phy between science and ethics—the former dealing with what is, the latter with what ought to be—point us to Hindú speculation as philosophy within the swaddling bands of theology, and claim that it was left for Greece to free man's mind from these trammels. Yet the philosophy of the Greeks in its earliest forms has a decided spiritual element; and such elements are supposed by Dr. Cudworth (Intell. System, ii, 94) and other eminent modern philosophers to have been pantheistic in their character. The material world is termed "the body of Zeus" in a poetic fragment said to have been written by Orpheus. At a later period we find the doctrine of emanations taught by Pythagoras (q. v.), an adept in ancient Orphic theology, and by other Greek philosophers, more especially by Xenophanes (q. v.), the founder of the Eleatic school (see Eleatic School), and compare Creuzer, Symbolik; Frenaus, lntrod. xiii, 260. Compare also Porphyr., Naturale, ii, 19; De Gimano, l, vi). Pythagoras (B.C. 569-470) taught that "one is all and all in a wide development of the unit. The monad produces the dyad; the two constitute the triad, and the product symbolizes the absolute unity that holds, as it were, in free solution the existence of the many, and in the soul and is an efflux of that energy. The world, too, is an exact impress of the eternal idea, which is the mind of God." A poetical theogony was greatly ingrained on such notions, and a polytheistic religion for the people. The philosophy of Anaximander (B.C. 610-547) the Milesian may almost, with equal accuracy, be described as a system of atheistic physics or of materialistic pantheism. Its leading idea is that from the infinite or intermediate (τε δύναμιν), which is "one yet all," prceed the entire phenomena of the universe, and to it they return. Xenophanes (B.C. 620-520), who, by the way, is considered one of the fathers of Stoicism (Cicero, De officiis, 1, 105); "Ex nihil, nihil fit," is really the first classical thinker who promulgated the higher or idealistic form of pantheism. Denying the possibility of creation, he argued that there exists only an eternal, infinite one all, of which the" totum" is the only existing" universal" and "sola" mode of representation; but as Aristotle finely expresses it—and it is this last conception which gives to the pantheism of Xenophanes its distinctive character—"casting his eyes withfully upon the whole heaven, he pronounced that unity to be God, Heracleitus (q. v.), who flourished a century later, reverted to the material pantheism of the Ionic school, and appears to have held that the "all" first arrives at consciousness in man, whereas Xenophanes attributed to the same universal entity intelligence and self-existence, denying it only personality. But it is often extremely difficult, if not impossible, to draw or to see the distinction between the pantheism of the earlier Greek philosophers and sheer atheism. In general, however, we may affirm that the pantheism of the Eleatic school was penetrated by a religious sentiment, and tended to absorb all reality into God; while that of the Ionic school was thoroughly materialistic, and tended to absorb God into the world, and suffered from atheism rather in name than in fact. Zeno (B.C. 494), the distinguished Eleatic philosopher, maintained that there was but one substance in the physical world, and that all other things were merely phenomenal, being only modifications or appearances of the one substratum. All was false and hollow that was based upon the suggestions of sense. Thought and its object are identical. Through his dialectical reasoning the school of the Sophists originated. By them it was denied that simple substance can fill space; next it was stopped gradually of every attribute, until it reached the vanishing point of the pantheistic perspective; substance, then, being wholly neutral and void of color, ceased to have any appreciable quality and the theory of philosophy subsided into the blank atheism of Leucippus (B.C. 500) and Democritus (B.C. 460-385), whose atomic fatalism finds a close parallel in the Zabism of the Babylonians, Phoronica, with other idiosyncratic offsets and antithetical stock. But though the deepest questions that can occupy the human intellect were bandied to and fro in sophistical discussion; all was problematical, all was doubt, and the only principle which met with universal acceptance was the sceptical maxim, μὴ δύνατον δεῖν. With Socrates (B.C. 468-399) opens a new epoch in Greek speculation. Hereafter we meet again with pantheistic notions, but they are no longer in extensive acceptance. The philosophers up to the days of Socrates had been simply physicists; they looked on nature as a deity in unity in the highest degree, and supplementary truth of real or correct philosophy had to be discovered. It was dreamed of by Pythagoras, but first fully discerned by Socrates; and we do not wonder that the wise said of him, "He first brought philosophy down from heaven to earth"—meaning that he was the first teacher of the world, because he brought home to the man of his time propositions and generalizations about matter and its origin to questions of human interest: our duty here, our hopes hereafter. From this time, too, dates the distinction of the two branches in philosophy, science and ethics (see Presocratic); and henceforth the great problem of Greek philosophy, as of all philosophy, became, "What is the ἐπιστήμη—the first principle—the ground and cause and reason of all existence?" The final answer of that age is found in Plato (q. v.), for "Platonism was the culmination, the ripened fruit of the ages of earnest thought which preceded Plato. He gathered up, coagulated, and grasped into unity the results bequeathed by the mental efforts of his predecessors. The Platonic answer to this great question of philosophy is clear and unequivocal. A perfect MIND is the primal source of all being—a mind in which intellect, efficiency, and goodness are one and the same, an absolute, a concept, p. 58, 39; comp. also his Christianity and Greek Philosophy; Butler, Lectures on Ancient Philosophy; Lewes, Biogr. Hist. of Philos.; and the references in the articles Plato and PLATONISM. One of the first of the Platonic schools to spring up was that which was associated with Plato's son, Plato, and the successor of Plato as scholar (from 347 to 393). Speusippus pantheistically represents the Best or Divine as first indeed in rank, but as chronologically the last product of development, and he finds the principles of ethics in the happiness of a life conformable to nature (comp. Ueberweg, Hist. of Philos. i, 133, 134, and the literature there quoted). Dicæarchus (B.C. 300), a disciple of Aristotle, and therefore a Peripatetic (q. v.), also advocated pantheistic notions. He taught that "there exist no individual substantial souls, but only in their stead one universal, vital, and sensitive force, which is diffused throughout all existing organisms, and is transiently individualized in different bodies" (Ueberweg, i, 138). The Stoics (founded B.C. 310) likewise taught this doctrine of force. Plato and his predecessor Societas had endeavored to reduce all being (οὐσίαν) to unity, admitting only reason as a channel of knowledge. Aristotle, the disciple of Plato, but the founder of an independent school (known as the immanent in distinction from the Platonic, which is known as the transcendent), believing his sessor were not so near the heart of the dualism of mind and matter unconciliated. With Plato God was one and all things; with Aristotle God was one, and the universe a distinct existence. But
PANTHEISM

as nothing can be which has not been before; as there can be no addition to the totality of existence. Aristotle made two eternals, the one Form, the other Matter—God, and the material from which the universe was made. The Stoics were not satisfied with the dualistic notion that all must be one, that an infinite cannot leave a finite standing over against it. They were willing to trust the testimony of sense, and to admit that logically mind and matter, God and the world, are separate and distinct; yet the Stoics contended that actually they must be one. They there-fore made in the process to show how God and the universe were distinct and yet one. Hence they came to teach that, "since the world contains parts endowed with self-consciousness, the world as a whole, which must be more perfect than any of its parts, cannot be unconscious: the consciousness which belongs to the universe is Deity. The latter permeates the world as an all-pervading breath, as artistically creative fire, as the soul and reason of the all, and contains the rational germs of all things" (Λόγος σπουδαιότερος). Hence they conceive the human and even the divine spirit, not as immaterial intelligence (σοφία), but rather as a force embodied in the finest and highest material substances (comp. Ueberweg, i, 194, and the article Stoics). But by far the most decided and the most spiritual representatives of the pantheistic philosophy among the Germans was the poet and scholar Alexander von Humboldt (q. v.), in whom we see most clearly the influence of the East upon Greek thought. The doctrines of emanation, of ecstasy, expounded by Plotinus and Proclus, not less than the fantastic daemonism of Iamblichus, point to Persia and India as their birthplace, and in fact differ from the mystical teaching of the Vedas only by being presented in a more logical and intelligible form, and divested of the peculiar mythological allusions in which the philosophy of the latter is sometimes dressed up.

The Christian Pantheism in the East.—In the Church of Christ also, in the various Gnostic sects, subject to the same influences as the Neo-Platonists, we can plainly trace the same tendency as in the Neo-Platonists. This is especially true of those Gnostics who were monarchical, believing in one principle, i.e. who made God the universal idea, which includes the world, as the genus includes the species. They were the pure Gnostic Pantheists; such were Apelles (A.D. 188), Valentinus (A.D. 140), Carpocrates (A.D. 120), and Epiphanes (A.D. 186). Those, however, who were dualistic and who divided God into a greater and a lesser, or a male and a female, or, as did Saturninus (A.D. 111), Bardesanes (A.D. 152), and Basilides (A.D. 184), whose systems were borrowed from Zoroaster and issued in Manicheism (q. v.), were scarcely pantheistic Gnostics. See Gueiricke, Handbuch der philol. Literaturgesch., ii, 269.

5. Pantheism in the Church of the West.—As we have just seen, most of the Christian sects of the early Church known as Gnostics were pantheistic in tendency. They were the first Christian Pantheists probably. With their disappearance pantheism disappears for a time from the Church. The idea of the school of learners by Charlemagne in the 9th century restored Neo-Platonic ideas to the Church, and with it pantheism. Speculation had up to this time been held in with tight reins by the Church. But now John Scotus, named Erigena, appeared with a translation of the mystical writings of Pseudo-Dionysius, the Areopagite. This work was followed by an original contribution from the pen of Scotus himself, entitled De Divisione Nature, in which he teaches that God is the essence of all things, and that what men call creation is a necessary and eternal self-manifestation of the divine nature. He describes the Universe as a mighty river flowing from its source in an indefinite stream, quickening all things in its course, and carried back to the fountain-head by natural exhalation and condensation, to be again rolled forth as before (De Div. Nat. iii, 103). The going forth of finite beings from the Deity Scotus called the process of unfolding (analysi, resolutio); the return of all things unto God, or the congregation of the infinite plurality of individuals in the genera, and finally in the simplest unity of all, which is God, so that then God should be comprehended in all (reductio, unitas). As Scotus stands midway between the more ancient and modern Pantheists—the corner-stone of the old system constituting the foundation of the new—he is usually spoken of as the link between the two systems. In the 11th century William of Champeaux, the instructor of Abelard, who thought of God and the universe as a system, he laid the groundwork of a theory, if it were not pantheistic, led straight to pantheism. His notion of universals, borrowed from Plotinus, taught that all individuality is one in its substance, and varies only in its non-essential accidents and transient properties. In the following century his theory was followed out into a thorough-going pantheism by Amalric of Béné (a disciple of Abelard), and his pupil David of Dinant. They declared that God is not the efficient cause merely, but the material, essential cause of all things. All positive religion, both doctrine and worship, is with them a symbol; true religion a tranquil, intuitive absorption into the divine, all-comprehending essence. They were condemned as heretics by a Church council held at Paris (q. v.) in A.D. 1210. Later versions of the Arab philosopher Averroes (q. v.) were condemned by the Council of Lateran, q.v., in 1215, to give a still more decided pantheistic tinge to scholasticism (q. v.), Albertus Magnus, Duns Scotus, and Raymond Lully were the principal divinists (comp. Encyclopaedia Metropolitana, xi, 608). As has been aptly said, "The fermentation of philosophic thought had brought the scent of pantheism once more to the surface." In the 14th century the practical extravagance of the schoolmen's pantheism was repeated by the Mystics, not, however, in a materialistic, but in an idealistic form. They held creatures to be in and of themselves, and not alone, and not being, the real substance of all things. All things are comprised in him, and even the meanest creature is a partaker of the divine nature and life. Such was the doctrine of the Beghards (q. v.), the Brethren of the Free Spirit (q. v.), and the later Cistercians (q. v.). These Pantheists of the Middle Ages held different shades of opinion, which it is difficult accurately to distinguish. Some claimed for themselves a perfect identity with the Absolute, which reposes in itself, and is without act or operation. Another class placed themselves simply under the influence of the divine spirit, i.e. from being by nature God, they had come into existence by their own free will. A third class put themselves on a level with Christ, according to his divine and human nature. A fourth class finally carried their pantheistic extravagance to such an extravagant length as to land themselves in pure nihilism (q. v.), maintaining that neither God nor themselves have any existence.

Among the pantheistical Mystics of the 14th century Eckart occupied a very high place, having wrought his doctrines into a regular speculative system. "This system," says a Reform. of the time, "describes the dome of the city in which he lived, towering aloft like a giant, or rather like a Titan assailing heaven, and is for us of the highest importance. Not unacquainted with the Aristotelian scholasticism, but more attracted by Plato, he termed them, 'the great priest,' as he calls him, and his Alexandrian followers, imbued with the mystical element in the works of Augustine, though not with his doctrine of original sin, and setting out from the foundations laid by the Areopagite, Scotus Erigena, and by the earlier Mystics of the Middle Ages, but adhering still more closely to the pantheistic doctrines which Amalric of Béné and David of Dinant had transferred to the sect of the Free Spirit and to a part of the Beghards, Master Eckart, with great originality, constructed out of these elements a system in which he did not expressly design to contradict the creed of the Church, but which
not a conscious and intelligent individual, but whatever of mental functions it possesses can only be the aggregate of the mental powers and actions of the innumerable beings (if we may so call them) that possess intelligence. The extension (=the material universe) is eternal and self-existent. The personal identity of men and other supposed beings is an illusion. All reported inhuman and miraculous events in human history are either fiction or confusion in civil order and society, and to promote a virtuous and moral life. To speak of the intelligence or the will of the Deity is to speak of him as a man: it is as absurd as to ascribe to the Deity bodily motion. There is nothing between the Deity and the concept of a Deity =a mere demonstration of human intelligence. “Cogitatio Dei conceptrundae, non intellectus.” There is no such thing as freedom of thought or will; everything is one extended chain of consequences, and thought begets thought by a necessity that is under no other control than the fatal law of its own being. Evil is inconceivable where all is equally divine and necessary, and where liberty is null. All is good where all is order; it is our own ignorance of ultimate results, and of the necessary relation of things, that makes us think things evil which are not substantially so. Of a future state Spinoza speaks mistily. He conceives that the union of the finite and the infinite, Immortality consists in a return to God, to the annihilation of all personal and individual existence; it is the idea of Averroes (q.v.) again revived.

Spinoza, like Scotus, was never the representative man of this period. His work, which in the 17th century, can be most reasonably referred that pantheistic spirit which has pervaded the philosophy as well as the theology of Germany since the beginning of our present era. Schelling (q.v.) and Hegel (q.v.), in fact, have proved themselves most faithful disciples of Spinoza, carrying out to the legitimate extent the principles of this rigid logical Pantheist. Fichte (q.v.), by his subjective idealism, had banished from the realms of existence both nature and God, reducing everything to the all-engrossing Ego. Schelling reproduced what Fichte had annihilated, but only to identify them with one another, thus declaring the unity and God to be identical, nature being, in his view, the self-development of Deity. The philosophy of Hegel was equally pantheistic with that of Schelling, inasmuch as he declared everything to be a gradual evolving process of thought, and God himself to be the whole process.

Thus “the fundamental principle of philosophical (i.e. modern) pantheism,” to use the language of Dr. Buchanan (Faith in God and modern Atheism compared), “is either that the Deity is the identity of existence and thought, as taught, with some important variations, by Fichte, Schelling, and Hegel. The Absolute is conceived of, not as a living Being to whom a proper personality and certain intelligible attributes may be ascribed, but as a vague, indeterminate somnehit, which has no distinctive character, and of which, in the first instance, or prior to its development, almost nothing can be either affirmed or denied. But this absolute existence, by some unknown inherent necessity, develops, determines, and limits itself; it becomes being, and constitutes all being. The infinite passes into the finite, the absolute into the relative, the necessary into the contingent, the one into the many; all other existences are only so many modes or forms of its manifestation. Here is a theory which, to say the very least, is neither more intelligible nor less mysterious than any article of the Christian faith. And what are the proofs to which it appeals, what the principles on which it rests? Its two fundamental positions are these—that finite things have no distinct existence as realities in nature, and that there exists only one Absolute Being, the identity Deity itself. And how are they demonstrated? Simply by the affirmation of universal 1 ‘Identity.’ But what if this affirmation be denied?
What if, founding our reply on the clearest data of consciousness, we refuse to acknowledge that existence is identical with thought? What if we continue to believe that there are objects of thought which are distinct from thought itself, and which must be presented to the mind before they can be represented by the mind? What if, while we reserve the right to extend to thought the reality and the absolute, the contingent and the necessary, we, by the utmost effort of our reason, obliterate the difference between them, so as to reduce them to one absolute essence? Then the whole suprastructure of pantheism falls along with the idealism on which it depends; and it is found to be, not a solid and enduring system of truth, but a frail edifice, ingenuously contrived out of the mere abstractions of the human mind. 

Pantheism is by no means confined to the philosophical schools of Germany. It has been taught, also, from her pulpits and her theological chairs (comp. Bretschneider, Dogmatik, i, 13; Ebrard, Kirchen- u. Dogmengesch., iv, 257 sq.; Schwarz, Gesch. der neuesten Theologie [3d ed. Leips. 1804, 8vo], i. 1 and ii; Dorn, s. Dogmengesch., i, 290 sq., ii, 318 sq.). Extreme Rationalists have not hesitated to pronounce Schleiermacher a Pantheist in the tendency of his doctrines. Hunt, in his Essay on Pantheism, has accepted this decisive proposition and gone to the length of asserting that Schleiermacher had made a fundamental error of faith. For, says he, Schleiermacher showed that, in the last analysis, God is the absolute mind, and that he never, for a moment, entertained the idea of a God who is distinct from mind. He was a materialistic Pantheist. He maintained that the Bible doctrine that God was the image of the living God, the blaspheous notion that God is more than the image of man. The literary productions, however, of this class of infidels were more suited to the atmosphere of Paris than that of Berlin, and accordingly their influence is not the same in Germany as in France. For, if, in Germany, Schleiermacher's ideas, like those of other rationalists, are, for France, and Young Germany, having lost its prestige, was speedily forgotten. In more recent literature the pantheistic notions abounded again, but not in such an objectionable shape. One of the ablest modern advocates of Spinozaism is the well-known German novelist, Theobald Auerbach, like his master in philosophy, of the Jewish profession, and, like him, a man of the highest moral worth. While it must be conceded that Auerbach has purified and enabled the infidel notions of the German masses, he yet has failed to quicken them spiritually, and there is only, as heretofore, a religion enthroned in the reason. See Rationalism.

The pantheistic system is too abstract and speculative in its character to find acceptance with the French mind generally. Near the beginning of the last century, however, Denis Diderot (1718-94), one of the Encyclopédistes, turned from the ideas of the pantheist, in his dialogue</p>
PANTHEISM

PANTHEISM

Thought, p. 297 sq.; Princeton Review, April, 1856, art. viii.

The system of philosophy-theology, which maintains God to be everything, and everything to be God, has extensively spread its baneful influence among the masses of the people in various Continental nations. It pervades alike the communism of Germany and the socialism of France. Indeed, in the eyes of those who hold that God is to be found in man, and the Saint-Simoniens, Pierre Leroux, in the other, that humanity is the mere incarnation of Divinity. In England and America also the same gross pantheism, decked out with all the charms of poetry and eloquence, is taught in our pulpit, in our schools, and in our colleges. The only element of the philosophy taught by the Emerson school, or Intuitionists, is, and is advocated and believed by a considerable number of speculative thinkers in England and America. "Standing on the bare ground," says the apostle of this latest form of pantheism, "my head bathed by the bilious air, and uplifted into infinite space, all mean egotism vanishes. The currents of the Universal Being circulate through me. I am part or particle of God. "The world proceeds from the same Spirit as the body of man. It is a remoter and more enervating emanation of the same life, the unconscious." "Intellectual science has been observed to beget invariably a doubt of the existence of matter." "The soul is... wider than space, older than time, wide as hope, rich as love." Mr. Emerson regards Jesus as the only true race of prophets because he said, "I am divine"; but his Christ is plainly no exceptional person, only one of a class. The language of the Bible he uses in a most extraordinary way, and all who insist on finding monothelism in the Scriptures, and not pantheism, as he does, he calls "dogmatical bigotry." The God of the Bible is a father with a father's pity for his children, but the God of the Pantheist is eternal fate which degrades all things. "Believe in the God within you," says Mr. Emerson. On principle Mr. Emerson is no philanthropist, but a disapprover of acts of charity. He counts a man no more sacred than a mouse, and confines the good with the bad (see Prof. Prentice's articles in Meth. Quar. Rev. July, 1874; April, 1875). Mr. Carlyle shares these opinions. The Pantheists themselves claim Frederick Robinson as their; but there is no more ground for this than for their claim on Schleiermacher. Indeed, Robinson's view of the relation of God to the world is as near to Schleiermacher's as it well can be. See Robertson, Theodore Parker is also claimed by the Pantheists, but we think with as little propriety as Robinson. True, Parkers not as devout a man and as ardent a believer in Christianity, but he was a man of truth and sainthood and the immortality of the soul. His chief work, A Discourse on Religion, and his after declarations present him to us as a Dost, and not a Pantheist. He was influenced by Schleiermacher, but got farther away from the Church and Christianity, and may be said to have held the position now assumed by Renan, the author of the Life of Christianity. Both accept the essence of Christianity as essential to the needs of humanity, but refuse to acknowledge as lord and master the authority thereof. See PARKER. Hunt, the author of an essay on pantheism, and noted English divine of our day, is the modern apostle of Christian pantheism. He insists that Christianity and pantheism must be reconciled, otherwise it will be the worse for Christianity:

"Pantheism is on all hands acknowledged to be the theology of reason—of reason it may be in its impotence, but still of such reason as man is gifted with in this present stage of the development of philosophy and religion, to which he is the very summary of all religions. It is the goal of Rationalism, of Protestantism, and of Catholicism, for it is the goal of thought. The idea of God, as the creator of the world, is the means by which to reconcile the reason on God and things divine. Individuals may stop at this point to make many and many a jostling-place on the way by appealing to the authority of the Church, to the letter of the Sacred Writings, or by trying to fix the 'limits' of religious thought where God has not fixed them" (p. 370).

In order to determine what this Mr. Hunt would give the Christian, it is necessary to hear the definition of pantheism Hunt furnishes. Here it is:

"It might be better, indeed, to get rid, if it were possible, of the term Pantheism; but we cannot get rid of the idea, for it exists as a part of the mind, and has emerged in all ages. The argument from final causes proves the existence of a world-maker. It demonstrates that there is a mind to be accounted for. It is the unanswerable, in satisfactory proof of the ordinary understanding of man; but it proves nothing more than a finite God. We must supplement the argument from our own finiteness. The one gives a mind, the other gives being, the two together give an existence of a grand divine being, incomprehensible to all names, if that is inconvertible, to be called by no name" (p. 385). "Is what is called Pantheism anything so fearful that to avoid it we must renounce reason? To trace the history of theology from its first dawning among the Greeks down to the present day, and to describe the whole as opposed to Christianity, is surely to place Christianity in antagonism with the catholic reason of mankind. To describe all the greatest minds that have been engaged in the study of religion as Pantheists, and to mean by the term men irreligious, un-Christian, or atheistic, is surely to say that religion, Christianity, and theism have but little agreement with reason. Are we seriously prepared to make this admission? Not only to make the distinction, but to urge against it the arguments of Schleiermacher, but St. Paul and St. John, St. Augustine and St. Althausius?" (p. 387).

In other words, the God of Christianity must be allowed not to be a God creating a world, and acting on a world for a purpose, but a God existing in the universe which is co-extensive with him as its source; and dogmatic form and Biblical representations irreconcilable with that doctrine must be explained as metaphors or shadows, or cast aside—or otherwise Christianity itself must cease to be the religion of civilization (Pictet, Dictionary, "Mystery of Matter" [Lond., 1875, 8vo], has taken a like position). This pantheistic sentiment floating about in the poetry, criticism, theology, and even in the speculative thinking of the present time is attributable principally, we think, to the ravages made by Biblical criticism and to the aggressiveness of the physical scientists, who, in the advances which they are making in the acquisition of knowledge, are determined to extend inquiry also into the region of religious beliefs. Hence multitudes of men are puzzled what to think and what to believe. They are blind to the fact that they have actually lost faith in revelation, and are no longer relying for help and guidance on the Spirit of God, but on the laws of nature; so they take refuge from the abhorred aspect of the naked truth in a cloud of conventional poetic phrases, which, if they mean anything, mean pantheism. "Quid philosophus sc Christiunus," said the rugged but sensible Tertullian in his day; and the same remark may here be made, "What has Christianity to do with Pantheism?" The personality of God is a previous question which Christianity, in common with all historical religions, must assume. He that cometh to God must believe that he is, and that he is the rewarder of them that diligently seek him. Now the Pantheist repels with indignation the charge of atheism. For he is not denying the existence of God, but is endeavoring to recognise God in all he sees and hears and feels. In his creed all is God, and God is all. But the very essence of his system consists in the denial of a living personal God, distinct from nature and presiding over it. This, if not atheism, approaches to the very verge of it, and is a deadly destructive of religious faith and atheism from each other, but the man who can look around him and say that the universe is God, or that he himself is an incarnation of God, a finite particle of the Infinite Being, makes assertions tanta- mont to the denial of God, by meaning the statement that there is no God. Christianity has no longer to maintain a conflict with open, avowed, unblushing atheism, but with secret, plausible, proud pantheism. Nor can the re-
PANTHEISM

sult of the conflict be doubtful. Christianity will as-
assuredly triumph over this, as she has already done over
all her former adversaries, and men will rejoice in re-
ocognising the old living personal God, who watches over
them, to whom they can pray, in whom they can trust,
and on whom they hope to dwell throughout a bless-
ed eternity.

The baneful effects of pantheism cannot fail to unfold
themselves wherever, as among the Hindees, it lies at
the foundation of the prevailing religion. Its practical
fruits, as to that circumstance, are moral degradation, bar-
barism, and cruelty. The natural consequences of a
pantheistic creed are thus ably sketched by Dr. Buchanan:

"The practical influence of pantheism, in so far as its
peculiar tendencies are not restrained or counteracted by
more general and sounder tenets and beliefs, must be deep
and lasting both in the individual and social welfare of mankind.
In its ideal or spiritual form it may be seductive to some ardent,
imaginative minds, but it is a wrecked creed notwithstanding;
and it will be found, when calmly examined, to be fraught with
the most serious evils. It has been condemned, indeed, in
glowing terms, as a creed alike beautiful and beneficent, as a
source of religious life nobler and purer than any that can ever spring
from the more gloomy system of theism; for, on the theory of pantheism,
God is manifest to all everywhere and at all times. Nat-
ure, too, is considered as divinized and glorified, and even-thing
in nature is invested with a new dignity and interest; above all,
man is conclusively freed from all fantastic hopes and
superstitions fears, so that his mind can now repose with
trivial satisfaction on the bosom of the Absolute, un-
modified by the decrees of life, and may view without
fear the prospect of death. For what is death? The dissolution
of any living organism is but one stage in the process of
its further development; and whether it passes into a
new form of self-conscious life, or is reabsorbed into the
infinite spirit, is an unsolved and insoluble problem in the
vast system of being. We may therefore, or rather must we,
leave our future state to be determined by nature's inexorable
laws and will, at least, far better bred than nature,
to whose justice we are amenable, or whose frown we
should dread. But even as it is thus exhibited by some
of its worst oubliettes, it appears to us, even to the
most dreary and cheerless creed when compared with that
faith which has not to regard God as our 'Father in
heaven,' and that 'hope which is full of immortality.'
It is worse, however, than dreary: It is destructive of all
religion and morality; it is an avowed antagonist to Chris-
tianity; and is less hostile to natural theology and to
ethical science: It consecrates error and vice as being
equal both with truth and virtue, necessary and beneficent
manifestations of the 'infinite.' It is a system of syncre-
ticism, founded on the idea that error is only an incomplete
truth, and maintains that truth must necessarily be de-
veloped by error and virtue by vice. According to this
fundamental law of 'human progress,' atheism itself may
be providential; and the axioms of a fatal optimism—
'Whatever is, is best'—must be admitted equally in regard
to truth and error, to virtue and vice.

Modern pantheism is nothing else than the theo-
poly of the East imported into the West: an avowed at-
tempt to displace the religious idea which God stamped
upon the soul and conscience of humanity from the very
cradle of the race in Paradise. The personality of the
Deity and of Christ, and the individual responsibility
of man, are the weighty questions upon which men's
minds are to be unsettled. There is nothing orig-
inal in the means adopted, unless indeed in their higher
sublimation from all earthly taint of common-sense—
"Inanæ magis quam hereticæ:" the profession of
man is the last word of this philosophy. "J'ai assez
lu," says Saisset, as the conclusion of his comparison of
the various systems of philosophy ('Essai de Phil. Rel.);
"J'ai assez discuté, l'âge mûr arrive, il faut former ces
livres, me replier au dais de moi et ne plus consulter qu'en raison."
In this case pagan but now Roman Catholic church may be seen different services going on at different altars at the same time, with distinct congregations around them, just as the inclinations of the people lead them to the worship of this or that particular saint. In 1632 a Barberini, then on the papal throne, thought he would add to his reputation by disfiguring the Pantheon, which he had just purchased with a slice of gold dividable into barbarians, that he might cast them into cannon and form a high-altar for the church of St. Peter. (J. H. W.)

Panthera is, according to the Talmud, the name of a certain soldier, said to have been illegitimately the father of Jesus. This tradition was current before the composition of the Talmud, for as early as the fourth century, a Jewish writer whom Origen in his treatise introduces, a Jew who, speaking of the mother of Jesus, says that "when she was pregnant she was turned out of doors by the carpenter to whom she had been betrothed, as guilty of adultery, and that she bore a child to a certain soldier named Panthera." The word Panthera, or, as it is written in the Talmud, פַּנְתֵרָה, seems to have been used in an allegorical sense, meaning "the son of a wanton," according to allegorical exegesis the panther derives the name from πανθέως, thus signifying "the personification of sensuality." Only in unexpurgated editions of the Talmud, and only from this place, which appears at Am. 106b, and in 1645, the name of Jesus occurs twenty times. The Todoroth Jedus (q. v.), a detestable compilation put together out of fragmentary Talmudic legends, contains everything that is supposed to have been uttered by Jewish blasphemers, and in the Latin translation given by Wa- gensell, in his Tela Ignota Satuwum (Altorf, 1691), it is made accessible to all who wish to know more about this matter. In the German language the student can peruse Eisenmenger, who has brought together all these blasphemous sayings, attributing them all to Judaism, while really they are the utterances of the most unlearned and simplest souls. In his Eindeutkent Juden, i, 106, 107, 109, 115, 116, 133, 261 sq., the German and the original are given. See also Buxtorf, Lexicon Talmudicum, s. v. בַּפַּנְתֵרָה, p. 792, and s. v. פַּנְתֵרָה, p. 874 (Fischer's ed.); Hoffmann, Das Leben Jesu nach den Apostrophren, p. 90 sq.; Farar, Life of Christ, i, 76; Nitzsch, Uber eine Reihe haloualscher und patriotischer Tatsachen, welche sich an den mirverständztn Spatenmenn, פַּנְתֵרָה גַּם, ge- klungen, in the Theologische Studien u. Kritiken (1840), p. 115 sq.; P. Cassel, Pantheo-Studo, etc., in his Apologische Briefe (Berlin, 1875). (B. P.)

Panuoeis, William, a Flemish painter and engraver, was born at Antwerp about 1600. Little is known of him as a painter, but it appears that he was a distant of Rubens from the inscriptions on some of his prints. He etched quite a number of plates after Rubens and from his own designs. They were executed in a spirited and masterly style, but his drawing is frequently incorrect. The following, after Rubens, are his most esteemed prints: Father before Absolution;—The Nativity;—The Adoration of the Magi;—Mary Winking the Feet of Christ;—The Assumption of the Virgin;—The Holy Family, with the Infant Christ and St. John playing with a Lamb;—St. John Baptisting Christ;—Simon Killing the Lion and the Bear;—St. Sebastian.

Panvinio, OTOFINO, an Italian monk noted as a historian and antiquarian, was born in Verona in 1599, and took at an early age the habit of the Order of St. Augustine. He pursued his studies at Rome, whence he was called to Florence in 1654 to fill the chair of theology in that city; but soon afterwards, at his own request, was superseded in the office, and obtained leave from his superiors to visit the chief cities of Italy in order to collect inscriptions. At Venice he became acquainted with Sigonio, who had been appointed professor of belles-lettres in that city in 1652, and who was not less enthusiastically attached than Panvinio himself to the study of antiquities. The acquaintance soon ripened into a lasting friendship. At Rome Panvinio was patronized by cardinal Cervini, who in 1555 became pope Marcellus II, and by him Panvinio was appointed to a situation in the library of the Vatican. As a scholar of great attainments he was the more estimable for his simplicity, but in the middle of a most active and useful life he suffered a violent death. He died at Rome on April 7, 1568, while visiting there. He was a man of great learning and indefatigable industry. Nicéron, in his Mémoires, mentions twenty-seven works by Panvinio which had been printed; and Maffei, in his Verona Illustrata, gives a list of Panvinio's MSS. in different libraries of Italy and Germany. The most important of his works are the following, some of which were not printed till after his death: Epitome Pontificum Romanaorum aequae ad Paulum IV (Venice, 1557, fol.):—Virgilis epistolis Pontificum Romanorum Elogia et Imagines (Rome, 1569, fol.):—De Fastis et Triumphis Romanorum aequae ad Carolum V (Venice, 1557; Mader published another edition in 1662 at Helmstädt);—In Fastis Consularibus Appendix;—De Ludis Secul.ribus et Antiqua Romanorum Nominibus (Heidelb., 1568, fol.):—De Euphrasii Etymologiarum Operibus, libri ii (Venice, 1569, fol.):—Agnes Dei (Rome, 1560, 4to):—De Sigillia et Sacramentia Sibylia (Venice, 1567, 8vo):—De Triumphi Commentariis (Venezia, 1578, fol.; Helmstädt, 1676, 4to, by Mader):—De Ritu sepulcrinis Mortuorum apud Veteres Christianos et eorum Canonicis (Louvain, 1575, 8vo):—De Republica Romana Libri III (Venice, 1581, 8vo):—De Bibliotheca Pontificis Vaticana (Tarragona, 1587, 4to):—De Libris Circinius Libri II, et de Triumphi Liber I (Venice, 1600, fol.):—Amplissimi Oratoris Sanctissimi Triumphi, et Antiquissimorum Lapidum et Numrorum Romanorum, etc. Descriptio (Rome, 1618, 4to):—De Antiquatate et Vitis Illustratione Verorum Libri VIII (Padd. 1548, 4to). The following treatises are contained in the great collection of Grav紫外, "Thessaurus Antiquitatum Romanarum":—De Civitate Romana et De Imperio Romanis, in vol. 1; De Antiqua Romanorum Nominibus, in vol. ii; Antiquae Urbis Imago, in vol. iii; De Libris Circinius, De Ludis Secularibus, et De Triumphi Commentariis, in vol. i. His great treatise De Cerimoniis Caru Romane, in 11 vols. folio, is in MS. in the royal library at Munich. See Reuter, De Onuphrio Panvino (Altorf, 1757, 4to); Aebach, Kirchen der Welt (Cologne, 1548, 2 folio), and Weiss, in the Archives Universelle, s. v.; Tiraboschi, Storia della Letteratura Italiana, vol. vii; English Cyclopedia, s. v.; Piper, Monumental Theol. § 163, 216. Panvinio. See Panvinio.

Panzani, GREGORIO, an Italian ecclesiastic, flourished in the first half of the 17th century. Sent by pope Urban VIII to England, he remained there from 1634 to 1636, in order to reconcile the differences which had arisen among the Roman Catholics. On his return home he was made canon of St. Lorenzo at Rome, and bishop of Miletus in partibus. He wrote some interesting memoirs upon the mission, but they have never appeared in separate form. Dodd has inserted some extracts in his History of the Church, and English priest, Joseph Berington, published a translation of them, entitled Memoria of Grigorio Panzani (Birmingham, 1794, 4to). See Chaudon, Dict. Hist. Univ.

Panzer, Georg Wolfgang, a German theologian, was born at Ruhlschatz in 1666, but afterwards he went to Altдорf, where he took his doctorate in philosophy in 1749. In 1751 he was made pastor at Etzelwang, near Nuremberg; in 1769, dean at St. Sebaldus, in Nuremberg; in 1772, senior preacher; in 1778, pastor. He died in
Besides his Ammales Typographici, he wrote a history of the German Bible, Liberare. Nachrichten v. den allerlängsten gedruckten Deutschen Bibeln (Nurem. 1777) — Grec. der Nürnbergischer Ausgaben der Bibel, etc. (luid. 1778) — Grec. der Augsburger Ausgaben (1780) — Die unerhörte Augsburgische Confession (1783) — Die evangelischen deutscher luther. deutschen. luther. (1778, 1783, 1785, 1817, 1818, 1820, 1821) — etc. He also devoted himself to a careful editing of the Church hymn-books.

Panzer, Johann Friedrich Heinrich, son of the preceding, also noted as a German theologian, was born at Nuremberg March 25, 1764. He was educated at the universities in Altdorf and Erlangen, and devoted himself to the study of church music. He finally decided to enter the ministry, and became catechist at the St. James's Church in his native place. In 1797 he was made pastor at Eltersdorf and Tannenhofe. During the Russian-Nuremberg controversy he was dismissed; but the Prussian government gave him an appointment as pastor at Baireuth. He died Nov. 15, 1815. Panzer wrote several valuable monographs treating of chapters in the history of the Reformation.

Panzi, Solomon ben-Eliyahu, of Rome, a Jewish writer noted as the author of נבון יסוד, or Clorisa Gemara, or rather methodology of the Talmud, in six chapters. It was translated into Latin with notes by Chr. Hen, Ritmer (Helmstädt, 1657), and republished in Hic. Jak. Baskby (Hamburg, 1761). The latter edition (Hamburg, 1714) See Furst, Bibl. Jud. i. 581; De Rossi, Dissertario storico degli orvii Ebrei (Ger.) transl. by Hamburger, p. 256; Wolf, Bibl. Hebr. vol. i and iii, No. 1958; Jöcher, Geschichte-Lexikon, continued by Rottemurder, v. 1516.

Paolotti, Ferdinando, an Italian theologian of note, was born at Alla Croce, in Tuscany, in 1717. He studied theology at Florence, and in 1746 was made rector in Villamagna, where he labored for the remainder of his life. He died in 1801. Paolotti several times refused episcopal dignity, preferring the quiet labors of his parish to the exacting work of a diocese. He was noted not only as a devoted priest, but also as a most zealous promoter of agricultural science in his rural district.

Paoli, Sebastiano, an Italian ecclesiastic, was born in 1688 at Lucca; entered the Order of the Mother of God; in 1729 was appointed general procurator of the congregation; afterwards rector of the college of St. Brigitta at Naples, where he died in 1751. He was one of the most zealous and most assiduous of his contemporaries in the field of the arts. He wrote Dea poesia de' S. Paolo e Latini nei primi secoli della chiesa (Naples, 1714) — Codice diplomatico dei saggi militari ordine Gerozolemitano oggi di Malta, etc. (Lucca, 1738-1738, 2 vols. fol.), which is very important for the history of the Knights of Malta. He also published a good edition of the Orations of Peter Chrysologus (Venice, 1750).

Paolini, Pietro, an Italian painter, was born at Lucca in 1638. He went early to Rome, where he entered the school of Angelo Caroselli. Under him Paolini acquired a manner that shows correct drawing, and a style of coloring more resembling that of the Venetian than the Roman school, uniting the richness and harmony of Titian and Pordenone. Lanzi says his Martyrdom of St. Andrew, in the church of S. Michele at Lucca, and the grand picture, sixteen cubits long, in the library of S. Frediano, would alone be sufficient to immortalize this painter. The latter work represents the pontiff St. Gregory entertaining some Pilgrims. It is a magnificent picture, ornamented in the style of Venetian, with a grand architectural perspective, full of figures, and possessing a variety, harmony, and beauty that have induced many to extol it. He also excelled in compositions of a conversational character, at the festivals, which are numerous at Lucca. Balducci especially commends two pictures of the Massacre of Val deosta, in the possession of the Oresti family, and remarks that he had a peculiar talent for tragic themes. He was accused of being too energetic, and strived for making the action of his females too strong. To prove the contrary, and to show that he pursued his method from choice, and that he was not inferior to his rival Biancuzzi in his own style, he painted his large work in the church of the Trinity in the graceful folino.

Paolini, Pio Fabio, an Italian painter, was born at Udine. He early went to Rome to study under Pietro da Cortona, and there acquired considerable reputation for some historical works, especially for his fine fresco of San Carlo, which adorns the Cure of Rome. In 1679 he was made a member of the Academy of St. Luke. He afterward returned to his native city, where he executed several altar-pieces and other works for the churches, which Lanzi says entitled him to a high rank among the followers of Cortona. He also painted much for the collections.

Paolo Cagliari. See Paolo Veronese.

Paolo, Maestro, of Venice, a noted painter, much devoted to sacred art, Lanzi says is the earliest painter in the national manner (i.e. different from the Greek artists of the time), of whom there exists a work with a most inscrutable name of its author. It is in the church of San Zaccaria, consisting of a tablet, or, as it is otherwise called, mosaic, divided into several compartments, representing the figure of a dead Christ, with some of the Apostles, and historical incidents from the holy evangelists. There is inscribed underneath, "Magister Paulus cum Jacobo et Johanne filiis hac opus fecit." There is no date upon it, but Zenale found his name recorded in an ancient parchment bearing the date 1346. Sig. Morelli also discovered a painting in the sacristy of the conventual of Vicenza, inscribed "Paulus de Venetis pinxit hic opus, 1352." 

Paolo Veronese (or Paolo Cagliari), a very noted Italian painter who belonged to the Venetian school of the 16th century, was a native of Verona, whence his surname. He was born, according to Ridolfi, in 1528; but others say in 1526. His father was a sculptor, and afforded the boy all the art-training that he seemed so much to seek after. When quite young he moved to Venice, where he soon developed talents which placed him on an equality with Titian. As colorists the two men differ considerably. Titian's colors are strong and bright, Veronese's are toned down, less gorgeous, more delicate. Paolo was eminently successful in color and in perspective painting and adhering to it through a long and active life. Most of his pictures represent scenes in the life of Christ, in which the personages appear in Venetian costumes of the 16th century, and in which are introduced portraits of contemporaries. It is useless to criticize such a phase of art, or to approach it with the same laws with which we judge pure artistic conception. Veronese's art is ornamentation carried to its highest perfection, but neither admitting nor asking comparison with the art of the Florentine or Roman schools. His pictures all present the same qualities of exquisite grace and refinement, full of what modern artists call "style." The mind never tires of these paintings, but rests upon them with pleasure and content. No great effort is necessary to enjoy them; they leave a pleasurable sensation, as if we too had been enjoying the culture and luxury of those epochs. His best works are his four great paintings in the Venetian churches. The first was painted for the refection of S. Giorgio Maggiore, and is now in the Louvre at Paris. The subject is The Marriage at Cana; it is over twenty-five feet wide, and contains an immense number of figures, among which are portraits. It is said that he received only ninety ducats for this immense work, which is accounted for by the fact that he never accepted more remuneration from the convents than the
expense of his materials. The second, painted in 1570 for S. Sebastian, represents The Feast of Simon with Magdalene washing the feet of Christ. The third, executed for SS. Giovanni and Paolo, is The Stavirce at Supper with his Disciples. The fourth (which is perhaps his masterpiece) is the same subject as the second, but quite differently treated; it was painted for the refectory of the Convent of S. Nicola in 1610 by the republic to Louis XIV. There are a few masterly etchings marked "P. C." and "P. A. Call," which are attributed to Paolo, among which are The Adoration of the Magi, "Paolo Veronese fec.," and Two Saints Sleeping (top mark). See Spooner, "Bibl. Hist. of the Fine Arts," i, 156; Ruskin, "Modern Painters;" Roldan, "Vita di P. Cagliari" (1648); Lecarpentier, Notice sur P. Cagliari (1818); Zabeo, "Elogio di P. Cagliari" (1818). (J. H. W.)

Pap (τάχυ, skik. Exx. xxiii, 21; τακτή, Isa. xxiii, 12; μαστίγω, Luke xi, 27; xxiii, 9; Rev. i, 18), the breast (as the Hebrew word is elsewhere rendered), especially of a female.

Papa (Πάπας), a name originally given to the bishops of the Christian Church, is now the pretended prerogative and sole privilege of the pope, or bishop of Rome. The word during the ancient times is to be understood in the same sense as our word "paternal." In the time of the Catholic Church, the name is used for the bishops of various cities, and is in constant use in the Greek Church, and is synonymous with the word "archbishop." The word is sometimes used for the pope, or bishop of Rome.

with the noble Roman, Flavius Clemens, who is said to have suffered martyrdom under Domitian. One of the principal writers on the earliest history of the Church of Rome, Lipsius, who in his first works had assumed the identity, adduces in his work, *Chronologie der römischen Bischöfe* (Kiel, 1889), cogent reasons against it. The first letter of Clement to the Corinthians is an important document in the history of the papacy, for it in Catholic historians find the first example of the exercise of a sort of papal authority. But, as the very introduction shows, this epistle is not sent at all in Clement's own name, but in that of the Roman congre- gation, and the tone of the writing is something but hier- archical. The epistle may, however, justly be quoted as an indication of the high esteem in which the Church of Rome was held at a very early period. This promi- nent position is easily explained by the political pre- eminence of the city, which was the capital of the Roman world-empire, and by the high antiquity of the Roman Church, to which Paul had addressed one of his epistles, and which the churches of Italy, Gaul, and Spain looked upon as their mother Church. There is only one other passage in the writings of the apostolic fathers which would require an argument for the exist- ence of the papacy at that time. Ignatius of Antioch (died 107), in his epistle to the Roman Church, calls her *proskeuinon tis agias*, which Möhler (*Patrolologie*, i, 144) and other Catholic scholars explain as "head of the love-union of Christendom," while Protestant writers hold it to mean "the leader which the head in love." It is at all events significant that in the whole epistle the bishop of Rome is not even mentioned.

With Xystus I (about 115 to 125) a second division in the oldest papal catalogues begins. It is regarded as probable that he was the first who occupied the presby- terial college of Rome an episcopal position, although his fellow-presbyters may have only regarded him as *primus inter pares*. With Hyginus (about 185 to 189), Pius I (died about 154), Anicetus (died 166 or 167), and Soter (died 174 or 175), the history of the Roman bishops begins to be better authenticated. The names which have just been mentioned are closely united in history with the names of the Gnostics Cerdon, Valentinus, and Marcion. "The Shepherd of Hermas," one of the cele- brated writings of the apostolic fathers, is ascribed to a brother of Pius I; and during the administration of Anicetus, bishop Polycarp came to Rome to discuss with the Roman bishop the first Easter controversy. Under Eulogius, towards the close of the 2nd century, Irenæus came to Rome as the delegate of the congregation of Lyons in affairs relating to Montanism. Irenæus is the first who launches the question of the Roman bishop's hon- orary pre-eminence of the Roman Church. He calls her (*Adv. Haer.* ii, 2) the greatest, the oldest, the Church, acknowledged by all, founded by the two most illustri- ous apostles, Peter and Paul, the Church "*with which, on account of *more important precedence, all Chris- tendom must agree*". ("Ad duas enim ecclesias proper potentiorem principalitatem necesse est omne conventio ecclesiam, hoc est eos, qui sunt undique fideles, in qua semper ab his, qui sunt undique, conservata est ea que est ab apostolis tradita"). The famous passage is only extant in Latin translations, and is of somewhat disputed interpretation, but it is not doubted that Irena- us meant to place the Church of Rome above the other *G*nostic churches, to which likewise a precedence of honor is allowed. It is to be observed, however, that this passage altogether speaks of a precedence of the Roman bishops over others, and not for the only reason of their peculiar Episcopate, as there is no indication that anything beyond a mere precedence of honor is meant. That this was really the idea of Irenæus is confirmed by the fact that when, about 190, bishop Victor of Rome broke fellowship with the church of Alexandria for their use of the Easter fire for the only reason of their peculiar Easter usages, Irenæus rebuked Victor for troubling the peace of the Church, and declared him- self against a forced uniformity in such non-essential matters. The Asiatic churches emphatically refused to comply with the demand of the Roman bishop, and the controversy remained unsettled until the 4th century, when the Council of Nice decided in favor of the Ro- man practice. Tertullian also gave prominence to Rome among the apostolic mother churches, but after these he was able to distinguish the Roman bishop by calling him in irony "pontifex maximus" and "episcopus episcoporum." At the beginning of the 3rd cen- tury Hippolytus censured the Roman bishops Zephyri- nus and Caecilus for the lax discipline of their Church. It appears from his work that these bishops claimed an absolute power within their jurisdiction, and that Caecilus established the principle that a bishop can never be deposed or compelled to resign by the pres- bytery. Cyriac (died 258) is the first who asserts in clear words the fundamental idea of the papy, claiming superiority for the bishop of Rome as the suc- cessor of Peter, and accordingly calling the Roman Church the chair of Peter, the fountain of priestly uni- ty, and the root and mother of the Catholic Church. It is, however, only an ideal precedence which Cyriac conceives to the bishop of Rome, for in the controversy with the African Church, and in the union with the bishops of Asia Minor, opposed the position taken by the Roman bishop Stephen, and accused him of error and abuse of power.

A retrospect of the history of the Church during the first three centuries shows a gradually increasing readiness to come to the Church, and at a later period to the bishop, of Rome, some kind of honorary supremacy, and an eagerness of the bishops of Rome to use this disposition of other churches for enlarg- ing his own. He derived his claims from the idea of honorary pre-eminence over other bishops—a claim which, as has been shown, was promptly and emphatically denied in all parts of the Christian world; and it is a most remark- able circumstance that almost every writer of this period whose words can be used as a testimony in favor of proving the existence of a germ of papy, also men- tions and personally endorses the stanch opposition made to the first claims of the Roman bishops. The first ecumenical Council of Nice (325), in its sixth can- on, makes only an incidental mention of the Roman bishop. It confers upon the bishops of Antioch and Alexandria metropolitan rights over the churches of their several provinces, "since the same belongs also to the bishop in Rome." The boundaries of the Roman diocese are, perhaps intentionally, not defined, but it appears certain that the Roman diocese comprised, in the main, the Nicene Council. It comprised the Lite- rasian provinces, or nearly the whole of Central Italy and the islands. See PATRIARCHATE. Nothing cer- tainly indicates that at this period any one conceded to the Roman bishop a jurisdiction over all the Occidental churches; and not only the Church of North Africa, in the following century, but also the diocese of Milan and the Church of Arelate, at a much later period repelled any claim of the Roman bishop to a jurisdiction over them. The canons of the Nicene Council were, how- ever, forged at Rome in the interest of the papy at an early period, and the words *Ecclesia Romana semper habuit primatum* were inserted. At the Council of Chalcedon (451) the Roman legate, Paschasius, read the canons with the forged addition, but the council protested at once, and opposed the genuine to the forged version of the Nicene canon. The Synod of Sarriac (377) set the Montanist right to the first canon. That Julius I (387-395), a really superior jurisdiction over other bishops, as canons 5 to 8 provide that in case a sentenced bishop desired to obtain a new decision from another synod, his judges must apply to Julius, bishop of Rome, he would declare himself or his sentence to be called or the judgment of the former was to be ratified, and until his decision was made the see of the sentenced bishop must not be filled. Julius might de-
PAPACY

Ported by a council which Rome herself recognizes as ecumenical. After the death of Leo, the papal chair was for nearly one hundred and fifty years filled by weak, insignificant men, who reasserted the papal claims of Leo. The period is known as the translatio potestatis

and who encountered the unanimous resistance of the Eastern patriarchs. When Felix II (483-492) ventured to excommunicate the patriarch of Constantinople, a complete schism between the Western and Eastern Churches took place, which lasted over thirty years.

Gelasius I (492-496) moaningly called the patriarch of Constantinople the bishop of the παπατζία of Heraclea, and proclaimed the principle that the pope's authority was higher than that of kings and emperors. When Pope Symmachus (501 or 508) was acquitted by a synod of Rome of the imputation of squandering the property of the Church, and other crimes, the partisans of the pope at this council declared that it did not behoove the council to pass judgment respecting the successor of St. Peter; and one deacon, Eunniadius (subsequently bishop of Padua), vindicated this decision by asserting that the Roman bishop is above every human tribunal, and is responsible only to God himself.

Facts like these prove the existence at this early period of the germ of the extreme papal theory, but even then the position they held, in the spiritual ascendancy, for which a divine origin was claimed, in order to make it an organic part of the doctrinal system of the Church. Innocent I (402-417) endeavored to put upon the canons of Sardica a far-reaching construction, and appealed to them for claiming a right of cognizance in all important ecclesiastical questions. Zosimus (417-418) asserted that the fathers that had conferred upon the Roman see the prerogative that his decision should be the last and decisive one. The fraudulent habit of ascribing the canons of the Synod of Sardica to theSynod of Nicaea, and that of Constantine's Council be came quite general in Rome. At the Synod of Eutychian, in 431, the Roman legates declared that Peter, to whom Christ had given the power of binding and unbinding, was continuously living and judging through his successor.

The first pope, in the real sense of the word, was Leo I (440-461). Being endowed by nature with the old Roman spirit of dominion, and being looked upon by his contemporaries, in consequence both of his character and his position, as the most eminent man of the age, he developed in him the idea of an ecclesiastical power, who had the right to determine how the life of the Christian Church should be conducted. In order to accomplish this object, he endeavored with great energy to transform the constitution of the Church in conformity with his ideal. As a theological writer, he used nearly all the arguments which the defenders of the papacy up to the present time have adduced from the Bible. As bishop of Rome, he carried through his claims to supreme power over the whole Church with a greater energy than any of his predecessors. The bishops of the African and Spanish churches submitted to his demands. Bishop Anastasius of Thessalonica applied to him to be confirmed, and when Leo granted his prayer, and extended his jurisdiction over all the Illyrian churches, Roman supremacy thereby gained an important foothold even in the East. In Gaul, however, he met with a more determined resistance on the part of Hilarus, the metropolitan of Arles, and though he procured from the emperor Valentinian III an edict which unconditionally subjected all bishops of the West Roman Empire to the primacy of Rome, he obtained only a partial victory. At the fourth eccumenical Council of Chalcedon (451) Leo's legates protested against the famous twenty-eighth canons of the Council, which elevated the patriarch of Constantinople, to equal officiality with the pope. But this protest, as well as that of Leo's successors, remained without effect, and the Eastern half of the Christian Church learned to look upon the bishop of Constantinople as its highest dignitary, whose claims were sup-

PAPACY
ern criticism. The conversion and baptism of Constantine by Sylvester; the inviolability of the pope in the pretended acts of a Synod of Sirmium, with the fabulous history of pope Marcellinus; the Constitution Sylvesteri, the Decretale Clementi (1174), Chapter III, Bull. X., shows an effort of selected legislation, and the close of the 6th century the forged additions to Cyprian's De unitate ecclesiae, to the Liber pontificalis, etc., all have the same tendency.

II. The Papacy of the Middle Ages. In the 7th and 8th centuries a series of important events added to the ecclesiastical ascendency of the popes a high and influential position among the secular governments of the world. In proportion as the Byzantine emperors lost their hold of Italy, and especially the city of Rome, it was easy to seize the power which the popes had shed their blood not for the Greeks, but for St. Peter, and for the good of their own souls. Charlemagne confirmed and enlarged the donation which his father had made, and on Dec. 25, 800, laid the deed of the enlarged donation on the tomb of St. Peter. See TEMPORAL POWER. Thus the popes became secular princes, though at first vassals of the Carolingian emperors; and they were led to conceive the plan of restoring the old world-empire of the Romans by the rule of the pope over the entire world. Soon after the establishment of the temporal power the popes availed themselves of the weakness of the Carolingian emperors to emancipate themselves from their authority; and, in order to efface the recollection that the secular power of the popes was the gift of the German princes, the story was started that Constantine had given Rome and Italy to pope Sylvester, and that this was the reason why the imperial capital had been removed to Constantinople. The actual power of the popes was, however, for several centuries not commensurate with their claims and aspirations. With the collapse of the Carolingian dynasty and the fall of the German emperors and the Carolingiania of France to the energetic rulers of Germany, the emperors in many cases asserted and enforced the right to depose and appoint popes, to prescribe laws for the Church, and to govern it according to the principles of state rather than those of the popes. These imperial rights were carried out by strong emperors in spite of the powerful support which the papal claims received theoretically from the famous collection of forged documents, known under the name of the Isidorian or pseudo-Isidorian decretales. The popes, from Clement I (91) to Damasus I (384), are there represented as rulers over a Church in which the clergy were disconnected with the State, and unconditionally subordinate to the pope. Episcopacy appears for the first time as an emanation from the papacy; synods are regarded as valid only when they have been called by the popes, and all their resolutions are said to need a confirmation by the popes, who appear vested with the supreme legislative, supervisory, and judicial powers. For many centuries this collection was the storehouse from which popes and papal writers took the materials of which they composed the constitution of the ecclesiastical claims of the papacy; but Protestant criticism so irrefutably established its spuriousness that the advocates of the papacy now content themselves with attempting to prove that the deception was not of a criminal character, and of such consequence, and that its primary object was not to enslave the papal power, but to secure the independence of the Church against secular rulers.

The first half of the 10th century is known as the period of "papacy," during which the papal chair, and to convert it into a family benefice; and even some of the unworthy occupants of the chair appear to have familiarized themselves with this idea, which was thwarted by the revolt of the public sentiment against the papal scandals. The vigorous interference of emperor Otto I, who had the last papal representative of "papacy," John XII, cited before a synod at Rome (963), which convicted him of murder, blasphemy, and all kinds of lewdness, and deposed him from his office, actually arrested the total decay of the papal dignity. The influence of the following emperors, especially of Henry III, secured the election of a number of popes (among them several Germans) who were of unimpeachable morality, and sincerely anxious to deliver the Church from the almost universal simony and licentiousness of the clergy. Their reformatory efforts were seconded by several new organizations which had arisen in the Church. The congregation of the bishops was needed to check the abuse of which the papal writers derived from the Isidorian decretales a new religious basis, and congregations of hermits in Middle and Upper Italy developed a new taste for the most rigid kind of asceticism, the principal representative of which is Petrus Damiani. About the middle of the 11th century a Roman monk, Hildibrand, who was a pupil of Cluny and a friend of Damiani, succeeded in effecting a complete change in the internal and external relations of the papacy. In order to emancipate the papal chair from the influence of the German emperors, he prevailed upon pope Leo IX (1048-1054), who owed his election to his cousin, emperor Henry III, to go to Rome in the character of a pilgrim, and to be there once more elected by the Roman clergy and people. One of the following popes, Nicholas II (1056-1061), committed the power of choosing the pope almost entirely to the College of Cardinals. In 1073 Hildibrand, after being for about twenty-five years the guide of the papal policy, ascended himself the papal chair under the name of Gregory VII. He is commonly regarded as the greatest pope of all times. He cleared away the abuse of which the authority of the pope over all nations of the world. The priesthood was regarded by him as the only power directly instituted by God, the power of secular rulers as the product of human agencies. The pope, as vicar of God, was to rule the Church, to depose kings, to determine the laws of the land, to enjoin and enforce the laws of divine right by his spiritual power, and able either to humble the people or to depose princes. The papacy he represented as the sun from whom all secular authority, also the empire, derived their light like the moon. He sternly enforced the law of prowess, compelled princes on an order that all priests, by renouncing the delights and cares of domestic life, might devote their exclusive labors to promoting the cause of the Church. To the claims which his predecessors had based upon the Isidorian decretales, Gregory added the doctrine of the infallibility and sanctity of the popes, and his right to depose princes and absolute subjects from the oath of loyalty. The period from Gregory VII to Innocent III and Innocent IV is almost a continuous conflict between the popes and the secular governments, during which the former, with an iron firmness, was the first to break the absolute power of princes upon the government and offices of the Church, and secondly to subject all secular governments to the pope and the Church. Only two years after his elevation to the papal see (1085) Gregory held a synod in Rome, which condemned all the acts of much popes, and forced every one under excommunication who should confer or receive
Eugenius IV (1431–1447), gained a complete victory over the Council of Basle, which, after being gradually abandoned by the Church, by the very pope whom it had opposed to Eugenius, and finally by its own members, was returned to Rome in 1439, and then to the support of the French government. The power of the papacy was now gradually restored, and at the close of the 16th century Innocent VIII (1484–1492) and Alexander VI (1492–1503) once more attained the highest cli
dam of depravity which has ever disgraced any episcopal See.

The Papacy since the Reformation. By the Reormation of the 16th century a considerable portion of Christian Europe totally broke off its connection, not only with the papacy, but with the entire Church sys
tem, over which the popes, in the course of the last thousand years, had gradually increased the power. Though arising from a theological controversy of so small dimensions that pope Leo X regarded it as a monastic quarrel, the Reformation at once gathered a gigantic strength from the latent contempt of the papacy which animated millions of minds. The efforts of Leo X and his successors to crush the spreading secession by the secular arm were unsuccessul; and although the new order of the Jesuits succe
ded in arresting its progress in some of the European countries, the Scandinavian kingdoms, Great Britain, Holland, Spain, were involved, and many of the possessions of the Roman pontiff (subreme Romano pontifici omnium humanorum creaturarum declaravimus esse de necessitate suavis).

This excess of daring arrogance brought on a fatal collapse. As in England the nobility and commons had extorted from their cowardly king the Magna Charta as a bulwark against royal and papal despotic presumption, so in France the Assembly of Estates derided the papal excommunication; and when Boniface himself was imprisoned, and his successors compelled to reside at Avignon in slavish dependence upon the French kings, the papal authority received in the public estima
tion a sharp and final check from which it never entirely recovered. The residence of the popes at Avignon, or, as it was called even before the times of Luther, the Baby
lonian exile of the popes, was followed by the great Schism (1378–1409), when Christendom was scandalized by the rival claims of two or, at times, of three vicars of God, who hurled against each other frightful anathemas. The papal theory that the pope see shall not be judged of by any one was thus most completely exploded, for the secular governments, the schools, the clergy, and the laity all had to make their choice between the claims of the French kings and the Church. The reformation of the Church in its head and members met with the heartfelt responses from all sections of the Church, and led to the convocation of the general councils of Pisa (1409), Constance (1414–1418), and Basle (1431–1433), which assumed the supervision of the eccumenical councils over the popes, and did not hesi
tate to depose popes and elect new ones. The principles which guided these councils were radically and irreconcilable at variance with the theories of papal absolutism which Gregory VII and his successors had so boldly proclaimed. How general the acquiescence of the
time in the reformatory attempts of these councils was may be inferred from the fact that when the Council of Pisa was called both the rival popes were abandoned by their cardinals, who united with two hundred bishops, three hundred abbots of monastic in
titutions, many hundred doctors of theology and canon laws, and the envoys of the secular governments in the deposition of the popes. If the central idea of these councils, the superiority of the eccumenical councils over the popes, could have been carried through, the develop
mont of the Roman Church would have been a radically different turn. But unfortunately the cuning of pope Martin V (1417–1431), who had been elected by the Council of Constance, knew how to thwart the general demands for a reformation by separate treaties with the principal Christian nations; and his successor,
PAPACY against being stripped of the more extensive authority of their predecessors; the majority of Catholic scholars chafed against the condition of abject servitude which the situation imposed on them. In the late 17th, and early 18th, Jesuits, assigned to them; and many governments became alarmed at the excessive claims, in behalf of the papacy, which were set up in the schools and the books of the Jesuits; but public sentiment in Catholic countries was, on the whole, in their favor. Thus, the popes were emboldened to revert from time to time the medieval ideas of their predecessors, the most significant fact in this respect being the famous bull In Canonis Dominii, to which Urban VIII (1639-1644) gave its final form, and in which not only Saracens, pirates, and princes, who incurred clerical enmity, were placed in Looberha, Zwillingias, and Calvinists were mathematized.

The Peace of Westphalia (1648) demonstrated, however, anew, that the actual influence of the popes upon the secular affairs, even in Catholic states, had irretrievably departed. The representatives of Protestant and Catholic governments met in common council to deliberate upon the peace of the world; the legal existence of Protestantism was recognized by all Catholic governments; while the pope, by his solitary and entirely ineffectual protest, revealed to the world, in a very contemptuous manner, how much his more theoretic ideas of the Middle Ages might still be adhered to by the ecclesiastical functionaries and devoted theologians, he had lost all control of the political world. In fact, the popes, from a political point of view, more and more appeared as the rulers of a petty Italian state (the states of the Church) rather than as the heads of a grand theoretic world-empire. Even in the College of Cardinals this view gradually gained strength; and while none of the old claims of the papacy were discarded, many popes appeared to care as much for their particular state. The greater importance which now attached to the pope's character as a secular prince, manifested itself in the habit of selecting nearly all the occupants of the papal chair from among the great Italian families, and in the fact that none but Italians have been elected popes since Adrian VI (1522, 1523), who was a native of Holland. At the same time a tendency showed itself at times among the cardinals to increase the influence of their college by electing popes who were chiefly remarkable for the absence of energy and any prominent qualities of mind. Thus it was said that Innocent X (1644-1655) was made pope on the ground of his mistakes, his melancholy, and his idleness; Clement X (1667-1670), a feeble octogenarian, "did nothing except to weep over the administration of his family favors;" Benedict XIII (1727-1730) "seemed always to regard the convent of the Dominicans as his workhouse, where his hypothetic theories of Coscia, bartered away both Church and State, until primitive Christian simplicity became utterly ridiculous in a court so recklessly conformed to the world;" and Clement XI (1720-1740) "was raised to the throne when old and blind" (Hase, Church History).

The episcopal tendencies in the Catholic Church which had made such a gallant struggle against the absorption of the old rights of the episcopacy by papal absolutism at the councils of Pisa, Constance, and Basle, and which even at Trent had been sufficiently powerful to thwart a part of the papal designs, made at the close of the 17th century a grand adjustment. An assembly of French bishops and barons, which was convoked by Louis XIV in 1682, defined the views of the Gallican Church in regard to the prerogatives of the papacy in the four following famous propositions: 1, That Peter and his successors, the Roman pontiffs, have supreme power, not in secular, but not in secular affairs; 2, That this power is limited, not only by the decrees of the Council of Constance relating to the authority of general councils, but, 3, by the established prescriotions and usages of the Gallican Church; and, 4, that the decisions of the pope, when not sustained by the authority of the Church, are not infallible. This was one of the grandest and most important manifestations on the part of the bishops of the Catholic world against the papal theories of Gregory XIII (1572-1585), and did much to curtail them, with but few exceptions, concurred in these resolutions; and thus one of the largest and oldest Catholic countries bore an unanimous, and therefore so significant a testimony, that France and the popes were radically disagreed as to the powers which in the Catholic Church belong to the papacy. The pope, Innocent XI (1670-1689), parried the dangerous blow with courage and skill. He had the proposition of the Gallican Assembly publicly burned at Rome by the common hangman, and refused to sanction the consecration of any newly appointed bishops until the revocation of these six propositions. The bishops in this conflict showed themselves as cowardly as the pope was resolute, and the king likewise soon effected a reconciliation by complying with the pope's demand. The bishops of France for a long time remained divided into a Gallican and a papal or Ultramontane party, but the latter steadily gained ground.

A still greater triumph was gained by the papacy in the long doctrinal controversies caused by a posthumous work of bishop Jansenius of the Netherlands. The Jansenists, who were the adherents of a school of thought which first came into prominence and was presently applied to the doctrine of predestination, were received with approval, the formal principles of the school were accepted by many of the most eminent theologians of France and other countries, but the Jesuits caused five of its propositions to be condemned. The friends of Jansenius contended that the five propositions had been misunderstood at Rome, and had a sense different from the one in which they were condemned by the pope. It was the first time that the question came up whether the pope had not only the right to make decisions in doctrinal controversies, but could also demand that his interpretation of any theologic propositions be accepted as correct, and that Alexander VII (1655-1667) made this demand, and assured the world that the propositions of Jansenius were actually condemned in the sense intended by Jansenius. The Catholic world was for a long time agitated by this question; but as the French government was determined upon the extermination of the Jansenists even more than the pope, the novel demand of the papacy for an acknowledgment of its right to give an infallible interpretation of any theologial work was tacitly acquiesced in. Only a small body in the Netherlands, the so-called Jansenists, persisted, under an archbishop of Utrecht, and the bishop of the duchy of Jansen, a papal claim, maintaining to the present day, in spite of the oft-repeated papal anathemas, an independent ecclesiastical organization.

About the middle of the 18th century a violent tempest Collects throughout Catholic Europe against the papacy. The educated classes of these countries were very largely pervaded by a disbelieve in the entire doctrinal system of the Catholic Church, and regarded the papacy as the chief obstacle to the progress of enlightenment and culture among the masses of the population. The Jesuits were viewed as the worst outgrowth of the papal system, and became as such the objects of intense hatred. In 1759 Pombal excluded them from Portugal and confiscated their property; and when the pope interceded for them all connection with Rome was broken off. The example of Portugal was followed by the Bourbon courts of France, Spain, Parma, and Naples, all of which expelled the Jesuits, and ridiculed the threats of excommunication with which the pope threatened some of them. When the papal chair became vacant, in 1769, the cardiac influence of these orders was secured by the election of cardinal Ganganelli as pope Clement XIV (1769-1774), who, after some hesitation, yielded to their urgent demands for the abolition of the Jesuits, which he announced by the brief called Dominus ac Redemptor noster, on August 16, 1773, and restored the great step which was required by the peace of the Church. About the same
time a German bishop, Nicholas of Hontheim, resumed the work of the Gallican Assembly of 1689. Under the name of Justinus Febronius he published a book (1750), in which the superiority of general councils over the popes, and the divine and independent rights of the bishops, were defended with great vigor and scholarship. The book created an immense sensation, but the author languished on his death-bed (1778). Soon after (1786), the archbishops of Mayence, Tèrves, Cologne, and Salzburg agreed at Emms upon the so-called Emser Punction, which demanded the establishment of an independent national church. Germany, the majority of the German bishops sided with the pope against the archbishops, this attempt likewise proved a complete failure. The same fate awaited the radical measures by which the emperor Joseph II of Austria endeavored to disconnect the Roman Catholic Church of his dominions from the pope, and to convert it into a strictly national agency for the education of the masses of the population. Although pope Pius VI (1774-1799), by a personal visit, in vain endeavored to make an impression upon the emperor, public opinion, as well as the bishops, opposed the efforts for reform, and the emperor finally abrogated the measure.

The Revolution of 1789 threatened the papacy with as great territorial losses as the Reformation of the 16th century. For a time France appeared to be lost to the papacy. Christianity itself was abolished by the new revolutionary constitution (1790). The pope (1786-1799) again permitted the exercise of Christian worship. French armies proclaimed in Rome the Roman republic, and carried pope Pius VI as a prisoner to France, where he died. His successor, Pius VII (1800-1823), was the first pope for many centuries whose election did not take place in the city of Rome. A concordat concluded with Napoleon Bonaparte in 1801 restored to the pope his ecclesiastical and temporal power; but when he revived all the old hierarchical claims of the papacy, the emperor again (1808) occupied the papal territory, and revoked the donation of his predecessor Charlemagne (1809); and when he was excommunicated by the pope, he carried the letter as a prisoner to Fontainebleau. The downfall of the Napoleonic rule and the Congress of Vienna put an end to the endangered position of the papacy. The ruling monarchs of Europe, the empress of Austria and Russia, and the king of Prussia, desired the co-operation of the papacy for the suppression of liberal ideas. Although the protest of the papal delegate, Consalvi, against the work of the Congress of Vienna was smiled at, and the pope was content to see the victorious armies of the 'emperor' reoccupy his old positions, the emperor even occupied the Papal States, temporarily, even those of the Protestant states, not only consented to the restoration of the temporal power of the popes, but regulated the affairs of the Catholic Church in the several states by means of Concordats (q.v.), which, though proceeding from the assumption that the secular governments were at least a co-ordinate and not, as the mediaval popes claimed, a subordinate power, conceded to the popacy a far-reaching influence, and even a vigorous support in ecclesiastical and educational matters. The concessions thus made were still more liberal under Leo XII (1823-1829), Pius VIII (1829-1830), and Gregory XVI (1831-1846), to extend again the spiritual influence of the Church upon the Catholic population of Europe, and to recover part of the lost ground. Immediately after his return to Rome (1814) Pius VII restored the order of the Jesuits, who were once more, as in the days before their suppression, the boldest champions of all the claims of the papacy, especially in the Catholic countries, and the violent opposers of liberal institutions.

The most notable success which was won during the first half of the 19th century by papal policy was the great decline and almost complete extinction of the Gallican and Episcopalian tendencies among the bishops and clergy. Even governments which might have been expected to oppose with all their might the spread of ultra-papal tendencies, as the Orleans dynasty in France, and the Protestant governments of Germany, made little or no effort to prevent the elevation of the most zealous adherents of the papal theories to the episcopal seats, and the coercion of the lower priesthood to the same views. It soon became apparent that in the Catholic Church of the first half of the 19th century the same is true of Pisa, Constance, and Bzde would be impossible, and the papacy, in its conflicts with the secular governments, the representative assemblies, and the liberal spirit of the age, could at least rely on an almost unanimous support of Cardinal Bzde against the lower clergy. But the masses of the population in a number of Catholic countries, as was shown by elections and by revolutionary movements, preferred liberal institutions in spite of all declarations and even excommunications of the papacy. This was especially apparent in the states of the Church, where only Austrian bayonets could prevent the people from overthrowing the temporal power of the popes. The elevation of Pius IX to the papal chair (June 16, 1846) not only encouraged the hopes of those who believed that some concessions to the liberal tendencies of the political world would be compatible with the interests of the state of the papacy, but even forth Utopian dreams of advanced liberals like the Italian priest and philosopher Gioberti, who enthusiastically maintained that the papacy, at the head of a confederacy of liberal Italian states, might bring about a full revolution in Italian political science. When Bzde was created, and might place Italy in the front rank of Christian nations. These hopes were bitterly disappointed when the pope first hesitated, and finally refused, in 1848, to take part in the Italian uprising against Austrian rule, and the republican government was established in Rome which decreed the deposition of the pope. It needed an interference of the French army to restore him to his throne (1850); but in 1859 and 1860 the larger part of the states of the Church concluded by popular vote to join the new kingdom of Italy, and the city of Rome itself was only prevented from following this example by French troops until 1870, when the withdrawal of the French garrison was at once followed by the declaration of the Romans in favor of annexation to Italy, and by the cessation of the temporal power of the pope.

The Vatican since the Declaration of Infallibility.

—Only one year before the downfall of the temporal power, the pope convened a general council at Rome, which was to elevate the ultra-papal theory to its climax by proclaiming the papal infallibility as a dogma of the Church. For a few years the popes, even before the times of Gregory VII, the popes had acted as if they were infallible. They had not only demanded, but, as far as lay in their power, enforced submission to their doctrinal decisions. They had forbidden appeals from their tribunal to a general council, and even disallowed the plea of the Jansenists and other censured schools that the popes had erred in understanding the right sense of the censured books. The Church had practically submitted to these claims, but only from want of organized and efficient opposition, not from any regard to the principle of infallibility. The Concordats of 1817 and the Gallican Assembly of the 17th century irrefutably prove the infallibility. The Jesuits, since the days of Bellarmine, have been foremost in discussing and defending the infallibility theory, but no pope until Pius IX had dared to solemnly declare it as a dogma of the Church. But Papal encyclicals and conciliations have had the indication of what might be expected from him by proclaiming, in 1854, the opinion held by many Catholic theologians of the immaculate conception of the Virgin Mary as a doctrine of the Church, and by the syllabus of Bzde, 1864, which overthrowing centuries of teaching and principles of modern civilization and progress that has emanated from any pope. Nevertheless, when the design of the pope to proclaim papal infallibility as a Church doctrine became known, many bishops, especially in the
Teutonic countries, earnestly declared against the intended measure, not so much because they professed a personal disbelieve in the doctrine, but because they regarded its promulgation as extremely inopportune, and fraught with dangers to the best interests of the Church. The Church, except a few of the United States on the Eastern shores, in Germany and Switzerland, however, a number of distinguished theologians persisted in their opposition, and originated the Old Catholic movement. See Old Catholics. The membership of the Old Catholic Church is estimated at about 200,000, a small number in proportion to the 200,000,000 at which the nominally Catholic population of the globe is estimated. But the papacy, with its new claims not less than with its old, lacks the recognition of the largely Catholic countries, as has been abundantly proved by the history of the years since the Vatican Council. Only a few months after the proclamation of the new doctrine, the city of Rome defied the papal excommunication by voting for the abolition of the temporal power and annulling the kingdom of Italy. The Italian government has not, however, made great progress even among the laity, the elections to the General Assembly held in 1872 gave a majority which is openly unfavorable to the temporal power and other papal claims. In Austria, next to France the largest among the Catholic countries, the lower house of the Vienna Parliament has declined its sympathy with the principle of religious liberty, and even with the Old Catholics. In all the other Catholic countries of Europe and America the papacy has but an uncertain hold of governments and parliaments. It has had, since 1870, more or less serious conflicts with Spain, Mexico, Brazil, Venezuela, and the United States of Colombia, and, except in the little kingdom of Belgium, where the Parliament is under the complete control of the Ultramontane party, it cannot rely on the subservience of a single secular government. And even Ultramontane Belgium finds it no longer possible to remain on good terms with the House of the Roman king, though he is under papal excommunication for having overthrown the temporal power of the papacy.—The relations of the papacy to non-Catholic governments have been seriously affected by the Vatican Council. In view of the past history of the papacy, the governments of Germany and Switzerland have deemed it necessary to introduce new laws on the administration of the property of the Church and on public education, which have kindled new and bitter conflicts with the papacy. Russia remains in the attitude of the council of 1870 on the property of the Catholic Church. Although stripped of his secular power, the pope, in 1876, was still treated by most of the Catholic and some non-Catholic governments as a sovereign, the following states having the Vatican Council accorded, however, on July 18, 1870, to the wishes of the pope, 586 members of the council voting for, 2 against the proposition, and 106 being absent, most of whom were unwilling to vote favorably. See Vatican Council. All the bishops of the opposition gradually submitted to the promulgated doctrine, except a few of the United States on the Eastern shores.

For the bishops from Peter to Pontianus the Catalogus Librarius substantially followed the chronicles of Hippolytus (beginning of the third century). The Catalogus Librarius was followed by the Catalogus Leontini, compiled under Leo the Great (440-441), and other continuations. A thorough and exhaustive work on all papal catalogues in Lipsius's Chronologie der römischen Bischofs (Kiel, 1869).—The earliest history of the popes is the Liber Pontificalis, which was long ascribed to Anastasius, bishop of Amasea in Pontus, and the Librarius of Pisa, but the account, however, is the product of the last biographies of the work only. It was edited by Busaeus (Mentz, 1602); Faesslotti (Paris, 1619); Bianchini (Rome, 1718 sq. 4 vols.); Muratori (in the three volumes of the Script. Ret. Ital.); Vignoli (Rome, 1724 sq. 3 vols.); among the very numerous histories of the popes we quote the following: F. Petrarca, Vita dei Pontifici et Imperatori Romani (Florence, 1478); Panvinii, De Vita Rom. Pontificum (ibid. 1626); Sacchi di Palatina, Hist. de Vita Pontificum Rom. (ibid. 1626); Tempesta, Vita S淡淡, Pontificum Rom. (Rome, 1599); Cinconii, Vita et gesta Rom. Pontif. et Card. 1787; Peroni and Fabbrini, pp. 511-519; Pallazi, Gesta Pontif. Rom. (Ven. 1687 sq. 5 vols.); Paggi, Brevisarium gest. Pont. Rom. (6 vols.); Bower, The Lives of the Popes (Lond. 1730, 7 vols.); Brusa, Hist. des Papes (Hague, 1732, 5 vols.); Wallch, Geschichte des päpstlichen Papiers (Göttingen, 1758); Spittler, Vorlesungen über die Geschichte des Papatthums (Hamb. 1828); Smet, Geschichte der Päpste (Cologne, 1829, 24 vols.); F. Müller, Die römischen Päpste (Vienna, 1847-1857, 17 vols.); Artaud de Montor, Hist. des souverains Pontifs Rom. (Paris, 1849 sq. 8 vols.); Alphonse de Puysegur, Les Papes et les pontificats (Paris, 1863); Heinrich Graf von Poppe, Geschichte der Päpste (Ratisbon, 1864).—Among the best works treating only a part of the history of the papacy are: Ranke, Die römischen Päpste, ihre Kirche und ihr Staats in den 16. und 17. Jahrhundert (Berlin, 1834 sq. 5 vols.); Seel, Geschichte der Päpste (Hamburg, 1839); Boll, Geschichte der Päpste (Cologne, 1849, 2 vols.); Heister, De生意, Rom. Pontif. (Paris, 1853; 2 vols.); Seevogel, De privilegiis et simplicibus Rom. Pontif. 1; K. Bazzottetti, PRIVILEGIO S. Petri vittis (Rome, 1756, 6 vols.); Orsi, De irresponsabili Rom. Pontif. judicio; Scardi, De Suprema Rom. Pontif. auctoritate; Chielo, De Rom. Pontif. (ibid. 1887); Kemmener, De Rom. Pontif. prin. (ibid. 1889); Kenrick, The Pontifices of the Apocalypse. Pont. ejusque juribus (Augsburg, 1834); Le Maistre, Du Pape (Par. 1820; one
PAPADOPOLI, Nicolao Commentus, a noted Italian theologian, was born Jan. 6, 1655, in the isle of Candia. When eleven years old he came to Rome, where he was educated in the college of St. Athanasia. In 1672 he joined the Order of the Jesuits, whom he entered at Rome. In 1685 he was appointed professor of canon law in the University of Padua, and died in 1740 (Jan. 20). Besides a number of dissertations on ecclesiastical law, he wrote, De differentia Gratios et gratiorum specierum; - - Promotiores mystagogiae ex purae canonico (Venice, 1697), in which two works he endeavors to show that the difference between the Latin and Greek churches is only a very small matter. He also left in MSS. Instructa Graeco-Latina dicta in saeclum; and a voluminous work of thirteen volumes, entitled Opus armorum, in which he treats of the saints in the Greek Church. See Fabricius, Bibliotheca Graec. ed. Harles, vol. xi; Jocher, Allgemeines Gehilten-Lexicon, III, 1232; continued by Rotermund, v, 1519; Theologische Universa-Lexicon, s. v.

Papaeus, a Scythian name of Zeus (Jupiter).

Papal Councils are the principal source for the history of the Roman bishops down to the 6th century. These councils are divided into two classes, the Greek and the Latin. Of the earliest Greek are the lists given by Irenaeus (Adv. Haereses, III, 8) and by Eusebius (Chronica et Hist. Eccles.). Jerome has depended altogether on Eusebius, and is therefore of importance only in so far as he supplements or corrects Eusebius. Of the later Greek chronicles are to be regarded the Xenodochia of Philip or St. Athanasia in the year 863; George Synkellos, and his continuator Theophanes, the chronography of patriarch Nicephorus; all based for the first three centuries on Eusebius. Of the Latin, and the most important for the first three centuries, is the so-called Catalogus Liberinus, which is found in the collection by the chronographer of the year 534, and goes down to the time of Liberius (352-356). On it is based the so-called Felician catalogue (till Felix IV, t 590), also the Liber Pontificum. The Catalogus Liberinus is followed by the Catalogus Leoninus (compiled under Leo the Great), which comes down to Sixtus III. Further cataloguing progressed down to the popes of the 6th century (among them one in several handwritings comes to Hormisdas, t 629). These are followed by the Catalogus Felicianus, of which the Vita Paparum, together with a Codex Canonum, coming down to Felix IV, are the first of the Liber Pontificiall (q. v.). See Lipsius, Chronol-gie der römisichen Bischöfe (Kiel, 1869).

Pape, Gabriel, an American rabbi, was born in Germany about 1813. He came to this country about 1835, and, though then a young man, found favor at Philadelphia, and was at one time the leader of the congregation Beth Israel. Arriving in Philadelphia when the Jews were few in number, he was enabled to continue his ministrations to a time when the local Jewish population was extensive and influential, possessing a half-dozen spacious synagogues, many charitable institutions, and a name for probity and intelligence unexcelled by any in the land. He died in 1872. In his last years of the ministry Mr. Pape did not appear much in public, limiting his efforts to mere congregational work; but he was always one of the most energetic and useful of the Jewish leaders of Philadelphia. He figured prominently in the Board of Jewish Ministers, and was beloved by his flock and esteemed by the entire community. He was a mild, estimable, and pious gentleman, of deep erudition, unassuming, and austerely pious in his habits.

See Jewish Messenger, N.Y., Jan. 8, 1872. (J. H. W.)

Papebroch (more correctly Paperbroch), Daniel, a learned Belgian Jesuit, was born at Antwerp March 17, 1628; entered the Society of Jesus in 1645, and was by that body educated. He then became a teacher for a while, but finally decided to study theology, and went to Louvain. In 1658 he was ordained priest, but instead of taking a pastorate he taught philosophy in his native place, until Bolland employed him as assistant in the Acta Sanctorum. In 1658 the learned editor of the Acta sent Paperbroch to Italy to search the archives, and there he was engaged until 1662. After his return home Paperbroch wrote the biography of St. Patricius, and later, with Henschen, composed the Acta of the month of March, then April all alone; and the first three volumes, and finally four volumes with Baert and Jenning, writing May and part of June. As Paperbroch denied the pretended origin of the Carmelites Order from the prophet Elias, he was severely attacked by that order. He was also subjected to trial by the Inquisition, and its tribunal at Toledo condemned, in 1656 and 1697, the fourteen volumes of the Acta SS., as heretical. At Rome, however, only the theology of the pope, the Propylæum ad SS., month of May, eighth volume, was condemned. A controversy resulted, and continued until 1698, when the Congregatio Inquisitiva commanded both parties to be silent, and threatened with excommunication the disobedient. This ended the strife. Paperbroch died June 28, 1714. His biography is in Acta SS., month of June, vol. vi. (J. H. W.)

Pappeliers, a term used in the 13th century to designate the party which uncompromisingly supported the papacy. It was applied chiefly to the mendicant friars and their adherents, and with special reference to their pietistic affection of poverty and their ascetic way of life. After the return home Paperbroch wrote the biography of St. Padricus, the Propylæum ad SS., month of May, eighth volume, was condemned. A controversy resulted, and continued until 1698, when the Congregatio Inquisitiva commanded both parties to be silent, and threatened with excommunication the disobedient. This ended the strife. Paperbroch died June 28, 1714. His biography is in Acta SS., month of June, vol. vii. (J. H. W.)

Papenrecht, Cornelius P. von, a Roman Catholic theologian, was born at Dort in the year 1686, and died in 1758, as canon of Mechlin, after having occupied for twenty-four years the office of secretary to the cardinal d'Alme, archbishop of Mechlin. Papenrecht wrote a History of the Church of Utrecht since the Change of Religion (Mechlin, 1725), and Analecta Belgica (Hague, 1748, 6 vols.), a collection of records bearing upon the history of Belgium, enriched by his comments.

Paper. See Writing.

Paper-reed is the false translation in the A. V. of the Heb. הַנַּדְנַד, .askh, a naked pole, referring to the
meadows on the banks of the Nile, which were for the most part destitute of trees. See Nile.

By the "paper-reed" the translators of the A. V. doubtless intended to designate the famous Egyptian *papyrus*, of which we borrow the following account chiefly from Chambers's Cyclop. s. v. The *papyrus* is a genus of plants of the natural order Cyperaceae, of which there are several species, the most important being the Egyptian papyrus, or "papyrus of the ancients" (*Papyrus antiquorum*, the *Cyperus papyrus* of Linnaeus), a kind of sedge, from eight to ten feet high, with a very strong woody, aromatic, creeping root; long, sharp-keeled leaves; and naked, leafless, triangular, soft, and cellular stems, as thick as a man's arm at the lower part, and at their upper extremity bearing a compound umbel of extremely numerous drooping spikelets, with a general involucre of eight long filiform leaves, each spikelet containing from six to thirteen florets. By the ancient Egyptians it was called *pupu*, from which the Greek *papyrus* is derived, although it was also called by them *byblis* or *delta*. The Hebrews called it *gome*, a word resembling the Coptic *gom*, or "volume." Its modern Arabic name is *berdi*. So rare is the plant at the present day in Egypt, that it is supposed to have been introduced either from Syria or Aethiopia: but it has been seen till lately in the vicinity of the lake Menzilah, and specimens have been sent to England; and as it formerly was considered the emblem of Northern Egypt or the Delta, and only grown there, if introduced it must have come from some country lying to the north of Egypt. It has been found in modern times in the neighborhood of Jaffa, on the banks of the Anapus, in the pools of the Liane, near Syracuse, and in the vicinity of the lake Thrasymenus. It is represented on the oldest Egyptian monuments, and as reaching the height of about ten feet. It was grown in pools of still water, growing ten feet above the water and two beneath it, and restricted to the districts of Sais and Sebennytus. The *papyrus* was used for many purposes both ornamental and useful, such as crowns for the head, sandals, boxes, boats, and cordage, but principally for a kind of paper called by its name. Its pith was boiled and eaten, and its root dried for fuel. The *papyrus*, or paper of the Egyptians, was of the greatest reputation in antiquity, and it appears on the earliest monuments in the shape of long rectangular sheets, which were rolled up at one end, and on which the scribe wrote with a reed called *kaauk*, with red or black ink made of an animal carbon. When newly prepared, it was white or brownish-white and lissom; but in the process of time those papyri which have reached the present day have become of a light or dark brown color and exceedingly brittle, breaking to the touch. While *papyrus* was commonly used in Egypt for the purposes of writing, and was, in fact, the paper of the period, although mentioned by early Greek authors, it does not appear to have come into general use among the Greeks till after the time of Alexander the Great, when it was extensively exported from the Egyptian ports under the Ptolemies. Fragments, indeed, have been found to have been used by the Greeks centuries before. It was, however, always an expensive article among the Greeks, and a sheet cost more than the value of a dollar. Among the Romans it does not appear to have been in use at an early period, although the Silvilline books are said to have been written on it, and it was cultivated in Calabria, Apulia, and the marshes of the Tiber. But the staple was no doubt imported from Alexandria, and imported or adapted by the Roman publicans, or other dealers in merchandise. So extensive was the Alexandrian manufactory that Hadrian, in his visit to that city, was struck by its extent; and later in the empire an Egyptian usurper (Firmus, A.D. 272) is said to have boasted that he could support an army off his materials. It continued to be employed in the Eastern and Western Empire till the 12th century, and was used among the Arabs in the 8th, but after that period it was quite superseded by parchment. At the later periods it was no longer employed in the shape of rolls, but cut up into square pages and bound like modern books. See Wilkinson, Anc. Egypt. ii, 95, 96. See Rees; Rush.

**Paphia**, a surname of *Aphrodite* (Venus'), derived from a temple in honor of this goddess at Paphos, in Cyprus.

**Paphnutius of Thebais**, a noted martyr of the early Church, flourished near the opening of the 4th century, as bishop of a city in the Upper Thebait. During the Maximian persecutions he lost an eye, and was sent into the mountains. Paphnutius' ascetical life and martyrdom made him notorious, and he was brought to the attention of the emperor Constantine, who learned to highly esteem him. When later again he attended there, he was deputed (as delegate of the Niceman Council (A.D. 325), and there opposed the proposition for the celibate life of the clergy. The doubts as to the authenticity of Paphnutius' opposition are dispelled by Lea in his *Hist. of Vorbalis O.Ec. Cbry. (p. 54). See also Neale, Hist. of the Eastern Church (patrimarchate of Alexandria), i, 147 sq.; Socrates, Hist. Eccles. i, 11. Paphnutius probably attended also the synod at Sardica in A.D. 343. He died after that event. Another Paphnutius was a follower of Theophilos, and an opponent of the extravagant anthropomorphism. He flourished about the close of the 4th century.

**Paphos** (Παφος, of unknown etymology), a city of Cyprus, at the western extremity of the island, of which it was the chief city during the time of the Roman dominion, and there the governor resided. This functionary is called in the Acts of the Apostles (xiii, 7) "deputy." The same word "depute" is said to have been Sergius Paulus. The word *deputy* signifies procuration. It implies that the province administered by such an officer was under the especial rule of the senate. See Depu. Cyp. Cyprus had originally been reserved by the emperor to himself, and governed accordingly by a
PAPHOS

propritor; but finding the island peaceful, and troops wanted in other parts of the empire, Augustus exchanged it with the senate for a more distant and troubled province, and the governor is therefore correctly styled in the Acts deputy or procurator. At this time Cyprus was in a state of considerable prosperity; it possessed good roads, especially one running from east to west through the whole length of the island, from Salamis to Paphos, along which Paul and Barnabas travelled; an extensive commerce, and it was the resort of pilgrims to the Paphian shrine from all parts of the world (Fairbairn). The two missionaries found Sergius Paulus, the proconsul of the island, residing here, and were enabled to produce a considerable effect on his intelligent and candid mind. This influence was resisted by Elymas (or Bar-Jesus), one of those Oriental "sorcerers" whose mischievous power was so great at this period, even among the educated classes. Miraculous sanction was given to the apostles, and Elymas was struck with blindness. The proconsul's faith having been thus confirmed, and doubtless a Christian Church having been founded in Paphos, Barnabas and Saul crossed over to the continent and landed in Pamphylia (ver. 13). It is observable that it is at this point that the latter becomes the more prominent of the two, and that his name henceforward is Paul, and not Saul (Σαύλος εις Ἑλλάδα, ver. 2) (Smith). See PAUL.

The name of Paphos, without any adjunct, is used by poets and by writers of prose to denote both Old and New Paphos, but with this distinction, that in prose writers it commonly means New Paphos, while in the poets, on the contrary—for whom the name Palm-Paphos would have been unwieldy—it generally signifies Old Paphos, the more peculiar seat of the worship of Aphrodite. In inscriptions also both towns are called "Paphos." This indiscriminate use is sometimes productive of ambiguity, especially in the Latin prose authors.

1. Old Paphos (Παλαιόπαφος), now K'uk'a or Koulikia (Engel, Cypriol, i, 125), was said to have been founded by Cinyras, the father of Adonis (Apollod. iii, 14); though, according to another legend preserved by Strabo (xi, 563)—whose text, however, varies—it was founded by the Amazons. It was seated on an eminence ("celis Paphos," Virgil, Æn. x, 51), at the distance of about ten stadia, or 1½ miles, from the sea, on which, however, it had a roadstead. It was not far distant from the promontory of Lephyrium (Strabo, xiv, 683) and the mouth of the little river Dicamus (Hesych. s.v. Βοῦπερος). The fable ran that Venus had landed there when she rose from out the sea (Tactit. Hist. ii, 8; Mela, ii, 7; Lucan, viii, 466). According to Pausanias (i, 14), her worship was introduced at Paphos from Cyprus; it is much more probable that it was of Phoenician origin. See PHOENICIA. It had been very anciently established, and before the time of Homer, as the grove and altar of Aphrodite at Pal-

phos are mentioned in the Odyssey (vii, 387). Here the worship of the goddess centred, not for Cyprus alone, but for the whole earth. The Cinyraeans, or descendants of Cinyras—Greek by name, but of Phoenician origin—were the chief priests. Their power and authority were very great; but it may be inferred from certain inscriptions that they were controlled by a senate and an assembly of the people. There was also an oracle here (Engel, i, 483). Few cities have ever been so much sung and glorified by the poets (comp. Euhychus, Suppl. 553; Virgil, Æn. i, 415; Horace, Od. i, 19, 30; iii, 28; Stat. Silv. i, 2, 101; Aristoph. Lysia, 833, etc.). The remains of the vast temple of Aphrodite are still discernible, its circumference being marked by huge foundation-walls. After its overthrow by an earthquake, it was rebuilt by Vespasian, on whose coins it is represented, as well as on early and later ones, and especially in the most perfect style on those of Septimius Severus (Engel, i, 150). From these representations, and from the existing remains, Hetsch, an architect of Copenhagen, has attempted to restore the building (Müller's Archäol. § 298, p. 261; Eckhel, iii, 86). See VENUS.

Ruler of the Temple of Venus at Old Paphos.

2. New Paphos (Παφός Νέος), now Bačia, was seated on the sea, near the western extremity of the island, and possessed a good harbor. It lay about sixty stadia, or between seven and eight miles, north-west of the ancient city (Strabo, xiv, 688). It was said to have been founded by Agapenor, chief of the Arcadians at the siege of Troy (Homer, Ili. ii, 609), who, after the capture of that town, was driven by the storm which separated the Grecian fleet on the coast of Cyprus (Pausan. viii, 5, § 3). We find Agapenor mentioned as king of the Phthians in a Greek distich preserved in the Aeschylos (i, 181, Brunk); and Herodotus (vii, 90) alludes to an Arcadian colony in Cyprus. Like its ancient namesake, Nea Paphos was also distinguished for the worship of Venus, and contained several magnificent temples dedicated to that goddess. Yet in this respect the old city seems to have always retained the pre-eminence; and Strabo tells us, in the passage be-

Map of the Coast of Cyprus near Paphos.
fore cited, that the road leading to it from Nea Pa-
phos was annually crowded with male and female
votaries resorting to the more ancient shrine, and
coming not only from the latter place itself, but also
from the other town of Cyprus. When Seneca says
(Nat. quaest. vi, 56, ep. 01) that Paphos was nearly Me-
stroyed by an earthquake, it is difficult to say to which
of the towns he refers. Dion Cassius (liv, 23) relates
that it was restored by Augustus, and called Augustus
in his honor; but though this name has been preserved
in inscriptions, it never superseded the ancient one in
popular use. Tacitus (Hist. ii, 2, 3) records a visit of
the youthful Titus to Paphos before he acceded to the
empire, who inquired with much curiosity into its
history and antiquities (comp. Suetonius, Tit. c. 5).
Until the historian Ctesias included the ancient as
well as the more modern history; and among many other
traits of the worship of the temple, he records with
something like surprise that the only image of the goddess
was a pyramidal stone—a red marble, of Phoenician origin. There
are still considerable ruins of New Paphos a mile or
two from the sea, among which are particularly re-
markable the remains of three temples which had
been erected on artificial eminences (Engel, Cyprus, i, 1841,
2 vols.). See Pococke, Disc. of the East, ii, 285—
288; Ross, Reise nach Kos, Halicarnassos, Rhodos, u.
Cyprus, p. 180—192; Conybeare and Howson, Life and Epis-
toles of St. Paul (2d ed.), i, 190, 191; Lewin, St.
Paul, 1, 130 sq.; and the works cited above. See
CYPRUS.

PAPIAS OF HIERAPOLIS, in Phrygia, a noted
Christian writer and prelate of the patristic period, is
one of the most important witnesses to the authentic-
it of John's Gospel. Papias flourished in the 2d cen-
tury, and finally suffered martyrdom. According to
Irenaeus he was a disciple of the apostle John; but
Eusebius, who quotes (Hist. Eccles. ch. xxxix) the
words of Irenaeus, immediately subjoins a passage from
Papias himself, in which the latter distinctly states that
he did not receive his doctrine directly from the
apostles, but from the "living voice" of such follow-
ers of theirs as "are still surviving." He was an
intimate associate of Polycarp, a bishop in the same
province of proconsular Asia; and as the latter was a
disciple of the apostle John, it is probable that Irenaeus
—somewhat a hasty writer—inferring that his incompli-
tion must have been the same. The Pachoi or Alex-
anderian Chronicle states that Papias suffered martyr-
dom at Pergamus, A.D. 161; others put the date 165.
Eusebius describes him as "well skilled in all manner
of learning, and well acquainted with the Scriptures;
but a little farther on he speaks of him as a man "of
limited understanding," and a very credulous chroni-
cler of "unwritten tradition," who had collected
"certain strange parables of our Lord and of his doc-
trine, and some other matters rather too fabulous." The
work in which these were contained was entitled
Logia kai istoria Xristiou (Five Books of Commen-
taries on the Sayings of our Lord). It is now lost, but
fragments of it have been preserved by Irenaeus, Eu-
sebius, Anastasius Sinaita, Andreas of Cesaras, Max-
imus Confessor, and Eusebius of Caesarea. These frag-
ments are extremely interesting, because of the light which
they throw on the origin of the New-Testament Scrip-
tures, and their importance may be estimated from the
fact that they contain the earliest information which we
possess on the subject. Papias is our authority for the
statement that the evangelist Matthew drew
up a collection of Christ's sayings and doings in the
Hebrew (probably Syro-Chaldaic) dialect, and that
every one translated it as he was able. There can be
no doubt that this is a perplexing statement, suggest-
ing as it does the delicate question: "If Papias in cor-
rectly supposed that the New Testament was written in
Greek, and not in Hebrew?" See MATTHEW, GOSPEL
OF. Papias also tells us, either on the authority of
John the Presbyter, or more probably on that of one
of his followers, that the evangelist Mark was the in-
terpreter (γεγονότα) of Peter, and wrote "what
soever he [Peter] recorded, with great accuracy." The
passage, however, is far from implying that Mark
was a mere amanuensis of Peter, as some have averred,
but only, as Valexis has shown, that Mark listened
attentively to Peter's preaching, culled from it such
things as most strictly concerned Christ, and so drew
up his Gospel. According to Eusebius (Hist. Eccles.
iii, 59), Papias was an extreme Millenarian. See Cave,
Hist. Litter. s. v. Papias; Lardner, Works (see Index
in vol. viii); Alzog, Patrologie, § 17; Neander, Hist.
of Dogmas; Holtzmann, Die Dispensationslehre der
Leipziger Kirche (Leips., 1865), p. 246—251; Limbach,
Das Papias Fragment (1875). See also Studien u. Kritiken,1870; 1875; Meth.
Qu. Rev. 1853, p. 487; 1866, p. 605; Theological Eccles.
Rev. iii, 241; Christ. Remembrance, July, 1853, p. 218.

Papillon du Rivet, NICOLAS-GABRIEL, a French
 Jesuit, was born in Paris January 19, 1717. He early
entered the Society of Jesus, and gained a reputation
as a writer by the pulpits of his church. He retired
to Tournay after the suppression of his order, and
died there in 1782. The Latin poems of which he is the
author are Tempus assensus (1741, 12mo) and Mundus physicus, physiæ mundi mo-
noles (1748, 12mo), in which he proceeds far from
moral to the image of Descartes's vortices. Among his
French poems, we select the Épitaphe de Voltaire and
l'Épitre au Comte de Falkenstein. His sermons, of a
correct and pure style, have been printed in Tournay
(1776, 4 vols, 12mo), and a selection from his Œuvres
was given in vol. lix of the Oeuvres sacrées by
the abbé Migne (1856). Papillon had intrusted to fa-
ther Veron two MS. volumes containing some fugitive
pieces, which are entirely lost. One peculiarity wor-
thy of remark in the life of Papillon is, that his con-
stitution was so delicate that for thirty years he
lived only upon a little milk and white bread. See
Feller, Dict. Hist. s. v.; Quercard, La France Litter.
s. v.

Papin, ISAAC, a noted divine who flourished first
in the Protestant, but later in the Roman Catholic
Church, was born at Blois, France, March 24, 1657.
He was a student for a while at Geneva, and later
for three years at Saumur. At the former school the professor,
then divided into two parties upon the subject
of grace, called "Particularists" and "Universalists,"
of which the former were the most numerous and
the most powerful. The Universalists desired simply tol-
eration; and M. Claude de la Faye, Bishop of
Turre-
tin, the chief of the predominant party, exhorting him
earnestly to grant that favor. But Turretin gave lit-
tle heed to it, and M. de Maratiz, professor at Gron-
gen, who had disputed the point warmly against
M. Dalilé, opposed it zealously; and supported his
opinion by the authority of those synods who had
determined for intolerance. There was also a dispute
upon the same subject at Saumur, where M. Pajon,
who was Papin's uncle, and was then one of the pro-
fessors of theology, admitted the doctrine of effica-
cious grace, and was consequently excommunicated
by the Reformed in general, and Jurius in particular
and though the synod of Anjou, in 1667, after many
long debates upon the matter, had dismissed Pajon,
with leave to continue his lectures, yet his interest
there was none of the strongest; so that his nephew,
who was a student in that university in 1658, was
press to condemn the doctrine, which was branded with the appellation of Pajonism (q. v.). Papin declared that his conscience would not allow him to subscribe to the condemnation of either party; whereupon the university refused to give him the usual testimonial. All these disagreeable incidents enraged him against the University from which he had to retire for a time to his own house of worship. The controversy also from his Church, and brought him to take a favorable view of the Roman Catholic religion. In this disposition he wrote a treatise, entitled The Faith reduced to its just Bounds; wherein he maintained that, as the Papists professed that they embraced the doctrine of the Holy Scriptures, they ought to be tolerated by the most zealous Protestants. He also wrote several letters to the Reformed of Bordeaux, to persuade them that they might be saved in the Romish Church, to which they were reconciled. This work, as might be expected, drew upon him the intense displeasure of the Protestants, and in 1686 he crossed the water to England, where James II. was then endeavouring to re-establish popery. Papin was granted deacon’s and priest’s orders from the hands of Turner, bishop of Ely. In 1687 Papin published a book against Jurieu. This prolixated that minister so much that, when he knew Papin was attempting to obtain some employment as a professor in Germany, he despatched letters everywhere in order to defeat Papin’s applications; and, though the latter procured a preacher’s place at Hannover, he found means to be sent home a few months before his death. About this time his Faith reduced to its just Bounds coming into the hands of Bayle, that writer added some pages to it, and printed it: but the piece was ascribed by Jurieu to Papin, who did not disavow the principal parts of the treatise, though they were laid down in a synod. Meanwhile, an offer being made him of a professor’s chair in the church of the French refugees at Dantzic, he accepted it; but after some time, it being proposed to him to conform to the synodical decrees of the Walloon churches in the United Provinces, and to subscribe them, he refused to comply; because there were some opinions asserted in those decrees which he could not assent to, particularly that doctrine which maintained that Christ died only for the elect. Those who had invited him to Dantzic were highly offended at his refusal; and he was ordered to depart as soon as he had completed the half year of his preaching which had been contracted for. This occurred in 1689. Not long after he embraced the Roman Catholic religion, putting his abjuration into the hands of Bossuet, bishop of Meaux, Nov. 15, 1690. This letter is accompanied by several others, wherein he states that Papin had always looked indifferently upon all religions, and in that spirit had returned to the Roman Church. In answer to this letter, Papin drew up a treatise, Of the Toleration of the Protestants, and of the Authority of the Church (printed in 1692). He afterwards changed its title, which was a little equivocal, and made some additions to it; but while he was employed in making collections to complete it farther, and collecting materials for the second part, it was finished at Paris, June 17, 1699. His widow, who also embraced the Roman Catholic religion, communicated these papers, which were made use of in a new edition printed at large in 1719 (12mo.). M. Paljon, of the Oratory, his relative, published all his Theological works in 1722, 12mo. He wrote also his biography, Essais de théologie sur la providence et sur la grace; La foi réduite à ses véritables principes et renforcée dans ses justes bornes; La tolérance des Protestans, afterwards under the title of Les deux doges opposés aux protestants modernes. They are all very solidly written. Among other things Papin declares that, if the authority of a synod, as that of Dort (q. v.), has to be acknowledged, the same authority must be ascribed to that of Trent (q. v.) also. See Hagenbach, Hist. of Doct. (Index in vol. ii.); id. Kirchengesch. vol. v.

Papiest (Lat. papiæta, i. e. an adherent of the pope) is generally applied with some admixture of contempt to Roman Catholics. Of itself, the name Papist implies nothing more than that he is an adherent of the pope; but in its popular use it includes all the distinctive doctrines of the Roman Catholics, and especially those which are supposed to be peculiarly cherished by the supporters of the papal authority. It is therefore, in many cases, held to be synonymous with the profession of the most extreme opinions permitted in the Church of Rome, and even those which are commonly regarded as superstitious. Understood literally, no consistent Roman Catholic would disclaim it; but in the imputed significance explained above it is held to be offensive.

Pappati, a name for the New-Year's-day festival among the Parsees, which is celebrated in honor of Yazdegird, the last king of the Sassanid dynasty of Persian monarchs, who was dethroned by caliph Omar about A.D. 640. The ancient Persians reckoned a new era from the accession of each successor, and as Yazdegird had no successor, the date of his accession to the throne has been brought down to the present time, making this festival (676)236 the 260th of the Parsie chronology. On the Pappati, the Parsees rise early, and either say their prayers at home or repair to their fire temples, where a large congregation is assembled. After prayers they visit their relations and friends, when the Ilhamas-hur, or joining of hands, is performed. The rest of the day is spent in feasting and rejoicing, till a late hour at night. It is customary on this day to give a poor to the poor and new suits of clothes to the serftans.

Pappenheim, Salomon ben-Seeligmann, a very eminent Hebrew grammatician and lexicographer, was born in 1740 at Breslau, where his distinguished attainments and great piety secured for him the rabbinate of the Jewish community. He died March 4, 1814. The work which has immortalized his name is a lexicon of the Hebrew and Syriac, entitled The Thesaurus of Solomon (סונאלא מפריש תכשונה) (3 vols. 4to). The first volume, which was published at Dyrenforth in 1784, consists of an introduction and three parts or sections, subdivided into forty-nine paragraphs. The introduction (i-xi) contains a grammatical dissertation (בושוף תכשונה סונאלא מפריש תכשונה); the first part (p. 1-83), consisting of seven paragraphs, treats on those words which denote time, or on such substantives, adjectives, and adverbs, as express the idea of time or duration, such as, long, short, end, haring, tarrying, tarrying, youth, age; the second part (p. 33-60), consisting of eleven paragraphs, treats on those words which denote space, or on expressions conveying the idea of place, even, straight, corner, crooked, way, neighborhood, etc.; while the third part (p. 66-118), consisting of thirty-one paragraphs, embraces words which convey the idea of motion in its various modifications, e. g. going, flying, springing, flaying, etc. The second volume, which was published at Redelheim in 1831, after the death of the author, with notes by the celebrated Wolf Heidenheim (q. v.), consists of an introduction and four parts, subdivided into twenty-six paragraphs. The introduction (p. 1-8) contains a psychological treatise (פישונא מפריש תכשונה סונאלא מפריש תכשונה); the first part (p. 9-39), consisting of fourteen sections, treats on words which express the idea of speaking or utterance in its various modifications; the second part (p. 39, 40) discusses words which denote hearing: the third part (p. 40-57), consisting of twelve sections, treats on words which refer to sight; while the fourth part (p. 57-75), consisting of twenty-three sections, treats on words which relate to the touch and smell. The third volume, which was published at
Dybenrath in 1811, consists of a general introduction and one part, subdivided into fifty-seven sections, and treats on those synonyms which convey the idea of action. The importance of this work can hardly be overrated. It is the only lexicon which embraces the synonyms of the whole Biblical Hebrew, as the contributions of Wenetz, Luzzato, and others to this department are confined to single groups of words. Pappenheim's marvellous mastery of the Hebrew style, his keen perception, refined taste, critical acumen, and his philosophical mind, pre-eminently fitted him for this task. He also wrote a lexicon, or treatise, embracing those words and particles which are formed from the letters נוֹרֵא נַפְרָה, The Delight of Solomon, of which, however, only one part appeared (Breman, 1802); and he has left in MS. A Critico- etymological and Synonymical Hebrew Lexicon, which has not as yet been published. See Geiger, in the Zeitschrift der deutschen morgenländischen Gesellschaft (Leipsic, 1863), xviii, 333 sq.; Fürst, Bibliotheca Judaica, iii, 64, etc.

PAPPUS, JOHANN, Dr., a Lutheran divine, was born Jan. 16, 1494, at Lindau, on the Bodensee. He studied theology at Tübingen and Strasburg. In 1570 he was appointed professor in Hebrew and minister in Strasburg; in 1578 professor of theology and pastor of the Münster. After the death of Dr. Martisch, his former teacher, he was appointed president of the church-convents, and in this position he succeeded in causing not only a Lutheran liturgy, but also the Formula of Concord (q. v.) to be adopted, thus giving the Lutheran doctrine a strong footing in Strasburg. For twenty-nine years he presided over the Strasburg Church, but he was more feared than loved. He was as severe against Papists as against Calvinists, and against the former he wrote Contraadriatiram doctorem nunc Romanae ecclesiae, judice et teste Rob. Bellarmino (Strasburg, 1597). His motto was Ad finem si quis separat, ut nospi. He died July 13, 1610. He is the author of an excellent hymn, Ich hab' mein' Sach Gott heimgestellt (Engl. transl. by Miss Winkworth, Lyra

PAPUA

Papemys, the god of war among the ancient Egyptians, who was worshipped under the figure of the hippopotamus. At Heliopolis and at Buto sacrifices are said to have been offered to this deity; and at Papemys, which was called after him, there was a festival celebrated every year in honor of him.

Papua, or, as the Dutch navigators called it, New Guinea, from a fancied resemblance of its inhabitants to those of the coast of Guinea in Africa, is, if we except Australia, the largest island on our globe. Papua lies in the Australian Archipelago, in 5° 30'-10° 4' S. lat., and 131°-151° 30' E. long., and is about 1400 miles in length from the Cape of Good Hope on the north-west to South-east Cape. In outline it is very irregular, the western part being nearly insulated by Geel-vink Bay, entering from the north, and the Gulf of McClure from the west, while in the south it ends in a long and narrow peninsula of lofty mountains. It is indented by numerous gulfs and bays, besides the two already mentioned, and a large number of rivers, none of which have as yet been much explored. Indeed the country is still largely closed to the whites. Our knowledge has only in very recent times become definite even of the coast lines (see below). Papua is very mountainous, except certain tracts of swampy land which have been formed by the river deposits. The southern part is hardly anything else than a mountain range. It has peaks far surpassing those of Australia in altitude, Mount Owen Stanley being 15,205 feet; Okere, 10,200; Yule Mountain, 9700; and many others of the same range approaching similar elevations. The south-west coast is chiefly composed of lofty limestone hills. Along the south-west shore are many coral-banks. Nothing is accurately known

which is abundant in that locality. Generally the men are better-looking than the women, but neither are particularly ugly, as has been repeatedly said. The Papuans of the coast are divided into small distinct tribes, frequently at war with each other, when they plant the paths to their villages with pointed pieces of bamboo or Nipa palm, called randjoes, which run into the feet of a party approaching to the attack, and make wounds which are difficult to cure. The men build the houses, hollow the trunks of trees into canoes, hunt and fish; while the women do all the heaviest work, cultivating the forest, making mats, pots, and cutting wood. Their food consists of maize, sago, rice, fish, birds, the flesh of wild pigs, and fruits. The Alfoors of the interior do not differ much in appearance from the Papuans, but, lower sunk in the savage life, are independent nomades, warlike, and said to be in some districts cannibals. They are called by the coast people Weekn, or mountaineers, and bring down from their forest the fragrant Masoö bark, nutmegs, birds-of-paradise, and crown-pigeons to the coast, bartering them for other articles. The natives of the Arfak and Amberbakin ranges are more settled in their habits, and also cultivate sugar-cane and tobacco as articles of commerce, but never build their houses at a lower level than a thousand feet from the base of the mountains. The people of the south-west coast are perfectly honest, open-hearted, and trustworthy. They have no religious worship, though some idea of a Supreme Being, according to whose will they live, act, and die, but to whom no reverence is offered. They reckon time by the arrival and departure of the Ceram traders, or the beginning and ending of the dry and rainy seasons, and number only up to ten. Their dead are buried, and after a year or more the bones are taken up and placed in the family tomb, erected near the house, or selected from the natural caverns in the limestone rocks. The women cover the lower part of the body; the men go all but naked, have their hair plaited or frizzled out, and ornamented with shells and feathers. Marriages are contracted early, and are only dissolved by death, and the women are chastest and modest. At Doreh, on the north coast, the bridegroom leads the bride home, when her father or nearest male relative divides a roasted banana between them, which they eat together with joined hands, and the marriage is completed. They have no religion, but believe that the soul of the father at death returns to the son, and that of the mother to the daughter. The Papuans of Humboldt Bay are further advanced than those of any other part of the island, carve wood, make fishing-nets, build good houses above the water of the bay, and connect them with the mainland by bridges; each village has also an octagonal temple, ornamented within and without with figures of animals and obscene representations, though nothing is known of their religion. The largest temple, that of Tobaldi, received in 1858 the present of a Netherlands flag, which is flying from its spires, the natives little suspecting that it is a sign of asserted foreign supremacy. The religion of these Papuans seems to consist mainly in the adoration of Karowaro, wooden idols, of which one is solemnly consecrated whenever a member of the household dies. Their temples are full of images, apparently symbolical of rude nature worship. They have charred talismans which derive their efficacy from being talked to.

All attempts of the sultans of Tidore to introduce the Mohammedan religion into Papua have failed. Christianity was first introduced in the northern portion in 1856, on the island of Massanama, to the east of Doreh harbor, by the German missionaries Ottow and Gieseler. They did not, however, remain long, and New Guinea may be said to be dependent for Christian teaching on the missionaries sent thither by the London Church Missionary Society since 1871. The founder of this mission is the Rev. A. W. Murray, for many years a laborer in the Polynesian country. He began the work at Darnley Island July 3, 1871, and the mission there has prospered beyond the most sanguine expectations. The people now generally observe the Sabbath and attend service, and the gross and superstitious practices of heathendom have disappeared from among the inhabitants of that island. On Aug. 24, 1873, a school was opened. Many of the natives, however, still continue the peculiar disposition of their departed—customs which seem to link them to countries far remote and ages long gone by. Instead of burying their dead out of their sight, they are accustomed to preserve them. The more corrupible parts are removed, and the body is stretched upon a wooden frame, to which it is fastened, and this is placed in an erect position and smoked till all the juices of the body are dried up; and when this is ef-

Village in Humboldt Bay, New Guinea.
acted it keeps for generations. Missions are now established also at the adjoining islands Stephen and Murray, Bampton and Tanau. At Murray Island the first Christian church in Papua was erected in 1874. The headquarters of this mission is at Port Moresby, and there the work has prospered greatly. Both idols and 8 
conversions have been made on the island of Manus, but the work has had to be temporarily abandoned there on account of the unwholesome climate. At Kaua, where a mission was begun in 1871, the laborers were murdered, and there has not yet been any attempt made to renew the work. The Rev. S. Macfarlane and W. G. Lewis are now the principal missionaries in New Guinea, and they are active in explorations as well as in Christian labors. Very interesting reports from these men may be read in "The London Academy of December 18, 1875; April 15, 1876. See also Moresby, New Guinea and Polynesia (London 1876); Murray, Polynesia and New Guinea (New York, 1876, 12mo); The Leisure Hour for August, etc., 1875. These descriptions supersede all former writings on Papua, and we therefore do not refer to older publications. Lawson's Wonders in the Interior of New Guinea (London, 1875) is regarded as a fraud. The author probably never saw Papua or its inhabitants (see Edinburgh Rev. Oct. 1875, art. vii; July, 1876, art. ix).

Parabasis. See Paper-Red.

Parabaptism (παραβάπτησις), baptism in private houses or conventicles, which is frequently condemned in the canons of ancient councils under this name.

Parable, a word derived from the Greek verb παραβάπτω, which signifies to set side by side, and thus comes easily to have attached to it the idea of doing so for the purpose of comparison. A parable therefore is literally a placing beside, a comparison, a similitude, an illustration of one subject by another. Parables or fables are found in the literature of most nations. They were called by the Greeks κἀκος, and by the Romans fabula. In the following discussion we treat the whole subject from a Scriptural as well as from a rhetorical point of view, as developed by modern criticism. See Figure.

1. Signification of the Terms in the Original.—"Parable" is the rendering in the A. V. of the following Hebrew and Greek words.

1. In the Old Testament it answers to תַּנָּבָת, maschil, usually rendered "proverb," which denotes (a) an obscure or enigmatical saying, e.g. Psal. xliii, 4: "I will incline mine ear to a parable; I will open my dark sayings upon the harp." Psal. lxxviii, 2:

"I will open my mouth in a parable; I will utter dark sayings of old."

(b) It signifies a fictitious narrative, invented for the purpose of conveying truth in a less offensive or more engaging form than that of direct assertion. Of this sort is the parable by which Nathan reproved David (2 Sam. xii, 2, 3); that in which Jotham exposed the folly of the judges (Judg. xvii, 5-9), the parable addressed by Jehovah to Amaasia (2 Kings xiv, 9, 10). To this class also belong the parables of Christ. (c) A discourse expressed in figurative, poetical, or highly ornamental diction is called a parable. Thus it is said, "Balaam took up his parable" (Num. xxviii, 7); and, "Job continued his parable" (Job xxi, 1). Under this general and wider signification the two former classes may not improperly be included. See Proverbs.

2. In the New Testament it is employed by our translators as the rendering of παράβολα (derived above), a word which seems to have a more restricted signification than the above Hebrew term, being generally employed in the second sense mentioned above, viz. to denote a fictitious narrative, under which is veiled some important truth. It has been supposed, indeed, that some of the parables uttered by our Saviour narrate real and not fictitious events; but whether this was the case or not is a point of little consequence. The fact that in one instance only (the parable of the Sower) is given—though probably but a conventional one commonly indicative of a class—is evidence that our Lord had no particular individual in view. Each of his parables, however, was essentially true; it was true to human nature, and nothing more was necessary. Another meaning which the word possesses among the rabbis in the New Testament is that of a type or emblem, as in Heb. ix, 9, where παράβολα is rendered in our version "figure." According to Macknight, the word in Heb. xi, 19 has the same meaning, but this is probably incorrect. See Emblem.

The word παράβολα therefore does not of itself imply a narrative. The juxtaposition of two things, differing in most points, but agreeing in some, is sufficient to bring the comparison thus produced within the etymology of the word. The παράβολα of Greek rhetoric need not be more than the simplest argument from analogy. "You would not choose pilots or athletes by lot; why then should you choose statesmen?" (Aristot. Rhet. ii, 20.) In Hellenistic Greek, however, it acquired a wider meaning, coextensive with that of the above-mentioned Hebrew maschil, for which the Sept. xxvii, 20; as it is the Greek equivalent. That word (συμπόθεσις), as was natural in the language of a people who had never reduced rhetoric to an art, had a large range of application, and was applied (as seen above) sometimes to the shortening of a long speech, sometimes to dark prophetic utterances (Numb. xxviii, 7, 18; xxviii, 4; Ezek. xx, 49), sometimes to enigmatic maxims (Psal. lxxviii, 2; Prov. i, 6), or metaphors expanded into a narrative (Ezek. xii, 22). In Ecclesiasticus the word occurs with a striking frequency, and, as will be seen hereafter, its use by the Son of Sarek throws light on the position occupied by parables in our Lord's teaching. In the N. T. itself the word is used with a like latitude. While attached most frequently to the illustrations which have given it a special meaning, it is also applied to such saying like "Physician, heal thyself!" (Luke iv, 23), a mere comparison without a narrative (Matt. xxiv, 32), to the figurative character of the Levitical ordinances (Heb. ix, 9), or of single facts in patriarchal history (Heb. xi, 19). The later history of the word is not without interest. Naturalized in Italy, it was for a time chiefly confined to the Vulgate, but in other versions, it loses gradually the original idea of figurative speech, and is used for speech of any kind. Medieval Latin gives us the strange form of parabolare, and the descendants of the technical Greek word in the Romance languages are parler, parôle, parler, paroles (Diaz, Roman. u. Werkt. s. v. Parole). See Simile.

II. Dificition and Distinction.—From the above examinations we are prepared to find the word frequently used both by the evangelists and by the disciples of our Lord, and to insist that we must call simply figurative, or metaphorical, or proverbial. In Luke vi, 38 we read, "And be not a parable unto them. Can the blind lead the blind? Shall they not both fall into the ditch?" (comp. Matt. xv, 14, 15, where Peter speaks of the saying as 'this parable': 2 Pet. iii, 15: and after the main text in that not the things entering into, but those coming out of a man defile him, we are told that, "when he was entered into the house from the people, his disciples asked him concerning the parable;" and, in Luke xiv, 7, the warning against taking the chief seats in the table is introduced as "a parable put forth to those which were hidden." In all these sayings of our Lord, however, it is obvious that the germ of a parable is contained. We have only to work upon the hint given
us, and we have the perfect story. Two blind men, for example, are seen leading each other along the road, and, after struggling for a time with the difficulties of doing so, both fall into the ditch by the wayside. A pure and noble-spirited man takes his food with the lowest class, and takes only the lowest, the master of the house notes the impropriety, and requests the former to go down, the latter to come up, the attention of the whole company is directed to them, the one is shamed, the other is honored, but in neither case do we have a sense of common life, although not the form, of the parable; in each an incident of common life is employed for the illustration of higher truth. But while comparison is thus the general meaning of the word before us, it has acquired a special sense in distinction from those other words, similitude, metaphor, allegory, fable, which also imply comparison. Let us endeavor to distinguish it from these.

1. The parable is not a mere similitude, in which the mind rests simply upon the points of agreement between the two compared persons and properties, in which pleasure is always afforded by the discovery of resemblances between things that differ. In such a case both terms of the similitude must be enunciated, and the pleasure springing from their agreement is all that the speaker or writer looks to as what will lend force to his instructions. See similitude.

2. Nor is the parable a mere metaphor, in which a word, familiar to us in the region of sensible experience, and denoting some object possessed of particular properties, is transferred to another object belonging to a more elevated region, in order that the former may impart to us a deeper and livelier sense of the properties which the latter ought to possess. Were we to speak of the Word of God as a seed we might be said to use a metaphor, but in that case we transfer the properties of the seed to the Word; the seed itself, having suggested the particular property upon which we wish to dwell, vanishes from our thoughts. But when a part of instruction by parable we use the same expression, the idea of the seed abides with us, and the keeping before our minds of its actual history, that we may ascend from it into another sphere, is a necessary part of the intellectual process through which we pass. See metaphor.

3. It is more difficult to draw the distinction between parable and allegory. It can hardly be (as in Trench, On the Parables, p. 6) that in the latter there is a transference of the qualities and properties of the thing signifying to the thing signified, so that the mind blends the two together, while in the former it keeps them separate. This distinction proceeds upon the idea that an allegory is only an extended metaphor, an idea which cannot be regarded as correct, for the allegory seems to differ from the metaphor especially in this, that no transference of qualities and properties takes place. In the allegory the circumstances employed for the purpose of comparison remain in their real or supposed existence; the mind does not, as in metaphor, rest at once in the final object of thought, and only travel backwards to the figure employed for giving liveliness to the representation, in order that it may fill out its idea of the higher by recalling the attributes of the lower. It starts from the facts, whether real or imaginary, which form the basis of the similitude it employs; it leaves them as they are; and only hastens to the conclusion that a corresponding order of things is to be found in the other sphere to which it ascends. The allegory thus corresponds strictly to what is involved in the derivation of the word. It is the teaching of one thing by another thing, of a second by a first; a similarity of properties is supposed to exist, a like course of events to be traceable in both; but the first does not pass off in the second; the two remain distinct. Viewed in this light, allegory, in its widest sense, may be said to be a process which has only the parable, and what we commonly call allegory are species. It only remains for us, therefore, to note the differences of these.

4. Between fable and parable the difference appears to be determined by the object which they severally propose. It is the business of a genuine fable to give some prudential maxim, some common-sense principle, some wise saw founded on the experience of the world, and to do this in such a way as shall awaken surprise and pleasure. Hence it deals mainly with plants or animals, or things inanimate, with the powers of reflection which lie within the compass of its aim, it gives not only interest but force to its lesson. If even animals or plants, we reason, can display such prudence or be the victims of such folly, how much more ought we, with our higher powers, to exhibit the one or to avoid the other? The parable has a nobler end. It would teach either religious or high moral truth. It deals with the loftiest aspect of man's being, with the nobler side of his character, with his relation not to mere earthly experience, but to a spiritual, a moral, a religious. Hence it deals with the lives of those actors in which the fable mainly delights. The lesson which it would enforce is too solemn for that. It would jar upon our sense of propriety, and would be unnatural. That such actors should appear in the fable produces no feeling of incongruity, because we know that there is a side of our nature which is possessed in common with us by the beasts of the field. But it is not so with that side of it which the parable would instruct, and to introduce therefore the lower animals as our instructors there would be to destroy our sense of what chiefly distinguishes us from them, and would only serve to show the greater incongruity of what has been said may still further appear if we consider that we would take no offence at a parable in which angels were actors, because, whatever points of difference there may exist between the human and the angelic nature, the manly and the womanly, in this that they are fitted for moving amid the same spiritual realities, and cherishing the same spiritual emotions. These considerations will also show us that, while a fable may proceed upon facts palpably fictitious, the parable can only proceed upon those which are or may be true. It deals with the lives of those who are more nearly related to us, it cannot accept the aid of anything plainly false. It is the truthfulness, in short, of the lower side of the representation that makes it the fitting vehicle for the conveyance of the higher. Thus also we remark, in conclusion upon this point, that the parable might take the place of the fable, but not the fable of the parable. As to the distinction again between the parable and the allegory commonly so called, it is probably to be sought in this, that the latter is the offspring simply of a poetical imagination, while the former is conversant with the actuality of life, that it cannot accept the aid of anything plainly false. It is the truthfulness, in short, of the lower side of the representation that makes it the fitting vehicle for the conveyance of the higher. Thus also we remark, in conclusion upon this point, that the parable might take the place of the fable, but not the fable of the parable. As to the distinction again between the parable and the allegory commonly so called, it is probably to be sought in this, that the latter is the offspring simply of a poetical imagination, while the former is conversant with the actuality of life, that it cannot accept the aid of anything plainly false. It is the truthfulness, in short, of the lower side of the representation that makes it the fitting vehicle for the conveyance of the higher. Thus also we remark, in conclusion upon this point, that the parable might take the place of the fable, but not the fable of the parable. As to the distinction again between the parable and the allegory commonly so called, it is probably to be sought in this, that the latter is the offspring simply of a poetical imagination, while the former is conversant with the actuality of life, that it cannot accept the aid of anything plainly false. It is the truthfulness, in short, of the lower side of the representation that makes it the fitting vehicle for the conveyance of the higher.
PARABLE

if we consider the grounds upon which its power to in-
struct us rests. But that power is not simply depend-
ent upon the pleasure which an aptly chosen simili-
tude always affords. It is rather dependent upon the
truth, of which we become gradually more sensible as
our views of religion rise, that the whole of nature and
providence, the whole constitution of human life, and
the law of man's soul and conscience, gives prece-
ding each individual and of society, spring from one God, and
are maintained by him. All outward things thus become
transfigured to us—are not merely what they are to the
bodily eyes, but are pregnant with a fuller mean-
ing, colored with a richer light to the eye of faith.
Heb. 11:39; Rom. 8:17, 29.
The parables of the Lord Jesus were sacred oracles,
material, the spiritual; beneath the visible, the invis-
ible; beneath the temporal, the eternal. Everywhere
the same perfections of God's being, the same rules
of his government, appear. We feel ourselves placed
in the midst of a grand harmonious system, all the
lines of which spring from the same centre, and
return to it again.

Whatever lesson, therefore, is associated
with any one part of the Almighty's works or ways,
comes to us with the weight, not of that part only,
but of all. If God reveal himself in this way here,
we will have more of the parable in that, in the next.
We call in the universe to bear witness to the truth
which we may be considering; and we rest in the as-
surance that, could we explore it all, we should find
analogous principles at work in it.

Inf. 3:2.

On Judg. xvi. 7, this view of parables is Christian, and that our Lord's parables were addressed to
Jews. The statement is true. The feeling which
we have expressed belongs, in its most developed form,
to Christianity alone. In its thoroughness and com-
pleteness it was first revealed in Christ. His alone has
taught us to behold in every thing the tokens of our
heavenly Father's presence, and yet to avoid the pan-
theistic error of merging the Father in his works.

But although fully developed only in Christianity, this
lesson was one also of Judaism. The Jew believed in
a personal God, and looked upon the world as his handi-
work. What he lacked was that well-grounded belief
in the love of God which could alone guide him through
the many perplexities and reconcile the many appar-
ent contradictions by which he was surrounded. Still
he knew enough to make in a great degree alive to
the love which it is the business of the parable to
reveal. Hence he must have been in mind that our Lord,
as the great Teacher of man, could not, while he sought to be understood by the
Jew, be limited in his teaching by the capacity of the
Jew to understand. He had to speak for all ages, and
all nations, and for every condition of life. He had
for the carnal, for full-grown men as well as babes.
More than all, we must remember that in his teaching the
Saviour had to present himself—that his lessons were
not like those of an ordinary teacher, who may
be more or less taught by others to speak what he
himself is not. Christ wasto embody in himself the high-
est conception of Christianity. He was to exhibit
our faith in living reality, by showing how he himself
felt and lived—how he himself looked on heaven and
earth, on God and man. Therefore, even although the Jew
might have been less favorably situated than he was
for owning this particular element of the parable's
power, such a method of instruction would still have
possessed a divine and beautiful appropriateness in
the lips of Jesus.

To understand the relation of the parables of the
Gospel to our Lord's teaching, we must go back to
the use made of them by previous or contemporary
teachers. We have sufficient evidence that they were
frequently employed by them (see Horwitz, Hebre.
Tales, Lond. 1826; N. Y. 1847; Levy, Parabole
dai Ἱηροῦ Ιουδαῖον, Florence, 1851). They appear fre-
cently in the German literature (Eberle, Hor.
Hb. in Matt. xiii, 3; Jost, Judenthum, ii, 216),
and are ascribed to Hillel, Shammai, and other great
rabbits of the two preceding centuries. The pane-
gyrists, from the great rabbi Meir, that his un-
death men ceased to speak parables, implies that no
so that there had been a succession of teachers more
or less distinguished for them (Soda, fol. 42, in Jost,
Judenthum, ii, 87; Lightfoot, l. c.). Later Jewish
writers have seen in this employment of parables a
view in the historical lore of the Jews. They often
ignore him, who cannot be taught otherwise. For them,
as for women or children, parables are the natural and fit method of instruction (Maimonides, Porta Mosé,
p. 61, in Wetzstein, On Matt. xxiii), and the same view is
taken by Jerome as accounting for the 'common use
of parables by our Saviour, and the like' (Jerome,
xviii, 23). It may be questioned, however, whether
this represents the use made of them by the rabbits
of our Lord's time. The language of the Son of Si-
rach confines them to the scribe who devotes himself
to study. They are at once his glory and his reward
(Eccles. xxxix, 2, 3). Of all who eat bread by the
swear of their bow, of the great mass of men in cities
and country, it is written that "they shall not be
found where parables are spoken" (xxxviii, 35). For
these, therefore, it is probable that the Scribes and
teachers, who had since become the paragons of
learning, were sometimes perhaps burdensome and oppressive (Matt. xxi,
3, 4), formule of prayer (Luke xi, 1), appointed times
of fasting and hours of devotion (Mark ii, 18). They,
who would not even eat with common people (comp.
Matt. xxi, 23, 27), would have been the least
likely to give even as much as this to the "people of the earth," whom they scorned as "knowing not the law," a brute
herd for whom they could have no sympathy.
For their own scholars they had, according to their indi-
vidual character and power of thought, the casuistry
with which the Mishna is filled. For so for many
months he taught in the synagogues and on the seas-
hores of Galilee, as he had before taught in Jerusalem,
and as yet without a parable. But then there comes
a change. The direct teaching was met with scorn,
and the Saviour, unknown and unbelieved, was seen
for the first time in his public teaching in the form of
parables. The question of the disciples (Matt. xiii, 10) implies that they
were astonished. Their Master was no longer pro-
claiming the Gospel of the kingdom as before. He
was falling back into one at least of the forms of rab-
inic teaching (comp. Schützgen's Hor. Heb, vol. ii,
"Christus Rabbinorum Summus"). He was speaking
to the multitude in the parables and dark sayings
which the rabbits reserved for their chosen disciples.
Here, for them, were two grounds for wonder. Here,
for us, is the key to the explanation which he gave
that he had chosen this form of teaching because the
people were spiritually blind and deaf (Matt. xiii, 13),
and in order they might remain so (Mark iv, 12).
Two interpretations have been given of these words:
(a.) Spiritual truths, it has been said, are in themselves
hard and uninviting. Men needed to be won to them
by that which was more attractive. The parable
was an instrument of education for those who were children
in age or character. For this reason it was chosen by
the Divine Teacher, as fables and stories, "saeculina
imbecilitatis" (Seneca, Epist. 69), had been chosen
by human teachers (Chrysostom, Hom. in Johann. 34).
(b.) Others, again, have seen in this use of parables
something of a peculiar character. Men have set them-
PARABLE

selves against the truth, and therefore it is hid from
their eyes, presented to them in forms in which it is
not easy for them to recognise it. To the inner circle
of the chosen it is given to know the mysteries of the
kingdom of God. To those who are without, all these
thingst are done in parables. Neither view is wholly
satisfactory. Each has a part in the truth, and all ex-
pressed together. first, that parables do attract, and,
when once understood, are sure to be remembered;
secondly, that men may listen to them and see that
they have a meaning, and yet never care to ask what
that meaning is. Their worth, as instruments of
教学, lies in their being at once a test of character,
and in their presenting each form of character with
that which, as a penalty or blessing, is adapted to it.
They withdraw the light from those who love dark-
ness. They protect the truth which they enshrine
from the mockery of the scoffer. They leave some-
thing even with the careless which may be interpreted
and understood afterwards. They reveal, on the other
hand, the seekers after truth. These ask the meaning
of the parable, will not rest till the teacher has ex-
plained it, are led step by step to the laws of interpre-
tation. They are the "understanding" (apostoloi),
and then pass on into the higher region in which par-
ables are no longer necessary, but all things are spoken
plainly. In this way the parable did its work, found
out the fit hearers and led them on. It is also to be
remembered that even after this self-imposed law of
revelation, the teaching of our Lord could be a marvellous
contrast to the narrow exclusiveness of the Scribes.
The mode of education was changed, but
the work of teaching or educating was not for a
moment given up, and the apostle scholars were found
in those whom the received system would have altogether
shut out.

If we test the parables of the Old Testament by
the rules above laid down, we shall not find them wanting
in any excellence belonging to this species of compo-
sition. What can be more forcible, more persuasive,
and more beautiful than the parables of Jotham (Judg.
ix, 7-19), of Nathan (2 Sam. xili, 1-14), of Isaiah (v.
1-5, and of Ezekiel (xix, 1-9)? There are other il-
ustrations, like that of the city delivered by one wise
inhabitant (Eccles. ix, 14, 15), which are substantially
parables, although not in express form. But the par-
bables uttered by our Saviour claim pre-eminence over
all others on account of their number, variety, appo-
siteness, and beauty. Indeed, it is impossible to con-
ceive of a mode of instruction better fitted to engage
the attention, interest the feelings, and impress the
concepts of truth on the heart of our Lord and his hearers.
Its advantages may be recapitulated in the following:

1. It secured the attention of multitudes who would
not have listened to truth conveyed in the form of ab-
stract propositions. It did so in virtue of two princi-
ples of human nature, viz. that outward and sensible
objects make a more vivid impression than inward no-
tions or ideas; and that the particular and the concrete
affect the mind more than the general and the abstract.
Thus a virtue or vice may be held up for abhorrence
or admiration far more successfully by exhibiting its
effects on the character of an individual than by elo-
gorating or declaring against it in the abstract. (2.
This mode of teaching was, as we have seen, one with
which the Jews were familiar, and for which they en-
tertained a preference. They had been accustomed
to it in the writings of their prophet; and, like other
Eastern nations, listened with pleasure to truths thus
wrapped in the veil of allegory. (8) Some truths which,
if openly stated, would have been opposed by a
barrier of prejudice, were in this way insinuated, as
it were, into men's minds, and secured their assent
unawares. (4) The parabolic style was well adapted
to conceal Christ's meaning from those who, through
obstinacy and perverseness, were indisposed to receive
it. This seems to be the meaning of Isaiah in the
passage quoted in Matt. xiii, 13. Not that the truth
was ever hidden from those who sincerely sought to
know it; but it was wrapped in just enough of obse-
curity to veil it from those who "had pleasure in un-
righteousness," and who would not "come to the light
lest their deeds should be reproved." In accordance
with this, those who have been given up to strong de-
usions, that they might believe a lie," See Blind-
ness, Judicial.

Accordingly, from the time indicated in the passage
just cited, parables enter largely into our Lord's re-
corded teaching. Each parable of those which we
may be said to read in the Gospels which are repeated more than
once with greater or less variation (as, e.g., those of the
pounds and the talents, Matt. xx, 14; Luke xix,
Everything leads us to believe that there were many
parables of which we have no record (Matt. xiii, 94;
Mark iv, 38). In those which remain various writers
have thought it possible to trace something like an or-
der; but as these classifications must be in any case
somewhat subjective and arbitrary, we refrain from
presenting them, and give simply a complete list in tach.

Lastly, it is to be noticed, partly as a witness to the
truth of the four Gospels, partly as a line of demarc-
tion between them and all counterfeits, that the apo-
cryphal Gospels contain no parables. Human invention
could imagine miracles (though those too in the spuri-
ous Gospels were few and meagre, and, being mere
pictures of the literal and figurative), but the parables of
the Gospels were inimitable and unapproachable by any writers of that
or the succeeding age. They possess a life and power
which stamp them as with the "image and superscrip-
tion" of the Son of Man. Even the total absence of
any allusion to them in the written or spoken teaching
of the apostles shows how little their minds set after-
wards in that direction, how little likely they were to
be do more than testify what they had actually heard.

IV. Rules of Interpretation.—It has been usual to
consider the parables as composed of two parts: viz.
the protasis, conveying merely the literal sense; and
the apodosis, containing the mystical or figurative sense.
It is not necessary, however, that this second part
should always be expressed. It is frequently omitted
in the parables of our Lord, when the truth illustrated
was such as his disciples were unable at the time fully
to comprehend, or when it was his design to reveal to
them something which was to be hidden from the un-
believing Jews (comp. Matt. xiii, 11-18). The excel-
ence of a parable depends on the propriety and force
of the connexion between the parts, and the manner
in which the idea is presented as an emblem of gen-
eral fitness and harmony of its parts; on the obvious-
ness of its main scope or design; on the beauty and
conceit of the style in which it is expressed; and
on its adaptation to the circumstances and capacities
of the hearers. The scope or design of Christ's parables
is sometimes to be gathered from his own express dec-
laration, as in Luke xii, 16-20; xiv, 11; xvi, 9.
In other cases it must be sought by considering the con-
text, the circumstances in which it was spoken, and
the features of the narrative itself, i. e. the literal sense.
For the right understanding of this, an acquaintance
with the customs of the people, with the productions
of their country, and with the events of their history,
is often desirable. Most of our Lord's parables, how-
ever, admit of no doubt as to their main scope, and are
so simple and pithy that "he who runs may read."

It has been urged by some writers, by none with
greater force or clearness than by Chrysostom (Hom.
in Matt. 64), that there is a scope or purpose for each
parable, and that our aim must be to discern this, not
to find a special significance in each omission or incident.
The rest, it is said, may be dealt with as the drapery
which the parable needs for its grace and comple-
teness, but which is not essential. It may be ques-
tioned, however, whether this canon of interpretation is likely to lead us to the full meaning of this portion of our Lord's teaching. True, as it doubtless is, that there was in each parable a leading thought to be learned, partly from the parable itself, partly from the occasion of its utterance, and that all else gathers round that thought as a centre, it must be remembered that the power of interpreting the entire ensemble of facts in which he himself has given us there is more than this. Not only the sower and the seed and the several soils have their counterparts in the spiritual life, but the birds of the air, the thorns, the scourching heat, have each of them a significance. The explanation of the wheat and the thorns and the fire at least fulfils that function, which, if it were, which the advancing scholars would be able to fill up—is equally specific. It may be inferred from these two instances that we are, at least, justified in looking for a meaning even in the seeming accessories of a parable. If the opposite mode of interpreting should seem likely to lead us, as it has led many, to strange and forced analogies and an arbitrary dogmatism, the safeguard may be found in our recollecting that in assigning such meanings we are but as scholars guessing at the mind of a teacher whose words are but a seed to be sown in the ground and to be interpreted by the minds of those who have received them—less to be understood than to be comprehended. No such interpretation can claim anything like authority. The very form of the teaching makes it probable that there may be in some set of minds a legitimate interpretation which may have been, but which were not necessarily those which be recognised. No such interpretation can claim anything like authority. The very form of the teaching makes it probable that there may be in some set of minds a legitimate interpretation which may have been, but which were not necessarily those which be recognised. No such interpretation can claim anything like authority.

(1.) The analogies must be real, not arbitrary. (2.) The parables are to be considered as parts of a whole, and the interpretation of one is not to override or encroach upon the teaching taught by others. (3.) The direct teaching of Christ presents the standard by which all our interpretations are to be referred, and by which they are to be measured. He interpreted two parables, that of the sower (Matt. xii, 3, 8-18; Mark iv, 8-15, 18-20; Luke vii, 5-8, 11-15) and that of the wheat and the tares (Matt. xii, 28-30; Luke vii, 36-46). These interpretations must support the further rules of which we are in search.

1. Each parable has one leading idea to which all its parts are subordinate. For example, in the parable of the sower, this idea is the manner in which we ought to use the word of God. In the sowing of the seeds of wheat, it is the struggle of the good with the evil, till the day when both shall be finally and forever parted. In subordination to these two ideas all the different incidents of the two parables are explained. It is always the same; and when we succeed in forming to ourselves such a conception of the leading idea of the narrative that all its parts easily and naturally arrange themselves around it, we have good reason to believe that our conception is correct. This idea, it may be further remarked, is to be sought in the relations of the human heart to God, and not in any local or temporary circumstances. It was so in the cases before us. Doubtless it would have been possible for the Saviour to have specified many causes which specially hindered, in those who then heard him, the true reception of his word. But he does not do so. Those which he mentions were not peculiar to that age and country; they belong to every land and to all time. The devil, tribulation, and persecution, the cares of this world, the deceitfulness of riches; how general are they! They embrace the widest and most universal relations between the human heart and outward circumstances. So with the other. The field is not Judea, but the world; "the good seed are the children of the kingdom, but the tares are the children of the wicked one." Again, but generally we, as well as Christ's immediate hearers, are included there. The lesson is important. What more common than for preachers to find the meaning of a parable, first, in the circumstances of the time—for example, in the calling of the Jews and the rejection of the Gentiles—and then to explain the general meaning of it which he believes he has himself found in it, thus leaving upon the minds of their hearers the impression that the first is the correct interpretation, the second the wise and happy application of it? The very opposite is the case. The general is the true meaning; the particular is only one of its applications, the meaning at least fulfilled, as he himself has once it may be permitted to any age if drawn from the circumstances by which the age is marked. How completely is the beautiful parable of the prodigal son ruined when we are told that the elder son is the Jew, the younger the Gentile. The whole conception which repels such a method of interpreting is more true to the nature of the parable than the would-be archaeological explorations of the pulpit.

It is possible, no doubt, that the individual parts of a parable may be full of instruction. In that of the sower, for example, those who find in the analogies of the seed and the field a justification for their view of "the seed is the Word of God" (Luke vii, 11). In that of the prodigal son, the description of the younger son's wandering from his father's house, of the famine that came upon him in the strange land, of his return and of the father's joy at the sight of him, to which he was subjected, form a striking representation of the nature and consequences of sin, which it is impossible to pass over. But in both cases, as in all others, the particular point to be observed is this, that such lessons must be kept subordinate to the main drift of the parable, and must be so treated as to bring more powerfully home to us its one leading idea. That in themselves they may teach more is possible. Who shall measure the infinite extent of the wisdom of Christ, or the inexhaustible meaning which may lie in the simplest utterance of him "in whom are hid all the treasures of wisdom and knowledge," who is "the same yesterday, to-day, and forever?" But, considered as parts of the parable in which they occur, such separate clauses or incidents are to be looked at in the light of the general lesson which it teaches, and may be so treated as to bring more powerfully home to us its one leading idea. This is the one great principle by which we are to be guided; and, when we hold it fast, we may at once admit that the fuller the meaning which can be naturally imparted to each individual portion of the parable the more justice do we do to it. The danger of forgetting this principle lies in the neglect of the fact that the verbal and unverbal, the due and undeserved pressing both of specific traits of parables and the want of them. Thus, in that of the laborers in the market-place, we might be easily led, by the last part of it (Matt. xx, 8-14), to the supposition that in the heavenly state the rewards of all Christ's servants will be equal—a supposition at variance with many other passages of Scripture. How often has it been argued that the doctrine of the atonement was not taught by the Redeemer, because in the parable of the prodigal son there is no mention made of expiation or intercession before the wanderer is welcomed to his father's house, and embraced in the arms of his father's love. It is of the utmost importance, therefore, to fix clearly in the mind the general lesson of a parable, and to keep everything subordinate to it.
must have some things in it which serve only to give
livelihood and force to the delusion, which are mere
transition points from one part of the narrative to an-
other; and that to assign a meaning to these is to
substitute simply human fancies for the teaching of
God; and it is only reasonable, therefore, to infer that
it will be constructed in such a manner as to answer
this end as far as possible in all its traits. In the
second place, the course followed by our Lord is con-
clusive upon the point. In the parable of the sower,
the field, the birds of the air, the heat of the sun,
the thorns and brambles of the bad ground, the thirty,
sixty, and hundred fold of the good ground, have all
a meaning. Nor is it otherwise in that of the tares
and the wheat. How readily might we suppose that
the reapers were only subordinate to the harvest.
There cannot be a harvest without reapers. Yet
"the reapers are the angels:" while the field itself,
the man who sowed good seed, the enemy who sowed
tares, and the harvest, are each explained. There is
hardly a trait in either parable that is destitute of for-
ce, and the case is the same in both. It must con-
duct the believer to conclude that it must be the
attempt is to be made, and our main object must be to
discover the limits beyond which we may not go.
Here, again, we cannot offer rules which promise to
be of much use, but attention to the following prin-
ciples may help us.

(a) Traits which cannot be applied to the relation
between God and man belong only to the coloring.
In the parable of the laborers in the vineyard, we
read that the Master said to one class of the workers,
"But to you who are텀 ① [ibid. 1866, 8vo];
"Lycenck, Parabola (Utrecht, 1717, 4to); Vitrings,
"Parabola (Amst, 1715, 4to); in Germ. Leips. 1717, 4to);

Parabolani, a term applied in the ancient Christian Church to those who employed themselves in visiting the sick. The name may have been given to them because they exposed (παραβάλλοντο) themselves to danger by such services, just as the Greeks applied a kindred term (παραβάλλων), from παραβάλλοντος την ἁμαρτίαν, to put one’s life in jeopardy; comp. Phil, ii, 30) to those who hired themselves out to fight with wild beasts in the amphitheatre; and the former office was considered, especially in times of public pestilence, as a work of similar danger. The Parabolani belonged to the inferior clergy, and consisted of a kind of brotherhood of superintendents under the bishop. They seem to have originated at Alexandria. They did not confine themselves to their legitimate sphere, but took an interest in ecclesiastical matters, frequently as supporters of the bishops to whose diocese they belonged. The Parabolani appeared the Baptist Simpatheus, (440). At Alexandria, they were during the 4th century, in the sense of the bodyguard of the patriarch. By imperial edict their number was limited to five hundred, which was, however, in 418, during an epidemic, temporarily increased to six hundred. See Julius, An Essay on the Public Care for the Sick as produced by Christianity (1825).

Parabrahma, a term often used to denote Brah'ma (q.v.), the supreme divinity of Hinduism.

Paracelsus, Philippus Auresolus Theophrastus Bombastus, an eccentric character of the 16th century, who as physician, magician, and theosophist exercised no inconsiderable influence on certain branches of science and theology. His father was a physician, a native of the Swiss canton of Appenzell, and bore the name William Hochener, but his more ambitious son claimed descent from a noble Swiss family, Von Hohenheim, and changed his patronymic into the Latinized form of his father’s name. He had been matron in the hospital of a convent in Einsiedeln. He was an only child, born in 1496 in that small town, in the canton of Schwytz, nine miles from Zurich, famous for a cloister and shrine of St. Mary, to which thousands of pilgrims still flock. Einsiedeln in German meaning hermitage, he sometimes added "Ermita" to his name, to designate his native place. It is related that as an infant of three years he had the misfortune to be mutilated by a sow in his private parts; his portrait (in Mackay’s Extraordinary Delusions, p. 143) shows him in fact indeed without, nor was he fond of female society; yet there is no mention made of a mutation of voice usually the consequence of castration. This sexual defect, however, seems not to have impaired the development of his mental faculties. He received his first instruction from his father, then his first vineyard, his second vineyard, his vintner’s lodge, his third, a theological college, and his fourth, a private oratory. At the age of 20 he went to Heidelberg, where he studied chemistry and philosophy. He became acquainted with the abbot of Sponheim, and later with Sigismund Fugg, who in Schwartz (Tyrrol) carried on a large laboratory; and there, Paracelsus assures us, he learned spagyric operations effectually. Imbued with a most ardent desire for information of every kind, he spent several years in travelling, during which he applied to all eminent masters of alchemical philosophy, and visited the universities of Germany, France, Italy, and Spain; he even ventured to the less civilized countries of Northern Europe and Asia, and tried to gather from all sorts of people some knowledge which he might utilize for the improvement of his own art. In this pursuit of "secrets," often under difficulties, he was once taken prisoner on the confines of Russia, and brought before the Khan of the Tartars. This barbaric potentiato succeeded in so impressing, and so ingratifying himself with him, that he was sent in the train of the Khan’s son an embassy to Constantinople. It was there, according to his statement, that Paracelsus, in his twenty-eighth year, was initiated into the secret of the philosopher’s stone. He was frequently retained as surgeon to armies in battles and sieges. Returning to Switzerland, he soon became renowned by his wonderful cures, and was introduced to such men as Erasmus, the printer Froben, Ecolampadius, and other distinguished personages. In his thirty-third year he boasted of having cured thirteen princes whose cases had been declared hopeless. By such recommendations he obtained in 1526 the appointment as professor of physic and surgery at the University of Basle. He commenced his course of lectures by denouncing Galen and Avicenna, then standard authorities, as corrupters of medicine, and, taking a bzenz on sulphur and the fixed embers of a hearth, he worked his invocations, explaining, "Si vos ardubitis in Gehenna." For Hippocrates, on the contrary, he professed great respect. For a while the singular manners and the novelty of his opinions rendered Paracelsus extremely popular, and his room was thronged with students; but his extravagances and self-adoration soon disgusted not a few of the more sober-minded. Among other things, he declared before his audience that he would even consult the devil, if God would not assist him in finding out the secrets of physic. He retained, in his treating of an elixir of life, which was to work by the magic name. The alchemist used, in the stomach, given over by his physicians, applied to Paracelsus, and promised him one hundred florins for a cure. Paracelsus gave him three small pills of his laudanum, and relieved him. When he demanded his fee, the canister refused so large a sum, as it had taken to procure the pills. Finally, he came to a churchman; the magistrate favored the canon, and adjudged Paracelsus only a trifle of the amount; whereupon Paracelsus reproached the justice with ignorance and partiality. The insult was reported to the city council, which ordered a complaint to be made in the name of Paracelsus, urged by his friends, had anticipated the sentence by a precipitate flight, in 1528. Henceforth his career was a downward course. He recommended a wandering life in Alase, and other parts of Germany and Switzerland, rarely staying long in any one place. He associated with low company, abandoned himself to intemperance, and when in his cups would threaten to summon a million of souls to show his power over them. By occasional extraordinary cures he measurably maintained his reputation. In the summer of 1541 he was called by the archbishop of Salzburg to that city. Here too he ranted against the old-fashioned regular doctors. In revenge he was by the servants of the aggrieved party thrown out of the window of an inn. The fall proved fatal, and, thus, Sept. 24, 1541, he ended his life. Paracelsus was buried in the churchyard of the hospital of St. Sebastian, to which he bequeathed the inconsiderable remnant of his property. It would be here out of place to descant on the merits or demerits of his medical practice. His epitaph tells perhaps all that can be said in commendation of it: "Lepram, pedagram, hydropatia aliaeque insanae corporis conu

paracelsus

praey to death by reason of its material nature, in which notion a still unsurmounted remnant of dualism is apparent (Dornier, Hist. of Prot. Theol. ii, 179). In spite of his adhoration of book-learning, and his many peregrinations, which would not allow him much time for studied compositions, there are quite a large number of treatises formed by Paracelsus himself, they are so manifold and so unequal that it is hardly possible to believe that they proceeded from the same brain.
The most of them may rather be denominated Paracelsian works and interpretations of Paracelsians, his disciples. During his lifetime only a few of them were printed: the first three books of his Chirurgia magna (Ulm, 1586);—De natura rerum (1539);—perhaps also De compositionibus, De gradibus, De Tartaro, the explanation of which constituted the subject of his lectures. The following are deemed genuine: Chirurgia magnum;—Chirurgia maxima;—De pest.;—Archidoxa medicinae;—De ars rerum naturalium;—De vita rerum naturalium;—De transformatione rerum naturalium;—De vita longa;—De mineralibus. Many of the theological essays passing under his name are regarded as spurious. The most complete collection of his writings is the one edited by Dr. Hufeland in Stiengard (1616-18, 3 vols. fol.); the earliest and best is in German (Basle, 1589-90, 10 vols. 4to), followed by that in Latin (Frankf. 1668, 10 vols. 4to; Genova, 1688, 3 vol. fol.).

Paraclete (Παρακλήτος, lit. one called near for aid; A.V. "Comforter"). This word is applied in the original to Christ in 1 John ii, 1, where it is translated "advocate" (q.v.). Indeed, in that famous passage in which Christ promises the Holy Spirit as a paraclete ("comforter") to his sorrowing disciples, he takes the title to himself: "I will send you another paraclete" (John xiv, 16). The question then is, in what sense does Christ denominate his own? and the Spirit sent him and the Father, παρακλήτης, paraclete? The answer to this is not to be found without some difficulty, and it becomes the more difficult from the fact that in genuine Greek the verb παρακλητός has a variety of significations: (1) To call to a place, to call to aid; (2) to admonish, to persuade, to incite; (3) to entreat, to pray. To these may be added the Hellenistic signification, "to console;" "to soothe;" "to encourage." Finally, the rabbis also in their language use the word פרבר (peraret) for the Angel of Intercession (Job xxxiii, 29), a fact which must be taken into consideration. In the explanation of the word the leading circumstance to guide us is to be to take into account which is applicable to the different passages in which it occurs. For we may distinguish three interpretations: (1). Origin explains it where it is applied to the Holy Spirit by "Consulator" (παρακλητής), while in 1 John ii, 1 he adopts the signification of "Defender." This is the course taken by most of the Greek commentators (Suicer, Theol. s. v.), and which has been followed by Erasmus, Luther, and others. But to this Thuduc and others object that, not to insist that the signification cannot be grammatically established for παρακλήτης, we are forced to ask the question: whether the verb παρακλητός can anywhere in the New Testament be found in the sense of "to teach," as this hypothesis assumes. It is at least very certain that this sense never was transferred to the rabbinical Παρακλητός, the paraklit, advocate or interpreter.
PARACLITIC

P. Baxtor, Lex. Talmudicam, col. 1843. (3) The considerations which tell against these views incline the balance in favor of a third sense, which is that of assistant, "helper," "counselor;" hence "advocate" (intercessor). Demosthenes uses it with this force in a judicial sense (see Index, et Reiske); and it occurs in the same sense in Origen (ibid., xvi, 7), and many others in the rabbinical dialect. It is supported by Rom. viii, 26, and, which is still more to the purpose, is appropriate to all the passages in the New Testament where the word occurs. After the example of the early Latin fathers, Calvin, Beza, Lange, Bengel, Knapp, Kuhl, Tittmann, and many others, have adopted this sense, tertullian and Augustine have advocate. The A.V. renders the word by "advocate" in John ii, 1, i but in other places (John xiv, 16, 26; xv, 26; xvi, 7) by "comforter." How much better, however, the more extensive term "helper" (including teacher, monitor, advocate) agrees with the passages than the narrow term "comforter" may be shown by a single instance. Jesus says to his disciples, "I will send you another paraclete" (John xiv, 16), implying that he himself had been such to them. But he had not been in any distinguishable sense a "comforter" or "conserver," because, having him present with them, they had not mourned (Matt. ix, 15). But he had been eminently a helper, in the extensive sense which has been indicated; and such as he had been to them—to teach, to guide, and to uphold—this Holy Spirit would come to them after his removal. See the commentators above named, particularly Tholuck and Tittmann on John xiv, 16; also Knapp, De Sp. s. et Christi Paracletico, Halle, 1790; Hare, Mission of the Comforter. See the treatises De Paracletico, by Scherr (Lips. 1714), Knapp (Halle, 1780), vol. i (Gottingen; 1786), Hugenholtz (Leyden, 1844). See Holy Spirit.

Paracletico (παρακλητικός) is a book of anthems or hymns used among the Greek Christians, and derives its name from its office, as it chiefly tends to comfort, or because the hymns are partly invocatory, consisting of pious addresses to God and the saints. The formulas of the Paracletico are not appropriated to particular days, but contain something proper to be recited every day, in the mass, vespers, matins, and other offices. All these finds great fault with this book, and says there are many things in it disrespectful to the Virgin Mary, and many things chargeable to her against the primitive church; that it affirms that John the Baptist, after his death, preached Christ in hell, and that Christ himself, when he descended into hell, freed all mankind from the punishments of that place and the power of the devil.

Paradise is but an Anglicized form of the Greek word παράδεισος, which is identical with the Sanscrit paraśada, Persian parde, and appears also in the Hebrew parâdâs, הַגָּן, and the Arabic fernâs. In all these languages it has essentially the same meaning, a park. It does not occur in the Old Testament, in the English version, but is used in the Sept. to translate the Hebrew gån, הָגָן, a garden (Gen. ii, 8 sq.), and thence found its way into the New Testament, where it is applied figuratively to the celestial dwelling of the righteous, in allusion to the Garden of Eden (2 Cor. xii, 4; Rev. ii, 7). It has thus come into familiar use to denote both that garden and the heaven of the just. See Eden.

I. Literal Application of the Name (Scriptural and profane).—Of this word (παράδεισος) the earliest instance that we have is in the Cyropædia and other writings of Xenophon. He has, it is true, described a really 400 years earlier, but his use of it has that appearance of ease and familiarity which leads us to suppose that it was current among his countrymen. A wide, open park, enclosed against injury, yet with its natural beauty unspoiled, with stately forest-trees, many of them bearing fruits, watered by clear streams, on whose banks roved large herds of antelopæ or sheep—this was the scenery which connected itself in the mind of the Greek traveller with the word παράδεισος, and for which his own language supplied no precise equivalent (comp. Anab. ii, 7; 4, 9; ii, 4; ii, 3; c. i, 1; i, 3; Deut. xi, 10); Eccl. x, 18 (Ecclesiastes, 11); Prov. vii, 16). We find it also used by Plutarch, who lived in the 1st and 2d century of our era. It was by these authors evidently employed to signify an extensive plot of ground, enclosed with a strong fence or wall, abounding in trees, shrubs, plants, and garden culture, in which choice animals were kept in different ways of restraint or freedom, according as they were ferocious or peaceable; thus answering very closely to the English word park, with the addition of garden, a menagerie, and an aviary. The circumstance which has given this term its extensive and popular use is that it has been taken by the Greek translators of the Sept., in the 5th century B.C., and, following them, in the ancient Syriac version, and by Jerome in the Latin Vulgate, as the translation of the garden (תֵּגָן) which the benignant providence of the Creator prepared for the abode of innocent and happy man. The translators of all languages also in the two subsequent periods, and even in the modern tongues, especially in iilii, but in eight others, and in two in the feminine form (תֵּגָנים) occurs; whereas, in other instances of those two words, they employ σκέπασμα, the usual Greek word for a garden or an enclosure of fruit-trees. But there are three places in which the Hebrew text itself has the very word, giving it the form גָּן, parâde. These are, "the keeper of the king's forest, that he may give me timber" ( Neh. ii, 8); "the orchard of pomegranates" (Ecclesiastes, 5); "an orchard of pomegranates" (Song of Solomon, iv, 13). Through the writings of Xenophon, and through the general admixture of Orientalisms in the later Greek after the conquests of Alexander, the word gained a recognised place, and the Sept. writers chose it for a new use. It was thus, in a more extended meaning, used it as a more perpetual life. The Garden of Eden became αὐτὸς ἡ παράδεισος τῆς γῆς (Gen. ii, 15; ii, 28; Joel iii, 17). They used the same word wherever there was any allusion, however remote, to the fair region which had been the first blissful home of man. The Valley of the Jordan, in their version, is the paradise of God (Gen. xiiii, 10). There is no tree in the paradise of God equal to that which in the prophet's vision symbolizes the glory of Aesop (Ezek. xxxii, 1-9). The imagery of this chapter furnishes a more vivid picture of the scenery of a garden than one could elsewhere find; the sleeve to whom "the word of the Lord came" by the river of Chebar may well have seen what he describes so clearly. Elsewhere, however, as in the translation of the three passages in which παράδεισος occurs in the Hebrew it is used in a more general sense (comp. Isa. i, 89; Nahum xxii, 15; Jer. xxix, 5). In the apocryphal book of So- manna (a moral tale or little novel, possibly founded on some genuine tradition) the word paradise is constantly used for the garden. It occurs also in three passages of the Son of Sirach, the first of which is in the description of W. (i, 33), I came forth as a camal duc, and a river, and as a water-pipe into a paradise (xxvii, 30). In the other two it is the objective term of comparisons: "Kindness is as a paradise in blessings, and mercifulness abideth forever—the fear of the Lord is an a paradise of blessing, and it adorns above all pomp (31, 17, 27). Josephus calls the gardens of Solomon the paradise, or the proper number, "paradises" (Ant. viii, 7, 5). Berossus (B.C. cent. 4), quoted by Josephus (c. Apion, i, 20), says that the lofty garden-platforms erected at Babylon by Nebuchadnezzar were called the Suspended Paradises. The Garden of Eden, through Christ, was transformed into a garden form in the Song of Sol. iv, 13; Eccles. ii, 5; Neh. ii, 8, may be classed, with hardly a doubt, as of Aryan than of Semitic origin. It first appears in Greek as coming straight from Persia (Xenoph, ut sup.). Greek lexicographers classify it as a Persian word (Julius Paulus, Lex-
The text appears to be a page from a book, discussing the geography and flora of certain regions, possibly in the Middle East or North Africa. It mentions the use of plants for food and medicine, and describes various environments and geographical features. The text is difficult to read due to the style and formatting, but it seems to be a detailed account of the land and its resources.
PARADISE

In Ugozina's 'Zem. ev. VII', he places the site of Paradise around Babylon, and, by the four streams proceeding from one, understands the two channels of the Euphrates, Nahar Malac and Maaarsaa (comp. Mannert, V, ii, 342 sq.); the former of which runs towards the east, being Fisbeon; while the latter turns westward, the Gihon. Babylon is connected with the Persian Gulf, and, as it is the home of the famous gold land Colchis (Pliny, vi, 4; Strabo, xi, 489); and Gihon is the Araxes (modern Aras), which also arises in Armenia and flows into the Caspian. Cassius is the land of the Casseans (who are placed by the ancient geographers in the neighborhood of the Caspius and the Caspian. Strabo, xi, 522; xii, 744; Diod. Sic. xvii, 111; comp. Mannert, V, ii, 493 sq.). Thus all the four rivers arise in one region—in the Armenian mountains—and Armenia is Eden. Verbrugge argues with this view for the most part, but would make Gihon the river Ganges (see Herod. I, 180), which formed part of the boundary between Armenia and Matiana. J. D. Michaelis, who, however, is doubtful in respect to some of the rivers, was inclined to find the Gihon in the Oxus of the ancients, which is still by the Arabs and Persians called Jehun; and compares the name Gihon with the city Chath, which stood on the site of the present Balch, on the Oxus; Fisbeon with the Chwelliser or Chwelliser (comp. Müller in Büsching's 'Magasin', xvi, 267 sq.), the people from whom the Caspain Sea is called by the ancients the Chwelliseres; and Fisbeon with this view, Fisbeon might be the Araxes (Araya), although Michaelis does not suggest it (comp. Schlotterer, in Michaelis's 'Liter. Briefer'. I, 212 sq.). Jahn argues in general with Michaelis ('Archäol. I, I, 27 sq.), but makes Fisbeon the Phasis. This scheme of identification, in some form, certainly has the greatest countenance in the sacred text.

Hammer (in the 'Wümer Jahrh. d. Lit. 1829, ix, 21 sq.; comp. Mahn in Berthold's 'Journ. xli, 827 sq.') finds the Mosaic Paradise on the elevated plain of Bactria. Fisbeon, in his view, is the river Sihan, or Jaxares, which arises near the city Chas, and flows around the land Ithab, where lay the gold-mines of Turkestan, and where jewels and bdellium were also found. Havitl is then Chwaraesin; Gihon the Oxus, the river nearest the Jaxares, which runs from the land of Hindú-Cush, or the Indian Caspaian. Link ('Uvel. I, 307, I st. ed.) understands Gihon of the land around the Caspass; Fisbeon of the Phasis; Gihon the Kur (the Euphrates), and, as the sources of the streams are not far apart, he finds Paradise in the highland of Armenia, near the Caspian Sea, the original home of many kinds of fruit-trees and of grain.

All the hypotheses of this class, though differing so widely among themselves, have this in common, that they understand the Mosaic account to indicate a particular region of Asia; and comparing the names Havitl, Cush, etc., with names of similar sound which now occur in Syria, Armenia, and the vicinity of the Caspian Sea, combine the results with the position of the Tigris and Euphrates. In opposition, however, to this view, the land of Hit (Ethiopia) has a fixed geographical meaning, though of wide extent, and that hence every effort to give it an entirely new and special significance in this place, as is done by Clericus, Rebindung, Michaelis, and others, is exceedingly forced. (2) That Havitl (I Sam. xv, 7) is certainly in Arabia, and cannot have ever been on the Chryssorrhóas. (i) The fact that the Phasis of the ancients did not arise in Armenia, but in the Caspian range, militates against Rebindung's theory. (4) To explain Havitl by a name which cannot be proved to have been in the Euphrates valley (as Mif'son, etc.), is especially bad. (Beke's view [in Origines Bibl. I, 511 sq.] is worthless.)

2. Rationalistic Interpretations. Turning from such doubtless inquiries, later German interpreters have mostly agreed to consider Gen. ii, 10 sq. as a mythical description of the lost Paradise, to be compared with
the Grecian accounts of the gardens of the Hesperides. They assume, as its possible foundation, an old tradition placing the original seat of the human race in Eastern Asia, which, however, like the Grecian myth referred to, grew by the free accretion of partial and fragmentary report, until it is the Grecian poet who declares Eden to have a place as definite on the map of the world, in men's eyes, as the Gardens of the Hesperides, the Islands of the Blessed, or the Indian mountain Meru, from which four rivers pour forth to water the whole earth (comp. BuUen, Inlures, ii. 290). Credner, however, who adopts this view in the main, thinks that the account itself indicates a western position for Eden, and compares the "Islands of the Blessed," which he identifies with the Canaries! The authors of the Universal History receive the account in Genesis as giving Moses a geographical idea, but not a then imperfect state of knowledge (Allemagne Wels.

history, i. 124); and it is plausibly urged that in early times the scientific method of statement, giving fragments of knowledge as such, apart from all subjective notions, was unknown. Yet this view does not shut out the inquiry what particular lands and rivers were meant by the writer; and this question has been examined especially by Sickler, Buttmann, and Hartmann. Sickler (in Augusti's Theol. Munduschrifft, 1, i, 1 sq., 75 sq.) supposes that the author of the account meant by the river ( bids) the Caspian Sea, viewing it as an enormous stream from the East. The first river named is Pishon, which surrounds the whole earth, from the east out to the Nile. The second is the Atlantic, Mediterranean, and Black seas, including also the Phœnix. This is the writer's view, surrounded the whole earth on the west, as far as the Nile. The third and fourth rivers, Tigris and Euphrates, are merely inland streams, dividing one region from another, but making the circuit of the Nile. Then in the vicinity of the Caspian, there where are very fruitful and pleasant tracts of country. According to Buttmann, however (paliste, Erdkunde des Europa, Berlin, 1803; also in his Mythology, i. 68 sq.), this account was brought from Southern into Western Asia. The original writer conceives of the four chief streams of the world as if they proceeded from one region and were arms of a single river. In the central part of Southern Asia he was acquainted with the Indus and Ganges; while the Shat el-Arab, the united Tigris and Euphrates (called Euphrates when the story reaches Western Asia, because this river is there most clearly identified), and the Indus, and the Lyan, and the Pegu towards the east, were to him the limits of the known world. Pishon is compared with Biumus (Bupcyaru), called by Ptolemy (vii, 2) the most considerable stream of India east of the Ganges: Havilah with him, a very ancient Indian kingdom (known to the Greeks as yndia sas, land of gold), and with the name Eviltes, or Oxel, given in connection with the Chinese by an unknown author (Hudson, Erps. tot. Almeid, ii, 2). Cusb, like the Ethio/pians of the Greeks, will then mean simply the extreme South. Gihon is the name of the river which supplies the Indian deities (Od. Hidd), the name Hiddkeal being really the two names Hit, Chid, the Indus, and Dekel, the Tigris, which have been through carelessness or ignorance written together. Finally, the narrator by Assur, Assyria (v, 10), probably understood the same region which later authors refer to the Medes or Persians. Hartmann (gebildet über Ais, 1, 249 sq.) attributes the whole geographical account in Gen. ii to the Babylonian or Persian period, and places Paradise in Northern India, in the famous valley of Cashmere (see Hartmann, ii, 17), the valley being shut in by a chain of impenetrable mountains, covered with snow, from which on the north spring the tributaries of the Oxus, and on the south those of the Indus; and as the Be- hut (Hydaspe, modern Ilyum) flows through the valley, it is easy to suppose that a very old tradition might substitute one stream instead of one mountain chain as the source of several rivers. Now the Hebrew writer gave those names to these four streams of Paradise which seemed greatest to him; thus Gihon became the Indus, and Assur, the Tigris; Hiddes is Colchis, Cash is Bactria, or Balk. Just such a fanciful conception as this tradition presents lies at the basis of the exposition of Josephus (Antiq, i, 1, 8), extending, however, only to the Pishon and the Gihon, which he makes to be the Ganges and the Nile respectively (comp. Eiphon, Gen. 11, 80; Böttiger, Empor. Dbers. p. 67 sq.). The fact that Havilah is mentioned as abounding in gold might be adduced to support this view of the Pishon. But although India was known as a gold country, yet Africa, and, in Western Asia, Arabia, were more famous in this respect; and the reference of Havilah to a special district on this ground is mere waywardness. The reference of Gihon to the Nile by Josephus is adopted by most of the fathers (see esp. Theophil, Antiq. ii, 24; Philostorg, in Niceph. Hist, Eccles. ix, 19), and in this view the Ethio/pian Nile, with its branches, may be understood (see Gessen, Thesauri, i, 285). Even the Greeks connected the Nile with the Indus (Piso? comp. Arrian, Alex. vi, 1, 3; Pausan. ii, 5, 2). On the other hand (see Philostorg. l.c.) some have supposed Pishon to be the Indian river Hipsa. Of the three hypotheticals which we have last stated, that given by Hartmann is the most simple. Sickler's supposes a conception on the part of the ancient writer which is entirely too inconsistent with itself. That of Buttmann rests upon too many separate suppositions, improbable enough in themselves; and assumes, besides, the existence of southern Asiatic traditions among the Hebrews before the Captivity; a view that finds no support but in the hypothesis itself, which places Paradise in India. But Hartmann's view also is sufficiently met by the fact, which, however, has only recently become known, that the vale of Cashmere is, in climate and productions, very far from resembling a paradise (see Ritter, Erdkunde, ii, 1083 sq. ; vii, 70 sq.). Thus, even if we should adopt this mythical view, there would be just as much difficulty in determining the regions which the author of Genesis intended, as more literal interpreters have found in placing them, on the supposition that the description is truly geographical. There appears no proof in this view that the writer thought at all of South Asia (although Pishon may be the Oxus); at least, it is going too far to extend his views to India, and to assume that the author of the Book of Genesis (see Geck, i, 831) thinks that the names were changed in the passage of the tradition to the Hebrews; that they substituted the better known names of the Euphrates and Tigris for those of the unknown Indus and Ganges. Toch (Gen. p. 72 sq.) would look only at the easily intelligible part of the account, the fellow-streams Euphrates and Tigris; and would look for Paradise among the heights of Armenia, which would accord well with Noah's history (see Gen. viii). But it is objected that it is uncritical to cut off half of the description of the destruction to join certain historical features. It is no part of our purpose here to examine the results of historical investigation, apart from the Mosaic records, respecting the first seat of the human race. All that is related in Genesis as having occurred from the creation of man, and his location in the garden of Eden, up to the time of his guilt and expulsion, has in like manner been viewed as a philosophical speculation, set forth in a historical form, on the origin of physical and moral evil, and the destruction of that golden age which the fancy of all nations has seen in remote antiquity (see especially Ammon, in the Neues theolog. Journ. iii, 1 sq.; Bibl. Theol, iii, 800 sq.; Bauer, Hebr. Mythol. i, 85 sq.; Buttmann, in the Herz. Monatschrift, l, 1894 sq. 261 sq., and Mythol, i, 122 sq.; Vater, Comment. ob. Pes-

tat. i, 14 sqq.; Gesenius, in the Hal. Ewkgcl. i, 358 sqq.; Eichhorn, Urgeschc., Hartmann, Heb. Pentateuch, p. 373 sqq.; Collin, Bibl. Theol. i, 224 sqq.). But more literal and historical interpreters of the passage have also appeared (as Hengstenberg, Christol. i, i, 26 sqq.; Tiele and Baumgarten, Comment.). Others are but half literal in their exposition, and seek to reconcile heaven and earth under the form of ornament (e.g. Less, Cranmer, Luder- wald, Eifert, Werner, in his Geschilch. d. Ausser. d. 3ersten Cap. d. Gen. [Tubing. 1829]). Von Gerstenberg defends the allegorical exposition, Rosenmuller and Gamm- borg the hieroglyphical view, that the account is a late and bau- talistic treatment of old historic ciclitics (see Tuch, Gen., p. 56 sq.; and comp. Bellerman, Handb. i, 37 sq., Beck, Comment. Rel. Chr. Hist. i, 398 sq.). It seems scarcely necessary to refer to the views of Hillman, in his Teogonie, and of Ballenstedt, in Die neue u. jetzige Welt, p. 222 sq., as they do not rest on the Mosaic hISTORY. The anonymous work, Ursprung. Entwickelungsgang der relig. u. sittl. Bildung [Greifswald. 1829], is simply child like.

3. Parallel Traditions. The idea of a terrestrial paradise, the abode of purity and happiness, has thus formed an element in the religious beliefs of all nations. The image of "Eden, the garden of God," retained its hold upon the minds of the poets and prophets of Israel as a thing of beauty whose joys had departed (Exek. xxvii. 13; Joel ii, 5), and before whose gate the cherubim still stand to watch the ways of the guilty. For interesting para- phrases from the philosophical speculations of other nations, see Bruns, in Gabler's Journ. f. ausser. theol. Lit. v., 50 sq.; Bauer, Mythol. i, 96 sq.; Pustkuch, Urgesch. der Mensch. i, 186 sqq.

(2.) Oriental. Arab legends tell of a garden in the East, on the summit of a mountain of incalculable age, where man lived in benighted innocence. And so among the Hind- u, in the centre of Jambu-dwipa, the middle of the seven continents of the Puranas, is the golden moun- tain Meru, which stands like the seed-cup of the lotus of the world, and is often compared to the Ark. In the Brahma- ma, renowned in heaven, and encircled by the Ganges, which, issuing from the foot of Vishnu, washes the lunar orb, and, falling thither from the skies, is divided into four streams, that flow to the four corners of the earth. These rivers are the Bhrada, or Oby of Sibe- ria; the Sit, or Hoang Ho, the great river of China; the Alakananda, a main branch of the Ganges; and the Chakshu, or Oxus. In this abode of divinity is the Nandana, or grove of Indra; there too is the Jambu-tree, from whose fruits are produced the fruits of the Jambu river, which give life and immortality to all who drink thereof (Vishnu Purana, trans. Wilson, p. 166-171). The enchanted gardens of the Chinese are placed in the midst of the regions of Hauounian, a high chain of mountains farther north than the Himalaya, and farther east than Hindu-Cush. The fountain of immortalitv which waters these gardens is divided into four streams, the fountains of the supreme spirit, Tychin. Among the Medo-Persians the gods' mountain Alborj is the dwelling of Ormuzd, and the tree of life which issues from the navel of the waters." The Zend books mention a region called Helden, and the place of Zoroaster's birth is called Hvemesh, or, according to another passage, Airjoma Vidjo (Knobel, Genesi).

These last-mentioned traditions even proceed to detail the steps by which this fair abode was forfeited. According to the Zendavesta, men were so blinded by a wicked demon that they viewed the whole creation, and their own happiness, as the work of Ahriman. After thirty days they went hunting, with black clothing on; shot a white goat, and drank its milk, finding its nature most pleasing. If evil spirits had possessed the face which they ate, and straightway lost all their excellence. After fifty years they first began sexual intercourse. (See Rhode, Heil. Sage des Zendawestas, 252 sq.; and comp. Ballenstedt, in Schröter u. Klein, Oppositionssch. v. 51 sq.) The account of the fall of man with the conflict between Ormuzd, the principle of good, and Ahriman, that of evil; and the victory of the latter, Gen. iii., 15.) But nearest of all, the fable of the Dalal Lama (see Vater, Archlst. F. Kirchen-gesch., i, 15 sq.) approaches the Mosaic narrative. A plant of sweet taste appeared on the earth; first one greedy man ate of it, then all followed his example, and immediately all spirituality and all happiness were gone. The length of life decreased, and with it human stature. At last the plant disappeared, and men were left to subsist, first on a kind of reddish butter, then on reed-grass, and finally on what their own labor could cause the earth to produce. Virtues had fled from earth; deeds of violence, mur- der, and adultery had taken their place. Compare further, Rosenmuller, Abrakam. i, i, 180; Tuch, Genes. i, 50 sq.; and comp. my volume on Morgen. u. Japhet, Geschlechter, d. Studeninfall des Menschen, nach Griech. Mythen (Giesen. 1824).

All these and similar traditions are but mere muck- ing echoes of the old Hebrew story,jarred and broken notes of the same strain; but, with all their exaggera- tions, "they intimate how in the background of man's visions lay a paradise of holy joy—a paradise secured from every kind of profanation, and made inaccessible to the guilty; a paradise full of objects that were calculated to delight the senses and to elevate the mind; a paradise that granted to its tenant rich and rare immunities, and that fed with its perennial streams the tree of life and immortality" (Hard- wick, Christ and other Masters, pt. ii, p. 138).

111. Figurative Application of "Paradise" to the Heavenly World (cf. Huxley's "Dict. of. the Bible").—The term, having by a natural process become a metaphor for the abstract idea of exquisite delight, was transferred still higher to denote the happiness of the righteous in the future state. The ori- gin of this application must be assigned to a certain formula of the messianic prophecy of Isaiah, and to the term New Ta- bament. In the Chaldean Targums, "the garden of Eden" is put as the exposition of heavenly blessed- ness (Psa. xc. 17, and other places). The Talmudic writings, cited by the elder Buxtorf (Lec. Chald. et Talm. p. 1602) and John James Wetstein (N. T. Cr., i, 819), contain frequent references to Paradise as the immortal heaven, to which the spirits of the just are admitted immediately upon their liberation from the body. The book Sohar speaks of an earthy and a heavenly Paradise, of which the latter exceeds the former "as much as darkness does light" (Schöttgen, Hor. Hebr. i, 1996).

Hence we see that it was in the acception of the current Jewish phraseology that the expression was used by our Lord and the apostles: "To-day thou shalt be with me in Paradise;" "I was shut up into Paradise;" "The tree of life, which is in the Paradise of my God" (Luke xxiii. 43; 2 Cor. xii. 4; Rev. ii, 7).

It was natural that this higher meaning should at length find a home in the church, which was the type of the world with new thoughts. Paradise, with no other word to quality it, was the bright region which man had lost, which was guarded by the flaming sword. Soon a new hope sprang up. Over and above all questions as to where the primordial garden had been, there came
PARADISE 657

PARADISE

the belief that it did not belong entirely to the past.

There was a paradise still into which man might hope to enter. It is a matter of some interest to ascertain with what associations the word was connected in the minds of the Jews of Palestine and other countries at the time of our Lord's teaching, what sense therefore we are to entertain of the use of the word by the New Testament writers.

In this as in other instances we may distinguish several modes of thought, each with marked characteristics, yet often blended together in different proportions, and melting one into the other by hardly perceptible degrees. Each has its counterpart in the teaching of Christianity. In the Parthenon, as in the N.T., stands apart from and above all. Traces of this way of looking at it had appeared previously in the teaching of the Son of Sirach. The four rivers of Eden are figures of the wide streams of Wisdom, and she is as the brook which cometh down from Lebanon the paradise of God (Eccles. xxiv. 23-30). This, however, was compatible with the recognition of Gen. ii, as speaking of a fact. But in later times the figurative or celestial reference became more and more distinct. It would be a hopeless task to attempt to reconstruct the various common ideas and to answer the question: their name is legion. All that we can attempt is a chronological outline of the main course of thought on the subject.

1. To the idealistic school of Alexandria, of which Philo is the representative, paradise was existing in a spiritual sense, being a spiritual perfection (aporia) of the world, or the only paradise. The trees that grew in it were the thoughts of the spiritual man. The fruits which they bore were life and knowledge and immortality. The four rivers flowing from one source are the four virtues of the later Platonists, each derived from the same source of goodness (Philo, De Aden, I). Philo conceived that by paradise is darkly shadowed forth the governing faculty of the soul; that the tree of life signifies religion, whereby the soul is immortalized; and by the faculty of knowing good and evil the middle sense, by which are discerned things contrary to nature. In another passage (De Plur. mast. § 9) he explains Eden, which signifies "pleasure," as a symbol of the soul, that sees what is right, exults in virtue, and prefers one enjoyment, the worship of the only wise, to myriad of men's chief delights. Again (Legis Allegor., I, § 39) "The Eurybates of Virgil, that is the tree of life and the site of paradise is Eden, that is, pleasure." The four rivers he explains (§ 19) of the several virtues of prudence, temperance, courage, and justice; while the main stream of which they are branches is the generic virtue, goodness, which goeth forth from Eden, the wisdom of God. It is obvious that a system of interpretation such as this was not likely to become popular. It was confined to a single school, possibly to a single teacher. It has little or nothing corresponding to it in the N.T. The opinions of Philo, therefore, would not be so much worthy of consideration, were it not that (as we shall see) he has been followed by many of the Christian fathers.

2. The rabbinical schools of Palestine presented a phase of thought the very opposite of that of the Alexandrian writer. They had their descriptions, definite and detailed, a complete topography of the unenlightened world. Paradise, the garden of Eden, existed still, and they discussed the question of its locality. The answers were not always consistent with each other. It was far off in the distant East, farther than the foot of the mountain of God, or a region of the dead, of Sheol, in the heart of the earth. Gehenna was on one side, with its flames and torments. Paradise on the other, the intermediate home of the blessed. (Comp. Wetstein, Grotius, and Schöttgen, In Luc. xxiii.) The patriarchs were there, Abraham and Isaac and Jacob, ready to receive their faithful descendants into their bosoms (Joseph. De Macc. c. 18). The highest place of honor at the feast of the blessed souls was Abraham's bosom (Luke xvi, 23), on which the new covenant was founded (Heb. xii. 24). The circumcised were the recognized guest. Or, again, paradise was neither on the earth nor within it, but above it, in the third heaven, or in some higher orb. See HEAVEN. Or there were two paradies, the upper and the lower—one in heaven, for those who had attained the heights of holiness and entered into the presence of God, and where they lived but-decently (Schöttgen, Hor. Heb. in Apoc. ii, 7), and the heavenly paradise was sixty times as large as the whole lower earth (Eisenmenger, Exod. 11. isi. 27). It had seven palaces, and in each palace was its appropriate dwelling (ibid. p. 382). And the righteous dead entered paradise, angelsstriped them of their grave-clothes, arrayed them in new robes of glory, and placed on their heads diadems of gold and pearls (ibid. p. 310). There was no night there. Its pavement was of precious stones. Plants of healing power and wondrous fragrance and looking like the banks of rivers on earth (ibid. p. 318). From this lower paradise the souls of the dead rose on sabbaths and on feast-days to the higher (ibid. p. 318), where every day there was the presence of Jehovah holding council with his saints (ibid. p. 820).

(Comp. also Schöttgen, Hor. Heb. in Luc. xxix.) Among the Hebraists Munster affirms that paradise (Tract. Heb. in Gen.) is on that place which was created before the world was formed, and is therefore beyond its limits. Moses bar-Cephas (De Parad.) assigns it a middle place between the earth and the firmament. Some affirm that paradise was on a mountain, which reached nearly to the moon; while others, struck by the manifest absurdity of such an opinion, held that it was situated in the third region of the air, and was higher than all the mountains of the earth by twenty cubits, so that the waters of the flood could not reach it. Others again have thought that paradise was twofold, one corporeal and the other incorporeal; others that it was formerly on earth, but had been taken away by the judgment of God (Hopkinson, Descr. Parad. in UgoLino, Theol. vol. vii).

3. Out of the discussions and theories of the rabbins there grew a broad popular belief, fixed in the hearts of men, accepted without discussion, blending with their best hopes. Their prayer for the dying or the dead was that his soul might rest in paradise, in the garden of Eden (Maimonides, Porta Mosis, quoted by Thiel, Ephraim, De Angelis, Tract. G. Daulon). The belief of the Essenes, as reported by Josephus (War, ii, 8, 11), may be accepted as a fair representation of the thoughts of those who, like them, were not trained in the rabbinical schools, living in a simple and more childlike faith. To them accordingly paradise was a far-off land, a region where there was no scourching heat, no consuming cold, where the soft west wind from the ocean blew forevermore. The visions of the second book of Esdras, though not without an admixture of Christian thoughts and phrases, may be looked upon as representing this phase of feeling. There also we have the picture of a fair garden, streams of milk and honey, twelve trees laden with divers fruits, mighty mountains whereon grow lilies and roses (ii, 19)—a place into which the wicked shall not enter.

It is with this popular belief that we are to be concerned. It is not with the "paradisical" thought of either school of Jewish thought, that the language of the N.T. connects itself. In this as in other instances it is the starting-point for an education which leads men to rise from it to higher thoughts. The old word is kept, and is raised to a new dignity or power. It is significant, indeed, that the word "paradise" is found, where it occurs in the public teaching of our Lord, or in his intercourse with his own disciples. Connected as it had been with the thoughts of a sensuous happiness, it
was not the fittest or the best word for those whom he was training to rise out of sensuous thoughts to the higher regions of the spiritual life. For them, accordingly, the kingdom of heaven, the kingdom of God, are the words most dwelt on. The blessedness of the pure in heart, the tree of life, the new wine, the bridegroom, the bowery from their common speech is used at other times, if they hear of the marriage-supper and the new wine, it is not till they have been taught to understand parables and to separate the figure from the reality. With the thief dying on the cross the case was different. We can assume nothing in the robber-outlaw but the most rudimentary forms of popular belief. We may well believe that the word used here, and here only, in the whole course of the Gospel history, had a special fitness for him. His reverence, sympathy, repentance, hope, uttered themselves in the prayer, "Lord, remember me when thou comest into thy kingdom!" What were the thoughts of the sufferer as to that kingdom we do not know. Unless they were supernaturally raised above the level which the disciples had reached by slow and painful steps, they must have been mingled with visions of an earthly glory, of pomp and victory and triumph. The answer to his prayer gave him what he needed most, the assurance of immediate rest and peace. The word paradise spoke to him, as to other Jews, of repose, shelter, joy—the greatest contrast possible to the thirst and anxiety of the journey. In the Gospel story (Luk. 23, 43) there is no word from his lips; but it is a most rudimentary as his previous thoughts of it might be, this was the word fittest for the education of his spirit.

There is a like significance in the general absence of the word from the language of the Epistles. Here also it is found nowhere in the direct teaching. It occurs only in passages that are apocalyptic, and therefore almost of necessity symbolic. Paul speaks of oneself, apparently of himself, as having been "caught up into paradise," as having there heard things that might not be uttered (2 Cor. 12, 3, 4). The message to the first of the Seven Churches (Rev. 1, 10) is the message of life, the call to live, the call to live in the midst of the paradise of God, appears as the reward of him that overcometh, the symbol of an eternal blessedness (comp. Dean Trench, Comment. on the Epistles to the Seven Churches, ad loc.). The thing, though not the word, appears in the closing visions of Rev. xxii.

4. The eager curiosity which prompts men to press on into the things behind the veil has led them to construct hypotheses more or less definite as to the intermediate state, and these have affected the thoughts which they have connected with the word paradise. Patristic and later interpreters follow, as has already been noticed, in the footsteps of the Jewish schools. To Origen, and others of a like spiritual insight, paradise is but a synonym for a region of life and immortality—one and the same with the third heaven (Jerome, Ep. ad Marcellum, c. 8, 4). St. Ambrose follows his example of Origen, and placed the terrestrial paradise in the third heaven, in consequence of the expression of Paul (2 Cor. 12, 4), and elsewhere he distinguishes between the terrestrial paradise and that to which the apostle was caught up (De Parad. c. 8). In another passage (Ep. ad Sorbinum) all this is explained as allegory. The sermon of Basil, De Paradiso, gives an eloquent representation of the common belief of Christians who were neither mystical nor speculative. Minds at once logical and sensuous ask questions as to the locality, and the answers are wildly conjectural. It is not in Hades, and is therefore different from Abraham's bosom (Tertull. De Idol. c. 18). It is above and beyond the world, separated from it by a wall of fire (id. Apol. c. 47). It is the "refrigerium" for all faithful souls, where they have the vision of saints and angels, and of Christ himself (Just. Mart. Respons. ad Orthodox. 75 and 85), or for those only who are entitled, as martyrs, fresh from the baptism of blood, to a special reward (Tertull. De Pass. c. 53). It is in the fourth heaven (Clem. Alex. Fragm. § 51). It is in some unknown region of the earth, where the seas and skies meet, higher than any earthly mountain (Joann. Damasc. De Orch. Fid. ii. 11), and had thus escaped the waters of the flood (P. Lombard. Sentent. ii. 17, E.). It has been identified with the gavvai of 1 Pet. iii, 19, and the spirits in it are those of the antediluvian races who perished before the great destruction overtook them (Bishop Horsley, Sermon. xx.). (Comp. an elaborate note in Thol. Codices Aporcypic. N. T. p. 754.)

The word enters largely, as might be expected, into the apocalyptic literature of the early Church. Where the true Gospel are most reticent, the mythical are most exuberant. The Gospel of Nicodemus, in narrating Christ's victory over Hades (the "harrowing of hell") of our early English martyrology, tells that when St. Ennoch and Elijah had been its sole inhabitants—how the penitent robber was there with his cross on the night of the crucifixion—how the soul of the patriarchs was led thither by Christ, and were received by the archangel Michael, as he kept watch with the flaming swords of the Cemetery. In the Church of Jerusalem (Tischendorf, Act. Apost. p. 89), the apostle is sentenced to remain for forty days outside the circle of paradise, because he had given way to anger and cursed the people of Hierapolis for their unbelief. Among the opinions enumerated by Mutilus (Hist. de Paull. Terras. in Ugolino, Theat. vol. vii) is one that, before the fall, the whole earth was a paradise, and was really situated in Eden, in the midst of all kinds of delights. Ephraem Syrus (Comm. in Gen.) expresses himself doubtfully upon this point. Whether the trees of paradise, being purely spiritual in their essence, were to be understood as literal trees, it is impossible to decide; but he seems to be of opinion that the four rivers have lost their original virtue in consequence of the curse pronounced upon the earth for Adam's transgression.

5. The later history of the word presents some facts of interest. Accepting in this as in other instances the mythical elements of Eastern Christianity, the creed of Islam presented to its followers the hope of a sensuous paradise, and the Persian word was transplanted through it into the language of the writers who inhabited the desert and the oases. In it, paradise passes through strange transformations, and descends to base uses. The thought that men on entering the Church of Christ returned to the blessedness which Adam had forfeited was symbolized in the church architecture of the 4th century. The narthexes, with their trees and fountains, were extensions of the garden of Eden—garden being in full communion, were not admitted into the interior of the building, was known as the "Paradise" of the church (Alt, Cultus, p. 591). Anatasiis, it has been said, speaks scornfully of Arianism as creeping into this paradise, in judging that it is addressed itself to the ignorant and untaught. In the West we trace a change of form, and one singular change of application. Paradise becomes in some Italian dialects Paraviso, and this passes into the French parti, denoting the western porch of a church, or the open space in front of it (Du- cange, s. v. Parsa, Diz. Eynolog. Wörterb. p. 705). In the church this space was occupied, as we have seen, by the lower classes of the people. The word was transferred from the place of worship to the place of amusement, and, though the position was entirely different, was applied to the highest and cheapest gallery of a French theatre (Alt, Cultus, l. c.). By some, however, this use of the word is connected only with the extreme height of the gallery, just as "Chemin de Paradis" is a proverbial phrase for any splendid arduous undertaking (Bescherelles, Dictionnaire François).

IV. Literature.—In addition to the many works cited
PARADISE above, see the bibliography of the subject in Dana, 
100; Alger, Pictorial Bible, p. 83; note the one half article in 
Herzog's Real-Encyclopädie, xx, 382-387; and Malcolm, 
Theological Index, s. v. Eden. Comp. also Gould, Mythos 
of the Ancient World, p. 242 sq.; Britton, Mythos of the 
New World, p. 866 sq. The following are among the 
pertinent monographs: Fuhrmann, Die Geschichte der Para 
(Jenae, 1869); Eppel, Der Paradis, 2e deel. (Alt. Nort. 
1755); Heinsen, De Paradiso (Helmst. 1698); Huet, De 
Ritum Paradisi. (Amst. 1698); Neumann, Das Paradis 
(Wittenb. 1741); and especially Schultze, Die Para 
dien, i. indische u. überird. Myst., Myth. u. Mystische (Zür. 
1811). The works of this genre are too much for the 
spaces allowed. The publications of the academy which 
gladly complied with those who advised him to provide 
in time for his own safety, and accordingly he retired to 
the town of Anweil, in the duchy of Zweibrücken, near 
Lanckau (October, 1821). He left that place shortly 
after and went to Neustadt, but did not even stay long 
there. He then made a tour through France, in order to 
spend his last days at his beloved home, and so to be buried 
next the professors of the university. He died June, 1856. 
The expository works of Paraeus are his most numer 
ous, and were long greatly esteemed on the Continent. 
They have been published collectively at Geneva and at 
Frankfort. Among them are commentaries on Genesis, 
Hosea, Matthew, several of Paul's Epistles, the Apoca 
lypse, and Adversaria on other parts of the Bible. 
Although the Biblical writings of Paraeus are superseded, 
it is impossible to deny them considerable merit, 
both in the form of the expository and in the form of 
his practical deductions. The greatest drawback to 
this merit arises from the long theological (chiefly polemical) 
discussions with which the commentary is 
overburdened. His commentary on Romans is well 
known for the thoroughness of the treatment of the 
theological principles which it embodies, and which gave 
so much offence to king James I and the University of 
Oxford. All of Paraeus's works were published by his 
son at Frankfort-on-the-Main in 1647 (8 vols. fol.). 
See Middleton, Evangel. Biogr. ii, 401 sq.; and the 
Memoirs in vol. i of the works, also published sepa 
ately since.

Parafrenarii, the coaches of the higher clergy 
in the ancient Christian Church. They had also the 
care of their stable and horses. They were sometimes 
reckoned among the number of the clergy, but of an 
inferior order.

Paraguay, a republic of South America, which, as 
represented on most maps, is confined to the peninsula 
between the rivers Paraguay and Parana, as far north 
as about 24° latitude, bounded on the north by 
recent treaties with neighboring states, has so consider 
ably enlarged that it now embraces an extensive region 
called the Chaco, west of the Paraguay, and as far south 
as the river Vermejo, and west as the meridian of 
20° west of the meridian of 

Paraguay. The whole area, according to official 
statistics, is in round numbers 484,000 square miles, of 
which 131,000 square miles are comprised between the 
rivers Paraguay and Parana, 196,000 square miles are 
vess of the Paraguay, and upwards of 21,000 square 
miles are between the Parana and Uruguay. The peninsula 
between the rivers is still the important part of 
Paraguay. A mountain-chain called Sierra Anam 
lahy, which traverses it from north to south, and 
liminates to the east and west towards the southern 
extremity, under the name of Sierra Maracaju, divides 
the tributaries of the Parana from those of the Para 
guay, none of which are very considerable, although 
they are liable to frequent and destructive floods.
As regards its physical character, the northern portion 
of the country is mountainous, especially towards the 
west. The southern portion is one of the most fertile 
districts of South America, consisting of hills and 
gentle slopes richly wooded, of wide savannas, which 
afford excellent pasture-ground, and of rich alluvial 
plains, some of which, indeed, are marshy, or covered 
with shallow pools of water (only one lake, that of 
Ipo, deserving special notice), but a good account of 
the land is of extraordinary fertility and highly 
cultivated. The banks of the rivers Parana and Par 

PARAGUAY
aguary are occasionally belted with forest; but, in general, the low lands are destitute of trees. The climate, for a tropical country, is temperate, the thermometer occasions; it rises from 60° to 63° in summer, but in winter being usually about 45°. The natural productions are very varied, although they do not include the precious metals or other minerals common in South America. Much excellent timber is found in the forests. Several trees yield valuable juices, as the India-rubber and its cognate trees; and an especially useful shrub is the Mâte, or Paraguay tea-tree, which forms one of the chief articles of commerce, being in general use throughout La Plata, Chili, Peru, and other parts of South America. The tree grows wild in the north-eastern districts, and the great part of the leaves are employed in the season for the supply to a large number of the native population. Wax and honey are collected in abundance, as is also cochineal, and the medicinal plants are very numerous. The chief cultivated crops are maize, rice, coffee, coca, indigo, mandio, tobacco, sugar-cane, and cotton.

One half of the land is national property, consisting partly of the lands formerly held by the Jesuit missions, or by other religious corporations, partly of lands never assigned to individuals, partly of lands confiscated in the course of the revolutionary ordeal through which the nation has been passing. The export of the staple products of the provinces, for the greater part, have been, for the most part, been let out in small tenements, at moderate rents, the condition of the tenure being that they shall be properly cultivated. Agriculture, though it has in recent years made considerable progress, is still, in consequence of the reflection of the influence of European progress. Only about 30,000 square miles of the whole territory are in cultivation. There are few manufactures—sugar, rum, cotton and woollen cloths, and leather being the only industrial productions. Indeed, the commerce of the country is chiefly in the hands of the government, which holds a monopoly of the export of the Paraguay tea, and in great part of the timber trade. The population consists of whites of Spanish descent, native Indians, negroes, and a mixture of these several races, who call themselves "Paraguayos," but are usually called "Parolos." The Indians are most numerous. They are mostly of the friendly tribe Guarani, whose language is also the language of the country.

By a census which was taken in 1857, the population was reported at 1,357,421, but the inaccuracy of this census is now generally conceded, and the population of Paraguay was further reduced in recent times by war with Brazil and internal strife (see below), is now generally estimated to be about 1,000,000.

History.—The history of Paraguay is highly interesting. The country was discovered by Sebastian Cabot in 1526; but the first colony was settled in 1535 by Pedro de Mendoza, who founded the city of Asuncion, and established Paraguay as a province of the viceroyalty of Peru. The warlike native Guarani, a people who possessed a certain degree of civilization, and professed a dualistic religion, for a long time, however, successfully resisted the Spanish arms, and refused to receive either the religion or the social usages of the invaders.

In the latter half of the 16th century (since 1586) the Jesuit missionaries were sent to the aid of the first preachers of Christianity in Paraguay (who had labor- ed since 1587); but for a long time the Jesuits also were almost entirely unsuccessful, the effect of their preaching being in a great degree marred by the proli- giate and cruel conduct of the Spanish adventurers who armed the staple of the early colonial population. The Jesuits, however, did not hopelessly abandon their task, as had the Franciscans, who had preceded them. With their indefatigable will and keen judgment of human nature, the Jesuits were probably the only Christians who could succeed. Finding that the obstacles were almost insurmountable, they concentrated their strength on the province of Guayra, and there succeeded in winning the confidence of the natives, whom they united in settlements (Reductiones), and taught there not only religion, but agriculture, arts, and industries. But even these settlements failed for a long time to bring about the desired change. The Jesuits were the objects of much enmity, and much fighting, and as late as 1610 several settlements had to be abandoned. The Jesuits finally deter- mined to secure the ruins of government in the entire country, to bring about such a change as they had hoped for, but had found it impossible to secure, so that they, as they did not themselves possess the civil control. In the 17th century the home government consented to place in their hands the entire administration, civil as well as religious, of two provinces, which, not possessing any of the precious metals, were of little value as a source of revenue; and in order to guard the natives against the evil influences of the bad example of European Christians, gave to the Jesuits the right to exclude all other Europeans from these colonies.

From this time forward the progress of civilization as well as of Chris- tianity was rapid. The legislation, the administration, and the social organization of the settlement were shaped according to the model of a primitive Christian community, or rather of many communities under one administration; and the accounts which have been preserved of its condition appear to present a realiza- tion of the Christian idea, which the Jesuits set forth in their inquiry into the history of the territory so ruled by the Jesuits reveals, however, that the natives had been made by them altogether helpless. True, the Jesuits were kind to their subjects, and gave them a quasi- independent life, but they kept them, as indeed was the case with the Spanish government, but they did everything in such a guardian-like manner that the natives lost the little qualification they once possessed for independent enter- prise. Besides, the great power and accumulating wealth of the Jesuits provoked envy, and finally result- ed in much opposition to the Jesuits; and when in 1750 they opposed the disposition of some of their ter- ritory to Portugal, and armed the natives for defence of the land against the Spanish government, the total expulsion of the Jesuits from Paraguay resulted in 1776. The province was again made subject to the Spanish viceroy. For a time the fruits of the older civilization maintained themselves; but as the ancient organization fell to the ground, much of the work of so many years was undone; the communities lapsed into disorganization, and by degrees much of the old barbarism returned. In 1766 Paraguay was again reduced to the condition of a province, and in 1776 Paraguay was transferred to the newly formed viceroyalty of Rio de la Plata; and in 1810 it joined with the other states in declaring its independence of the mother kingdom of Spain, which, owing to its isolation, was the last of the Spanish American republics to establish complete independence. In 1814 Dr. Francia, originally a lawyer, and the secretary of the first revolution- ary junta, was proclaimed dictator for three years; and in 1817 his term of the office was made perpetual. He continued to hold it till his death in 1840; and although many of his measures tended to improve the condition of the country and to develop its internal resources, yet his rule was arbitrary and despotic in the highest degree; and his attempt to isolate the territory from commercial intercourse with the rest of the world was attended with a complete stagnation of commerce and the enterprise to which it leads. On his death the government was vested in consuls, and in 1844 a new constitution was proclaimed, and Don Car- los Antonio Lopez elected in that year. He held the government until his death in 1870. The condition of the country was little changed under his administra- tion. Though he was a man of extraordinary char- acter, he was so largely controlled by the restless and roving spirit of the white population of Paraguay that he was forced into a war with Brazil and the La Plata states, which brought about the death of the country on the verge of destruction. It barely escaped utter ruin. A pro- visional government conducted the affairs of Paraguay,
independent of Brazil, after the re-establishment of peace in 1870, until the people had time to elect Riverola as their president. In December, 1871, Salvador Jovellanos became president. Under his administration the country was slowly recovering from the dreadful depression that had prevailed from 1867 to 1872, when the rebellion broke out (1874), which has only been suppressed very recently. The arbitrary measures which the unsettled condition of the country forced the government to adopt have resulted in driving many whites into the Argentine territory and the Brazilian provinces. In the spring of 1876 the most heartrending condition prevailed. Little was produced by the farmers, and the principal staple of food, maize, sold at famine prices.

The republic is divided into twenty-five departments. The most important of these, in which the capital, Asunción, is situated, contained in 1857 288,686, or nearly one third of the whole inhabitants, and the capital itself 48,000. The inhabitants of the towns consist chiefly of whites, or of half-breeds (mestizos), who closely resemble whites; the language common spoken, besides that of the native Indian, the Guarani, is the Spanish. The established religion is the Roman Catholic, the ecclesiastical head of which is the bishop of Asuncion. Education is pretty well diffused, much more than is usually the case in countries so long ruled by the Jesuits. History of Paraguay (Best, 1871). See also Harper's Monthly, vol. xvii. and xl.

Parah (Heb. Parah, פָּרָה [with the article], חֶסֶר; Sept. φαρα v. τ. ἀραῖον), a city of the tribe of Benjamin, named in the north-eastern group between Avim and Ophrah (Josh. xviii. 29). Buckingham (Travelled, p. 813) heard of a village named Parah, which Robinson, however, could not find; but the name exists farther to the south-east attached to the Wady el-Pirah, one of the southern branches of the great Wady Suidain, and to a site of ruins at the junction of the name with the main valley (Ritter, Pol. u. Systen, iii. 529). This identification is supported by Van de Velde (Memoir, p. 529), and Servais (Pannier, p. 139). The drawback mentioned by Dr. Robinson (Researches, ii. 112), namely, that the Arabic word ("mouse") differs in signification from the Hebrew ("the cow") is not of much force, since it is the habit of modern names to cling to similarity of sound with the ancient names, rather than of significance (Heit-ur, es-Aar, etc.). The site of the valley is given by Barclay (City of the Great King, p. 558), who proposes it for Ξέσων (q.v.); but he incorrectly interprets the name ("valley of delightful").

Parah. See TALMUD.

Parallelism. See PSEUTRY, HEBREW.

Paralytic (παραλυτικός, παραλύσιος), a name of sick persons named in the Gospels in connection with demoniacs and epileptics (see Matt. iv. 24; comp. Acts viii. 7), as being deprived of the power of motion, and borne for cure on couches to the Saviour (Matt. ix. 2; Mark ii. 9; Luke v. 18; comp. Acts ix. 20). In our version the word paraliptikos is rendered "sick of the palsy," and so other versions. Modern physicians understand by paralytikos or palsy the loss of power over the voluntary muscles; some accept it with the loss of sensation in certain parts of the body, in which the muscles affected are relaxed and slack. This last symptom seems to distinguish paralysis from catap Theory and the various kinds of tetanus, in all of which the muscles are rigid and con- tracted. During palsy the circulation, the animal heat, and the usual secretions continue. The attack is often very sudden, following an apoplectic stroke; but sometimes comes on slowly and imperceptibly; and in either case the cure is exceedingly difficult (see Sprengel, Int. Encyclop. xxvi. 441). Compare "paralysy" (Encyclop. xxi. 26 sq.). But the ancient physicians understood paralyzis in a much wider sense, and, according to Richter's careful investigations (see his Dissert. quant. Med. Gottingen, 1775), applied the term to every disease which destroyed the power of voluntary action, without regard to the condition of the muscles; thus including under it both tetanus and catalepsy. He adduces in confirmation of this view, besides other passages of ancient physicians, the treatment of Celcius Aurelianus (Morb. Chron. ii. 1), who distinguishes two kinds of paralyzis: the one marked by spasms, the other by fasciculation of the muscles. This would serve to explain the case (Matt. viii. 6) of a paralytic who was in great suffering (see Ackermann, in Weisse's Material. für Gottes- gelehrt. i. ii, 57 sq.). But pain is rarely experienced in the disease now called palsy; and when it does occur it is not severe, being merely a prickling or itching sensation. On the other hand the paralyzis a conductum, or convulsive palsy of Celcius Aurelianus (or, as the modern term it, the contractura articulorum, spasm of the joints), is an exceedingly painful disease. It is certain that the words used to denote diseases in the Greek language have no exact scientific definiteness, but like other words in the language of common life, including various symptoms more or less allied to each other. It is not therefore necessary, in any case, to understand the case spoken of by Matthew as one of tetanus or lockjaw (as Cholmeley, Spec. Pathol. u. Therap. p. 711 sq., 2d ed.), a disease more common in hot than in temperate climates, and in Africa than in the East; and often followed quickly by death. Some, again, interpret the case of the woman who was bowed together (Luke xiii. 11) of the tetaus or paralyzis, that of the disease which bends forward stiffly the neck and the whole body. But an arthritic contraction of the body may also be meant (comp. Wedel, Exercit. Med. Philol. p. 4 sq.).

On the other hand, the case of Aichmus, spoken of in 1 Mac. i. 55, is probably that of a sudden tetanus, which would account for the severe pain mentioned, a symptom not found in apoplexy, as well as for the sudden death. The tetanus (which receives its common name of lock-jaw from its effect on the organs of speech) attacks and disables the body suddenly, is connected with severe pain in muscles, and sometimes lasts for days or even months, entirely thirty or fifty hours. Yet it is possible, with Ackermann, to refer such cases to apoplexy, understanding by the "torment" (basavos) the suffering which bystanders, from the visible symptoms, suppose the patient to suffer. The victim of this disease is motionless; his breathing is slow and interrupted, accompanied by a rattling sound; foam often appears in the mouth; the face is swollen and red; the eyes protrude, and are fixed, and the extremities cold (see Courali, Handb. d. spec. Pathol. ii, 501). It is well known that apoplexy often is sudden. See further for this, in the following views which medical men take of the palsy of the New Testament, Bartholinii Paralytici N. T. Medico et Philol. Commentarii, illustr. (Hafn. 1658; 3d ed. Leips. 1688); Wedel, Exercit. Med. Philol. dec. 5, p. 6 sq.; dec. 8. p. 17 sq.; Adler, Exercit. de Agitato et Exang. (Tolosa, 1723), p. 10 sq.; Bailer, Animadcur. physico-med. ad loc. N. T. Spec. ii, 30 sq.; Medic.-acerb. Unter- such. 109 sq. (extracted from Ackermann).

The passages which speak of a withered hand (1 Kings xiii. 4; Matt. xii. 10; Mark iii. 1) remain to be noticed. This (Gr. ypsi graphe) in the last two passages can be understood neither of atrophy of the limbs (see Ackermann, in Weisse's Material. i. 131 sq.; comp. Conradi, op. cit. ii. 212) nor of palsy (Wedel, Exercit. dec. 8. p. 24 sq.; comp. Adier, Exercit. p. 69 sq.; Schultheis, in Henke's...
defeating the giant tribes east of the Jordan, they swept over Mount Seir (Edom) unto the terebinth of Paran (7:22; 8:2; Sept. υπὸ τῆς τιμίανος τοῦ Φαρω; Vulg. uaque ad Campestria Pharum, A.V. "El-Paran"), which is in the wilderness" (Gen. xiv, 6). Doubtless some well-known sacred tree is here referred to. It stood on the western border of Seir, and consequently in the Arabah [see Seir]; and it was in "the wilderness"—that is, the desert of Paran, apparently considerably south of Kadesh. From the terebinth of Paran they turned back, "and came to En-mishpat, which is Kadesh."—When Abraham sent away Hagar and Ishmael from his tent at Beersheba, they went out into "the wilderness of Paran"; and Ishmael dwelt there, allying himself doubtless with the nomad tribes who made that place their home (Gen. xxvi, 14, 31).

But it is from its connection with the wanderings of the Israelites that Paran derives its chief and abiding interest: "And the children of Israel took their journeys out of the wilderness of Sinai; and the cloud rested in the wilderness of Paran (Num. x, 12). From it might be thought that Paran lay close to Mount Sinai, where the Israelites had long been encamped; but the full narrative which is afterwards given shows that from the encampment at Sinai they made a four-days' march to Hazeroth (x, 25; xi, 3, 54, 35); and then the next three days' march to "the wilderness of Paran" (xii, 16). From Paran the spies were sent to survey Canaan (xiii, 8); and after completing their mission they returned to the camp "unto the wilderness of Paran, to Kades" (ver. 26). There is an apparent difficulty in this, as appears from the sign which would apply to the camp. Canaan was very near Paran, but in Canaan was only a single march from Hazeroth; while Hazeroth has been identified with Ain Hudherah, which is 140 miles distant from Kades. The difficulty is solved by a reference to the detailed itinerary in Numb. xxxiii. Paran is not mentioned there, because it was the most remote, perhaps the southernmost, station; and the sacred books simply list only the names of the camp-stations. Hazeroth is mentioned, however, and so is Kades; and between them there are twenty stations (17-38). Most probably all these stations were in Paran, for it is said that when they "took their journeys out of the wilderness of Sinai, the cloud rested in the wilderness of Paran" (x, 12); and Moses also states, "When we departed from Horæb, we went through all that great and terrible wilderness which ye saw by way of the mountain of the Amorites; and we came to Kadesh-barnea" (Deut. i, 19).

The modern Gerf Paran in fact extended from the desert of Hazeroth, and the desert of Sinai (or Oreb) on the south, to the foot of the mountains of Palestine on the north; and its eastern border ran along the valley of the Arabah, from the gulf of Akaba to the southern shore of the Dead Sea. Through this wide region the Israelites marched, not in a straight line, but, like the modern Arab tribes, from pasture to pasture; and it was when entering upon that long and toilsome march that Moses said to his father-in-law, "Leave us not, I pray thee; forasmuch as thou knowest how we are to encamp in the wilderness, and thou mayest be to us in stead of eyes" (Numb. x, 31). Jethro was intimately acquainted with the whole wilderness. As a nomad pastoral chief he knew the best pastures and all the wells and fountains; and hence Moses was most anxious to secure his services as guide.

The name of Gerf Paran in 1 Sam. xxv. shows that it bordered upon the southern declivities of the mountains of Judah. Probably its boundary was not very accurately defined; and whatever part of that region lay between the limits of settled habitation was called "the wilderness, or pastures of Sion," and thus included a large section of the Negeb. See South Country.—The reference to Paran in Deut, i, i is not so clear. The object of the sacred writer is to describe the place where Moses gave his long address to the Israelites. It was "this (the east) side of Jordan, in

** PARAMAHANSAS 662 **

**PARAN**

Museum, iii, 24 sq.). The case of Jeroboam (1 Kings xii, 4), whose hand was suddenly so affected that he could not draw it back to him, is either one of palmy, or perhaps of tetanus, as Ackermann thinks (L. c.). See PALSY.

Paramahansas, a species of Sanyasi, or Hindú ascetics, and, indeed, the most eminent of the four gradations, being solely occupied with the investigation of Brahm, and equally indifferent to pleasure, insensible to cold or heat, and incapable of satiety or want. In accordance with this definition, individuals are sometimes found who pretend to have reached this degree of perfection, and in token of it they go naked, never speak, and never eat anything but what any man will give them. They are fed by attendants, as if unable to feed themselves. They are usually classed among the Saiva ascetics, but Prof. H. H. Wilson doubts the accuracy of the classification.

Paramandyaas, a portion of the dress of Calouyers, or Greek monks. It consists of a piece of black cloth sewed to the lining of their caps, and hanging down upon their shoulders.

Paramata, a Buddhist sect which arose in the beginning of the present century at Ava. They respect only the Abhikarma, and reject the other sacred books. Koan, the founder of the sect, with about fifty of his followers, were put to death by order of the king.

Paramo, Lutz de, a Spanish theologian, was born about 1560 in Borox, near Toledo. He was archdeacon and canon of the cathedral of Leon, and afterwards inquisitor of the faith in Sicily and in Spain. He consecrated his pen to history and to the defence of the Inquisition, and wrote, among other works, De origine et progressus officii Sinicet Inquisitum ejusque decentia et utilitate, (Madrid, 1598, fol.); reprinted in 1614 at Antwerp). This book is the rarest and the most curious upon the tribunal of the Holy Office. Extracts have been translated from it in the sequel of the Manum des Inquisiteurs (Paris, 1762, 12mo). See Antonio, Biblioth. Hispana nova, vol. ii.

Paramanaroos was the name of an inferior officer belonging to the ancient Christian Church. The parasmarii are referred to in the Council of Chalcedon. Translators and critics differ as to the meaning of the word. Some of the more ancient writers consider it as equivalent to the Mosaic Marianus or Ostiarus (q. v.). More modern scholars again explain it by villanus, or steward of the lands. Walford says the parasmarium was "in the East a bailiff of Church lands; in the West, a resident verger and porter." Paramour is in one passage of the A. V. (Ezek. xxiii, 20) properly the rendering of πυλερ' γεχ (whence the Greek βαλλεν), a concubine (q. v.), as elsewhere rendered, being in every other instance used only of a female.

Paran (Heb. Paran; 7:22, according to Gesenius and Fürst, excaeratae, i. e. a place of caves, from an Arab. root; according to others, from פיר, to be beautiful; Sept. and Josephus, Φαρω; Vulg. Pharum), a name given in the Bible to a desert and to a mountain. The present article embodies the Biblical and the modern information on this subject.

1. The Wilderness of Paran (7:22; 8:2; Sept. הירموי תויו פראון).—The situation and boundaries of this desert are set forth with considerable exactness by a number of incidental notices in Scripture. It had Paran on the north, the valley of Arava on the east, and the desert of Sinai on the south. Its western boundary is not mentioned in the Bible, but it appears to have extended to Egypt and the Mediterranean.

The first notice of Paran is in connection with the expedition of the eastern kings against Sodom. After
the wilderness" (or Milḥar of Moab; comp. ver. 5), in
the plain (the Arabah, הָרֹדֶשׁ) over against the Red
Sea (or "opposite to Suf," סֵפֶע, between Paran and Tophel, etc. ("between Paran, and between Tophel and Laban," etc.). The sense appears to be that the Arabah in which Moab stood was opposite to the norther
nern Gulf of the Red Sea, and had on the one side Paran, and on the other Tophel, etc. It must not be inferred that Paran extended up to Jericho; all that seems to be meant is that it formed the western boundary of the greater part of the Arabah. It would seem from the incidental statement in 1 Kings xi, 18 that Paran lay between Midian and Egypt. The region there called Midian was situated on the south of Edom [see Mid
ian], apparently at the head of the Edomite Gulf; and the road taken by the fugitive Hailand was most proba
bly that now traversed by the Egyptians' Hajj route, which passes through the whole desert of Thīḥ.

It is strange that both Eusebius and Jerome (followed by Steph. Byz.; Reldan, p. 556; Raumer, and others) speak of Paran as a city, which they locate three days' journey east (στενός ἀναπυργός, but they must evidently mean west) of Allā (Onomast. s. v. Paran). They refer, doubtless, to the old town of Paran, in the valley of Fei
rān, at the foot of Mount Serbāl, in the desert of Sinai. In this valley there are still ruins of a town, and indeed of more than one, with towers, aqueducts, and seu
chlarizes, which, as a rule, the Riphā'īn retain as the remains of a church, which he assigns to the 5th century (Reise in Nubien, p. 263). This was the Paran on which the Holy Land, which had a Christian population, and was the seat of a bishopric as early as A.D. 400 (Oriens Christ. col. 735; Reland, Palest. p. 219, 229, 228). The city is described, under the name of Feiran, by the Arabian historian Edrisī, about A.D. 1100, and by Makrizī about A.D. 1400. The description of the latter is copied by Burek
hardt (Syria, p. 616). He mentions it as having been a city of the Amaelekites; and the history of the He
brew pilgrimage renders it extremely probable that the Amaelekites were actually stationed in this valley, from which they came forth to attack the Israelites, when encamped near it at Rephidim (Exod. xvii. 8). Feiran was thus an important place in early ages (Robinson, i, 126, 592); but it lies nearly thirty miles beyond the southern boundary of Paran. Nevertheless it seems to be a trace of the ancient name transferred to an adjoin
ing locality. Some writers even regard it as the source of the designation of the region. Josephus mentions a valley of Paran but it was situated somewhere in the wilder part of his "Arabah." (Ant., iv, 5, 4.

Paran is not strictly speaking "a wilderness." The sacred writers call it midbar; that is, a pasture-land, as distinguished from an agricultural country. Its prin
cipal inhabitants were nomads, though it had a few towns and some corn-fields (Robinson, Bibl. Res., i, 190 sq.). The leading features of its physical geography are as follows: The central section, from Beerseba to Jebel et-Thīḥ, is an undulating plateau, from 600 to 800 feet is height, traversed by bare rounded ridges, and shallow, dry valleys, running on the one side into the Arabah, and on the other into the Red Sea. The basin is sandy, white, and thickly strewed with nodules of flint. In early spring it is partially covered with grass, shrubs, and weeds; but during the heat and drought of summer all vegetation disappears, and the whole surface assumes that aspect of dreary desolation which led the Israelites to call it "a great and terrible wilderness" (Deut. i, 19); and which suggested in re
cent times the somewhat exaggerated language of Mr. Williams—"A frightful terrify wilderness, whose horro
rs language must fail to describe" (Holy City, i, App. p. 464). Four or five of these are rare, and even wells and tanks are far apart. The plateau rises considerably towards the north-east; and, as deep gles descend from it to the Arabah, this section presents the appearance of a series of parallel ridges extending east and west. Their

southern sides are mostly bluffs of naked white rock, which seem from a distance like colossal terrace-walls. These are the mountains of the Amorites mentioned in Deut. i, 19, 20, to which the Israelites approached through the wilderness, and which formed the southern border of the Arabah. Besides these the eastern white hills running along the whole western border of the Arabah, and forming the support of the table-land of Paran. Towards the valley they descend in steep shelving slopes and rugged precipices, averaging about a thousand feet in height; and everywhere deeply furrowed by wild ravines. The passage from the Arabah to Paran are difficult, and a comparatively small band of resolute men might defend them against an army. The southern declivities of the mountains of the Amorites would also present serious obstacles to the advance of a large host.

These natural features enable us to understand more fully some points in the history of the wilderness jour
ney, and to illustrate many incidental expressions in the sacred narrative. They show why the Israelites feared to enter Canaan from Kadesh until they had ascertained by the report of the spies that those formidable mountain-passes were open (Deut. i, 22). They show how the Amorites, "which dwell in that moun
tain," were able to drive them back when they attempted to ascend (Deut. iv, 44; comp. Numb. xiv, 40-45). They show how expressive and how natural is the language of the rejected spies, "as though he said, Get you up this way south
ward, and go up into the mountain!" "so they went up ... they ascended by the south." (Num. xiv, 40, 44, 45). The name Paran thus corresponds in general outline with the desert Ez-Thīḥ. The Sinaic desert, in
cluding the wedge of metamorphic rocks, granite, syen
ite, and porphyry, set, that were, in a supercilious margin of red sandstone, forms nearly a scalene triangle, with its apex southward, and having its base or upper edge not a straight, but concave crescent line 
the ridge, in short, of the Ez-Thīṭ range of moun
tains, extending about 126 miles from east to west, with a slight depressio on the north of it, and project north
ward. Speaking generally, the wilderness of Sinai (Numb. x. 12; xii, 16), in which the march-stations of Taberah and Hazereth are probably included towards its north-east limit, may be said to lie south of the Ez-Thīṭ range, the wilderness of Paran north of it, and the one to end where the other begins. That of Paran is a stretch of chalky formation, the chalk being covered with coarse gravel, mixed with black flint and drift ing sand. The caravan route from Cairo to Akaba crosses the Ez-Thīṭ desert in a line from west to east, a little to the south of it. This wide tract, which extends north
ward to join the "wilderness of Beersheba" (Gen. xxi, 21; comp. ver. 14), and eastward probably to the wild
erness of Zin [see Kadesh] on the Edomish bor
der, Ishmael dwelt, and there probably his posterity originally multiplied. Ascending northwards from it on a meridian to the east of Beersheba, we should reach Maon and Carmel, or that southern portion of the territory of Judah, west of the Dead Sea, known as "the South," where the waste changes gradually into an uninhabited pasture-land, at least in spring and au
tumn, and in which, under the name of "Paran," Ama
bal fed his flocks (1 Sam. xxx, 1). Between the wild
erness of Paran and that of Zin no strict demarcation exists in the narrative, nor do the natural features of the region, so far as yet ascertained, yield a well-de
Paranymph (παρανυμφος), a term used in ancient Greece to denote one of the friends or relations of a bridegroom who attended him on the occasion of his marriage. Among the Jews there were two paranymphs, one a relative of the bridegroom and the other of the bride; the first was called his companion, and the other her conductor. Their business was to attend upon the parties at the marriage ceremony. See WEDDING.

Parapet (Lat. para-petto, from parare, to protect, and pecto, the breast) is an architectural term applied to a low breastwork intended for the protection of galleries and roofs. In England they are commonly battlemented or panelled, but in France they are usually pierced.

Ornamented Gothic Parapet.

Parapets are of very ancient date. The Israelites were commanded to build a “battlement” round their flat roofs.

Paraphrase. See COMMENTARY; TARGUM.

Parasara is the name of several celebrated personages of ancient India whose history is recorded or referred to in the Mahabharata (q.v.), the Paranaas (q.v.), and other Hindū writings.

Parasceve (παρασκευα, preparation), the day before the Saviour’s passion. It is called by the Council of Laodicea the fifth day of the great solemn week, when such as were baptized, having learned their creed, were to repeat it before the bishop or presbyters in the church. This was the only day for several ages that ever the creed was publicly repeated in the Greek churches. It was also called Holy Thursday, or Maundy Thursday (q.v.), and is observed with great pomp in the Romish Church. See PREPARATION.

Parash. See HORSE.

Parashioth (or Parashiyoth, פָּרָשִׁיָּהָּ). It was the custom of the Jews to have the whole Law, or Five

Tower, Merton College, Oxford, A.D. 1440.
PARASITE

Books of Moes, read over in the synagogues in the course of every year. Hence, for the sake of conven-ience, the Lord was introduced into the Law, or, Parashoth, as nearly equal in length as possible. These were appointed to be read in succession, one every week, till the whole was gone over. They were made fifty- four in number because the longest years contained fifty- four weeks. It was thought that Sabbath in such a case should be left without its particular portion; but as common years were shorter, certain shorter sections were joined together so as to make one out of two, in order to bring the reading regularly to a close at the end of the year. The course of reading the Parashoth in the synagogue commenced on the first Sabbath after the feast of Tabernacles; or, rather, on the Sabbath before that, for on the same day that they finished the last course of reading they began the new course, in order, as the rabbinists allege, that the devil might have no ground for accusing them to God of being weary of reading the Law. See HEPHATAH.

Parashoth (παρασήκον, fellow-servants), assistants to certain priests among the ancient Greeks. The gods to whose service parasites were attached were Apollo, Heracles, the Anasa, and Athena of Pallene. They were generally elected from the most ancient and illustrious citizens, and what was assigned to them it is difficult to discover. They were twelve in number, and received as the remuneration for their services a third part of the sacrifices offered to their respective gods. Parasites were also appointed as assistants to the highest magistrates in Greece. Thus there were both civil and priestly parasites. The term is now generally used to denote flatterers or sycophants of any kind.

Paratorium, a name sometimes given to the Oblo-thonarium (q. v.) of the Ordo Romanus, because, when the offerings were received preparation was made out of them for the Eucharist.

Parapet (παραπέτωμα), the name given in the Greek Church to a side-table for the additional chalices. See CHALICE.

Paray-le-Monial, a little village in the eastern part of France, has become noted in recent times as the seat of a sacred shrine dedicated to a virgin who is reputed to have led a most exemplary life, and was canonized in 1863. All nations of the race have been wont to look with veneration at the shrines of Paray-le-Monial, and so general became the enthusiasm over these wonderful (1) reports that pilgrimages were regularly organized not only in France, where the checked fate of the last war would naturally turn the lower classes to superstition in the most absurd and deplorable man- struction of departed saints, but also in Belgium, and in Protestant England and America. In 1873 pilgrims from all points of the compass flocked to Paray-le-Monial. Of course the English and American pilgrims attracted special attention, for it was supposed that in neither of these countries could any superstitious veneration be fostered and quickened. The general supposition of Protestants, and all who disbelieve ecclesiastical miracles (q. v.), is that the Ultramontanes are seeking to unite the lower classes of all countries under the papal banner; and, knowing in them a sympathy for the Romish cause, to undermine the opposition which has developed against Jesuitism and Ultramontanism at the different European centres of influence. Inasmuch as the Jesuits and Ultramontanes generally have encouraged the people in these pilgrimages, the supposition seems reasonable.

In the article MARIE à LA COQUE we have already given the personal history of this remarkable Romish saint. It remains to be added here that the Romanists of Paray-le-Monial claim to possess her bones, and that over them stands a star erected to her memory. A correspondent of the New York Tribune, who was an eye-witness, in September, 1873, of the arrival and reception of a great body of English pilgrims—a motley throng of men and women, priests and laymen, old and young; rich and poor—describes the saint's remains and their costly shrine:

"She lies stretched upon an altar in the splendid chapel which her devotees have endowed. When the bones already referred to were dug up from the vault in which they had lain for two hundred years, they were committed to the charge of a cunning artificer, who, re- verse downwards, cemented them as firmly as they would go with gold wire. Head, feet, and hands were formed out of wax and stuck on with adhesive paste. The body was wrapped up in a bed, with an outward covering of cloth of gold, laid upon a magnificent marble altar enrobed in a rich case of crimson velvet, with a portrait of the dead. The eyes of the wax figure, which are made of enamel, are half open. With its right hand it presses upon its breast a breastplate of iron, and in its left hand it holds a branch of silver lilies. The chapel itself is almost oppressive from the richness of its decoration. The walls are hidden behind the pictures and the banners which the faithful have deposited there. The vault is of azure, studded with stars of gold. The pavement of the church is of marble, while that of the sanctuary is set with stones, in imitation of carpet-patterns. Before the wax figure burn constantly, day and night, two candles set with precious stones. One of the lamps burns for the preservation of the faith in Belgium, another for the coun- tries of England. A third represents the Church of the Sacred Heart, and the rest are severally devoted to simi- lar interests. At the sides of the altar is a square of marble, which will be increased by one, which the English pilgrims have brought with them, and for the endowment of which a sum of money has been collected. As this sum will be a capital sum of forty pounds to endow a lamp with oil in perpetuity." See PILGRIMAGE.

Parbar (Heb. kop - Parbar, פֶּרֶבַרְנ), with the article: Sept. בַּעֲרָבּוֹ, Vulg. celcina), a word occurring in Hebrew and A. V. only in 1 Chron. xxvi, 18, but there found twice: "At [the] Parbar westward four [Levites] in the causeway two [the] Parbar." From this passage, as also from the context it would seem that Parbar was some place on the west side of the temple enclosure, the same side with the causeway and the gate Shallecheth. The latter was close to the causeway—probably on it, being that which in later times gave place to the bridge, and we know from its remains that the bridge was at the extreme south of the western wall. Parbar therefore must have been north of Shallecheth, apparently where the Bab Sisilla now is. As to the meaning of the name, the rabbinists generally agree (see the Targum of the passage; also Bux- torf, Lex Talm. s. v. ד"ב; and the references in Lightfoot, Prospect of Temple, ch. v) in translating it "the outside place;" while modern authorities take it as equivalent to the parvurum in 2 Kings xxiii, 11 (A. V. a suburb) and almost identical with parbar, and used by the early Jewish interpreters as the equivalent of migrašim, the precintis (A. V. "suburbs") of the Levitical cities. Accepting this interpretation, there is no difficulty in identifying the Parbar with the suburb (רֵבֶן) mentioned by Josephus in describing Herod's Temple (Ant. iv. 11, 1), as lying in the deep valley which separated the west wall of the Temple from the city opposite it; in other words, the southern end of the Tyropoön, which intervenes between the Wailing-place and the (so-called) Zion. The two gates were built in the city, and one of them (which is now destroyed) belongs to four. It does not follow (as some have assumed) that Parbar was identical with the "suburbs" of 2 Kings xxiii, 11, though the words denoting each may have the same signification. For it seems most consonant with probability to suppose that the "suburbs of the Sun" would be in the eastern side of the Temple Mount, in full view of the rising rays of the god as they shot over the Mount of Olives, and not in a deep valley on its western side. Parbar is probably an ancient Jebu- sitio name, which perpetuated itself after the Israelitish conquest. Geuesius (Thesaur. p. 1128 o) and Furst (Handb. ii. 235 b) connect parbar and par- varum with a similar Persian word, farsdr, meaning a
summer-house or building open on all sides to the sun and air. See Temple.

Parce (from the root pars, "a part"), the name given by the Romans to the powerful female divinities who presided over the birth and the life of mankind; they are called the goddesses of Fate, from the fact that they seemed to have control over his every thought. The Greek name, Moira, has the same meaning (from μοίρα, a share). They were three in number, Clotho, Lachesis, and Atropos, daughters of Nox and Erebus, according to Hesiod, or of Jupiter and Themis, according to the same poet in another poem. Some of them are daughters of the sea. Clotho, the youngest of the three, presided over the moment in which we are born, and held a distaff in her hand; Lachesis spun out all the events and actions of our life; and Atropos, the eldest of the three, cut the thread of human life with a pair of scissors. Their different functions are well expressed in this ancient verse:

"Clotho column retinet, Lachesis net, et Atropos occit."

The name of the Parce, according to Varro, is derived a partu or parturiendo, because they presided over the birth of men, and, by corruption, the word parca is formed from parta or parturus; but, according to Servius, they are called so by antiphrasis, quod novinti partem. This was evidently the common belief. Some suppose that they were subject to none of the gods but Jupiter; while others suppose that even Jupiter himself was obedient to their commands; and indeed we see the father of the gods, in Homer's Iliad, unwilling to give the Parcae their proper office, and yet obliged to do so by the superior power of the Fates, to abandon him to his destiny. According to the more received opinion, they were the arbiters of the life and death of mankind, and whatever good or evil befalls us in the world immediately proceeds from the Fates or Parce. Some make them ministers of the king of hell, and represent them as sitting at the foot of his throne; others represent them as placed on radiant thrones, amid the celestial spheres, clothed in robes spangled with stars, and wearing crowns on their heads. According to Paussanias, the names of the Parce were different from those already mentioned. The most ancient of all, as the geographer observes, was Venus Urania, who presided over the birth of men; the second was Fortune; Iththia was the third. To these some add a fourth, Proserpina, who often disputis with Atropos the right of cutting the thread of human life. The name Parca is the Grecian for Parcae, and the Parcae was well established in some cities of Greece, and though mankind were well convinced that they were inexorable, and that it was impossible to mitigate them, yet they were eager to show a proper respect to their divinity by raising them to temples and statues. Called received the same worship as the Furies, and their votaries yearly sacrificed to them black sheep, during which solemnty the priests were obliged to wear garlands of flowers. The Parcae were generally represented as three old women with chaplets made of wool, and interwoven with the flowers of the narcissus. They were covered with a white robe, and fillets of the same color, bound with chaplets. One of them held a distaff, another the spindle, and the third was armed with scissors, with which she cut the thread which her sisters had spun. Their dress was differently dressed by some authors. Clotho appears in a variegated robe, and on her head is a crown of seven stars. She holds a distaff in her hand reaching from heaven to earth. The robe which Lachesis wore was variegated with a great number of stars, and near her were placed a variety of spindles. Atropos was clad in black cloth; she held scissors in her hand, and with claws of thread of different sizes, according to the length or shortness of the lives whose destinies they seemed to contain. Hyginus attributed to them the invention of these Greek letters, α, β, γ, τ, ρ, κ, λ, ι, ο, υ, χ, ψ, but they were not yet in use when they were committed to the archives of ceter.

The Parcae had places consecrated to them throughout all Greece, at Corinth, Sparta, Thebes, Olympia, etc. See Hesiod, Theog. et scut. Her. / Pausan. i. l. 40; l. 8, c. 11; l. 5, c. 15; Homer, ll. xxvi, 49; Callimach. in Iam. ll. Ilian, l. 10; Findlar, Homer, l. xxvi, 49; Omer, ll. xxi, 49, in Iphig. ap. urb. Lyc. 648 in orbe Luna; Hygin. in profab. fab, 277; Orph. hymn. 58; Apollon, 1, etc.; Claudian, De repent. Pros.; Horace, Od. 6, etc.; Ovid, Met. v. 538; Lucan, 3; Virgil, Aen. 1, 22; etc.; Seneca. in Herc. Fur., Stat. Theb. 475

Parched Corn is the rendering in the A. V. of 

χειμάζει (once χειμάζων, 1 Sam. xvii, 17), kali', an edible substance (Lev. xxviii, 14; Ruth ii, 14; 1 Sam. xvii, 17; xxv, 18; 2 Sam. xxvii, 28, twice, the last "parched pulse"); and of ἀλάπη in Judith x, 5. The correctness of this translation has not, however, been assented to by all commentators. Thus, as Celsius (Hierobot. ii, 251) says, "Syrus interpreps, Onkelos, et Jonathan errores voce utuntur, Lev. xxviii, 14; 1 Sam. xvii, 17; xxv, 18; 2 Sam. xvii, 18." Arias Montanus and others, he adds, render kalli by the word toastum, considering it to be derived from χειμάζει kalêw, which in Hebrew signifies "to toast" or "parch." So in the Arabic kali signifies any thing cooked in a frying-pan, and is applied to the beans which have been simmered in a little oil or curry; kalli and kalâ signify one that fries, or a cook. From the same root is supposed to be derived the word kali or al-kali, now so familiarly known as alkali, which is obtained from the ashes of burned vegetable substances. But as, in the various drawings of Scripture where it occurs, kalli is without any adjunct, different opinions have been entertained respecting the substance which is to be understood as having been toasted or parched. By some it is supposed to have been grain in general; by others, only wheat. Some Hebrew writers maintain that flour or meal, or others that parched meal, is intended, as in the passage of Ruth ii, 14, where the Sept. translates kalli by ἄλατον, and the Vulg. by potenta. A difficulty, however, arises in the case of 2 Sam. xvii, 28, where the word occurs twice in the same verse. We are told that Shobai and others, on David's arrival at Mahanaim, in the farther limit of the tribe of Gad, "brought bread, and basins and earthen vessels, and wheat, and barley, and flour, and parched corn (kali), and beans, and lentils, and parched pulse (kali), and honey, and butter, and sheep, and cheese of kine, and milk, and oil and butter." It is plain that there is here a doubt how these various articles of food were prepared. This is a striking representation of what may be seen every day in the East: when a traveller arrives at a village, the common light beds of the country are brought him, as well as earthen pots, with food of different kinds, and for a meal. A meat is often put into the pot, or else it is boiled up; and for the rest is eaten cold, or else it is boiled up, and drink it as a draught, the refrigerating and satisfying qualities of which they justly extol (Kitto, Pictorial Bible, ii, 557). Parched grain is also, no doubt, very common. Thus in the bazars of India not only may rice, obtained in a parched state, but also the seeds of the Nympheum, and of the Nelmum spectro-

PARCHED GROUND

zeug, or bean of Pythagoras, and most abundantly the pulse called green by the English, on which are chiefly fed. This is the Cicor aristaeun of botanists, or chick pea, which is common even in Egypt and the south of Europe, and may be obtained everywhere in India in a parched state, under the name of chelene. Belon (Observ. ii, 50) informs us that large quantities of it are mortifying instead of refreshing, and this is evident from the magazines at Cairo and Damascus. It is much used during journeys, and particularly by the great pilgrim caravan to Mecca (comp. Hasekliquist, p. 191). Considering all these points, it does not appear to us by any means certain that the kals is correctly translated "parched" in all the passages of Strabo and Pliny, in Lev. xxiii. 14: "Ye shall eat neither bread, nor parched corn (kali), nor green ears, until . . ." So in Ruth ii, 14: "And he (Boaz) reached her parched corn (kali), and she did eat." 1 Sam. xvii, 17: "Take now for thy brethren an ephah of parched corn." And again, xxxv, 18, where five measures of parched corn are mentioned.

Bochart remarks (Hieroz. ii, i, 7) that Jerome renders kals by frirum cicer, i.e. the parched cicer or chick pea; and, to show that it was the practice among the ancients to parch the cicer, he quotes Pausanias (xvi, 9, 6, b, 7). Hirt (De Planta Bethlehem, p. 249, and others; and allows from the writings of the rabbins that kals was also applied to some kind of pulse. The name kals seems, moreover, to have been widely spread through Asiatic countries. Thus in Shakespeare's Henry V, ii, 14, kals, from the Sanscrit kola, from which is derived pulse—leguminous seeds in general. It is applied in the Himalayas to the common field-pulse. It is cultivated in the Himalayas, also in the plains of North-west India, and is found wild in the Khadie of the Junna, near Delhi; the corra matter of the natives, called kalasa in the hills (Iliust. of India, p. 200). Hence we are disposed to consider the pea, or the chick pea, as more correct than parched corn in some of the above passages of Scripture. See also Gesenius, Theeuar. p. 1215; Celsius, Herobot. ii, 231 sq., where other methods of interpretation are collected. Some have even supposed kals to be a kind of coffee bean! The predominant opinion of interpreters, however, sustains the rendering of the A.V., since wheat or barley, roasted on the ears and then rubbed out, is still common among the Bedouin (see Leach, in Macmichael's Journal, 226), and in Palestine (Robinson, Ros. B. ii, 394). Thus Thomson remarks, "A quantity of the best ears, not too ripe, are plucked with the stalks attached. These are tied into small parcels, a blazing fire is kindled with dry grass and thorn-bushes, and the cut ears are laid in it until the chalk is mostly burned off. The husks are thus sufficiently removed and it is a favorite article all over the country" (Land and Book, ii, 510). Tristram likewise observes, "We once witnessed a party of reapers making their evening meal of parched corn. A few sheaves of wheat were brought down, and tossed on the fire of brushwood. As soon as the straw was consumed, the charred heads were Dexterously swept from the embers on a chark spread on the ground. The women then beat the ears and tossed them into the air until they were thoroughly winnowed, when the wheat was eaten at once while it was hot. This seems to be the " pulses, or " of the Bible, in Lev. (Nat. Hist. of the Bible, p. 492). See EARS (OF CORN).

Parched Ground is the rendering of the Hebrew sharaab, בַּעֲשֵׂה, in Is. xxxv, 7. This word properly means "heat of the sun," as the A.V. renders it in Is. xlix, 10. Hence it is used to designate a phenomenon which is frequent in Arabia and Egypt, and may be occasionally seen in the southern parts of Europe; called by the Arabs Sarab, and by the French Le Mirage, by which name it is commonly known in English. Descriptions of this illusion are very given by travelers. It consists in the appearance of a lake or sea in the midst of a plain where none in reality exists. It is produced by the reflection of the rays of light from strata of air heated by the sand or the sun; and it frequently extends itself from the thin line of reflection to fill himself in the midst of nothing but glowing sand. It is often used proverbially, or for the sake of comparison, by the Arabs, as in the Koran (Sur. xxiv, 39): "But as for those who believe not, their works are like the sherab of the plain: the thirsty imagines it to be water, but when he reaches it, it is not." The same figure occurs in Is. xxxv, 7: "The sharaab shall become a lake," i.e. the illusive appearance of a lake in the desert shall become a real lake of refreshing waters. See Gesenius and Henderson on Isaiah, and comp. the descriptions and explanations in Kitto's Physical History of Palestine, p. 147, 150, 151. See MIRAGE.

Parchi, Estori ben-Moses, a noted Hebrew scholar, was a native of Provence, and belonged to those exiles who were driven from France in the year 1306, under Philip IV, the Fair, one of the most rapacious, perhaps the most thorough, sovereigns in the history of France. At the time of the expulsion Parchi must have been a young man yet, for in the introduction to his work he gives us a description of the miseries which he had to undergo in the following words: "They drove me out from the college; naked I have walked the streets of my father's house, as a young man, and was obliged to wander from country to country, from people to people, whose languages were foreign to me." Parchi found a resting-place in Palestine, where he wrote his יִשְׂרָאֵל, which treats on the topography of Palestine, and is especially valuable for the geography of the Holy Scriptures, the Talmud, and the Middle Ages, for numismatics and chronology. It was first published at Venice, 1549, and has been edited with a very valuable introduction by H. Edelmann (Berlin, 1846 and 1852). See Fürst, Bibl. Jud. i, 359; Zunz, in Asher's Itinerary of Benjamin of Tudela (London, 1841), ii, 389-448; Gratz, Gesch. d. Juden, vii, 268; Frankel's Monatschrift, 1851, 1852, p. 528; Jost, Gesch. d. Judenth. u. d. Sekret. iii, 62; Zunz, Zur Geschichte u. Literatur, p. 465, 555, 536. (B.P.)

Parchment is the rendering in the A. V. at 2 Tim. iv, 13 of the Greek μετανοία, a skin, from which the English membrane is derived. The apostle Paul in this passage bids his opposite, and to the Church at Rome, whither be charges him to require strictly, careful things; "but especially the parchments," what these parchments were to which so much importance seems to be attached can only at this time be matter of conjecture. Parchment is prepared from the skins of animals, generally sheep, in an untanned state. It is one of the oldest inventions of writing materials, and was known at least as early as 500 years B.C. Herodotus speaks of books written upon skins in his time. Fliny, who speaks of the goods, places them as early as 480 B.C. Plato, telling us that it was made at Pergamos (hence the name Pergamum, corrupted into English parchmen in the reign of Eumenius II, in consequence of Ptolemy of Egypt having prohibited the exportation of papyrus. Possibly the Pergamian invention was an improvement in the parchment, skins for skins, which had been used centuries before. The manufacture rose to great importance in Rome about a century B.C., and parchment soon became the chief material for writing on; and its use spread all over Europe, and retained its prevalence until the invention of paper from rags, which from its great durability proved a formidable circumstance for literature (Chambers). Parchment is now rarely used except for literary diplomas and such
PARCHON, SALOMON BEN-ABRAHAM, one of the earli-er Jewish grammarians and lexicographers, who flour-ished about 1130 at Calatajude, in Aragon. He after-wards emigrated to the peninsula of Salerno, where he most probably died about 1160. Being anxious to furnish his co-religionists in Italy in some a qualitative and exegetical labors of his brethren in Spain, Parchon compiled, in the year 1160, a Hebrew lexicon, entitled יִדְּרָע הָרַבָּה. Though it is substi-tually a translation of Ibn-Ganach's celebrated lexicon [see IX, Ganach], yet Parchon also introduces in its the labors of Chajuj, Jehuda Ha-Levi, Ibn-Ezra, etc.; and the index is composed of many words by the Parchon himself. From the Targums, the Mishna, Tossefta, and the Talmud. The work is divided into two parts; the first containing a grammar of the Hebrew language, and the second a lexicon. It has been published by Stern (Priesburg, 1844), with a valuable introduction by Rappaport, in which this erudite scholar gives a succinct history of the study of the Hebrew language, and of the different periods in which the great grammarians lived. Parchon also wrote a commentary on the Prophe-tes and Hagiographies, which has not as yet come to light. See F. Steinschneider, Bibliographisches Hand-buch [Leipsic, 1859], p. 108; Furst, Bibliotheca Judaica, iii., 66.

PARCLOES (or PARCELOS) is an architectural term applied to enclosures, railings, or screens, such as may be used to protect a tomb, to separate a chapel from the main body of the church (especially those at the east end of the aisle of a cathedral), or in the front of a gallery, or for other similar purposes. It is either of open work or close. A distinct chapel is often formed in this manner, e.g. a chantry chapel. See Chapels.

Pardée, Richard Gay, one of the most noted Sun-day-school workers of our day, and one of the most re-markeable of American lay-workers in the interests of the Christian Church, was born at Sharon, Conn., Oct. 12, 1811, and was the oldest of a family of twelve chil-dren. His boyhood was spent on his father's farm, upon Sharon Mountain, and Richard attended the com-mon district school. This was the only schooling he ever had. At the age of seventeen he went to Seneca Falls, N.Y., to live with an uncle, and was engaged for a time as a clerk in the post-office, but afterwards learned the dry-goods business. He was at this time strongly inclined to a life of gayety; but about 1851 he was converted, and ever after he most faithfully served the Church and his God. He became at once active in Sunday-school work, and being of a quick, perceptive turn of mind he fathomed the imperfections of Sunday-school training as it prevailed at that time, and applied himself to bring about improvements. While living in Palmyra, N.Y., where he had engaged in business, he became intimate with Mr. L. B. Tousley, the well-known children's missionary of that region, and the two friends made frequent missionary tours together through the western part of the state, addressing large meetings of church workers, and friends of Sunday-schools. Pardée was at that time a Presbyterian elder, and superintendent of the Sunday-school of the church to which he belonged, and also corresponding secretary of the "Wayne County Sunday-School Union." From 1851 to 1856 he resided at Geneva, N.Y., and then removed to New York City to enter the business of "The New York Sunday-School Union." As the agent of that organization, his busi-ness was to promote in every legitimate way a healthy activity in the cause of Sunday-schools, but especially to secure the establishment of mission-schools. The agen-t was well aidsed to effect the task assigned him, and the work accomplished became at once a spur and a model for Christian workers in this line of effort in other cities. The mission-schools of the New York Sunday-school Union became a notable feature in the religious move-ment of the great metropolis, and had a wide influence in leading to similar operations elsewhere. He resigned his position in the Union in the fall of 1863 to take a position as agent in a life insurance company, but he so conditioned his employers that he had perfect liberty to go and come when he pleased, and he became thenceforth a frequent visitor in every state in the union except California, everywhere welcome, and everywhere carrying with him an influence rich in blessing. He was also sent for by the students of several of our largest theological seminaries, and delivered in each a course of familiar lectures on the practical details of Sunday-school organization and labor. Among the institutions in which he thus labored were the Presbyterian Theo-logical Seminary at Princeton, the Union Seminary in New York, and the Episcopal Seminary in Philadelphia. These blessed labors were suddenly cut short by death, Feb. 24, 1869. A more gentle, genial, loving spirit was never met. Without being remarkably original, he was yet eminently progressive in his ideas, always keeping himself on the top of the advancing wave; and the new ideas which he gathered and scattered in such rich profusion were in turn scattered all over the country through the columns of the Sunday-school Times, to which he regularly contributed from the establishment of that paper until his hand ceased to hold a pen. Mr. C. C. North, the noted Meth-odist lay-worker, in a eulogy which he pays the much-lamented Pardée, writes (N. Y. Christian Advocate, Feb. 18, 1869): "It has not been within my province to write of philosophic powers, of scientific researches, of brilli-ant poetic conceptions, or of splendid oratory; but of traits, virtues, and usefulness, so singular and so rare, that while the generation past produced but one Raikes, the present has given birth to but one Pardée." His two volumes, the Sunday-school Worker and the Sabbath-school Index, are widely known and prized. See Dr. John S. Hart in Sunday-school Times, April 3, 1869.

Pardés (パスデス, i.e. Paradise) is the acrostic comprising the four exegetical rules, עְסָרָה, פָּרְדֵּס, בּוֹשֵׂש, הַשָּׁם, by which the rabbis explained the Scriptures. Im-mEDIATELY after the close of the canon of the Old Testament became an object of scientific treatment among the Jews. A number of God-fearing teachers arose, whom, by their instruction, encouragement, and sol-emn admonitions, rooted and built up the people in their scriptural faith. As the Bible formed the central point around which their legends, sermons, lectures, discussions, investigations, etc. clustered, a homiletic-exegetical literature was in the course of time de-veloped, called Midrash (q. v.), from פָּרְדֵּס (from פָּרְדֵּס, "to study, expound")—a term which the A. V. renders by "Story," 2 Chron. xiii. 22; xxiv, 27), which became as mysterious in its gigantic dimensions as it is in its or-i gin. In the Middle Ages we find a number of rabbis who felt the study of the Bible had not all the sciences, as well as the requirements of man for time and eternity, an answer to every question, and that every repetition, figure, parallelism, synonym, word, letter, nay, the very shape and ornaments of the letter or titles, must have some recondite in every fly's wing or an ant's foot had its peculiar significance," the text was explained in a fourfold manner: viz. 1. פָּרְדֵּס עֲשָׂרָה. 2. פָּרְדֵּס בּוֹשֵׂשׂ. 3. פָּרְדֵּס הַשָּׁם. 4. פָּרְדֵּס רָדָא. The one called פָּרְדֵּס עֲשָׂרָה, simple, primary, literal, aimed at the simple understand-ing of words and things, in accordance with the primary exegetical law of the Talmud, "that no verse of the Scrip-ture ever practically travelled beyond its literal meaning," פָּרְדֵּס עֲשָׂרָה (Jebamoth, 24a), through
It might be explained, homiletically and otherwise, in innumerable new ways. The second, ἁμνὸς, means “hymn,” i.e., the discovery of the indications contained in certain seemingly superfluous letters and signs in Scripture. These were taken to refer to laws not distinctly mentioned, but either existing traditionally or newly promulgated. This method, when more generally applied, became the principal method of interpretation, a method that also adhered to the “Notarikon” of the Romans. Points and notes were added to the margins of scriptural MSS., and the foundation of the Massorah, or diplomatic preservation of the text, was thus laid. The third, σφαίρα, was homiletic application of prophetic and historical dicta to the actual condition of things. It was a peculiar kind of sermon, with all the side-issues discussed, parable, gnomes, proverbs, legend, and the rest, exactly as we find it in the New Testament. The fourth, ἱμάλατος, σχέτος, ἀρχαίος, was a science into which but few were initiated.

It was theosophy, metaphysics, angelology, a host of wild and glowing visions of things beyond earth. Faint echoes of this science survive in Neo-Platonism, in Gnosticism, in the Cabala, in Hermes Trismegistus. It was also called “the Creation” and “the Chariot,” in allusion to Ezekiel’s vision. Yet here again the power of the vague and mysterious was so strong that the word Paradies or Paradise gradually indicated this last branch, “the secret science only.”

1. PARDIES, IGNAZE GARTON, a French Jesuit, much noted for his attainments in philosophy, mathematics, and belles-lettres, was born, of distinguished parentage, at Paris in 1536. After due training at the schools in Paris, he conceived the purpose of entering the Society of Jesus, and joined the order in 1562. For several years he was employed as instructor in polite literature. His leisure he employed in speculative studies, and soon came to be noted for his mastery of the Cartesian philosophy. Pardies claimed not only to have mastered Descartes’s views, but to have improved upon that system. He died in 1673, before he had really developed his own philosophical theories into a system, and there is not enough extant in his writings to judge of him as an original mind. Pardies had the reputation in his own day of a writer much cultivated, and with a neat and concise expression and pure diction. He had a dispute with Sir Isaac Newton regarding his New Theory of Light and Color in 1672. His works are not of interest to us. A list of them is given in Hoefer, Nouv. Biogr. Générale, xxxix, 190, 191. See also Bayle, Hist. Dict. s. v.; Niecor, Memoires, vol. i and ii; Chaupépil, Nouv. Dict. histor. s. v. (J. H. W.)

2. PARDY, a Jewish family, several members of which have become distinguished as rabbins and writers.

3. ABRAHAM, a younger brother of Isaac, also a learned and pious man, who lived at Amsterdam.

4. DAVID (1), third son of Joseph (1), went with his father to Amsterdam, and officiated there, while his father was yet alive, as rabbi of the synagogue Beth Israel, which was built in 1618. Through the efforts of David Pardo in 1639, the three synagogues were united to form from that time forward one single and inseparable community of Spanish and Portuguese Jews. In the same year a rabbinical school, “Talmud Thora,” was established, which attained to eminence, and where Saul Levi Morteira, Menasse ben-Israel, Isaac Aboab, and David Pardo lectured. Pardo published the Spanish translation of the Compendio dos Dinos, by Zaddik ben-Joseph Formon, the Compendio dos Dinos (Amst. 1610), which was also printed in Hebrew letters, in a new edition. He died in 1652, leaving behind two sons, Joseph and Josiah.

5. DAVID (2), perhaps a descendant of Isaac Pardo (a son of Isaac, according to Fürst, who seems to confuse this David with David Pardo, No. 1), lived at Spalatro in the last century, and distinguished himself as a writer. He wrote, דַּנְיָל, a super-commentary on Rashi’s commentary on the Pentateuch (Venice, 1760); דַּנְיָל, a commentary on the Mishna (ibid. 1792); דַּנְיָל, a commentary on the six orders of the Tosefta (Livorno, 1790); דַּנְיָל, a collection of decisions (Amst. 1756); דַּנְיָל, in which he surpassed his father. At Salonica, his native place, he was president of the Jewish college אֶבֶרְתָּן, and acquired reputation as a good preacher. Towards the end of his life he went to Scopia, in order to be near his sons, where he died shortly after his arrival.

6. JACOB (1), son of David (2), was rabbi at Ragusa, and wrote, דַּנְיָל, a commentary on the earlier prophets, viz. Joshua, Judges, Samuel, and Kings (Venice, 1784); דַּנְיָל, prayers and religious poems (ibid. 1800); דַּנְיָל, prayers occasioned by the earthquake at Ragusa (ibid. 1780).

7. JACOB (2) CHAJIM (ben-David Samuel ben-Jak, ben-Dan) was born at Ragusa in 1818. He was educated at the university in Padua, and was noted for his remarkable attainments. When eighteen years of age he wrote, דַּנְיָל, a commentary on Micah; reprinted in S. D. Luzzatto’s דַּנְיָל, as well as Pardo’s “cinque discorsi.” He died in 1839, when about to enter upon his official duties as rabbi at Verona. Pardo’s death was regarded as a great loss to the Jewish community. D. Chan. Viterbo and Jos. Almanzi gave vent to their feelings in two poems, which were published (Prague, 1839). Though Pardo died so young, he was yet distinguished for his oratorical talent, and the Jews looked upon him as one of their ablest men in the pulpit. After his decease five of his discourses were published.

8. JOSIAH (1), son of Joseph (1), succeeded his father in the rabbiship, and afterwards went to London, where he wrote his הַדְּרֵי הַלֵּבָנָה, “The Pure Table,” an abridgment of the Jewish rites, of which many editions have appeared. He died before 1860. His son David (3), who likewise officiated as rabbi at London, published the הַדְּרֵי הַלֵּבָנָה at Amsterdam, dedicating it to the vestry of the London congregation.

9. JOSIAH (2), a pupil and son-in-law of Saul Levi Morteira, also officiated as chacham or rabbi until, in 1674, he went in the same capacity to Curaçao, and afterwards to Jamaica. His son David (4) was rabbi at Surinam, where he died about 1717.

See Kayserling, Die Pardos, in Frankel’s Monats- schrift, 1859, p. 886 sq.; De Rossi, Dizionario storico della autorit Ebrei, p. 267 ( Germ. transla. by Hamberger);
PARDON

Grütz, Czech, J. Juden, ix. 372; x. 7, 9, 14; Lindo, Hist. of the Jews in Spain and Portugal, p. 370; Kayserling, Sephardim, p. 169, 201, 203, 296; Wolf, Bibl. Hebr. i, 325; iii, 281, 296; First, Bibl. Jud. iii, 66 sq.; Fink, Sephardim, p. 462. (B. P.)

Pardon (prop. some form of "έφη, to cover, i.e. forgive") is in the theology of the act of forgiving an offender, or removing the guilt of sin, that the punishment due to it may not be inflicted. On the nature of pardon, it may be observed that the Scripture represents it by various phrases, as only a lifting up or taking away of sin (Psa. xxxii. 1), a covering of it (Psa. xxxix, 2), a non-imputation of it (Psa. xxxiii, 2), a blotting it out (Psa. li. 1), a non-remembrance of it (Heb. viii. 12; Isa. xxxi. 29). In character, it is an act of free grace (Psa. li. 1; Isa. xxxi. 29); 2, a point of justice, God having received satisfaction by the blood of Christ (1 John i. 9); 3, a complete act, a forgiveness of all the sins of his people (1 John i. 7; Psa. cii. 2, 8); 4, an act that will never be repealed (Mic. vii. 19). The author or cause of pardon is not any creature, angel, or man; but God. Ministers preach and declare that there is remission of sins in Christ; but to pretend to absolve men is the height of blasphemy (1 Thess. ii. 4; Rev. xii. 5, 6). See Absolution; Indulgences; and the article below, Pardons. There is nothing that moves the heart of a godly man more for which pardon can be procured: wealth cannot buy pardon (Prov. xi. 4), human works or righteousness cannot merit it (Rom. xi. 6), nor can water baptism wash away sin. It is the pre-requisite of God alone to forgive (Mark ii. 7), the first cause of which is his own sovereign grace and mercy (Eph. i. 7). The meritorious cause is the blood of Christ (Heb. ix. 14; 1 John i. 7). It is to be sought by prayer. See Forgiveness.

Pardons of sin and justification are considered by some as the same thing, and it must be confessed that the toil of those who seek to be justified they agree, and without doubt every sinner who shall be found pardoned at the great day will likewise be justified; yet they have been distinguished thus: 1. An innocent person, when falsely accused and acquitted, is justified, but not pardoned; and a criminal may be pardoned, though he cannot be justified or declared innocent. Pardon is of men that are sinners, and who remain such, though pardoned sinners; but justification is a pronouncing persons righteous, as if they had never sinned. 2. Pardon frees from punishment, and justification from guilt; neither one nor the other can be true. 3. Justification does (Rom. v. 1). "If we were only pardoned, we should, indeed, escape the pains of hell, but could have no claim to the joys of heaven; for these are more than the most perfect works of man could merit; therefore a man must be what the Scripture declares—"...therefore, knowing how deeply we are in debt, let us pay the true cost of our sins in the gift of God." After all, however, these two may be distinguished, yet they cannot be separated; and, in reality, one is not prior to the other; for he that is pardoned by the death of Christ is at the same time justified by his life (Rom. v. 10; Acts xxii, 38, 39). See Charteris, A Scriptural Defence of the Indulgence, s. v.; Owen, On Paul's Pardon. Hervey, Works, ii, 328; Dwight, Theology; Fuller, Works; Griffin, On Atonement, Appendix; Knapp, Theology, p. 385; New Englander, Jan. 1783, art. iii. See Justification.

Pardon Bell is the same as the Ave (q. v.), which was tolled three times before and after service; it was first expressed in the English Church by bishop Shaxton. It derived its name from the indulgences attached to the recitation of the angelus.

Pardoner. See Questor.

Pardons, or the release from the temporal punishment of sin, the popes of Rome claim to have the power to grant. It is held by Romanists that the pope, in whom this power is lodged, can dispense it to the bishops and inferior clergy for the benefit of penitents throughout the Church. In the theory of pardons, the point is assumed that holy men may accomplish more than is strictly required of them by the divine law; that there is a meritorious value in this overplus; that such value is transferable, and that it should be disposed of, by the pope in a spiritual treasury of the Church, for the benefit of souls subject to the disposal of the pope, to be, on certain conditions, applied to the benefit of those whose deficiencies in endowments of such a compensation. A distinction is then drawn between the temporal and the eternal punishment of sin; the former of which not only can be, but is, systematically provided for, not only in the present life, but also the pains of purgatory in the next. These are supposed to be within the control and jurisdiction of the Church, and in the case of any individual may be ameliorated or terminated by the intercession of saints, but of the offenses most meritorious of the saints, etc., as may be necessary to balance the deficiencies of the sufferer. The privilege of selling pardons we have treated we have in the art. Indulgences. We content ourselves, therefore, in this place by stating what the Roman doctrine of pardons is; and yet this is no small task, for, as part of his work, he has so many crotchetts about it that one can scarce tell where to find them. We shall endeavor to explain it in these following propositions in the language of Beveridge:

"First, they assert, as Bellarmine saith, that many holy prayers, andMODEL, according for every ounce of their merit, must beought than the guilt of the temporal punishment which they were obnoxious to for faults committed by them contrary to the Gospel.

"Secondly, hence they say, as Johannes de Turrecremata, 'That one can satisfy for another, or one can acceptably perform satisfactory punishment for another's viro, because they suffer more than is due to their own sins.' And so, if the guilt of the temporal punishment which men undergo more than is due to their own is satisfactory for other men's sins.

"Thirdly, using they who thus undergo satisfactory punishments for others do not appoint the fruit of this their satisfaction to any particular persons, it therefore, as Robertus de Prato saith, 'is common to the whole Church in common, so that it is now called the common treasury of the Church,' which, however, is fetched whatsoever any others lack of due satisfaction.

"Fourthly, as Bellarmine saith, 'It is the foundation of pardons.' So that, as he saith, 'The Church hath power to apply this treasure of satisfaction, and by this to grant our pardons.'

"By this, therefore, we see how some sight into this great mystery, and perceive what they mean by pardons. For so saith he, 'A gift or grace, or indulgence is the remission of a temporal punishment due to God without the sacrament, by the application of the satisfaction of the Church.' Or, as Bellarmine saith, 'An ecclesiastical pardon or indulgence is a relaxation of a temporal punishment by God's judgment due to the sacrament of penance.' Or, as Robertus de Prato saith, 'An indulgence saith, 'An ecclesiastical pardon or indulgence is a relaxation of a temporal punishment by God's judgment due to the satisfaction of the Church. The pope, on behalf of the Church, grants indulgence by him who hath lawful authority to do it.' But let us hear what a pope himself saith concerning these pardons of the pope, his decretals, and his plenary indulgences: 'The pope of Rome may, for reasonable causes, grant to the same saints of Christ who, charity uniting them, are members of Christ, whether they be to this life or in purgatory, pardons out of the superabundance of the merits of Christ and the saints: and that he need, for the living as well as for the dead, by his sportive power of granting pardons, to dispense or distribute the treasure of the merits of the saints, and to give indulgences by himself, after the manner of an absolution, or to transfer it after the manner of a suffrage.' So that, as Durandus saith, 'Thus the difference from this matter is, that one day, one, or several, for their sins, in part or in whole, according as it pleases the Church to communicate more or less from the treasure.' And hence it is that we find it said in the book of indulgences or pardons, that 'popes Sylvester and Gregory, who consecrated the Lateran Church, gave so many pardons that none could number them but God.' Benefice being witness, who said, 'If men knew the pardons that are dispensed from Christ, they would not need to go by sea to the Holy Sepulchre.' In the chapel of the saints, 'The pope, bishop of Rome, that stood before the throne of Jerusalem. Whosoever shall ascend those stairs with devotion hath for every sin nine years of life, and the pope has in his power to apply them, and he shall be free one soul out of purgatory.' So that it seems the pope can not only give me a pardon for sins past, but to come to another place, only give me a pardon for my own sins, but power to pardon other men's sins, else I could not redeem a soul from purgatory.
"We have been the larger in the opening of this great Romish mystery; because we need do no more than open it. When the door is opened, it shows a dark and impious doctrine, utterly repugnant to the Scriptures. For this doctrine, thus explained, is grounded upon works for salvation; for 'God so loved the world,' of these three works that the Romish Church fetches all her pardon. Now this is but a bad foundation, contrary to Scripture and the fathers; and the fathers held to a different interpretation of the fourteenth article. And if the foundation be rotten, the superstructure will be most unstable. Against which supposition one man may, and doth satisfy for another; whereas the Scriptures hold forth 'Christ [as our propitiation] for us, who died for us, that is, for our sins,' (Rom. iii. 24, 25.) Lastly, this doctrine supposes that a pope, a priest, a noble creature, can pardon a man from sin, or 'sins;' whereas the Scriptures hold forth the prerogative only of the true God. For 'who is a God like unto thee, saith the prophet Michæl, that pardonneth iniquity, and passeth by the transgression of the remnant of his people.' (Is. lxxxiii. 10.) And therefore did Ambrose, Saint Chrysostom, and in short, nearly all the fathers say, that the Scriptures do not give to men any power of pardon, but to have the Desiderata, to the Dialecticis by the anonymous writers known as Grammaticus Leidenensis and Grammaticus Meermannianus. An edition by G. H. Schäfer, containing the treatises published by Koenius, and one or two additional, among which was the tract of Manuel Moschopulus, De Testa Fides, was subsequently published (Leips. 1811, 1850), with copious notes and observations by Koenius, Bastus, Bousinaude, and Schäfer, and a Commentatio Palaeographica by Bastius. Several works of Pardus are extant in MS.; they are on grammar; the most important are apparently that Pedi συμπεριλλήφθων Αγίας ΚΑΙ ΚΑΙΝΑΙΣ ΚΑΙΝΑΙΣ ΠΩΤΗΡΙΩΝ ΡΟΜΑΙΩΝ, κ. τ. λ., De Constructione Orations, et de Solacesvio et Barbarismo, etc.; that Περὶ τῶν ποιμῶν τῶν Ποιητῶν, De Troia Poëtica, et especially a collection entitled Εὐγενικεῖς θείς τῶν ανδρών τῶν ποιητῶν κυρίων, ἐ. ἡ. Λ., Expositiones in Comites s. Hymni s. Hymnorum, et Fotorumque totius Anti, et in Trivio Magne Hebdomadiacae et Fœtorum Deipara, a grammatical exposition of the hymns of Cosmas and Damascenus, used in the Greek Church— a work which has been, by the oversight of Posaevino, Sixtus of Sena, and others, represented as a collection of Homilies and Sermons. See Allatius, De Georgios, p. 416, ed. Paris, et apud Fabric. Bibl. Graec. xii, 122 sq.; Koenius, Prof. in Gregor. Corin.: Fabric. Bibl. Graec. vi, 195 sq., 320, 411: lix, 742.

**PARDUS**

*Pardus, Georgius* (or *Gregorius*), a noted Eastern prelate, who is supposed to have flourished after the 11th century, although the time is not exactly known. He was the first writer we have in which he lived is a passage in an unpublished work of his, De Constructione Orationis, in which he describes Georgiós Pisis, Nicolaus Callieois, and Theoros Prodomus as "more recent writers of iambic verse." Nicolaus and Theoros belong to the reign of Alexius I Comnenus (A.D. 1081-1118), and therefore Pardus must belong to a still later period; but his vague use of the term "more recent," as applied to writers of such different periods as the 7th and 11th or 12th centuries, precludes us from determining by his work to what period he may be placed. He was archbishop of Corinth, and hence he has sometimes been called Corinthus; but Allatius, in his *Dictiona de Georgios*, pointed out that Pardus was his name and Corinthius that of his see, on his occupation of which he appears to have disused his name and assumed the title of archbishop. The most published work is *Pedi ἐκλειστων των παρακενθητων μεταβατικων*, De Dialectica et Corinthis decadentis. It was first published with the *Eremotet: of Demetrius Chalcondylas and of Moschopulus, in a small folio volume, without note of time, place, or printer's name, but some of his verses were published in the *Psalterium* (Panzer, Annal. Syrop. ii, 96). The full title of this edition is *Περὶ ἐκλειστῶν τῶν παρακόπων παραβατικῶν*, De Dialectica et Corinthis decadentis. It was afterwards frequently reprinted as an appendix to the earlier Greek dictionaries, or in the collections of grammatical treatises (e.g. in the *Theatrion Compendiopic of Aldus* [Ven. 1496, fol.]: with the works of Constantine Lascaris [ibid. 1532, 4to]; in the dictionary of Aldus and Asenius [ibid. 1524, fol.], and of De Sessa and Ravanis [ibid. 1526, fol.], sometimes with a Latin version. Sometimes (as in the Greek lexicons of Stephanus and Scalpula) the version only was given. All these earlier editions were made from two or three MSS., and were very defective. But in the last century Gisbertus Koenius, Greek professor at Franeker, by the collection of fresh MSS., published the work in a more complete form, with a preface and notes, under the title of Γενημέτοριος κατάλογος κοινών Κάρπων εἰς ελληνικόν, *Gregoria Corinhi Metropoleis de Dialectica* (Leiden, 1766, 8vo). The volume included a supplement of two new treatises, De Dialectica and De Eretica, by the anonymous writers known as Grammaticus Leidenensis and Grammaticus Meermannianus. An edition by G. H. Schäfer, containing the treatises published by Koenius, and one or two additional, among which was the tract of Manuel Moschopulus, De Testa Fides, was subsequently published (Leips. 1811, 1850), with copious notes and observations by Koenius, Bastus, Bousinaude, and Schäfer, and a Commentatio Palaeographica by Bastius. Several works of Pardus are extant in MS.; they are on grammar; the most important are apparently that *Pedi συμπεριλλήφθων Αγίας ΚΑΙ ΚΑΙΝΑΙΣ ΚΑΙΝΑΙΣ ΠΩΤΗΡΙΩΝ ΡΟΜΑΙΩΝ*, κ. τ. λ., De Constructione Orations, et de Solacesvio et Barbarismo, etc.; that *Περὶ τῶν ποιμῶν τῶν Ποιητῶν*, De Troia Poëtica, et especially a collection entitled Εὐγενικεῖς θείς τῶν ανδρών τῶν ποιητῶν κυρίων, ἐ. ἡ. Λ., Expositiones in Comites s. Hymni s. Hymnorum, et Fotorumque totius Anti, et in Trivio Magne Hebdomad. and Fœtorum Deipara, a grammatical exposition of the hymns of Cosmas and Damascenus, used in the Greek Church— a work which has been, by the oversight of Posaevino, Sixtus of Sena, and others, represented as a collection of Homilies and Sermons. See Allatius, De Georgios, p. 416, ed. Paris, et apud Fabric. Bibl. Graec. xii, 122 sq.; Koenius, Prof. in Gregor. Corin.; Fabric. Bibl. Graec. vi, 195 sq., 320, 411: lix, 742.

**FAR THE NAILS**

*Ράδος* (Ράθος) ἰτικά, *lit. make the nails*; *Sept. πιπωρινυχια*; *Vulg. circumcideres unguere*. This expression occurs in Deut. xxii, 12, in reference to female captives taken in war: "Thou shalt bring her home to thine house, and she shall shave her head, and she shall be thy servant all her life, and pay all the hire of her sale;" which is, as Roberts observes, "I doubt not, the true meaning. This woman was a prisoner of war, and was about to become the wife of the man who had taken her captive. Having thus been taken from her native land, having had to leave her earliest and dearest connections, and now to be the wife of a foreigner and an enemy, she would naturally be overwhelmed with grief. To acquire a better view of her state, let any woman consider herself in similar circumstances. She accompanies her husband or father, the enemy to their native land, and partakes of all the sorrows and joy. She is carried off by the hand of a ruthless stranger. Poignant, indeed, would be the sorrow of her mind. The poor captive was to 'shave her head' in token of her distress, which is a custom in the East to this day. A son on the death of his father, or a woman on the death of her husband, has this token of their sorrow and grief. To shave the head is also a punishment inflicted on females for certain crimes. The fair captive, then, as a sign of her misery, was to shave her head, because her father or brother was among the slain, or because she had been sold in token of sorrow. To shave the head is also a punishment inflicted on females for certain crimes. The fair captive, then, as a sign of her misery, was to shave her head, because her father or brother was among the slain, or because she had been sold in token of woman's sorrow. But this poor woman was to suffer her nails to grow as an additional emblem of her distress. That it does not mean she was to pare her nails, as the
text has it, is established by the custom of the East, of allowing them to grow when in sorrow. The marginal reading, therefore, would have been much better for the text. When people are performing penance, or are in captivity or disgrace or prison, or are devotees, they suffer their nails to grow; and some may be seen, as were those of the monarch of Babylon in his sorrow, 'like birds' claws,' literally folding round the ends of the fingers, or shooting through the backs of their hands.' (Or loc. cit. ad loc.) See NAIL (of the Finger).

Paré. See PAREUS.

Pareau, John Henry, a noted Dutch Orientalist, was born, of French parentage, in the second half of the last century, probably about 1770. He was for some time preacher at Deventer, later at Utrecht. At the last-named place he became professor of Oriental literature at the university. He died in 1830. He is the author of various useful and reputable works relating to Biblical criticism and interpretation. His *Institutio Interpretis Veteris Testamenti* (Tr. ad Rh. 1822, 8vo), a valuable compendium of sacred hermeneutics, has been deemed worthy of a place in the *Bibliotheca Sacra* (Leyden) in 1818. He published a prize essay in Latin on the mystical interpretation of the Scriptures, in which he aimed a successful blow at the principles of interpretation adopted by modern German neologists. He also wrote on Hebrew antiquities, especially on the illustrations of the books of *Jeremiah*, the 13th chapter of 1 Corinthians, and in a dissertation on the book of Job defended the position that Job was acquainted with the doctrine of a future state, etc. (J. H. W.)

Pareia, a surname of Athenae (Minervia), under which she was worshipped in Laconia.

Parent (greek).—As early as the giving of the decalogue, and were to be honored by their children as a religious duty (Exod. xx. 12; Lev. xix. 3; Deut. v. 16); but as the law was promulgated more fully, their relation to their children was more accurately defined and more firmly established in society. The respect due to parents was inviolable. A child who cursed (Exod. xx. 17; Lev. xix. 9; comp. Deut. xxvii. 16; Prov. xx. 20; Matt. xi. 4) or struck his parents (Exod. xxi. 15) was punishable with death. Even obstinate disobedience on the part of sons, who, in spite of all parental reproofs and influence, continued to be flagrantly wicked, was punished by the judicial investigation and proceeding with this matter (Deut. v. 16; Philo, opera, i. 371; Joseph. ant. iv. 8, 24; Apion, ii. 27). Pareicide is not mentioned in the Mosaic law (so that of Solon [Cicero, Pro R. Aem. c. 25] and of Romulus [Plutarch, Vit. Rom. c. 22]. On the Egyptian law for this crime, see Dio. Sic. i. 77). The support of old or infirm parents was a matter of course, but in the Talmud is expressly enjoined on children (see Lightfoot, p. 908; comp. Potter, Greek Antiq. ii. 618 sq.). The father, as head of the family, had very great authority over his children. But the Jewish law, unlike the Egyptian (yet there the power was limited, see Dio. Sic. i, 77), and that of the ancient Gauls (Caesar, Bell. Gall. vi. 19), did not allow parents the power of life and death over their children; although it has been inferred from Judah's sentence of Tamar (Gen. xxxviii. 24; comp. Liv. iv. 41) that the father of the family, during the patriarchal period, exercised also the functions of a criminal judge. (On the extent of parental authority among the Romans, Zimmern's Geschichte d. Rom. Privatrechts, i. ii, 305 sq., may be consulted.) Under the law, however, he not only patronized the settled household economy, but married his sons (Gen. xxvi; Exod. xxi. 9 sq.; Judg. xiv. 2 sq.) and daughters (Gen. xxix. 16 sq.; xxxiv. 12) at his own pleasure; could sell the latter into slavery (Exod. xxii. 7, comp. Plutarch, Vit. Sol. ch. 10), and could even annul any vows which they had made without his knowledge (see Numb. xxx. 6, and comp. Gams, Erbrecht, i. 136). But by the time of Christ the traditional expositions of the law had lessened the parent's authority (Matt. xv. 5, See Vow. Comp. Michaelis, Mos. ii. 108 sq. in the Munich edition was ascribed to the blessing of a parent, and the curse of one was accounted a great misfortune (Gen. xxvii. 4, 12; xiii. 2 sq.; Sirach iii, 11. See Grotius, ad loc. Comp. Homer, oik. ii, 194; li. ix, 454; Plutarch, Timol. vi; Pinto, Leg. ii, 381 sq.). See CHILD; FAMILY; OLD.

By the old Roman law parents had power of life and death over their children, and in certain cases could sell them into slavery without redemption. The Christian emperors, however, soon modified and finally abolished this arbitrary power. In many heathen nations it still continues. Among civilized communities the duties of parents to children have in all ages, as a general rule, been recognised as relating to their health, their maintenance, their education, and morals. See EDUCATION; PEDAGOGICS.

Parent, Francois-Nicolas, a French priest, was born in Paris, 1722. Being curate of Boisissaine-la-Bertrand, near Melun, when the Revolution broke out, he embraced its principles with ardor; and having re-nounced the ecclesiastical career by a letter addressed to the National Convention (Nov. 4, 1798), and inserted in the *Journal des Débats*. In that day he was married, and became compiler of the *Journal des Campagnes*. He worked also on the *Courrier Français*, which then appeared, but found small resources in these occupations. He dragged out a miserable existence until the Consulate, when he obtained a moderate employment in the police, section of customs. Having lost this place upon the Restoration, he entered a printing-house as corrector, and died in poverty, Jan. 20, 1822, at Paris. We have of his works, Recueil d'hymnes philosopohiques, civiques et moraux (Paris, 1789, 8vo). He left several works, e.g., Les Mésaventures de Manon du sang:—Raisonnons tous—Mon Epinepine et mes Confessions. See Mahul, Ann. nécrol.; Feller, Dict. Hist.

Parentino, Bernardo, called also Fra Lorenzo, an Italian painter, was born at PARENZO, in Istria, in 1467. He was a pupil of Andrea Mantegna. Lanzi says that he was a 1782. Being curate of Boisissaine-la-Bertrand, near Melun, when the Revolution broke out, he embraced its principles with ardor; and having re-nounced the ecclesiastical career by a letter addressed to the National Convention (Nov. 4, 1798), and inserted in the *Journal des Débats*. In that day he was married, and became compiler of the *Journal des Campagnes*. He worked also on the *Courrier Français*, which then appeared, but found small resources in these occupations. He dragged out a miserable existence until the Consulate, when he obtained a moderate employment in the police, section of customs. Having lost this place upon the Restoration, he entered a printing-house as corrector, and died in poverty, Jan. 20, 1822, at Paris. We have of his works, Recueil d'hymnes philosopohiques, civiques et moraux (Paris, 1789, 8vo). He left several works, e.g., Les Mésaventures de Manon du sang:—Raisonnons tous—Mon Epinepine et mes Confessions. See Mahul, Ann. nécrol.; Feller, Dict. Hist.

Parentino, Bernardo, called also Fra Lorenzo, an Italian painter, was born at PARENZO, in Istria, in 1467. He was a pupil of Andrea Mantegna. Lanzi says that he was a 1782. In that day he was married, and became compiler of the *Journal des Campagnes*. He worked also on the *Courrier Français*, which then appeared, but found small resources in these occupations. He dragged out a miserable existence until the Consulate, when he obtained a moderate employment in the police, section of customs. Having lost this place upon the Restoration, he entered a printing-house as corrector, and died in poverty, Jan. 20, 1822, at Paris. We have of his works, Recueil d'hymnes philosopohiques, civiques et moraux (Paris, 1789, 8vo). He left several works, e.g., Les Mésaventures de Manon du sang:—Raisonnons tous—Mon Epinepine et mes Confessions. See Mahul, Ann. nécrol.; Feller, Dict. Hist.
PARIS, COUNCILS OF

1. The first was held at 380, according to the most common opinion, under Julian the Apostate, who was proclaimed emperor at Paris, in May, 380. St. Hilary had recently arrived in Gaul from Constantinople, and at his entreaty the heretical formulary of Ariminum (A.D. 358) was rejected. Among the fragments which remain of his doctrine, St. Hilary has been justified by the bishops of this council to those of the East, in which they return thanks to God for having delivered them from the Arian heresy, and for having enabled them to learn the real sentiments from the Orientals. They then give an open profession and clear exposition of the doctrine of Nestorianism and Monophysitism. In the act of搐, they sign that they had, through ignorance, done at Ariminum, and promise to perform whatever the Orientals required of them, to the extent of deposing and excommunicating all in Gaul who should resist. Further, the bishops declared that those who had consented to suppress the word οβία, or substance, both at Ariminum and at Nice in Thrace, had been chiefly induced to do so by the false statement made by the Arian party, that the confession of faith which they were called upon to sign had had the sanction of the Oriental bishops, who, as such, had been the first to banish the word. The act of the Council is, as it were, a reply to this controversy with the Arians, "And we," they added, "received it, and have always preserved the use of it inviolably; we have used this word ὁμοούσιος to express the true and actual generation of the Son of God, of the same God and the same substance, it is only to exclude the idea of creation, adoption, etc. We recognise no likeness worthy of him but that of true God to true God . . . We revoke all that we have done ill through ignorance and simplicity, and we excommunicate Aetiusus, Ursacces, and Valens, Gaius Magnus and Justinus." About this time several other councils were held in Gaul, by means of St. Hilary, upon the same subject. See Labbé, Conc. ii, 821; Baronius, p. 302, § 229; and Ragel, note 27.

2. Another important council was held at Paris in 357, under king Childeric I, and at which the archbishops of Bourges, Rouen, and Bordeaux were present. Ten canons were published. Among these are most important:

1. Against those who detain Church property.

4. Against marriages within the degrees prohibited; forbad marriage between brother's widow or wife's sister.

5. Enacts that the election of the bishop shall be left free to the people and clergy; that no one shall be installed contrary to the prayer of the clergy, or the will of the metropolitan and the provincial bishops.

These canons are subscribed by fifteen bishops, among whom were St. Prætensatus of Rouen, Leo of Bordeaux, Germanus of Paris, and Euphronius of Tours. See Labbé, Conc. 357, p. 814.

3. The next Parisian council of importance occurred in 573. Thirty-two bishops (six of whom were metropolitan) attended. It was called to terminate a difference between Chilpéric and Sigebert, the two brothers of the king Gontran. Promotus, who had been uncanonically consecrated bishop of Châteauneuf by Ogdins of Rheims, was deposed, but was not removed, apparently, until the death of Sigebert. See Labbé, Conc. v, 918.

4. In the spring of 577 a council of the Church was convened at Paris by Chilpéric; forty-five bishops were present. The so-called Prætensatus of Rheims, upon a false accusation of having favored the revolt of Merovee, the king's son, and plotted his death. (Although Prætensatus was innocent of the charge of conspiracy against the king in favor of Merovee [or Merovig], who was his grandson, he had been guilty of marrying the latter to Hidulph, the widow of his son, which was also alleged against him. Sigebert appears to have used intimidation to induce the bishops to condemn Prætensatus. The place of his banishment was probably Jersey.) St. Gregory of Tours refused his consent to the act, and Sigebert and Melanias put into his place. See Labbé, Conc. v, 925.

5. In 615 a council was convened under king Clotaire II. This was the most unusually attended of the Gallic councils up to that period. Seventy-nine bishops from all the newly united provinces of Gaul were present. Fifteen canons have been preserved, but others probably were published. Among the most noteworthy enactments are:

1. Declares elections of bishops made without consent of the clergy null and void.

6. Declares that he secular judge may try or condemn any priest, or any ecclesiastic, without first giving warning to the bishop.

14. Forbids marriage with a brother's widow, and other incestuous relations.

15. Forbids a Jew to exercise any public office over Christians, and in case of his obtaining such an office, contrary to canon, insists upon his being baptized with all his family.

Most of the other canons refer to the property of the Church and of ecclesiastics. King Clotaire published an edict for the execution of these canons, with some modification however, since he commanded that the bishop elected according to the canons should not be consecrated without the leave of the prince. See Labbé, Conc. v, 1649.

5. In November, 825, a council convened, and the bishops who attended addressed a synodal letter to the emperor Charlemagne, in which they expressed their approval of the letter of Hadrian to the emperor Constantine and his mother Irene, so far as relates to his rebuke for their audacity and rashness in removing and breaking the images, but his command to adorn them (as adored) they refuse to approve, styling all such adoration superstitious and sinful; they also declare that in their opinion the testimonies which he had collected from the holy fathers in support of his view, and had inserted in his letter, were very little to the purpose. They further declare that, without approving the acts of the Council of Constantinople in 254, they condemn the second Council of Nicaea, and hold that it was no light error on the part of those who composed it to assert not only that images should be venerated and adored (colit et adorari), and called by the title of holy, but that even some degree of holiness was to be attained through their means (verum etiam sanctificationem ab eis ad invasiones sacris sanctorum). They declared their adhesion to the Caroline books. See Goldast, In Dec. Imp. ds Imag.; Labbé, Conc. vii, 1652.

7. Another important synod was held at Paris June 6, 859, under Charles the Debonnaire. It was composed of the four provinces of Rheims, Sens, Tours, and Rouen; twenty-five bishops attended, besides the four metropolitans of the above-mentioned provinces. The council was held in the church of St. Stephen the elder. The acts of the council are divided into three Books of Canons.

Book I relates to ecclesiastical discipline.

Canon 7. Forbids to baptize except at the canonical times, without the consent of the clergy.

9. Directs that persons baptized in illness, beyond the proper canonical times for baptism, shall not be admitted to holy orders, according to the twelfth canon of Neo-

10. Declares that all property amassed by bishops and priests after their ordination shall be considered as belonging to their churches, and that their heirs shall have no part of it.

11. Declares that the pastors of the Church ought to possess the property of the Church without being possessed of it, and that no granting of the property from the Church should be despised. It condemns also those worldly people who are ever complaining that the Church is too rich.

12. Orders that the proceedings of the council shall be held annually.

13. It is intended as a check upon the abuse, forbids them to confer and to perform any other function peculiar to the episcopate.

24. Forbids women to take the veil until thirty days after their husbands' death, at which time they were by the emperor's edict free to marry again.

25. Forbids women to touch the sacred vessels, or to give the vestments to the priests; also forbids them to...
PARIS, COUNCILS OF

give the holy Eucharist to the people: an abuse which it seems had crept in in some places.
47. Forbids to say mass in private houses, or in gardens and woodlands except when on travel, and in extreme cases when people are very far from a church.
48. Forbids priests to eat alone.
49. Book II relates to the duties of princes and lay persons. It condemns the error of the persons who think that, having been baptized, they must eventually be saved, whatever sins they may commit. It contains a collection of twenty-seven of the foregoing canons, which the bishops forwarded to the emperor Louis and Lothaire, specially requesting the execution of some of the number.

See Labbé, Conc. vii, 1590.

8. In the autumn of the year 849 a council convened at Paris, which was composed of twenty-two bishops from the provinces of Tours, Sens, Rheims, and Rouen. These prelates addressed a letter to Nomenaul, the duke of Bretagne, concerning his proceedings in the Council of Rennes in the preceding year, on which occasion he had taken for his own use the property of the Church, which, they stated, was the property of the poor. He had driven the lawful occupants from their sees, and had put mercenaries and thieves in their places; and he had favored the revolt of Lambert, count of Nantes, against king Charles. See Labbé, Conc. vii, 58.

9. The next important ecclesiastical synod at Paris was held in 1050, in the presence of king Henry I. Many bishops attended. A letter from Beranger was read, which gave great offence to the council, and he was condemned, together with his accomplices—also a book by John Scottus upon the Eucharist, whence the errors which they had condemned were taken. The council declared that if Beranger and his followers would not retract, the whole army of France, with the clergy at their head in their ecclesiastical vestments, would march to find them, wherever they might be, and would besiege them until they should submit to the Catholic faith, or should be taken in order to be put to death. See Vercell, Council of (1050). See Labbé, Conc. ix, 1059.

10. Some time after Easter, 1147, a synod was convened at Paris by pope Eugenius III. Many cardinals and learned men attended it. The errors of Gilbert de Poirée, bishop of Poitiers, upon the subject of the Trinity, were examined; two doctors, Adam of Petit Pont and Hugo of Champfleury, attacking him vigorously. He was accused chiefly on the four following grounds:

1. "Il est de la plus haute Délité que Seigneur non esse Deum." (That the Divine Essence was not God.)
2. "Quod procedit per hominem omnium esse Jessus Christus, non esse Deus." (That the Divine Essence was not God.)
3. "Cunctum speculatissimorum ei non esset Res ignotum." (That the Divine Essence was not an attribute, in any sense.)
4. "Quod Divini Natura non esset incarnata." (That the Divine Nature was not incarnate.)

St. Bernard, who was present, disputed with Gilbert; but the pope, in default of certain evidence, deferred the decision of the question to a council to be held in the year following.

See Labbé, Conc. x, 1147.

11. A synod was held in 1186. It was an assembly of all the French archbishops, bishops, and chief seigneurs, whom the king, Philip Augustus, desired to exhort his subjects to make the voyage to Jerusalem in defence of the Catholic faith. See Labbé, Conc. x, 1181.

12. In another council, held three years afterwards by the same king, the payment of the Saladin tenth was ordered, i.e. the tenth of every one's revenue and goods for the succor of the Holy Land. See Labbé, Conc. x, 1763.

See Labbé, Conc. x, 1783.

13. The next important Parisian council was held in 1901 by Octavian, the pope's legate, assisted by several bishops. Evraud of Nevers, the governor of the district, said to have been one of the Vaulois, was convicted of heresy; and having been carried to Nevers, was there burned. See Labbé, Conc. xi, 24.

14. A council was held in 1210, in which the errors of Amauri, lately dead, were condemned, and fourteen of his followers sentenced to be burned. Also Aristotle's Metaphysics, which had been brought to Paris and translated into Latin, shared the same fate; and a decree was published that it should be translated, read, or kept, under pain of excommunication. Labbé, Conc. xi, 49.

15. In 1218 Robert de Courçon, cardinal and legate, whom the pope had sent into France to preach the Crusade, convened a synod at Paris. Several canons of discipline were published, which are divided into four parts.

Part I refers to the secular clergy, and contains twenty

1. The rules of modesty of deportment; that the hair be kept cut short; forbids talking in church.
2. Forbids to employ a priest to say mass who is unknown, except he have letters from his own bishop.
3. Forbids the division of benefices and prebends.
4. Forbids the temporary or permanent appointment of rural deans in consideration of money received.
5. Forbids to possess more than one benefice with the cure of the same place.

Part II relates to the canons, and contains twenty-seven canons.
6. Forbids to take money from any one entering upon the monastic state. Forbids monks to possess property.
7. Forbids to receive any one into the religious life under the age of twenty.
8. Enjoys bishops to cause the suspicions little doors and windows to be blocked.
9. And 5. Exhort to charity and hospitality towards the poor.
10. Forbids monks to wear white leather gloves, fine shoes and stockings, etc., like those used by the laity; to use any other cloth save white or black; and to dye out of the religious life.

Part III relates to monks, etc., also to abbots, abbeses, etc., and contains twenty-one canons.
11. Forbids monks to wear white leather gloves, fine shoes and stockings, etc., like those used by the laity; to use any other cloth save white or black; and to dye out of the religious life.
12. Expels monks to leave their convent in order to visit their relations, except for a very short time; and directs that they shall have letters written by the bishop, etc.
13. Forbids them to dance in the cloisters, etc., anywhere else, and declares that it is better to dig or plough on Sunday than to dance.
14. Directs that albes who fall in their duty shall be excommunicated; and, if they do not amend, shall be deposed.
15. Directs that abbots, priors, and other superiors who offend in the same manner shall be punished.
16. Directs that they who lead an irregular life shall be deposed.
17. Forbids abbots and priors to threaten or maltreat any who may propose a measure to the chapter for the reformation of the house or of its head.

Part IV relates to the duty of bishops and archbishops.
18. Directs them to keep their hair cut round, so as not to project beyond the mitre; and gives other directions for the observance of the religious life.
19. Forbids them to wear mantis in bed, and to occupy themselves with matters of sadness and conversation while the service is being said.
20. Forbids them to hunt, etc., to wear precious furs, and to ride on the back of horses.
21. Directs that they shall cause some good book to be read at the beginning and end of their repastas.
22. Prohibits the sale of the bullion of the Festival of Fools, celebrated every 1st of January.
23. Directs that they shall be held every year. Orders also confirmation, and the correction of disorders in the dioceses.

24. Directs that they shall not permit women to dance in cemeteries or in holy places, nor work to be done on Sundays.

See Labbé, Conc. xi, 57.

16. Jan. 28, 1226, another Parisian synod was convened by the legate to consider the affairs of England and of the Albigenses. In consequence of the decision, Louis VIII ceased from his pretensions against England, and turned his arms against the Albigenses. The legate, in the pope's name, excommunicated John, count of Toulouse, count of Comminges, with all his counsels, and confirmed to the king and his heirs forever the right to the lands of the said count, as being a condemned heretic. Amauri, count de Montfort, and Guy, his uncle, ceded to the king whatever rights they possessed over the lands in question. On March 29, same year, the king, Louis VIII, convinced
another council upon the subject of the Albigeneses.— 

Raynold, 1, 554 (note). See Labbé, Conc. xi, 800.

17. A synod was convened in Paris in 1255, by Henry, archbishop of Sens, and five other archbishops, on occasion of the murder of a chanter of the cathedral. The synod, at the head of the order of preaching friars complained of certain things said and preached by some seculars, doctors in theology, to the prejudice of his order. William de Amour and Laurent, both doctors-regent in theology at Paris, being examined upon the subject by the prelates, denied the justice of the charge. Subsequently S. Amour wrote a book, entitled The Perils of the Last Days, in which he attacked the preaching friars without mercy. At last the dispute between the latter and the University of Paris being so warm that the friars were obliged to send to Rome to appease it. The pope, however, sided entirely with the friars. See Labbé, Conc. xi, 738.

18. A council was held March 21, 1260, by order of St. Louis, to implore the aid of heaven against the conquests of the Tartars. It was ordered that pro-
cessions should be made, blasphemy punished, luxury in dress and at table repressed, tournaments prohib-
eted for two years, and all sports whatever put a stop to, except practice with the bow and cross-bow. In the following year, another council, when he acts were renewed. See Labbé, Conc. xi, 783.

A synod was held in December, 1281, composed of four archbishops and twenty bishops. Much com-
plaint was made of the conduct of the mendicant or-
der, who persisted in preaching and bearing confession in spite of the bishops, upon pretext of having the pope's privilege for doing so. A bull by Martin IV, bearing date Jan. 10, 1280, was, however, produced, which confirmed the claim of the Franciscan friars; but, nevertheless, with this clause, that those persons who chose to confess to the friars should be bound to confess also once a year to their own priest, according to the order of the Council of Later-
an; and that the friars should sedulously exhort them to do so. See Dobulialy, iii, 465.

20. In 1302, April 10, a council convened at Paris to consider how to heal the difference between the king, Philip the Fair, and the pope, Boniface VIII. The for-
mer in the preceding year had thrown into prison 

Bernard de Saiset, bishop of Pamiers; upon which the pope wrote to Philip complaining of the act, ac-
companying the letter with the bull Aescusa Filios in which the pope openly did not receive himself of by thinking that he had no superior, and that he was in-
dependent of the head of the ecclesiastical hierarchy. Philip assembled his barons with the prelates at Notre 

Dame, and laid before them his ground of complaint against the pope and his bull, which he caused to be 
read. Thereupon the barons addressed a letter to the 
cardinals, in which, very strong language, they 

complained of the pope's conduct in pretending to 

consider the king as his subject, and that he held his tem-
poral authority of him. The prelates were more back-
ward in giving an opinion in order to excuse the pope, and to maintain peace. This, how-
ever, was not suffered, and they were clearly informed that if any one of them presumed to hold a contrary opinion to that of Philip and his lords, he would be 

laid upon as the enemy of the sovereign and king-

dom. They then addressed to the pope a letter con-
ceived in a much milder strain than that of the barons, in which they implored him to be cautious, and to

preserve the ancient union between the Church and State; and, moreover, to revoke the mandamus by which he had cited them to appear at Rome. The answer of the 
cardinals to the barons was to the effect that the pope had not absolutely declared that the king ought to 

acknowledge that he held the temporality of him, a 

statement which the pope himself in his answer to the 
bishops by no means corroborated. This was not strict-
ly speaking an ecclesiastical council, but a national as-
sembly; two others of the same kind were held in 

the following year, upon the subject of the differences be-

tween the king and the pope. In September, in that 

year, a bull excommunicating Philip, but on the eve of the very day on which he had in-

 tended to publish it he was seized by William de No-
garet, the French general, and though released from 

confinement almost immediately, he never recovered 

the mortification and sorrow which this blow inflicted 

on him, and on Oct. 11, 1283, he died at Rome. See 

Labbé, Conc. xi, 1474.

21. In 1310 Philip de Marigni, archbishop of Sens, 

convened a synod at Paris to deliberate upon the case of the Templars; after mature consideration, it was 

decided that some should be merely discharged from 

their engagement to the order, that others should be 

sent freely away, after having accomplished the 

course of penance prescribed; that others should be 

strictly shut up in prison, many being confined for 

life; and, lastly, that some, as, for instance, the 

religiosi, should be given over to the secular arm, af-

ter having been degraded by the bishop if in holy or-

ders. All this was accordingly done, and fifty Tem-

plars were burned in the fields near the abbey of St. 

Antony, not one of whom confessed the crimes im-

puted to them. The oaths, on the contrary to the 

which they maintained the injustice of their sentence. See Labbé, 

Conc. xi, 1385.

22. A council was held March 3, 1323; William de 

Melium, archbishop of Sens, presided. A statute of 

four articles or canons was published, which was al-

most word for word identical with that drawn up in 

the Council of Sens, A.D. 1293, under the same prelate.

Canon 1. Directs that the people shall fast on the 

eve of the holy eucharist.

2. Directs that a friar's interdict shall be laid upon any place in 

which a cleric is detained by a secular judge.

4. Of the life, conversation, and dress of clerks.

23. On March 6, 1410, a council was held, presided 

over by the same archbishop, assisted by five bishops. 

Thirteen canons were published.

1. Complains of the treatment of the clergy by the secur-

al judges, and sets forth that the former were contin-

ually imprisoned, and imprisoned without trial. 

10. Directs that beneficed clerks shall employ a part of 

their revenue in keeping in order and repairing their 

church and a shrine.

13. Confirms the bull of John XXII, given May 7, 1297, 

by which the Order of the Angels is given to those 

who repeat it three times at night.

24. A national council was held at Paris in 1395, at 

which the Latin patriarchs of Alexandria and Jerusa-

lem were present, together with seven archbishops, 

forty-six bishops, and a large number of abbots, deans, 

and doctors in theology. The object of the council, 

convoked by Charles VI, was to consider the best 

method of putting an end to the schism caused by the 

rival popes Benedict XIII and Clement VII. 

The Eastern patriarch, Simon of Alexandria, was unami-

ously elected to preside. The council met at (Feb. 2) by the majority, was that the best means of 

securing the peace of the Church would be for both 

claimants to resign their pretensions. The king's un-

cles, the dukes of Berri and Burgundy, were in conse-

quences sent as ambassadors to Rome to Benedict. See 

Labbé, Conc. xi, 2511, Appendix.

25. Another national council was held May 22, 1398; 

convoked by the same prince. There were present, 

besides the regular Alexandrian patriarch Simon, the 

Latin patriarch of Alexandria, eleven archbishops, 

sixty bishops, and the superiors of all the monas-

tries of universities, and others of the clergy. Simon 

Cramand opened the council. In the second session, 

held in July, it was agreed that the best way of bring-

ing Benedict to reason was to deprive him not only of
the power of collating to benefices, but of the entire exercise of his authority. For this purpose the king published, July 27, his letters patent, entirely suspending the pope's authority in the kingdom: this edict was published at Paris, in February, and in September. This suspension lasted until May 30, 1408, when the king revoked it, and promised, in his own name and that of his realm, true obedience to Benedict XIII. See Spicil. vi, 157.

26. A national council, composed of clergy from all parts of France, was held in 1408, to take measures for terminating the schism. The council resolved to demand the convocation of a general council, and to withdraw from the obedience of Benedict XIII. The withdrawal was carried into effect on August 7, and the pope was forbidden to take any money out of the country. In the following session, held at St. Martin's, certain theologians and canons discussed the question, some speaking in favor of Benedict, and others against him; and in the last session, Dec. 20, the king's advocate declared his adherence to the demand of the universality for a general council, and an entire withdrawal from the obedience of Benedict; upon a division both these points were carried. After this, both Benedict XIII and Gregory XII promised to renounce the pontificate for the sake of peace, neither of them, however, doing it, and in 1409 and 1410, having created four cardinals, in spite of the opposition of those then existing, the latter withdrew from his obedience, appealing to a general council and to his successor. In answer to this appeal, Benedict published a bull excommunicating all persons whatsoever, even kings and princes, who refused to resort to conference as the means of restoring peace to the Church. This bull was condemned at Paris, and torn up as inimical to the king's majesty. Pedro of Luna was declared to be schismatic, obstinate, and heretical, and every person forborne to style him anything but either Benedict, pope, or cardinal, or to obey him, etc.

27. A national council was held in 1408, convoked to deliberate upon the government of the Church, and the presentations to benefices: first, The declaration of the favorers and adherents of Pedro of Luna was read; then, a great number of articles were drawn up, upon the manner in which the French Church should be governed during the neutrality. These articles come under five principal heads.

1. Concerning the absolution of sins and censures rescinded: for which the pope's bull permitted that rescissions be had to the pontifical of the Holy See (the president of the penitentiary court at Rome, among others) which rescripts have been set up in the Benedict II in 684); or, if that cannot be, to the ordinary.

2. Concerning dispensations for irregularities, and for making the church in the council was made to substitute all those matters which were usually carried to the pope.

It was further resolved that the revenue of all benefices enjoyed by the followers of Pedro of Luna should be seized and put into the king's hands. See Labbé, Conc. xi, 2518.

28. A synod convened in 1429, from March 1 to April 28, by call of John de Nanton, archbishop of Sens, who was assisted by the bishops of Chartres, Paris, Meaux, and Troyes, his suffragans; also by the provosts of the bishop of Auxerre and Nevers, and a great number of abbots and other ecclesiastics. Forty regulations, relating to presentations to benefices, were made the substitute for all those matters which were usually carried to the pope.

The dispensation of bans, were drawn up. The following are the most remarkable:

1. Orders canons and other clerks connected with the church to attend duly to their divine service in an edifying manner, to chant the Psalms reverently, and in rigorous verse, so that one side of the choir should not begin before the other.

2. Exhorts the clergy to act as models of piety and correct behavior to the laity; not to be careless in doing justice, but to act with justice and mercy for the sake of the income to be derived from it.

3. Against the capturing of the church for three months as a base to the prejudice of persons in irregular life and ignorant of the epistles, gospel, and other parts of the holy scriptures.

Other regulations refer to the conduct of canons, and direct them to expel their parions to confession five times a year, to observe the stalls, the Assumption, All Saints, and Christmas, and also at the beginning of the Mass to receive scripures, and also to progress of sacred objects, abbesses, priors of orders of St. Benedict, of Franciscans, of the monastic orders, prescribing annual chapters, modesty of apparel, and how it would be exacted from any one entering upon a monastic life.

Regulation 25. Forbids barbers, and other persons in trade, to use any mercer's goods on Sundays and fairs.

29. Forbid the celebration of marriages out of the parish church, and too great laxity in dispensations of bans.

See Labbé, Conc. xii, 392.

25. An important synod, sometimes called the Council of Sens, but more properly of Paris, from Feb. 3 to Oct. 9, in the church of the Great Augustines. Cardinal Antoine du Prat, archbishop of Sens and chancellor of France, was president. He was assisted by seven bishops, viz. the bishops of Chartres, Auxerre, Meaux, Paris, Orleans, Nevers, and Langres. The council were chiefly to condemn the errors of Luther, and to reform the discipline of the Church. Sixteen decrees were published relating to the faith, and forty upon discipline. Among the first the following are the principal:

1. Declares that the Church Catholic is one, and cannot be divided.

2. That it is visible.

3. That the Church is represented by an ecumenical council, which has universal authority in determining questions of faith, etc.

4. That to the Church it belongs to determine the authenticity of the canonical books, and to settle the sense of Holy Scripture.

5. That the pastoral traditions are certain and necessary, and to be firmly believed.

6. That the constitutions and customs of the Church are to be submitted to with respect, and her rule of conduct to be obeyed.

7. That the reasons of fasting and abstinence are to be observed under pain of anathema.

8. That the celibacy of the clergy being ordered by the Father of heaven as a days practice from all eons by the second council of Countrigh, as a law ordained in the apostolical times; they who teach the contrary are to be treated as schismatics.

9. That monastic vows are not at variance with Christian perfection; to be observed, etc.

10. That they who take from the number of sacraments, and who deny their efficacy to confer grace, are to be treated as heretics. This decree treats of each sacrament in detail.

11. That the necessity of the sacrifice of the mass is supported by several passages of Holy Scripture, especially by Luke xxii. Thall houcianes, this victim for sin, this conceually in the 'pure offering' of which the prophet Malachi speaks.

12. After refuting the opinions of Luther upon the subject, and after showing it to be a rule of prayer for the dead, this decree goes on to state that, after baptism, the guilt of sin being remitted, there still remains the temporal penalty to be paid, and that he who may be compelled to expiate their faults in the other world, and that it is a solitary custom to offer the holy sacrifice for the dead.

13. Concerning the worship of saints, they declare it to be firmly established in the Church that the saints hear our prayers, they are close to our sorrows, and feel joy in seeing us happy; and that Holy Scripture proves this.

14. Declares that it is not idolatry to venerate images; that the intention is to honor them whom they represent, and remind us of and make us imitate their holy actions.

15. That man's free-will does not exclude grace; that the divine grace can help, for, as God does not take away, we and choose us, but that he will glorify those only who make their calling and election sure by good works.

16. That faith in no wise excludes works, especially
those of charity; and that men are not justified by faith only.

Then follows a list containing thirty-nine errors main-
tained by the heretics of the time. Of the forty decrees on
discipline the following may be noticed:

2-3. Relate to persons to be admitted to holy orders or to
be held for the purpose of being, and enact that they who are admitted to
holy orders without being properly qualified are to be sus-
pected until they are sufficiently instructed.

6. Forbids imposing the Holy Scriptures and works of the
church without the consent of the diocesan.

10. Orders all persons to bring all books in their pos-
session relating to faith or morals to their bishop for ex-
amination.

26. Of proper persons to be licensed to preach.

See Labbé, Conc. xiv. 462.

30. March 15, 1612, a council convened, and was
presided over by cardinal du Peron, archbishop of Nantes.

The book of Edmund Hickner concerning the ecclesiasti-
cal power was condemned. See Labbé, Conc. xv. 1628.

Paris Manuscript.
The only uncial MS. of the New Testament thus known consists of two fragments in the National (formerly Royal. Later Imperial) Library at Paris, appended to No. 90, usually designated as W, of the Codex Gospels (formerly Codex Regius), and contain-
ing Luke xi. 34-37; x. 12-23. They belong to the 8th

century. They have been published by Tischendorf, Monum. Sacra Inedita (1868), who regards them as
originally forming part of the same MS. to which the

Notre-Dame Paris (W) was attached. See Proc. R. H.,
Horne’s Introd. iv. 204; Schreiner, Introd. to N. T. p. 117. See Manuscrits, Biblical.

Paris Protestant Missionary Society.

This society was formed in 1822, under the title of
Société des Missions Evangéliques de Paris. A meet-
ing was held for the purpose at the house of S. V. at
Wilder, Esq., an American merchant, then residing in
Paris, which was attended by the presidents of the Re-
formed and Lutheran Conspiracies; by other pastors,
lay members of the two churches; by various foreign
Protestants then in Paris, among whom were
Rev. Daniel Wilson, Rev. S. S. Wilson, and Rev. Jonas
King, and by Messrs. Cook and Craggdon, Wesleyan mis-
ionaries then in France. One object of the society
was declared to be to enlighten the public mind, through
the press, as to the character and importance of the
different missions of Protestant Christendom, and anoth-
er to establish an institution for young persons recommended by the different mission-
ary societies, to whom it might be necessary to study
some of the Oriental languages. Rev. Jonas King, be-
ing then in Paris, and having received an invitation
from Rev. Mr. Fisk, after the death of his associate,
Rev. Mr. Parsons, to join him in the mission to the
Holy Land, the new society assumed, for a given period,
his support. The committee issued an address, setting
forth the object of the society, and soliciting contribu-
tions. They also established the monthly Concert of
Prayer.

Subsequently this society directed all its efforts to
Southern Africa, where their missions have been very
energetically and successfully prosecuted to the present
time. They have nineteen stations, among several dif-
ficent tribes, with fifty missionaries, and a large num-
er of native assistants, and 8254 communicants. See
South Africa.

Paris Sanhedrin. See PARIS SANHEDRIN.

Paris, François (1), A French ascetic author, was
born at Chartillon, in the neighborhood of Paris, about
the middle of the 17th century. He died in 1718, at
an advanced age. He was a servant in the house of
Vanniers, furrier of Sons, where, as a young man, he
stayed, he was educated for holy orders by his master,
and was presented to the living of St. Lambert, near
the monastery of Port-Royal-des-Champs. From this
he removed—driven away, it is said, by fear of the
weakness of the faith—and lived his latter days in the
sub-vicar at Saint-Etienne-du-Mont. He finally set-
tled in Paris, where he died, Oct. 17, 1718. He pub-
lished several works, among others, De l’Usage des ac-
crements de pénitence et d’excommunication (Paris, 1673, 1674,
12mo), in which he is said to have been assisted by his
friends Arnauld and Nicole.—Les Psaumes de ma de prières (ibid. 1690, 12mo); this work has reached
more than ten editions:—Explication des commandemens
de Dieu (ibid. 1698, 2 vols. 12mo);—Martinlgrope, ou le
de la vie des saints (ibid. 1694, 12mo);—L’Envoi
des psaumes (ibid. 1684, 1685, 4 vols. 8vo);—a good
translation of the Lamentations (ibid. 1706, 1728, 1800).
See MORÉ, GRAND Dict. Hist.

Paris, François de (2), commonly known as the
Abbe Paris, was born at Paris June 80, 1600. His
father, being an eminent counsellor of the Par-
lement, designed him, as his eldest son, to succeed
him in his office, and consequently bad him study
law. But the son, determining to be an ecclesiastic,
was admitted into holy orders, and in the disputes
occasionally by the bull Unigenitus, he attached him-
self vehemently to the Jansenist party. From that
time, he was not permitted to enter into the society
of the rules necessary to occupy a curacy, he resolved
to devote himself to retirement. Having made trial
of different solitudes, he at length fixed upon a
house in the suburb of St. Marceau, where he spent
his time in prayer and the most rigorous acts of pen-
ance. His father having left him by will only one
fourth of his wealth, Francois devoted himself to
manual labor in order to increase the funds for
charity which he distributed among the poor. He
died in consequence of the severity of the discipline
which he observed, May 1, 1727. He is chiefly cel-
brated for what occurred after his death. The Jansen-
ists canonized him, and pretended that miracles
were wrought at his tomb. One of the contempo-
raries of Francois de Paris writes as follows regard-
ing these strange occurrences at the grave of this
departed ecclesiastic:—Several miracles have taken
place, very opportunely, in cases of paralysis. The
people sing of their own accord, and intone the Te
Deum. This gives great pleasure to the Jansenists.
A beggar and another, having thought proper to
take jests upon the assembled crowd, the people
drove him away, and in consequence no one in the
neighborhood will bestow any alms upon him for the
future. The portrait of the bienheureux Paris has been
engraved, and is cried about the streets. The people
will not only refuse alms, but prohibit the signing of
the hymn of Rome if this go on.’ One of the earliest of the
supernatural phenomena attributed to his agency was
the cure of a young female named Anne Lefranc,
who seems to have been in the last stage of consumption.
No sooner was she laid upon the worst sick-list than
the most distressing symptoms disappeared in-
stantaneously, and within a few days her recovery
was pronounced complete. As the event became a
subject of loud and boisterous excitement among the en-
emies of the Constitution, archbishop de Vintimille
instituted an inquiry into the facts. One hundred
and twenty witnesses came forward to verify the prodigy;
fifty were examined—among them the mother, the
brother, and the sister of the patient, and the surgeons
who had attended her—and their evidence proved by
no means satisfactory upon several points of essential
importance. The archbishop decided that, in the face
of so many inconsistencies and contradictions, the tale
was unworthy of credit. On July 24, 1731, he pub-
lished a mandatement to that effect; he condemned
a dissertation which had been circulated in defence of
the miracles, and prohibited that tale to be read, and
generation at the tomb of M. Paris for the future. “Not
withstanding this,” says Barbier, “such a crowd collect-

ed on the morrow, St. James's day, that by four o'clock in the morning it was not possible to get into the church of St. Médard, or into the little cemetery which contains the tomb." Maddemoiselle Lefranc appealed to the Parliament against the archbishop's decision; and by way of challenging further investigation, twenty-thousand marks were laid before it as a sum for the successful prosecution of fresh marvels of the same kind, which now multiplied so rapidly that their very number became an argument of no small weight against them. It appears that those who resorted to the tomb were mostly females suffering under various forms of nervous disease, partially paralyzed, or subject to hysterical affections. These poor creatures were seized with spasms or convulsions, which led to a state of delirious frenzy; and not infrequently, whether from abnormal tension of the imagination, or from the action of some occult physiological cause, such paroxysms were followed by an abatement of the morbid symptoms. The nervous system was relieved; the crippled limb resumed its functions; a healthy reaction set in, and infirmity for the time took flight. Such phenomena are, and always will be, popularly classed as supernatual; but it is perhaps, so designed by nature—whence it is a good sense—relatively, that is, to our own feeble ideas and apprehensions of the organic economy of nature. The terms natural and supernatural serve, in fact, only to express the limitations and imperfections of human knowledge. The noted case of the abbe Bicheran, though it has been discredited by the copiously appearing testimony of several learned Jesuit agitators, will not stand the test of sober and rational criticism. Throughout the year 1731 the ferment continued to increase. One case produced an extraordinary sensation: that of a woman, who, being in sound health, pretended to be paralyzed, and proceeded to St. Médard in a spirit of mocking incredulity. Her folly was promptly punished; she was struck with real paralysis of the whole of the right side, and was carried away on a litter to the Hôtel Dieu, in the midst of an excited crowd, who proclaimed this novel portent through the streets. The process-verbナル recording the event was signed by twenty-six persons of established credit in various sections of society, including magistrates of the Parliament and canons of Notre Dame. Individuals of high rank were to be seen from time to time among the throng of devoted persons who paid their respects to the shrine of St. Médard—the princess-dowager of Conti, the marquis de Legale, the vicomte de Nessemond, the chevalier Folard (a literary writer of considerable reputation), the historian Rollin, and a councillor of the Parliament named Carri de Moissac. The same case was repeated many times, according to his own account, a most memorable recollection for his assiduous pilgrimages to St. Médard. He was converted, by an ineradicable and irresistible impulse, from the extreme of scepticism to a profound acceptance of the whole cycle of Catholic belief. Montgiron recorded his own experience, together with his convictions of the truth of the miracles, and the grounds on which he formed them, in a quarto volume, entitled La vérité des miracles opérés par l'intervention de M. de Paris. He was imprudent enough to present this work to Louis XIV, whereupon a lettre de cachet convicted him to the Bastile; and, after being transferred from one place of confinement to another, he ended his days a prisoner in the citadel of Valence. The conviction movement thus ran its course through various stages, until it reached an ultimate development of undefined and inexplicable immorality. At this point it was obviously impossible that it could be any longer defended or countenanced by men of respectable character; and the leading Jansenists were accordingly compelled to repudiate all connection with it, though for the sake of their names they were willing to have the imputation laid to Colbert, Caylus, and Sonnen in declared in favor of the earlier manifestations; but with regard to the absurdities and excesses which followed they used the language of unqualified condemnation. The most influential of the apostle of persecution took the same line; the famous Duguet, Jérôme Bérouse, author of the Histoire de Port-Royal, Bourlier, Delan, D'Asfeld, Petitpied, and others, earnestly reproached the prevailing mania, and deprecated the obloquy which it brought upon the party. Petitpied, a veteran of the universalist of well-known ability, burned himself in 1735 a public declaration, which was signed by thirty doctors of the Sorbonne, to serve as a public manifesto of their sentiments at this crisis. These divines solemnly declared that the convulsions were the work of God, and declared them to be more powerful than the device of Satan. It was madness, they said, fanaticism, scandal, blasphemy, to attribute to God what could not possibly proceed from him. A reply was immediately put forth on behalf of the convulsionists, who taunted the doctors with deserting their colors and betraying their convictions. "Though standing on the same footing with them in point of principle, they now sought to deprive them of the most cogent proofs and arguments whereby those principles were established; after having furnished them with arms, they had cut away from them the support of which those were to be made. They have found their enemies and win the battle." The apellants were thus divided against themselves; the learned, the right-minded, the moderate found it necessary to stand aloof from the thorough-paced enthusiasts, drawing a broad distinction between different forms of lunacy and moving to different planets. The government of France, which had shown exemplary forbearance with this strange outbreak of fanatical delusion, was at length obliged to put a stop to the decep- tions by closing the church-yard of St. Médard, in which the bones of François de Paris rest. It was walled up in January, 1732. Paris is the author of several com- mcnentaries on the New Testament. They were pub- lished after his death. See Jarvis, Hist. of the Church of France, vol. ii, chap. viii; Journal of Sacred Liter- ature, xxviii, 71 sq. See Jansenists. (L.B.)

Paris, Matthew, an English Benedictine monk of the 17th century, was born about 1195. He joined the order at St. Albans in 1217. He was soon marked as a man of the highest character, and distinguished as a musician, poet, orator, theologian, painter, and architect. His books were never printed, but were received, and monastic discipline, on which account he was sent to Norway by the pope. After his return to England Matthew Paris stood high in the favor of king Henry III, who used to converse with him in the most familiar manner, and who derived much historical information. Paris had besides a large number of in- fluential friends, and a wide circle of acquaintances among the clergy. After the departure of Roger of Wendover, in 1285, Paris was chosen to succeed him as annalist of the monastery. A man of his marked prob- ity could not be expected to discharge this duty in any politic spirit, and he reproved vice without distinction of persons, and did not even spare the English court itself; at the same time he showed a hearty affection for his country in maintaining its privileges against the encroachments of the pope and his creatures and officers, who riled all their engines to destroy his privileges. Of this we have a clear though unwilling evidence in Baronius, who observes that Matthew Paris remonstrated with too sharp and bitter a spirit against the court of Rome, and that, except in this particular only, he bore himself with all due respect for the bishops and clergy, but that he did not find hearty recognition among his learned coreligionists, the people did not withhold their approbation, and as far down as the days of the Reformation English
men pointed with pride to this the most considerable and trustworthy Latin chronicler. This work is entitled Historia Major, and consists of two parts: the first, from the creation of the world to William the Conqueror; the second, from that king's reign to 1250. He carried on this history afterwards to the year of his death in 1259. Richard's, a monk of the church of St. Allains, added it to 1272 or 1273, the year of the death of Henry III. Paris made an abridgment of his own work, which he entitled Historia Minor. The MS. of this work is in the British Museum. He also published some other pieces explanatory on the ords with the meaning of the Church. An account of those papers may be seen in Basle. The first edition of the Historia Major was published at London by archbishop Parker in 1571, and was reproduced at Zuirich in 1606; later and more complete editions are those of London in 1640-41; and in 1684. An English translation was published in Bonh's Antiquarian Library. Matthew Paris died in 1259. See Inset, Excles. Hist. of England; Burton, Ch. Hist. of England.

Parish is now generally used to designate a certain extent of territory in city or country, with its church and church equipment. The word is from the Greek πανοικία, which signifies habitation, sojourning, or living as a stranger or in exile; for so it is used among the ancient Greek writers. The term is derived from the Hebrew word "אִשָּׂא, a foreigner, by παροκείμενος (Gen. xxv, 13, etc.), and the word "παρακατά, a dwelling-place, by παρο κείμενος (Ps. cxix, 54)." The primitive Christians seem to have obtained the word from the Jews. These were in the habit of calling sojourners in a society, i.e., Jews who had come from foreign parts and established themselves either in a synagogue of their own or in a temporary place of worship—the πανοικία. At the beginning of Christianity its adherents were very much in the condition of these Jewish sojourners. The primitive Christians lived, as we know, in a retired condition, sequestered from the world, and little mixing with its affairs. For this reason St. Peter addresses them as παροκείμενος, etc., "as strangers and pilgrims" (1 Pet. ii, 11). This number of strangers in the heathen cities was called the πανοικία, over which there was set, by apostolical authority, a bishop, a παροκάτω, a chosean, an inspecotor, or a rook coled, a head of the congregation; all which names denoted the episcopal authority, and which in a little time centred in the one most usual name of παροκάτω, or bishop, as is plainly seen by the Ignatian epistles. Thus the πασχαντος and πανοικία became relative terms; he that had the superintendence of a church was called a bishop, he that was the bishop, and the congregation under his care was called the πανοικία. Hence, in the earliest days of the Greek Church, the word πανοικία was used to signify what we now call a diocese; and thus, in the apostolic canons, a bishop that leaves his diocese for another is to be reduced to lay-communion. Hence it is said, "The bishop of the diocese of Alexandria departed this life." And again, "the glory of the diocese of Cesarea." The Latins took up the same way of expression, from the Greek, denoting a diocese by the word "parococh", which may be rendered "district" or "province," after the time of Charlemagne. But it is to be observed that when the word "parococh" signified a diocese, the word "diocesis" signified a parish. So in the Council of Agatha, presbyter dum diocesis tenet, "while the presbyter is in possession of his living." And in the third Council of Orleans, diocesis is the same with basilica, a parish church.

The distribution into parishes appears to be comparatively modern. Originally all the clergy were (in the opinion of the Episcopalian churches) but custodians of the bishop, and served in his church, at which all the faithful assembled. Necessity, no doubt, and convenience gave rise to the division of parishes; for when the number of believers so increased in large and populous cities that a single church could not care for them, there was a necessity of erecting other churches. At Alexandria, and afterwards in Rome, a number of minor churches were opened, which were served by the clergy, at first not permanently attached to them, but sent from the principal or bishop's church, and in progress of time permanently fixed in the charge. The city of Rome had above forty such churches, there called tiniti (q. v.), before the end of the 3d century. In France the Council of Vaison speaks of country parishes in the beginning of the 5th century. In England we have not so early an account of them, because the reception of the religion in the country, both by clergy and laity, made no mention of parishes. Dugdale and others think Honorius, the fifth archbishop of Canterbury, divided so much of the nation as was converted into parishes about the year 640; but others understand this division rather of dioceses than parishes. In England the first legislation on the subject occurs in the laws of Edgar, about 970. The parochial division of districts seems in great measure to have followed the civil distribution into manors, or other feudal divisions of territory; and it is probable that it is to the same state of things that we owe the priest officiating in a memorial church being chosen, with the bishop's consent, by the lord of the manor. The parochial revenue, however, by no means followed the same rules which now prevail. Settlement in a parish, whether in city or country, did not immediately entitle a church to the revenue of the clergy. The clergy, whether in tithes, oblations, or any other kind; for anciently all Church revenues were delivered into the common stock of the bishop's church, whence, by direction and approbation of the bishop, a monthly or annual division was made among the clergy under a seigneurial jurisdiction. At Constantinople no parish church had any appropriated revenues till the middle of the 5th century. In the Western Church, particularly in Spain, in the middle of the 6th century, the bishops and city clergy still had their revenues out of a common fund. See Moxa. But the country clergy were upon a different footing; and from this time we may date the appropriation of revenues in Spain to the country parochial churches. In Germany and France the revenues of the parochial churches seem to have continued in the hands of the bishops some ages longer. Broughton says: "Some are of opinion that the bishops had their portion of the ecclesiastical revenues with the parochial clergy for a considerable time after the first settlement of parishes; for they suppose that originally the bishop's cathedral was the only church in a diocese from whence all ecclesiastical revenues of that district were enjoyed by the country people, who for some time resorted to the cathedral for divine worship. Afterwards, by degrees, other churches were built for the convenience of such as were at too great a distance from the cathedral, some by the liberality of the people themselves, others by the bishops, and others by the Saxons kings; but chiefly the lords of manors were the great instruments in this work of founding parish churches. The bishops seem voluntarily to have relinquished their title to parochial revenues, though whether they made any canon about it is uncertain. At first, all ecclesiastical income, from whatever district, was carried into a common fund, which was placed at the disposal of the bishop, and was generally divided into four parts—for the bishop, for the clergy, for the poor, and for the Church. By degrees, however, beginning first with the rural parishes, and ultimately extending to the cities, the parochial revenues were placed at the disposal of the parish clergy (subject to the same general threefold division, for the clergy, for the poor, and for the Church); and in some places an abususe claim, which was early reprobated, arose upon the part of the lord of the manor to a portion of the revenue. Properly, a parish has but one church; but when the district is extensive, one or more minor (succeurial) churches, sometimes called "chapsels of ease," are permitted.
The first duty of the incumbent is to perform public worship in the parish church every Sunday, according to the form prescribed by the Book of Common Prayer, which is part of the statute-law of England. He must live in the rectory, be the spiritual guide and guardian of the souls of the parishioners, and be present at all their marriages and deaths. He is bound, as a general rule, to reside in the parish, so as to be ready to administer the rites of the Church to them.

The parishes of the diocese of London were divided into rural Deaneries, each with a Rector who was the head of the parish. The parishes were further divided into sub-parishes, each with a Vicar or a Priest. The incumbent was responsible for the spiritual welfare of the parishioners, and for the maintenance of the church and its furnishings.

The parishes were also responsible for the care of the poor, and the incumbent was expected to take an active role in this. The poor were supported by the parishioners through contributions to the poor rates, and the incumbent was expected to ensure that these contributions were collected and used for the benefit of the poor.

The incumbent was also responsible for the education of the children of the parish, and was expected to provide a school or other educational facility. The incumbent was also responsible for the care of the churchyard, and for the burial of the dead.

The incumbent was also responsible for the administration of the church, and was expected to manage the church's finances, and to ensure that the church was in good repair.

The incumbent was also responsible for the care of the clergy, and was expected to provide a living for the clergy, and to ensure that they were properly educated and trained.
establishment of baths and wash-houses, watching and lighting. Returns are made of all parish and local rates to Parliament every year. The parish property, except the goods of the parish church, which are vested in the churchwardens, is vested in the overseers, who hold and manage the same as a fund for the stated maintenance of the Poor-law Board in order to sell it. Of late a statute has authorized benefactors to dedicate greens or playgrounds to the inhabitants of parishes through the intervention of trustees.—Chambers.

In Scotland the division into parishes has existed from the most ancient times, and is recognized for certain civil purposes relative to taxation and otherwise, as well as for purposes purely ecclesiastical. The Court of Session, acting as the commission of teinds, may unite two or more parishes into one; or may divide a parish, or disjoin part of it, with the consent of the heritors (or landholders) of a major part of the valuation; or apart from their consent, if it be shown that there is within the disjoined part a sufficient place of worship, and if the titulars of teinds, or others who have to pay no less than three fourths of the additional stipend, do not object. By act 7 and 8 Vict. c. 44, any district where there is an endowed church may be erected into a parish quadra sacra, for such purposes as are purely ecclesiastical. Endowed Gaelic congregations in the large towns of the Lowlands may similarly be erected into parishes. Hence the peculiar Scottish parochial division for civil purposes relates to the administration of the poor-law. Under the old system the administrators of the poor-law were the Kirk-session in country parishes, and the magistrates, or certain managers selected by them, in burghal parishes. The acts 8 and 9 Vict. c. 83, which remodelled the poor-law of Scotland, retained the old administrative body so long as there was no assessment; but, on a parish being assessed, substituted for it a new one, consisting in rural parishes of the owners of heritable property of £20 yearly value, of the majority of whom were resident within the limits of the Kirk-session, a certain number of members chosen by the persons assessed; and in burghal parishes of members, not exceeding thirty, chosen by the persons assessed, four members named by the magistrates, and not above four by the Kirk-session or sessions. The Board of Supervision may unite two or more parishes into a combination for poor-law purposes. There is not the same extensive machinery for parochial self-government that exists in England. The burden of supporting the fabric of the church falls on the heritors, and is thus lightly thrown on the laity. Highways are likewise nearly all repairable by the parish, and there is no election of surveyors or way-wardens. The meeting of the inhabitants in vestry, which so often takes place in England, is unknown in Scotland, and hence the rate-payers do not interest themselves so much in local affairs. Many of the duties which in England are discharged by parochial officers, are in Scotland discharged by the sheriff-clerk, a county officer. In Scotland there is a school in every parish, while in England the parochial school is unknown. See Parish-School.

In England, the parish has undergone considerable modification. It is in its present condition far more liberal than the Church of England parochial system, and may be fairly pronounced republican in character. There is, first, in each diocese a committee of "patronage" or appointment, consisting of the bishop, with two clerical and one lay member, elected by the Diocesan Synod. Then in each parish the parishioners, who must be members of the Church of Ireland, elect three lay communicants to be nominators for the parish. When a vacancy occurs, these two bodies form a Extraordinary Synod, in which the presbyters, in orders, bishop, presbytery, and laymen, and the parish, are both fairly represented. The bishop is ex officio president, and has both an ordinary and a casting vote. Provision is made for filing vacancies in both branches of this board. If the bishop should not be satisfied with the fitness of the clergyman so nominated, he may decline to institute; but, if required, must give him his reasons in writing. Provision is also made for an appeal in behalf of the clergyman so rejected. If no nomination is made to the bishop in three months after a vacancy, he shall appoint a fit person to fill the vacancy, and the clergyman so appointed shall be a nominee of any cure shall signify to the bishop, in writing, their desire to leave the nomination to him, he may institute any duly qualified clergyman whom he may think fit. A clergyman resigning cannot withdraw from the duties of his cure until his resignation has been formally received and registered by the bishop, and notified to the churchwardens. Nor can an incumbent be removed without his own consent, unless upon the decision of a competent tribunal. These regulations seem fairly to consider the rights of all parties. A parish cannot be kept vacant by its own perversity or negligence, nor any loyal parish unduly obstructed in its choice. A clergyman is not to be dismissed without canonical cause, and by authority, nor yet to be obstructed upon an unwilling people. The bishop's ultimate responsibility and prerogative is recognized, and a fair opportunity given to keep the clergy employed, and to put the right man in the right place. There is besides a general sustentation fund, which is to become the chief support of the clergy, and is intended to give to the ministry an income irrespective of employment, so that conscientious may not at their will withhold the pastor's salary.

In the United States the Protestant Episcopal Church adheres to the parish idea. The whole of each diocese is divided into parishes, and the spiritual wants of each geographical parish are confided to the local Church and its pastor. But the parish is of course purely ecclesiastical. There were, however, in our colonial days parishes set off and named by the civil authority. These existed in South Carolina, Virginia, and Maryland, almost coeval with their settlement as colonies of Great Britain. With the civil records of our states, after the Kirk-session, a certain number of members chosen by the persons assessed; and in burghal parishes of members, not exceeding thirty, chosen by the persons assessed, four members named by the magistrates, and not above four by the Kirk-session or sessions. The Board of Supervision may unite two or more parishes into a combination for poor-law purposes. There is not the same extensive machinery for parochial self-government that exists in England. The burden of supporting the fabric of the church falls on the heritors, and is thus lightly thrown on the laity. Highways are likewise nearly all repairable by the parish, and there is no election of surveyors or way-wardens. The meeting of the inhabitants in vestry, which so often takes place in England, is unknown in Scotland, and hence the rate-payers do not interest themselves so much in local affairs. Many of the duties which in England are discharged by parochial officers, are in Scotland discharged by the sheriff-clerk, a county officer. In Scotland there is a school in every parish, while in England the parochial school is unknown. See Parish-School.

There is, first, in each diocese a committee of "patronage" or appointment, consisting of the bishop, with two clerical and one lay member, elected by the Diocesan Synod. Then in each parish the parishioners, who must be members of the Church of Ireland, elect three lay communicants to be nominators for the parish. When a vacancy occurs, these two bodies form a Extraordinary Synod, in which the presbyters, in orders, bishop, presbytery, and laymen, and the parish, are both fairly represented. The bishop is ex officio president, and has both an ordinary and a casting vote. Provision is made for filing vacancies in both branches of this board. If the bishop should not be satisfied with the fitness of the clergyman so nominated, he may decline to institute; but, if required, must give him his reasons in writing. Provision is also made for an appeal in behalf of the clergyman so rejected. If no nomination is made to the bishop in three months after a vacancy, he shall appoint a fit person to fill the vacancy, and the clergyman so appointed shall be a nominee of any cure shall signify to the bishop, in writing, their desire to leave the nomination to him, he may institute any duly qualified clergyman whom he may think fit. A clergyman resigning cannot withdraw from the duties of his cure until his resignation has been formally received and registered by the bishop, and notified to the churchwardens. Nor can an incumbent be removed without his own consent, unless upon the decision of a competent tribunal. These regulations seem fairly to consider the rights of all parties. A parish cannot be kept vacant by its own perversity or negligence, nor any loyal parish unduly obstructed in its choice. A clergyman is not to be dismissed without canonical cause, and by authority, nor yet to be obstructed upon an unwilling people. The bishop's ultimate responsibility and prerogative is recognized, and a fair opportunity given to keep the clergy employed, and to put the right man in the right place. There is besides a general sustentation fund, which is to become the chief support of the clergy, and is intended to give to the ministry an income irrespective of employment, so that conscientious may not at their will withhold the pastor's salary.

In the United States the Protestant Episcopal Church adheres to the parish idea. The whole of each diocese is divided into parishes, and the spiritual wants of each geographical parish are confided to the local Church and its pastor. But the parish is of course purely ecclesiastical. There were, however, in our colonial days parishes set off and named by the civil authority. These existed in South Carolina, Virginia, and Maryland, almost coeval with their settlement as colonies of Great Britain. With the civil records of our states, after the
PARISH CHAPLAIN

PARISH SCHOOLS

No exercises of the parish officers are now performed in the main by the town organization. The term "parish" is also used in a popular but inaccurate way to signify the members of the congregation worshipping in the church of any denomination.

It may not be out of place here to add that the Protestant Episcopal notion of the parish is fast dying out in this country. There is now an agitation on foot to give it greater efficiency by creating such a sustentation fund for the church as has existed in England, but if that should fail, it is likely the parish system will have to be altogether abandoned, or be confined to the narrow limits of its own membership. In 1867 the parochial distribution gave rise to a most animated discussion. Dr. Stephen Tyng, Jr., by invitation of the deceased principal of the Church, preached at the Congregational church (St. James's) at New Brunswick, N.J. The rector of the Protestant Episcopal church held his ground, as Dr. Tyng had not asked his consent, and the matter was carried to the highest courts in the Protestant Episcopal Church. There has never been a definite settlement reached. Dr. Tyng, though an offender against the canon, remains in that Church, and his own congregation support the action, frequently repeated since him by his other clergymen of the Protestant Episcopal Church. One of the ablest editors for the Literature on the subject was presented by the American Presbyterian, March 26, 1868. The High-Church view was taken by the New York Church Journal, and we refer to its pages for a general representation of the parish question from 1868 to our own time, especially to their publications of Dec. 9, 1875, and Feb. 9, 1876. For general inquiry on the parish system we refer to Riddle, Christian Antiquities, p. 272 sq.; Coleman, Ancient Christianity Exemplified; Blunt, Hist. Diet. s. v.; Green, Short Hist. of English People, p. 66 sq.; Watten, Stoats, Ecclesiastical Archeology, s. v.; Freeman, Comparative Politica, p. 116, 417.

Parish Chaplain is an assistant stipendiary, temporary or permanent; the medieval curate, whose pay was six marks a year in 1347. In 1562 they had become scarce, preference being given to unbenedic clerks to the office of miss priest, who celebrated annally, without care of souls. Very stringent regulations were then made in order to secure curates, while the pay of the others was not to exceed five marks a year.

Parish Churches exist in a monastic or cathedral church, as at Norwich, Kilkenny, Carlisle, Chester, Salisbury, and Hereford. Spanish churches have usually an attached sagrario or parroquia, or parish church, which communicates with the main building; at Strengnits, in the south aisle, there is a peasants' church. Nice, like Manchester and Ripon, are also parish churches. The Austin canons of Thornton, Carlisle, and Christchurch, and the secular canons at Hereford and Chester, left the navies open for the parish altar; the Benedictines, who at Rochester, Westminster, St. Albans, and other places, built a separate parish church, yet tolerated it within the nave at Bollin and Tynehead. At Romsey, Marring, St. Bevens (Bishops-gate), Croyland, and Dunstable, the north aisle, and at Leominster the south aisle, formed a parish church. At Lincoln bishop Sutton removed the parishioners of St. Mary Magdalene out of the nave. In order to give still further relief at Chichester, Scarborough, and Manchester, side chapels were erected externally to the nave aisles; a large church at York and a church of St. Cross at Ely were appended on the north, as at Rochester and Waltham on the south of the nave; and at Sherborne a western ante-church.

Parish Clerks, in England, is an officer of the parish of some importance, his duty being to lead the responses during the reading of the service in the parish church. He is appointed by the parish, unless some other custom of a peculiar kind exists in the parish. He must be twenty years of age, and has his office for life, but is removable by the parson for sufficient cause. By the statute 7 and 8 Vict. c. 59, a person in holy orders may be elected a parish clerk. Under some of the Church Building Acts governing the new churches built in populous parishes, he is annually appointed by the minister. The salary of the parish clerk is paid out of the church-rate.

Parish Priest. (1) A mediival reader in a parish is 1127; a temporary assistant in choir to a resident incumeben, without cure of souls, under 50 years of age, in 1297, received forty shillings a year, while the chaplain had five marks, and the mass priest was paid fifty shillings. He is called a temporary vicar in 1408. (2) In 1523, a curate in a parish church. (3) A rector or vicar in 1298; called by John de Athon perpetual curate or perpetual vicar. The temporary parish priests only preached if they had a license. Either of the three meanings of the word can only be ascertained by the context of the passages in which it occurs. Annual chaplains, in 1296, were required not to be the rectors of the churches without the consent of the people. In 1305 these stipendaries, or chaplains, were often maintained by their friends; they attended church in surplice, and could only celebrate mass, bury, and hear confessions by the permission of the incumbent. See Curate.

Parish Schools have existed in the Church since the 4th century. Of course we refer to schools for secular instruction. Catechetical schools existed much earlier. See Catechetics. In the 7th century we find enactments regarding parochial or parish school. (See Council of Constantineople, A.D. 680, and of Trulia, A.D. 692.) In later times many of these schools were abandoned, but the instruction of the young is given to the monastic establishments. After the Reformation parochial schools became quite common in Germany, but with the modern provisions for instruction by the state the parochial schools have been abandoned, except by the Romanists and the Jews. The latter call them Congregational Schools.

In England there is no such thing as a parish school—that is, a school existing for the benefit of the parishioners, endowed by the state, or supported by taxes on the parishioners. Every school beyond charity schools is, as a rule, less voluntary in its character, and endowed, if at all, by private benefactors. In Scotland, however, it is essential that in every parish there shall be a parish school, for a statute of 1696 made it compulsory on the heritors—i.e., the chief proprietors—to provide a schoolhouse, and to fix a salary for the teacher. If the heritors neglected to supply a school-house, the presbytery was empowered to order one at the expense of the heritors.

In Scotland, as early as the reign of David I, there were grammar schools in the principal towns, and is many of the monasteries. There were also "lectura schools," as they were called, in which the young were taught to read the vernacular language. These seminaries were placed under the superintendence of the clergy, who held a monopoly of the learning of their region. Still, for example, in the cartulary of Keltow, all the churches and schools in Roxburgh were bestowed by David I on the monastery of Kelso and the schools of Perth and Stirling were confirmed to the monks of Dunfermline by Bishop, bishop of St. Andrews, from 1160 to 1175. The first effort of the Scotch church to confine the education of the people was made in the year 1494, when it was enacted, under a penalty of twenty pounds Scots, that all laity and substantial freeholders "should put their eldest sons and heirs to the schools, for that six or nine years of age, and to remain at the grammar schools until they be competently founded and have perfect Latin;"
and thereafter to remain three years at the schools of arts and jure (law), so that they have knowledge and understanding of the laws, through the whilk justice may remain universally through all the realm. No poor child however, otherwise than for the education of the common people until the period of the Reformation. In the First Book of Discipline, ch. vii, the importance of schools is strongly inculcated, in order that the youth may have knowledge and learning to profit and comfort the Church. It is declared to be a matter of necessity that “every parish should have one schoolmaster appointed—such a one, at least, as might be able to teach grammar and the Latin tongue, if the town were of any reputation. If it were a country parish, where the people conformed to the doctrine only once in the week, there must either be a minor in the Church, who added point take care over the children and youth of the parish, to instruct them in the first rudiments, and especially in the Catechism, as we have it now translated in the Book of Common Order, called the ‘Order of Geneva.’” It was further provided that “no father, of whatsoever rank, should use his children at his own fancy, especially in youth, but that all were to be compelled to bring up their children in learning and virtue. The rich and powerful were to be exhorted, and, by the censure of the Church, compelled to dedicate their sons to study, and agreed that the children of the poor was to be done at their own expense. The children of the poor were to be supported at the charge of the Church if they showed a genius for letters.” It was also appointed that when the ordinary curriculum had been passed through, “the children should either proceed to further knowledge, or else they must be set to some handie craft, or to some other profitable exercise: providing always that first they have the knowledge of God’s law and commandments, the use and office of the same, the chief articles of the beleefe, the right form to pray unto God, the number, use, and effect of the sacraments, the true knowledge of Christ Jesus, of his offices and natures, and such other points, without the knowledge whereof neither any man deserves to be called a Christian, neither ought any man to be admitted to the participation of the Lord’s table.” At this period, however, there was no law which compelled the heritors or parishioners to establish schools or to provide salaries for the teachers. The Church courts of the ministers, in their several parishes, exerted themselves strenuously to supply this defect. Measures were taken by the Kirk Session to provide for the education of the poor out of the parochial funds, and in cases of youths of promising ability and remarkable diligence, it was not uncommon to give an additional sum to prepare them for the university. It was declared that it was a moral duty of every father to see that his children from the age of six be taught as above noted. And as for se, as ar able to sustein ther bairnes at the school, and do ther deyntye to the teacher for them, they shall be commanded to put them to the school, that they may be brought up in the fear of God and virtue: quhilk if they refuse to do, they shall be called before the session and admonished of their deyntye.” A number of the ministers established and endowed schools at their own expense. Their zealous efforts to promote the education of the people were attended with great success. It appears from a report of the visitation of a number of the parishes in 1511 and 1618 that at that early period, of the parishes visited, “those which had were more than double in number to those which had not schools.” In 1618 the privy council empowered the bishops, in conjunction with the heritors, to take care of the schools in their respective dioceses, and to assess the land for that purpose, for the advancement of true religion, and the teaching of children “in civility, godliness, knowledge, and learning.” This act, however, was not vigorously carried out, and in 1626 an effort was made by Charles I to remedy the defects. But the act of the privy council in 1616 was confirmed by the Parliament in 1633, and under its authority a number of additional schools were erected in the more cultivated districts of the country. Five years later the General Assembly gave directions for the settling of schools in every parish, and providing entertainment for men able for the charge of teaching youth.” A representation was made to his majesty that the “means hitherto appointed for schools of all sorts have both been little and ill paid,” and presbytery were ordered to see “that every parish should have a school where children are to be bred in reading, writing, and grounds of religion.” The revival of the Presbyterian form of Church government, which took place at this period, gave a powerful impetus to the cause of education, and there is good reason to believe that some time before 1700 they were establishe in almost every part of the Lowlands of Scotland. We are told by Kirkton that before the restoration of Charles II “every village had a school, every family almost had a Bible; ye, in most of the country all the children of any age could read the Scriptures.” The dimensions which soon after broke out in Scotland unfortunately prevented the nation from reaping the benefits of this judicious policy, and threatened to reduce the whole country to a state of absolute barbarism. After the Revolution, however, had established peace and order in the land, an act was passed, declaring that “there be a school founded and a schoolmaster appointed in every parish (not already provided), by advice of the presbytery; and to this purpose that the heritors do in every congregation meet among themsell—concerning a common order and method of educating and modifying a stipend to the schoolmaster, which shall not be under 100 merks (£2 11s. 14d.), nor above 200 merks (£11 2s. 2d.), to be paid yearly at two terms.” The teacher was required to subscribe the Confession of Faith, and to promise to conform to the worship and discipline of the Church. The schoolmaster was required to stipulate for a constant attendance thereon, and to modify his stipend in case of sickness or injury, and to be paid yearly at two terms. The right of appointing the schoolmaster and selecting the branches to be taught was vested in the heritors of each parish; while the duty of examining the teacher before his indiction to office, and of judging of his qualifications, and of superintending and visiting the school, was intrusted to the Kirk Session. This famous act laid the foundation of Scotland’s proudest distinction, and has proved one main source of her subsequent prosperity. For more than a century after the enactment of this law the Scottish parochial schools were wholly supported by the heritors. The legislation provided for the education of the poor out of the parochial funds, and in cases of youths of promising ability and remarkable diligence, it was not uncommon to give an additional sum to prepare them for the university. It was declared that it was a moral duty of every father to see that his children from the age of six be taught as above noted. And as for se as ar able to sustein ther bairnes at the school, and do ther deyntye to the teacher for them, they shall be commanded to put them to the school, that they may be brought up in the fear of God and virtue: quhilk if they refuse to do, they shall be called before the session and admonished of their deyntye.” A number of the ministers established and endowed schools at their own expense. Their zealous efforts to promote the education of the people were attended with great success. It appears from a report of the visitation of a number of the parishes in 1611 and 1618 that at that early period, of the parishes visited, “those which had were more than double in number to those which had not schools.” In 1618 the privy council empowered the bishops, in conjunction with the heritors, to take care of the schools in their respective dioceses, and to assess the land for that purpose, for the advancement of true religion, and the teaching of children “in civility, godliness, knowledge, and learning.” This act, however, was not vigorously carried out, and in 1626 an effort was made by Charles I to remedy the defects. But the act of the privy council in
revision, which fell due in 1858, but was delayed by temporary acts until 1857. Various attempts were made during the interval to increase the endowments of the schoolmasters, and to adapt the system to the existing state of the country, but the prejudices and conflicting interests of rival sects rendered them abortive. At length an act was passed in the session of 1861, mainly through the exertions of Lord-advocate Moncrieff, which has preserved the see of the Kirk, and given a greater degree of autonomy to the parochial schools. The minimum salary has been raised to £35 and the maximum to £70 a year, with a house of not less than three apartments, besides the kitchen. Instead of the examination by the presbytery, the schoolmaster elect is to be examined by a board chosen by the university court of one or other of the four Scottish universities, and composed of six professors (three of whom must be professors of divinity), or by their deputies, one half of whom must be graduates of arts, and the other ministers or licentiates of the Church of Scotland. The electors may, if they shall see fit, nominate two or three persons to be tried by the examiners, whose duty it shall be to determine which of them is the best qualified for the office. The parochial teachers are not now required to subscribe the Confession of Faith of the Established Church, or to profess that they will submit themselves to its government and discipline. But before induction into office the schoolmaster elect must solemnly declare that in the discharge of his official duties he will never endanger, directly or indirectly, to its possible prejudice, the divine authority of the Holy Scriptures or to the doctrines contained in the Shorter Catechism; and that he will faithfully conform thereto in the instruction of his pupils; and that he will not exercise the functions of his office to the prejudice or subversion of the Church of Scotland, as by law established, or of its doctrines and privileges. If any schoolmaster should be guilty of contravening this declaration, the secretary of state may, on the complaint of the presbytery or heritors, appoint a commission to inquire into the case, and to censure, suspend, or deprive the offender, as they shall find to be just, provided that this sentence shall not take effect until it has been confirmed by the secretary of state. A schoolmaster charged with immoral conduct, or cruel and improper treatment of his scholars, is henceforth to be tried, not by the presbytery, but by the sheriff of the county, on complaint being made by the heritors or minister, or of any six heads of families in the parish whose children are attending the school. The sheriff's decision is final, and not subject to review. When the schoolmaster of any parish is disqualified, through imprisonment, bankruptcy, or death, a report by one of her majesty's inspectors of schools, to have failed, from negligence or inattention, efficiently to discharge his duties, a meeting of the heritors and ministers may compel him to resign his office. But they are empowered to grant him a retiring allowance, amounting to at least one third of his salary.

Parishioners, in 1290, 1281, and 1305, were required to find in every church a chalice, principal vessels, a silk cope for principal festivals, two others for the rector of the choir on those days; a procession cross, a cross carried before the dead, a hier, a holy-water vessel, with salt and bread; oculatory, paschal candlestick, censer, lantern, and little hand-bell (for preceding the vesture); two candlesticks for acolytes before the high altar; a chalice, paten, corporal, linens, antependium, great chasuble; ordinar, missal, and manual; high-altar frontal, three surplices, a pyx, rogation busters, bells and ropes; a font with lock and key, chrimatory, images, the image of the patron saint, the church light (before the altar); the repairs of the nave and tower, glass windows, sashes, and churchyard fence. In 1014 parishioners were called the priest's hyrmen, or hyrmen. In 994 the only church furniture expressly required comprised holy books, bosal, vessels, and mass vestments. The sovereign is the parishioner of the archbishop of Canterbury.

Parishioners, in 1789, which marked an entirely new epoch in the history of Europe, was not without influence on the history and condition of the Jews. The contest between tradition and revolution, the priestly and the democratic, still continued. Of things in Europe, concerning the Jews and their position in society, began with that year in France. Two years before the Academy of Metz had convened an assembly to consider the best means of making the Jews happier and more useful to society. Among the works which were published at that occasion was written by the abbe Gregoire (q. v.): Essai sur la regeneration morale, physique, et politique des Juifs (Metz, 1789), and another by Salkind Horwitz, afterwards librarian of the Royal Library at Paris —Apologie des Juifs (ibid. 1786). The revolution which was occurring in the public opinion, and the breaking down of the barriers which separated Jews from the Christian world, occasioned much discussion on the question, and through the influence of Mirabeau and Rabat St. Etienne, the National Assembly, in 1791, admitted the Jews of France to equal rights with other citizens. During the supremacy of Napoleon the condition of the Jews in France remained on the same footing as during the Reign of Terror. He only showed severity towards the Jewish population in the provinces of the Rhine, where they had long been in ill repute on account of their usury. Thus in 1808 he issued an imperial edict, imposing on every Jewish creditor who would go to law against a debtor the obligation to procure a certificate of good conduct, attested by the local authorities, declaring that the said creditor was not in the practice of taking usury or pursuing any disgraceful traffic. Two years prior to this edict, in 1806, Napoleon had, according to the ideas of the time, given a report by one of her majesty's inspectors of schools, to have failed, from negligence or inattention, efficiently to discharge his duties, a meeting of the heritors and ministers may compel him to resign his office. But they are empowered to grant him a retiring allowance, amounting to at least one third of his salary.
answer which was to be the first and principal occupation of the Sanhedrin. The questions were as follows:

1. Is polygamy allowed by the Jewish law?
2. Is the marriage law to be observed by the Jews living in the Dispersion?
3. Are Jews allowed, by their regulations, to intermarry with Christians?
4. Were the Jews in France regarded as French people or as strangers or as brethren?
5. In what respect would the Jews stand towards the French according to the Jewish law?
6. Do those Jews who are born in France consider the French law as binding upon them?
7. Are Jews allowed, by their regulations, to intermarry with Christians?
8. Are the Jews in France regarded as French people or as strangers or as brethren?
9. In what respect would the Jews stand towards the French according to the Jewish law?
10. Do those Jews who are born in France consider the French law as binding upon them?
11. Are Jews allowed, by their regulations, to intermarry with Christians?
12. Are the Jews in France regarded as French people or as strangers or as brethren?

To these twelve searching inquiries the Sanhedrin, after due and careful deliberation, sent the following answers:

1. Polygamy is unlawful, being declared such by the rabbis held at Worme in 380.
2. Divorce is allowed by the Jewish law for various causes; but on this subject the Jews cheerfully obey the decisions of the civil laws of the country.
3. Intermarriages with Christians are not forbidden; but as differences and disputes often arise as to the ceremony of marriage and the education of children, such marriages are regarded as involuntary.
4. The Jews in France are considered as the same as the Jews in the Jew, the only distinction being that of religion.
5. The Jews, even while they were oppressed by the French monarchs, regarded France as their country.
6. No law or regulation has been enforced to prevent the religious liberty of the Jews.
7. The Jews in France and Italy enjoyed the equal protection of the laws at that time, there was no necessity to confer any jurisdiction or authority on their teachers.
8. The election and authority of the rabbis are governed solely by custom.
9. No law or regulation has been enforced to prevent the religious liberty of the Jews.
10. The election and authority of the rabbis are governed solely by custom.
11. The Mosaic law forbids the Jews to engage in any kind of business. The Talmud enjoins that every Jew shall be taught some trade.
12. The Mosaic law forbids the Jews to engage in any kind of business. The Talmud enjoins that every Jew shall be taught some trade.

The Sanhedrin was convened, to which Jews from other countries, and especially from Holland, were invited, that the principles laid down by the first Sanhedrin might acquire the force of law among the Jews in all parts. The answers of the former were sanctioned, and a plan of reform adopted exactly suited to the emperor's purpose. The Jews, and even the rabbis, were to be governed by consistories, which, of course, were to be governed by Napoleon.

Parity, in ecclesiastic judicial parlance, signifies the equality of rights of different religious denominations in their relations to the state; those states, therefore, are parital which have granted equal rights to the several churches established in their domains. The principle of parity, totally unknown to Christian antiquity and the Middle Ages, has but gradually attained recognition since the very first century. It was only partially acknowledged in the relations of the Lutheran and the German empire to the Augsburg (religious) compact of 1556, which however excluded the Reformed (Calvinistic) Church; yet for the single territories to the right of the Rhine, the principle was determinative. In the Peace of Westphalia (1648) this territorial principle was restricted or abolished; but the denominational character, in spite of the imperial statutes, continued in the single territories with manifold restrictions. The Netherlands, after their struggle for liberation, and Cromwell and the English commonwealth of the 17th century, were the first to pronounce and practice the principle of religious toleration (q. v.) at least of all evangelical sects; in Germany it was the great elector who carried out the parity of the Reformed with the Lutheran Church at the Westphalian peace. But only after the principle was recognized, or, as it was most maxim prevalent in the 15th and 16th centuries—had yielded to the influence of the doctrine of universal human rights, the idea of the state parity for the different churches came to prevail, and is now incorporated in the constitution of the European states. In Germany parity was formally declared only as late as the act of the Rhenish Confederation, by art. xvi., in 1806. In America it has been acknowledged since the establishment of the Union; in Pennsylvania it had been introduced by William Penn, who may properly be considered the founder of our parity idea. In the details,
PARK

the position of the several religious corporations towards the state is regulated according to the constitution and laws of the state in which they are situated. It is a notable fact that every one of the generally recognized religious communities shall enjoy equal rights and equal protection in the state; and in this respect parity is only a part of universal freedom in religious matters. Parity asks no more than that the state deal equally with every religious denomination, but by no means that it permits every one to draw the full practical consequences, irrespective of the communal life of the state. Thus, for instance, the reservation of the "place" (q. v.) was not incompatible with parity.

PARK, Thomas, F.S.A., was born in 1769. He was brought up in a goodnumerous, but gave his attention to literary pursuits. He was the author of one hymn that has found its way into various collections—"My soul, praise the Lord; speak good of his name." He was employed in the editorialship of various books, including the "Works of J. Hammond" (1803), the "Works of John Dryden" (1806), the "Works of T. Wharton," a work called "Nuga Antiqua," by Sir J. Harrington; and the "Works of the British Poets," in 42 small volumes (1808). The "Harleian Miscellany" was published under his direction in the same year. He died in 1834. (S. S.)

PARKER, Alexander, a noted Quaker preacher, one of the most intimate friends and frequent companions of George Fox in his early days, was born about 1628. Like most of his brethren in the ministry, he suffered much for his religious testimony, and was diligently engaged in the Lord's service. There is little to be found on record concerning this saintly man. The latter part of his life he spent in London, where he died in peace with man and God, Jan. 8, 1689. See Janney, "History of the Friends," ii. 483, 484.

PARKER, Alvin H., a Presbyterian minister, was born in Castleton, Vt., in 1795. He graduated at Middlebury College, Vt.; studied divinity in the theological seminary of Princeton, N. J., and was licensed and ordained by the Philadelphia Presbytery in 1825. His first call was to the Church at Cold Spring, Cape May County, N. J.; and he afterwards preached at Salem, N. J., and Middletown and Ridley churches in Delaware County, Pa. He was without charge some time previous to his death, which occurred July 6, 1864. Mr. Parker was a good preacher and an excellent pastor. See Wilson, "Presb. Hist. Almanac," 1865, p. 140. (J. L. S.)

PARKER, Benjamin Clark Cutler, a clergyman of the Protestant Episcopal Church, son of bishop Samuel Parker of New England, was born at Boston, June 6, 1796, and was educated at Harvard University, class of 1813. He determined to enter the ministry; and, after pursuing his studies very carefully and assiduously, he was ordained priest May 17, 1826. He then preached in various places, and finally took charge of the "Floating Chapel for Seamen" in New York City, where he labored fifteen years with ability and fidelity. He died at New York Jan. 28, 1852.

PARKER, John, a noted minister of the Church of the New Jerusalem, was born in Harbourne, England, in 1823, and early joined the Wesleyans. He was but moderately educated, and for many years followed the trade of brass-finishing. In 1853 he was led to change his Church relations through the instrumentality of the Rev. Dr. Bailey, of London. Mr. Parker now became a most ardent advocate of Swedishborgian doctrines, and engaged in discussions both publicly and privately. In 1863 he removed to Canada, and settled in Toronto. In 1868 he finally entered the ministry. He had previously addressed large audiences on the New Jerusalem doctrines in the Toronto Park on Sunday afternoons, and became mainly instrumental in gathering the Toronto New Church Society. After his ordination he was most assiduous in his labors as the minister of the Toronto Society, making also many missionary tours into country places in Ontario and to the backwoods of Michigan, so that, besides those in Toronto who acknowledge Mr. Parker as the instrument of their introduction into the New Church, many isolated societies throughout Ontario and the West for the same reason remember him. In 1871 he severed his connection as pastor with the Toronto Society, and was engaged in missionary work for the General Association of the New Church in Canada, when, admonished by the symptoms of an impending illness, he returned to Toronto for medical advice, but never made any promising rally. He died Aug. 25, 1872. Mr. Parker enjoyed the confidence and esteem of his own Church people to a remarkable degree. As a speaker his manner was easy, and his voice pleasing; his mental powers having been of a high order, he sought truth—natural, scientific, and spiritual—very earnestly, and he had the faculty of expressing his convictions to others in simple language. He was a genial, kind-hearted man, with strong antipathies, to which he did not hesitate to give expression. See The New-Jerseymen's Messenger, New York, Oct. 2, 1872. (J. H. W.)

PARKER, Matthew, an eminent English prelate, noted especially for his connection with the Nag's-Head Consecration, is so closely related to the history of his own times that the period of his activity is regarded as an essential part of the history of the Church of England, or, as some say, "the Bishop of Parker's history is that of the Church of England." He was born at Norwich Aug. 6, 1504, and was educated at Corpus Christi College, Cambridge. While at the university he was a distinguished student, especially of the Scriptures and of the history of the Church; even to antiquarian minutiae; yet, in spite of his strong leaning to the past, he was from an early period favorably disposed towards the doctrines of the Reformation. He was first created Bible-clerk, or scholar, and afterwards fellow of his college. He was so learned that he was among those eminent scholars invited by cardinal Wolsey to Oxford, to furnish and adorn his new magnificent foundation. This invitation Parker did not choose to accept; but, residing in his own college, he pursued his studies with the greatest application for five or six years; and, in this period having read over the fathers and councils, acquired a thorough knowledge of divinity. He was ordained a priest in 1527, and lived in close intimacy with some of the more ardent Reformers. In 1533 he was appointed chaplain to queen Anne Boleyn, who thought very highly of him before her fall, and married her daughter Elizabeth to avoid herself of Parker's wise and pious counsel. In 1535 he obtained the deanship of the monastic college of Stoke-Clare, in Suffolk—Roman Catholicism, it must not be forgotten, being still the professed religion of the land, as Henry had not yet forsaken the Church of Rome. Here the learned bishop continued his pursuit of classical and ecclesiastical literature, and at the same time set himself to correct the prevailing decay of morals and learning in the Church by founding a school in the locality for the purpose of instructing the youth in the study of grammar and humanity. Here, too, he appears for the first time to have definitely sided with the reforming party in the Church and State; the sermons which he then preached contain bold attacks on various Roman tenets and practices. In 1537, after the queen's death, Parker was made one of the king's chaplains, and continued in the bold and uncompromising course notwithstanding that complaint was entered against him to lord-chancellor Audley. In 1538 Parker took the doctorate in divinity; in 1541 he was installed prebend in the cathedral of Ely; in 1542 he was presented with the rectorate of Ashwell; in 1545 with that of Newmarket and Cambridge and Stoke; and when, in 1548, he resigned this living, he was presented with the rectorate of Bingham, in Norfolk. In this year he also received further expression of royal favor by being made master of Corpus Christi College, his alma mater at Cambridge. In the year following his college elevated him
to the vice-chancellorship, and presented him with the rectorcy of Landbeach, in Cambridgeshire. In 1547 he renounced the obligations of priestly celibacy and married a daughter of a Norfolk gentleman. As this step caused much agitation, he drew up his defence, entitled De Conjugio Suauerdatis. By Edward VI he was nominated to the deanery of Lincoln in 1552; and under this prince, as under king Henry, he lived in great reputation and affluence. But in queen Mary's reign he was deprived of all his preferments, because he was married, and was placed in a prison, but the real cause was his zeal for the Reformation. Parker was so disliked by the papists that he was even obliged to hide himself, though it does not appear that the Romish emissaries cared to find him in his concealment. His low circumstances he endured with a cheerful and contented mind; and during his retirement turned the book of Psalms into English verse, and wrote and considerably enlarged his De Conjugio Suauerdatis.

The death of Mary and the accession of Elizabeth called Parker from his learned retirement. Sir Nicholas Bacon, now lord-keeper, became the earl, and Sir William Cecil, secretary of state, both old Cambridge friends, heartily recommended Parker for the archbishopric of Canterbury, and the queen, approving of their choice, caused his consecration in Lambeth chapel, Dec. 17, 1559, by Egerton, bishop of Chichester; Scory, bishop of Hereford; and Dr. Lyme, bishop of Worcester. The archbishop of York, Dr. Wodkin, suffragan-bishop of Bedford. We mention this circumstance so minutely because the Romanists invented a tale afterwards that he had been consecrated at the Nag's-Head inn or tavern in Cheapside. But this notorious and improbable falsehood was fully confuted by Mason (Vita ecclesiastica del Church of England concerning the Consecration and Ordination of Bishops [1633, fol.]), by Bramhall (Consecration of Protestant Bishops Vindicated), and by Courayer (Defence of the Validity of English Ordinations [1728, 2 vols.]). By the bishop's wish, he was promised the archbishopric of York; and so that to believe it nowadays requires more than even popish credulity. The period now opening up is one of the most remarkable in English history. Parker held the archbishopric for more than fifteen years. These were years of changes in the State and in the Church. For all there was the restoration of the Church Establishment to the condition which it had enjoyed previous to the accession of bloody Mary (q. v.). And this of itself was no easy matter in the unsettled state of ecclesiastical affairs. The hierarchy was dissected as a body, and dispersed among strange and untravelled channels. A strong spirit of dissension had developed within the very heart of the establishment—the germs of Puritanism had begun to spring up. There can be no doubt that all this was attributable to the caprices of the new monarch herself. She had pledged herself to a restoration of Protestant principles, and yet was so much addicted to various papish practices, such as the idolatrous use of images, and was so strongly, we might say violently, in favor of the celibacy of the English clergy, that several parties developed within the Church, some favoring her, others opposing her; some approving her notions, others insisting upon a less or a more decided radical departure. Possibly all the factions might—by wise and considerate action have been harmonized. But then came the great difficulty of satisfying also those who, having been abroad while the papists controlled, now, on their return home, desired the adoption of the Swiss or Continental doctrines and practices in toto. Parker himself, being rather of a conservative turn of mind, had been chosen for the archbishopric, just as the primates of England are generally chosen for their willingness to reconcile the most irreconcilable parties. The dignity of their office has, in their judgment, culminated in obedience to the policy and the passions of the sovereign. Cranmer's chief work had been to celebrate and then to undo royal marriages, to carry out the law of the six articles, to publish the Bible when it pleased the king that his subjects should read it, and to recall that book when the king found that its circulation was becoming dangerous to his pretensions. Parker's office was to carry into execution the law which made it criminal to read a prayer-book, and his treason itself to refuse to take the oath of spiritual supremacy. Parker assumed this task, and endeavored to carry it out to the letter. He had never seen Protestantism under any other form than that which it wore in Edward's reign. He had no thought of a religious revolution upon some alleged reference to Scripture merely. Imbued with a deep veneration for antiquity, he simply desired the elimination from the English religious system of what recent inquiry had detected as undeniable blemishes. Puritans and Lutherans must stand aside, the establishment must be preserved at all hazards, and everything that savored of a mutinous individualism, incompatible with a hierarchical organization, must be rigorously repressed. This very attitude forced him into intolerant and inquisitorial courses, the result of which was most damaging to the interests of English Protestantism. The Church was divided into factions, a reign of terror and persecution was inaugurated that constituted the germs of the revolution which at one time threatened to destroy the very life of the English nation.

Archbishop Parker has been, however, too severely condemned. The miseries and misfortunes endured by the Puritans and English dissenters generally, for it must be considered that he was driven, rather by the attitude of the queen than by his own choice, into severe measures; and yet it should be borne in mind, too, by his apologists that as he grew older he became harsher, the conservative spirit increasing with his years. To forbid "preaching" or meetings for religious discourse was something very like persecution, though probably something very like treason to the Church was talked in these pious conventicles. The archbishop, we must remember, was responsible not only for the prosecution of the innovators, as those were called who dared to dissent from the Act of Uniformity. In 1565 the queen ordered the primate and other English bishops to see that uniformity was maintained in the Church of her realm. For several years the measures adopted were of so mild a nature that the Dissenters, with a passive relation; but in 1572, made bold by the encouragement of the earl of Leicester, the Puritans put forward a sacrilegious Admonition to Parliament, in which, among denunciations of the Prayer-book and the hierarchy, there was a demand to reduce the religious establishment into the form of a new Church, whose "holy discipline" should copy the Presbyterian models then exhibited in Scotland and Geneva. Thus a favorable termination of the contest was made almost impossible. This was an open defiance of the whole ecclesiastical hierarchy and of the temporal constitution of England so closely interwoven therewith. The hour seemed to have brought a most important epoch, and the archbishop, though violent and determined, was yet wise enough to comprehend the situation. Severity was most unlikely to check the Disciplinarians; and hence Primate Parker determined upon a literary examination of the Puritan pamphlets. John Whitgift first prepared an answer; later, when Cartwright returned from abroad, he also answered the admonition. Both these great champions of the establishment proved most valuable aids to the archbishop, but they failed to convince their adversaries. A few concessions at the beginning of the queen's reign would have satisfied such men as Foxe, Coverdale, and Humphrey; but now nothing less would have been satisfactory than an unconditional surrender of ecclesiastical patronage, ecclesiastical revenues (including those of the monasteries), and institutional power. The contest waged hottest, archbishop Parker was suddenly stricken with death, May 17, 1575. Fuller (who must have his pun, however bad) says of him: "He was a Parker indeed, careful to keep the
PARKER 688 PARKER

fences." But if we cautiously consider the times and the circumstances, we must pronounce him to have been a good man, generally judicious, and of considerable ability. When he was first drawn from his seclusion and studies, he seemed very sincerely and persistently to see and believe that the spiritual life was the only life to live. His judgment to the peremptory will of Elizabeth. Parker rejoiced that he was the first bishop who was consecrated without any of what he calls "the old idle ceremonies of the Aaronitic garments, gloves, rings, sandals, slippers, mitre, and pall." Neither must his vast literary labors be forgotten. It is to Parker we owe the Bishops' Bible, undertaken at his request, carried on under his inspection, and published at his expense in 1568. He had also the principal share in drawing up the Book of Common Prayer, for which his skill in ancient liturgies peculiarly fitted him, and which strikingly bears the impress of his broad, moderate, and unsectarian intellect. It was under his presidency, too, that the Thirty-nine Articles were finally reviewed and subscribed by the clergy (1562). Among other literary performances, we may mention that Parker published an old Saxon Homily on the Sacrament, by Edric of St. Alban's, to prove that transubstantiation was not the doctrine of the ancient English Church. "Parker's good fortune in putting thus to shame and eventual silence the idle boasts of Rome has earned him a place between political writers and controversial historians." (q. v.) Parker also edited the histories of Matthew of Westminster and Matthew Paris (q. v.), and superintended the publication of a most valuable work, De Antiquitate Brittanniae Ecclesiae, probably printed at Lambeth in 1572, where the archbishop, we are told, had an establishment of printers, engravers, and illuminators. He also founded the "Society of Antiquaries," and was its first president; endowed the University of Cambridge, and particularly his own college, with many fellowships and scholarships, and with a magnificent collection of MSS. relating to the civil and ecclesiastical condition of England, and belonging to nine different centuries (from the 8th to the 16th). Of this collection, Fuller said that it "was the sun of English antiquity before it was eclipsed by that of Sir Robert Cotton." There is a minute and excellent catalogue of these MS. collections in the Public Library at Cambridge which has never been printed. Those who desire a careful but churchly estimate of archbishop Parker must consult the Life written by the indefatigable Strype (Oxf. 1711), and Hook, Lives of the Bishops of the Church, 3 vols., by Soames, 4th Ed., and the Ref. Ch. of England, iv, 579 sq.; Strype, Annals, i, 282 sq.; Burnet, Hist. of the Ref. iii, 887 sq.; Soames, Elizabeth Hist. ii, 15 sq., 174 sq., 201–218; Hallam, Contin. Hist. of England, i, 282 sq., etc.; Cunningham, Reformer; Neal, Hist. of the Puritans, i, 292 sq., esp. when he speaks of Archbishop Parker, p. 22 sq.; Middleton, Evangel. Biogr., ii, 171 sq.; Skents, Hist. of the Free Churches of England, p. 14 sq.; Butler, Ecclesia Historia, ii, 449 sq.; Marsden, Ch. Hist.; Collier, Eccles. Hist., ii, 542–549; Palmer, Ch. Hist. i, 430; Hume, Hist. of England, iv, 201 sq.; Deane & Thomson, Short Hist. of the English People, p. 383 sq., 454 sq.; Froude, Hist. of England (see Index in vol. xii); and especially Gibbon's estimate in his Posthumous Works, iii, 566.

Parker, Nathaniel, D.D., a Unitarian minister of the Congregational body, was born at Reading, Mass., June 5, 1785, and was educated at Harvard University, class of 1810. After graining ten years in teaching at Worcester, Mass.; then studied theology; in 1805 was appointed tutor in Bowdoin College, Me.; in 1808 he was settled as pastor of a Congregational Church in Portsmouth, and there ministered until his death, Nov. 21, 1847. While at Portsmouth, and after Andrew P. Peabody had been ordained his colleague, when the division of the Congregational body in New England into two parties was recognised, Parker took part as a professed Unitarian. Henry Ware, Jr., published a volume of Parker's Sermons, with a memoir (1865). See also

Ware, Biographical Sketches of Unitarian Ministers, ii, 25; Sprague, Amner of the Amer. Pulpit, viii, 411.

Parker, Robert (1), a Puritan divine of considerable learning and teaching, was educated at Benet Col-lege, Cambridge, and after graduation (1688) was made a Fellow of the College. He was also a Commissioner of the Ecclesiastical Court of Wilts. In 1607 he was obliged to quit the country, and he found refuge in Holland, because he had dared to publish A Discourse against Symbolizing with Antichrist in Ceremonies. Parker died in 1614. After his death was published De Politica Ecclesiastica Christi et Hierarchica opposita, libri tres, in quibus tam vera disciplina fundamenta, quam oneris referre de cadem controversia, summum cum judicio et doctrina methodico pertractatur (Frankl. 1616, 4to) — A Discourse concerning the Puritans (1641, 4to) — The Mystery of the Vials opened in the 16th Chapter of Revela-tion (1651, 4to) — Exposition of the Fourth Vial (1654, 4to). See Darlow, Cyclop. Bibliog. a. v.; Neal, Hist. of the Puritans.

Parker, Robert (2), a pioneer minister of the Methodist Episcopal Church, was born at Fishing Creek, Luzerne County, Pa., March 30, 1792; was converted at the age of eleven years, and joined the Methodist Church. He entered the Genesee Conference in 1820, and continued a member thereof until his death, being forty-seven years in faithful, active work, and seven years in the Conference at Large. The General Conference at the time above mentioned included Western and portions of Central and Northern New York, part of Pennsylvania, the whole of Upper Canada, and a part of Michigan. His first charge was Canisteo Circuit, and in 1827 he was appointed to Painted Hills Circuit, in Oregon, and in 1832 was assigned the work in Reedsvalle, which was included in his first circuit. His earlier circuits required three hundred miles' travel, which occupied six weeks' time. Riding from morning till evening twilight through thick forests marked only by Indian trails, swimming rivers, climbing hills and fording streams, with his baby in a high chair on his膝, or school-house or barn, or out of doors, summer and winter, this veteran did an amount of labor for his Master that few modern preachers conceive of. His life was one of remarkable purity and earnestness, being always willing to work wherever there was work to do. For the last two years of his life he was almost entirely bereft of reason by a paralytic stroke. Yet he never lost his hold on the higher life, but prayed as intelligibly and eloquently, and sang the old familiar hymns as sweetly, as when in the vigor of manhood. He died in the Sparta Circuit on May 13, 1854, in the 22d year of his Ministry. See The Minutes of the Conferences M. E. Ch. p. 875; Combs, Hist. Gen. Conf. ch. ii, § 1; Boehm, Autobiography.

Parker, Samuel, D.D. (1), a prelate of the English Church, was born at Northampton in September, 1640. He was of Puritan extraction, and was married by certain Puritan customs, when, as a young man, he entered Waltham College, Oxford. He studied later at Trinity College. He was there brought in contact with persons of a very different turn of mind, particularly with Dr. Ralph Bathurst, who is said by the writers of his Life to have been chiefly instrumental in drawing him over from the Puritans. Parker, at the Restoration, became a zealous advocate for episcopacy. He had an active pen, which he employed about the time of the Restoration, and for a few succeeding years, in repeated attacks on the Puritan, or, as it was then become, the Non-conformist press. The controversy is almost forgotten, and we think it needless to r ecount the titles of his tracts. One of his writings, A Discourse in Vindication of Bishop Bramhall (Lond. 1670), called forth the "Rehearsal Transposed" of Andrew Marvell, in which the controversy is almost lost. Parker replied in A Reproof to the Rehearsal Transposed (Lond. 1673); but Marvell's was too much for him, and in everything he subsequently wrote he showed how keenly he felt the castigation. He was favored and promoted in the Church. In 1667 he was made
chaplain to archbishop Sheldon; in 1670 he became archdeacon, and in 1672 a prebendary of Canterbury, and had the livings of Ichham and Chartham. When king James II contemplated the reunion of England with the General Church, with its head in the Roman pontiff, he looked among the English divines for per-
note:... see the History of the Consecrations in the Ecclesiasti-
l., i, 9 sq.; (Lond.) Gentleman's Magazine, 12, 7 sq.

Parker, Samuel (2), son of bishop Samuel Parker, was an excellent scholar, but a man of singular modesty. He married a bookbinder's daughter at Oxford, where he resided, and appears to have had a situation in the city; for declined taking the oaths at the Revolution, and therefore did not enter into orders. He published Bibliotheca Biblica; being a Commentary upon all the Books of the New and Old Testa-
ments, gathered out of the genuine Writings of Fathers and ecclesiastical Historians, and Acts of Councils down to the Year of our Lord 651, etc.; comprehending the proper allegorical, or mythic, and moral Import of the Text, etc. [anonymous] (Oxf. 1720, etc., 5 vols. 4to). This is a commentary of profound learning and re-
search. It is to be regretted that it was not carried beyond the Pentateuch. An Abrégé de l'Ecclesiastical History of Eusebius. His son founded the bookselling establishment at Oxford which still remains in the family.

Parker, Samuel (3), D.D., an American prelate, was born in Portsmouth, N. H., Aug. 28, 1744, and passed A.B. in Harvard, 1764. He then became a teacher, and after having for nine years followed this profession, de-
termined to enter the ministry. Though educated in the Congregational Church, he repaired to England for or-di-
dination by the bishop of London, and in 1778 became assistant in Trinity Church, Boston. During the Revo-
lution he was in eminent peril for his royalist declara-
tions, and was at length obliged to omit the prayers for the king. In 1779 he became rector of Trinity Church, New York, and was actively engaged as agent for the propagation of the Gospel. In 1808, upon the death of bishop Bass, Parker was elected bishop. He died, how-
ever, only a little while later, Dec. 6, 1804. Bishop Parker was distinguished for his benevolence. He was a devoted and considerate friend of the poor, who in his death incurred the loss of a father. His publications are, The Annual Election Sermon before the Legislature of Mass. (1793);—A Sermon for the Benefit of the Bos-
ton Female Asylum (1803); and other occasional ser-

Parker, Samuel (4), a minister of the Methodist Episcopal Church, one of the most eminent pioneers of Methodist in the West, was born in New Jersey about 1774. He was converted at fourteen; in the year 1810 entered the itinerant ministry; in 1815 was presiding elder on Indiana District, which was then one of the most important fields of the Church, and was greatly improved and enlarged under his labors; in 1814 he was on Miami District; and in 1815-1819 on Kentucky District. An important position in the Missionary Conference it held. In 1816 he went to Indiana District, where he was converted; in 1817 he sent the bishops to send him in 1819; but he was soon stricken down with disease, and died Dec. 20 of the same year. His preaching was of the most eloquent and irresistible
PARKER

character. He possessed an exceedingly musical voice, a clear, keen mind, an imagination which, though never extravagant, afforded frequent and brilliant illustrations of his subject, while his ardent piety imparted wonderful tenderness and power to his appeals. Withal his personal appearance was striking. He was nearly six feet six inches in height, and of a remarkably neat and comely countenance, with a full forehead, and a black, piercing eye.

Parker's whole life was one of ceaseless and glorious toil for the kingdom of Christ. He was one of the princes of Israel, and his early death deprived the Church of one of her most needed laborers in the West. He was a Hebrew, and was one of the leaders of the Congregational Church of the Western Methodist ministry. See Minutes of the Annual Conferences, i, 358 ; Meth. Mag., 1825, art. Wm. Beauchamp, et al.; Stevens, Hist. of the Meth. Epis. Church, iv, 665, 578; Finley, Sketches of Western Methodism, p. 296; McFerrin, Hist. of Methodism in Tennessee, ii, 321 sq.; Redford, Hist. of Methodism in Kentucky (see Index in vol. ii). (J. H. W.)

Parker, Samuel (6), a Presbyterian minister, was born at Ashfield, Mass., April 23, 1779. He was of Puritan ancestry, noted for their piety and decided character. During 1798 and 1801 he pursued his preparatory studies under the superintendence first of the Rev. Mr. North, of Barnstable, Mass., and afterwards of Dr. Smith of Ashfield. He graduated at Williams College in 1806, taught a year in the academy at Brattleboro, Vt., and in the fall of 1807 went to Shelburne, Mass., and commenced theological study with the Rev. Theophilus Packard. In the pecuniary straits, as well as the demand for duty, he was licensed at the end of the year 1808 by the Northern Congregational Association of Hampden County to go to Steuben County, N.Y., and to Northern Pennsylvania. After three months there, he entered the Andover Theological Seminary, and graduated with the first class of that institution, immediately after which he was sent by the Massachusetts Missionary Society to Middle and Southern New York. He died February 20, 1877.

Parker, Samuel (7), an English lawyer and author, was born at Fowkestone, Kent, in December, 1724. He was educated at Gonville and Caius College, Cambridge, and at the University of Leiden. He returned to England in 1745, and was elected fellow of Corpus Christi College, Cambridge. In 1750 he was appointed tutor of his college, and in 1756 he was called to the bench. He died April 12, 1795.

Parker, Theodore, an American theologian of the extreme rationalistic order, was possessed of one of the brightest intellects of this century, and in many respects was fitted by nature to lead and teach. He is held to be the founder of any school in religion or philosophy.

Theodore Parker was born in Lexington, Mass., Aug. 21, 1810. He was descended from an old Puritan family. His grandfather and other near relatives were people of influence, and took a prominent part in the Revolutionary struggle. His father, John Parker, was a millwright and pump-maker by trade, but he also tilled a large farm, and was besides noted for rare intellectual culture. He possessed some scientific knowledge, and though a remarkably exact man in religion and philosophy, was withal a godly man. He rejected the predestination theory in toto, and as the Calvinists were then in the ascendency, he came to dislike the Church. He was disinclined to believe all the miraculous in the Scriptures, but yet he never consented to part with the Germ of the Bible as, in a general sense, an inspired book, and not only went himself regularly to Church service, but also insisted upon daily worship in his family and their Church attendance. Theodore Parker's mother was a woman of more than ordinary ability and distinction, and possessed the faculty of guarding her children; in short, was an example of sweet, fresh, and instructive piety. As a youth Theodore Parker also enjoyed the advantages of a fair physical development. He was invited to activity in his father's shop and in the open field, and while he thus acquired habits of industry he also secured a well-developed frame and great physical endurance. His intellectual training depended largely on his own choice, and that was decidedly con
trolled by his knowledge. He was daily occupied in reading, in school and out. In the summer months, when others were enjoying a nap under the trees, he refreshed himself with his book. The extent of his reading was astonishing. Before he was eight years old he had read the translation of Homer and Plutarch, Halle's Ancient History, and all the other volumes of history and poetry that came in his way. Books of travel and adventure were eagerly devoured. He went through Colburn's Algebra in three weeks. Nor did books alone engage his interest. He studied the stars and the flowers. The foreign fruits in Boston market, the nuts and leaves that came wrapped around bales of goods from distant parts of the world, attracted his attention. Even the structure of the hills and the formation of the stones on his father's farm excited his curiosity. In the virtues of toll and economy his whole life was a school. In the summer he was employed in the usual labors of the farm and the workshop, digging, ploughing, haying, laying stone wall, mending wheels, repairing wagons, and making pumps, with as much conscience, if not with as much delight, as in the pursuit of his studies. Theodore Parker was always useful to fill up the time.

He wanted more books than his father could afford to give him, and he could obtain them only by work. His first Latin grammar was the gift of his father; the Latin dictionary was paid for by picking huckleberries when he was twelve years old. The gift of expression was as precious to him as the gift of acquisition. He was an impassioned declaimer and a skillful mimic. While yet a schoolboy he had all the political events of the day at his tongue's end, and greatly amused the gossips of the country tavern by his wise discussions of them. But his superiority called forth no jealousy among his comrades. He was always full of fun, and took part in play with the other boys in the most robust style. The testimonies to his moral character are of this stamp. He was modest, pure, single-minded, frank, and truthful. His thoughts were busy with literature; his mind was always active and so eager as to preserve him from the temptations of his age.

He began to teach at seventeen, taking charge of district schools in the neighborhood for four successive winters. The last place at which he taught school he left with regret, and even determined to improve himself that he would frequently encourage his scholars to take up studies he was himself desirous of pursuing. Thus he formed a class in French after having
taken only a very few lessons himself, and Spanish without having enjoyed the instruction of a master for a single lesson. In a library room, and to enable him to Cambridge to be examined for admission to Harvard College. He was admitted; but being a non-resident, and unable to pay the tuition fees, he was not entitled to the degree of A.B. In 1840, however, the degree of A.M. was conferred upon him by the same college. On March 25, 1831, he went to Boston in fulfillment of an engagement to assist in the instruction of a private school. He transported thither eleven octavo volumes, his entire library, and fell to work with indomitable resolution and energy. He received fifteen dollars a month and his board for teaching Latin, Greek, French, and Spanish, mathematics, and all branches of philosophy. He taught six hours a day, and from May to September seven hours. He remained in Boston just one year; whether the engagement was closed on his motion or not we do not know; but this we do know, that the work proved too much for his strength. He needed air and exercise, but he needed society even more. He next opened a private school at Watertown, where he found much to encourage him—pleasant social relations, the friendship of the Rev. Dr. Francis, the Unitarian clergyman there, and the employment of his brother-in-law, Eliza H., whom he had married in 1837. Mr. Parker's achievements in scholarship during his residence in Watertown were remarkable. He pursued the study of Latin and Greek authors, and read the most of Cicero, Herodotus, Thucydides, Pindar, Theocritus, Bion, Moschus (the last four of which he translated); and Zephylus. He wrote for a Sunday-school class a history of the Jews; increased his studies in metaphysics, taking up Cousin and the new school of French philosophers; and entered upon a course of theology. Every Saturday he walked to Cambridge and to Charlestown for instruction in Hebrew. In addition to this, he devoted a portion of his time to the German poets, Goethe, Schiller, and Klopstock, and the works of Coleridge engaged a share of his attention. An occasional novel by Sir Walter Scott or a poem of Byron beguiled his leisure hours. His studies," says his biographer, Frothingham, "ran into the early morn- ing. The landlady kept the lamps well supplied, but there was no oil in his lamp when the day broke." In 1834 Parker entered the Cambridge divinity school, where he remained two years and three months. He was so poor that he was obliged to eke out his scanty means by taking four or five pupils, and to prac- tice the most rigid economy. In his journal he says that he did not take up the theological course without many misgivings, and that he had even taken preliminary studies looking towards the law as a profession, because he feared he was doing nothing for his mind and that he was not fitted to teach in the pulpit, the nutritious dulness of Sunday services, and the fact that the clergy did not lead in the intellectual, moral, or religious progress of the people. In this account of his experience as a minister, how- ever, Parker is continually substituting his own conclu- sions for his early impressions. In certain cases we can detect great discrepancies between the state- ments contained in this document and the real facts. For example, among the "five distinct denials" of the popular theology with which he alleges that he entered upon his theological education, the first is "the ghast- lily doctrine of eternal damnation and a wrathful God." This he states that he made way with somewhere from his seventieth to his tenth year. But he had forgotten the confession of his faith which he made in a letter to his nephew, Columbus Greene, on April 2, 1834 (see note- paper the examination on this topic in The Advocate, Jan. 1873, p. 17, 18). At the theological school Parker made a marked impression. He soon came to be regarded as a pro- digious athlete in his studies. He made daily acquaint- ance with the Bible and the classics. He was a great Biblical scholar, and which the younger members of the school did not know even by name. He would dive into the college library, and fish up huge tomes in Latin and Greek, which he would lug off to his room, and study by the light of one little oil lamp. A boarding-school girl goes into a novel. His power of speech also began to attract attention. He was the best debater, if not the best writer, in Divinity Hall. He finished his term at the divinity school in the summer of 1836, and, after preaching as a candidate in Bere- stable, Greenfield, Northfield, and other vacant parishes in Massachusetts, accepted a call to settle in West Rox- bury, where he was ordained in June, 1837. This was a quiet country place. His parish was small, and com- posed mostly of plain people, and his salary of six hun- dred dollars a year. Doleful, surrounded by no bewildering conceptions, the village was near Boston and Cambridge, and promised leisure for the work on which his heart was set. The absorbing pursuit of this period was the literature of the Bible. He devoted a share of his time to the Egyptian and Phenician alphabets; he dabbled with ancient inscriptions and coins; the orphic poems at- tracted his attention; but the Bible literature led all the rest. Still, all literature in his eyes was sacred literature. All facts were divine facts. He came to look upon man as a progressive being, and developed the notion of his development very simply in a theo- logical way. He felt that development, writers of the liberal development theorists, Lubbock, Tylor, Hittel, etc.; only he was more considerate to Christianity. Parker's journal is filled with curious inquiries into the mysteri- ous phenomena of nature and life. To the last he was always gleaning accounts of miracle and prophecy. His reading was universal in its range. He took up Cham- man the poet, Herrick, With, Wharton, Wotton, Flecknoe, Surrey, Suckling. There was honey for him in every flower. The early Christian hymns, the Mi- lesian fables, Cupid and Psyche, Campanella, biogra- phies of Swedenborg and other famous men who had been his mental recreations. Hume, Gibbon, Robertson were trifles; Schleiermacher, Bouwerke, Baur, Hegel, Leib- nitz, Laplace were more serious. Bopp's Comparative Grammar, Karcher's Analetheo, Meiner's History of Reli- gions, Rimann's History of Atheism (Latin) are ex- emples of the solid reading. The books that were not at hand, Abelard, for instance, and Averroes, he sought from afar. Wilkinson and Rosellini were familiar to him. Hesiod he commented on minutely. Plato was a constant companion. No book is mentioned without some notice of the sentiments and arguments of its author. So extensive was his course of study that the truthfulness of his statements have been called in question; and Prof. Prentice, in his reviews (Meth. Rev. Jan.-Oct. 1878), after detailed examination, pronounces Parker guilty of exaggeration and very inaccurate in scholar- ship. "He certainly did not make the discovery that attracts so much attention in the history of his gift. . . . Mr. Parker read too much, his life through, to read well; he attempted too many languages to know any accurately. . . . The merest inspection will show not only that his mode of life was unfavorable to study, but also that he had more to do; his orphic poems to burst his mind with." We cannot endorse this harsh criticism. Theodore Parker's intellectual ability has been sur- passed very rarely in this country. With naturally great powers, he had subjected himself to a thorough discipline till he attained to a surprising degree of mental strength and vigor. His memory was very re- tentive: and it is said that he could repeat a whole volume of poetry, and would often learn by heart a poem of four or five hundred lines from a single reading. It had been carefully cultivated, but not, as is too often the case, to the neglect of the other faculties. We must confess, however, that Parker's range of stud- ies was too vast and too supercilious to avail much, and that his intellectual constitution un fitted him for original work. True, his intellect was keen and subtle, and bored into every thing, determined to find the kernel, if it had not a kernel. But it had not a kernel that his range was lateral and horizontal, and lacked both height and depth. He saw sharply through shams reasoning
in other people, could prick all wind-bladders with the needles of his criticism and satire, or, as Mr. Beecher has it, "he had a habit of striking at the root of things with very vigorous blows," and hence was quick to run down a falsehood, but he was just as impotent to establish a truth. His intellect was colored mainly by his tempestuous sensibilities. He had not even enough of the intuitive faculty, notwithstanding his abundant materials for the conclusion, which he learned from Kant, for intellectual sympathy, and hence he could not enter into other people's beliefs so as to understand them and get their outlook.

The society which Parker found at West Roxbury was of special value to his culture. His immediate neighbors, a circle of persons used to the refinements of life, accomplished in literature and art, with high tone of sentiment, and "that rich flavor of character which distinguishes people well bred." In his student days at Cambridge, and in his earliest days of ministerial life, Theodore Parker had been a most ardent admirer of the Unitarian Channing. But gradually Emerson's influence came to predominate and crowded out Channing. In 1887 Parker and Channing read Strauss's Leben Jesu together, and in the discussion of their own views on this subject it soon developed that Channing was conservative and Parker was radical in his theologian. By 1839 Emerson's influence was most decidedly in the ascendency, and fast growing, though silently, to vast power. This is very clearly apparent in an article which Parker published about this time in the Boston Qu. Rev. on "Palfrey's Lectures on the Jewish Scriptures and Antiquities," and in the Thursday lecture on "Inspirations," preached in January, 1840, in which he talks about the folly of thinking that the divine goodness had exhausted itself, and the probability that new Christs would be manifested among mankind. He began to hint, too, that we might equal or even transcend Jesus Christ in spiritual insight and moral excellence. In November of this year he gave further proof of his departure from conservative theology by attending the Chardon Street Convention, then held in Boston. This meeting was called to discuss the ministry, the Sabbath, and the Church. Men of all shades of opinion were invited, under the management of Edmund Quincy, to share in the deliberations. Parker was advised by Channing to keep clear of the affair, but was bent on going on. Of course the convention was a motley throng, and there was, therefore, no real possibility of persuading them. No candid and thoughtful believer had much chance of a hearing, and a questionable name hangs over the convention. Parker seems to have taken no active part in their discussions; but a record in his journal shows that he meant to push his peculiar views: "I have my own doctrines, and shall support them; still I think the convention as it may." In this mood he resolved to write a sermon on Idolatry, and he ministers the points for discussion. These will help us to detect the drift of his meditations. After a few well-delivered blows at mammon and love of gain, he uncovers the real objects of the discourse by saying that the Church makes an idol of the Bible; that it loves Jesus Christ as God, though he is not God; that the Church, ministry, and Sabbath are regarded as divine institutions, though they are merely human. This sermon he preached on the occasion of the Rev. C. C. Shackford's ordination at Howes Place Church, South Boston, May 19, 1841. The discourse was entitled The Transient and the Permanent in Christianity, and it hit flatly repudiated the theory of the infallible and miraculous inspiration of the Bible. The Church, he declared, that the order of the Church, was harsh and sarcastic. The more conservative Unitarians were shocked at such sentiments, and a general dissatisfaction arose that a man holding these views should be recognised as a Unitarian clergyman. His connection with them could only be an embarrassment to them. Thus in the midst of the pretense that the rights of free thought and free speech were involved in the question, he refused to withdraw from them, as they would gladly have seen him do. They, on the other hand, refused to expel him from their association lest he should thus be afforded the position of a martyr. Yet he was punished for his heresy. For ecclesiastical and civil ostracism social proscription was substituted. People ceased to know him, ministers refused to exchange with him; he found the congregations shut against him, and the effort was made to reduce him thus to silence. Debarred from the general privileges he had hitherto enjoyed, he withdrew himself altogether to his vicarage at West Roxbury, where, however, the storm might rage elsewhere, he always found peace. It speaks well for him that all attempts to alienate the feelings of his parishioners failed. They were his firm and constant friends. In this quiet abode he continued to study, read, think, and find domestic happiness; yet his eye watched the movement of the storm he had raised, and ever and anon he intervened in the conflict. Early in May, 1843, he sent the last sheet of his Discourse on Matters pertaining to Religion to the printer, and in somewhat more than a twelvemonth later his translation of De Wette's Introduction followed. Of the former work, we may say in this place that it was evidently an effort on the part of the author to give the reader, not a rational view from entangled alliances. It is a vigorous rejection of the authority of the evangelical faith. The peculiar dogma of the book is the sufficiency of human nature for all its functions. "Man's religion is a joint development from the mere survival of the older world. God, duty, and immortality are conceptions which arise of themselves in human souls. Out of these fundamental ideas all religious systems have been built up."

The autumn of 1843 found Parker so much worn out by toil that a voyage to Europe was recommended for recreation. A friend was near to supply the pecuniary needs of such a journey, and he set out September 9, to remain a whole year on the other side of the Atlantic. It proved no holiday trip for sight-seeing, but a serious pilgrimage. He returned like a student from his task. Unfortunately, however, his visit to the Old World had filled him with vast and ambitious schemes. The little church, of which he had been a pencil-drawing on the fly-leaf of his European journal, in sight of the splendid cities with their vast cathedrals, had made him discontented for less, and he determined to meet all the demands of the nearer, broader fields and greater responsibilities. He deemed himself called to higher work. But how to get beyond his circumscribed circle of influence at West Roxbury, now that even the most radical of Unitarian clergy dared not to invite him to his pulpit, was the question. His sympathizers were numerous in all the churches, and evinced their love for him by constantly crowding his little country church Sunday after Sunday, whither many came from the city to sit under his preaching. He soon saw very clearly that he must first leave the little lamp that came to its own deal, and so he wrought with them until they were powerful and enthusiastic enough to promise his support in the metropolis; and in January, 1845, about a year and a quarter after his return from Europe, Parker removed to Boston, with a view of forming a permanent congregation in that city. It was as yet simply an experiment, it was to be an unre- ceivable. The masses are ever ready to applaud the destructive elements in society. Those who toil quietly to build up are hardly known, but those who come to tear down and destroy are warmly welcomed, loudly praised. It was such a movement as this that the church was being made to realize. The masses are ever ready to applaud the destructive elements in society. Those who toil quietly to build up are hardly known, but those who come to tear down and destroy are warmly welcomed, loudly praised. It was such a movement as this that the church was being made to realize.
and who denied that there was "any great moral or religious truth in the New Testament which had not been previously set forth by men, for whom no miraculous help was ever claimed," still professing to be a Christian minister! There was no Church organization, and no sacraments were administered. The public services consisted simply of a single discourse every Sunday on some literary, philosophical, theological, or political topic, having more or less of a moral or religious tinge, according to the taste and the strain of prayer. His congregation, which was large, as might be expected, was made up of men of diverse religious opinions, comparatively few of whom agreed with him, except in his thorough opposition to evangelical Christianity and his general philanthropic sentiments. The majority of the audience could not have had a preference for what had a taste for religious discussion, but who had reasoned themselves away from the Bible—had become dissatisfied with the churches, and had passed into various phases of unbelief. There were atheists, deists, physical and spiritual pessimists, sceptics, spiritualists, come-outers, universal sceptics, and sectarians. There were many persons of high culture, wealth, and social position. The more radical reformers, dissatisfied with the indifference of some of the churches to great public vices, and the complicity of others in them, naturally gathered about him. Pusey was a man of poetic min., and delighted to pour forth his scorching invective upon those religious bodies who only rebuked unpopular wickedness. Thus a large element of his congregation consisted of those who, having no special religious or irreligious principles, were attracted by the interesting manner, the novel matter, the trenchant wit, and other high intellectual qualities of his discourses. He was not what is popularly termed an eloquent speaker—though he was something far better. Neither his person, attitude, gesture, nor elocution indicated the great speaker. He used no splendid declamation, no soaring flight, no electrifying of the audience as by some rhetorical machiner. He had learned, what so few of our scholars ever know, how to convey great thoughts in common language. Not that his vocabulary was meagre or vulgar—though there was sometimes an approach to coarseness in his expressions. On the contrary, his range of language was remarkably extensive, and his command of appropriate terms almost unlimited. He was thus able to popularize the most abstruse thought, and convey it in the most familiar language. He was an ardent reformer, his views were boundless and his brief similes and metaphors sometimes gave possession of a valuable idea which whole pages of writing might otherwise have failed to bring out. In reading as well as in hearing him, all felt that an ordinary man was placing before them extraordinary thoughts. It is true that sometimes when he was discoursing on some popular sin before which the Church and the political parties had been awed into silence, his soul would become mightily stirred, and then the momentum was almost terrific. A natural rhetoric would marshal his phrases in wonderful order; his fire would sometimes leap into the eyes of those who heard them; there was then an eloquence which inspired whole multitudes after the sublimest manner. Ordinarily, however, he spoke in a plain, easy, conversational way, using familiar but striking illustrations, garnishing, and yet helping the argument with strokes of irresistible humor, not sparing the terri- ble sarcasm in which he was an adept, often palpably extravagant in his statements, now and then violating the conventional canons of good taste, but always making his point tell, at whatever sacrifice. Besides his ordinary sermon on Sunday, he was said to have engaged largely in parochial duties, attending to the wants of the poor and the afflicted. Of these we find no definite account; but from the benevolent character of the man we have no doubt that he devoted some time to those genial employments. In addition to the duties of his parish, his public labors were very numerous. He lectured before lyceums all through New England and many other Northern states, to the amount of eighty or one hundred times in a year; was present at and addressed many kinds of meetings for the promotion of temperance, antislavery, education, the rights of women, etc.

Though often in feeble health, Theodore Parker seldom allowed physical languor to intermit his work. He knew the value of the necessity of sleep, rest, or recreation. He grew up thoughtless of the simplest conditions of physical health. For more than ten years before his death he manifested symptoms that caused great anxiety to every one but himself. 

But it was not till the beginning of 1869 that he was compelled to leave his work, and after a year of improvement of his health in another climate. On February 3 he sailed for Santa Cruz, where he remained until the middle of May, when he took passage from St. Thomas for Southampton. His stay in Switzerland and Italy was unusually pleasant. The fatal moment did not long delay to strike. After suffering intensely from the capricious climate, and still more from the spiritual atmosphere of Rome, he found a welcome resting-place in the beautiful Florence, where in the midst of flowers, which he loved so well, he died shortly after his arrival. He had been a su- dden death at an earlier life that, like Goethe and Channing, he might not be deterred from labor by the prospect of immediate death. Shortly before his decease he addressed to his congregation in Boston a letter containing a few remarks of the sort of earnestness and passionate interest at the Melodion. He now rests in the little cemetery outside the walls of Florence; his tombstone, at his own request, simply recording his name and the dates of his birth and death.

See, besides the preface to his works, Life by Weir (Boston, 1873, 2 vols. 8vo), and by Frothingham (1874); A Discourse occasioned by the Death of Theodore Parker, delivered by P. W. Perfitt in South Place Chapel, Finsbury, on Sunday evening, May 27, 1869 (1869); The late Theodore Parker, a discourse delivered in South Place Chapel, Finsbury, on Sunday evening, June 6, 1869, by Henry N. Hooper, published at the request (1869); Three Discourses delivered on the Occasion of the Death of Theodore Parker, by the Rev. Messrs. Warren, Newhall, and Haven (N. Y. 1869); Harst, History of Rationalism, p. 664 sq.; Farrar, Critical History of Free Thought, p. 329 sq.; Moschet (Qu. Rev. April-October 1878; July, 1859, p. 435; Brit. and For. Rev. Rev. Oct. 1867, art. vii.; London Qu. Rev. vol. iii., art. i.

Parker, Thomas, a noted Puritan divine, was son of Robert Parker, and was born June 8, 1655. He studied some time at Oxford, and in Ireland under Dr. Usher, receiving his degree of M.A. while at Leyden in 1617. He taught and preached for some time in Newbury, England. He came to New England in May, 1634; was co-pastor with Mr. Ward, of Ipswich, about a year; and then began the settlement of Newbury, Mass., and became the first minister of the Church in that place. A bitter controversy on Church government, lasting for years, united him with his church. He died April 24, 1677. He was eminent for learning and piety. He published a Letter to a member of the Westminster Assembly on Church government (1644)—The Proph- ecies of Daniel Expounded (London, 1646, 4to)—The Truths of God's Word (London, 1647, 4to)—The Wonders of the World Revealed, or True Observations of Certaine Peculatoria ad Vitam, with some works of Dr. Ames. See Brooks, Lives of the Puritans, vol. iii.; Mother, Magnalia; Sprauge, Annals of the Amer. Pulpit, i., 41 sq.

Parker, William, D.D., F.R.S., an eminent English divine, was born near the opening of the 18th century. He was educated at Baidil College, Oxford (M.A. 1728; B.D. 1731; D.D. 1746). After entering the min-
isy became rector of Little Ilford, Essex; vicar of St. Catharine Cree, London; and rector of St. James's, Westminster. He died in 1802. Dr. Parker published The Nature and Reasonableness of the Inner and Outward Mission to the Holy Ministry considered (ordination sermon), and other sermons, of which a list is given by Darling, Cyclop. Bibliog. ii, 22 sq.

Parker, William E., a minister of the Methodist Episcopal Church, South, was born in Virginia in 1789. His parents, who were Presbyterians, removed to Ohio while he was still a boy. In that new and stirring population he developed into an active and industrious man. Many of his neighbors sent their produce every autumn to New Orleans in flat-boats. The love of excitement and a curiosity to see that semi-tropical region, and the hope of bettering his fortune, induced him to go frequently to that distant city, and he became so familiar with the river-bed that he was finally employed as a pilot; after a time he learned the trade of a cooper, and for many years, both in Ohio and Kentucky, carried on the business. He was fully grown to maturity before he became religious. But when he heard the Methodist doctrine of free grace he was drawn towards the cross. So anxious was he to know the plan of salvation, that even while engaged at his trade he availed himself of Dr. Wesley's Clarke's Commentaries on his bench, that he might glean some grains of knowledge while for a moment at any time he stopped to rest his body. After joining the Church he soon became class-leader, then local preacher; and as such he was ordained deacon at Maysville in 1834, and in 1850 he was received into theKentucky Conference. He was admitted, and, having filled his probation, was admitted into full connection in 1851. As a preacher he was studious, faithful, and full of zeal; as a pastor he was diligent. While on the New Columbus Circuit, where he labored most faithfully, both in the pulpit and from house to house, he was stricken down. During his sickness he was patient in suffering, but grieved that he could not be at work. Though he suffered much in body, his soul seemed filled with the love of God. He died May 28, 1871. See Minutes of Annual Conferences of the Meth. Episc. Church, South, 1871, p. 569.

Parker Society is the name of an English organization of churchmen started in 1841, for the purpose of a complete republication of the writings of the Reformers. We append a list of the works published and proposed to be published by the Parker Society:

- The Apology of Thomas Cranmer, 1549-53
- Burnet's Brief History of the Reformation
- Whitgift's History of the Church
- Tindal, Frith, and Barnes
- Bollingen's Decade
- Allen's Whitney
- Denny's Minsebes
- Pilkington's History of the Church
- Phillipps's Hist. of England
- Cotton's Armorial
- Juxon's Historia Ecclesiae Anglicanae
- Sands's History of the Church
- Hutchinson, Grindal, Hooper, Latimer, Bradford, Fox, Tanner, and others

Royal authors—
- The Institutes of the Christian Religion
- Volumes relative to the reign of Queen Mary
- Theologian's: Documents of the reign of Queen Elizabeth
- Zurcher's Letters (two series)
- Letters and Documents from archbishop Parker's MSS. in C.C.C.C.
- Occasional Services of Queen Elizabeth's reign; the Homilies; some volumes of Sermons preached before King Edward VI and Queen Elizabeth at Paul's Cross, in the universities, and on various occasions; several volumes of Tracts and Small Pieces; various Letters and Documents; the Reformatic legum Ecclesiasticarum; queen Elizabeth's Prayer-book; Devotional Poetry of the sixteenth century; Christian Meditations and Prayers, and some other devotional manuals. It was calculated that the work, when done, would be in about two hundred and fifty volumes royal octavo, and fifty volumes demy, and the whole might be completed in sixteen years from the commencement of publication. The work is now being executed, and probably will be printed as fac-similes, and these were to be the standard original.

Parkhurst, John (1), D.D., an English prelate of some note, was born in 1511 at Guildford, in Surrey. He received his preparatory training at the grammar school of his native place, and then proceeded to Merton College, Oxford. After graduation he was tutor at his alma mater for five years. In 1540 he was appointed English prelate Jewell (q.v.). In 1548 Parkhurst was sent with the living of Bishop's Cleve in Gloucestershire, but on the death of Edward VI Parkhurst retired to Switzerland, and there imbued Calvinistic views. On the accession of queen Elizabeth he returned to his native country. He now advocated Puritanic notions, very much to the displeasure of his former pupil, who was highly esteemed by archbishop Parker. This primate in 1560 caused Parkhurst to be elevated to the bishopric of Norwich. As Parkhurst after this favored the most liberal concessions to the Dissenters, he fell under displeasure with the archbishop and the queen, and his last years were eminently marked by reviling and opposition from the High-Church party. He was accused of inability for the bishopric, was declared in his dotage, and was reported very superstitious, when the truth is that he simply had faith in ecclesiastical miracles, and put a favorable construction on the failings of his fellow beings of whatever class. He was certainly a learned and pious man. He died Feb. 2, 1574. Bishop Parkhurst was one of the translators of the "Bishops' Bible," of which his share was the Apocrypha, from the book of Wisdom of Solomon. Some of his letters were published by Strype, and others are still in MS. in the British Museum.

His publications are:
- Epigrammata in Mortem duorum Fratrum, etc. (Lond., 1592, 4to) — Epigrammata Seria (1600, 4to) — Ludens; see Epigrammata Juvenilia (1593, 4to); — Fides Christi, carm. Lat. in 16, fol. Lond. 1598, 4to; — In Thom. Cranmeri, O.C. C. Akena Oeconomia; Novum, Hist. del Principum; S纪念碑, Historia Gentis; etc. (Lond., 1604, 4to; — Hook, Eccles. Digl. vii, 548 sqq.; — Allibone, Dict. ofBrit. Auth. Mod., vol. ii, s. v. Parkhurst, John (2), a noted English Biblical scholar, was born of honorable parentage in June, 1728. He was educated at Rugby Grammar School, and afterwards at Clare Hall, Cambridge, where he took the degree of B.A. in 1748, and that of M.A. in 1752. He was for some years a fellow of his college; then took orders in the Church of England, but never obtained any preferment, having succeeded to a considerable estate, which rendered him independent. He acted, without receiving any salary, as curate of the church at Catesby, the preferment of which was in his own gift. He died at Epsom March 21, 1757. Parkhurst was a man of great integrity and firmness of character. He always lived in retirement, though he possessed qualities which fitted him to shine in society. In spite of a weak constitution he was a most laborious scholar. His chief work was A Serious and Full Examination of the rev. John Wesley (1758), demonstrating against the doctrine of the faith of assurance as held by Mr. Wesley (see Wesley's Works). Parkhurst, however, devoted himself chiefly to Biblical studies. In 1762 he published an English Hebrew Grammar, which has passed through several editions. His Greek and English Lexicon to the New Testament, with a Greek Grammar, appeared in 1785. Of this work there are several editions, both in quarto and octavo; the first of the octavo editions was prepared for his daughter on her marriage.

A new edition, by the Rev. Hugh James Rose, B.D., was published in 1829. The only other work published by Mr. Parkhurst was The Divinity and Pre-existence of our Lord and Saviour Jesus Christ demonstrated from Scripture, in Answer to the First Section of Dr. Priestley's Introduction to the History of Early Opinion concerning Jesus Christ (London, 1787, 8vo). Dr. Priestley replied to this work in "A Letter to Dr. Horne." Parkhurst's lexicology, though now superseded, enjoyed a considerable reputation at the time of their first appearance, and certainly were very useful in their day. Their great blemish is their many fanciful and ridiculous etymologies bearing traces of the Hutchinsonian opinions of their author. See English Cyclop. s. v.; Kitto, Biblical Cyclopedia. s. v.; Allibone, Dict. of Brit. and Amer. Auth. s. v.; Horne, Biblical Dictionary (1828) s. V. — Birketesh, Christian Student, p. 888; Orme, Bibl. Bibb. s. v.; Chalmers, Biog. Dict. xxiv, 130; Lond. Genl. Mag. vol.
PARKINSON, 695
PARLIAMENTARY CHURCH

Harvard College, where he graduated in 1721. He entered the ministry that year as pastor of the Church at Westminster, Mass. He died in 1782. He published, Reformers and Interveners sought by God, a sermon (Boston: Northeast Sermon, 1761, 8vo).

PARKMAN, Francis, D.D., a Unitarian minister, was born in the city of Boston June 4, 1788. He was educated at Harvard University, class of 1807. He studied theology under Dr. William E. Channing, and at the University of Edinburgh. He was ordained Dec. 8, 1818. From 1813 to 1849 he was pastor of the New North Church in Boston. He died at Boston Nov. 12, 1852. Dr. Parkman published The Origin of Sympathy (1829), and some occasional sermons and addresses. The Parkman professorship of public eloquence and pastoral care at the Cambridge Theological School was founded by his munificence; and he took an active part in nearly all the most important charitable institutions of his native city. See Drake, Dict. Amer. Biog. s. v.; Sprague, Annals of the Amer. Pulpit, viii, 449; Allibone, Dict. of Brit. and Amer. Authors, s. v.

PARKS, Isaac, D.D., a minister of the Methodist Episcopal Church, was born in Granville, N. Y., Sept. 6, 1803. He was converted when about twenty-two years of age, and licensed to preach in 1829 by Rev. Tobias Spicer. In 1834 he was admitted into the Oneida Conference, and appointed to East Cayuga Circuit; in 1836, to Carthage; in 1837, to Brownville; in 1838 he was appointed to Callicoon Circuit, and subsequently to Grotton, Fleming, Newfield, Morrisville, and Skaneateles. In 1848 he was stationed in Stockbridge; in 1849 he was called to supply the place of the presiding elder on the district. From 1850 to 1854 he was presiding elder of Otsego District, and from 1854 to 1858 of Oneida District. In 1858-59 he was stationed in Canastota: in 1860-61 in Fort Plain. The General Conference of 1860 transferred Fort Plain to the Troy Conference. In 1862-63 he labored in Gloversville; 1864-65 in Cambridge; and in 1866-67 in Whitehall. In 1868 he was appointed a presiding elder of the Old School District. He died April 15, 1869. He was a laborious and faithful minister of the Gospel of Jesus Christ. He took a deep interest in the cause of education, and was elected regent of the University of New York in 1857. His social qualities were very striking. He was always cheerful and genial, always enjoying the smiles of happy society. Sulleness and gloom could not live in his presence. All who knew him loved him. See Minutes of Conferences, 1870, p. 140, 141.

Parks, Martin F., an American minister of the Gospel, who distinguished himself by a most consistent and graceful influence on the younger generation in North Carolina in 1804 of pious Methodist parents. He chose a military career, and was educated at West Point. While at the academy he was converted under the preaching of Melvillay, and after having been over a year and a half in the United States service, felt obliged to enter the ministry of the Gospel by a direct and immediate experience to this holy work. He joined the Virginia Conference, and preached for years with great success. "The force and beauty of his language, the fervor of his appeals, and the rapture that kindled in his heart while he preached, were at times almost irresistible; his listeners were borne along on the rapid, sparkling current of his eloquence." He was at the opening of Raudolph Macon College appointed professor of mathematics in that institution. But after a time he determined to change his Church relations, and he finally became a deaconary in the Protestant Episcopal Church. In this new relation he was equally successful until disease closed his labors. He died on the ocean while on his way from Europe, whither he had gone to regain his health, in the year 1854. See Bennett, Memorials of Methodism in Virginia, p. 729-731. (J. H. W.)

Parliamentary Church is a church erected un-
der the authority of an act of Parliament. In England such a church is generally called a district church; and the acts of Parliament authorizing such churches are known as the Church Building Acts. In Scotland similar churches are called Quoad Sacra churches. See Parish.

Parlor is the rendering occasionally of three Heb. words: 1, "עֵדֶּרֶת, chider,” an enclosed place (1 Chron. xxviii:11; Sept. αὐλοτής, Vulg. cubiculum), especially an inner room or “chamber” (as elsewhere almost invariably rendered); 2, רָעְבָּא, lakahă, a bedroom (1 Sam. ix:22; Sept. κατάλυμα, Vulg. triclinium), especially a corner cell or “chamber” (as elsewhere nearly constantly rendered) in a courtyard; 3, רָעְבָּא, eliyyă, an upper room (Judg. iii:20, 23, 24, 25; Sept. εἶπραπόω, Vulg. conservandum), especially “the chamber” (as elsewhere usually rendered) over the gate or on the roof. See Chamber. In Judg. iii:20-28 the words in the original imply “an upper chamber of coolness,” no doubt such as are still found in the mansions and gardens of the East, to which the owner retires to enjoy a purer air and more extensive prospect than any other part of his dwelling commands, and where he usually takes his siesta during the heat of the day. It is kept as a strictly private apartment, no one entering it but such as are specially invited. See House. Kittō ob- serves (note in Pict. Bible, ad loc.) that “it appears to have been a dwelling-study, a retreat detached from the main building, but having a communication with it, and also with the exterior. It also probably enjoyed a free circulation of the air, which rendered it particularly agreeable in the heat of summer, especially in so very warm a district as the plain of Jericho.” See Upper Room.

Parlor (Locatorium, spekehouse) designates in ecclesi- astical language the room in which monastics commun- icated with tradespeople and visitors at the convent; also with the obedientiaries during reading or cloister time.

Parma, a former duchy of Upper Italy, but now a part of the Italian kingdom, is bounded on the north by Lombardy and Venice, east by Modena, south by Genoa and Tuscany, and west by Piedmont, and contains in all 1278 English square miles, with a population (1889) of 285,790. The Apennines, which cross the southern division of the duchies, send off spurs northwards, and give to the northern part of the country the character of a plain, gently undulating, but sloping uniformly to the sea, to which country is the principal outlet of the country. The plain, which is very fertile, produces rich crops of grain (including rice), leguminous plants, fruits of all kinds, olives, and grapes; while marble, alabaster, salt, and petroleum are the chief mineral products. Next to agriculture, the production and manufacture of silk, the rearing of cattle and poultry, cheese-making, and the extraction of the mineral products afford the chief employment. Silk and cheese are the chief exports. The Roman Catholic religion was until its recent union with the kingdom the only one tolerated, though a few Jews and Mohammedans were allowed to pass and return. The condition of education, much improved of late, is still very defective.

History.—Parma and Piacenza, which was a part of the recent duchy, belonged in the time of the Roman empire to Cisalpine Gaul, and after its fall came under the rule of the Lombards, to whose rule succeeded that of the kings of Italy and the German emperors. In the 12th and following centuries they joined the other territories of Northern Italy which were struggling for liberty and independence, and consequently became involved in wars and civil strife. Gibellin and Guelph parties were maintained by these strife, they fell under the domination of the powerful houses of Este, Visconti, and Sforza; but in 1499 they passed under the yoke of the French monarch, Louis XII, from whom they were soon recovered by the emperor Maximilian, and handed over to pope Leo X in 1518. They continued under the sovereignty of the popes till 1648, when they were alienated by pope Paul III, and with the surrounding territory were erected into a duchy for his natural son Pier-Luigi Farnese, the younger brother of Alexander Farnese, who was regent of the Low Countries. On the extinction of the male line of Farnese in 1731, by the death of the eighth duke, Antonio, his niece Elizabeth, the queen of Philip V of Spain, obtained the duchies for her son Don Carlos, who, however, exchanged them in 1735 with Austria for the throne of the Two Sicilies. In 1748 they were restored, along with Guastalla, to Spain, and became a duchy for the infante Don Philip, with a reversion to Austria in case of the failure of his male descendants, or of any of them ascending the Spanish or Neapolitan throne. This arrangement was confirmed in 1765 by the treaty of Vienna, which was signed between Maria Theresa and Maria Carolina, who was an able and enlightened ruler, and expelled the Jesuits in 1768. He died in 1802, and his dominions were immediately taken possession of by the French, and were incorporated with France, under the designation of the department of Taras, in 1805. In 1814, by the treaty of Paris, Parma, Piacenza, and Guastalla were presented as a sovereign duchy to the ex-empress Maria Louisa, a proceeding strongly opposed by the king of Spain, who demanded them for his sister, Maria Louisa, the widow of Louis, king of Etru- ria, and chief of the house of the Ferdinand. However, in 1817, it was settled that Maria Louisa of Spain should possess the duchies, and that on her death they should descend to Ferdinand Charles, duke of Lucca, the son of Maria Louisa of Spain, and the rightful heir; and on failure of his heirs Parma should revert to Austria, and Piacenza to Sardinia. The empress governed very well after the Austrian fashion, but with gentleness, though liberal sentiments were looked upon by her with little favor. On her death in 1847 the duke of Lucca suc- ceeded as Charles II, and certain exchanges of territory, previously settled by the great powers, took place. With Turin and Modena the chief of which being the transfer of Guastalla to Modena in exchange for the districts of Villa France, Treschietto, Castevoli, and Me- lazzo, all in Massa-Carrara, resulting in a loss to Parma of about 77 English square miles of territory, and a gain of 198 English square miles. This transfer was not made without great discontent on the part of the inhabitants. The duke’s rule was severe and tyrannical, and on an address being presented to him with a view of obtaining a reform of certain abuses, and a more lib- eral political constitution, similar to what Tuscany had obtained (1830, see Tuscany), he violently opposed it, and consented to the occupation of his territory by Austrian troops. In March, 1848, a revolution broke out, and the duke was compelled to grant the popular demands, but he almost immediately retired from the country. Parma joined with Sardinia in the war of 1848-1849 against Austria, but on the triumph of the latter power was compelled to receive Charles III (his father, Charles II, having resigned his throne, March, 1849) as its ruler. The new duke recalled the constitution which his father had been compelled to grant, and punished with great severity the active agents of the revolutionary movements in his dominions. His arbitrary measures were effectively seconded by his chief minister, an Englishman named Ward, who shared the public obloquy with his master. After Charles III’s assassination in March, 1854, his widow, Louise-Marie-Therese de Bourbon, daughter of the last duke of Berry, assumed the government for the benefit of her son Robert I, and made some at- tempts at political reform; but owing to the excited state of the people they were little effective, and she and her son were compelled to leave the country in 1859, on the outbreak of a new war between Saniniana and Austria. On March 18 of the following year the country was annexed to Sardinia, and now forms a part of the kingdom of Italy, constituting the two provinces of Parma (area 1261 English square miles, population
PARMA

268,502) and Piacenza (area 965 English square miles, population 210,903), a few of the outlying districts, amounting to about 150 square miles, being incorporated with other provinces.

Parma, the chief town of the province of the same name in Italy, and formerly the capital of the duchy of Parma, is situated on both sides of the river Parma, twelve miles south from the Po, seventy-five miles south-east from Milan, and about the same distance eastward from Genoa. It is reported to have been the seat of a Church council in 1187, presided over by pope Gregory VIII, but nothing is known of the synodal decisions. See Hefele, Conciliaevsch. v, 649; also iv, 791.

Parsam'tha (Heb. Parashat'shah, פָּרָשָׁתָה, prob. from the old Per., frsh, very, and matisha, the greatest =perarmash; Sept. Μαριαμωθανία, τ. Μαριαμωθανίαν), the seventh named of the sons of Malamai slain by the Jews in Shushan (Esth. ix, 9). B.C. 473.

Paremele, Aahbel, D.D., a Presbyterian divine, was born in West Stockbridge, Mass., Oct. 18, 1784. He received an early pious training, and during a revival in 1802 he was converted, and soon after entered upon a course of study, intending to obtain a liberal education and enter the ministry; but his health became impaired, and he was compelled to desist from study. In 1806, having given up the hope of a collegiate education, he began the study of theology with the Rev. Lemuel Haynes, of Rutland, Vt., where he remained for more than a year, and then completed his course with the Rev. Holland Weeks, of Pittsford, Vt. He was licensed Sept. 27, 1808; entered upon his work in Cambridge, Vt., where he labored six months, and the next six months at Hinesville, Vt.; in October, 1809, he commenced preaching in Malone, N. Y., and was ordained pastor of the Congregational Church in that place Feb. 10, 1810. After a pastorate of more than thirty-five years he resigned. In April, 1845, he came pastor to Bangor, N. Y.; in 1848, chaplain in the state prison at Clinton, N. Y.; in 1851, pastor at Champlain, N. Y.; in 1854, at Constanta, N. Y.; and in 1857 he returned to Malone, and preached in his old pulpit till his death, May 24, 1862. Dr. Paremele loved the work of the ministry with all his heart. He was an excellent minister, and naturally gifted as a speaker. See Wilson, Preb. Hist. Alumni, 1868, p. 506; Congregational Quar. 1862, p. 392. (J. L. S.)

Paremele, David Lewis, a somewhat noted Congregational minister, was born in Litchfield, Conn., Nov. 11, 1785; received his preparatory training at the school of his native town, and then entered upon mercantile employment. He was this all a time member of the Protestant Episcopal Church, but the frequent appeals from Dr. Lyman Beecher, which he heard, for a devoted and active Christian life, influenced Paremele finally to change his Church relations, and he became while at Goshen, whither he had removed, a member of the Congregational Church. Having amassed a tolerable competency, and feeling called of God to preach, he forsook the counting-desk, and entered upon the study of theology under the direction of his pastor, Dr. Harvey. When Paremele finally offered himself before the Middlesex (Conn.) Association, he was by that body approved and licensed to preach. After laboring for a season in several parishes as a temporary supply, he was, at the age of thirty-five, ordained and installed as pastor of the Congregational Church and society in Bristol, Conn. Although entering on the public ministry thus, compared with many, late in life, it was evident that God had ordered his previous course of training, even in things secular as well as religious, that he might be the better fitted for the work of the office of God. His ministry of ten years in Bristol was eminently useful and successful. The congregation was largely increased. Special revivals were enjoyed, and the Church greatly strengthened and prospered. At the end of ten years' constant labor, "instant in season, out of season," he felt the need of temporary rest. He was not, however, allowed to remain long unemployed. The Church and society in Litchfield, South Farms (now Morris), soon sought his labors, and he was shortly after installed as their pastor. The Church was considerably divided, but his labors were blessed, promoting their union and strength; and his ministry of twenty years as their sole pastor was one of great spiritual benefit to them and to their children. "As a watchman on the walls of Zion, he was ever vigilant against the incursions of error. As a shepherd, intimated by the great Head of the Church with the care of the flock, like his namesake of old, 'So he fed them according to the integrity of his heart, and guided them by the skillfulness of his hands.'" In consequence of waning bodily health and strength, Paremele gave up the responsible charge of his Church, and removed to Litchfield in 1861; and there he died, June 29, 1865. "His end was peace; he rests from his labors, and his works do follow him." He was deeply interested in all benevolent and religious enterprises; and, after having made ample provision for the earthly comfort of his wife and children, be gave it in M. L. L. to the people of his benefact ceilings to several of them. See Congreg. Quar. April, 1866, p. 211 sq.

Parmenides (Παρμενίδης, probably a contraction for παρμενίδης, constant), the sixth named of the seven first deacons (q. v.) of the Church formed at Jerusalem (Acts vi, 5). A.D. 29. Nothing more is recorded of this man, but the history of the young college that he suffered martyrdom at Philippi under Trajan (Baron. Anm. ii, 55). Hippolytus asserts that he was at one time bishop of Soli. In the Calendar of the Byzantine Church he and Prochorus are commemorated on July 28th.

Paremnianus. See Pararmianus.

Paremnius, a Donatist prelate, flourished in the second half of the 4th century. Upon the decease of Donatus the Great in A.D. 360 Paremnianus was chosen his successor as anti-bishop of Carthage. He was, however, soon driven from this episcopal seat, and only reinstated under Julian the Apostate. He was at the head of the Donatist party until the close of the 4th century. Two of his writings are lost; they are noteworthy, as one of them was replied to by Optatus of Milevi in his De Schismate Donatistarum aderv. Parmen., and the other occasioned a reply from St. Augustine (Contra Epistolam Parmenianum, lib. iii). The strict adherents of Parmenianus are called Pararmianitae. See Donatist.

Parmenides (Παρμενίδης), a noted Greek philosopher of the 5th century B.C., who belonged to the school of the so-called Eleatic philosophers, was a native of Elea, in Italy. He was descended from a noble family, and is said to have been induced to study philosophy by Aminias (Diog. Laert. ix, 21). He is also stated to have received instruction from Diogenes the Pythagorean. Later writers inform us that he heard Xenophon, the founder of the Eleatic school; but Aristotle (Met. i, 5) speaks of it with some doubt. We read that Parmenides gave a code of laws to his native city, which was so highly esteemed that at first the citizens tooled every year on the feast of Parmenides, and Panathenaic and stopped at the house of Pythodorus. As this visit to Athens probably occurred about B.C. 454 (Clint. Fast. Hell. p. 864), Parmenides would have been born about B.C. 519. But to this date two objections are urged: first, that Diogenes Laertius (ix, 25) says that Parmenides flourished in the 6th or 7th Olympiads, that is about B.C. 568; and consequently, if he was born B.C. 519, he would only have been about sixteen in the 69th Olympiad; and, secondly, that Socrates is stated by
Plato, in his dialogue entitled Parmenides, to have conversed with Parmenides and Zeno on the doctrine of ideas, which we can hardly suppose to have been the case, as Socrates at that time was only thirteen or fourteen. Athenaeus (xi, p. 505) accordingly has censured Plato for saying that such a dialogue ever took place.

But the charge has been anachronized. It was founded on a fact that Socrates when a boy had heard Parmenides at Athens. Plato mentions, both in the Theaetetus (p. 180) and in the Sophistes (p. 127), that Socrates was very young when he heard Parmenides. We have no other particulars respecting the life of Parmenides. He taught Empedocles and Zeno, and with the latter he lived on the most intimate terms (Plato, Parm., p. 127). He is always spoken of by the ancient writers with the greatest respect. In the Theaetetus (p. 183) Plato compares him with Homer, and in the Sophistes (p. 287) he calls him "the Great" (comp. Aristot. Met., i, 6). Parmenides wrote a poem, which is usually cited by the title Of Nature— 

Παρ ίατες (Sext. Empir. Adv. Mathem., vii, 111); Theophrastus, Ap. Diaq. Laert., viii, 55), but which also bore other titles. Suidas (s. v.) calls it Ψευδολογία; and adds, on the authority of Plato, that it was written in hexameters. The character of Plato (Sплод, p. 297) however, to which Suidas refers, perhaps only means an oral exposition of his system, which interpretation is rendered more probable by the fact that Sextus Empiricus (Adv. Mathem., vii, 111) and Diogenes Laertius (i, 16) expressly state that Parmenides only wrote one work. Several fragments of this work (On Nature) have come down to us, principally in the writings of Sextus Empiricus and Simplicius. They were first published by Stephanus in his Poetics Philosophica (Par. 1570). The text is extant in a Latin version by Päpillone, with a translation in verse (Zullichau, 1765). Brandis, in his Commentationes Eleaticae (Altona, 1815), also published the fragments of Parmenides, together with those of Xenophanes and Melissius; but the most recent and most complete edition is by Karsten, in the second volume of his Philosophorum Graecorum veterum, praeviam quam ante Platonem floruerunt, Operum Reliquia (Brux. 1836).

The fragments of his work which have come down to us are sufficient to enable us to judge of its general method and subject. It opened with an allegory, which was intended to exhibit the tendency to hang by the truth. The allegory is represented as drawn by himself along an unстроed road to the residence of Justice (Δικαιοσύνες), who promises to reveal everything to it. After this introduction the work is divided into two parts: the first part treats of the knowledge of truth, and the second explains the physiological system of the Eleatic school. That great search concerning the substance of things occupied Parmenides; but, instead of finding unity in nature, he discovered it in mind alone. It is the reason which conceives and bestows unity on plurality; so that true reality is such a scheme of Parmenides is pure idealism, and open to all the objections to which one-sided schemes are liable. He exercised much influence on the speculations of Plato. See Rüth, Essai sur Parménide et Éleus (1840); Ritter, Hist. of Philos.; Lewis, Hist. of Philos.; Ueberweg, Hist. of Philos. i, 40, 54 sq., 247; Cocker, Christianity and Greek Philosophy, pp. 307-309; Cudworth, Intellectual System (see Index in vol. iii); Butler, Ancient History, vol. ii; Smith, Dict. of Class. Biog. s. v.; Journal of Spec. Philos. Jan., 1870, art. i. See also Eleatics, and Parmenidean philosophy.

Parnassian, Francesco Mazzuoli, familiarly known as Parmeggiano, a noted Italian painter, who devoted himself to the study of sacred art, was born at Parma Jan. 11, 1593. He studied under his uncles, who were artists of celebrity, and in his sixteenth year finished a picture of the Baptism of Christ. In 1521 Correggio's visit to Parma afforded Parmigianino the opportunity to study the style of that great artist, and thereafter the efforts of Parmigianino betray that influence. In 1522 he painted, among other works, a Madonna with the Child, and St. Jerome, and St. Herennius. In 1527 he painted the dryads in the works of Raffaello. Parmigianino now aimed to combine with the grace of Raffaello the contrasts of Michael Angelo and the grace and harmony of Correggio. By Parmigianino's admirers it was said at this time that "the spirit of Raffaello has possessed him." In 1527 he removed to Bologna, where, among other works, he painted for the church of St. Petronius the Madonna della Rosa, now in the Dresden Gallery. He returned to Parma in 1531. Having engaged to execute several extensive frescoes in the church of S. Maria Storica, after repeated delays, he was thrown into prison for breach of contract, and on being released, instead of carrying out his undertaking, he fled to Casal Maggiore, in the territory of Cremona, where he died in 1540. Vasari, in his notice of Parmigianino, attributes his misfortunes and premature death to a passion for alchemy; but this oft-repeated story has been disproved by the researches of late biographers. Parmigianino executed several etchings, and some woodcuts are attributed to him. His works, especially his easel-pieces, are very scarce. The prominent features of his style are the elegance of form, grace of line, contrast in the attitudes, perfect knowledge of the chiaroscuro, and the charm of color. But his figures are often characterized by excessive slenderness rather than real elegance of form, and his graces sometimes degenerate into affectation, and his contrasts into extravagance. Parmigianino was celebrated for the ease and freedom with which he designed, and for those bold strokes of the pencil which Albano calls divine. There are a few altar-pieces by Parmigianino; the most valued is that of St. Margaret in Bologna, a composition rich in figures. Guido preferred it to the St. Cecilia of Raffaello. See Affo, Storia di F. Mazzola (1784); Bellini, Cenni intorno alla Vita ed alle Operi di Mazzola (1844); Mortara, Memoria della Vita di Mazzola (1846); Mrs. Jameson, Memoirs of Early Italian Painters; Spooner, Biog. Hist. of the Fine Arts, vol. ii, s. v.; English Cyclopædia, s. v.

Par'nach (Heb. Par'nak, פַּרְנָאָכ, perhaps spyf; Sept Φώριοι), the father of Elizaphan, which latter was prince of the tribe of Zebulun at the close of the Exod (Num. xxxii, 25). B.C. ante 1618.

Parnass (πάρνασσ = παρουσία, shepherds) is a name by which the rulers of the synagogue in the time of Christ were called. A place that had at least "ten men of leisure" (batallinim), as they were technically called, i.e. men who could devote the whole of their time to the requirements of the synagogue, enjoyed the privilege of erecting a synagogue. These men filled the different offices required for the administration of the affairs of the synagogue, and were called presbuters or elders = παρουσιοι (because old men were generally selected for those offices), or parnasim or shepherds (because they had both the ecclesiastical and civil affairs of the community (or shepherds). The term parnas, of which parnasim is the plural, is Arabic, and is used in the Chaldee paraphrase for the Hebrew word (Iv, 22), "shepherd" (comp. Ezek. xxxiv, 5, 8, 23; Zech. xi, 15, 16, etc.). This appellation was in the Old Testament already given to God, who performs the office of affording and caring for his people in the best manner, Ixx, 14, 15. Hence it is applied to his representatives, who exercised religious and civil care over the community (e. g. Jer. iii, 15). As these rulers had to feed the poor with bread, and their respective congregations with knowledge and understanding, the title "shepherd" was appropriated to them. The
Talmud declares that "every shepherd (מגלה) who leads his congregation in gentleness has the merit of leading them in the path for the world to come" (Sanh. 92 a); and that "the Holy One, blessed be he, moved the congregation which has a shepherd who conducts himself haughtily towards his flock" (Chagig. 5 b). From this custom of calling the administrators of the synagogue "shepherds" came the application of the name to those who bear office in the Church. See FARMOR. (B. F.)

Parnassus, a mountain greatly celebrated among the ancients, and regarded by the Greeks as the central point of their country. It was in Phocis. It has three steep peaks, almost always covered with snow, and seen from a great distance, the highest being fully 8000 feet above the level of the sea; but as only two of them are visible from Delphi, it was customary among the Greeks to speak of the two-peaked Parnassus. On its southern slope lay Delphi, the seat of the famous oracle, and the fountain of Castalia. The highest peak of Mount Parnassus was the scene of the orgies of the worship of Bacchus, and the poets were required to adapt to the power of that deity the language of poetry the feelings which appear to have taken a lasting possession of his mind. In 1776 was published his first collection of elegiac poems, which have been so much admired by his countrymen that they have earned for him the title of the French Tibullus. On the breaking out of the French Revolution he became deprived of the property which he had inherited from his father, and he was compelled to obtain a livelihood by the cultivation of his talents. A painful and striking change now appears in his writings, which he had the weakness to admit, in a letter to his friend the Marquis de Sade, the rival of Tibullus became the feeler copyist of Voltaire, and his Paralysie perdu, Galanteries de la Bible, and Guerre des Dieux, by their disgusting profanity and absence of genuine poetic feeling, will only be remembered by posterity as indications of the corruption existing at a period when "everything evil was rank and luxuriant." So strong indeed was the feeling excited against Parny even in France on account of the last mentioned of these three poems that his name was repeatedly passed over among the candidates for the honors of the Institute. However he was admitted into it in 1807, in the place of Devaines. Most of his other poems are, with few exceptions, inferior to his early productions. He died in Paris Dec. 5, 1814. His works have been published in 5 vols. 18mo by Didot, Paris, 1808, and at Brussels, in 2 vols. 8vo. The best edition, however, is that by M. Boissoudne in the Collected Oeuvres of Eugene Francois (Lefevre, Paris, 1827). A volume was published in 1826, entitled Les Poésies indites de Parny, with a notice of his life and writings by M. Tissot. See English Cyclop. s. v.; St. Beuve, Essais, vol. X. 285 sqq. See also Notice sur la Vie et les Oeuvres de M. de Parny (1829).

Parochial Board, in Scotland, is the board in each parish which manages the relief of the poor. In England the same duty is performed by overseers, and in some cases by guardians of the poor. See Parish.

Parochial relief is the relief given to paupers by the parish authorities. See Pauperism.

Parochial Schools. See Parish Schools.

Parolini, Giacomo, an Italian painter, was born at Ferrara. According to Baraulli, who wrote his life, his father died when he was five years old, and his maternal uncle took him under his protection, and, perceiving in him a genius for painting, placed him with the cavalier Peruzzi at Turin, with whom he remained until he was eighteen, when he entered the school of Carlo Cignani. On his return to Ferrara Parolini finished some pictures left incomplete at the death of Maurizio Scannavino, who had been his fellow-student under Cignani. He did this out of regard to his friend, for the relief of his orphaned family. He executed many works for the churches, and a multitude for the collections. Though inferior to Cignani in the grandeur of his conceptions and the masterly style of his chiaroscuro, he yet sustained the credit of his school by the elegance of his design and the savviness of his coloring, particularly in his flesh-tints, in which he excelled, and for which reason he was fond of introducing into his pictures the nude female figure. He was unusually successful in the design of his female figures, children, and cherubs.
PAROLINI

says his pictures of Bacchanals, festive dances, and Car-
pacci take partake much of the playful and elegant style of
Albano, and are found in almost every collection at
Ferrara. His principal works for the churches are three
altar-pieces in the cathedral, and a grand fresco, repre-
sented on the festa of St. Anastasia, adorning it with glory amid a
group of angels, in the church of that saint at Ferrara. Lanzi
pronounces this work a grand production, well executed,
which greatly raised his reputation. He died in 1738,
and "with him," says Lanzi, "was buried for a sea-
son the reputation of the Ferrarese school in Italy." 
Zani, differing from all others, calls him Giacomo
Filippo, and says he was born in 1667, and died in 1787.

Parolini, Pio, was an Italian painter of Udine.
According to the abbe Titi, Parolini resided chiefly at
Rome, and was admitted a member of the Academy of St.
Luke in 1678. He painted the ceiling of one of the
capels of the Sts. Carlo at Carso, representing an allegorical
subject, which was ingeniously composed and well col-
ored.—Spooner, Biog. Hist. of the Fine Arts, ii, 665.

Parone, Francescisco, an Italian painter, was born
about 1600 at Milan. According to Baglioni he was the
son of an obscure artist, who taught him the rudiments
of the art. At an early age he went to Rome, where he
enjoyed the good fortune of being taken under the
protection of the marquis Giustiniani, for whom he
painted several pictures. He studied the works of the
best masters with great assiduity, and had already
begun to distinguish himself when he died, in 1634, in
the flower of his life. His principal work is an altar-
piece in the church of the monastery of St. Romualdo at
Rome, representing the martyrdom of that saint—a
grand composition of many figures, executed in the
style of Caravaggio.

Paros, one of the larger islands of the Greekian
Archipelago. See Greece.

Parosh. See FLK.

Pa'rosh (Heb. Paroesh, 327/2 18a; see: Sept. Pho-
ep, but Φωκες in Ezra ii, 3; A. V. "Parosh," in Ezra vii,
3), a Jew whose retainers or descendants, in number
2172, returned from Babylon with Zerubbabel (Ezra ii,
3; Neh. vii, 8). Another detachment of 150 males, with
Zechariah at their head, accompanied Ezra (Ezra vii,
3). Seven of the family had married foreign wives
(Ezra x, 25). They assisted in the building of the wall
of Jerusalem (Neh. iii, 25), and signed the covenant
with Nehemiah (Neh. x, 14), either individually, or per-
haps representatively in the person of Parosh himself,
if then surviving. B.C. ante 545-446.

Parousia. See Eschatology; Millennium.

Paroy, Jacques Dr., a French painter on glass,
was born at St. Pourcin-sur-Allier, towards the close of
the 16th century. After acquiring the elements of
design and painting, he visited Rome for improvement,
and studied under Domenichino. It is probable that
he gained his knowledge of glass painting in his native
country, as that art had already been practiced in the
south of France in great perfection by Frere Guillaume,
or Guglielmo de Marcilly. Paroy executed several fine
works in Venice, and then returned to France. At
Paris he painted the windows in the choir of St. Marie,
and designed the Judgment of Susanna for the chapel of
St. Sebastian mounted on glass for Nogare. There are four beautiful paintings by Paroy in the
parish church of St. Croix at Gannat, representing
St. Ambrose, St. Jerome, St. Augustine, and St. Greg-
ory.

Parr, Elizannah, D.D., an eminent English divine,
founded in the reign of King James I. Parr was edu-
cated at King's College, Cambridge, and after taking holy
orders he became rector of Palgrave, Suffolk. His
expression of the Epistle to the Romans is a useful
work, "equally remarkable," says Dr. Williams, "for soundness
of sentiment, familiarity of illustration, and want of taste
in style and composition." His Works were repeatedly
published (4th ed., corrected and enlarged, Lond. 1651,
fol.). They contain, Exposition on the Epistle to the
Romans (on ch. i, on the first two verses of ch. ii, and
on ch. viii-xvi); —The Grounds of Divinity expounded
and applied (6th ed. Lond. 1636, 12mo): —Abo,
Framing of Private Prayer. Direction concerning the
Framing of Private Prayer.

Parr, Richard (1), an English prelate, flourished in
the first half of the 17th century. He was made
bishop of Sodor and Man in 1653. He died in 1654.
He published a Sermon preached at the burial of Sir
Robert Spencer (Oxf. 1638, 4to), and Concilio ad Clerum
(1639) on the Thirty-Nine Articles.

Parr, Richard (2), D.D., an exemplary Irish di-
vine of note, was born at Fermoy, Ireland, in 1617.
He was educated at Exeter College, Oxford. After
taking holy orders he held several minor appointments,
and in 1658 became vicar of Camberwell. He re-
mained in this position for thirty-eight years. He
died in 1691. In doctrine he was a Calvinist. He
wrote Life and Letters of Archbishop Ussher, and The
Christian Reformation (Lond. 1660, 8vo); and pub-
lished many Sermons.

Parr, Samuel, LL.D., a learned English divine
noted as a profound scholar, was born in 1747, at Har-
row-on-the-Hill, Middlesex. He was educated at the
place, and at St. John's College, Cambridge. He accepted in 1767
the living of a situation of usher at Harrow, under Dr. Summer; at whose death in 1772 he offered himself as a candidate for the
mastership, but without success. He first opened an acad-
emy at Stanmore, which began under very promising
appearances; but which, ultimately failing, he gave up
in 1776, and then became master of the grammar school
at Colchester; whence, in 1778, he removed to that of
Norwich. In 1780 he was presented to the rectory of
Asterby, Lincolnshire. In 1783 he obtained the perma-
nent curacy of Hatton, in Warwickshire, and a prebend in St. Paul's Cathedral. In 1789 he exchang-
ed Hatton for the rectory of Wadenhoe, in Northampton-
shire, though he still continued to live at the former place, to
which he was much attached, and the parish church of
which he greatly ornamented. In 1802 Sir Francis Bur-
dett gave him the rectory of Graffham, in the county of
Huntingdon, and this completed the course of his
Church preferment. He died in 1825. As an elegant
classical scholar Dr. Parr stood pre-eminent among his
contemporaries; his prodigious memory and extent of remem-
brance were admirably combined with a remarkably
discerning power in conversation; and it is to be regretted that the greater part of his labors as an author had reference to topics which
were of a temporary nature, and therefore, though writ-
ten with vigor, are fast sinking into oblivion. Dr. Parr
has not left a single great work, nor will his name go
down to posterity associated with any important prin-
ciple or extensive literary undertaking. His fame rests
upon a learning which, whatever may have been its
accuracy and extent, has bequeathed to the world no
memorable results. Parr was a man of great talents,
of aagreeable manner, and of pre-eminent conversa-
tional powers; but he was vain, arrogant, and over-
bearing. His friends uniformly represent him as pos-
sessing much benevolence and kindness of feeling; but
he required the utmost submission, and exacted the
most devoted attention from all who approached him.
In his literary and political disputes he was argu-
med and declared with the freeness of party feeling and
the petulance of self-love, and forgot alike both the equi-
ties and the decencies of controversy. Though of unques-
tionable ability, he spoke and wrote with the fluency
of ready knowledge, rather than that soundness of original thought or the compass of a philosophic
spirit. He was determined and violent in his social
views, as his opinions on the slave-trade and Test-Act
questions fully testify. It must be stated, however,
that on these subjects his mind underwent a change in the latter part of his life. Still his notions about civil and religious liberty were never the clearest or the most comprehensive; for while he could recommend conciliation to the Roman Catholics and the Unitarians, he did not hesitate to suggest persecutions against Methodists. He left a vast number of pamphlets behind him, consisting of his correspondence, and of historical, critical, and metaphysical disquisitions. His published writings, with a memoir by Dr. Johnstone (1826), fill eight thick octavo volumes. They relate to matters historical, moral, and metaphysical, and show a copious erudition, a ready conception, and a vigorous and ample style. He published 'Tracts by Warburton and a Warburtonian' to annoy bishop Hurst, the editor of Warburton; and felt no compunction about injuring the fame of Warburton, whom he pretended to admire and respect, if he could only annoy Hurst, who had given him no offence save what a mortal self-sacred might imagine. See Field, 'Memoir of Dr. Parr' (1826); Parrian (1826); Allibone, 'Dict. of Brit. and Amer. Authors', s. v.; Blackwood's Magazine, Jan., May, June, 1851.

Parricide (Lat. 'parricide') is rather a popular than a legal term. In the Roman law it comprehended every one who murdered a near relative; but in English the term is usually confined to the murderer of one's father, or of one who is loco parentis. The parricide does not, in any respect, differ in British and American law from the Methodist, Pirri, who both are punishable by imprisonment. The term 'parricide' was punished in a much more severe manner, being sewed up in a leather sack, along with a live cock, a viper, a dog, and an ape, and cast into the sea to take his fate with those companions.

Parris, Samuel, a Congregational minister, was born in London in 1655. He studied at Harvard University, but did not graduate, and engaged in mercantile labor. He became a successful merchant in Boston, but finally felt it his duty to enter the ministry. He was the pastor of the church at Danvers, Mass., from 1689 to 1696. The Salem witchcraft commenced in his family in 1692. His daughter, and his niece, Abigail Williams, aged eleven, accused Tituba (a South American slave), living as a servant in the family, of bewitching them. Mr. Parris beat her, and compelled her to confess herself a witch. John Tituba's husband, on his own safety, turned accuser of others. Nineteen were hung, and Gyles Corey perished in his delusion. Mr. Parris had been a zealous prosecutor, his Church in April, 1698, brought charges against him. He acknowledged his error, and was dismissed. After he had been reigning two or three months, they removed to Concord, and preached six months in Dunstable in 1711. He was buried at Sudbury, Mass., Feb. 27, 1720. See Life of Parris, by S. P. Fowler, to Essex Institute (1857, 8vo).

Parrish, Daniel H., a minister of the Methodist Episcopal Church, South, was born about 1845, of pious parents. In 1855 he joined the Board of Missions as an itinerant preacher, and in the various stations that he was called upon to serve he labored zealously for the cause of Christ. He commanded the attention which intelligence, piety, and warm and generous sympathies usually secure. He was uncorked from the crucifers of last and earnest in exhortation; and in none of the duties of his work did he appear to greater advantage than in the labors incident to revivals. A friend writes, "In these his soul took delight, and great success attended his efforts." He died in February, 1872. See Minutes of Conferences of M. E. Church, South, 1871, pp. 525, 620.

Parrish, Joseph M., a Quaker noted for his philanthropy, was born in Philadelphia Sept. 2, 1779. Even as a youth he distinguished himself by his pious life. In his twenty-second year he engaged in the study of medicine, and after entering the medical profession became noted for his skill. He was also an elder in the Society of Friends, and by a noble and consistent life gained the esteem of his fellows. Dr. Parrish especially interested himself in the welfare of the African Americans. He watched with deep concern those measures and plans by which African bondage was to be perpetuated in efforts to shield them from injury. He was also the friend of the colored people, and early advocated their emancipation. He died March 18, 1840. See Janney, Hist. of Friends, iv, 126, 127.

Parrish, Nathan Cowery, M.D., a minister of the Methodist Episcopal Church, was born in West Chester, Ohio, Dec. 17, 1834. When he was about fourteen years of age his father died; when about sixteen years of age he began to teach. In 1856, while a student in Brookville College (in the preparatory department of which he was at the same time a teacher), he was converted. In 1858 he received his degree in divinity. He soon after felt impressed that he was called to preach; but he hesitated long to abandon his life-plans. At last, however, his convictions became so settled and thorough that he applied for work in the Kentucky Conference, and was employed by the presiding elder on Vanceburg Circuit. Charge. He was theuling inclination to the course of study, and was appointed to Venice Circuit. His subsequent appointments were as follows, viz.: To Wayne Street, Piqua; Carr Street, Cincinnati; Venice Circuit, Miami Circuit, Morrow Station, where he remained three years. At the conference of 1875 failing health warned him to rest for a season, and a special call to the West was granted him. He died Feb. 15, 1875. Dr. Parrish was a man of sterling worth. Of him it could be faithfully said, he was "diligent, never unemployed, never triflingly employed. During his entire ministry he was in the habit of spending from six to ten hours per day in study. As a preacher he was earnest, practical, and eloquent. As a pastor he was faithful. With the irreigious he maintained a dignified familiarity that honored his office, made him hosts of friends, and gave him large audiences. He had also a happy faculty of interesting children, and he diligently instructed them. See Minutes of Conferences, 1875, p. 115.

Parrocq, Etienne, a French painter, was born in Paris about 1720. He painted historical subjects, but attained little reputation. He executed several scriptural works, which were Christ on the Mount of Olives. There are several etchings by him, in a bold, free style, among which is The Triumph of Mordecai (after De Froy).

Parrocq, Pierre, a French painter and engraver, was born at Avignon in 1664. He received his first instruction in art from his uncle Joseph, also a noted painter, after which he went to Rome, and studied under Marotti. On his return he travelled through Languedoc and the Provence, and left many valuable productions in sacred art in different churches: among them the Resurrection and the Ascension of Christ, at the chapel of the White Penitents at Avignon. He was invited to Paris, and there executed a number of magnificent works. At Marseilles he painted the Coronation of the Virgin, in the church of St. Maria. His engravings are inferior.

Parry, Richard D.D., an English divine, was born about the beginning of the second quarter of last century. He was a student of Christ Church, Oxford, and obtained the degree of M.A. March 31, 1747; B.D. May 25, 1754; and D.D. July 8, 1757. After taking holy orders he was made rector of Wichampton, in Dorsetshire, and preacher at Market Harborough, in Leicestershire, for four years, and in the latter county he was in the commission of the peace. Dr. Parry was a very learned, active, and able divine. He died miserably poor at Market Harborough, April 9, 1780, scarcely leaving sufficient to defray the charges of his funeral. His publications are:
The Christian Sabbath as Old as the Creation (1758, 4to); he was then chaplain to lord Vere.—The Scripture Account of the Lord's Supper; the substance of three sermons preached at Market Harborough in 1755, 1756.—The Fig-tree dried up, or the Story of that remarkable transaction as it is related by St. Mark considered in a new light (1758, 4to)—:—Defence of the Lord Bishop of London's Interpretation of Job's "I know that my Redeemer liveth" (against Warburton [1760, 8vo]):

—A Dissertation on Daniel's Prophecy of the Seventy Weeks (Northampton, 1762, 8vo)—:—A Sermon upon a Letter from the Rev. Dr. Kennicott to the Printer of the "General Evening Post" wherein the printed Hebrew Text in Psa. xci, 10 is vindicated, and the Doctor's Charge against the Jews of having wilfully corrupted the Prophecy is confuted (London, 1765, 8vo). Other works: Harmony of the Four Gospels:—The Genealogy of Jesus Christ in Matthew and Luke explained (1771, 8vo).

PARRY, William, some time president and theological tutor at Wymondley Academy, Herts, was born in the year 1764 at Bermondsey, by Westminster, in Monmouthshire. He was the eldest of twelve children, most of whom died young. When he was about seven years of age he removed with his father to London, where he attended the ministry of Dr. Samuel Stennett. At the age of seventeen he publicly professed his attachment to the Church of England, becoming a member of the Church at Stepney, then under the pastoral care of Mr. Brewer, by whom, at the age of twenty, he was introduced to the academy at Homerton. Under the instructions of Drs. Conder, Gillions, and Fisher, Mr. Parry remained during six years, pursuing, with unremitting ardor and perseverance, the studies to which he had devoted himself. He was ordained at Little Baddow, Essex, in the year 1780. To his suggestion and benevolent activity while resident at Baddow may be attributed the formation of "The Benevolent Society for the Assistance of Widows and Orphans of Dissenting Ministers in the Counties of Essex and Herts," also "The Essex Union," whose object is to promote the extension of the Gospel in the county. In the year 1791, when an opposition was made to an application of the Dissenters for a repeal of the Test and Corporation Acts, more especially by the nondenominational gentlemen, and clergy of the county of Warwick, he animadverted with great eloquence and force on their resolutions in three letters addressed to the earl of Aylesford. The pamphlet on the "Inquisition of the Netherlands and Muscovy" in the year 1786, he maintained for its author an extensive reputation. Shortly after its publication proposals were made to Mr. Parry, by the trustees of W. Coward, Esq., to become theological tutor in the dissenting academy which had for some years been conducted at Northampton and Daventry by Drs. Doddridge and Ashworth. An earnest desire of extended usefulness led Mr. Parry to accept those proposals, and in the year 1799 he took an affectionate farewell of his beloved flock at Baddow, after having labored among them for twenty years with great acceptability and fidelity. Mr. Parry entered on his new and important office at Wymondley (to which place the academy was removed) with all that intense application which naturally resulted from the high sense he entertained of its responsibility. As a lecturer Mr. Parry was distinguished by perspicacity and classical simplicity; and by a happy union of dignity and affection he secured the love and veneration of the students intrusted to his care. In undertaking the office of tutor, Mr. Parry did not resign that of a minister of Christ. Immediately after his settlement at Wymondley a small chapel erected on the premises, where a congregation was raised and a Church formed, over which he presided as pastor till the time of his decease. With the exception of a charge delivered at the ordination of one of his students, Mr. Parry appeared but once in the character of an author after his removal to Wy- mondy, which was in a work of a controversial kind with Dr. Williams, of Rotherham, On the Origin of Moral Evil. It had been his intention to write a history of the Dissenters, a work for which he was well qualified, and for which he had made considerable preparations; but in the round of his labors the design was interrupted, and never afterwards resumed. He died in November, 1818. The death—bed of Mr. Parry was one of calm and holy triumph; he rested with unshaken confidence on the rock of ages, and entered with a smile the gloomy valley which was to be his portion to the end; he was the last of the reformed generation of the eighteenth century. The writings of Mr. Parry are characterized by clearness of conception, with great accuracy and felicity of expression.

Paraseism. See Paraseis: Persia.

Parases (i.e. people of Par, or Pera, the name of ancient Persia) are a remnant of the old inhabitants of Persia, who to this day continue faithful to the ancient Persian religion as reformed by Zoroaster (q.v.). Parases also are called "fire-worshippers" or "fire-worshippers"; Mogh, from their priests the Magi; and by themselves Beh-Din, "Those of the excellent belief;" or Mazdaaman, worshippers of Ormuzd; by the Turks Ghaur or Ghuwar, which is commonly, but against all linguistic laws, derived from the Arabic Kafir (a word used by the Mohammedans to designate all who have been first bestowed upon this sect by their Arabic conquerors in the 7th century), but which is evidently nothing more than an ancient proper name taken from some pre-eminent tribe or locality, since the Talmud (Jebum, 30 b, Gitt. 17 a, etc.) already knew them only by this name (Cabrera); and Origen (Contra Cels. 291) speaks of Kabiri or Persians, asserting that Christianity has adopted nothing from them.

What the pre-Zoroastrian religion of Persia was is not yet determined, and in all likelihood will not soon be definitely settled. By philosophical research it has been made clear that in primitive or pre-historic times the religious faith of the Persians and Hindûs was identical; in other words, that Paraseism is but an outgrowth of Brahminism (q.v.). It appears that in consequence of certain social and political conflicts between the Iranians and the Aryans, who were in the latter period of Hindustan proper, an undying feud arose, in the course of which the Iranians foreswore even the hitherto common faith, and established a counter faith (Ahura). The ancient but now hostile gods were transformed into demons, and the religious rites of the Aryans, which had always been marked by all mischief and wickedness. The founder and organizer of this new religion is reputed to be Zarathustra (Greek, Ζαραθσούρης, Ζαράθσούρης; Latin, Zoroaster; mod. Persian, Zerdosht, Zerdusht), and he is usually distinguished from his predecessors in the priesthood by the name of the addition of his family name, Spitama. (For a summary of what is known and speculated about the person and time of this great reformer, see the article Zoroastrianism.) We shall here confine ourselves to the merest essentials of Paraseism.) Zoroastrianism, as the new religion is sometimes called, is of uncertain date. The Zend-Avesta, the Parsee Bible, is ascribed to Zo- roaster, but its varieties in doctrine make it evident that it was composed in different ages. Thus the dualism, which is now a characteristic of Paraseism (see below), is not found in the most ancient sections of that book, and there are very early chapters that contain traces even of a polytheistic nature-worship, in which the gods have no personal existence, but are mere powers, such as the sunshine, the wind, the earth, and fire. Hardwick takes the ground that the modifications in the religion of Indian Persian heartened, that give it the view that we so often encounter it, contain in the 5th century B.C., and continued until the Sassanid revival in the time of Artaxerxes, or the 3d century of the Christian era (A.D. 226). He also holds that the Avesta was not given its present shape any earlier
than the last-named period (Christ and other Masters, ii, 374).

Whatever the date of the origin of Parseeism, the principles of Zoroaster's theology are easily accessible, and we now turn to a consideration of these. In the account, we are given the early religious history of the Persian people. Taking for granted that such a prophet as Zoroaster flourished at some time in Persian history, we encounter him as the reformer of the Persian religion. From the too-sensuous Aryan system the Iranians had developed a distinct conception of the things spiritual and the self-consciousness and intelligence. But the attempt to subordinate one power to another, in order to establish the supremacy of one God, was first conceived by the author of Zoroastrism. Its especial glory is to have established as the principle of its theology a monotheism as pure as ever the followers of the Jehovahistic faith enjoined. The supposed Zoroaster first taught the existence of but one deity, the Ahura, who is called Mazda [see Ormuzd], the Creator of all things, to whom all good things, spiritual and worldly, belong; Zoroaster's conception of the Supreme Deity is sublime. All the highest attributes, except that of Fatherhood, are assigned to him. He is the Creator of all earthly and spiritual life. He is the Holy God, the Father of all truth, the "Best Being of all," the Master of purity. He is supremely happy, possessing every beauty, and every virtue, immortality and immutability, and abundance of every earthly good. All these he bestows on the good man who is pure in thought, word, and deed, while he punishes the wicked. All that is created, good or evil, fortunate or misfortune, is his work. He is to be served by purity, truth, and goodness in thought, word, and deed, by prayers and offerings. The works of agriculture are especially pleasing to him. No images of him were allowed. In spite of some mixtures of physical ideas, such as the ascription to him of health, and the conception of him as in some sense light, the main body of the Zoroastrian theology is essentially that of the Supreme Being are the genius, who stand between God and man; Sassaba, the instructor of the prophet, the friend of God, and the protector of the faith; and Aramait, the genius of the earth and the guardian of piety, and perhaps some others. The existence of evil was accounted for by the supposition of two primal causes, which, though opposed to each other, were united in every existing being, even in Ahura-Mazda himself, and by their union was produced the world of material things and of spiritual existence. The cause of good is Vohu-Mano, the good mind, from which springs Gaya, or reality and existence, in the physical world. The evil cause is Anau-Mano, "naughty mind," from which springs non-reality (Ajsyati); to it all evil and disvaluable things belong. But, as united in Ahura-Mazda, the two principles are called Spento-Manys, the dark spirit. No personal existence is ascribed to these; they both exist in Ahura-Mazda, but they are opposed to one another as creators of light and darkness, of life and death, of sleep and waking. In the course of time, through the operation of the principle whereby attributes become personified, this primal cause became correlated into a systematic dualism. Thus the two causes appear as distinct and opposed personal beings, Ahura-Mazda or Ormuzd, of whom Spento-Manys is a title, and Angro-Manys or Ahriman. These two existed separately and independently from all eternity, each ruling over a realm of his own, and constantly at war with and striving to overthrow the other. All the good and pure creations of Ormuzd are directed and spoiled by those of Ahriman, who cannot create independently, but only brings evil into being to counterwork, ruin, and destroy the good works of Ormuzd. Under each principle is a hierarchy of ministers, of personal beings created by these respective lords, whom they serve and obey in every way. The first created and chief of these to Ormuzd are his six councillors, in later times made seven by including Sassaba or Ormuzd himself. They are all called "immortal saints," and each rules over a special province of creation. These are in their origin personifications of abstractions, representing the gifts of Ormuzd to his worshippers. Ahriman has also a council of six (later seven) evil beings, the counterparts of Ormuzd's councillors, who work evil in the spheres over which the latter preside. Under these, on each side, are hosts of other spirits. Those of Ormuzd are the "good spirits," headed by Sassaba and the Fervers, invisible protectors of all creation. Ahriman's hosts are the "evil spirits," the exact counterparts to these. The two principles are considered as co-equal and co-eternal in the past; neither is absolutely victorious as yet. Their strife extends throughout all creations; every existing thing is ranged on one side or the other; nothing can be neutral. But at the last three principal beings from Zoroaster will appear, who will convert all mankind to Zoroastrism; evil will be conquered and annihilated; Ahriman will vanish forever, and creation will be restored to its primitive purity.—A later development still as made to the unity of the Supreme. It was therefore held that the two principles emanated from a being called Zarvan-Akaraana, time without bounds, into whom they will again be in the end absorbed. This doctrine rests on a misinterpretation of texts in the Avesta (see Haug, Zoroastrism, p. 30 sq., 264). It is held by the Parsees as a belief, as it is in Persia. Man is represented as created by Ormuzd in purity and holiness; but through the temptation of the Devil he fell, and became exposed to sin and evil. Every man is bound to choose whether he will serve Ormuzd by good deeds, industry, and piety, or Ahriman by the contrary vices. According as he chooses, so is he rewarded or punished in another world. For Zoroaster had taught the hope of a future life. According to him, there are two intellects, as there are two lives—one mental and the other bodily: and, again, there are two kinds of man, earthly and a future life. There are two kinds of the departed—Heaven (Garo-Demana, the House of the Angels, Yazna, xxviii, 10; xxxiv, 2; comp. Isa. vi, Revelat., etc.) and Hell (Drajo-Demana, the residence of devils and the priests of the Deva religion). Between the two there is the gathering of those who have not been able to gather in the land of judgment, which the souls of the pious alone can pass. There will be a general resurrection, which is to precede that judgment, to which the souls of the righteous will be sent by Ahura-Mazda. The place of the dead will be a wretched place, which they will enter. The souls of the just, in the wretchedness, darkness, and sin, will then be renewed; death, the archfiend of creation, will be slain, and life will be everlasting and holy.

The Zoroastrian creed gradually became corrupted, until, in the time of Alexander Severus, Ardashir "Ariazos" (comp. Mirkhond, ap. de Sacy, Memoires sur l'Ant. de la Perse, etc., p. 59), the son of Babegan, called by the Greeks and Romans Araxaxares or Artaxares, who founded the Sassanide dynasty, gave the restoration of the partly lost and partly forgotten books of Zoroaster, who in effect became the inspiration of a Magian sage, chosen out of 40,000 Magians. The sacred volumes were then translated out of the original Zend into the vernacular, and disseminated among the people at large, and fire temples were reared throughout the length and breadth of the land. The Magi or priests were all-powerful, and of the land, and they were have dedicated principally against the Greeks. "Far too long," wrote Ardashir, the king, to all the provinces of the Persian empire, "for more than five hundred years, has the poison of Aristolos spread." The fanaticism of the priests often led to open persecution against Christians and Jews. The latter have left us some account of the tyranny and oppression to which they as unbelievers were exposed—such as the prohibition of fire and light in their houses on Persian.
fast-days, of the slaughter of animals, the baths of puri-
ification, and the burial of the dead according to the
Jewish rites—prohibitions only to be bought off by
heavy bribes. In return, the Magi were cordially
hated by the Jews, and remain branded in their writ-
ings with the name of dupes of heathenism (Shahb, 72 a).
To accept the instruction of a Magian is pronounced to
be a Jewish sage to be an offence worthy of death (Shahb,
75 a, 156 b). This mutual animosity does not, how-
ever, appear to have long continued, since in subse-
quent times we frequently find Jewish sages (Samuel
the Tanna) in terms of friendship and confidence,
with the later Sassanide kings (comp. Moed Katon,
26 a, etc.).
From the period of its re-establishment, the Zoroas-
trian religion flourished uninterrupted for about four
hundred years, till, in A.D. 651, at the great battle of
Nahavand (near Ecbatana), the Persian army, under
Yezdegerd, was routed by the caliph Omar. Under
Mohammedan rule, the great mass of the inhabitants
were converted to the religion of Islam. A very small
number, still clinging to the ancient religion, were for
many years at least considered as heretics by the
Mohammedan Church, Mahommed the Ghiznevideh, Shah Abbas, and others, were
conspicuous by their uttering persecution of them; and the
manner in which they were held up to general detesta-
tion is best shown by the position assigned them in most
popular Mohammedan tales as sorcerers and criminals.
There were, however, some notable exceptions; and that
the Zoroastrians became nearly exterminated, and after untold suffering
for two hundred years a colony found its way to India.
Those that remained in Persia, being permitted to reside
only in one district and under the most mortifying re-
strictions, gradually sank into ignorance and degrada-
tion, and procured a precarious living by performing
menial labor; but, notwithstanding all this oppression, they
have always maintained the character of honest,
chaste, and industrious citizens. At present there are,
according to the very latest information, about eight
thousand Guereves (as they are now called) scattered
over the vast dominions of their ancestors, chiefly in
Yezd and twenty-four surrounding villages. There are
a few at Teheran, a few at Ispahan, at Shiraz, and some
at Baku, near the great naphtha mountain.

During those fierce persecutions of the 7th century
many of those who still adhered to the religion of their
forefathers found a refuge in the mountainous districts
of Khorassan, where, for about a hundred years, they
lived in the free and undisturbed exercise of their re-
ligion. At length, however, when the sword of the persecutors had been lowered in</gallery>
The traditions of the Parsees teach that the sacred fire which Zoroaster brought from heaven has been kept continually burning in the consecrated temples, and is fed with choice wood and spices. The Parsees claim to have brought that fire from the temple in Persia, and for ages they have kept it alive throughout the land. They are called Fire-worshippers, but they call themselves "those of excellent belief." Their temples contain no idols, but are entirely plain, and contain nothing that they regard as sacred but the fire which is burning on the altar, and which they assert has not only been kept burning through all the ages, but will be kept burning to the end of the world. All intelligent Parsees, however, spurn the imputation that they worship the sun or fire. Ahura-Mazda being the origin of light, his symbol is the sun, with the moon and the planets, and in default of them the fire, and the believer is enjoined to face a luminous object during his prayers. Hence also the temples and altars must forever be fed with the holy fire brought down, according to tradition, from heaven, the nullying of whose flame is punishable with death. The priests themselves approach it only with a half-mask (Penum) over the face, lest their breath should defile it, and never touch it with their hands, but with holy instruments. The fires are of five kinds; but however great the awe felt by Parsees with respect to fire and light (they are the only Eastern nation who abstain from lightning), yet they never consider these, as we said before, as anything but emblems of Divinity. They assert that they worship the one true spiritual God alone, but reverence the sun and fire as the highest manifestation of God. The ignorant Parsees, however, do not so discern in their worship, and pay adoration to the sun and fire as divinities; and the intelligent excuse them because, say they, if so ignorant as to be unable to comprehend the true God, they may as well be suffered to adore His brightest manifestations. The intelligent ones claim that when they look up to the sun, they look up to the greatest manifestation of the worship only Him. "We see them," says Graves (in a letter from India to the Northern Christian Advocate, 1875), "in the street, on the docks, or anywhere that they may happen to be at the time of the going down of the sun, apparently in adoration. We have seen them in their carriages stop on the terrace and put themselves in a position of worship. They gather on the shores of the sea as the sun goes down, and raise their hands and bow with the most profound reverence. From their beautiful homes on Malabar Hill they look up in worship and adore the setting sun as it sinks into the sparkling sea."

The Parsees practice also five kinds of "sacrifice," which term, however, is rather to be understood in the sense of "service." They offer the bloodless eating of animals for public or private solemnities; prayer; the Darus sacrarium, which, with its consecrated bread and wine in honor of the primeval founder of the law, Hom or Heemoh (the Sainars, Somal), and Dahnam, the personified blessing, bears a striking outward resemblance to the sacrarium of the Lord's Supper; the sacrifice of Akipsh, consisting either in flagellation or in gifts to the priest; and, lastly, the sacrifice for the souls of the dead. The purification of physical and moral impurities is effected, in the first place, by cleansing with holy water (Nirang), earth, etc.; next, by prayers (of which sixteen, at least, are to be recited every day) and the recitation of the divine word; but other self-castigations, fasting, celibacy, etc., are considered hateful to the Divinity. The ethical code may be summed up in the three words—purity of thought, of word, and of deed; a religion "that is for all time and not for any particular nation," as the Zoroastrians say. It need hardly be added that superstitions of all kinds have, in the course of the tribulations of ages, and the intimacy with neighboring countries, greatly defaced the original purity of this creed, and that its forms new
very much among the different communities of the present time.

There are two sects of Parsees in India, the Šāṁsky and the Kudmīn, both of whom follow in all points the religion of Zoroaster, and differ merely as to the precise institution of the religion of the last king of the ancient Persian monarchy. The only practical disadvantage which arises from this chronological dispute is that there is a month's difference between them in the time at which they observe their festivals. The Kudmīns are few in number, but several of the most wealthy and influential of the Parsees belong to this sect. About thirty years ago a keen discussion, known among the Parsees by the name of the Kudmīn controversy, was carried on in Bombay, and though argued with the greatest earnestness and animation on both sides, the contested point in regard to the era of Yazdegird has not yet been satisfactorily settled. The difference was first observed about two hundred years ago, when a learned Zoroastrian, named Jamasp, came from Persia to Surat, and while engaged in instructing the Mobeds, or Parsee priests, discovered that there was a difference of one full month in the calculation of time between the Zoroastrians of India and those of Persia. It was not, however, till 1746 that any great importance was attached to this chronological difference. In that year the Kudmīn sect was formed, its distinguishing tenet being an adherence to the chronological view imported by Jamasp from Persia, while the great mass of the Parsees in India still retained their former mode of calculation. At first sight this might appear a matter of too small importance to give rise to a theological dispute, but it must be borne in mind that when a Parsee prays, he must repeat the year, month, and day on which he offers his petition, and this circumstance leads to an observable difference between the prayer of a Kudmīn and that of a Shensky, and the same difference of course exists in the celebration of the festivals which are common to both sects.

Something like a very serious schism has lately broken out in the Parsee communities, and the modern terms of Conservative and Liberal, or, rather, bigot and infidel, are almost as freely used with them as in Europe. The sum and substance of these innovations, stoutly advocated by one side and stoutly resisted by the other, is the desire to stop early betrothal and marriage, to suppress the extravagance in funerals and wedding, to educate women, and to admit them into society. They wish to abolish the worship of the Nirang—a filthy substance in itself—as well as to reduce the large number of obligatory prayers. The task of the pious Parsee in prayer is certainly no small one. He has to repeat his devotions sixteen times at least every day. First on getting out of bed, then during the morning prayer, again when he takes his bath, again when he cleanses his teeth, and when he has finished his morning ablutions. The same prayers are repeated whenever, during the day, a Parsee has to wash his hands. Every meal—and there are three—begins and ends with prayer; before going to bed the work of the day is closed by prayer. Two counter alliances or societies—the "Guides of the Worshippers of God" and the "True Guides"—respectively—are contending for the objects of their different parties.

The literature of the Parsees will be found noted under PERSE and ZEND-AVESTA. Besides the latter, which is written in ancient Zend, and its Gujarati translation and commentaries, there are to be mentioned, as works essentially treating of religious matters, the History of Zoroaster, by Mr. Meineck, or Lampiran-ravang of the Parsees; the Saddar, or Summary of Parsee Doctrines; the Shabdistan, or School of Manners; the Desatur, Sacred Writings, etc. All these have been translated into English and other European languages. The Gujarati knowledge of the Parsees is not connected with their religion, and were altogether steeped in the grossest ignorance, until the recent efforts for their elevation. As we have said above, the Parsee merchants of India sent a member of their denomination to Persia, with the view of ameliorating the condition of their poor brethren residing in that kingdom. The curiosity of the Persian king stood in need of an oxidation, and the friendly mission of Lijind Lushak. This worthy man, being a British subject, enjoyed in his mission all the privileges which that mother-country of liberty so bountifully confers. Mahana visited the several settlements of the poor Guebre, and acquainted himself with their wants and burdens. Backed by his constituents in India, he made himself responsible to the Persian government for the punctual discharge of the annual poll-tax that was to be levied on the Guebre subjects of the realm. By this measure he put himself in direct connection with all the communities of Persian Guebre, and, moreover, became the medium of their political complaints to government. He thus liberalized them at once from those endless troubles to which they had hitherto been subjected. He at the same time took care to establish schools and complete possession of the incumbrance, and to inform that his success has been so complete in this undertaking as to induce Mohammedan fathers to send their children to the excellent Guebre school at Teheran.

Of works treating on the subject of this article, we mention principally, Hyde, Veterum Ex, Pers, Historia (Oxon. 1760, 4to); Ouseley, Travels in the East (Lond. 1819); Anquetil du Perron, Exposition des Usages des Parsees; Naggi, Essays on the Sacred Language, Writings, and Religion of the Parsees (Bombay, 1802; 8vo), especially essay iv; Rawlinson, Four Great Monarchies, iii, 93-196; iv, 329-347; Bunnen, God in History, bk. iii, ch. vi, and Appendix, notes D, E, Egypt, iii, 474 sq.; Müller, Chips from a German Workshop, i, 158 sq.; also 79 sq., 116 sq., 146 sq.; Narro, Manners and Customs of the Parsees (Liverpool, 1861); id., The Parsee Religion (ibid. 1861); Franjaz, The Parsees (Lond. 1858); Hardwick, Christ and other Masters, ii, 861 sq.; Clarke, Ten Great Covenants, ch. v, Theol. Rev. Jan. 1871, p. 96-110; Spiegel's art. "Parasismus", in Herzog's Real-Enzyklopädie, xi, 115 sq.

Parasimony. See Covetousness.

Parson in English ecclesiastical law means the incumbent of a benefice in a parish. He is called parson because he represents the Church for several purposes. He must be a layman, of the Established Church of England, and duly admitted to holy orders, presented, instituted, and inducted; and at least twenty-three years of age. When he is inducted, and not before, he is said to be in full and complete possession of the patronage, and is called in law persona impersonata, or "parson impersonate." The theory is that the freehold of the parish church is vested in him, i.e. he represents the church, and in the eye of the law sustains the person thereof, as well in suing as in being sued in any action touching the same. As the legal owner, the parson has various rights of control over the chancel. He is also the owner of the churchyard, and as such is entitled to the grass. As owner of the body of the church, he has a right to the control of the church bells, and is entitled to prevent their being removed. He has a right to notice of the marriage of all persons in the parish. The distinction between a parson and a vicar is, that the parson has generally the whole right to the ecclesiastical dues in the parish, whereas the vicar has an appropriator over him, who is the real owner of the dues and tithes and the vicar has only an inferior portion. The duty of the parson is to perform divine ser-
vice in the parish church under the control of the bishop, to administer the sacraments to parishioners, to read the burial-service on request of the parishioners, and to mar- ry them in the parish church when they tender them- selves. He is bound to reside in the parish, and is sub- ject to penalties and forfeitures if he without cause abs- ent himself from the parish. He is subject to the Clergy Discipline Act, in case of misconduct. One may cease to be a parson, by death, cession in taking another benefice, consecration, promotion to a bisho- ricia, resignation, or, lastly, deprivation, either by sen- tence of the ecclesiastical court, or, in pursuance of divers penal statutes, which declare the benefice void for some neglect or crime. See Walcott, "Oec. Archael. a. v.; //Church Dict. a. v.; Chambers, Cyclop. a. v.// See Parish.

Parsonage, a common term for the residence of a parson or minister in many churches.

Parsons, Charles Booth, D.D., a minister of the Methodist Episcopal Church, was born in Enfield, Conn., July 23, 1836. In early life he was an actor, but hav- ing become convinced finally that he could not serve God as he should in that employment, he took up the stage and all its associations in 1837, and joined the Church, to become a preacher of the good tidings, in 1840, as a member of the Kentucky Conference. At the time of the separation of the Southern branch of Methodism, Parsons joined the Methodist Episcopal Church, South; but at the close of the civil war he went back to the mother Church, and gave his influence to the support of the Northern, or, rather, Union cause, and became also a most devoted friend of the freedmen, especially in the state of Kentucky, where he was then residing. Parsons's early training for the ministry al- ways attracted to him large audiences, and somewhat stunted his style as a preacher. Those who had the pleasure of hearing him in his best days bear testimony to his ability, and the scores who have been converted under his ministry are the living witnesses of his suc- cess. His favorite pulpit themes were the cardinal doc- trines of the New Testament, as taught by his Church. He seemed to have a clear conception of these truths, and before large congregations he defended them with ability, and urged them with singular pathos and pow- er. He happily united the qualities of the able de- bater and the attractive orator. His pronunciations were clearly stated, and sustained by the conclusive reason- ing of the one, and sufficiently adorned by the embellish- ments of the other. His sermons were remarkable for the uniformity of their excellence. Nearly every effort was a success, and a small number of sermons were written on each of the cardinal points. He wrote one whom it is competent to criticise pulpit oratory, "his grim picture of that hardened wretch who stood at Calvary, clanking the spikes that were so soon to be driven through the hands and feet of the blessed Re- deemer." This is a good sample of the dramatic per- vading his discourses. Nor was he distinguished alone for the ability and success of his pulpit ministrations, but also for his wisdom in council and his administra- tive capacity. In the meridian of his life he was removed from the itinerant's extensive field to the invalid's lim- ited one, coming from the pulpit to the sick-room. In af- fliction and death, which occurred in Louisville, Ky., Dec. 8, 1871, he exemplified the truth of what he had preach- ed in life. He was a good man, a kind friend, a popu- lar minister, and his name will long survive. He was the author of quite an interesting volume, entitled The Stage and the Pulpit, now out of print, and he was one of the commissioners of the Church South to settle the claims of that Church with the Methodist Episco- pal Church; but, as is well known, that settlement failed to give satisfaction, and a final arrangement was not made until 1874.

Parsons, David, D.D., a Congregational minister, was born Jan. 28, 1748, at Amherst, Mass. He gradu- ated at Harvard College in 1774, entered the ministry in 1776, and was ordained pastor in Amherst, Oct. 2, 1782, and resigned Sept. 1, 1819. He felt much interest in the cause of education, and gave land for the site of an academy which has been established. Ambrose Col- lege. Parsons died May 18, 1828. He published several of his Sermons (1788, 1795, et al.). See Sprague, Annals of the Amer. Pulpit, ii, 120.

Parsons, Henry M., an American Presbyterian minister, was born at Glen's Falls, N.Y., July 27, 1813. He received a careful training from his parents; gradu- ated at Union College, Schenectady, in 1835. He studied theology under Hugh N. Wilson, D.D., at Southampton, N. Y.; was licensed and ordained Oct. 8, 1847, pastor over the Moriches Church, Long Island. Soon his health began to fail him, and at the earnest solicitation of his people he tried a southern climate; he spent a winter in Cuba, where he served as a chaplain for the season at Havana; but after two years' absence he returned and labored another year with his people on Long Island. His health was still poor, and thinking that an inland climate would help him, in 1852 he accepted a call from Warrior Run Church, Pa., where he continued to labor for two years. At length he gave up preaching and travelled for his health, but died Aug. 10, 1859. Mr. Parsons was the author of Christ in the Desert. His mind was well-balanced, his descriptive powers ex- cellent; and his letters from abroad bear evidence of nice discrimination and clear perception. See Wilson, Prob. Hist. Almanac, 1861, p. 104. (J. L. S.)

Parsons, Jonathan, an American Presbyterian minister, was born at West Springfield, Mass., Nov. 30, 1705. He was educated at Yale College, class of 1729. As a student at New Haven he gave many indications of uncommon genius. Soon after graduation Parsons began to preach. He was ordained minister in 1731 of Lyme, Conn., where he continued until 1748. The last thirty years of his life were spent at Newburyport, in one of the largest congregations in America. His labors were incessant, and he sometimes sank under his exertions. During his last sickness he enjoyed the peace of a Christian. He expressed his unwavering assurance of an interest in the favor of God through the Redeemer. He died July 19, 1776, at Newburyport. As a preacher he was eminently useful. During some of the first years of his ministry his style was remark- ably exact, but a little later he began to be attracted when his attention was occupied by things of greater importance, his manner of writing was less polished, though perhaps it lost nothing of its pathos and energy. In his preaching he dwelt much and with earnestness upon the doctrines of grace, knowing it to be the design of God to have his religion to humble the pride of man and to exalt the grace of God. His invention was fruitful, his imagination rich, his voice clear and com- manding, varying with every varying passion, now forc- eful, majestic, terrifying, and now soft and persuasive and melting. He was eminent as a scholar, for he was familiar with the classics, and he was skilled in the Latin, Greek, and Hebrew languages. He was ac- counted a dexterous and masterly reasoner. He pub- lished at Boston, Letters in the Christian History (1741): —a Lecture (1742); —Lectures on Justification (1746); —Good News from a Far Country, in seven Discourses (1756); —Observations, etc. (1757); —Manna Gathered in the Morning (1761); —Infant Baptism from Heaven, in two Discourses (1765); —A Sermon on the Death of G. Whifield (1770); —Letters on Baptism (1770); —Free- dom from Tyranny, A Sermon on the Day of Christ (1774); —Sixty Sermons on various Subjects (1780, 2 vols. 8vo). See Searl's Sermon preached at the funeral obsequies; Allen, Amer. Biog. Dictionary, a. v.; Sprague, Annals of the Amer. Pulpit, iii, 47-52; Amer. Qu. Rep. xiv, 109.

Parsons, Joseph (1), a Congregational minister, flourished in the early part of last century. He was born about 1671, and was educated at Harvard College,
PARSONS, Joseph (2), also a Congregational minister, was born about 1708, and was educated at Harvard College, where he graduated in 1720. He studied theology, and became pastor at Bradford, Mass., where he died in 1765, in the thirty-fifth year of his ministry. He published three occasional Sermons (1741, 1744, and 1759).

PARSONS, Levi, a Congregational minister, who was employed also in missionary labors, was born July 18, 1792, in Goshen, Mass. He graduated at Middlebury College in 1814; was ordained Sept. 8, 1817, and labored under the Vermont Missionary Society a year, when he was sent on an agency into Palestine by the American Board. He sailed with Rev. P. Fisk for Smyrna Nov. 8, 1819, and arrived Jan. 15, 1820, whence they went to the island of Scio, and in November Mr. Parsons started for Palestine, reaching Jerusalem Feb. 12, 1821, where he remained. For seven years he labored among the Jews on the island of Syra, he reached Smyrna Dec. 3, and sailed to Alexandria, where he died, Feb. 11, 1822. Mr. Parsons was a good scholar, and very amiable and interesting in his manners. His life was thoroughly devoted to benevolent work. His biography was written by his brother-in-law, D. V. Morton (1824). See also Amer. Miss. Mem., p. 583; Sprague, Annals of the Amer. Pulpit, ii, 644; Wilson, Presb. Hist. Almanac, 1866, p. 221; Christian Monthly Spectator, vii, 316.

PARSONS, Moses, a Congregational minister, was born at Gloucester, Mass., in 1716. He graduated at Harvard College in 1736; taught school at Manchester, and subsequently at Gloucester; was ordained at Byfield, Mass., in 1744, and continued pastor of that Church until his death in 1783. He published several Sermons (1765, 1772, 1775). See Sprague, Annals of the Amer. Pulpit, i, 448 sq.; Memoirs of Chief Justice Parsons (his son), ch. ii, viii.

PARSONS, Philip, a noted English divine, was born at Gloucester, Eng.; in 1729. He was educated at Sidney Sussex College, Cambridge. Having taken orders, he was appointed to the Free School of Oakham, Rutlandshire. In 1761 he was presented to the school and curacy of Wye, became rector of Eastwell in 1767, and of Soham in 1788. He died in 1812. He published Dialogues of the Dead with the Living (Anon. (Loud, 1779, 8vo):—Six Letters to a Friend on the Establishment of Sunday-schools (ibid. 1786, 12mo). See Darling, Cyclop. Bibliog. ii, 41; Allibone, Dict. of Br. and Amer. Authors, ii, 41; (Loud) Gentleman's Magazine, vol. lxxxi.

PARSONS, Robert, better known as Father Parsons, a noted English divine, originally a Protestant, but finally an ardent adherent of the Roman faith, and a most influential member of the Society of Jesus, was born of very humble parentage at Netherstowey, near Bridgewater, in Somersetshire, in 1546. He was as a boy remarkable for his native endowments and his devotion to study. The vicar of the town, interested in the promising youth, gave him instruction in Latin and Greek, and when he had been properly prepared for college contributed liberally towards Robert's support at Oxford. He graduated at a very early age in 1563. In the university Parsons was remarkable as a clever disputant in scholastic exercise, then much in vogue; so that, having taken his first degree in arts in 1568, he was the same year made probationer-fellow of his college; and, taking pupilla, was presently the most noted tutor in it. He entered into orders soon after, and was made socius sacerdos, or chaplain-fellow. In 1572 he proceeded M.A., was bursar that year, and the next dean of the college; but being charged by the society with incontinency and embezzeing the college-money, he was dismissed from a formal and public accusation allowed him, out of respect for his learning, to send in his resignation, Feb. 1573-4. After quitting Oxford he went first to London, and thence, June, 1574, through Antwerp to Louvain, where, meeting with the Jesuit father, William Good, his countryman, he spent a week in the spiritual exercises at the college of the Jesuits. He next proceeded to Padua, there to study medicine, in order to practice it for a support; but he had not been long at Padua before the unsettled state of his mind and of his affairs excited in him a curiosity to visit Rome. This visit fixed him heartily as a Jesuit; for here meeting with some Englishmen of the order, he became so impatient to be among them that he went back to Padua, settled his affairs there, and, returning to Rome, May, 1575, was chosen a member of the Society of Jesus, and admitted into the English college. He was indeed framed by nature, as a Jesuit, to be a very brilliant and zealous soldier of the faith; being fierce, turbulent, and bold, and he soon made a distinguished figure in it. Having completed the course of his studies, he became one of the principal penitentiaries, and was in such credit with the pope in 1579 that he received the commission to perform the pontifical function at the papal conclave at Rome, founded in queen Mary's time, and to establish it as a college or seminary for the English. Later he was sent, together with Campian, to England to influence the Anglican clergy towards a return to the Roman Church, and in this mission proved himself a most dexterous and wily messenger. As the law at the time forbade the admission of papal emissaries, Parsons carefully concealed his purpose, and made himself known only to those he knew he could safely trust. He at one time prided himself in having so far succeeded in his purpose, that the covering of the Anglican Church to the Romish fold was very imminent. But at this very time, so suspicious to him as he believed, his co-laborer was discovered by the watchful agents of lord Burleigh and imprisoned. Parsons thereupon hastily passed over into France, and stopped at Rouen. While in England he had found means to privately print and put in circulation books advocating the re-establishment of the papal Church in England, and on kindred subjects; and now, not being otherwise employed, he printed others, which he likewise caused to be dispersed there. In 1583 he was so successful in carrying on this plan, that he was made superior or prior to the English mission by one Heyward. However, the management of that mission was left to him by Aquaviva, the general of the order, and he was appointed prefect of it in 1592. In the interim, having procured for the English seminary before mentioned at Rome a power of choosing an English rector in 1586, he was himself elected into that office the following year. Upon the profligie preparations in Spain to invade England, father Parsons was despatched to Madrid, to turn the opportunity of the present temper of its monarch, the son of the Jesuit, to induce the king to abandon the intrigues that nearly brought them into the Inquisition. Parsons found means to elude the severity of that tribunal; obtained of the king that his majesty should appoint one of the judges, and himself another, for this Inquisition, and then set about the main business of the voyage. He caused seminaries to be erected for the purpose of supplying England from time to time with priests, who should keep alive the spirit of Romanism that he had kindled, as well as opposition to the Protestant crown, and to prepare the papists there to join with any invasion which those abroad might propose. Thus, for instance, he dealt with the duke of Guise to erect a seminary for such a purpose in Normandy; and now he prevailed with Philip II to erect such in Spain; so that in a short time they could not only boast of their

PARSONS

seminaries at Rome and Rheims, but of those at Velle-duche, Sciville, and St. Lucar in Spain, at Lisbon in Portugal, and at Douai and St. Omer in Flanders. In these the English Roman Catholic youth who were sent to them were educated in violent prejudices against their native country, and their minds formed to all the purposes that father Parsons had in his head; one of these was to persuade them to abandon the church and the infants of Spain to the crown of England. In support of this scheme he published his *Conference about the next Succession to that Crown*, advocating as lawful the intended deposition of queen Elizabeth. After the defeat of the Spanish Armada, father Parsons left no means in his power untired to invite the duke of Guise, at that time all-powerful in France, to a second invasion; and when nothing effectual could be obtained that way, he endeavored to raise a rebellion in England. He tampered with the earl of Derby to appear at the head of it, and when that nobleman refused to be led into dialogical schemes he was poisoned, it is charged, by Parsons’s procurement. Nor is this the only charge brought against Parsons. We find Sir Ralph Winwood informing secret agents Cecil from Paris, in 1602, of an attempt to assassinate the king. He also, in a letter to his correspondent, the archbishop, at the instigation of father Parsons (Winwood, *Memorials*, vol. i). Finding all his projects against queen Elizabeth blasted, he plotted the exclusion of king James by several means; one of which was exciting the people to set up a popular form of government, for which purpose he translated one of his pamphlets in the French language, and published another in his own. Another was to engage the pope in a design of making his kinsman the duke of Parma king of England, and securing the assistance of lady Arabella by marrying her to the duke’s brother, cardinal Farnese. Cardinal Farnese was at that time king of France in a long account of both these projects in one of his letters, and in another mentions a third, wherein himself he had been dealt with by Parsons, which was that the pope, the king of France, and the king of Spain should agree among themselves for a successor for England who should be a Catholic, and that they should join their forces to establish him on the throne (Osmant, *Letters*, pt. ii, lib. iii). However, even the death of his friend, cardinal Allen, in 1594, drew Parsons’s attention for a while off these weighty public affairs upon his own private concerns. It was chiefly by his interest that the cardinal had obtained the purpose which had been the subject of his attack upon the court, and the dignity was worth his utmost endeavors, and he turned every stone to compass it. For that purpose he employed some Jesuits to set about in Flanders a petition to the king of Spain, subscribed by great numbers of people, in which they used words with much art, rank, and quality. He applied also to that monarch by John Piraques, one of his prime confidants, but received no answer; and then repaired himself to Rome in 1596, under pretense of settling some quarrels that had arisen in the English college there during his absence. He had the year before been complimented, in a letter from some of the principal persons of his order there, on the assured prospect he had of succeeding; and upon his arrival was visited, among others of the highest rank, particularly by cardinal Bellarmine, who encouraged him to wait upon the pope, as he did, with an account of the reports that were spread all over Flanders, and even at Rome, of his holiness’s design to confer the purple upon him, and that the king of Spain had written to his holiness regarding this promotion. But in a personal interview with the pontiff, Parsons learned that there had been sent to him many complaints of him from the secular clergy, that, instead of bringing him into the sacred college, he had some thoughts of stripping him of the posta he was already possessed of. To avert this disgrace, Parsons withdrew on pretense of health to Naples, and he formed and disseminated many complaints of him from the secular clergy; the pope (Clement VIII) in 1606, Parsons now continued to devote his attention mainly to the successful termination of the English work, and under the next pontiff, Paul IV, enjoyed greater favor at Rome. When suddenly brought to a sick-bed, and his recovery was regarded as extremely doubtful, the pope indulged Parsons in all the ceremonies usually granted to cardinals at the point of death. Upon his decease at Rome in 1610 his body was embalmed, and interred, pursuant to his own request, in the chapel of his college, close to that of cardinal Allen.

The Jesuits all abound in praise of father Parsons, but there are many Romanists who impeach the integrity of his character. Thus cardinal D’Ossea, in a letter to the king of France, giving an account of father Parsons’s *Conference about the next Succession to the Crown*, declares that he was a man who regarded neither truth nor reason. Pasquin also at Rome thus exposed Parsons’s factious and plotting humor: "If there be any man that will buy the kingdom of England, let him repair to a merchant in a black square cap in the city, and he shall have a very good pennyworth thereof." To conclude, the imputation laid upon him by the English secular Romish priests, as well as the Protestants, that Parsons was a person of a turbulent and seditionous nature, is sufficiently supported by his numerous writings, the titles of which are as follows:

*A brief Essay for Jesus’s Refusal to go to Church, with a Dedication to Queen Elizabeth*, under the fictitious name of John Howlet, Dec. 15, 1580: *Reasons for his coming into the Mission of England*, etc.; by some ascribed to Campian: *A brief Censure upon two Books written against the Reasons and Proofs of the Author of a Practical Treatise of Jesus’s Fidelity*, all written and printed while our author was in England: *A Defence of the Censure given upon his two Books*, etc. (1688): *De persequutione Anglicana epistolae* (Rome and Ingolstadt, 1682): *A Christian Directory* (Rome, 1683): *A New and Universal Board of Particulars for the Year 1691*; these two parts being printed erroneously at London, our author published an edition of them under this title, *A Christian Directory, guiding Men to their Salvation, etc., with many Corrections and Additions by the Author himself*; this book is really an excellent one, and was afterwards put into modern English by Dr. Stanhope, dean of Canterbury, and has gone through eight editions, the last in 1782: *Responsio ad Eliz. Regiam editicum contra Catholicos* (Rome, 1598), under the name of Andr. Philosopher: *A Conference about the next Succession to the Crown of England, etc.* (1694), under the name of D. Philip; *A Summary of the Proofs on both Sides of the Wordsward of the turbulent and seditionous Watchword of Sir F. Hastings, Knight, etc.* (1599), under the same name: *A Copy of a Letter written by a Master of Arts at Cambridge, etc.* (written in 1584, and printed about 1608): *theatrum sive comedia de Anarchia* or *sona’s Green Coat*, being sent from abroad with the binding and leaves in that livery: *Apologeticall Epistle to the Lords of her Majesty’s Privy Council, etc.* (1601): *Brief Apology, or Defence of the Catholic Ecclesiastical Hierarchy erected by Pope Clem. VII*, etc. (St. Omer, 1601): *A Manifestation of the Folly and bad Spirit of secular Priests* (1692): *A Deacondrom of ten quid Esthological Questions* (1602): *De Peregrinationes*: *An Answer to O. PARSWANATHA 710 PARTHENON

— The Judgment of a Catholic Gentleman concerning King James's Apology, etc. (1698) — Soler Reckoning with Thomas Morton (1609) — A Discussion of Mr. Hartley's Answer to the Judgment of a Catholic Englishman concerning the Oath of Allegiance (1612) — this book, being left not quite finished at our author's death, was altered and completed afterwards by two others, edited by a heretic. The following are also posthumous pieces: The Liturgy of the Sacrament of the Mass (1620) — A Memorial for the Reformation, etc.; thought to be the same with The High Court and Council of the Reformation, finished, after twenty years' labor, in 1566, but not published till after our author's death, and republished from a copy presented to James II, with an introduction and some animadversions by Edward Gee, under the title of The Jesus's Memorial for the intended Reformation of the Church of England under their first Popish Prince (1686, 8vo). There is also ascribed to him A Declaration of the true Causes of the Great Troubles presupposed to be intended against the Realm of England, etc.; seen and allowed, anno 1581. Parsons, besides, translated from the English into Spanish, A Relation of certain Martyrs in England, printed at Madrid, 1590, 8vo. See Dr. James Aitcheson: Daniel Defoe, Memoirs of Gregor Pannartz (papal legate in England under Charles I); Henke, Kirchenreform; vol. ii.; Dodd, Ch. Hiat., sees Index); Lingard (Rom. Cath.), Hist. of England; Hallam, Literary Hist. of Europe; id., Comit., Hist. of England; Green, Hist. of the English People; E. Loefnitz, Great Britain: The Life of, vol. ii, 1823, 544: Nutt, Ch. Hist. of England; (Lond.) Gentleman's Magazine, 1823, p. 412 sqq.; Allibone, Dict. of Brit. and Amer. Authors, ii, 1517, 1518.

Parwanatha is the name of the twenty-third of the deified saints of the Jainas in the present era. Parwanatha and Mahavira, the twenty-fourth, are greatly revered amongst the Jains by a name of soluill of Benares, called Belupara, there is a temple dedicated to the birthplace of Parwanatha. See JAINAS.

Parthake, to receive a share. The saints are partakers of Christ, or of the heavenly calling. By receiving Jesus Christ and his Spirit into their hearts, they possess them and their blessings and influences as their own, and are effectually called to the heavenly glory (Heb. iii. 1-4; vi. 4). They are partakers of God's promises and benefits; they have an interest in all the promises, and shall receive every blessing therein contained (Eph. iii. 6; 1 Tim. vi. 2). They are partakers of the divine nature and of Christ's holiness, when through union with Christ and fellowship with him in his righteousness and spirit, their nature is conformed to Christ (2 Pet. i. 4). They partake of Christ's sufferings, and of the affections of the Gospel, when they are persecuted for their adherence to the truth and example of Christ (1 Pet. iv. 19; 2 Cor. i. 7; 2 Tim. i. 8). They partake of the grace of Paul, and other ministers, when they receive spiritual edification from their ministry (Phil. i. 7). Hypocrites are partakers of the Holy Ghost. Some of them in the apostolic age enjoyed his miraculous gifts and operations; and in every age they receive such convictions, or other influences, as are separable from a state of grace (Heb. vi. 4). Men become partakers in other men's sins by consenting, consenting, inclining to, rejoicing in, assisting to commit, or sharing the profits or pleasures of their sin; or by occasioning them by an evil example, or offensive use of things indifferent; by provoking or tempting to, or not doing all we can to hinder their sin; or by commanding, exciting, or hiring men to sin; or by defending, exalting, or commending their sin; by neglecting to reprove, and promote the proper punishment of sin; and by not making mention over and praying against sin (Rev. xviii. 4; Eph. v. 11).

Parthenai (or Partheny). Anne de, an accomplished and pious lady, the wife of Anthony de Pons, count of Marennes, was Duchess of Ferrara, daughter of Louis XII, and one of the brightest ornaments of the court of Renée de France. She was a protector of learning, and was herself, on account of her abilities and accomplishments, the delight of every society into which she entered. She understood Greek and Latin, and took great pleasure in conversing with theologians and reading the Scriptures, which induced her to turn Protestant, and to give succor to the Reformed cause.

Parthenay, Jean de, lord of Soubise, a hercule leader among the Protestants of France, was descended from an ancient Romish family of his name, and was born about 1512. He chose the profession of arms, and having brouht himself into so great a repute that he commanded Henry II's troops in Italy about 1550. Before he left Italy he imbibed the sentiments of the Reformed religion at the court of Ferrara, under the auspices of Renée. After his return to France lord Soubise applied himself with extraordinary zeal to propagate his principles in the town and neighborhood of Soubise, and he succeeded so well that in a little time the mass was forsaken all about the place by a great part of the people. He held frequent conferences with Catharine de Medici, queen-mother of Henry III, who became in her heart his proselyte, though she had not courage enough to declare it openly; and the duchess of Montespenser, who was always present at these conferences, was so much wrought upon by Soubise's discourse that she desired on her death-bed to have the sacrament administered to her according to the Calvinistical form. The queen-mother, when she came to be regent of the kingdom during the infancy of Charles IX, appointed Parthenay gentleman of the chamber to the young monarch in 1661; and he was likewise created a knight of the order of the Holy Ghost. The same year the prince of Condé, the hereditary viscount of Soubise, was also set at liberty, and in the very beginning of the religious war that prince, looking on the large city of Lyons which had declared for the Protestant cause, as not in safe hands under the baron d'Adret, appointed Soubise to that important command in 1662; and he answered fully all the expectations which the prince had conceived of him. He performed a hundred bold actions there, and resolutely kept the city, defending it effectually against all difficulties both from force and artifice. The duke of Nevers besieged it to no purpose, and the queen-mother attempted in vain to overreach him by negotiation. He persevered in maintaining the Protestant cause with unabated ardor till his death in 1566, when he was about fifty-four. His wife, Antoinette Bouchard, eldest daughter of the house of Aubeterre, is also noted as a most devoted advocate of the Protestant cause.

Parthenia, a surname of Artemis (Diana), and also of Hera (Juno).

Parthenius, an Eastern prelate, flourished in the second half of the 17th century. He was successor to Cyril Lucas (q. v.) in the patriarchate of Constantinople. Parthenius was a man of unusual mental powers, and in his position held remarkable sway. Not only in the East, but also in Russia his influence was felt. Opposed to all reformatory inroads, he freed the Church from Calvinistic doctrinal tendencies, as well as everything that betrayed the influence of Protestant ideas. He was also the principal promoter of the 'Opolec' which was held at Constantinople under the pope Muger (q. v.), prepared, and which is the synod at Jerusalem in 1762 was adopted as the principal confession of the whole Greek Church. Parthenius died very near the close of the 17th century. See Neale, Hist. of the Eastern Church (patriarchate of Constantinople).

Parthenon is the temple which the Greeks dedicated at Athens to Minerva (q. v.). It is one of the most celebrated of the Greek temples, and is usually regarded as one of the most perfect specimens of Greek architecture.
architecture. Many of the sculptures have been removed from the Parthenon in modern times, and the different capitals of Europe highly prize the secured relics from this historic place. See ATHENS.

Parthenos (Gr. a virgin), a surname of Athene (Minerva) at Athens, where the Parthenon was dedicated to her.

Parthia. See PARTHIAN.

Parthian (Parthia). Parthians are spoken of in Acts ii, 9 as being with their neighbors, the Medes and Elamites, present at Jerusalem on the day of Pentecost. The persons referred to were Jews who had settled in Parthia ( Parsa in Ptolomy, Parsua in Strabo and Arrian), and the passage shows how widely spread were members of the Hebrew family in the first century of our era. See DARIAPAR. The term originally referred to a small mountainous district lying to the north-east of Media. Afterwards it came to be applied to the great Parthian kingdom into which this province expanded. To the history of the Parthians there seems to have been an alliance from the Old Testament, that in Daniel (Dan. xi. 44; comp. Tact. Hist. v. 8) to the campaigns of Antiochus Epiphanes.

Parthia Proper was the region stretching along the southern flank of the mountains which separate the great Persian desert from the desert of Kharesan. It lay south of Hyrcania, east of Media, and north of Sagartia. The country was pleasant, and fairly fertile, watered by a number of small streams flowing from the mountains, and absorbed after a longer or a shorter course by the sands. It is now known as the Atak or "skirt," and is still a valuable part of Persia, though supporting only a scanty population. In ancient times it seems to have been densely populated; and the ruins of many large and apparently handsome cities attest its former prosperity (see FRASER, Khorasan, p. 245).

The ancient Parthians are called a "Scythic" race (Strabo, xi. 9, § 2; Justin, xii. 1-4; Arrian, iv. 1), and probably belonged to the great Turanian family. Various stories are told of their origin. Moses of Choreen calls them the descendants of Abraham by Keturah (Hist. Armen. ii. 63); while John of Malala relates that they were Scythians whom the Egyptian king Sesostris brought with him on his advance from Scythia, and settled in a region of Persia (Hist. Univ. p. 26; comp. Arrian, l. c.). Really nothing is known of them till about the time of Darius Hystaspis, when they are found in the district which so long retained their name, and appear as faithful subjects of the Persian monarchs. We may fairly presume that they were added to the empire by Cyrus, about B.C. 550; for that monarch seems to have been the conqueror of all the north-eastern provinces. Herodotus speaks of them as being contained in the 16th satrapy of Darius, where they were subdued with the Chosraians, the Sogdians, and the Aryans, or people of Herat (Herod. iii. 29). He also states that they served in the army which Xerxes led into Greece, under the same leader as the Chosraians (vii. 66). They carried bows and arrows and short spears, but were not at that time held in much repute as soldiers. In the final struggle between the Greeks and Persians they remained faithful to the latter, serving at Arbela (Arrian, Exp. Alex. iii. 8), but offering only a weak resistance to Alexander when, on his way to Bactria, he entered their country (ib. 28). In the division of Alexander's dominions they fell to the share of Eumenes, and Parthia for some time was counted among the territories of the Seleucids. About B.C. 256, however, they ventured upon a revolt, and under Arsaces (whom Strabo calls "a king of the Dahae," but who was more probably a native leader) they succeeded in establishing their independence. This was the beginning of the great Parthian empire, which may be regarded as rising out of the ruins of the Persian, and as taking its place during the centuries when the Roman power was at its height. During the Syro-Macedonian period the Parthians and the Romans had no separate spheres, but under the Romans the Parthians defended the party of Antigonus against Hyrcanus, and even took and plundered Jerusalem (Josephus, Ant. xiv. 18, § 2; War, i. 18).

Parthia, in the mind of the writer of the Acts, would designate the entire area, which extended from India to the Tigris, and from the Chosraian desert to the shores of the Southern Ocean. Hence the prominent position of the name Parthia in the list of those present at Pentecost. Parthia was a power almost rivalling Rome—the only existing power which had tried its strength against the Greek, and not been accepted in the end. By the defeat and destruction of Crassus near Carrhae (the sculptural Haran) the Parthians acquired that character for military prowess which attaches to them in the best writers of the Roman classical period (see Horace, Od. ii. 19; Stat. lib. i. 150; Virgil, Georg. iii. 31; Ovid, A. et A. Am. i. 299, etc.). Their armies were composed of clouds of horsemen, who were all riders of extraordinary expertness; their chief weapon was the bow. They shot their arrows with wonderful precision while their horses were in full career, and were proverbially remarkable for the injury they inflicted with these weapons on an enemy who attempted to follow them in their flight. The government of Parthia was monarchical; but as there was no settled and recognised line of succession, rival aspirants were constantly presenting themselves, which weakened the country with internal dissension, and especially as the Edessa were found to be of interest to foster dimensions and encourage rivalries. From the time of Crassus to that of Caracalla they were an enemy whom Rome especially dreaded, and whose ravages she was content to repel without levenging the dominion dislike of Nerva and Trajan; but his expedition, which was well conceived and vigorously conducted, deprived them of a considerable portion of their territories. In the next reign, that of Hadrian, the Parthians recovered these losses; but their military strength was now upon the decline, and in A.D. 226 the last of the Arsacides was forced to yield his kingdom to the revolting Persians, who, under Artaxerxes, son of Hannan, succeeded in re-establishing their empire. The Parthian dominion thus lasted for nearly five centuries, commencing in the third century before, and terminating in the third century after, our era.

It has already been stated that the Parthians were a Turanian race. Their success is to be regarded as the subversion of a tolerably advanced civilization by a comparative barbarism—the substitution of Tartar manners for the Aryan polish and refinement. They aimed indeed at adopting the art and civilization of those whom they conquered, but their imitation was a poor travesty, and there is something ludicrous grotesque in most of their more ambitious efforts. At the same time they seem to have added certain modifications of nobleness and taste, more especially where they followed Greek models. Their architecture was better than their sculpture. The famous ruins of Ctesiphon have a grand
Ornamentation of Arch at Takt-i-Borjan.

deur of effect which strikes every traveller; and the Parthian constructions at Akkerkuf, El Hammam, etc., are among the most remarkable of Oriental remains. Nor was grandeur of general effect the only merit of their buildings. There is sometimes a beauty and delicacy in their ornamentation which is almost worthy the Greeks. For specimens of Parthian sculpture and architecture, see Sir R. K. Porter, Travels, vol. i, plates 19-24; vol. ii, plates 62-66 and 82, etc. For the general history of the nation, see Hermon, Manual of Anc. Hist., p. 229-305, Eng. trans.; Smith, Dict. of Greek and Roman Greg. s. v.; and especially Rawlinson's Sixth Oriental Monarchy—Parthia (Lond. 1871), on whose article in Smith's Dict. of the Bible the above is chiefly founded. The geography of Parthia may be studied, besides the ancient authorities, in Cellar, Notit. ii, 700; Mannert, v, 102; Forbiger, Handb. ii, 546 sq. See also Amer. Ch. Rev. Oct. 1873, art. iii; Bibliotheca Sacra, April, 1874, art. viii.

Participation, the act of sharing jointly with others in any object or benefit. "Participation" is what is meant by "communion," when applied by the apostle to the body and blood of Christ sacramentally received. The "communion" is on the part of the receivers of that ordinance; the Greek word which is so rendered (κοινωνία) not signifying communication, as from the priest, of any benefit of which he is the dispenser, but the partaking together, the joint enjoyment, of the spiritual benefits of which Christ, by the sacrifice of himself, has called us to be partakers. See COMMUNION.

Particular Baptists. See Baptists.

Particular Redemption. See Redemption.

Particularists, a name sometimes applied to Calvinists (q. v.), at least such as hold the doctrine of particular redemption and a limited atonement. See GRACE.

Partington, John, M.A., an English divine, was a native of Scotland. The time of his birth is not known to us. In 1732 he became minister of a dissenting congregation at Hampstead. He also preached at Founders' Hall, London, in 1738. He died in 1749. Partington published a Sermon (Jan., 1717) on the right Improvement of the Gifts of God's Bounty (Lond. 1739, 8vo).

Partington, Josiah, a Presbyterian minister, was born in Manchester, England, Dec. 25, 1801. He was educated privately, and studied theology under the care of a minister. In 1823 he immigrated to the United States, was licensed and ordained by Niagara Presbytery, and preached successively in the churches of Knowlesville and Byron, N. Y.; Pelham, C. W.; and in Youngstown, N. Y., where he died, Feb. 14, 1864. Mr. Partington was a man of sterling piety and earnest zeal for the Master. He possessed special command of language he was good at length, by frequent repetitions of it, being able to destroy him." Egmont and Heymen (ii, 49) give an account of the manner of taking snipes in the Holy Land, very much like the Arab way of catching partridges. They say that if the company be numerous, they may be hunted on horseback, as they are then never suffered to rest till they are so tired that they may almost take them in your hand. But snipes delight in watery places. David, therefore, being in dry deserts, might rather mention the partridge.

It will be seen by the marginal reading that the passage in Jeremiah may bear the following interpretation: As the kōrd "gathereth young which the bath we brought forth." This rendering is supported by the Sept. and Vulg., and is that which Maurer (Comment. on the passage of the text).

Parti, MIDDLE WALL OF (μεταόχης) τοῦ 

Partridges, from a bas-relief, Khorsabad.
PARTRIDGE

713

in Ier. l. c.); Rosenmüller (Sch. in Ier. l. c.), Gesenius (Theaur. s. v.), and scholars generally adopt. In order to meet the requirements of this latter interpretation, it has been asserted that the partridge is in the habit of stealing the eggs from the nests of its congener and of sitting upon them, and that when the young are hatched, their care is assumed by the hens; a similar meaning of the simile: the man who has become rich by dishonest means loses his riches, as the fictitious partridge her stolen brood (see Jerome in Ieron. l. c.). It is perhaps almost needless to remark that this is a mere fable, in which, however, the ancient Orientals may have believed, as is evident, for instance, in a passage in the Arab. naturalist Damir, quoted by Bochart (Herios. ii. 638), which shows that in his time this opinion was held with regard to some kind of partridge. The explanation of the rendering of the text of the A. V. is obviously as follows. Partridges were often "hunted" in ancient times as at present, either by hawking, or by being driven from place to place till they become fatigued, when they are easily captured or killed in the manner above described. Thus nests were not only constantly disturbed, and many destroyed, as already, in I. 13, is indicated; but the birds taking shelter from such disturbances would enrich himself by unjust means—"he shall leave them in the midst of his days." The expression in Ecclus. xi. 80, "like as a partridge taken (and kept) in a cage," clearly refers, as Shaw (Travel. l. c. has observed) to a "decoy partridge," and is equivalent to the Greek σταφυλία Superstition almost certainly has been traceable, as is evident from the context and the Greek words; comp. Aristot. Hist. Anim. ix. 9, § 3 and 4. The "hunting this bird upon the mountains" (1 Sam. xxxvi. 20) entirely agrees with the habits of the Greek partridge (Cuculus sabulicus) and the desert partridge (Ammoperdix Heyi). The specific name of the former is partly indicative of the localities it frequents, viz. rocky and hilly ground covered with brushwood. Our common partridge (Perdix cinerea), as well as the Barbary (C. petrosus) and red-leg (C. rufa), do not occur in Palestine.

Late commentators state that there are four species of the tetrao (grouse) of Limneus abundant in Palestine; the francolin (T. francolinus), the katta (T. alchata), the red-legged or Barbary partridge (T. petrosus), and the Greek partridge (T. sabulicus). In this now obsolete classification there are included not less than three genera, according to the more correct systems of recent writers, and not one distinctly a grousse occurs in the number, though the real T. urupulosis, or cock of the woods, is reported as frequenting Asia Minor in winter, and in that case is probably no stranger in Libanus. There is, however, another species of which the Arab. name is the katta (ganga, cota), and pin-tailed grousse of author, a species very common in Palestine, and innumerable in Arabia; but it is not the only one, for the sand-grouse of Latham (P. arenaria) occurs in France, Spain, Barbary, Arabia, Persia, and on the north side of the Mediterranean, or all round Palestine. P. Arabicus, and probably P. exustus, or the Arabian and singing gattas, occur equally in the open districts of the south, peeping the desert along with the ostrich. All are distinguished from other genera of Tetraonoe by their long and powerful wings, enabling them to reach water, which they delight to drink in abundance; and by this propensity they often indicate to the thirsty caravan in what direction to find relief. They feed more on insects, larvae, and worms than on seeds, and, none of the species having a perfect hind toe that reaches the ground, they run fast: these characteristics are of some importance in determining whether they were held to be really clean birds, and consequently could be the seder of the Israelites, which our versions have rendered "quail." See Quail. The francolin forms a second genus, of which P. ornatus, or the common-tree-partridge, is the Syrian species best known, though most likely not the only one of that country. It is larger than the gatta; the male is always provided with one pair of spurn (though others of the genus have two), and has the tail longer than true partridges. This species is valued for the table, is of handsome plumage, and common from Spain and France, on both sides of the Mediterranean, eastward to Bengal. The partridge is a third genus, reckoning in Syria the two species belonging to the same genus, the red-legged and the black and crescents on the sides; but the other markings differ, and the Barbary species is smaller than the Greek. They are inferior in delicacy to the common partridge, and it is probable that Perdix rufa and the Caspian partridge, both resembling the former in many particulars, are no strangers in Asia. The expostulation of David with Saul, where he says, "The king of Israel is come out to seek a sheep, as when one doth hunt a partridge on the mountains," is perfectly natural; for the red-legged partridges are partial to upland brushwood, which is not uncommon at the mountains and mountains of Palestine; and the kott sitting on her eggs and not catching them (Jer. xvii. 11) alludes to the liability of the nest being trodden under foot, or robbed by carnivorous animals, notwithstanding all the care and interesting mancuvres of the parent birds to save it. Not that they are timid; for they nestle not on the ground, but in a male and female sit and anxiously watch over the safety of their young. This explanation renders it unnecessary to resort to exploded notions drawn from the ancient. Little regard is paid to specific and generic identity by the rabbinical and Arabic writers. As for the species of birds of this genus are already indicated in various tongues to the extremity of Africa and of India; among which Otis curvata and Otis Avara are so called at this day, although the first mentioned resides on the plains of Western India, the second in Arabia. Both these, however, appear to be the same species. "Cory" is likewise applied in Capriaria to a bustard, which from an indigenous word has been converted by the Dutch into American. Notwithstanding the pretended etymology of the word, by which it is made to indicate a long neck, none of the genus, not even Otis Denhami (a large bird of Northern Africa), has it long, it being, in fact, middle-sized in all. Thus it would appear that the type of the name belongs to Otis, and it might be maintained that species of that genus were known to the Hebrews, by their name korrét, were it not for the fact that birds bearing this name were hunted by the Hebrews, which could not well have been the case had they not included other genera: for bustards, being so immense, were not known by the Hebrews as partridges, having it, were clean. The ganga, or katta, being provided with a small, incomplete one, may have offered an instance where the judgment of the priesthood must have decided. See Unclean (Birds).

The following account of the bird denoted by the Heb. korré, taken from Tristram's Nat. Hist. of the Bible, s. v., is probably the most correct: "The commonest partridge of the Holy Land is the Greek partridge (Cuculus saubulicus), a bird somewhat resembling our red-legged partridge in plumage, with their beautiful feathers on the flanks, and deep-red legs and bill, but much larger, approaching the pheasant in size, and very distinct in habits from our grey partridge. In every part of the hill country, whether wooded or bare, it abounds, and its ringing cries can be heard like the tolling of a bell, coming and sending every dog farther than any dog, screening themselves from sight by any projecting rock as they run. The covesys in autumn are very large; but the birds do
not pack very much in winter, probably from the necessity of dispersing themselves to obtain food. In the wilder parts of Galilee the Greek partridge is especially abundant. The Syrian bird is, I am inclined to believe, a distinct variety from any other. In coloration it closely resembles the Indian Chukor partridge, but it is much larger, exceeding even the specimens from continental Greece in size, and it has a deeper black gorget than the bird from other countries. Whether it be a species or variety, the Syrian bird is undoubtedly the largest and the finest of all the true partridges. The Greek partridge inhabits a wide range from east to west, extending from Galicia, in the west of Spain, through the Pyrenees and Alps to Greece, Asia Minor, Persia, and Northern India—at least, the species of all these countries are very closely allied.

"The true partridge of the wilderness is another and very different bird (Ammoperdix Heyg), decidedly small-er than the common English partridge, and a bird of most delicate pencilling in its plumage. The bill and legs are a rich orange color, the back finely mottled, a bright white spot behind the eye, and the flanks striped with purple and red-brown. It is peculiar, so far as we know, to Arabia Petraea, the basin of the Dead Sea and its wadies, and to the eastern strip of the wilderness of Judea, where it supplants in some degree the larger species, though both are found in the same localities. In the neighborhood of the Cave of Adulam it is very plentiful, and it often lays its beautiful cream-colored eggs in holes in caves, as well as under the shelter of crevices of rocks. It runs with wonderful agility up and down the cliffs, and its call-note is like that of the other partridge.

"In the rich lowland plains, as of Gennesaret, Acre, and Phoenicia, the place of the partridge is taken by the francolin, a bird of the same family, well known in India as the black partridge, and formerly found in Southern Europe as far as Spain, but now quite extinct on the Continent. The francolin (Francolinus vulgaris) is as large and heavy as the red grouse, concealing itself in the dense herbage and growing corn of marshy plains, where its singular call can be heard, as on Gennesaret, resounding at daybreak from every part of the plain, while not a bird can be seen. It is distinguished from the kojei, or partridge, by the Arabs, but was doubtless included under hord by the Hebrews. The male bird is very beautiful, with deep black breast, flanks black with large white spots, and a rich chestnut collar fringed with black and white spots.

Syrian "Black Partridge" (Francolinus vulgaris).

"With the partridges may also be included the sand-grouse (Pterocles), of which several species occur in great abundance in the more arid parts of the country. Some have supposed the sand-grouse to have been the 'qauil' of the Israelites in the wilderness—both, as it appears, needless conjectures. The sand-grouse are recognised by very distinct names by the Orientals. They are a peculiar group of game birds, in some respects approaching the pigeons, and inhabit the sandy regions of Africa and Asia in myriads. Two species are found so far north as Spain, and in the 'Landes' in the south of France. One of these (Pterocles armarius), the common sand-grouse, the khaadyr of the Arabs, inhabits the wilderness of Judea, and the other (P. natarius), the pin-tailed sand-grouse, the kata of the Arabs, may be seen passing over the barren parts of the Jordan valley and the eastern desert by thousands at a time. It was beautifully described by Russell in the Natural History of Aleppo, more than a century ago. Two other species, also common in Arabia and Egypt, abound in the wilderness of Judea and near the Dead Sea (P. cuatus and P. Senegalensis), both birds remarkable for the delicate markings of their plumage, but, like all the species of the genus, of a general sandy hue, which admirably assists them in escaping observation on the bare plains." See Bird.

Syrian "Kata Partridge" or Sand-grouse (Pterocles Alchata or Satarus).
Ephesian Church, and held this position until his death on the wreck of the steamer “United States” on the Ohio river, Dec. 4, 1808. He published Sunday-school Illustrations (Philadelphia. 1851, 1880; very popular)—The Shepherd’s Voice (1853)—Union Notes on the Gospels (1856—58, 2 vols. 1860); this is based on an English work, and has been reprinted in several publications of the New Testament circulation. He also contributed to many periodicals, and wrote a number of children’s stories. See Newton, God’s Interest in the Death of his People (Philadelphia. 1869).

Parvis (parvis) is the name given to an enclosed space, paradise (q.v.), or atrium, or to the court in front of a mosque, which is usually surrounded with cloisters. The name applies to a space given some ancient synagogues. The cloister-garth at Chichester is still called paradise; and the space around a church is usually termed parvis in France. The latter term is often, however, employed to denote a room over the porch of a church, which is often used for a library, as the residence of a chantry-priest, or as a record-room or school.

The parvis is a relic of the primitive arrangement: the ancient basilicas had a fore-court, surrounded with porticoes, and containing in the centre tombs, wells, fountains, and statutes. At the close of the 15th century the parvis began to be enclosed, and only slightly marked out, to show the episcopal jurisdiction. On it scaffolds were erected, on which deliquent clerks were exposed, and criminals did open penance; the relics were exhibited, and the inferior clergy were ranged, while their superiors and great personages went round singing the Gloria. At Rheims, and Notre Dame, Paris, the parvis was enclosed with a low wall; at Amiens and Lisieux the raised platform exists; and at Rheindeck, Pictiers, the coped wall, with kneeling angels, dogs, and lions, and its five entrances remain perfect. A trace of the same plan may be seen in front of Liebfeld. At Laach, and St. Ambrose’s, Milan, the parvis and cloister remain; and the fore-court at Parenzo, Salerno, Aschaffenburg, St. Clement’s, and other churches at Rome.

Parsach (Heb. Pasach, פָּסָחַ, cut off; Sept. Pascha x.r. Φασχα) the first named of three sons of Japhlet, of the tribe of Asher (1 Chron. vi. 35). B.C. circ. 1618.

Passagio or Pasaçægini, a Christian heretical sect which arose in Lombardy towards the close of the 12th century, sprang out of a mixture of Judaism and Christian- tianity, occupied perhaps by the conquest of Jerusalem. This sect held the absolute obligation of the Old Testament upon Christians in opposition to the Mu- scelion, who maintained only the authority of the New Testament. Here they likewise practised the rites of the Jewish law, with the exception of sacrifices, which ceased to be offered at the destruction of the Temple of Jerusalem; consequently they circumcised their followers, abstained from those meats of which the use is prohibited under the Mosaic economy, and celebrated the Jewish Sabbath. They also revived the Ebionitish and Arian doctrines on the subject of the person of Christ, maintaining that he was not equal, but subordinate to the Father, and indeed merely the highest or purest of the creatures of God. The Passagi were condemned as heretics by the Council of Verona in A.D. 1184, and, under the name of Circumcisci, they are mentioned also in the laws against heresies issued by Frederick II in 1224. “The name of this sect,” says Neander, “reminds one of the word pascha (passage), which signifies a space; and very properly employed to denote pilgrimages to the East, to the Holy Sepulchre crusades. May not this word, then, be regarded as an index, pointing to the origin of the sect as one that came from the East, intimating that it grew out of an intercourse with Palestine? May we not suppose that from very ancient times a people of Judaising Christians had survived, of which this sect must be an offshoot? The way in which they expressed themselves concerning Christ, as being the
first-born of creation, would point also more directly to the connection of their doctrine with some older Jewish theology than to a later purely Western origin. "There are also some who believe the Passagi to have been Jews, who, to escape persecution, assumed enough of Christian practices and doctrines to be passed un molested, like the Cathars (q.v.). (J.L.W.)

Passagian. See Pasaig.

Pascal, Blaise, one of the most remarkable of men; sublime in his virtuous life; eloquent in his defence of the truth; wonderful in his vast acquisitions; remarkable for his genius; one, in short, associated with all the great spiritual events of the highest order of the 17th century, and all that is bright and pure in the practice of holiness. Boyle characterizes him as 'one of the sublimest spirits in the world.' Locke calls him the "prodigy of poets," and why should he not be called a prodigy? It is certainly not a very common thing to meet in the same mind in perfect harmony, as we see in Pascal's, the reasoning powers of a great mathematician and the imagination of a great poet—the genial warm-heartedness of a philanthropist and the playful satire of a satirist. His best deliberations are those of a philosopher; or to find the canvas on which were wrought out these prodigies of genius ever aglow with the well-ordered contrasts, the graceful variety, and the rich coloring of a painter of human life and manners. Blaise Pascal was born at Clermont, in Auvergne, on June 19, 1623, and died there on August 19 of the same year. His family was one of considerable influence in the province, several of his ancestors having held high offices in the government of France; and his father was at the time president of the Court of Aids in Auvergne. Blaise evinced in his early childhood an inquisitiveness of mind and an acuteness far above the average standard of boys. As he was deprived of his mother when only three years of age, his father, who was an eminent mathematician, and associated much with men of learning and science, undertook the sole charge of his son's education, and to that end settled in Paris. For the purpose of concentrating all the boy's efforts upon languages, his father kept out of his reach all books treating the subject of mathematics, for which he had early evinced a decided taste; and it is recorded that by his own unaided speculations, he wrote of figures and their squares on the floor, he made some progress in geometry. One account represents him as having thus mastered the first thirty-two propositions of the first book of Euclid's Elements, when his father suddenly surprised him in his studies, and was so moved by the boy's attainments that he forthwith set about teaching him the rudiments of mathematical investigations; and Blaise made such rapid progress that at the age of sixteen he composed a treatise on Conic Sections which displayed an extraordinary effort of mind, and evinced a strength of reasoning and knowledge of science fully equal to anything that had appeared. It extorted the almost-incredible admiration of his contemporary, Des Cartes. But this was not the only extraordinary performance of Blaise Pascal. In his nineteenth year he invented an ingenious machine for making arithmetical calculations, which excited the admiration of his times; and afterwards, at the age of twenty-four years, the conjecture of Torricelli that the atmosphere had weight, and that this quality might account for effects before ascribed to the horror of a vacuum, led him to institute many able, and decisive the experiments on this subject, which confirm the truth of Torricelli's ideas, and established his own scientific reputation. The results of these labors were collected into two essays, which appeared after his death, On the Equilibrium of Liquids, and On the Weight of the Atmosphere. Unfortunately Pascal's health gave way before the cares and labors of theological and scientific undertakings; he was made to suffer by the judgment of the Sorbonne, and hold the Jesuits to have gained the cause. Pascal changed the order of battle. He addressed himself to the public; appealed from authority to common-sense, declaring that it was easier to understand the age of the world, and the apparent life of eighty the never passed a day without suffering, Being forbidden all work by his doctors, he threw him-
one's self read and understood by such a tribunal was no small task; but Pascal disposed of it so happily that it made a *chef-d'oeuvre* of *Les Lettres Provinciales*. They were not read and he was often employed twenty days on a single letter; one (the eighteenth) he wrote over more than thirteen times; and all, after being written, he transmitted to Arnauld and Nicole, to be carefully revised and corrected. We shall not stop to speak of the literary flattery with which he was often surrounded—his character was universally acknowledged. The most distinguished French critics unite in pronouncing it a perfect model of taste and style, which has exerted a powerful influence on the literature of succeeding times. Those of other countries who are acquainted with it unite in bearing testimony to its merit. *Les Lettres Provinciales*, which is by Lemaitre) are written, as if to a provincial friend, on the absorbing controversial topic of the day. The first three are devoted to the vindication of Arnauld, and the demonstration of the identity of his doctrine with that of St. Augustine. But it was in the last letters that the collection owed both its contemporary popularity and its abiding fame. In these Pascal addressed himself to the casuistry and to the direction of Arnauld's great antagonist, the Jesuits; and in a strain of humorous irony which has seldom been surpassed he holds up to ridicule their jejune tautology of principle on the obligation of restitution, on simony, on probable opinions, on directing the intention, on equivocation, and mental reservation, etc. The Jesuits and their friends loudly complain of the unfairness of the "Provincial Letters," and represent them as in great part the work of a special agent. The quotations, with the exception of those from Esco- bar, were confessedly supplied by Pascal's friends. It is charged that many of the authors cited are not Jesuits at all; that many of the opinions ridiculed and rep- roached have found their way into the teaching of the Church; that they have been formally repudiated and condemned by the society; that many of the extracts are garbled and distorted; that it treats as if designed for the pulpits and as manuals for teaching works which in reality were meant but as private directions of the judgment of the confessor; and that they are all or almost all, circumstances are witheld which would modify, if not entirely remove, their objectionable tendency. See Jesuits. There seems, however, to be no just ground for such complaint, and the frequent replies which have been made to this charge would hardly afford us an excuse for taking space here to consider this appeal. In all his exposures Pascal deals only with the maxims, and not with persons. There is nowhere the appearance of vindictiveness over a vanquished foe. If there be at times an indignation rising to the verge of aw- ful majesty, there is mingled with it a philosophy most tender and heartfelt; "he would take these men to his bosom and reform them, while he consigns their impious doctrines to destruction." What he says to the unsuspicous monk, when taking leave of him, is the ex- pression of his tender heart, "if God should take your eyes at length, my dear father, and if the other er- ors of your casuists have made no impression on you, let these last, by their very extravagance, compel you to abandon them. This is what I desire from the very bottom of my heart, relations between me and your doctors; and my prayer to God is that he would vouchsafe to convince them how false the light must be that has guided them to such precipes; my fervent prayer is that he would fill their hearts with that love of himself from which they have dared to give man a dispensation. What be uttered on his death-bed was the real motive which prompted him in all his controversies: "As one about to give an account of all his actions, I declare that all my conscience gives me no trouble on the score of my 'Provincial Letters'; in the work of recomposition of that which I was influenced by no other motive, but solely by regard to the glory of God and the vindication of truth, and not in the least by any passion or personal feeling against the Jesuits." Yet we do not wonder that the Jesuits charge Pascal with malice. For these letters were the handwriting on the wall against them, and the people interpreted it. " Thou art weighed in the balance, and art found wanting." All the efforts made to suppress the letters, which had been speedily translated into the Latin, the Spanish, and the Italian languages, and had been widely spread among all the nations of Europe, served only to pro- mote their popularity. Thus they were read at Rome, and burned by the hangman at Paris, yet they circulated freely everywhere, and their principles ac- quired much credit and authority among the people, and took deep root in their minds. The Society of Je- sus, in its efforts to suppress them, only accelerated its doom. From the moment of the publication of the "Provincial Letters" the order degenerated, the necessary conse- quence of a full discovery of its principles. It hastened to its dissolution; and if the "Provincial Letters" were not the means of the extinction of the Jesuits-brother- hood, they certainly accelerated its doom. Of course it was some time before public opinion was thoroughly aroused and the Jesuits were brought low. But the final blow came at last. In 1770 they were expelled from Portugal, in 1764 from France, in 1767 from Spain, and on July 21, 1773, they were suppressed by the papal bull. See Jesuits. If we judge of eloquence by such effects, then the "Provincial Letters" were truly elo- quent. Trivial and veheiment by turns, Pascal climbed to the very climax of eloquence. Sometimes he reminds us of the satire of the Dialogues of Plato; sometimes of the Phyllips of Demosthenes and Cicero. Voltaire calls him the first French satirist, and says: "The first comedies of Moliere have no more salt than the first *Provincial Letters*; Bossuet has nothing more sublime than the last" (Sicle de Louis XIV, ch. xxvii). "Pascal," says Diderot, "by his eloquence is more than ever able to ruin the name of Jesuit than all the controversy of Protestantism, or all the fulminations of the Par- liament of Paris. . . . He has accumulated so long a list of scandalous decisions, and dwelt upon them with so much wit and spirit, and yet with so serious a severity, that the order of Loyola became a byword with mankind." The "Provincial Letters" were, however, only a pas- time with Pascal. His great and favorite labors were of weightier matters. He desired purity in Christendom, and his heart longed for the strengthening of Christ's kingdom on the earth. In silence he prepared the mate- rials for a great work, which death prevented him from accomplishing. Yet the scattered fragments which re- main are sufficient to insure for their authentic the admi- ration of posterity. Persuading himself that there was need of a work on the evidences of the Christian religion, he aimed in his *Pensees* to show the necessity of a divine revelation, and to prove the truth, reality, and advan- tage of the Christian religion. He proposed to demon- strate the evangelical system by the Cartesian method. He undertook to prove the reality and the power of a miracle by the most severe logical induction. He sum- moned reason to lead the way to those elevated regions of thought in which she must resign her charge to the guidance of faith and adoration. From a review of the Bible, to relations between the living and the dead, and the revelation of God was to be wrought out a chain of internal evidences linking indissolubly together those
primary verities which our consciousness attests and the same verities which the Church has defined. Descartes had demonstrated the existence of God. Pascal wished to go much farther than his master, and by taking by the hand a doubting, indifferent reader, to seat him, docile and faithful, at the feet of religion. A pupil of Montaigne, filled with his spirit and his style, and with Montaigne's voice, whose grace and simplicity had been transmitted to him by Singlin and Sacy, he combined these two influences in the most remarkable manner. By a bold manoeuvre he attempted to turn the scepticism of the first master against rational metaphysics, to bring it to the adventurism of the second. For him, then, there is neither reason, justice, truth, nor natural law. Human nature is deeply corrupted by its original fall. Grace is the only resource, faith the only refuge for reason convinced of its own impotence. Small and incomplete as is the work, it is a mine of profound thought, and evangelical piety which deserves to be explored.

The ideas and sentiments, though partially evolved and imperfectly developed, display an intellect of surprising energy and expansion, a richness and novelty of illustration, a depth and pregnancy truly admirable—all expressed in a style terse and simple, without comparison with examples of that serene eloquence which becomes the philosophic and the Christian. Of course the unqualified approbation of the Protestant is not expected for these Pensées. There are sentiments foreign and repugnant to the Protestant, arising from that system of facts which, in Pascal's fixed and unchangeable view, he had learned from the Bible and the Church. No amount of gratitude for his high regard for Scripture authority, exerted an influence over him—sentiments on the subject of miracles, the character of the Church and some of its ceremonies, auricular confession, and the benefit of that easy and cheerful and indolent state of mind of which he was so painfully an example at the close of his life. Neither can the Protestant be perfectly satisfied with the very dark view of human life which he presents. Addison has wisely pointed out our way of escape from Pascal's extreme in the one direction and the world's escape in the opposite extreme, when he says: "To consider the world as a dungeon, and the whole human race as so many criminals doomed to execution, is an idea of an enthusiast; to suppose the world to be a seat of delight, where we are to expect nothing but pleasure, is the dream of a Sybarite." Waiving all these elements in the Protestant's view, the thought even in their unfinished state must be recognised as constituting the most effectual perhaps of all the successors by which uninspired man has relieved the human mind from the heavy burden of religious scepticism. Dr. Vincent, in his Life of Pascal, on Pascal's faith and religious zeal (and to which below), thus comments on Pascal's ability as a Christian apologist:

"He comprehended, he explained that it was not in the head, but in the heart of man, that the rebellious part was in the heart of men: and he illustrated, or, rather, he drew from the Gospel, and laid before us, under the form which was proper to his genius and suitable to his time, that beautiful doctrine of the knowledge and the comprehension of divine truths by the heart which is the dominant thought of the key of his apologetics. The heart! the intuition, the internal conviction of religious truths held up immediately as first principles are? A bold and sublime proposition, which one much greater than Pascal had professed before him.—Believe me, it is the ground where all the works of truth have their titles in it; it is its own proof in itself; it demonstrates itself by showing itself. And the heart is the mirror of the truth. But this mirror, badly placed, does not reflect the light until a divine hand has turned it towards the sun. The heart requires to be inclined; that in us which receives the truth, that in us which knows, believes, loves, is not the heart such as it is, it is the heart turned. The presence of the first, or the heart, the heart offering itself by humiliation to inspiration, as Pascal himself expresses it. Pascal here announces the need of the miracle, the necessity of the assumption, the need of the Holy Spirit; Christianity considered as existing in man, by the testimony, the reign of the Holy Spirit. The divinity and the human meet here in a glorified and ineffable unity.

Of Pascal as a writer, Dr. Vincent says:

"Pascal has not treated, has scarcely even touched any subject without having in some sort rendered it a domen subject to all me besides. The most accomplished, after him, seem reduced to come near him; so closely does his thought grasp the object, so closely does his expression grasp his thought."

"The notes of Voltaire" [to Pascal's "Thoughts"], Hallam tells us, "though always intended to detract, are sometimes misunderstood. We have had his eloquence absolutely annihilated, in effect on the general reader, even this antagonist."

The weak frame of Pascal was reduced to premature old age by infirmities which were aggravated by his ascetic habits. But he bore his trials with exemplary patience, and died in Paris, Aug. 19, 1662, while yet a young man. The gentle and holy spirit of Blaise Pascal then returned to him who gave it, leaving to the world a name which will ever live as the representative of splendid talents united to self-denying benevolence and ardent piety. Pascal's life was written elaborately by his sister, Madame Perier, and afforded the materials for an able and interesting article in the Dictionary of the Bylante. His Œuvres were collected and published in 5 vols. 8vo, 1778, well edited by the abbé Bossant. They were reprinted (Paris, 1819, 5 vols. 8vo), with an essay by M. François, "Sur les meilleurs ouvrages écrits en prose dans la langue Française." As we are writing, a new edition of Pascal's works is preparing by M. Mollière for Messieurs Lemerre's collection. His Pensées sur la Religion, et sur quelques autres Sujets, being unfinished, were published, with suppressions and modifications, in 1699; but their full value was only learned from the complete edition which was published by Faguer at the instance of M. Cousin (Paris, 1844, 2 vols. 8vo). It has the fault of reproducing Pascal in his first drafts, many of which he would himself have cast aside. Since then have appeared the following editions worthy of mention here: Pensées de Pascal, publiées dans leur texte authentique, avec un Commentaire, suivi d'une étude littéraire, par E. Havel (Paris, 1855); Pensées de Pascal, suivant le plan de l'auteur, avec des notes originales, par les additions, et les variantes de Port-Royal, par J. M. Frantin (2d ed. ibid., 1855); Pensées de Pascal, disposées selon un plan nouveau. Édition complète d'après les derniers travaux critiques, avec des Notes, un Index, et une Préface, par J. F. Astic (Lausanne, 1856, 2 vols. 4mo). This is considered the best of all the editions. It was inspired by St. Beuve. Another good edition is entitled Pensées de Pascal. Édition variéorre d'après le texte du MS. autographe, par Charles Laundure (ibid., 1861). Of all Pascal's works, the Lettres Provinciales have been the most frequently repeated. They have been translated into Latin in the lifetime of Pascal by Nicole, under the pseudonym of a German professor, "Wilhelm Wendroc;" and an edition in four languages appeared

Pascal, Jacqueline, a noted French female monastic, was the sister of Blaise Pascal, and greatly influenced that celebrated man in his ascetic practices. She was born at Montauban in 1625. She was a most devoted sister, but her peculiar notions of an ascetic life led her to Port-Royal herself, and finally brought Blaise to the same retirement. In her, Blaise much enjoyed the remarkable intellectual attainments and native talent. The poet Corneille used to visit her when she was yet a girl, and aid her in the development of her poetic talent. See Cousin, Jacqueline Pascal (Paris, 1849); Metz. Qu. Rev. July, 1854, art. iv.

Pascal, a term sometimes used to denote the festival of Easter (q.v.).

Pascha. See PASOVER.

Pascha Annuitus, an expression which was used in the Church of the early Middle Ages to designate the first anniversary day of baptism, which was observed by prayer and song by the baptized and his friends. It passed out of date in the 11th century, and the frequent efforts to re-establish the "Pascha annuitus" have failed. The Sunday Quasimodogeniti was the day appointed for such observance, and was therefore principally called Pascha or Pascha Annuitus.

Paschal, antipope of Rome, flourished in the 7th century. He was early admitted to the service of the Church, and was for some time archdeacon of the Roman Church. During the sickness of pope Conon, in or- der to take possession of the gold which this pontiff had bequeathed to the clergy and to the monasteries, he wrote to Jean Platys, exarch of Ravenna, and promised him this gold if he would consent to sustain his election to the pontifical throne. The exarch entered into this design, and his officers, the next day after the death of Conon (Oct. 22, 687), elected Paschal. Another party of the Roman people elected the archpriest Theodore, and took possession of the interior of the palace of Lat- eran, while the faction of Paschal could only occupy the exterior. In order to put an end to this scandalous struggle, the majority of the clergy, magnates, and people voted for a priest called Sergius (Dec. 16, 687). Theodore submitted; Paschal, on the contrary, re- 345sisted, and persuaded the exarch to come to Rome with his officers. The latter arrived, but finding Sergius expelled by all, he abandoned Paschal and his unhappy fate, requiring of the new pope, in order to confirm his nomination, the hundred pounds of gold which had been promised him. Shortly after Paschal, convicct of magic, was deprived of his office of archdeacon and imprisoned in a monastery, where he died imprisoned in 694. See Fleury, Hist. Ecclés. bk. xl, ch. xxxix; Anastasie, Vita Pontifex; Arland de Mouton, Hist. des souverains Pontifes Rom. vol. i.

Paschal II, a pope of Rome, was born at Rome near the middle of the 8th century. After taking the monastic vows he entered into holy orders, and was for several years abbot of the Benedictine monastery of St. Stephen at Rome. Pope Leo III elevated him to the cardinalate, and upon the death of pope Stephen V he ascended the papal throne, Jan. 25, 817, by the choice of both clergy and people, who, in their impatience urged him to assume the functions of the office without the imperial sanction, which was then regarded as indispensable. Paschal II was wise enough not to assume the responsibility of this step, and by special messenger informed the emperor of the disloyal precipitancy of the people. Of course the imperial forgiveness was thus
easily secured, and the pontiff became a favorite of the emperor. To Paschal the pretended donation by the emperor Louis the Pious is said to have been made. He crowned as emperor Lothaire, son of Louis the Pious, in the year 828, and died the following year. He was succeeded by Eugenius II. Shortly before his death Eugenius was irritated by imperial friends for the summary punishment he meted out to two ecclesiastics who were believed to have been imperialists, but Paschal's position is justifiable. The punished had been guilty of disloyalty to the pope, and though they were strongly connected with the imperialists, this was sufficient; if the pope should not immediately punish them if they were treacherous subjects of his. On the re-ouetbreak of the iconoclastic controversy at Constantinople, Paschal granted an asylum to those Greek priests who favored the use of images in churches. He is said to have gone three times which is found in the collection of the councils. See Pagi, Breviar. Pontif. Rom. ii, 25 sq.; Aschbach, Kirchenlex., s. v.; Bower, Hist. of the Popes; Riddle, Hist. of the Popes, i, 328 sq.; Milman, Hist. of Latin Christianity, ii, 418, 529; Baxmann, Gesch. der Politik der Päpste, v, 555, 563.

Paschal II, pope of Rome, was a Tuscan by birth. His family name was Ramieri. He was a native of Bleda, where he was born about the middle of the 11th century. He joined the Order of Cluni, and having been chosen by the interest of a cardinal, he was noticed by pope Gregory VII, who made him a cardinal. After Gregory's death and the short pontificate of Urban II, Paschal was elected pope. He refused the dignity, and even concealed himself, but was at last prevailed upon to accept the papal chair in 1099. He prosecuted the great contest of the investitures, begun by Gregory VII, with the emperor Henry IV, against whom he launched a fresh bull of excommunication. Henry's son and namesake, availing himself of this, revolted against his father, and, having deposed him, was acknowledged as king of the Germans by the title of Henry V. He then proceeded to Italy with an army, in order to cause himself to be crowned emperor. On the question of the investitures he was as stubborn as his father. After some conferences between him and the pope's ambassadors, Paschal proposed what appeared to be a reasonable compromise of the matter in dispute. "If the emperor," said he, "contends for his regal rights, let him resume the donations on which those rights are founded, the duchies, margravates, countships, towns, and manors which his predecessors have bestowed on the Church. Let the Church retain only its tithes and the revenues which it has received by bounty. If Henry renounces the right of investiture, the Church shall restore all it has received from secular princes since the time of Charlemagne" (Pagi, Vita Paschalis, i, 282 sq.; Feuchy, Hist. Eccles., v. 250). This proposal went to the root of the evil, and Paschal was probably sincere in making it; but the bishops, and especially the German bishops, who were possessed of large fiefs, strongly protested against it. In the mean time Henry arrived at Rome to be crowned, in 1100. He kissed the pope's feet according to custom, and entered hand in hand into the church of the Vatican; but here an explanation took place concerning the compromise, the result of which was that the treaty was broken off, and Paschal refused to consecrate the emperor. The particulars have been differently viewed by the Church writers. Some say that Paschal could not fulfill his proposed renunciation of the temporalities of the Church owing to the opposition of the bishops; others say that Henry would not give up the right of investiture, because his counselors, and among the rest several German bishops who were about his person, unwilling to risk their domains and revenues, pressed him not to renounce what they represented as an essential part of the imperial prerogatives and of the splendor of the imperial dignity. After repeated messages between the pope and the emperor, the latter, who wished to be crowned at all events, determined to frighten the pope into compliance. At the suggestion, it is said, of two German prelates, one of whom was the archbishop of Metz, Henry ordered his German soldiers to lay hands on the pope. A scuffle ensued; and the people of Rome, irritated by their prince's treatment, drove away the German soldiers, and drove them back with considerable slaughter to their camp outside of the town. Henry, however, kept possession of the person of the pope, whom he dragged after him, stripped of his pontifical ornaments and bound with cords. Paschal remained for nearly sixty years in a state of slavery. During which he was assailed by the remonstrances of his clergy, many of whom were prisoners with him in the German camp, until at last he yielded to their entreaties, consented to consecrate Henry unconditionally, and soon set up a bull the right of investiture. After the ceremony Henry returned to Germany, and Paschal thought it necessary to assemble a council in the Lateran to submit his conduct to the judgment of the Church. He declared to them at the same time that he would rather abdicate than break his word to the emperor, either by exchanging his persons or molesting him. After much deliberation, Paschal's cession of the right of investiture was solemnly condemned; and it was declared that the investiture of churchmen by lay hands was a heresy. The prelates and even the pope, in Frédéric's life of Paschal, approved of the proceedings of the Lateran council, and several of the turbulent German feudatories revolted against Henry. The emperor, however, kept the field, and, having defeated his revolted subjects, marched again to Italy to terminate the question with the see of Rome. Paschal, blamed and even personally insulted by the Romans because of his indulgence towards Henry and threatened at the same time by the latter, escaped to Benevento; and Henry, entering Rome, caused himself to be crowned again by the bishop of Benevento. After Henry's departure Paschal returned to Rome, but fell ill of plague and anxiety, and died in January, 1118. The question of the investiture was settled by a compromise in 1122, under Calixtus II, the successor of Gelasius. It was agreed that the bishops, being elected according to the canonical forms, should receive their regalia at the hand of the emperor, and do homage for them; but that in this ceremony the emperor should no longer use the ring and crosier, the insignia of spiritual authority, but the sceptre only. Paschal had also been in controversy with Henry I of England on the same subject, but they had settled in 1108 on similar terms. See Pagi, i, 286; Feuchy, v, 674; Baur, Gesch. d. Pol. d. Päpste, v, 287; Gföhrer, Gregorius V. u. sein Zeitalter, v, 529; Baxmann, Gesch. der Politik der Päpste, vol. v. See IV. Paschal III, antipope, was elected by the influence of the emperor Frederick I, in opposition to Alexander II, to be emperor. He took possession of Rome for a short time, Alexander being obliged to escape to Benevento, but with the departure of the imperial army from Rome in 1167 Paschal was obliged to quit also. He died short after (in 1168) at Viterbo. See Riddle, Hist. of the Popes, ii, 199; Milman, Hist. of Latin Christianity, iv, 396, 423-431. See also Alexander III. Paschal Candle. See Paschal Tapfer. Paschal Controversy designates the various disputes which have agitated the Church regarding the proper reckoning of Easter. The three synoptic Gospels are unanimous (Matt. xxvi, 17, 19; Mark xiv, 12-
16: Luke xxii, 17-19) in their statement that our Lord instituted the holy Eucharist in his last paschal supper. John is equally precise in saying that the Jews would not enter the judgment-hall "lest they should be defiled" through blood pollution, and be precluded from eating the passover in the evening (John xviii, 29). However, we have no record that our Lord celebrated the passover on one evening, and that the Jews should have deferred the memorial feast till the corresponding period of the next day? This is a real difficulty, which will be found discussed in full under Pasa- ovae. We here give the following as a possible solution. The Jews of the time of the new moon determined the Jewish calendar, an assembly was held in the Temple on the closing day of each month, to receive intelligence respecting the first $\phi \alpha \acute{\alpha} \nu\kappa \sigma$ of the new moon. If nothing was announced a day was intercalated, yet if the appearance of the moon was afterwards authenticated the intercalation was cancelled. This naturally caused much confusion, especially in the critical month of Nis- an. Hence (Talmud, Rosh Hash. 1) it was permitted that in doubtful cases the passover might be observed on two consecutive days. For the intercalation could hardly be known in Galilee; and, according to Maimonides (י"ע י"ק מ"א), in the more distant parts of Judaea the passover was in some years kept on one day, at Jeru- salem on another. Our Lord, coming in from the country, followed the letter of the law; but the main body of the Jews, observing rather the "tradition of the elders," sacrificed the passover on the following day in consequence of the intercalation of a day in the preceding month. Thus our Lord ate the passover on the evening of the 14th Nisan, and was upon the same day "the very Paschal Lamb" by the death of the cross (Harvey, Credea, p. 328).

Easter has been the high festival of the Church since the days of the apostles; though the primitive ritual in the west was very crude it followed inwardly the rule. Thus while the churches in a large majority celebrated Easter-Sunday on the first Lord's-day after the 14th of Nisan, on which our Lord suffered; others, as the Asiatic churches, commemorated our Lord's death on the 14th of Nisan as being the very day of the Saviour's cross and passion. This they did irrespectively of the day of the week on which it might fall. The paschal fast also was variously observed. Tertullian speaks of it as extending over the Holy Week (De Jejun. c. xiv); Epiphanius says, "The Catholic Church solemnizes not only the 14th of Nisan, but the entire week" (Herr. 1, 3), making a distinction from the Ebionite Quarto-decimani, who kept fast on one day only. The Church of the Ebionites is said to have observed the first Lord's-day following the pasch, or the day after the passover, making the 14th of Nisan a day of hybrid ceremonial, in which type and antitype, shadow and substance, law and Gospel, were hopelessly confused.

These three varying rules created a plentiful source of dissension; the Church was long unconscious of the coming evil, but while men slept the tares were sown. At first the bond of charity was known to be stronger than all—the difference of calendar made no alteration in the Gospel law of love. Thus Polycarp, bishop of Smyrna, having had occasion to visit Rome (A.D. 100) to confer with pope Anicetus on other matters, made the hypothesis that the Asiatic rule differed essentially from that of Rome. Both could claim apostolic authority, and therefore each reverently forbore from pressing a rival claim; while Ani- cetus assigned to his guest as his senior the privilege of consecrating the holy element; the Ebionites, on the other hand, would seem to have been the practice from the de- cree of an early synod (Euseb. Hist. Eccl. v, 23) convened to consider the case, which ordained that the Feast of the Resurrection should be celebrated on the Lord's-day and on no other; and that the paschal fast should then be brought to a close; for the ordinance would not have been needed if there had been nothing in this particular to amend. Hefele, however, sees in this decree a proof that the Asiatic Easter was always celebrated on the Lord's-day. The Council of Arles, A.D. 314, at which British bishops were present, similarly decreed that Easter should only be celebrated on the Lord's-day. Ireneus declares that with respect to the paschal fast there was a great divergence of practice, some churches fasting for one day, as the Ebionites, some for two; and some, as the Egyptians, for seven. Nothing can im- mediately precede the dawn of Easter; and he speaks of it as an old-standing discrepancy, ον ενωθεν μετα τω ημων γενωντας αλλα και πολυ πρωτον εις των προ ημων (Ep. ad Victor Frangm. c. iii, Cambri. ed.). The primitive Church, therefore, knew no fixed rule for the universal observance of the paschal fast.

With respect to the precise day on which our Lord's death should be commemorated, there was a threefold difference of practice. (1.) The Catholic Church affirmed that our Lord suffered on the 14th of Nisan; but seeing that the new creation dawned from Easter-morning, the Lord's-day following was the $\pi \alpha \chi \alpha \sigma \alpha \nu \alpha \tau \mu \alpha \nu \sigma \mu \nu$ and the Friday preceding was the $\pi \alpha \chi \alpha \sigma \alpha \nu \alpha \tau \mu \alpha \nu \sigma \mu \nu$. Thus the rule was fixed according to the day of the week on which our Lord suffered, and was declared to be the true ordinance, $\partial \gamma \xi \nu \delta \iota \varphi \iota \iota \iota \iota \iota \iota \iota$ (1 Cor. xiv, 20).

(2.) The Asiatic rule was professedly based upon the au- thority of the Ebionites, and of the Ebionite Quarto-decimani. The churches of Rome and of Antioch are said to have been adopted by the churches of Proconnesia (Hist. Eccles. v, 23) and those of the neighboring provinces, also in Mesopotamia, Syria, Cilicia (Athanas. Ad Afr. c. 2, de Synod. Arrim. et Sel.) and, as Chrysostom says, Antioch (In eoa qui Orat. in Pusea Sej. [ed. Bened. i, 688]). It was the belief of all the churches that our Lord was put to death on the 14th of Nisan, the day on which the paschal lamb was slain. But many denied that the Last Supper was installed at the paschal feast, or that our Lord celebrated the Passover at all in the last year of his minis- try, the statements of the synoptical Gospels notwithstanding (2 Cor. v, 10-16). The Asiatic rule commemorated the Lord's death on the 14th of Nisan, being guided by the day of the Jewish month, as the more general practice followed the day of the week on which Christ died. They were taunted for the Judais- ing practice, though the Church of Rome in its ritual and liturgy had more perhaps in common with the syna- gogue than the churches of Asia. The Quarto-decimani were but a small party in the Church. Still fewer in number (3) were the Ebionites or Judaising Quarto- decimani who held to the observances of the Mosaic law, and who the Church of Rome held to have made the 14th of Nisan a day of hybrid ceremonial, in which type and antitype, shadow and substance, law and Gospel, were hopelessly confused.

These three varying rules created a plentiful source of dissension; the Church was long unconscious of the coming evil, but while men slept the tares were sown. At first the bond of charity was known to be stronger than all—the difference of calendar made no alteration in the Gospel law of love. Thus Polycarp, bishop of Smyrna, having had occasion to visit Rome (A.D. 100) to confer with pope Anicetus on other matters, made the hypothesis that the Asiatic rule differed essentially from that of Rome. Both could claim apostolic authority, and therefore each reverently forbore from pressing a rival claim; while Ani- cetus assigned to his guest as his senior the privilege of consecrating the holy element; the Ebionites, on the other hand, would seem to have been the practice from the de-
keen perception of the truth of his own position, he was blind to all that might be advanced by others, and threatened with excommunication (A.D. 180) all those churches which commemorated their Lord's death on the first day of the week. It was the first germ of that system of aggression which reached its climax in the Hi" Gaza of Hieropolis. In Bithynia, the bishops and bishops of Bithynia were immediately held by his order (Euseb. Hist. Eccl., v. 23) in Palestine, Pontus, Gaul, Alexandria, Corinth, and Rome, and the more Catholic rule was everywhere pronounced to be binding. It was also determined that the festivals of the Paschal fast, and that the Lord's-day and no other should be the day for its celebration. The Asians remained unconverted and unconvinced, and continued to observe the 14th of Nisan as a day of mixed character, fasting till the ninth hour, and then rejoicing for the achieved work of man's redemption.

In opposition to a somewhat crushing array of names, not of individuals, but of churches, Polycrates, bishop of Ephesus, and a friend of Polycarp, put forth a writing in the name of the Asiatic bishops claiming the authority of John and Philip, whose tombs were still Eusebius, Hierapolis and many of the other venerable bishops, in favor of their own prophetic tradition. Still Victor pronounced them "heterodox," and not only essayed to cut them off from communion, ἀπόστιγμα τῆς ἑωσίας περιέχει, but he was told to pronounce them excommunicate, στυλητὶς ἐν διὰ γραμματίων, ἀκουσμηνοις ἁρδεύνην πάνω τοις ἱεροῖς ἀνακριβῶς ἀδύνατον (Euseb. Hist. Eccl., v. 24). The violent decree, however, was a mere "brutum fulmen," for none of the other churches assented to it, and Irenæus, bishop of Lyons, wrote a letter of excommunion to Victor on the subject. The result was that Rome stood alone in its extreme antagonism to the churches of Ephesus' communion.

Hitherto the paschal controversy had turned upon two points: (1) the proper day for the memorial of our Lord's death, and (2) the day on which the paschal fast should be resolved in the joyful commemoration of Easter. A third difficulty, of an Etoniotion complexion, arose (A.D. 170) at Laodicea, the capital of Phrygia Pacatiana, in Asia Minor; it was stated that our Lord instituted the holy Eucharist on the 14th, and was put to death on the 15th of Nisan, the Jewish method of computing the commencement of the day from sunset having been apparently ignored (Euseb. Hist. Eccl., iv. 26). The paschal feast of these schismatics combined the eucharistic with the paschal character which was introduced in the Syrian ordinance. The Church of course affirmed that the passover, like any typical observance, had only a temporary character, and that it was merged in the Christian commemoration of the sacrifice of Christ upon the cross. It was an entirely new phase of the Quaestodecanian theory, and caused an evil report of Judaizing notions to be attached to the orthodox followers of John and Philip and Polycarp. But the writers of the Asiatic Church at once denounced it as wholly inconsistent with Christian principle; and fragments still exist of writings that were put forth against it. The bishop of Ancyra, and Apollinaris, bishop of Hierapolis, both of whom followed the more orthodox Asiatic rule. "They err," says this latter writer, "who affirm that our Lord ate the passover on the 14th of Nisan with his disciples, and that he died on the great day of unleavened bread (i.e. on the 15th of Nisan). They maintain that Matthew records the event as they have imagined it: but their notion agrees not with the law; and thereby the Gospels are made to wear a contradictory appearance" (Chronicon Paschale, i. 18, in Dunbarton's Eshol. Hist. Script., xvi). This was the phase of the controversy which was adopted into Rome by Blasius, and was denounced at once by Irenæus (Euseb. Hist. Eccl., v. 20) in his treatise De Schismate. His follower, Hippolytus, took an active part against it (Fragm. in Chron. Paschale, i. 12, 13; and Philosoph., vi. 18); and Clement of Alexandria was induced by the treatise of Melito to refute the same error in his work on Easter, a few fragments of which are preserved in the Chronicon Paschale, (ibid. 14).

The Laodicene Quodrecedimus closely followed the Jews in their observance of the barley-harvest, or whenever the solar cycle required it, an entire month was intercalated at the vernal equinox. Hence in some years there was with them a double paschal celebration, and in others a total omission. Hence arose the reason why Easter was placed in the 5th century, but they caused an evil name to be attached to the orthodox Quodrecedimus practice, and greatly embittered the differences that already existed between some of the Asiatic churches and the rest of the Christian world. Further, the Catholic practice, like the Eastern, diverged into two branches, and the churches were unable to settle down upon one uniform rule. It is a question of astronomy; for the Jewish calendar ceased to be any trustworthy guide after the destruction of Jerusalem. The equinox was then taken as the fixed date from whence Easter should be calculated. The Christian church adopted and fixed the practice of reckoning from the equinox. At Rome it was March 18th; at Alexandria it was the 21st, according to the Macedonian calendar. The Asians, retaining their old custom, commemorated the death of our Lord on the full moon day of Pasch, as stated above. The new move for Easter on the first Sunday after the equinoctial full moon; but if the moon was at the full on Sunday, then on the succeeding Sunday, for the plain reason that the full moon in such a case coincided with the lunar age on the day of our Lord's death, and not of the resurrection. Hence those churches which followed the earlier equinox occasionally found themselves rejoicing in Easter festivities while the other churches were still practicing the mortification of Lent. And worse still, when the full moon fell on March 18th, Western churches celebrated their Easter accordingly; but the Alexandrian Church of necessity deferred their Easter till the next full moon, as being the first after the equinox of March 21. To obviate this difficulty various recurring cycles were devised, wherein the return of the full moon to the same solar position coincided after a certain number of years with the same day of the week, and the same day of the year. But they were more or less inaccurate.

The earliest was that of Hippolytus, bishop of Rome. As a rare waif of time, this was discovered inscribed on the right face of the pedestal of a marble statue of Hippolytus, who lived in the fourth century, and was buried (A.D. 1551) between Rome and Tivoli, near the church of St. Lawrence, and is now preserved in the Vatican. Eusebius (Hist. Eccl., vi. 22) attributes to Hippolytus the discovery of the cycle of sixteen years; and here it was found displayed for one hundred and twelve years (A.D. 292-393), Easter-Sunday in each of these years being given on the left face of the pedestal. But the cycle of sixteen years only showed the recurrence of the paschal-day with regard to the day of the year, and not of the week. The same ancient authority also shows that a fixed date was observed in 304, 305, and 312, Sunday, March 18 being assumed always as the vernal equinox. Dionysius, bishop of Alexandria (A.D. 246-265), set forth an eight years' cycle, Χρυσώματος καταραγείως (Euseb. Hist. Eccl., v. 70). Twelve years after his death Anatolius, an Alexandrian by birth and education, but bishop of Laodicea in Syria, wrote out the famous nineteen years' cycle, originally the observation of Meton the astronomer. The ancient Jews could only have celebrated the passover after the vernal equinox; therefore this, with him March 19th, was made the basis of construction. The Christian cycle was adopted by the Eastern churches, however, being advanced two days, to March 21; and whenever the full moon happened on Saturday, the next day, contrary to the Roman custom, was declared to be Easter-Sunday. The Asians still
followed the Jewish computation, as harmonising with the Saviour's practice, and cared nothing for the ecclesiastical calendar, which was to be occasionally anticipated; and for this reason the term Protopaschites was applied to them. The confusion caused by these differences has been very great, and especially in conterminous churches, where one custom ended and another began, but in the East it was not so, and that ancient rule was made to produce uniformity by synodal action. In that year the Council of Arles in its first canon decreed that Easter should be solemnized as "unio die et unio temporum per omne oratorium;" and the bishop of Rome sent forth an encyclical letter to enforce the desired harmony of action. Thus, in March AD. 331, it was resolved that the provincial could speak with no authority to the Church catholic; neither was the Roman bishop as yet the supreme pontiff, and practice continued to be discordant. It then became one of the two principal subjects for discussion and arrangement in the Council of Nice. No decree on the subject appears in its canons, and it is difficult to see any reason for the omission, unless it be that the fathers were unable to make up their minds upon a point that could only be settled by the astronomical expert. Thus they delegated to Eusebius of Caesarea the duty of determining by the best rule of observation the most accurate cycle to be adopted in framing the calendar. The Epistle of Constantine to the churches shows clearly the general points on which the Nicene fathers agreed, viz.: 1. That from henceforth the vernal equinox, and not the Jewish calendar, should determine the incidence of Easter. 2. That when the ecclesiastical full moon fell on a Sunday, Easter should be celebrated on the Sunday following; both for the reason already given, and because the Jewish festival would have been celebrated and over. Also, by making Easter by necessity the 17th Sunday after the vernal equinox, there was no longer danger of a double observance in the same year. But what ecclesiastical day was adopted, the Roman or the Alexandrian? The Latin translation of the Prodigy Paschalis of Cyril of Alexandria says that the Alexandrian Church, as representing the astronomical science of the day, was ordered to announce to the Church of Rome the true incidence of Easter in each year, and that it should be notified from Rome throughout the churches (Petavius, Doct. Temp. ii, App.; He- fele, Conc. i, 318; Ideler, Hombd. d. Chronol. ii, 258). Later councils, however, account (Ep. 121 al. 94), and Ambrose virtually says the same thing; the Nicene Council having, according to his statement, adopted the cycle of nineteen years, which, as has been shown, was the Alexandrian computation (Ambr. Ep. op Epis. cop. Eran). But, independently of the equinox, the paschal difficulties continued. The Church of Rome still clung to its faulty cycle of eighty-four years, the Alexandrian to that of nineteen; and it still continued to be a matter of reproach that the two principal churches of Christendom were often found to celebrate Easter on different days. The Council of Sardica, therefore, as seen by the lately discovered Festal Letters of Athanasius (Cureton, from the Nitrian Syr. MS., A.D. 843), endeavored to compose a difference by drawing out a paschal scheme for half a century. But it only defined the lunations, and (A.D. 897) matters showed worse than ever when Rome celebrated Easter on March 21, but the Alexandrian Church, since the 21st was its equinox, postponed the celebration till after the next full moon, or till late in April. The Quartodeciman party also still survived, the Nicene injunctions notwithstanding; as may be seen by the anathemas that against it were pronounced, Exarthis of the Council of Anacopia (A.D. 841), can. 1, and Council of Laodicea (A.D. 881), can. 1. It may be observed here that the Jews learned from the Christian Church to frame a paschal cycle, which was first adopted in the presidency of Hilile II at Tiberias, A.D. 338. The paschal difference to the continued use of the Christian Church on the 19th and 30th, induced by the less inconvenience and heart-breaking for another century and a half, till Dionysius Exiguus did good service to chronology by first dating events from the Christian era, and by giving Easter to the cycle of nineteen years for determining Easter. This he did by adopting the Alexandrian method of calculation, and reforming the Roman calendar accordingly, in which the churches of Italy readily acquiesced; while those of Gaul and Britain still held to their "old style." When the Heptarchy of England became the Diocese of Easter in Britain, although in Wales, and in the northern parts of the island, the old eighty-four years' cycle of Rome was still retained. A council was held on the subject, A.D. 664, at Streanechale (Whitby), king Oswy having found that his queen and her ladies were fasting in March whilst he indulged in the feasts of Easter. The Roman order was then fully confirmed in Britain. As Montalembert has justly observed, this difference had nothing to do with the Quartodeciman practice, which, in fact had died away in the 6th century (Moëne de l'Occid. iv, 169). In our present calendar, the Prime or Golden Number marks the particular year of the nineteen years' cycle; and these golden numbers, added in the margin from March 21 to April 18, indicate the days of the plenium on which Easter for each particular year depends, and which is the Sunday next following the Sunday of the Paschala; it being first fixed in Italy, and which case Easter falls on the following Sunday—Blunt, Dict. Paschal Light. See PASCHAL TAPER.

Paschal Solemnity, the weekly preceding and the week following Easter.

Paschal Taper, a taper used in the Roman Cath- olic Church at the time of Easter. It is lighted from the holy fire, and receives its benediction by the priest's putting five grains of incense in the form of a cross into the taper. This blessed taper must remain on the Gospel-side of the altar from Easter-eve to Ascension-day. See LYCHNOSCOPE.

Paschal Term, a name given sometimes to Eas- ter-day.

Paschall, Giovanni Luigi, a martyr to the Prot- estant cause in Italy, was a native of Cone, in Pied-mont. He was born about 1555, in early life was a soldier. Converted to God, he forsook the army and went to Geneva, there to study Protestant theology under Cal- vin. Paschall became so interested in the Reformed doctrines that he wrote pamphlets in their advocacy, and also urged the translation of the Bible into the Italian, in order that the populace might be more thor- oughly instructed in God's truth. From Geneva, where he received the freedom of the city, he went, with some other students, to Lausanne. At the latter place he continued his studies under Viret. About this time it happened that the poor Waldensian Christians of Cal- labria, in the southern part of Italy, appealed to Calvin for a teacher—for the Inquisition, first of all, robbed the flocks of their shepherds, in order the better to get the sheep into its power. The necessity was thus con- fronted by the principal persons of the Italian congrega- tion at Geneva, and they found no one better fitted for the task than Paschall, now at Lausanne. When he heard the news of this appointment he was on the eve of being married, but he concluded to postpone this step, and accepted the call more cheerfully. He was born at Luni. In 1559 Paschall was received with joy by the Walden- sian, and he began his work among them with great
On Sunday, Sept. 8, 1560, he was taken to the cloister of La Minerva, where his sentence was publicly read to him. After he had acknowledged the authenticity of his decription, and thanked God for the honor of which he was counted worthy, he was again conducted to prison. The next day, Sept. 9, the people went to the execution. The martyr was led bound to the Campo di Fiore, in sight of the castle of St. Angelo, where the pope had gone, accompanied by the cardinals and other prelates. As Paschali undertook to preach to the people, to the pope, and his prelates, there arose a great commotion, and every one demanded that he should be immediately put to death. Thereupon the executioner quickly threw the rope about his neck and strangled him, and with a short respite and a kneeing, Paschali died, saying, "Martyrs for the True Cause, p. 28 sq; M'Crie, Hist. of the Ref. in Italy."

Paschalinus, a Roman priest of note in his day, flourished near the middle of the 5th century. We first encounter him in A.D. 451, when he was bishop of Lifybaurn, in Sicily, as papal legate at the Council of Chalcedon. He there represented the interests of the Roman pontiff, together with Lucentius, bishop of Asculum, and Bonifacius, a presbyter. Paschalinus, of whose previous history and position in life we know nothing, seems to have held the chief place among the three legates, since he subscribed the acts of the council in the names of the pope before the others. An epistle of Paschalinus, De quatione Pastali, is still extant, addressed to Leo in reply to some inquiries from the pontiff with regard to the calculations for determining the festival of Easter. It will be found under its best form in the editions of the works of Leo, published by Quezel and by the brothers Ballerini. See Schlennon, Bilih. Patrum Lat. vol. ii, § 49; Bähr, Geschichte der röm. Literatur, suppl. vol. p. ii, §168; Smith, Dict. of Greek and Roman Bieg. and Myth. iii, 181; Cellier, Hist. des Act. Sacres, z, 170-175, 201 sq; Stob. i 222 sq.

Paschalinus, a Roman Catholic divine of the 5th century, flourished at Rome as deacon of a Church about A.D. 490. He was a friend of the antipope Laurentius, and sided with him. Paschalinus is reputed to have written De Spiritu Sancto libro duo, quibus symboli cærorum continetur, adversus errores Monac. Patr. cap. 82; and Casimir Oudin describes the work to Faustin Regensis.

Paschalinus Radbertus, Sr., a noted Benedictine of the first half of the 9th century, was a native of Soissons, France. He embraced the monastic life while yet a youth, and was educated and domiciled at the convent at Corby, in Aquitaine. He was there under the rule of Adrian, and when his house was burned, he withdrew to St. Fortrice.

The former of these abbots died in A.D. 826. Paschalinus first came into public notice in A.D. 851, when he was still a simple monk. A little after this he was employed as teacher, and in important missions. In A.D. 864 he was elected abbot of the convent, although he had never taken holy orders. In A.D. 851 he resigned this office, and died as simple monk in A.D. 865, at the abbey of St. Riquier, where his time was zealously devoted to the study of theology and philosophy. He is now commemorated by the Church of Rome as a saint by order of Pope Alexander II (A.D. 1070). In the history of Christian dogmatics Paschalinus is celebrated as the originator of the transubstantiation theory, i.e. that the bread and wine no longer exist in the elements of the Eucharist after the blood and body of Christ have become present there by the act of consecration. Paschalinus may thus be said to have raised a controversy which has disturbed the Western Church for more than a thousand years. It was called out into symmetrical form, as a theory, by the inquiries of a former pupil of his named Waurin (whom he addresses as Paschidius), who, having become abbot of New Corby, in Saxony, requested his old instructor
to draw up a treatise on the Holy Eucharist for the guidance of the young community. In the year 831, therefore, Paschiasius Radbertus wrote his work, De Sacramento corporis et sanguinis Christi, of which, when it had become the subject of controversy, he presents a large fragment, in the presence of Charles the Bald, in the year 844. In this treatise Radbertus sets forth the ordinary doctrine of the Church respecting the true and real presence of Christ’s body and blood in the consecrated elements, but he goes far beyond all previous writers in enlarging the matter of the presence and its consequences. There had been scarcely any controversy hitherto on the subject of the Holy Eucharist, although John of Damascus, followed by the second Council of Nicea (A.D. 787) and the Council of Frankfort (A.D. 794), had seen cause to censure the application of “figure” and “type” to the elements, while a Council of Constantinople (A.D. 754) had asserted their legitimate use. This shows the dawn of such a controversy.

The dialectical subtlety which had been employed on the subject was extremely learned, and the Christian Trinity was now, however, to be engaged for many a generation on those connected with the sacrament of Christ’s body and blood, and the full tide of strife was set flowing by the clear and uncompromising statements of Radbertus. The substance of these statements is as follows: (1) The very body of Christ, which was born of the Virgin Mary, and which was imculated on the cross, together with the very blood that belonged to that body, and was shed upon the cross, are those which the communicants receive (and he does not hint at receiving in spirit only) in receiving the consecrated elements of the Holy Eucharist; (2) That the bread and wine which are consecrated are wholly and entirely converted into the body and blood of Christ, so that they are no longer to be spoken of as being in any natural sense bread and wine; (3) That the consecration is not simply of such a manner that it is not made known to the senses, God permitting the appearance and taste of the bread to remain as a veil to the great miracle which he has wrought; (4) But that under special circumstances, to confirm the faith of doubters or to satisfy the devotion of others, the fact of the conversion is made apparent to the senses by the substance of Christ’s body and blood either in the form of a lamb, or presenting the color and appearance of flesh and blood. Only one such instance is narrated, but it is said to be one out of many. (De Sacramento corporis et sanguinis Christi [in "Bibl. Max. Ludi." xiv, 729]; Martene, Vet. Script. Collect. i, 867; Migne, Patrol. vol. cxx.)

This precise definition of the nature of the Eucharist was a novelty in the Church, as is shown by the catenae of authorities respecting that sacrament which have been collected by Palladius in his Liturgicon, and by Grrieranger in his Institutions Liturgiques. It raised a controversy at once among the theologians of the Benedictine order, and Radbertus endeavored to prove his statements in a letter addressed to one of his monks named Prudegarde, in which he collected passages in support of his fathers (Pasch. Radbert. Opp. Bibl. Max. Ludi. xiv, 749; Migne’s Patrol. cxx, 1551). The first to reply in writing to these novel opinions or definitions was Rabanus Maurus, abbot of Fulda (A.D. 892-947), and afterwards archbishop of Mentz (A.D. 847-856), in an epistle to a monk named Eigel, which has been lost (comp. Mabillon, Act. Sacr. Ord. Benel. sec. iv, ii, 591). When the controversy attracted the attention of the emperor Charles the Bald, he required of Paschiasius Radbertus a copy of the treatise, and it was delivered to another monk of Corvey, Ratramnus, or Bertram, for examination. The result was an answer by Ratramnus. Radbertus, in the form of a treatise bearing the same title as that of Radbertus, is of the point is to prove that there is a difference between the manner of Christ’s presence when on earth and that of his sacramental presence in eucharistic elements; that in the latter “est quidem corpus Christi sed non corporale, at spiritualiter;” maintaining, however, as strongly as his opponent the reality of that presence (Ratramnus, De Corp. et Sangu. Dom. ii; Migne’s Patrol. xxvii, 815, Oxford ed. 1866). The great liturgical commentaries of Walafrid Strabo, De Recl. Ecc. ch. xvii, xvi, were also an opponent of Radbertus, and that portion of his work which deals with the subject is more in accordance with the writings of their Catholic predecessors (Walafrid Strabo, De Reb. Ecc. ch. xvi, xxi, etc. and other opponents, more radical than the others, was Eriken (q. v.). He held that the Eucharist is a mere memorial of Christ’s death in past time, and not of his presence in the sacrament, a typical act of feeding, by which the mind of the faithful communicates intellectually and piously reminds him of the work of his Lord (Dillingen, Church Hist. iii, 23, Cux’s transl.). With the death of Paschiasius the controversy subsided for a while, but its revival by Berengar and Lanfranc in the 12th century makes it very evident that the doctrine pleased the superstitions tendency of those ages, and that this the view of the Council of Constance effects far and wide on the popular mind, and finally the views of Paschiasius Radbertus were stamped upon the authoritative theology of the Roman Church, under the name of Transubstantiation, by the fourth Council of Lateran, in the year 1216.

Paschiasius was also the author of works entitled De etate et caritate, and De Partu virginis. The former betrays more clearly his熹itious notions in religion. The latter is a bold defence of a doctrine held also by St. Jerome, viz. that the virginity of the Holy Virgin Mary continued after the birth of Christ, or, in other words, that Mary gave birth to Christ exuclusus, and that therefore she and her offspring should be regarded as free from the taint of original sin. (See Mitichner, Dogmengesch. ed. Coln, p. 86 sq.; Walch, Historia Controversiaria sec. IX de Partu B. Virginis [Gotz. 1798, 4to]; Hagenbach, Hist. of Dogmas, ii, 40 sq.). The complete works of Paschiasius, with a short but excellent biographical sketch as introduction, were published by the Benedictines, entitled Opera, quorum pars maxima nunc primum prodiit ex bibliotheca Monast. Corbieziana (Paris, 1618, fol.). The works are reprinted in Migne’s PATROLOGIA, vol. cxxii, besides the authors already quoted, Hagenbach, Hist. of Dogmas (see Index in vol. ii); Neander, Hist. of Dogms (see Index in vol. ii); Rücker, in Hilgenfeld’s Zeitschr. für hist. Theologie, 1868; Dieckhoff, Die Abend-mahlformen im Reformationsangebot; Baur, Dogmengesch. vol. ii; Hausherr, Der h. Paschiasius Radbertus (Mainz, 1862).

Pas-Dammim (Heb. Pas Dammim', פס דאם', west of brook [or extension of brooks, First]; Sept. Πασδαμον v. Πασδαμονι, Vulg. Amphimelum), the form in 1 Chron. xi, 18, of the name which in 1 Sam. xvii, 4 is given more at length as Ephed-dammim. It will be observed that in the original of Pas-dammim the article (ה) has taken the place of the first letter of the other form (ה). In the parallel narrative of 2 Sam. xxiii the name appears to be corrupted (Kennicott, Dissert. p. 137) to charphem (ךרפחם), in the A. V. rendered “there.” The present text of Josephus (Ant. vii, 15, 4) gives it as Aramesum (Arsanocon). The chief interest attaching to the appearance of the name in this passage of Chronicles is the evidence it affords that the place was the scene of repeated encounters between Israel and the Philistines, unless indeed we treat 1 Chron. xi, 13 (and the parallel passage, 2 Sam. xxiii, 11) as an independent account of the occurrence related in 1 Sam. xvii, which seems possible. In the text, a ruined site bearing the name Dārân lies near the road from Jerusalem to Beit Jebrin (Von de Velde, Palast. ii, 188; Tobler, Dritte Wand. p. 201), about three miles east of Shuweikeh (Socho). Dr. Porter, how-
ever, who visited and carefully selected, came to the conclusion that the camp of the Philistines must have been west and not east of Shochoh, and he does not therefore identify Ephes-dammim with Dagon (Ussishkin for Palestine, p. 291). See ELIAS, BROOK OF

Paseah (Heb. Pase'dhch, פָּסָה, lame, Sept. Φεσώγια v. r. Besorah in 1 Chron. iv, 12, Paseah in Ezra ii, 49, Φασώγια in Neh. iii, 6), the name of two men. 1. The second named of three sons of Eshton, among the descendants of Judah (1 Chron. iv, 12), described as "the general of Bechah," which in the Targum of B. Joseph is rendered "the men of the great Sandhemir." B.C. post 1618. 2. The head of a family among the Nethinim who returned with Zerubbabel (Ezra ii, 49; "Paseah" in Neh. vii, 51). Jehohada, a member of the family, assisted in rebuilding the old gate of the city under Nehemiah (Neh. iii, 6). B.C. ante 446.

Pase-Buddhā, a name for the Buddhā who arise in the period in which there is no supreme Buddha, and discover instinctively the way to Nirwāna, but are unable to teach it to others. If alms be given to a Pase-Buddhā, it produces merit greater by one hundred times than when given to a rākṣasa. The peculiarities of the character of the Buddhas are detailed by Mr. Spence Hardy in his Eastern Monachism: "He has attained the high state of privilege that he enjoys by his own unaided exertions, as he has had no one to instruct him. He is called pratyekabuddha, or one who has attained the perfect state of a Buddha, being a pure, free, towards the Pase-Buddhāship, both dāna, gift, and kṣāman, the growth or nourishment, the bud, forward, towards the state of the supreme Buddhas. He has learned that which belongs to his order, but he understands not the five kinds of knowledge that are perceived by the supreme Buddhas and by no other beings: he knows not the thoughts of others; he has not the power to see all things, nor to know all things; in these respects his mind is heavy. Thus a man, whether by day or night, arrives at the brink of a small stream, into which he descends without fear that he may cross over to the other side. But another time he comes to a river that is deep and broad; there are no steppingstones by which he can cross; he cannot see the opposite bank. It is like the ocean. In consequence of these obstacles he is afraid to venture into the water; he cannot cross the stream. In the same way the Pase-Buddhā is afraid to venture into the river of the next world; he is afraid to take the path of his own order, but bound as to all that is peculiar to the supreme Buddhas."

Pashā, a title used in the Ottoman empire, and applied to governors of provinces, or military and naval commanders of high rank. The name is said to be derived from two Persian words—pet, "foot," or "support," and šah, "ruler," and signifies "the support of the ruler." The title was limited in the early period of the Ottoman empire to the princes of the blood, but was subsequently extended to the grand-vizier, the members of the divan, the seraskier, capitán-pasha, the beglerbegs, and other civil and military authorities. The distinctive badge of a pasha is a horse's tail, which is taken from the end of a staff crowned with a gilt ball; in war this badge is always carried before him when he goes abroad, and is at other times placed in front of his tent. The three grades of pashas are distinguished by the number of horse-tails on their standards; those of the highest rank are pashas of three tails, and include in general the highest functionaries, civil and military. All pashas of this class have the title of vizier; and the grand-vizier is por excellens, a pasha of three tails. The pashas of two tails are the governors of provinces, who are called by the simple title of "pasha." The lowest rank of pasha is the pasha of one tail; the sanjaks, or lowest class of provincial governors, are of this rank. The pasha of a province has authority over the military force, the revenue, and the administration of justice. His authority was formerly absolute, but recently a check was imposed on him by the appointment of local councils. The pasha is in his own person the military leader and administrator of justice for the province under his control. It is said that the pleasure of the sultan—a most precocious tenure, as the sultan can at any moment, in the exercise of his despotic power, exile, imprison, or put him to death; and this has frequently been done in cases where the pasha's power has excited the apprehension, or his wealth the avarice, of his royal master. The word pasha does not occur in the A. V. of the Bible, but in the original it is the identical term, pechā (rendered "captain," "deputy," "governor"); it is applied in 1 Kings x, 15 to the petty chieftains who were tributary to Solomon (2 Chron. ix, 14); to the military commander of the Syrians (1 Kings xx, 24), the Assyrians (2 Kings xvii, 34; xxiii, 6), the Chaldeans (Jer. ii, 29), and the Medes (Ezra viii, 38). Under the Persian viceroy, during the Babylonian captivity, the land of the Hebrews appears to have been portioned out among "governors" (יוֹם, pachokh) inferior in rank to the satraps (Ezra viii, 36), like the other provinces which were under the dominion of the Persian king (Ezra viii, 33). It was only proper that they should have precise limits of their authority, or the functions which they had to perform. They formed a part of the Babylonian system of government, and are expressly distinguished from the דְּגָגִים, seganim (Jer. ii, 28, 29), to whom, as well as to the satraps, they seem to have been inferior (Dan. iii, 2, 8, 27); as also from the דְּגָגִים, seganim (Ezra iii, 1, 12; viii, 9), who, on the other hand, had a subordinate jurisdiction. Sheshbazzar, the "prince" (Neh. iv, 1, 9) of Judah, was appointed by him as" governor" of Jerusalem (Ezra vi, 14), or "governor of the Jews," as he is elsewhere designated (vii, 7), an office to which Nehemiah afterwards succeeded (Neh. viii, 14) under the title of Tirathshu (Ezra ii, 68; Neh. viii, 9). Zerubbabel, the representative of the royal family of Judah, is also called the "governor" of Judah (Hag. i, 1), but whether in consequence of his position in the tribe or from his official rank is not quite clear. Tzarai, the "governor" beyond the river, is spoken of by Josephus (Ant. xi, 4, 4) under the name of Sisanes, as פָּסָה, of Syria and Phoenicia (comp. 1 Esdr. vi, 3), the same term being employed to denote the Roman pro-consul or proprietor as well as the procurator (Josephus, Ant. xx, 8, 1). It appears from Ezra vi, 8 that these governors were intrusted with the collection of the king's taxes; and from Neh. v, 18; xii, 26, that they were supported by a contribution levied upon the people, which was called "the tribute of the governor" (comp. Ezra iv, 14). They were probably assisted in discharging their official duties by a council (Ezra iv, 7; vi, 6). In the Peshito version of Neh. iii, 11, Pahath Mofh is not taken as a proper name, but is rendered "chief of Mofh," and a similar translation is given in other passages where the words occur, as in Ezra ii, 6; Neh. vii, 11; x, 14. The "governor" beyond the river had a judgment-seat at Jerusalem, from which probably he administered justice when making a progress through his province (Neh. iii, 7). See GOVERNOR.

Pashur [some Psia/hur] (Heb. Pashur), פֶּשֶׁר (Gesenius, from an Arabic word, surrounded by a pool; by Furst, from a Heb. root, liberation; the etymology, as implying something favorable, seems to be referred to in Jer. xx, 8; Sept. פֶּשֶׁר, פֶּשֶׁר, n. r. פֶּשֶׁר [Ezra ii, 38; x, 27], פֶּשֶׁר [Neh. viii, 41], פֶּשֶׁר [Jeremiah]), the name of two or three men.

1. A priest, the son of Immer, and a contemporary of Jeremiah, who acted as to incur a severe threatening from that prophet. B.C. 607. Presuming on his position as "chief governor in the house of the
PASINELLI

PASQUALI

Lord" (Jer. xx. 1)—that is, probably, being at the head of those who had the charge of maintaining order and decorum about the Temple—he smote Jeremiah, when he heard him prophesying of the desolations which were going to fall upon Jerusalem, and put him in the stocks. He had heard and a sad situation the prophet remained for a night; and on being brought forth on the morrow, he declared to Pashur that the Lord no longer called his name Pashur, but Magor-mi-shebag—on every side enveloped in trouble and distress. Thus, the prophet further intimates, was to be visited by both Pashur and his family being involved in the terrible disasters that were presently to burst upon Judah and Jerusalem from the invasion of Nebuchadnezzar; they were to be all carried away into captivity to Babylon, and die in that foreign land (xx. 9). We have no specific account of the fortunes of the family; but the circumstances which soon took place leave no room to doubt that the prediction was verified.

2. Another priest in the time of Jeremiah, being the son of Melchiah (Jer. xxi. 1; xxviii. 11). B.C. 589. He twice came in contact with the prophet: once sent along with some others to inquire what was the mind of the Lord respecting the meditated assault of Nebuchadnezzar against Jerusalem, which drew forth an announcement of certain overthrow; and again when conversing with several others in an application to the king, and tried to dissuade Jeremiah part to desert from the denunciations he was uttering, as tending to discourage the people and produce in them a spirit of disaffection. The application led to Jeremiah's imprisonment, from which he was only delivered by the special interposition of Providence (1 Chron. xiv. 17). Pashur's father, however, were among those who returned from the captivity of Babylon, and seem to have possessed a place of importance both as to position and numbers (Neh. vii. 41; xi. 12).

3. The father of Gedaliah, which latter took part with Pashur last named in the accusation and imprisonment of Jeremiah (Jer. xxviii. 11). B.C. 589. He was perhaps identical with one or the other of the foregoing.

Pas[s]inelli, LORENZO, an Italian painter, was born in 1629 at Bologna. He first studied under Simome Cantarini, and next with Flaminio Torri. He afterwards went to Venice, where he became enamoured of the ornamental and brilliant style of Paul Veronese, and he made the works of that master his model, though he did not servilely imitate him. Lanzi says, "He bore himself with that easy and easy-going air, that natural composition, but the air of his head and the distribution of his colors he obtained from another source; and though he never acquired the correctness of design which distinguishes the works of Torri, yet in this respect, he was no less happy." On his return to Bologna, Pasinelli found abundant employment in painting, principally for the churches. He was naturally inclined to create surprise by the display of copious, rich, and spirited compositions; such are his two pictures at the Certosa, representing Christ's Entrance into Jerusalem, and his Return into Limbo; and such, too, is his history of Coriolanus, in the Casa Manuzzi—a piece found repeated in many collections. No one can behold these paintings without granting to Pasinelli a true painter's fire, great novelty of ideas, and an elevated character. With these gifts, he was sometimes too extravagant in his imitation of the Venetian master, and composed strange and novel draperies of Veronese, which he is thought to have carried to the extreme, as in his Preaching of John the Baptist in the Wilderness, which gave occasion to his rival Taruffi sarcastically to remark that, instead of the desert of Judea, he had placed the piazza of St. Mark at Venice. He nevertheless knew how to moderate his fire according to his theme, as in his Holy Family, in the church of the Barefooted Carmelites, which partakes of the elegance and grace of Allano. The most esteemed of his paintings in the churches at Bologna are the Resurrection, in St. Francesco; and the Martyrdom of St. Ursula and her Companions, in the Palazzo Zambeccari. Pasinelli died in 1700. Basan erroneously states that Pasinelli etched some plates, and mentions two—St. John in the Desert, and the History of the Founder of the Donor of St. Ursula and other saints; but these plates were engraved by Lorenzini, a scholar of Pasinelli.

Pasiphéïa, a goddess worshipped among the ancient Greeks at Thalame, in Laconia. She was believed to give success in all revelatory or oracular responses in dreams to those who slept in her temple.

Pasithéa, one of the Graces among the ancient Greeks.

Pasar, GEORG, a learned German philologist, was born Aug. 1, 1570, at Ellar, in Nassau. In 1615 he became professor of philology at Herborn, and in 1616 at Franoecker, where he died, Dec. 10, 1657. He is the author of a small lexicon of the New Testament, Lerncon Graeco-Latin in N. Test. (Herborn, 1622), which has been several times republished, and he left among his papers a grammar of the New Testament, which his son Matthias published, with additions and improvements. The title of this work, under the heading, De grammaticis Graecae Sacrae N. T, in tres libros distributa (Groningen, 1658), this work, which is far more fitted than the lexicon to transmit the author's name to posterity, is now a literary rarity, and is not even mentioned by Poppen (Bibliotheca Belgica, i, 942), who gives a list of Pasar's other writings. See Frits, Bibl. Judaeos, iii, 68; Steinschneider, Bibliogr. Handbuch, p. 109; Theologisches Universal-Lexikon, s. v., Jöcher, Allgemeines Gelehrten-Lexikon, iii, 1284; continued by Rottermund, v, 1629; (F. F.)

Pasar, MATTHAEUS, son of the preceding, is noted also for his philological as well as mathematical attainments. He was born at Herborn in 1599, and was educated at the university in Marburg. After teaching for some time privately in Hebrew and mathematics he went to England, and was created M.A. by the University of Oxford in 1624. Not finding any opportunity there of securing a professorship he went over to Germany, and attended lectures at Paris. He made himself master of the Syriac and Arabic, returned to Oxford in 1625, and was shortly after made lecturer on oriental languages. In 1626 he was made temporary professor, and exercised this function till 1629, when he accepted an invitation to the chair of mathematics and philosophy at Groningen, which he entered upon in August of the same year. Upon the death of Muller, the mathematical professor, six years after, Pasar succeeded to that chair, and in 1645 he was raised to that of divinity, of which faculty he was then created doctor. On this occasion he resigned his mathematical professorship, but retained that of moral philosophy. In 1658 he made a visit to Nassau, his native country; and, going as far as Heidelberg, was entertained with great civility by the elector palatine. He died in January, 1657-8, at Groningen, having never been married. He published no books, for which he gave two admirable reasons: first, "Because he was not willing that youth should be diverted from reading the good books already published;" and, secondly, "Because he did not care that the booksellers should risk their money." (J. H. W.)

Pasqualli, FILIPPO, an Italian painter, was a native of Forli, and flourished in the second half of the 17th century. He studied under Carlo Cignani at Bologna, and afterwards associated himself with Marc Antonio Franceschi, in conjunction with whom he painted many works at Bologna, Rimini, and other places, in which he imitated the style of the ornamental parts. Some of his earlier works are to be seen in the portico of the Serviti at Bologna. Lanzi highly commends his altar-piece in the church of S. Vittore at Ravenna, which he executed alone at a more advanced age. He is supposed to have

Pasqualini, Felice, a Bolognese painter, who flourished about 1575. According to Malvasia, he was the pupil of Lorenzo Pasquini, whose style he adopted. He executed some works for the churches, which Lanzi thinks might justly be attributed to Sabbattini, such was the part he took in their execution.

Pasqualini (or Pascalinii), Giovanni Battista, an Italian painter and engraver, was born at Certo, near Bologna, in the latter part of the 16th century. His earliest print is dated 1619, and the latest 1630. He studied painting under Ciro Ferri, but does not seem to have acquired much eminence in that art. He executed many etchings, mostly after Guarini, in which he endeavored to imitate with the point the masterly pen-drawings of that master, but he did not possess a sufficient command of his instrument to accomplish it with much success. He frequently signed his plates J. B. Centensia. Nagler gives a list of forty prints by him, of which the following are of interest to us: *Christ dictating the Gospel to St. John; the Resurrection of Lazarus; Christ giving the Keys to St. Peter; Christ taken in the Garden; Angels showing Mary Magdalenne the Instruments of the Passion; Christ with the Disciples at Emmaus; the Incredulity of Thomas; the Virgin and the infant, with an Angel presenting Fruit; the Virgin and Infant, to whom St. John presents an Apple; St. Charles Borromeo; St. Felix resurrecting a Dead Child.* All these are after Guarini. Besides, Pasqualini elaborated St. Felix kneeling before the Virgin and Infant, after L. Caracci; *St. Diego working a Miracle*, after Ann. Caracci; *The Death of St. Cecilia*, after Domenichino.

Pasqualina, Martínez, chief of the sect of the Illuminati (q. v.), was born about 1715 in Portugal. Of Jewish origin, he had submitted himself in 1754 for admission to the cabalistic body, and afterwards became famous by his introduction of cabalistic rites into several masonic lodges of France—at Marcellieres, Toulouse, and Bordeaux. In the latter city he initiated operations which he called *theorie*. One of his most devoted admirers there was Louis-Clauude de Saint-Martin, then an officer in the regiment of Foix, with whom he has often been confounded, in consequence of the similarity of their names. Saint-Martin, who presented his doctrine as a secret Biblical teaching which he had received by tradition, brought it in 1768 to Paris, and made a large number of adeptes, who in 1775 took the name of *Martínistas*. In their reunions they engaged in exercises which announced active virtùes, to use consecrated language. They obtained, by sensible means, manifestations of an intellectural order, which revealed to the proselytes a science of minds, as the visions of Swedenborg, of a sentimental order, revealed a science of souls. One may conclude from Pasqualina's unpublished writings, and from those of his disciples, that he believed, or made his disciples believe, that it is possible for men in a devoted state to produce supernatural effects, or miracles. Martínez Pasqualina left Paris in 1778 for St. Domingos, where he was called to succeed one of his relatives, and died at Port-au-Prince the following year. See Saint-Martin, *Œuvres diverses*, passim.

Pasqualeotto, Constantino, an Italian painter, flourished at Vicenza about 1700. He studied at Venice, and on returning to his native city he executed some fine works for the churches. Lanzi says he was master of the technique for the imitation of drapery and the brilliancy of his coloring than for the correctness of his design.

Pass (or Passe), Crispin de, called the Younger, a Dutch painter, was born at Urrecht about 1630. Little is known with certainty of him. He studied design and engraving in 1658. There are only a few prints by him, and these are of the set of four plates of the History of the Rich Man and Lazarus; the fourth was engraved by his father.

Pass (or Passe), Magdalena de, daughter of Crispin de Passe, was born about 1588. She learned engraving of her father, and elaborated some small plates of portraits and other subjects in such a neat, finished style, that their possession considerably enriches Among her works are, *The Wise and the Foolish Virgins*, after Elsheimer; *fine*.

Passage, in the A. V., is the representative in certain places of several forms from the root יתָר, abder, to cross: 1, the simple verb (Num. xx, 21, "give passage," elsewhere usually "pass"); 2, יָּתָר, eber, a crossing (Josh. xxii, 11; in the plur. Jer. xxii, 20, *Abartim* [q. v.]; elsewhere "by beyond," etc.) [see also Enem]; יָתָר, madbër, fem. יָתָר, a transt, either by water (Judg. xii, 5; Jer. ii, 32), a ford (as rendered often), or by land, a pass through mountains (Isa. x, 29), as at *Michmash* (q. v.) (1 Sam. xii, 28; xxiv, 4).

Passalorchnichites, a party of Montanists who observed perpetual silence, giving literal obedience to *Pass. cxili. 3: *"Set a watch, O Lord, before my mouth; keep the door of my lips."* Jerome found some of them in Asia Minor obliterating this passage of the *dissimulism*.

Their name is derived from the Greek *phazo*, a nail, and *vorn*, a nostril, because when they put their finger to their mouth, which they did to keep their mouth from giving utterance to their thoughts, they touched their nose. The Passalorchnichites did not even pray.

Passau, a picturesque fortified frontier town of Bavaria, containing 15,988 people, and situated at the confluence of the Inn and the Iitz with the Danube, ninety miles east-north-east of Munich, and rising like an amphitheatre on the most beautiful spot of the Danube, is strikingly effective and picturesque. The place is especially celebrated in Protestant Church history, for it was here that the treaty of Passau was signed, Aug. 2, 1552, by the emperor Charles V on the one side, and the Protestant princes of Germany on the other, giving public recognition to the Lutheran faith as among the national constitutions. Among the chief buildings are the cathedral, the bishop's palace, the post-office (where the treaty of Passau was signed in 1552); the Jesuits' College, a large building now used as a school; and the church of St. Michael. The Cathedral Square (Dompfalt) is a bronze statue of king Maximilian Joseph, of recent erection. Passau contains also numerous picture-galleries, collections of antiquities, and benevolent and charitable institutions. The natural advantages of this site, in a military point of view, were appreciated at an early period by the Romans, who erected a strong camp here, garrisoned it with Batavian troops, and from this circumstance named it Batavia Castra. Passau was long the seat of a bishopric founded in the 7th century, but secularized in 1803. The cathedral of Passau and great part of the town were consumed by fire in 1662. During the Reformation period many advocates of the new cause flourished in Passau, but the Jesuits of Vienna, who in 1612 succeeded in establishing a college at Passau, used all means at their command to reinstate Romanism at this place in its wonted glory and power, and they succeeded so well that the Protestant fold was reduced to a mere trifle. See Spieker, *Gesch. des Augsburger Religionsfriedens* (Schliz, 1884); Ranke, *Reformationsgesch. vol. vii; Soames, Hist. of the Ref. iii, 747; Hefele, *Conciliengesch.,* v, 26 sq.; Fisher, *Hist. of the Ref.,* p. 187; *Gieseler, Eccles. Hist. iv, 206. See PROT. RELIGION.* RELIGION.
PASSAVANTI, Jacopo, an Italian scenic writer, was born in 1357, at Florence, his native place. He belonged to the order of the Dominicans, and rendered his name celebrated in Italy by a treatise entitled Sprechto della vose persuasoria, which Leonardo Salviati had printed in 1588. The Academy of La Crusca pronounced this the classic of the Italian language. He had the excellence of style, and published an edition of it in 1681, which was reproduced in 1725 (Florence, 4to). See Echard et Quétif, Script. ord. Pracolici, vol. i.

Passerini, Albertino Radicati, Count of, was an Italian philosopher, born at Piacenza. He writes in the last volume of his works, attached to the house of King Victor Amadeus II, he was concerned in the differences which arose between that prince and the holy chair on the subject of consistorial benefices, and wrote against the court of Rome pamphlets so violent that, in consequence of a suit which was brought against him, the tribunal of the Inquisition ordered the seizure of his goods. But he was enabled to escape the effect of this judgment, and fled to England, where he allied himself with Collins, Tindal, and other freethinkers. He died in Holland, and was bequeathed all that was possessed by the poor. We have several works of his in Florence, in which are found a singular mixture of invectives against the clergy, plans of reform, and philosophical ideas; of these we quote Dissertation sur les mort (Rotterdam, 1732). This tract, advocating monarchy, justified by a qualifying suit, and condemning the responsibility, was suppressed. We quote again of his works Recueil de pièces curieuses (ibid. 1735, 8vo), and a supposed translation under the title of La Religion Mohametana comparée à la Polonoise (1737, 8vo). See Foccart prefixed to the Recueil of 1736.

Passeri, Andrea, an Italian painter of Como, flourished about the year 1505. In the cathedral of his native city is a picture of The Virgin surrounded by the Apostles, in which the composition and expression of the heads are good; but Lanzi says there is a dryness in the hands, with the use of gilding, unworthy of the age in which Passeri painted.

Passeri, Giovanni Battista, a distinguished painter and ecclesiastic, is author of one of the best collections of biographies of Italian artists. He was born at Rome about 1610. He received a good education, and, according to his own account, did not take up painting until comparatively late. He was engaged in the capacity of a painter in 1535 by Canini, in the Villa Aldobrandini, at Frascati, where he contracted an intimate friendship with Domenichino, then returned from Naples. When Domenichino died in Naples, in 1641, Passeri was president of the Academy of St. Luke, and he read a funeral oration on him, painted a portrait of him, now in the gallery Dugli Uffizi, at Florence. At the close of his life Passeri entered into holy orders, and obtained in 1675 a benefice in the college of Santa Maria, in Via Lata. He died in 1679. Passeri is one of the best of the Italian historians of art; his theoretical knowledge was good, and his statements are believed to be very correct. The circumstance of his book lying for nearly a century unnoticed, or rather unpublished, was owing to its unfinished state and the severity of many of his remarks, especially on Bernini. It was first published in Rome by an anonymous editor (supposed to be Bottari, editor of the Lettere Pittoresche in 1772, with some omissions, under the title, Vite de Pittori, Scultori, ed Architetti che anno lavorato in Roma, morti del 1641 fino al 1715, di Giam- battista Passeri, Pietro e Pensa (492 pp., 4to), thus constituting a continuation to the work of Baglione. It contains thirty-six lives, from Domenichino to Salvador Rosa inclusive. There is only one public picture of Passeri in Rome, a Crucifixion, between two saints, in the church of San Giovanni della Malva. See English Cyclop. s. v.; Spooner, Dict. Hist. of the Fine Arts, ii. 661.

Passeri, Giuseppe, a nephew of the preceding, was born at Rome in 1654. According to Pascoli, he was a scholar of Carlo Maratti, and one of the most successful followers of his style. He painted many works for churches in Rome, and painted some scenes in the Roman territory. In the church of the Vatican he painted a pendant to the Baptism of Maratti, representing St. Peter baptizing the Centurion. This work, after being copied in mosaic, was sent to the church of the Colonna Urbinata, and is admired in the direction of Maratti himself, and is admirably colored; but in his other works at Rome, such as the Conception, in the church of St. Tommaso in Pianore, the coloring is comparatively feeble. At Pesaro, he is one of his most esteemed works, representing St. Jerome meditating on the Last Judgment. He painted for the collections, and was also an excellent portrait painter. Passeri lived in general esteem, and his house was much frequented by persons of the first rank for taste and literature. He died at Rome in 1714.

Passerotti, Gian Carlo, an Italian painter, for some time in the service of the Church, was born in 1718 at Condamin, in the county of Nizza; he studied at Milan in the Jesuit College, and afterwards took orders as a priest. He went to Rome with the papal nuncio, and afterwards returned to Milan, where he spent the rest of his life in a state of poverty, laboring under distemper; but he was so used to be content with little that he felt no inconvenience from his condition, and constantly refused the offers of his numerous Milanese friends to relieve his wants. Passerotti was fond of study, and especially of poetry, and he had a great deal in common with the best of the Italian writers of his age. Parini, who in his youth was intimate with Passerotti, afterwards admitted that to his precepts and example he owed the formation of his own style. The principal work of Passerotti is a half battle, half moral poem, styled II Cicerone, in one hundred and one cantos. It is full of digressions, something similar in manner to Sterne's Tristram Shandy; but Passerotti's digressions are clearly intelligible, and have all a moral scope. A kind of parody of Cicero's life is used by the author as a thread whereon to hang his digressions. Passerotti ridicules or reproves the numerous follies and vices of society in a good-humored and often highly amusing strain, and his verses, like those of Ovid, seem to flow naturally and without effort from his pen. This facility, and the unaffected simplicity of the style, constitute the principal charm of the poem. Passerotti also wrote seven volumes of fables in verse, chiefly imitations of those of Esopo, Phædrus, and Avienus. He died at Milan in 1803.

Passerotti, Bartolomeo, an Italian painter, was born about 1540 at Bologna. He studied under Taddeo Zuccaro at Rome, and is mentioned by Vasari as one of the assistants of his master. He is known chiefly through the works of Borghini and Lomazzo. Passerotti resided in the early part of his life at Rome, where he executed some works for the churches, the most esteemed of which is the Martyrdom of St. Paul. On his return to Bologna he painted many altar-pieces for the church of the Spirit; the most celebrated of which are the Adoration of the Magi, in St. Pietro; the Annunciation, in St. Martino Maggiore; The Virgin on a Throne, surrounded by St. John the Baptist and other Saints, in St. Giacomo Maggiore, which last work was adoredly painted in competition with and by Piazzetta. The subject is taken from the Miraculous degree of diligence and refinement which Passerotti displayed in this work he rarely used; but he generally painted in a bold, free style, with remarkable facility of execution. He also excelled in portraits.
and in this branch Guido ranked him next to Titian, preferring him before the Caracci themselves. He opened a school at Bologna, which was attended by many distinguished masters. Lanzi says "he was the first at Bologna to make a grander display, and began to vary Scripture histories by drawing from the naked torso. He also invented the custom of signing with his pen, a gift which drew to his school Agostino Caracci. He also wrote a book, from which he taught the syntax and anatomy of the human body essential to the artist. His pictures are distinguished by a sparing, in which his name—a custom derived from the ancients, and practiced by many modern artists. Zani describes Passerotti as a designer and engraver. He says, also, that he is called Il Maestro al Pussara (the Master of the Sparrow), from his having used a sparrow between the letters B. and P. as his rebus, but this is not mentioned by any other writer. Bartch commends Passerotti highly for his ability as a designer, and for the freedom and boldness of his manner of engraving. He enumerates and describes fifteen prints by him, also two mentioned by Gori and Rosso, and one doubtful; but he does not concern himself above the catalogue complete. He says that Passerotti's prints have at least been sought for by artists and connoisseurs, and that they have become extremely scarce, the richest collections possessing one or two at most. We append a list of Passerotti's etchings, as given by Benozzo Gozzoli in 1557—XVII. "Memorial of Joseph, after Parmigianino: —The Visitation, after F. Savitiati:—The Virgin, with the Infant and St. John; marked B. P.:—a similar subject, with the letters B. P.:—The Virgin, sitting on the ground, with the infant Jesus on her knees; signed B. Passaro:—Joseph, Carrying a Banner:—signed B. Passaro:—Jean, Chariot holding a Banner:—signed B. Passaro. This and the five following are supposed to be part of a suite of thirteen, representing Christ and his Apostles:—St. Peter; the letters B. P. on the left at bottom:—St. Andrew:—signed B. Passaro:—bottom:—St. John the Evangelist:—ditto:—St. Bartholomew:—ditto:—St. Paul; the letters B. P. on the right at bottom:—Religion, represented by a woman seated, and surrounded by the sun; the letter B. on the right at bottom:—Painting, represented by a young female with wings; the letters B. P. on the right at bottom:—The Young Woman in Bed; B. Passaro, written backwards, the letter R. reversed and joined to the P.:—The Sacrifice, in which there are eight figures; the letters B. P. on the left at bottom:—The Charity, mentioned by Gori:—The Marriage of Isaac and Rebecca, after Perugino; mentioned by Benozzo; two copies, doubled, one signed, and delivered from Prison by an Angel. St. Peter is seated, and the angel, without wings, has placed the left hand on Peter's shoulder, and directs the way with the right; at the bottom, in the corner, are the letters B. P.

Passerotti, Tiburzio, an Italian painter, son of the preceding, was born at Bologna in 1575. He was instructed by his father and another master whose name he adopted, though he wrought with a less bold, free, and rapid pencil. He executed some works for the churches, which were admired for their beautiful composition, and which Lanzi says possess real merit. The principal of them is The Assumption, in S. Maria Mascarella; The Virgin, with St. Francis and St. Jerome, in S. Cecilia; The Annunciation, in S. Christina; and The Martyrdom of St. Catharina, in S. Giacomo Maggiore, which last is his most celebrated performance. He was also an excellent portrait-painter. He died in the prime of life in 1612.

Passignano, Domenico da, or DomenicoCreati, called Lilli. An Italian painter of the 17th century, was born at Florence about the middle of the 19th century. Some accounts give 1650, but this is probably too late; Baglione says he was eighty years old when he died, in 1688, which would place his birth in 1578 or 1588. He was the pupil of Federigo Zuccaro, and lived some time in Venice, where he acquired a decided preference for the Venetian school of painting, and especially the works of Paolo Veronese. He acquired a great reputation at Rome, where he was employed by the popes Paul V and Urban VIII; he was, moreover, appointed Director of the Accademia di San Luca, and given the benefice of the Church of the Cappella Clementina in the great church of St. Peter at the Vatican, for which he was created Cavaliere dell' Abito di Cristo. He spent the latter part of his life at Florence, and he was one of the most influential of those painters who contributed towards the reform of the Florentine school by improving the taste for color, and rendering the mannered anatomical school less popular. Passignano was the friend and associate of Cigoli, and is said to have been the master of Lodovico Caracci while in Florence. He had many scholars, of whom Pietro Surti of Siena was the most distinguished.

Passing Bell, the bell which in former times was tolled when any person was dying or passing out of this life. It is tolled in England at the burial of any parishioner, the practice being enjoined in the sixth canon of the Church of England. In the United States the practice of tolling the bell on the occurrence of death and on the service is formerly very general, but it is gradually becoming rare, especially in large places. In hamlets and villages, where greater intimacy prevails among the people than in the cities, the tolling of the bell to register the death-stroke will probably continue for some time yet. One of the peculiar features of this practice is the notice by the bell of the age of the deceased.

Passion (Gr. πάθος, to suffer) expresses really the contrary of action. But first in the plural form, and now even in the singular, the word is used to describe a violent commotion or agitation of the mind—emotion, zeal, ardor. In its widest sense it denotes all the states or manifestations of the sensibility—every form and degree of feeling. In a more restricted psychological sense it is confined to those states of the sensibility which are turbulently, and weaken our power of self-command. This is also the popular use of the phrase, in which passion is opposed to reason. (a.) Plato arranged the passions in two classes, the consciptible and irreconcilable—ιστημενη και θημος; the former springing from the body and perishing with it, the latter connected with the rational and immortal part of our nature, and stimulating to the pursuit of good and the avoidance of evil. The passions were considered as the means, by which all man's active principles under one general designation of orotic, and distinguished them into the appetite irascible, the appetite concupiscible, which had their origin in the body, and the body rational (βοληλοιος), which is in the will, under the guidance of reason. Descartes and Malebranche have each given a different and classification of the passions, also Dr. Isaac Watts, Dr. Cognan, and Dr. Hutcheson and Le Brun. The last named makes the number of passions about twenty: 1. Attention; 2. admiration; 3. astonishment; 4. veneration; 5. surprise; 6. joy; 7. grief; 8. compassion; 9. fear; 10. pain; 11. sadness; 12. weeping; 13. compassion; 14. scorn; 15. horror; 16. terror or fright; 17. anger; 18. hatred; 19. Jealousy; 20. despair. All these may be represented on canvas by the pencil. Some make their number greater, adding aversion, love, emulation; others, however, may be considered as included in the above list. They are divided by some into public and private, proper and improper, social and selfish passions. (b.) The origin of the passions is from impressions on the senses; from the operations of reason; by which good or evil is foreseen; and from the recollections of memory. (c.) The objects of the passions are mostly things sensible, on account of their near alliance to the body; but objects of a spiritual nature also, though in-
visible, have a tendency to excite the passions: such as the love of God, heaven, bell, eternity, etc. (d.) As to the insensibility of the passions; in themselves they are neither good nor evil, but according to the good or ill use that is made of them, and the degrees to which they rise. (e.) The usefulness of the passions is considerable: when they are given us for a kind of spring or elasticity to correct the natural sluggishness of the corporeal part. They give birth to poetry, science, painting, music, and all the polite arts, which minister to pleasure; nor are they less serviceable in the cause of religion and truth. "When sanctified," says Dr. Watts, "these are the divine artillery, the weapons with which we are furnished in the search of divine truth and religious duty; they keep the soul fixed to divine things; render the duties of holiness much easier, and temptations to sin much weaker; and render us more like Christ, and fit for his service and enjoyment."

(f.) The regulation of the passions: to know whether they are under restraint and directed to proper objects, we must inquire whether they influence our opinions; run before the understanding; are engaged in trifling, and neglectful of important objects; express themselves in an indistinct or insipid manner; and whether they disorder our conduct. If this be the case, they are out of their due bounds, and will become sources of trial rather than instruments of good. To have them properly regulated, we should possess knowledge of our duty, take God's Word for our guide, be much occupied in prayer and reflection on the Divine Being. (g.) Lastly, we should study the passions. To examine them accurately, indeed, requires much skill, patience, observation, and judgment; but to form any proper idea of the human mind, and its various operations; to detect the errors that arise from heated temperamnet and intellectual excess; to know how to touch their various strings, and to direct and employ them in the best of all services—to accomplish these ends, the study of the passions is of the greatest consequence.

"Amid the numerous branches of knowledge," says Mr. Cogswell, "it is the more important to establish the requisition of the human mind; no one can be more important than this. Whatever most intimately concerns ourselves must be the first moment. An attention, therefore, to the workings of our minds; tracing the power which external objects have over us; discovering the nature of our emotions and affections; and comprehending the reason of our being affected in a particular manner, must have a direct influence on our character, our happiness. It may with justice be advanced that the happiness or unhappiness in ourselves in this department is of much greater utility to ourselves and our posterity, and the future of the human soul, or even the most accurate knowledge of the universe, than all the sciences. Affections and emotions are excited and directed towards the objects investigated by our intellectual natures that we become involved in ourselves and others into a sort of respectability or sink into contempt; that we diffuse or enjoy happiness, diffuse or suffer misery. An accurate analysis of these passions and affections, therefore, is to the moralist what the science of anatomy is to the surgeon. It constitutes the first principles of rational practice: it is, in a moral view, the anatomy of the heart; it discovers why it beats, and how it beats; indicates appearances in a sound and healthy state; detects diseases with their causes, and it is infinitely more fortunate in the power it communicates of applying suitable remedies.

Passion is a term ecclesiastically applied to our Lord's crucification (as in Acts i, 8, 2 Cor. xii, suffering, as elsewhere). For the details circumstances connected with this event, see Agony; Crucifixion; Flagellation, etc. Monographs on the various points may be seen cited in Volbeding, Index Programmatum, p. 50, 52, 60, 62; Hase, Leben Jesu, p. 138, 174. See also Blunt, Hist. Dict. s. v.; Liddon, Dict. of Christ; Bunsen, Die heilige Leidenageschichte (Leips. 1861); Farrar, Life of Christ. For the history, see Jesus Christ.

For the symbol of the Cross, see page 692.
the week following as well as to the week preceding Easter. The emperors, also, granted a general release to prisoners at this season, and commanded all suits and processes at law to cease. The Thursday of the Passion Week, being the day on which Christ was beheaded, is observed with some peculiar solemnity. In some of the Latin churches the communion was administered on this day in the evening, in imitation of Christ's last supper, a provision being made for this in one of the canons of the third Council of Carthage. On this day the celebrants, or candidates for baptism, publicly recited the Creed in the presence of the bishop or presbyters in the church. Such public penitents, also, as had completed the penance enjoined by the church, were then absolved. On this day, too, it was customary for servants to receive the communion. (The modern ritualists call it Monday Thursday, q. v.) The Friday was called Good Friday, (q. v.), or Paasch van de Kruis, in opposition to Easter, or the Paasch van de Ongestorven. From the canons of the fourth Council of Toledo it would appear that a general absolution was proclaimed to all those who observed the day as a day of rest. The same observance was kept on the Saturday, or Sabbath, in Passion Week, was commonly known by the name of the Great Sabbath. It was the only Sabbath throughout the year that the Greek churches, and some of the Western, kept as a fast. The fast was continued not only until evening, but protracted until morning, and the evening meal on the preceding day was supposed to be the time of Christ's resurrection. The previous part of the night was spent in religious exercises of various kinds. Eusebius tells us that in the time of Constantine this vigil was kept with great pomp; for he set up lofty pillars of torches to burn all over the city, and lamps burning in all places, so that the noise seemed to outshine the sun at noonday. Gregory Nazianzen also speaks of the custom of hanging up lamps and torches both in the churches and in the private houses, which, he says, they did as a forerunner of that great Light the Sun of Righteousness arising on the world on Easter-day. This night was famous above all others for the baptism of catechumens. The fifth Sunday in Lent is sometimes called Passion Sunday, that name being applied to it in reference to Christ's prediction on that day of his approaching passion. Some persons in the Western church have true Eastern Sunday in the first, Passion Week, to distinguish it from the real Passion Week, which they call Holy Week.

Passion Week (or Holy Week, as it is often called, though incorrectly; for Passion Week, by the proper rubric, is observed in the church season preceding Easter) is observed with great pomp in the Roman Church. The ceremonies of the season commence on Palm-Sunday (q. v.), when the commemoration takes place of the Saviour's triumphal entry into Jerusalem. On Wednesday of this week, in the afternoon, there is the service of the Te Deum, a kind of funeral service, which is repeated at the same hour on the Thursday and Friday. The ceremonies of the Thursday consist principally of a representation of the burial of our Saviour. This is followed, in Rome, by the ceremony of the pope washing and anointing the feet of twelve of his household in imitation of our Saviour's washing the feet of his disciples; this ceremony being followed by the same pilgrims being served by his holiness at dinner. A singular ceremony takes place on the Thursday at St. Peter's in Rome—the washing of the high-altar with wine. On Good Friday the ceremony of uncovering and adoring the cross is observed, at the close of which a procession is marshalled to bring back the host from the sepulchre in which it was deposited on the previous day. The pope and cardinals also adore the three great relics, which are placed in the church of St. John Lateran. The ceremonies of Good Friday, Holy Saturday, and Easter are arranged with the greatest impressiveness. During the entire season the church is adorned with petitions to the Saviour to show his mercy, and the procession is variously arranged, which is styled the Angelica, and is one of the principal public libraries at Rome. His nephew, Benedict Passionei, published a volume containing all the Latin and Greek inscriptions collected by the cardinal (Lucca, 1765, fol.). His works were written in Greek. We have only a single volume of his works, which is styled the Angelica, and is one of the principal public libraries at Rome. His nephew, Benedito Passonei, published a volume containing all the Latin and Greek inscriptions collected by the cardinal (Lucca, 1765, fol.). His books were published after his death by his Augustine monastery, and added to their collection, which is styled the Angelica, and is one of the principal public libraries at Rome. The Text is in the possession of the council of Lucerne.—Oratio funebris in Principep Eugenii (Vienna, 1737; in Italian, Padua, 1737)
PASSIONISTS

in different collections, such as the Tempor Hebratica (vol. iv), in the Commentarii Epistolae, of Offenbach, etch. PASSOVER. See Sufferings of Christ.

PASSOVER. See Sufferings of Christ.

PASSEVIN, the ancient mystic, is a total suspension or ligature of the intellectual faculties, in virtue whereof the soul remains of itself, and in its own power, impotent with regard to the producing of any effects. The passive state, according to Fénelon, is only passive in the same sense as contemplation; i.e. it does not exclude peaceable, disinterested acts, but only unquiet ones, or such as tend to our own interest. In the passive state the soul has no life in it, in the same sense as courting, or any sensation of its own. It is a mere flexibility of the soul, to which the feeblest impulse of grace gives motion. See MEDITATION.

PASSOVER, the first and most important of the three great annual festivals—the other two being Pentecost and the Feast of Tabernacles—on which the male passover appears before the Lord in Jerusalem. In the present article we may aim to compile the Scriptural notices of this institution with whatever information ancient or modern authors give, especially the Talmudical regulations for its observance. See FESTIVAL.

I. Name and Signification.—The Heb. word PASSOVER, Pessach, from e'pax, to pass through, to leap, to salt [2 Sam. iv. 4; 1 Kings xviii. 21], then tropically to pass by in the sense of sparing, to save, to show mercy [Exod. xii, 13, 23, 27; Is. xxxi. 5], denotes—1. An overtopping, passover, and is so rendered by Josephus (Ant. ii. 14, 6, 25), Aquila (25), and the English version. 2. It signifies the paschal sacrifice, by virtue of which the male passover appears before the Lord in Jerusalem. 3. The passing over, or saving, was effected [Exod. xii, 21, 27, 48; 2 Chron. xxx. 15]. 4. It designates the paschal meal on the evening of the 14th of Nisan, while the seven following days are called הָעַרְבִּים, the feast of unleavened bread. See HEBREW.
II. Biblical Institution and Obsecrance of the Passover (from the time of Moses to the Captivity.)—The following are the principal passages in the Pentateuch relating to the Passover: Exod. xii., 1–51, in which there is a full account of the original institution and first observance in Egypt; Exod. xii., 19, 20, 23, 26, 27, 31, 34, 35, 36, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, in which the unleavened bread is spoken of in connection with the sanctification of the first-born, but there is no mention of the paschal lamb; Exod. xiii., 1–19, where, under the name of the feast of unleavened bread, it is first connected with the two other great annual observances, and also with the Sabbath, and in which the paschal lamb is styled "My sacrifice;" Exod. xxxiv., 18–26, in which the festival is brought into the same connection, with immediate reference to the redemption of the first-born, in which the words of Exod. xxi., 18, regarding the paschal lamb, are repeated; and Exod. xii., 4–14, where it is mentioned in the same connection, the days of holy convocation are especially noticed, and the enactment is prospectively given respecting the offering of the first-born of harvest, with the offerings which were to be made thereon, and the list of the Promised Land; Numb. ix, 1–14, in which the divine word repeats the command for the observance of the Passover at the commencement of the second year after the Exodus, and in which the observance of the Passover in the second month, for those who could not participate in it at its regular time, is instituted; Numb. xxvii., 16–25, where directions are given for the offerings which were to be made on each of the seven days of the festival; Deut. xvi., 1–6, where the command is prospectively given that the Passover, and the other great festivals, should be observed in the place which the Lord might choose in the land of Promise, and where there appears to be an allusion to the Chagigah, or voluntary peace-offerings. There are five distinct statutes on the Passover in the 12th and 18th chapters of Exodus (xii., 9, 5–20, 21–28, 42–51; xiii., 1–10).
of the congregation are to appear in the sanctuary before the Lord with the offering of firstlings (Exod. xxi, 19-20; xxxiv, 18-26); that the first sheaf of the harvest (עָרָבָּה) is to be offered on "the morrow after the Sabbath" (Lev. xxiii, 4-14); that those who, through defilement or absence from home, are prevented from keeping the Passover on the 14th of Nisan, are to keep it on the 15th (Exod. xii, 14); that all the animals are to be slain on the 14th, and their blood to be sprinkled on the doorposts and lintels of the doors (Exod. xii, 14); that special sacrifices are to be offered on each day of the festival (Num. xxxvi, 16-25); that the paschal animals are to be slain in the national sanctuary, and that the blood is to be sprinkled on the lintels and doorposts of the two doors and lintels of the doors in the respective dwellings of the families (Deut. xvi, 1-8). The ancient Jewish canons, therefore, rightly distinguished between the Egyptian Passover (פסח מצרי) and the Permanent Passover (פסח دائم), and point out the following differences between them:

(a) In the former the paschal animal was to be selected on the tenth of Nisan (Exod. xii, 8).
(b) It was to be killed by the head of each family in his own dwelling, and its blood sprinkled on the two door-posts and the lintels of the house (Exod. xii, 21).
(c) It was to be consumed in haste, and the eaters thereof were to be dressed in their journeying garments (Exod. xii, 11).
(d) Unleavened bread was to be eaten with the paschal animal only on the first night, and not necessarily on the two following days. The whole of the two door-posts and lintels of each house were to be made clean of all leaven and leaven-like substances (Exod. xii, 14).
(e) No one who partook of the Passover was to go out of the house until the morning (Exod. xii, 22).
(f) The women might partake of the paschal animal.
(g) Those who were Levitically impure were not necessarily precluded from sharing the meal.
(h) No firstlings were required to be offered.
(i) No sacrifices were brought.
(j) The festival lasted only one day, as the Israelites commenced their march on the 15th of Nisan (Mishna, Pesachim, ix, 5; Tositha, Pesachim, vii; Maimonides, Ig. Ha-Bezak, Hilchot Korban Pesach, x, 15).

Now these regulations were peculiar to the first Passover, and were afterwards modified and altered in the Permanent Passover. Elias of Byzantium adds that there was no command to burn the fat on the altar, that neither the Hallel nor any other hymn was sung, as was required in later times in accordance with Isa. xxx, 29, and that the lambs were not slain in the consecrated place (quoted by Carpzu, App. Crit. p. 406). For other Jewish authorities on the origin of the Passover, see Daniel, "The Passover," p. 281.

Dr. Davidson, indeed (Introduction to the O. T. i. 84, etc.), insists that the Deuteronomist (xvi, 1-7) gives other variations—that he mentions both "ןָּסָל, small cattle," and "בָּטָן, oxen," as the paschal sacrifice, and states that the paschal victim is to be boiled (טָבַל), while in the original institution in Exod. xii it is enacted that the paschal sacrifice is to be a בָּטַל only, and is to be roasted. But against this is to be urged (1) That the word בָּטַל in Deut. xvi, 1, 2, as frequently, is used for the whole festival of unleavened bread, which commenced with the paschal sacrifice, and which indeed the Deuteronomist speaks of as the sacrifices of sheep and oxen in question do not refer to the paschal victim, but to all the sacrifices appointed to be offered during the seven days of this festival. This is evident from ver. 3, where it is distinctly said, "Thou shalt eat no leavened bread therewith (לבוש [i.e. with the בָּטַל in ver. 2]). seven days shalt thou eat therewith (לבוש) [i.e. with the בָּטַל unleavened bread], thus showing that the sacrifice and eating of בָּטַל is to last seven days, and that it is not the paschal victim which had to be slain on the 14th and be consumed on that very night (Exod. xii, 10).
simply denotes to cook, dress, or fit for eating in any manner, and here unquestionably stands for שָׁזָּה, to roast in fire (as in 2 Chron. xxxix. 13). This sense is not only given in the ancient versions (Sept., Vulg., Chaldee paraphrase of Jonathan ben-Uziel, etc.), and by the best commentators and lexicographers (Rashi, Rashbam, Aben-Ezra, Ibn-Sa'adi, Kimhi, and Y. Eliezer), but is supported by Nehemiah (Comment. on Exod. and Lev., p. 99). he is quite as anxious as Dr. Davidson to establish the discrepancy between the two accounts. (3) We know from the non-canonical records that it has been the undeviating practice of the Jews during the second Temple to offer a קָרָך only as a paschal sacrifice, and to root it, but not to eat it. Now the Deuteronomist, who, as we are assured by Dr. Davidson and others, lived at a very late period, would surely not contradict this prevailing practice of a later time. Besides, if the supposed variations recorded by the Deuteronomist describe practices which obtained in later times, how is it that the non-canonical records of the Jewish practices at a later period agree with the older description, and not with the supposed variations in Deuteronomy?

That the Israelites kept the Passover on the evening before they left Egypt is distinctly declared in Exod. xii. 11. Dr. Colenso, however, attempts to set against the Passover, and against the possibility of its having been celebrated, because (1) Moses having received the command about the Passover on the very day at the close of which the paschal lambs were to be killed, could not possibly have communicated to every head of a family throughout the entire country the special and strict directions how to keep it; (2) the notice to start at once in hurried flight in the middle of the night could not suddenly and completely be communicated to the whole population; and (3) 2,000,000 in number, and, if we take fifteen persons for each lamb, must have been slain 150,000 paschal lambs, all males, one year old; this premises that 200,000 male lambs and 200,000 ewe-lambs were annually produced, and that there existed a flock of 2,000,000 (The Pentateuch and Book of Joshua critically examined, pt. i., chap. x). But (1) from Exod. xii. 2, 3 it is evident that, so far from receiving the command on the 14th of Nisan, Moses received it at the very beginning of the month, and that there was therefore sufficient time for the elders (comp. Exod. xii. 1, 2, 20, 21); (2) he had the necessary instruction to the people, who were a well-organized body, presided over by the heads of families and leaders (Exod. v. 6-23; Num. i. 1, etc.; Josh. vii. 14, etc.). The expressions עָנָאַה (xii. 12) and הַנְּשָׁב (xi. 4), on which Dr. Colenso lays so much stress, do not refer to the night following the day of the command, but to the night following the day when the command was to be executed. עָנָאַה here, as frequently elsewhere, denotes the same, and expresses simultaneity, wheter past, present, or future, inasmuch as in historical narrative not only that which one can see or, as it were, point his finger at, is regarded as present, but that which has just been mentioned (Gen. vii. 11, 18; Exod. xii. 1; Lev. xxiii. 6, 21; Job x. 13), and that which is immediately to follow (Gen. xxv. 1; Exod. xix. 19; Deut. iv. 7; Ps. lxix. 18). (2) The notice to quit was not momentary, but was indicated by Moses long before the celebration of the Passover (Exod. xi. 1-8), and was most unmistakably given in the order to eat the paschal lamb before the Sabbath, that it may be ready to start (Exod. xii. 11), (3) The average number of fifteen or twenty persons for each lamb, based upon the remark of Josephus (War, vi, 9, 3), is inapplicable to the case in question, inasmuch as those who, according to later legislation, went up in after-times to Jerusalem to offer the paschal sacrifice were all full-grown and able-bodied

men, and every company of twenty such persons, when the Jews were in their own land, where there was every facility for obtaining the requisite number of sheep, might easily have kept a sheep in one night. But among the several millions of Israelites in Egypt and in the wilderness there were myriads of women, children, invalids, uncircumcised and unclean, who did not partake of the Passover, and those who did partake of the feast were so fully occupied with the signal event if one or two hundred of them surely ate a morsel of one and the same animal when they found any difficulty in obtaining flocks, inasmuch as the paschal sacrifice was only to be commemorative; just as one loaf suffices for the wants of persons at the commencement of the Lord's Supper. Now the need of 150,000 being required for this purpose, 10,000 animals would suffice. Moreover, Dr. Colenso, misled by the A. V., which renders קָרָך by lamb, makes a mistake in restricting the paschal sacrifice of Egypt to a lamb. Any Hebrew lexicon will show that it denotes one of the flock, i.e. either a sheep or a goat, and it is so used in Deut. xiv. 4, וּבָשׁוֹר וּבָשָׂן הָבֶּן הָאָדָם, one of the sheep and one of the goats (comp. Genesis' and Elisha's Lexicons, s. v. קָרָך). This mistake is all the more to be deplored, since at the institution of the Passover it is expressly ordered it is to be קָרָך אֵין יָוָת לָא. Now, one of the sheep or of the goats (Exod. xii. 19). It is well known to scholars that the word קָרָך is not a common fixed a lamb for this purpose long after the Babylonian captivity. Hence the Targum's rendering of קָרָך by כָּבָשָׁה or כָּבָשָׁא which is followed by the A. V. It is well known also that goats have always formed a large admixture in Oriental flocks, and in the present which Jacob sent to Esau the proportion of sheep and goats is the same (Gen. xxxii. 14, 25). Now the fifteen thousand sheep and goats divided between the lambs and the goats would not be such an impossible demand upon the flocks.

3. Subsequent Notices before the Exile.—After the celebration of the Passover at its institution (Exod. xii. 39, 50), we are told that the Israelites kept it again in the wilderness of Sinai in the second year after the exodus (Num. xix). Between this and their arrival at Gilgal under Joshua, about thirty-nine years, the ordinance was entirely neglected, not because the people did not practice the rite of circumcision, and were therefore legally disqualified from celebrating the festival: but because, as has been said, the remnant of the Israelites who came out of Egypt was not yet sufficiently numerous to constitute a community of a religious character. Hence when the Hasideans introduced the celebration of the Passover in the Promised Land and the Babylonian captivity, viz. under Solomon (2 Chron. viii. 13), under Hezekiah when he restored the national worship (2 Chron. xxx. 15), and under Josiah (2 Kings xxii. 19; 2 Chron. xxxv. 1-19). Later biblical instances are those where the celebration was either by Ezra after the return from Babylon (Ezra vi. 19), or those of Ezra and Nehemiah, as is said in the title of the latter (Ezra i. 1). III. Robustophic Regulations.—After the return of the Jews from the captivity, where they had been weakened by idolatry, the spiritual guides of Israel reorganized the whole religious and political life of the nation, and directed, modified, and expanded every law and precept of the Mosaic code so as to adapt them to the actual condition of the people. The celebration of the Passover, therefore, like that of all other institutions, became more regular and systematic during this period, while the different colleges which were now established, and which were attended by numerous disciples (see
Education], have faithfully transmitted to us all the sundry laws, rites, manners, and customs connected with this and all other festivals, which it was both impracticable and impossible to record in the limited space of the canonical books of the O. T. Hence it is that the manners and customs of this period, which were those of our Saviour and his apostles, and which are therefore of the utmost importance and interest to Christians, and to the understanding of the N. T., can be more easily ascertained and more minutely described. Hence, also, the simple summary notice of the fact that the Israelites kept the Passover after their return from Babylon, contained in the canonical Scriptures (Exra vi, 19-22), may be supplemented by the detailed de-
scriptions of the manners of the Passover as celebrated during the second Temple, given in the non-
canonical documents. The various practices will be better understood and more easily followed if given in connection with the days of the festival on which they were respectively observed.

1. The Great Sabbath (הַגָּדוֹלָה הָעֶקְדִּית) is the Sabbath immediately preceding the Pass-
over. It is so called in the calendar because, according to
tradition, the tenth of the month on which the Lord commanded every head of a family to select the paschal sacrifice (Exod. xii, 3) originally happened to fall on the Sabbath; and though in later legislation the animal was not required to be eaten that day, yet the Jewish canons determined that the Sabbath should be used to instruct the people in the duties of this great festival. Hence special prayers (鄜ִּבּוּ) bearing on the redemption from Egypt, the love of God to Israel, and Israel's obligations to keep the Passover, have been ordained for this Sabbath, in addition to the ordinary ritual. Mel. iii, 1-18; iv, 1, was read as Masechta (תְּבַנָּה) = the lesson for the day (see HAPHTORAH) and discourses were delivered by the spiritual guides of the community explanatory of the laws and domestic duties connected with the festival (Tur Orach Chajim, sec. 380). Though the present synagogal ritual for this day is of a later date, yet there can be no doubt that this Sabbath was already distinguished as the great Sabbath (מעֳדֵה וּמֵעָרוֹת פָּאְגָה יָהָשָׁבָן, John xix, 81) in the time of the second Temple, and was used for preparing the people for the ensuing festival. See SABBATH.

3. The 14th of Nisan.—On this day, which, as we have seen, was till the evening called the preparation for the Passover, there was also observed a day of rest on the day of Passover or of unleavened bread (Lev. xxii, 6; Num. xxvi, 18; xviii, 16; Josh. x, 18; Ezek. xiv, 21; 2 Chron. xxx, 15; xcviii, 1; Joseph. War, v, 3, 1), for the reason stated under the 18th of Nisan, handicraftsmen, with the exception of tailors, barbers, and laundresses, is obliged to replenish their work either from morning or from noon, according to the custom of the different places in Palestine (Mishna, Passachim, iv, 1-8). Leaven was only allowed to be eaten till mid-day, when all leaven collected on the previous day was to be burned. The time for desisting from eating and burning the leaven was thus indicated: "Two decorated cakes of thanksgiving-offering were placed on a bench in the Temple: as long as they were thus exposed all the people ate leaven; when one of them was removed they abstained from eating, but did not burn it; and when the other was removed all the people began burning the leaven" (ib, i, 5). It was on this day that every Israelite who was not infirm, ceremonially pure, uncorrected, or who was on this day fifteen miles within the walls of the city of Jerusalem (Mishna, ix, 2; Maimonides, Hilchot Korbim Passach, v, 89), appeared before the Lord in Jerusalem with an offering in proportion to his means (Exod. xxii, 15; Deut. xvi, 16, 17). Though women were not legally obliged to appear in the sanctuary, yet they were not excluded from it (ib, i, 5; Luke ii, 27). More especially those, who came from the country to Jerusalem to celebrate the Passover were gratuitously accommodated by the inhabitants with the necessary apartments (Luke xxii, 10-12; Matt. xxvi, 18); and the guests left in return to their hosts the skins of the paschal lambs, and the vessels which they had used in their religious cere-
monies (John, 12 a). It was, however, impossible to house all the pilgrims in Jerusalem itself, since the circ-
umference of the city was little more than one league, and the number of the visitors was excessively great. Josephus tells us that there were 3,000,000 Jews at the Passover A.D. 65 (War, ii, 14, 3), and that at the Passover in the reign of Nero there were 2,700,000, when 256,500 lambs were slain (ib, vi, 9, 8), and most of them must therefore have encamped in tents without the walls of the town, as the Mohammedan pilgrims now do at Mecca. The matters of detail concerning the circum-
stances broke out on these occasions, and that the Ro-
mans, fearing lest these myriads of pilgrims should cre-
ate a disturbance, and try to shake off the foreign yoke when massed together, took all the precautionary measures of both force and compulsion during the festive-
iv, 9, 8; War, i, 3, etc.; Matt. 8, 24.
5. The Offering of the Paschal Lamb.—Having selected the lamb, which was neither to be one day above a year nor less than eight days old (Maimonides, Hilkhot Korban, i, 12, 13)—being an extension of the law about firstlings and burnt-offerings (Exod. xxii, 30; Lev. xxii, 27)—and agreed as to the exact number of those who were to join for one lamb, the representatives of each company went to the Temple. The daily evening sacrifice (Exod. xxix, 38, 39), which was usually killed at the eighth hour and a half (2:30 P.M.), and offered up at the ninth hour and a half (3:30 P.M.), was on this day killed at 1:30, and offered at 2:30 P.M., an hour earlier: and if the 14th of Nisan happened on a Friday, it was killed at 12:30 and offered at 1:30 P.M., two hours earlier than usual (Mishna, Pesachim, v, 1; Maimonides, Hilkhot Korban Pesach, i, 4). All the representatives of the respective companies were divided into three groups: the first divided the lamb among the paschal sacrifices, until the court of the Temple was filled, when the doors of the court were closed, and the trumpets were sounded three times, differing in the notes (ספָּפֶנָן). The priests immediately placed themselves in two rows, holding bowls of silver and gold in their hands, i.e. one row holding silver bowls and the other gold ones. These bowls were not mixed up, nor had they stands underneath, in order that they might not be put down and the blood become coagulated. The Israelites themselves killed their own paschal sacrifices, the nearest priest caught the blood, handed it to his fellow-priest, and he again passed it on to his fellow-priest, each receiving a full bowl and returning an empty one, while the priest nearest to the altar sprinkled it in one jet towards the base of the altar. Thereupon the first division went out, and the second division entered; and when the second again went out, the third entered; the second and third divisions acting in exactly the same way as the first. The Hallel was recited (see Hallel) the whole time. When the butchered bodies of the animals were slain, it might be repeated a second and even a third time. . . . The paschal sacrifice was then suspended on iron hooks, which were affixed to the walls and pillars, and its skin taken off. Those who could not find a place for suspending and skinning it had pieces of wood provided for them, which they put on their own shoulders and on the shoulders of their neighbor, and on these they suspended the paschal sacrifice, and thus took off its skin. When the 14th of Nisan happened on a Sabbath, on which it was not lawful to cut the lamb, the butcher, standing on the right shoulder of his fellow-offerer, while the latter put his right hand on the shoulder of the former, wherein they suspended the paschal sacrifice, and took off its skin. As soon as it was opened, the viscera were taken out and the internal fat. The fat was carefully separated, and collected in the large part of the inside, to make the burnt sacrifices (Lev. i, 9; iii, 3-5; comp. Pesachim, vi, 1). Maimonides says that the tail was put with the fat (Nid. i, 10). The fat was burned on the altar, with incense, that same evening. On the Sabbath, the first division, after leaving the court, remained on the Temple mountain. The second between the ramparts (i.e. the open space between the walls of the court of the women and the trellis-work in the Temple, comp. Mishna, Middoth, ii, 3), while the third remained in its place. When it became dark, they all went out to roast their paschal sacrifices (Mishna, Pesachim, v, 5-10). A spit, made of the wood of the pomegranate-tree, was put in at the mouth of the lamp, and thence, after it had been rolled back again on the lamb, the part so touched had also to be cut out (Pesachim, vii, 1, 2). If any one broke a bone of the paschal lamb, so as to infringe the command in Exod. xxi, 26, he incurred the penalty of forty stripes (Pesachim, viii, 11). The bone, however, for the breaking of which the offender was to receive the stripes, must either have some flesh on it or some marrow in it, and be incurred the penalty even if some one had broken the same bone before him (Maimonides, Hilkhot Korban Pesach, x, 1, 3). The oven was of earthenware, and appears to have been in shape something like a bee-hive, with an opening in the top by which the fuel was admitted. According to Justin Martyr, a second spit, or skewer, was put transversely through the shoulders, so as to form the figure of a cross. As Justin was a native of Flavia Neapolis, it is a striking fact that the modern Samaritans roast their paschal lambs in nearly the same manner. ”The lambs (they number six for the community now) are roasted all together by stuffing them vertically, head downwards, into an oven which is like a small well, about three feet in diameter. and four or five feet deep, roughly stoned, in which a fire is kept up for several hours. After the lambs are thrust in, the top of the hole is covered with bushes and earth, to confine the heat till they are done. Each lamb has a stake or spit run through him to draw him up by; and, to prevent the spit from tearing away through the roast meat with the weight, a cross piece is put through the lower end of it” (Alias Rogers’s Domestic Life in Palestine). Vitringa, Bochart, and Houtzinger have taken the statement of Justin as representing the ancient Jewish usage; and, with him, regard the crossed spits as a prophetic type of the cross of our Lord. But it would be more reasonable to think that the transverse spit was a mere matter of convenience, and was perhaps never in use among the Jews. The Rabbinical traditions relate that the lamb was called Galaatur, “qui quum totus assabatur, cum capite, cruribus, et intestinis, pedes autem et testicula ad latera ligabantur inter se in linea.” Hillel the Patriarch confesses the verity, “qui galea in capite et eque in latere est meminit” (Otho, Lex. Rob., p. 508).

5. The Paschal Supper.—The paschal sacrifices having been taken to the respective abodes of the companies, and the meals prepared, the parties arranged themselves in proper order, reclining at ease on the left side, round the table. A cup of wine was filled for every one, over which the following benediction was pronounced: “Blessed art thou, O Lord our God, King of the universe, who hast created the fruit of the vine! Blessed art thou, O Lord our God, King of the universe, who has chosen us above all nations, and exalted us above all peoples, and hast sanctified us with thy commandments. Thou hast given us, O Lord our God, appointed seasons for joy, festivals and holidays for rejoicing, such as the feast of unleavened bread, the time of our liberation, our holy convocation, and our holy sacrifice, and we have gone from Egypt. Yes, thou hast chosen us, and hast sanctified us above all nations, and hast given us thy holy festivals with joy and rejoicing as an inheritance. Blessed art thou, O Lord, who hast sanctified Israel and the festivals, and thou, O Lord our God, King of the universe, who hast preserved us and kept us, and hast safely brought us to this period!” The cup of wine was then drunk, and a basin of water and a towel were handed round, or the celebrators got up to wash their hands.
PASSOVER

(John xiii, 4, 5, 12), after which the blessing belonging thereto was pronounced. A table was then brought in, upon which were bitter herbs and unleavened bread, the Charóeth (see below), the body of the paschal lamb, and the flesh of the Chayuqah, or feast offering. The president of the meal then took the herb, dipped it in the Charóeth, and, after thanking God for creating the fruits of the earth, or as the rabbinists like to interpret it, 'dipped it in charóeth,' and gave a similar portion to each one reclining with him at the table (Matt. xxvi, 23; John xiii, 26). A second cup of wine was then poured out, and the son, in accordance with Exod. xii, 26, asked his father as follows: "Wherefore is this night different from all other nights?" On all other nights we may eat either leavened or unleavened bread, but on this night unleavened bread only; on all other nights we may eat every kind of herbs, but on this night bitter herbs only; on all other nights we may eat meat either roasted, boiled, or cooked in different ways, but on this night we must eat roasted meat only; on all other nights we may dip once what we eat, but on this night twice. On all other nights we may eat either sitting or reclining, but on this night reclining only." To this the father replied: "Once we were slaves to Pharaoh in Egypt, but our Lord our God delivered us therefrom, and He hath given us a strong hand and a stretched out arm. If the Holy One—blessed be He—had not delivered our fathers from Egypt, we and our children, and our children's children, might still be in Egyptian bondage; and although we may all be saved, the aged persons, elders, or weak persons, is incumbent upon us to speak of the exodus from Egypt, and whose dwells much on the exodus of Egypt is all the more to be praised." The father then expounded Deut. xxvi, 5-12, as well as the import of the paschal sacrifice, and said, "The paschal sacrifice is offered because the Lord passed over the houses of our ancestors in Egypt, in accordance with Exod. xii, 27; the unleavened bread is eaten because our ancestors were redeemed from Egypt before they had time to leaven their dough, and the bitter herbs are eaten because the Egyptians embittered the lives of our ancestors. It is therefore incumbent on everyone, in all ages, to consider as if he had personally gone forth from Egypt, as it is said in Exod. xii, 27. We are therefore in duty bound to thank, praise, adore, glorify, extol, honor, bless, revere, and reverence on the holy night all these miracles for our forefathers and for us; for he brought us forth from bondage to freedom. He changed our sorrow into joy, our mourning into a feast; he led us from darkness into a great light, and from servitude to freedom. He delivered us therefore, and led us to a land of leulajah." The first part of the Hallel was then recited (see below), i.e. Ps. cxiii and cxiv, and the following blessing pronounced: "Blessed art thou, O Lord our God, King of the universe, who hast redeemed us, and redeemed our forefathers from Egypt," etc. A third cup of wine was then poured out, and the grace after meals was recited. After pouring out the fourth cup the Hallel was finished (i.e. Ps. ex-cxiii), and the blessing of the song (i.e. הֵרָם הבֹּלָה and הֵרָם הַלּוּד) was said. The meal being ended, it was unlawful for anything to be introduced in the way of desert (Mishna, Pesachim, ch. 1-8; Maimonides, Tad Ha-Chazakah; Hilchot Chomez U-Matzot, ch. 8, 1-5). In this connection it is proper to notice more in detail several points relating to the meal under consideration.

(a) The Bitter Herbs and the Sauce.—According to Pesachim (ii, 6), the bitter herbs (סֵרוֹן הַשָּׁרֶשׁ; Sept. παρακασάζ; Vulg. lactus agrestes, Exod. xii, 8) might be endive, chicory, wild lettuce, or nettles. These plants were important articles of food to the ancient Egyptians (as is noticed by Pliny), and the place of the use of eight of them half that of the modern Egyptians. According to Niebuhr they are still eaten at the Passover by the Jews in the East. They were used in former times either fresh or dried, and a portion of them is said to have been eaten before the unleavened bread (Pesach, x, 8). The sauce into which the herbs, the bread, and the meat were dipped as they were eaten (John xiii, 26; Matt. xxvi, 23), is not mentioned in the Pentateuch. It is called in the Mishna פַּрабатыва, charóeth. According to Bartenora it consisted of only vinegar and water; but others describe it as a mixture of vinegar, figs, dates, almonds, and spice. The same sauce was used on ordinary occasions as thickened with a little flour; but the Rabbinists forbade this at the Passover, lest the flour should occasion a slight degree of fermentation. Some say that it was beaten up to the constancy of mortar or clay, in order to commemorate the toils of the Israelites in Egypt in laying bricks (Buxtorf, Lex. Talm. col. 631; Pesachim, ii, 8, x, with the notes of Bartenora, Maimonides, and Surenhusius).

(b) The Four Cups of Wine.—There is no mention of wine in connection with the Passover in the Pentateuch; but the Mishna strictly enjoins that there should never be less than four cups of wine at the paschal meal even of the poorest Israelite (Pesach, x, 1). The wine was usually red, and it was mixed with water as it was drunk (Pesach, viii, 19, with Bartenora's note; and Otho's Lex. p. 507). The cups were handled round in succession at specific intervals in the meal (see above). Two of them always had to be distinctly mentioned in the Laws xxii, 17, 20. "The cup of blessing" (1 Cor. x, 16) was probably the latter one of these, and is generally considered to have been the third of the series, after which a grace was said; though a comparison of Luke xxii, 20 (where it is called "the cup after supper") with Pesach, x, 7, and the designation "ןָעַת הַחַלֵּל" (cup of the Hallel) might rather suggest that it was the fourth and last cup. Schöttgen, however, is inclined to doubt whether there is any reference in either of the passages of the N. T. to the formal ordering of the cups of the Passover, and proves that the name "cup of blessing" (ﾌﾞﾗｯｸﾙ ﾓﾝｼﾞ) was applied in a general way to any cup which was drunk with thanksgiving, and that the expression was often used metaphorically, e. g. Ps. cxxvi, 18 (Hor. Heb. in 1 Cor. x, 16; see also Carpovov, App. Crit. p. 880).

The wine drunk at the meal was not restricted to the four cups, but none could be taken during the interval between the third and fourth cups (Pesach, x, 7).

(c) The Hallel.—The service of praise sung at the Passover was introduced in the early days of the Dispersion, and is contracted from חַלֵּל הָעַד (Hallelujah). It consisted of the series of Psalmas from cxiii to cxviii. The first portion, comprising Psas. cxiii and cxiv, was sung in the early part of the meal, and the second part after the fourth cup of wine. This is supposed to have been the "hymn" sung by our Lord and his apostles (Matt. xxvi, 30; Mark xiv, 26; Buxtorf, Lex. Talm. s.v. מְלָשׁוֹן, and Syn. Jud. p. 48; Otho, Lex. p. 271; Carpovov, App. Crit. v. 874).

See Hallel.

(d) Persona Portaking.—No male was admitted to the table unless he was circumcised, even if he was of the seed of Israel (Exod. xii, 48). Neither, according to the letter of the law, was any one of either sex admitted who was ceremonially unclean (Num. ix, 6; Joseph. War., vi, 9, 3). But this rule was on special occasions liberally applied. In the case of Hezekiah's Passover (2 Chron. xxx, 2), we find that a greater degree of legal purity was required to slaughter the lamb than to eat it, and that number was still further reduced; but who were not "cleansed according to the purification of the sanctuary." The Rabbis expressly state that women were permitted, though not commanded, to partake (Pesach, viii, 1; Chayyagh, i, 1; comp. Joseph. War., vi, 9, 3), in accordance with the instances in Scripture and the Tractate of the Talmud which have been cited, and which the Karaites, in more recent times, excluded all but full-grown men. It was customary for the number of a party to be not less than ten (Joseph. War., vi, 9, 8). It was
perhaps generally under twenty, but it might be as many as a hundred, if each one could have a piece of the lamb as large as an olive (Pesech. viii, 7).

(c) Position at the Table.—When the meal was prepared, the family was placed round the table, the paterfamilias taking a place of honor, probably somewhat raising his hand, and there is no mention to doubt that the ancient Hebrews sat, as they were accustomed to do at their ordinary meals (see Otho, Lex, p. 7). But when the custom of reclining at table had become general, that posture appears to have been enjoined, on the ground of its supposed significance. The Mishna says that the meanest Israelite should recline at the Passover "like a king, with the case becoming a free man" (Pesech. x, 1, with Maimonides's note). He was to keep in mind that when his ancestors stood at the feast in Egypt they took the posture of slaves (Ri. Levi, quoted by Otho, p. 564). Our Lord and his apostles conformed to the usual custom of their time, and reclined (Luke xxii, 14, etc.).

6. The 16th of Nisan.—On this day there was a holy convocation, and it was one of the six days on which, as on the Sabbath, no manner of work was allowed to be done (Exod. xxiii, 23, 25; xxxiv, 2, 3), on holy convocation it was permitted (Exod. xii, 16; Lev. xxiii, 7; Num. xxvii, 18). The other five days on which the Bible prohibits servile work are the seventh day of the month, the first day of the Passover's year, the first day and the last days of the feast of Tabernacles. The needful work which was lawful to be done on these days is defined by the Jewish canons to be such as killing beasts, kneading dough, baking bread, boiling, roasting, etc.; but not such work as may be done in the evening of a feast-day, as, for instance, reaping, threshing, winnowing, or grining; while servile work is building, pulling down edifices, weaving, etc. Any one engaged in servile work he was not to be stoned to death, as in the case of violating the Sabbath (Num. xv, 32, 35), but received forty stripes save one (Maimonides, Yad Ha-Ḥesekah, Iḥiloth Yom Tobi, i, 1, etc.). In addition to the daily ordinary sacrifices, there were offered on this day and on the following six days two young bullocks, a ram, and seven lambs of the first year, with meat-offerings for a burnt-offering, and a goat for a sin-offering (Num. xxviii, 19-22).

Besides these public sacrifices, there were the voluntary offerings which were made by every private individual who appeared before the Lord in Jerusalem, in accordance with the injunction in Exod. xxviii, 15; Deut. xxvii, 12. For this reason the crown of this festival was the voluntary offering from every attendant at the sanctuary (תּוֹחָן) was to be a threefold one: 1. A burnt-offering of not less value than one meah silver = 16 grains of corn; 2. A festivity-offering, called Chagigah (see below), of not less value than two meahs = 82 grains of corn; and 3. Peace or joyful offering (Deut. xxviii, 7), the value of which was entirely left to be determined by the good-will of the offerer, according to Deut. xvi, 16. The last two were alike denominated peace-offerings. They were generally offered on the first day of the festival, and if any one failed to bring them on this day, they might be brought on any other day of the festival; but if they were neglected during the festival, they could not be offered afterwards (Chagigah, 1, 6; Maimonides, Iḥiloth Chagigah, i, 4, 5). Those who contracred any legal impiety were not allowed to offer the Chagigah (Mishna, Pesachim, vi, 5).

The special sort of sacrifice named above as connected with the crown, was not as usual with other festival offerings, is called in the Talmud תּוֹחָן (Chagigah, i.e. "festivity"). It was a voluntary peace-offering made by private individuals. The victim might be taken either from the flock or the herd. It might be either male or female, but it must be without blemish. The offerer laid his hand upon its head and slew it at the door of the sanctuary. The blood was sprinkled on the altar, and the fat of the inside, with the kidneys, was burned by the priest. The breast was given to the priest as a wave-offering, and the right shoulder as a heave-offering (Lev. iii, 1-5; vii, 29-34). What remained of the victim might be eaten by the offerer and his guests on the second day only, on which day it was slain on the second day following; but if any portion was left till the third day, it was burned (Lev. xvii, 16-18; Pesech. vi, 4). The connection of these free-will peace-offerings with the festivals appears to be indicated in Num. x, 10; Deut. xxiv, 26; 2 Chron. xxvii, 27, and they are frequently referred to in the term Passover in Deut. xvi, 2: "Thou shalt therefore sacrifice the Passover unto the Lord thy God, of the flock and of the herd." Onkelos here understands the command to sacrifice from the flock to refer to the paschal lamb, and that to sacrifice from the herd to the Chagigah. But it seems more probable that both the flock and the herd refer to the Chagigah, as there is a specific command respecting the paschal lamb in ver. 5-7 (see De Miura's note in the Crit. Sac., and Lightfoot, Hor. Heb. on John, xviii, 28). There are evidently similar references in 2 Chr. xxvii, 26; 30; 2 Kings iv, 44; 8, Lightfoot, Temple Service, c. xii; Roland, Ant. iv, c. ii, § 2).

That the Chagigah might be boiled, as well as roasted, is proved by 2 Chron. xxxv, 15, "And they roasted the pasover with fire according to the ordinance; but the other holy offerings they did in pools, and in caldrons, and divided them speedily among all the people." 7. The 16th of Nisan.—On the 16th, or the day after the holy convocation, called "the morrow after the Sabbath" [see Pentecost], the "omer (וסיע, rá ṣipāyāra, manuscula epicarum) of the first produce of the harvest was brought to the priest, to be waved before the Lord in commemoration of the instruction in Lev. xxiii, 10, in which was of barley, being the grain which ripened before the wheat (Exod. ix, 31, 32; 2 Sam. xxii, 9; Ruth ii, 23; 2 Kings iv, 42; Muanakot, 84 a). The omer had to be from the best and rippest standing corn of a field near Jerusalem. The measure of an omer had to be of the meal obtained from the barley offering. Hence through the day, weighing ten omer's worth, which was distributed in the following manner: "Delegates from the Sanhedrin went [into the field nearest to Jerusalem] a day before the festival, and tied together the ears in bunches, while still fastened to the ground, so that they might easily be cut. [On the afternoon of the 16th] the inhabitants of neighboring towns would assemble together, that the reaping might take place amid great tumult. As soon as it became dark, each of the reapers asked, Has the sun gone down? To this the people replied, Yes. He asked again, Has the sun gone down? To this the people again replied, Yes. Each reaper then asked, Is this the shecyte? To this the people replied, Yes. Is it the scythe? Yes, was again the reply. Is this the scythe? Yes, they replied. Is it the box? Yes, was again the reply. Is this the scythe? Yes, it is the scythe.
bath, they replied. Is it the Sabbath? Yes, this is the Sabbath, was again the reply. Shall I cut? Yes, cut, they replied. Shall I cut? Do cut, they again replied. Every question was asked three times, and the people replied: You are right, it is the Sabbath; we refrain from labor, for the wind to pass over it, and ground in a barley-mill [which left the hulls unground]. The flour thus obtained was sifted through thirteen different sieves [each one finer than its predecessor], and in this manner was the prescribed omer, or tenth part, got from the seed. The residue was redeemed, and could be used by every one. They mixed the omer of meal with a log [= half a pint] of oil, put on it a handful of frankincense (Lev. ii, 15), as on other meat-offerings, waved it, took a handful of it, and caused it to ascend in smoke (Lev. ii, 10), and the residue was eaten by the priest. Immediately after the ceremony, bread, parched corn, green ears, etc., of the new crop were exposed for sale in the streets of Jerusalem, as prior to the offering of the omer no use whatever was allowed to be made of the new corn (Mishna, Menachoh, x, 2–5; Maimonides, Yad Ha-Chetzukai, Hilkhot Tomarim, Mo'ed, x, 4–5; comp. also Josephus, Ant. iii, 10, 5). From this day the fifty days began to be counted to the day of Pentecost (Lev. xxiii, 15).

8. The 17th to the 20th of Nisan.—This period was half-holyday (נ ve ב wrongdoing), called the middle days of the festival, or the lesser festival (נ ve ב wrongdoing), which had already commenced with the 16th. The people either left Jerusalem and returned to their respective homes or remained and indulged in public amusements, as dances, songs, games, etc., to fill up the time in harmony with the joyful and solemn character of the festival. The work allowed to be done during the middle days of the festival was restricted to irrigating dry land, digging watercourses, repairing conduits, reservoirs, roads, market-places, baths, whitewashing tombs, etc. Dealers in fruit, garments, or in utensils were allowed to sell privately what was required for immediate use. Whatever the emergencies of the public service required was necessary for the festival, as the passage of the army which might cause loss or injury, was permitted. Hence no new graves were allowed to be dug, nor wires espoused, nor houses, slaves, or cattle purchased, except for the use of the festival. Mourning women, though allowed to walk, were not permitted to clasped or pray together. The work allowed to be done during these days of the festival is strictly regulated by the Jewish canons contained in the Mishna, Moed Katan. In the Temple, however, the additional sacrifices for the festival were offered up, except that the lesser Hallul was now recited, and not the Great Hallul.

9. The 21st of Nisan.—On the last day of the festival, as on the first, there was again a holy convocation. It was in all respects celebrated like the first day, except that it did not commence with the paschal meal. As at all the festivals, as cheerful thoughts were entertained during the whole week, and all care was to be laid aside (Deut. xxvii, 7; comp. Joseph. Ant. xi, 5; Michaelis, Laws of Moses, art. 197).

10. The Second or Little Passover.—According to the injunction in Numb. ix, 9–12, any one who was prevented by legal impurity, or by being at too great a distance from Jerusalem, from celebrating the regular Passover on the eve of the 14th of Nisan, was obliged to keep it on the 14th of the following month. This is called by the ancient Jewish tradition the Second or the Little Passover (נ ve ב wrongdoing, נ ve ב wrongdoing), and the Jewish canons also add, most justly, that those who have been prevented from observing the first or ordinary Passover through error or compulsory force, are absolutely bound to keep the second Passover. The difference between the two Passovers is thus summed up in these words: in the case of the first Passover, the Jew was to be seen or found in the house, the paschal sacrifice could not be offered with leaven, no piece thereof was allowed to be removed from the house in which the company ate it, the Hallul had to be recited at the eating thereof, the Chagigah had to be brought with it, and it might be offered in the temple on the morrow of the Sabbath. In the case of the second Passover, the house where the Jew was to be seen or found in the house, the paschal sacrifice could not be offered with leaven, no piece thereof was allowed to be removed from the house in which the company ate it, the Hallul had to be recited at the eating thereof, portions thereof might be removed from the house in which the company ate it, no Chagigah was brought with it, and it could not be offered under the above-named legal impropriety (Mishna, Pesachim, ix, 3; Maimonides, Hilkhot Korban Pesach, x, 15).

11. Release of Prisoners.—It is a question whether the release of a prisoner is required by the Passover (Matt. xxv, 15; Mark xv, 6; Luke xxiii, 17; John xviii, 39) as a custom of Roman origin, resembling what took place at the leetiesternium (Livy, v, 18), and in later times on the birthday of an emperor; or whether it was an old Hebrew festival custom, when the fugitives, who had been allowed the Jews to retain, Grotius argues in favor of the former notion (see Matt. xxv, 15). But others (Hottinger, Schöttgen, Winer) consider that the works of St. John — "οἱ ἐκατονταεταὶ ἁγία — render it most probable that the custom was essentially Hebrew. Schöttgen thinks that there is an allusion to it in Pesachim (viii, 6), where it is permitted that a lamb should be slain on the 14th of Nisan for the special use of one in prison to whom a release had been promised. The subject is discussed at length by Hottinger, in his tract De Ritu spirituale natae Domini, in the Thesaurus Novae Theologiae Philologicae.

IV. The Manner in which the Passover is Celebrated at the Present Day.—With the exception of those ordinances which were legal, and belonged to the Temple, and the extension and more rigid explanation of some of the rites, the Jews to the present day continue to celebrate the feast of Passover as in the days of the second Temple. Several days before the festival all the utensils are cleansed (נ ve ה wrongdoing); on the eve of the 13th of Nisan the master of the family, with a wax candle or lamp in his hand, searches most diligently into every hole and crevice throughout the house, lest any crumb of leaven or unleavened bread should remain (נ ve ה wrongdoing). Before the search commences he pronounces the benediction, and after this he recites the formal recitation of all leaven given in the former part of this article. On the 14th of Nisan, the Preparation Day (נ ve ה wrongdoing, נ ve ה wrongdoing), all the first-born males above thirteen years of age fast in commemoration of the sparing of the Jewish first-born at the time when all Egypt's first-born were destroyed. On this evening the Jews put on their festive garments, resort to the synagogue, and offer up the prayers appointed for the occasion, after which they return to their respective homes, where they find the houses illuminated and the tables spread. Three of the thin, round, and perforated unleavened cakes, which are made of wheaten flour, resembling the oatmeal bread made in Scotland, and which are eaten during the whole of the Passover week, are put on a plate, wrapped up in a napkin in such a manner as to be separated from each other, though lying one above the other. These three cakes represent the three loaves put into the threshing-floor by David, viz., Priests, Levites, and Israelites. See Haphtarah. A shank-bone of a shoulder of lamb, having a small bit of meat thereon roasted on the coals to commemorate the paschal lamb, and an egg roasted hard in hot ashes, to signify that it was to be roasted whole, are put on
another dish; the bitter herbs are on a third dish, while the charoseth (חַרֹשֶׁת), in remembrance of the bricks and mortar which the Israelites made in Egypt, and some salt water or vinegar in memory of their passage through the Red Sea, is put into the fourth dish. When all the family have sat round the table, including the servants, to remind them that they were all alike in bondage, and should equally celebrate their redemption; and when the paterfamilias, arrayed in his death-garments, has reclined at the head of the table to indicate the freedom of the people, the meal goes through:

1. (םֵדי) Each one has a cup of wine, over which they all stand up and holding their respective cups in their hand, pronounce the blessing for the juice of the grape, welcome the festival, and drink the first cup leaning on the left side; 2. (יִירָא) Thereupon the head of the family washes his hands; 3. (שֵׁבֵי) Takes the parsel or shervil, dips it into the salt water, and hands it round to every one at the table, pronouncing the following benediction: "Blessed art thou, O Lord our God, King of the universe, who hast created the fruit of the earth." 4. (יִירָא) He then breaks in two the middle of the three unleavened cakes on the dish, conceals one half for an after-dish (יִירָא = יִירָאוֹת), and leaves the other half on the dish; 5. (יִירָא) Then he uncovers the unleavened cakes, takes the egg and the bone of the lamb from the dish, holds them up and says, "Lo! this is the bread of affliction which our forefathers ate in the land of Egypt. Whosoever is hungry let him eat; and whosoever is thirsty let him come and celebrate with us the Passover. This year we are here, next year we shall be in the land of Israel; this year we are servants, next year we shall be free children." The second cup is then filled, and the son asks the father the meaning of this festival, who replies in the manner described above. He is then given a summary of the Egyptian bondage, and the deliverance therefrom, they all, lifting up the cup, exclaim, "Therefore it is our duty to give thanks," etc. The cup is then put down, the unleavened cakes covered, and the first part of the Hallel is recited. The unleavened cakes are again uncovered, the cups of wine taken up, and the following benedictions are pronounced: "Blessed art thou, O Lord our God, King of the universe, who have redeemed us and redeemed our forefathers from Egypt, and preserved us this evening to eat thereon unleavened bread, bitter herbs, mixed with salt, as our God and our fathers God, also peacefully reach other festivals and holy days, to which we look forward. Cause us to rejoice in the rebuilding of thy city, and to be joyful in thy service, so that we may there eat of the thanksgiving offering and drink of the passover, whose blood was sprinkled on the sides of thine altar as an acceptance. Then shall we sing unto thee a new song for our redemption and deliverance. Blessed art thou, O Lord, who redeemest Israel!" The blessing over, the second cup is then filled, a blessing pronounced, and the wine drunk, whereasupon each one washes his hands, and says, "Blessed art thou, O Lord our God, King of the universe, who hast sanctified us with thy commandments, and enjoined us to wash the hands." The master of the family takes up all the three unleavened cakes together in the order in which they are arranged, pronounces the following blessing: "Blessed art thou, O Lord our God, King of the universe, who bringest forth food from the earth!" and then pronounces the blessing for eating unleavened bread over the middle broken cake, which is as follows: "Blessed art thou, O Lord our God, King of the universe, who hast sanctified us with thy commandments, and enjoined us to eat unleavened cakes!" He next breaks off a piece from the upper whole cake, and a piece from the half central cake, dips them in salt, and eats the two pieces in a reclining position. He then takes some of the bitter herbs, dips them in the charoseth, pronounces the blessing over them, distributes them all round, and they eat them, not reclining. The master then takes a piece from the underneath cake and some of the bitter herbs, and eats them in a reclining position, saying, "In remembrance of the Temple according to Hillel! Thus Hillel did at the time when the Temple still existed. He wrapped up unleavened cakes with bitter herbs and ate them together, in order to perform what is commanded in the service with unleavened bread and bitter herbs." This concludes the first part of the ceremony, and the supper (יִירָא) is now served. After the supper the master takes the half cake, which has been concealed (יִירָא) for the after-dish (יִירָא), eats thereof the size of an olive, and gives each one of the household a similar piece; whereupon (יִירָא) the third cup is filled, the usual grace after meals is said, the blessing over the fruit of the vine is pronounced, and the third cup drunk in a reclining position. A cup of wine is now poured out for the prophet Elijah, when profound silence ensues for a few seconds; then the door is opened for this harbinger of the Messiah to enter, and the following passages of Scripture are recited at the moment when he is expected to make his appearance. Pour out thy wrath upon the heathen that have not called upon thy name, and upon the family thereof which have not called upon the name of the Lord" (Lam.iii.66). The fourth cup is then filled and the Hallel is finished, pieces are recited which recount the power and goodness of God, the wonderful things which he wrought at midnight in Egypt, and in connection with the Passover, the blessing is pronounced over the fourth cup, which is drunk, and after which the following last blessing is said: "Blessed art thou, O Lord our God, King of the universe, for the vine and for the fruit of the vine, and for the increase of the field, and for that desirable good and broad land wherein thou hast pleased, and which thou hast given to our forefathers as an inheritance, to eat of its fruit and be satisfied with its goodness. Have mercy, O Lord our God, on Israel thy people, on Jerusalem thy city, on Zion the habitation of thy glory, on thine altar. Rebuild Jerusalem, the holy city, speedily in our days; bring us back to it; cause us to rejoice in it, that we may eat its fruit, be satisfied with its goodness, and we shall bless thee for it in holiness and purity. Cause us to rejoice on this day, the feast of unleavened bread, for thou, O Lord, art good and gracious to all. We will therefore praise thee, and give thanks to thee for the fruits of the vine, of the art thou, O Lord, for the bread and for the fruit of the vine!" The whole is concluded with the singing of the soul-stirring Paschal Hymn:

"He is mighty. He will rebuild his house speedily; quickly, quickly in our days, speedily, God build, God build thy house speedily," etc.

The same service is gone through the following evening, as the Jews have doubled the days of holy conversation. In the morning and evening of the festive week the Jews resort to the synagogue and recite the prayers appointed for the feasts. The lessons from the law and prophets read on the days of holy convocations, as well as the laws of the festival. The following benediction is given in the article HAPHTARAH. It must be remarked that, in accordance with the injunction in Lev. xix.10, 11, 15, 16, the Jews to the present day begin to count the forty-nine days until Pentecost at the conclusion of the second evening's service, when they pronouce the following benediction: "Blessed art thou, O Lord our God, King of the universe, who hast sanctified us with thy commandments, and has enjoined us to count the omer! This day is the first day of the omer. May it please thee, O Lord our God, and the God of our fathers, to rebuild the sanctuary speedily in
It is alleged that this view of the case is strengthened by certain facts in the narratives of the synoptical Gospels. John, as well as the other Evangelists, was not a Jew, and could not have been a party to the law with what we know of Jewish customs in later times. If the meal was the passchal supper, the law of Exod. xii, 22, that none shall go out of the door of his house until the morning," must have been broken, not only by Judas (John xiii, 30), but by our Lord and the disciples (Mark xiv, 17), and thus the other discourses and acts recorded according to Jewish authorities, this law was disused in later times. But even if this were not the case, it does not seem that there can be much difficulty in adopting the arrangement of Greenwell's Harmony, that the party did not leave the house to go over the brook till after midnight. In like manner it is easy to account for the observance of the 15th, the day of holy conviction with which the paschal week commenced (Exod. xii, 16; Lev. xxiii, 35, etc.), and some express enactments in the Talmut regarding legal proceedings and particular details, such as the carrying of spices, must have been infringed by the Jewish rulers in the apprehending of Christ, in his trials before the high-priest and the Sanhedrim, and in his crucifixion; and also by Simon of Cyrene, who was coming out of the country (Mark xvi, 1; Luke xxiii, 26); by Joseph, who bought spices for the body (Matt. xxvii, 57); by Nicodemus, who brought to the tomb a hundred pounds weight of a mixture of myrrh and aloes (John xix, 39). The same objection is considered to lie against the supposed connexion that the third evangelist relates that the use of the guest-chamber was secured in the manner usual with those who came from a distance to keep the festival. Each states that "they made ready the passover," and that, when the evening was come, our Lord, taking the place of the head of the family, sat down with the twelve. He himself distinctly calls the meal "this Passover" (Luke xxii, 15, 16). After a thanksgiving, he passes round the first cup of wine (ver. 17), and, when the supper is ended, the usual "cup of blessing" (comp. ver. 20; 1 Cor. x, 16; xii, 28). A hymn is then sung (Matt. xxvi, 50; Mark xiv, 26; Luke xxii, 7), which is reasonable to suppose was the last part of the Hallel. If it be granted that the supper was eaten on the evening of the 14th of Nisan, the apprehension, trial, and crucifixion of our Lord must have occurred on Friday. There are, indeed, suggestions as to conversant, which was the first of the seven days of the Passover week. The weekly Sabbath on which he lay in the tomb was the 16th, and the Sunday of the resurrection was the 17th. But, on the other hand, if we had no information but that which is to be gathered from John's Gospel, we could not hesitate to infer that the evening of the supper was that of the 13th of Nisan, the day preceding that of the passchal meal. It appears to be spoken of as occurring before the feast of the Passover (xiii, 1, 2). Some of the disciples suppose that Christ told Judas, while they were at supper, to buy what they "had need of against the feast" (xiii, 29). In the night which follows the supper, the Jews will not enter the pretorium lest they should be defiled, and so not able to "eat the passover" (xxvi, 28). When our Lord is before Pilate, about to be led out to crucifixion, we are told that it was "the preparation of the Passover" (xix, 14). After the crucifixion, the Jews are solicited, "because it was the preparation, that the bodies should not remain upon the cross on the Sabbath day, for that Sabbath day was a high day" (xix, 31). If we admit, in accordance with the first view of these passages, that the last supper was on the 13th of Nisan, our Lord must have been crucified on the 14th, the day on which the passchal lamb was slain and eaten; he lay in the grave on the 15th which was a "high day" or double Sabbath, because the weekly Sabbath coincided with the first day of the week (satun), and the Sunday of the resurrection was the 16th.
Galileans may have submitted to eat the passover a day too early to suit the convenience of the priests, who were overdone with the labor of sprinkling the blood and (as he strangely imagines) of slaughtering the lambs.

(6.) It has been conjectured that the great body of the Jews held the passover in the same day as they ate the passover at the same time with the Jews, but only ate the customary supper, in the following manner: In that year in which the first paschal day fell on a Sunday, the paschal lamb could not be slain on the previous day, the Jewish Sabbath, nor could it be consumed until Friday, the preparation for the Sabbath. Suppose then, that it was slain on Thursday, to be eaten on Sunday, the 14th of Nisan; but that Jesus, in view of his own approaching death, chose to anticipate the day. But we are expressly assured by the Mishna (Pesach, vi, 1) that the passover could be slain on Sunday, and this authority cannot be overthrown by a passage of the Gemara. Besides, the expression “eat the passover” (see esp. Luke xxiii, 7, 11) cannot well be referred to such a customary meal. This reconciliation of the Synoptics with John thus depends upon a makeshift supposition, which is far from explaining the very discrepancy. Under such a view, how is it possible that the day on which Jesus slew and ate the paschal lamb could be called “the first day of unleavened bread?” (Matt. xxvi, 17; Mark xiv, 12; Luke xxii, 7). (For a careful discussion of this question, see the art. on “The alleged discrepancy,” etc., in the Biblioth. Sac. 1845, p. 406 sq.)

(2.) The current opinion in modern times (Lickel, Ideleer, Tittmann, Bleek, De Wette, Neander, Tischendorf, Winer, Ebrard, Alford, Ellicott; of earlier critics, Erasmus, Grotius, Suicer, Carpzov) has set in favor of taking the more obvious interpretation of the passages in John, that the supper was eaten on the 18th, and that our Lord was crucified on the 14th. It must, however, be admitted that most of those who advocate this view in some degree ignore the difficulties which it raises in any respectful interpretation of the synoptical narratives. Tittmann (Meletemata, p. 476) simply remarks that ἰ πρῶτος τῶν ἀρχῶν (Matt. xxvi, 17; Mark xiv, 12) should be explained as πρῶτος τῶν αὐτῶν. Dean Alford, while he believes that the narration of John is substantially the same as that held by Clement, Origen, Erasmus, Calmet, Kuhnül, Winer, and Alford. Dean Ellicott regards the meal as a “paschal supper” eaten twenty-four hours before that of the other Jews, “within which were popularly considered the limits of the festival,” and would force the text of John xxiii, 6, “between the two evenings,” as denoting the time between the evenings of the 13th and 14th of the month. A somewhat similar explanation is given in the Journal of Sacred Literature for October, 1861. Erasmus (Paraphrasis on John xxiii, 1, xvii, 18; Luke xxii, 7) and others have called in an “anticipatory Passover” with the intention, no doubt, to help on a reconciliation between John and the other evangelists. But if this view is to stand, it seems better, in a formal treatment of the subject, not to call it a Passover at all. The difference between it and the Hebrew rite must have been essential. Even if a lamb was eaten in the supper, it can hardly be imagined that the priests would have performed the essential acts of sprinkling the blood and offering the fat on any day besides the legal one (see Maimonides, quoted by Otho, Lex. p. 501). It could not therefore have been a true paschal sacrifice.

(3.) Those who take the facts as they appear to lie on the surface of the synoptical narratives (Lichtfoot, Bochart, Reland, Schöttgen, Tholuck, Olshausen, Stier, Lange, Hengstenberg, Robinson, and Davidson) start from a simpler point. They see nothing unexpected in the occurrences described, for, they say, that the passages in John may fairly be interpreted in such a manner as not to interfere with their own conclusion, and to meet the objections suggested by the laws relating to the observance of the festival. We shall give in the following pages to appear to be their best explanations of the passages in question.

(4.) John xiii, 1, 2. Does πάρο τῆς ἑυχῆς limit the
time only of the proposition in the first verse, or is the
limitation to be carried on to verse 2, so as to refer to
the latter event, for the former, and others say there is a "logical necessity," εἰς τὰς ἔρημους αὐτὸς must refer more directly to the man-
ifestation of his love which he was about to give to his
disciples in washing their feet; and the natural conclu-
sion is that the meal was one eaten before the paschal supper.
But, however, contends that τὸς Κυρίου τῆς Αἰôνων ἡ λατρεία τῶν σποραδῶν. But not a few of
those who take this side of the main question (Ob-
hausen, Wieseler, Tholuck, and others) regard the first
verse as complete in itself; understanding its purport
to be that "Before the Passover, in the prospect of his
death, the Saviour's love was actively called forth
unto his followers, and he gave proof of his love to the
last." Tholuck remarks that the expression δίκαιος τὸν αὐτόν (Tischendorf reads γινόμαι), "while supper was going on" (not as in the A. V., "supper be-
ing prepared"), is a common phrase in the Jewish writers except the Passover. The evangelist would then rather have used some such expression as καὶ ἐκτίνατον αὐτῷ δίκαιον; and he considers that this view is confirmed by xxi. 20, where this supper is spoken of as if it were something familiarly known and not peculiar in its character—καὶ ἐκτίνατον αὐτῷ δίκαιον. On the whole, Neander himself admits that nothing can safely be inferred from John xiiii, 2, in favor of the supper
having taken place on the 13th.
(6) John xiii, 29. It is urged that the things of
which they had "need against the feast" might have been
the provisions for the Chaghigah, perhaps with
what else was required for the seven days of unleavened
bread. The usual day for sacrificing the Chaghigah was the
15th, which was then commencing. But there is
nothing to show, in the disciples thinking it likely
that purchases could be made, or that alms could be
given to the poor, on a day of holy convocation. This is
of course a difficulty of the same kind as that
which meets us in the purchases actually made by
the women, by Joseph and Nicodemus. Now it must be
admitted that we have no proof that the strict religious
maxims which have been appealed to on this point
existed in the time of our Saviour, and that it is highly
probable that the letter of the law in regard to trading
was habitually relaxed in the case of what was required
for the Passover and other feasts. There was plainly a
distinction recognized between trade during the day of
convocation and the Sabbath in the Mosaic law itself, in respect
to the obtaining and preparation of food, under which
head the Chaghigah might come (Exod. xii, 16); and
in the Mishna the same distinction is clearly main-
tained (Yoma xii, 2, and Megilla, i, 5). It also ap-
ppears that the school of Hillel allowed more liberty in
certain particulars on festivals and fasts in the night
than in the day time (Peschim, iv, 5). The special
application of the license is rather obscure. See Barre-
na's note. Comp. also Peschim, vi, 2. And it is
expressly proved in the Mishna that on the Sabbath it-
self wine, oil, and bread could be obtained by leaving a
claus (τὴν θαλάσσα) as a pledge, and that the 14th of Nisan
fell on a Sabbath the paschal lamb could be obtained in
like manner (Sabbath, xxiii, 1). Alms also could be
given to the poor under certain conditions (δ twentieth, 1).
(c) John xviii, 28. The Jews refused to enter the
praeatorium lest they should be defiled, and so disquali-
fied for eating the passover. Neander and others
deny that the Greek word πρόερχόμενος is to be understood as referring
to the paschal supper. But it is alleged that the words ὄν τοῖς ἑτέροις must either be taken in a
general sense, as meaning "that they might go on
keeping the Passover," or that τὸ αὐτός may be un-
derstood specifically to denote the Chaghigah. That
it might be so used is rendered probable by Luke xxii, 1;
and the Hebrew word which it represents (יִדוֹן) evi-
dently refers equally to the upper and lower rooms for the Chaghigah and the paschal lamb (Deut. xvi, 2), while the former pre-
cluded necessarily that the latter must be eaten. (See 2 Chron. xxiii, 17; also Peschim, iv, 24, note.) Ewald also thinks the words (monides's note.) Joseph appears not to have partici-
pated in the scruple of the other rulers, as he entered the
praeatorium to beg the body of Jesus (Mark xv, 45). Lightfoot (Ex. Hebr. in loc.) goes so far as to draw an
argument in favor of the 14th being the day of the
supper from the very text in question. He says that the slight defilement incurred by entering a Gentile
house, had the Jews merely intended to eat the supper
in the evening, might have been done away in good
time by mere ablation; but that as the festival had actu-
ally commenced, and they were forbidden to eat, or
except the Passover. In this case, the Chaghigah might not be eaten
in such an unclean state, and they could not resort even to such
a simple mode of purification. Dr. Fairbairn takes the expression "that they might eat the passover" in its
limited sense, and supposes that these Jews, in their determinate view, were willing to put up the matter to the
verge of, or even beyond, the legal time (Herm.
In opposition to this view it may be argued, (i.)
That according to the Mishna (Peschim, vi, 4) the flesh
of these voluntary offerings might be eaten at any time
within two days and one night, and even this might be
postponed for individuals. (ii.) By the same pas-
sage, since the 14th of Nisan fell in that year on a
working-day, these sacrifices might have been brought
at the same time with the paschal lamb, and the sacrif-
cial meal must already have been eaten by many of
the Jews. In this case the expression of the evangelist
is too general, and the Sanhedrim would certainly
have sent to the heathen procurator such delegates as
had no further reason to fear the uncleanness thus con-
trasted. (iii.) Since the paschal lamb must be slain in the Temples, we who offered sacrifices to the prescribed regulations, was done from the first
to the fifth hour, and could be done only by those who
were clean; such uncleanness continuing until evening
was a hindrance, and would certainly be avoided in the general character of an important festival
like this festival (comp. Litcke, Op. cit. 725). (iv.) Again,
the mode of speech in Deut. xvi, 2, "Thou shalt ac-
cess the passover," cannot prove any wider meaning of
the words "eating the passover" than the common
one, feast of all a technical or short use of the term Pascha (πρόερχόμενος) itself for the customary thank-offerings alone,
to the exclusion of the paschal lamb; and indeed the
effect of the loose use of these words in the second verse
is completely removed by the strict use of the same
phrase in the sixth. (v.) In the same manner the ar-
guement from 2 Chron. xxx, 22 is without force, since
"eating throughout the feast" (ver. 22) is distinguished
clearly enough from "eating the passover" (ver. 18).
(d) John xix, 14. "The preparation of the Pass-
over" at first sight would seem as if it must be the
preparation for the Passover on the 14th, a time set
apart for making ready for the paschal week and for
the paschal supper in particular. It is naturally so un-
derstood by those who advocate the notion that the last
supper was eaten on the 13th. But they who take the
opposite view affirm that, though there was a regular
preparation for the Sabbath which was ascribed to any "preparation" for the festivals (Bochart, Reland,
Tholuck, Hengstenberg). The word πρόερχόμενος is expressly explained by προσδόκησαν (Mark xv, 42:
VII.—24*}
PASSOVER 746 PASSOVER

Lachmann reads πρως αὐτὸν ὁμαλῶς. It seems to be essentially connected with the Sabbath itself (John xix. 31). It cannot, however, be denied that the days of holy convocation are sometimes designated in the O. T. simply as Sabbaths (Lev. xvi. 31; xxiii. 11, 32). It is therefore not quite impossible that the language of the Gospels considered by itself might refer to them. They were not, however, Sabbaths of rest, for they had no connexion with the Sabbath in the O. T., but it is mentioned by Josephus (Ant. xvi. 6, 2), and it would seem from him that the time of preparation formally commenced at the ninth hour of the sixth day of the week. The πρωσίσβασις is named in Judith viii. 6 as one of the times on which devout Jews suspended their fasts. It was called by the rabbinists פניזות והנין, ויהי אס ביכיר (Buxtorf, Lex. Talm. col. 1655). The phrase in John xix. 14 may thus be understood as the preparation of the Sabbath which fell in the Passover week. This mode of taking the expression seems to be justified by Ignatius, who calls the Sabbath which occurred in the festival αὐτίσβασις τοῦ παίσα (Ep. ad Phil. 13), and by Socrates, who calls it αὐτίσβασις τῆς τόπης (Hist. Eccl. v. 22). These arguments are admitted, the day being preparation for the feast. In the Gospels might have fallen on the day of holy convocation, the 15th of Nisan. (Comp. Reland, iv. 3, 11; Gabler, Op. cit. 445 sqq.; Baur, Gottet. Verfass. ii. 227; Tholuck, John, p. 300 sqq.; John, Arch. eol. iii. 314; Guericke, in the Neues krit. Journ. der Theol. iii. 290 sqq.; Mme. Com. ii. 417 sqq.; Hengstenberg, in the Evang. Kirchen- gesch. 1838, No. 98 sq.; Kern, in the Tübinger Zeitschr. 1836, iii. 7 sq.; Crusius, John ii. 138, 148; Wieseler, Chron. Synops. p. 389 sqq.; Ebrard, in the Evang. Joh. p. 42 sqq.; Von Ammer, Leben Jesu iii. 235, 411 sqq.)

All this, however, seems forced, and contradicts the usus loquendi (see Thiele, in Neues krit. Journ. v. 129 sqq.). The explanation of “the preparation of the Passover” also, by the Sabbath of the Passover (comparing Ignat. ad Philop. c. 19), cannot well be accepted; for Ignatius, a xiv. 31). It cannot, however, be supposed that on the Saturday before Easter the preparation for Easter, which is altogether analogous to the preparation of the Passover, in the usual sense; nor indeed is the reference certain (Bleek, Op. cit. p. 119). It would seem that Greek readers would understand this phrase (πρωσίσβασις τοῦ παίσα) only of the preparation for the Passover observed by the Jews (see Dr. Gell). (c.) John xix. 31. “That Sabbath-day was an high day,” μετὰ μεγάλην. Any Sabbath occurring in the Passover week might have been considered “a high day,” as deriving an accession of dignity from the festival. But it is assumed by those who fix the supper on the 15th that the term was applied owing to the 15th being “a double Sabbath,” from the coincidence of the day of holy convocation with the weekly sabbath. Those, on the other hand, who identify the supper with the paschal meal, contend that the special dignity of the day resulted from its being the day on which the omer was offered, and from which were reckoned the fifty days to Pentecost. One explanation of the term seems to be as good as the other.

(f.) The difficulty of supposing that our Lord’s apprehension, trial, and crucifixion took place on the day of holy convocation has been strongly urged, especially by Greswell (Dissert. iii. 156). If many of the rabbinical maxims for the observance of such days which have been handed down to us were then in force, these occurrences certainly could not have taken place. But this is not yet within the proper Jewish usage in regard to legal proceedings on sacred days are very inconsistent with each other. Some of them make the difficulty equally great whether we suppose the trial to have taken place on the 14th or the 15th. In others, there are exceptions permitted which seem to go far to meet the case before us. For example, the Mishna forbids that a capital offender should be examined in the night or on the day before the Sabbath or a feast-day (Sanhedr. iv, 1). This law is modified by the glosses of the Gemara (see the notes of Cocceius in Surenhusius, 1711, p. 469). They allowed, however, that the crucifixion might be decided in its legal meaning by the Jewish rulers, they would have outraged it in as great a degree on the preceding day (i.e. the 14th) as on the day of holy convocation before the Sabbath. It was also forbidden to administer justice on a high day, or on Easter, or to carry arms on a high day. But these prohibitions are expressly distinguished from unconditional precepts, and are reckoned among those which may be set aside by circumstances. The members of the Sanhedrim were forbidden to eat any food on the same day after condemning a criminal (Bab. Gem. Sanhedr., quoted by Lightfoot on Matt. xxvii. 1). Yet we find them intending to “eat the passover” (John xviii. 28) after pronouncing the sentence (Matt. xxvi. 65, 66). The application of this prohibition to the point in hand will, however, hinge on the way in which we understand it not to have been law. For the Jews were to eat the passover (Ex. xii. 14) on the 14th, and therefore to pronounce sentence in the legal sense. If we suppose that the Roman government had not deprived them of the power of life and death, it may have been to avoid breaking their law, as expressed in Sanehridim, as well as by the Roman procurator. (See Biscoe, Lectures on the Acts, p. 166; Scaliger’s note in the Critici Sacri on John xviii. 31; Lightfoot, Ex. Hebr. Matt. xxxi. 8, and John xviii. 31, where the evidence is given which is in favor of the Jews having resigned the right of capital punishment forty years before the destruction of Jerusalem.) It was, however, expressly permitted that the Sanhedrin might assemble on the Sabbath as well as on feast-days, not indeed in their usual chamber, but in a place near the court of the women (Gemara, Sanhedr.). And there is a remarkable passage in the Mishna in which it is commanded that an elder not submitting to the voice of the Sanhedrin should be kept at Jerusalem till one of the three great festivals, and then executed, in accordance with Deut. xvii. 12, 18 (Sanhedr., x. 4). Nothing is said to lead us to infer the execution could not take place then. It is a difficult point to fix. It is; however, hardly necessary to refer to this, or any similar authority, in respect to the crucifixion, which was carried out in conformity with the sentence of the Roman procurator, not that of the Sanhedrin.

But we have better proof than either the Mishna or the Gemara can afford that the Jews did not hesitate, in the time of the Roman domination, to carry arms and to apprehend a prisoner on a solemn feast-day. We find them at the feast of Tabernacles, on the “great day of the feast,” sending out officers to take our Lord, and rebuking them for not bringing him (John viii. 32-45). St. Peter also was seized during the Passover (Acts xii., 3, 4). And, again, the reason alleged by the rulers for not apprehending Jesus was not the sanctity of the festival, but the fear of an uproar among the multitude which was assembled (Matt. xxvi. 5).

On the whole, then, notwithstanding the express declaration of the law and of the Mishna that the days of holy convocation were to be observed precisely as the Sabbath, except in the preparation of food, it is highly probable that considerable license was allowed in regard to them, as we have already observed. It is very evident that the festival times were characterized by a free and jubilant character which did not belong, in the same degree, to the Sabbath, and which was manifestly not confined to the days of that period. But the days of holy convocation were observed in the manner prescribed by the law as the evidence of the festival, but the fear of an uproar among the multitude which was assembled (Matt. xxvi. 5).
PASSOVER

among the Israelites, such was not the case with the law of the festivals. A greater freedom of action in cases of urgent need would naturally follow, and it is not difficult to suppose that the women who "rested on the Sabbath-day according to the commandment" had prepared the spices and linen for the entombment on the day of holy convocation. To say nothing of the way in which the question is treated in the much greater license permitted by the school of Hillel than by the school of Shammai, in all matters of this kind, it is remarkable that we find, on the Sabbath-day itself, not only Joseph (Mark xv, 43), but the chief priests and Pharisees coming to Pilate, and, as it would seem, to the preternatural grace of Matt. xxv. 29.

(g.) Finally, it must be admitted that the narrative of John, so far as the mere succession of events is concerned, bears consistent testimony in favor of the last supper having been eaten on the evening before the Passover. That testimony, however, does not appear to be so distinct, and so incapable of a second interpretation, as that of the synoptic Gospels in favor of the meal having been the paschal supper itself, at the legal time (see especially Matt. xxvi. 17; Mark xiv, 1, 12; Luke xxii. 7). Whether the explanations of the passages are due to the results of the discussion arising from the nature of the occurrences related, compared with the enactments of the Jewish law, be considered satisfactory or not, due weight should be given to the antecedent probability that the meal was no other than the regular Pasover, and that the reasonableness of the view cannot be maintained without some artificial theory, having no proper foundation either in Scripture or ancient testimony of any kind.

3. Evidence of Later Writers.—There is a strange story preserved in the Gemara (Sanhedrin, vi, 2) that our Lord, having been mainly engaged during forty days to find an advocate, was sentenced, and, on the 14th of Nisan, stoned, and afterwards hanged. As we know that the difficulty of the Gospel narratives had been perceived long before this statement could have been written, and as the two opposite opinions on the chief question were both current, the writer might easily have taken up one or the other. The statement cannot be regarded as worth anything in the way of evidence. Other rabbinical authorities countenance the statement that Christ was executed on the 14th of the month (see Joseph, Ant. iii, 5). But this is not the view in which, for the reason stated above, numbers do not add to the weight of the testimony.

Not much use can be made in the controversy of the testimonies of the fathers. But few of them attempted to consider the question critically. Eusebius (Hist. Eccl. [iii. 1, 1]) has recorded that traditions were in favor of John having kept Easter on the 14th of the month. It has been thought that those traditions rather help the conclusion that the supper was on the 14th. But the question on which Eusebius brings them to bear is simply whether the Christian festival should be observed on the 14th, the day i.e. Πάσχαν το πρόστατος ιουνίαν παρασχεθαι, on whatever day of the week it might fall, or on the Sunday of the resurrection. It seems that nothing whatever can be safely inferred from them respecting the day of the month of the supper or the crucifixion. Clement of Alexandria and Origen appeal to the Gospel of John as deciding in favor of the 13th. Chrysostom expresses himself doubtfully between the two. St. Augustine was in favor of the 14th. Numerous patristic authorities are stated by Mabillon On Matt. xxi.

See Lord's Supper.

5. Origin and Import of the Feast of Passover.—1. Naturalistic Interpretation. In the three great festivities contained a reference to the annual course of nature. Two, at least of them—the first and the last—also commemorated events in the history of the chosen people. The coincidence of the times of their observance with the most marked periods in the process of gathering in the fruits of the earth is not without a naturalistic notion that their agricultural significance is the more ancient; that, in fact, they were originally harvest feasts observed by the patriarchs, and that their historical meaning was superadded in later times (Ewald).

Hagar—or rather an arrangement of the passages in the Pentateuch bearing on the Passover so as to show, according to this theory, their relative antiquity. The order is as follows: (1) Exod. xxiii, 14-17; (2) Exod. xxiv, 18-26; (3) Exod. xiii, 3-10; (4) Exod. xii, 15-20; (5) Exod. xii, 1-14; (6) Exod. xii, 43-50; Numb. ix, 10-14.

It may seem at first sight as if some countenance were given to the notion that the feast of unleavened bread was originally a distinct festival from the Passover, by such passages as Lev. xxiii, 5, 6: "In the fourteenth day of the first month at even is the Lord's Passover; and on the fifteenth day of the same month is the feast of unleavened bread unto the Lord: seven days ye must eat unleavened bread" (see also Numb. xxviii, 16, 17). Josephus, in like manner, speaks of the feast of unleavened bread as "following the Passover" (Ant. iii, 10, 5). But such usage may mean no more than the distinction between the paschal supper and the seven days of unleavened bread, which is so obviously implied in the fact that the eating of unleavened bread was observed by the country Jews who were at home, though they could not partake of the paschal lamb without the leaven. Every member of the household had to abstain from leavened bread, but some only went up to the paschal meal (see Maimonides, De Ferramento et Asymo, vi, 1). It is evident that the common usage, in later times at least, was to employ, as equivalent terms, the feast of the Passover, and the feast of unleavened bread (Matt. xxvi, 17; Mark xiv, 12; Luke xxi, 1; Josephus, Ant. xiv, 2, 1; War, ii, 1, 3).

That the feast of Passover, as such, was instituted to commemorate the deliverance of the Israelites from Egypt will be admitted by all who give credence to the historical version of the Pentateuch. That, however, to commemorate this great historical fact has been thought by some by no means to preclude the idea, that a festival, of somewhat similar rites, was celebrated by the Jews at this season, in common with other nations of antiquity, containing a reference to the annual course of nature. The following circumstances are adduced to sustain this view. When the first appeal was made to Pharaoh to let the Israelites go, it was that they might celebrate an approaching festival (Exod. iii, 19; v. 1). Moreover, it is a well-known fact that all the Eastern nations, whose customs were dependent upon the course of the sun, celebrated two principal annual festivals referring to the seasons: viz. the spring festival, at the time when the sun passes over (τηπ. πέριστροφος) into the sign
of Aries, and when the corn began to ripen; and the other, the autumn festival, when the last fruits were gathered in, which is identical with the feast of Tabernacles (ἐπίτεμνος). We are told that, since the time of this spring festival was both an occasion of gratitude and anxiety—inasmuch as not only was the barley gathered, but it decided the fertility or the barrenness of the year—the spring festival was celebrated in a double manner: (a) As a token of gratitude, the fresh grains of barley were quickly ground into flour, and the bread was made of the dough at once, before it had time to leaven, and thus offered; and (b) as an expression of anxiety, and of a desire to conciliate the divine favor, an expiatory sacrifice was offered for the transgressions of man against God. Indeed, Epiphanius declares (Ad. Haer. cap. xix, 8) that the Egyptians on this occasion marked their sheep with red, because of the general conflagration which once raged at the time when the sun passed over into the sign of Aries, thereby to symbolize the fiery death of those animals which were not actually offered up; while Von Bohlen assures us that the ancient Peruvians marked with blood the doors of the temples, the royal residences, and private dwellings, to symbolize the triumph of the sun over the winter (Altes Andien, i, 140; also General Introduction to the Pentateuch, xxxvii. p. 416, Kalisch. Hymns, Commentary on Exodus, p. 184; Ewald, Alterth. P. 390). Now it is admitted that two of the three great Jewish festivals—viz. Pentecost and Tabernacles—refer to the annual course of nature [see Festival], and that the festival of New Moon, which existed prior to the Mosaic legislation, was introduced by the inspired legislator into the cycle of Jewish festivals. See New Moon, Feast of the. There can therefore be no difficulty in admitting that the third festival was also celebrated in the patriarchal age as a barley-harvest festival, which is indicated by the very name, Abib (אֵבִּיא), of this month, and that God in his infinite wisdom and goodness chose to re-deem Israel at the time of this festival, and thus connected with the celebration of the regeneration of nature the celebration of the birth of the nation (Isa. xliii, 1, 15-17; Ezek. xvi, 4; Hos. ii, 5), superadding there-to rites and ceremonies commemorative of the historical event, as well as assigning to some already existing ceremonies a spiritual and original significance. This explains the fact why the unleavened bread, which was undoubtedly connected with sacrifices before the institution of the Passover, and which was enjoined to be eaten with the paschal sacrifices, without giving it to any significance in the original ordinance (Exod. xxii, 1-3), would come to symbolize the same state in which the children of Israel had to leave Egypt (Exod. xii, 54; Deut. xvi, 8). That the unleavened bread could not from the first have been the symbol of the fact that there was no time for the dough to leaven (Exod. xii, 38, 39, 95) is evident from Exod. xii, 5-15, where the Israelites were commanded to eat unleavened bread before their departure, and when there was plenty of time for the dough to leaven. Moreover, the fact that this primordial festival has been divested of many old superstitions, and invested with new ideas of a most exciting tendency, in being made to coincide with the exodus as well as the barley harvest, sets aside the arguments brought against the possibility of its having been celebrated at the exodus, inasmuch as the people were quite prepared for the celebration, so far as arrangements and cattle were concerned. The above view of Baur, that the Passover was an astronomical festival and the lamb a symbol of the sign Aries, and that of Von Bohlen, that it resembled the sun-feast of the Peruvians, are well exposed by Bähr (Symbolik). Spencer has endeavored in his usual manner to show that many details of the festival were derived from heathen sources, though he admits the originality of the whole. It must be admitted that the relation to the natural year expressed in the Passover was less marked than that in Pentecost or Tabernacles, while its historical import was deeper and more pointed. It seems hardly possible to study the history of the Passover with candor and attention, as it stands in the Scriptures, without being driven to the conclusion that it was, at the very first, essentially the commemoration of a great historical fact. That some symbolical meaning has been impressed by the cultural reference—the offering of the omer—holds a very subordinate place. But as regards the whole of the feast, it is not very easy to imagine that the rites which belonged to them connected with the harvest were of patriarchal origin. Such rites were adapted for the use of the ancient pastoral people, the shepherds, who had no more of shepherds like the patriarchs. It would seem, therefore, that we gain but little by speculating on the simple impression conveyed in the Pentateuch, that the feasts were ordained by Moses in their integrity, and that they were arranged with a view to the religious wants of the people when they were to be settled in the Land of Promise.

2. Historical Significance of the Festival as a Whole. The deliverance from Egypt was regarded as the starting-point of the Hebrew nation. The Israelites considered themselves to be freed from the yoke of a foreign tyrant to that of a free people owing allegiance to no one but Jehovah. "Ye have seen," said the Lord, "what I did unto the Egyptians, and how bare you on eagles' wings and brought you unto myself" (Exod. xii, 4). The prophet in a later age spoke of the event as a creation and a redemption (Isa. Ivii, 18). God declares himself to be "the creator of Israel," in immediate connection with evident allusions to his having brought them out of Egypt; such as his having made "a way in the sea, and a path in the mighty water," and his having overcome "the chariot and horse, the army and the power" (Isa. xlii, 15-17). The exodus was thus looked upon as the birth of the nation; the Passover was its annual birthday feast. Nearly all the rites of the festival, if explained in the most natural manner, appear to point to this as its primary meaning. It was the yearly memorial of the dedication of the people to him who had saved their first-born from the destroyer, in order that they might be made holy to himself. This was the lesson which they were to teach to their children throughout all generations. When the young Hebrew asked his father regarding the paschal lamb, "What is this?" the answer prescribed was, "By strength of hand the Lord brought us out from Egypt, from the house of bondage: and it came to pass, when Pharaoh, our father, knew it, that he pursued us through the Red Sea, which the children of Israel had to leave Egypt (Exod. xii, 34; Deut. xvi, 8). That the unleavened bread could not from the first have been the symbol of the fact that there was no time for the dough to leaven (Exod. xii, 38, 95) is evident from Exod. xii, 5-15, where the Israelites were commanded to eat unleavened bread before their departure, and when there was plenty of time for the dough to leaven. Moreover, the fact that this primordial festival has been divested of many old superstitions, and invested with new ideas of a most exciting tendency, in being made to coincide with the exodus as well as the barley harvest, sets aside the arguments brought against the possibility of its having been celebrated at the exodus, inasmuch as the people were quite prepared for the celebration, so far as arrangements and cattle were concerned. The above view of Baur, that the Passover was an astronomical festival and the lamb a symbol of the sign Aries, and that of Von Bohlen, that it resembled the sun-feast of the Peruvians, are well exposed by Bähr (Symbolik). Spencer has endeavored in his usual manner to show that many details of the festival were derived from heathen sources, though he admits the originality of the whole. It must be admitted that the relation to the natural year expressed in the Passover was less marked than that in Pentecost or Tabernacles, while its historical import was deeper and more pointed. It seems hardly possible to study the history of the Passover with candor and attention, as it stands in the Scriptures, without being driven to the conclusion that it was, at the very first, essentially the commemoration of a great historical fact. That some symbolical meaning has been impressed by the cultural reference—the offering of the omer—holds a very subordinate place. But as regards the whole of the feast, it is not very easy to imagine that the rites which belonged to them connected with the harvest were of patriarchal origin. Such rites were adapted for the use of the ancient pastoral people, the shepherds, who had no more of shepherds like the patriarchs. It would seem, therefore, that we gain but little by speculating on the simple impression conveyed in the Pentateuch, that the feasts were ordained by Moses in their integrity, and that they were arranged with a view to the religious wants of the people when they were to be settled in the Land of Promise.
chif characteristics of a sacrifice are all distinctly ascrib-
ated to it. It was offered in the holy place (Deut.
16, 5, 6); the blood was sprinkled on the altar, and the
fat was burned (2 Chron. xxx, 16; xxxv, 11). Philo
and Josephus (War, ii, 8, 9; Ant., vii, 6, 2) adopted the
language of Exod. xii, 27; xxiii, 18; Numb. ix, 7; Deut.
xvi, 2, 5, together with 1 Cor. v, 7, would seem to
decide the question beyond the reach of doubt.
As the original institution of the Passover in Egypt
preceded the establishment of the priesthood and the
regulation of the services of the tabernacle, it necessarily
fell short in several particulars of the observance of the
festival according to the fully developed ceremonial law
(see II, 1). The head of the family slew the lamb in
his own house, not in the holy place; the blood was
sprinkled on the lintel; there was no placing on the
altar; when the law was perfected, certain particulars were
altered in order to assimilate the Passover to the accoutum-
ed order of religious service. It has been conjectured
that the imposition of the hands of the priest was one of
these particulars, though it is not recorded (Kurtz).
But whether this was the case or not, the other changes
which have been stated seem to be abundantly suffi-
cient for the argument. It can hardly be doubted that
the paschal lamb was regarded as the great annual
peace-offering of the family, a thank-offering for the
existence and preservation of the family (Exod. xiii,
14-20). It was a symbol of the covenant of the
children of the promise. It was peculiarly the
Lord's own sacrifice (Exod. xxiii, 18; xxxiv, 25). It
was more ancient than the written law, and called to
mind that covenant on which the law was based. It
retained in a special manner the expression of the sac-
credness of the whole people, and of the divine mission
of the head of every family, according to the spirit of
the old patriarchal priesthood. No part of the victim
was given to the priest as in other peace-offerings,
because the father was the priest himself. The custom,
handed down from ancient times (Deut. xvi, 9), was
to give the head of the family a portion of the pas-
called the idea of a priesthood placed in the members
of a single tribe, while it visibly set forth the promise
which was connected with the deliverance of the peo-
ple from Egypt. "Ye shall be unto me a kingdom
of priests and a holy nation" (Exod. xix, 6). In this way
it became a testimony in favor of domestic worship.
In the historical fact that the blood in later times
sprinkled on the altar had at first had its divinely ap-
pointed place on the lintels and door-posts, it was de-
clared that the national altar itself represented the sanc-
tity and holiness of the people, as the command only
which belonged to the nation as a whole. As
regards the mere place of sprinkling in the first Pass-
over, on the reason of which there has been some spec-
ulation, Bähr reasonably supposes that the lintels and
door-posts were selected as the parts of the house
impossible to passers-by, and to which inscriptions of
different kinds were often attached (comp. Deut. vi, 9).
A question, perhaps not a wise one, has been raised
regarding the purpose of the sprinkling of the blood on
the lintels and door-posts. Some have considered that
it was meant as a mark to guide the destroying angel.
Others (especially Bochart and Bähr) suppose that it
was merely a sign to confirm the faith of the Israelites
in their safety and deliverance. Surely neither of these
views can stand alone. The sprinkling must have been
an act of faith and obedience which God accepted with
favor. "Through faith (we are told) Moses kept the
Passover and the sprinkling of blood, lest he that de-
stroyed the first-born should touch them" (Heb. xi, 28).
Whatever else it may have been, it was certainly an
essential part of a sacrament, of an "effectual sign of
grace and of God's good-will," with the mutual
relation into which the covenant had brought the Cre-
ator and the creature. That it also denoted the puri-
fication of the children of Israel from the abominations
of the Egyptians, and so had the accustomed signifi-
cance of the sprinkling of blood under the law (Heb.
lxix, 22), is evidently in entire consistency with this
view.
No satisfactory reason has been assigned for the com-
mand to choose the lamb four days before the paschal
supper (Exod. xii, 5), for it might have been during
that time that the sacrificial offering was supposed to
commemorate the haste of the departure of the Israe-
isites (so Bähr and most of the Jewish
authorities). Spencer observes on the other hand that,
as they had their cooking-vessels with them, one mode
would have been as expeditious as the other. Some
think now, like the dress and the posture in which the
first Passover was to be eaten, it was intended to re-
mind the people that they were now no longer to re-
gard themselves as settled down in a home, but as a
host upon the march, roasting being the proper military
mode of dressing meat. Kurtz conjectures that the
lamb was to be roasted with fire, the purifying element,
because the meat was thus left pure, without the mix-
ture even of the water, which would have entered into
it in boiling. The meat in its purity would thus cor-
respond in signification with the unleavened bread.
It is not difficult to determine the reason of the com-
mand, "not a bone of him shall be left" (Exod. xii, 6)
was to be a symbol of unity; the unity of the family,
the unity of the nation, the unity of God with his peo-
ple whom he had taken into covenant with himself.
While the flesh was divided into portions, so that each
member of the family could participate, the skeleton was
left one entire and to remind them of the bonds which
united them. Thus the words of the law are applied
to the body of our Saviour, as the type of that still high-
er unity of which he was himself to be the author and
centre (John xix, 36).
The same significance may evidently be attributed to
the prohibition that no part of the meat should be kept
for another meal, or carried to another house. The
paschal meal in each house was to be one, whole and
entire.
(2.) The unleavened bread ranks next in importance
to the paschal lamb. The notion has been very gen-
erally held, or taken for granted, both by Christian and
Jewish writers of all ages, that it was intended to re-
mind the Israelites of the unleavened cakes which they
were obliged to eat in their hasty flight (Exod. xii, 34,
29). But nothing is said not the particular aspect of
the effect in the sacred narrative. On the contrary, the
command was given to Moses and Aaron that unleavened
bread should be eaten with the lamb before the circum-
stance occurred upon which this explanation is based
(comp. Exod. xii, 8 with xii, 38).
It has been commonly supposed (Ewald, Winer, and
the modern Jews) that the unleavened bread and the
bitter herbs alike owe their meaning to their being re-
garded as unpalatable food. The expression "bread of
affliction," מֵאֳסָכָן (Deut. xvi, 8), is regarded as equi-
ivalent to fasting-bread, and on this ground Ewald as-
cribes something of the character of a fast to the Pass-
over. But this seems to be wholly inconsistent with the
pervading joyous nature of the festival. The bread of
affliction may mean bread which, in present gathering,
was commemorated, either in itself, or in common with
the other elements of the feast, the past affliction of
the people (Bähr, Kurtz, Hofmann). It should not be for-
gotten that unleavened bread was not peculiar to the
Passover. The ordinary "meat-offering" was un-
leavened (Lev. vii, 4, x, 12; xii, 2), the shewbread (Lev.
xxvii, 3). The use of unleavened bread in the consecration
of the priests (Exod. xxix, 23), and in the offering of the Nazarite (Numb. vi, 19), is interesting in relation to the Passover, as being ap-
parently connected with the consecration of the person.
PASSOVER

On the whole, we are warranted in concluding that unleavened bread had a peculiar sacrificial character, according to the law, and it can hardly be supposed that a passover that did not have the offering of unleavened bread would have been acceptable to the Lord because it was insipid or unpalatable. Hupfeld imagines that bread without leaven, being the simplest result of cooked grain, characterized the old agricultural festival which existed before the sacrifice of the lamb was instituted.

It seems more reasonable to accept Paul's reference to the subject (1 Cor. v. 6-8) as furnishing the true meaning of the symbol. Fermentation is decomposition, a dissolution of unity. This must be more obvious to ordinary eyes where leaven in common usage is a pledge of growth, of something new, in contradistinction to the spirit employed in this country to make bread light. The pure dry biscuit, as distinguished from bread thus leavened, would be an apt emblem of unchanged duration, and, in its freedom from foreign mixture, of purity also.

The root γυμνος signifies "to make dry." Kurtz thinks that dryness rather than sweetness is the idea in γυμνος. But sweet in this connection has the sense of uncorrupted, or incorruptible, and hence is easily connected with dryness. Perhaps our authorized version has lost something by substituting the term of the unleavened bread for the "sweet bread" of the older versions, which still holds its place in 1 Esd. i. 19. If this was the accepted meaning among the Jews, the unleavened bread of sincerity and truth must have been a clear and familiar expression to Paul, as well as to the Brethren readers of Bithynia, who knew that the blood of the lamb figured in the act of purifying, the getting rid of the corruptions of Egypt, the unleavened bread signified the abiding state of consecrated holiness.

(5.) The ater herbs are generally understood by the Jewish writers (Maimonides in Pesach viii, 4) to signify the bitter sufferings which the Israelites had endured (Exod. i. 14). But it has been remarked by Aben-Ezra that these herbs are a good and wholesome accompaniment for meat, and are now, and appear to have been in ancient times, commonly so eaten.

(6.) The offering of the ears, though it is obviously that part of the festival which is immediately connected with the course of the seasons, bore a distinct analogy to its historical significance. It may have denoted a deliverance from winter, as the lamb signified deliverance from the plagues of Egypt, which was to be considered as a winter in the history of the nation. This application of the rite perhaps derives some support from the form in which the ordinary first-fruit offering was presented in the Temple. See First-Fruits. The call of Jacob ("a Syrian ready to perish"); and the deliverance of his children from Egypt, with their settlement in the land that flowed with milk and honey, were then related (Deut. xxi. 5-10). It is worthy of notice that, according to Pesuchim, an exposition of this passage was an important part of the reply which the father gave to his son's inquiry during the paschal supper. The account of the procession in offering the first-fruits in the Mishna (Hilkout), with the probable reference to the subject in Isa. xxx, 29, can hardly have anything to do with the Passover. The connection appears to have been suggested by the tradition mentioned by Aben-Ezra that the army of Senacherib was smitten on the night of the Passover. Regarding this tradition, Vitringa says, "Non recipio, nec sperno" (In Justin. xxx. 29).

Again, the consecration of the first-fruits, the first-born of the soil, is an easy type of the consecration of the first-born of the Israelites. This seems to be countenanced by Exod. xiii, 2-4, where the sanctification of the first-born, and the unleavened bread which figured it, seem to be emphatically connected with the time of year, khi, the month of green ears (see Genesis, lxxvii. In the Sept., it is not mentioned). If Nisan is a Semitic word, Genesis thinks that it means the month of flowers, in agreement with a passage in Macarius (Hom. xxi), in which it is called πρωτον μων month of New-year's day.

4. Typical Import of the Festival.—No other shadow of good things to come contained in the law can vie with the festival of the Passover in expressiveness and beauty. It is so clearly a typical ordinance that it is so often made to express the most or less distinctly, in the ritual and language of the Church. Its outline, considered in reference to the great deliverance of the Israelites which it commemorated, and many of its minute details, have been appropriated as current expressions of the truths which God has revealed in the fulness of times in sending his Son upon earth.

It is not surprising that ecclesiastical writers should have pushed the comparison too far, and exercised their fancy in the application of trinitarian or accidental particulars of the Lord's life to the Passover, and to the Passover connected with it. The crossed spits upon which Justin Martyr laid stress are noticed above. The subject is expanded by Vitringa (Observat. Sac. ii, 10). The time of the new moon, at which the festival was held, has been taken as a type of the brightness of the appearing of the Lord at his second coming. If the Passover be regarded as the symbol of the year as figuring the ever-increasing light and warmth of the Redeemer's kingdom; the advanced hour of the day at which the supper was eaten, as a representation of the fulness of times; the roasting of the lamb, with the effect of God's judgment against sin, as typifying the cooking of the Passover, as a lesson that Christian doctrine should be well arranged and digested; the prohibition that any part of the flesh should remain till the morning, as a foreshadowing of the haste in which the body of Christ was removed from the cross; the unleavened bread, as the emblem of an humble spirit, while fermented bread was the figure of a heart puffed up with pride and vanity (see Suicer, sub σπέρμα). In the like spirit Justin Martyr and Lactantius take up the charge against the Jews of corrupting the O.T., with a view to deprive the Passover of its cleanness as a witness for Christ. They specifically allege that the following passage has been omitted in the copies of the book of Exra: Ec dicxit Eadras ad populam: Hoc pascha salvator noster est, et refugium nostrum. Cogitate et ascendet in cor vestrum, quoniam habemus humiliare eum in signo; et erat in orbe ut sit in corde suo, "Non nec sperno." (Just. Mart. Dialog. cum Trypt.; Lact. In. iv, 18). It has been conjectured that the words may have been inserted between vers. 20 and 21 in Exra vi. But they have been all but universally regarded as spurious.

But, keeping within the limits of sober interpretation indicated by Scripture itself, the application is singularly full and edifying. The deliverance of Israel according to the flesh from the bondage of Egypt was always so regarded and described by the prophets as to render it a most apt type of the deliverance of the spiritual Israel from the bondage of sin into the glorious liberty with which Christ has made us free. The blood of the first paschal lambs sprinkled on the doorways of the houses has ever been regarded as the best defined foreshadowing of that blood which has redeemed, saved, and sanctified us (Heb. xi. 29). The lamb itself, sacrificed by the worshippers without the intervention of a priest, and its flesh being eaten without reserve as a meal, exhibits the most perfect of peace-offerings, the closest type of the atoning Sacrifice who died for us and has made peace with God (Isa. lili, 7; John i, 29; comp. the expression "my sacrifice," Exod. xxxiv, 25, also Exod. xii, 27; Acts viii, 32; 1 Cor. v, 7; 1 Pet. i, 18, 19). The ceremonial law, and the functions of the priest in later times, were indeed recognised in the sacrificial rite of the Passover; but the previous existence of the rite shewn to us they were not essential for the personal approach of the worshipper to God (Isa. ixi, 6; 1 Pet. ii,
PASSOVER

5, 9). The unleavened bread is recognised as the figure of the state of sanctification which is the true element of the believer in Christ (1 Cor. v. 6). The haste with which the people was summoned in the night, the slaughtering of the fowls and the sheep, the slaughtering of the lamb with ashes and burnt-offerings, the slaughtering of the beasts, the slaughters of the sheep and the goats were all symbolic of the sacrifice of Christ, and the slaughters of the sheep and the goats were all symbolic of the sacrifice of Christ.

PASCHATOMAS

Paschophori, a title among the ancient Greeks for those of their priests whose duty it was to carry the Pasch (q.v.) in the sacred rites of heathen antiquity. The priests of Isai and Osiris among the ancient Egyptians, who were so denominated, were arranged in incor porated colleges, which again were divided into lesser companies, each consisting of ten Paschophori, headed by an officer, who was appointed every five years, to preside over them. Along with the Egyptian worship, the Paschophori were long after found in Greece. The duty of this office was to carry in procession among various processions the pasch, or sacred sash, often employed in covering and concealing from public view the adytum or shrine containing the god. It was customary for the Paschophori to chant sacred music in the temple, and to draw aside the priests that the people might behold and adore their deity. Generally speaking, this office of priests had the custody of the temple and all its sacred appurtenances. The Paschophori were looked upon by the Egyptians as eminently skilled in the medical art.

Paschophobia has been applied in ecclesiastical language to different purposes: (1) It designates that which was borne on a shrine. (2) A small chapel (paschonton), the sacristy of the Greek church (from πασχον, in the sense of an embroidery which was wrought upon the curtain that hung before it). It comprehended the ἐπικοινωνία and σπηροφολίαν. (3) The watch's chamber. The ancient (i.e. classical) Greeks used the term πασχένταρχος and πασχεναρχος for the house of a family or temple appropriated to the Paschophori (q.v.). The same word occurs in the Septuagint translation of the Old Testament, where in Ezek. xi, 17 it is used for the chambers in the outward court of the Temple. Jerome, in commenting upon the passage, says that the translations of Aquila and Symmachus is rendered Gaszoo.
pastoral care and ec advertise, and signified chambers of the treasury, and habitats for the priests and Levites round about that court of the Temple. The subsequent translation of the word was probably derived from the writings of Josephus, who mentions the poraesthesiae as a part of the Temple at Jerusalem, constituting the treasury, in which the offerings of the people were deposited. Jerome, in another passage in his commentary on Isaiah, terms the court of the treasury care rooms or chambers habitation it is called by which the ruler of the Temple dwelt. It is plain, therefore, that the word must have been employed in a very extensive significance.

Pastor (παστός, robh, from παστός, to feed), in Jer. ii. 8; iii. 15; x. 21; xii. 10; xviii. 12; xxiii. 22; xxiii. 1, 2; παστοφορία, Eph. iv. 11, a shepherd (as elsewhere rendered). Besides this literal sense, the word is employed figuratively in the Scriptures in somewhat the same way as it is now used to denote a stated minister appointed to watch over and instruct a congregation. See Shepherd.

Pastor, Christian, literally a shepherd, from pastor in Latin. It may be considered the exact equivalent of παστός in Greek and παστός in Hebrew. See above.

No idea has been for ages more familiar in Oriental countries than that of the shepherd as the feeder and guide of a flock. Yet the terms expressing it seem never to have been applied in the Old Testament in its figurative sense to the Jewish priests except by the later prophets, more especially Jeremiah, Ezekiel, and Zechariah, whose writings have a strong Messianic tinge. Those prophets denounced terrible woes against the "brutish pastors" who sought not the Lord, but who destroyed and scattered the sheep of his pasture. That they were also authorized to announce the glorious coming day of "the Lord our righteousness," and to promise that he should "feed his flock like a shepherd," "gather the lambs with his arm, and carry them in his bosom," "seek that which was lost," "bind up that which was broken," "strengthen that which was sick," "feed them with judgment," and "be their shepherd." They also recorded God's promise, in which he said, evidently with reference to the days of the Messiah, "I will give you pastors according to mine heart, which shall feed you with knowledge and understanding." (Jer. iii. 15). Under the new dispensation the Lord Jesus Christ was prominently recognized as "the great Shepherd of the sheep," "the chief Shepherd," and "the Shepherd and Bishop of souls." In this character Christ portrayed himself when he said, "I am the good Shepherd and know my sheep, and am known of mine." "I am the good Shepherd and the door for his sheep." (John x. 11, 14). He employed a similar idea when giving his parting injunctions to his disciples: "Feed my lambs," "Feed my sheep." The foregoing injunctions, taken in connection with the great commission, "Go teach all nations," show at once the nature and importance of the pastoral office in Christianity. That office is a function of the Christian ministry supplementary to the preaching of the Word. In order to make full proof of his ministry, the man of God must be both a preacher and a pastor. Preaching and pastoral work are two connected duties; otherwise they employ somewhat different though never antagonistic means for its accomplishment. Their relations and correspondences will be better understood from a comparative view. Preaching is the initial work. It awakens attention, arouses conscience, proclaims the terrors of the law, offers the mercy of salvation, and persuades men to be reconciled to God. Pastoral care feeds the flock of Christ, nourishes and cherishes the lambs of his fold, gives milk to babes, and strong meat to them that are full. Preaching introduces the Gospel. Pastoral care establishes and perpetuates the institutions of Christianity. Preaching enlarges the area of Christian influence. Pastoral care individualizes the application and consolidates the results of pulpit labor. Pastoral care increases attendance upon preaching, and secures unequaled opportunities for spiritual growth within the circle of pastoral influence, and pastoral care waters the seed sown in their hearts. Preaching is aggressive. It is the pioneer work of the Church. Pastoral care follows as the work of occupation. Preaching challenges attention and awakens inquiry. Pastoral care seeks to win that knowledge of salvation by a clear, simple, and practical explanation and solution and instruction. Preaching attacks error in its various forms, and unfolds and defends the truth of God. Pastoral care folds, watches, and guards the gathered flock. Preaching not followed, or not duly sustained by pastoral care, fails of its ultimate object, while pastoral care, without preaching, is insufficient to accomplish the designs of a Christian Church. Churches in which preaching is neglected decline both in numbers and spirituality. Those in which preaching is depreciated, or becomes powerless, verge over into ritualistic ceremonies and profanes formalities. Churches in which pastoral care is neglected lose their organic power, and tend to dissolution. Preaching and the pastoral care are, in fact, so closely correlated, and so reciprocal to each other, that they should always be maintained in unison. The Church should cooperate in order to secure some particulars in which the administration of the two functions widely differs.

Preaching, in some important senses, is a universal duty, whereas the pastoral care is committed to comparatively few. All God's people may be preachers, to a certain extent they all are preachers, but the existence of a special class of preachers, and their influence, preach Christ, and make known the knowledge of his name and the power of his grace, thus multiplying Christian activities at every point of contact between the Church and the world. Pastoral duties cannot be thus subordinated to the work of the spiritual acres, but they are limited in extent of territory, and for completeness and efficiency they must necessarily focalize in an individual pastor, however he may be aided by assistant pastors or lay helpers. Not merely is a pastor to take the spiritual oversight of his flock, but also to stimulate and guide the individual efforts of its members. Into this responsibility a stranger cannot enter, however good or great as a preacher. The spirit of true Christian always demands illustration, by private as well as public labor, for the propagation of the faith and the salvation of men. It is therefore important that such labor be under wise direction, and not wasted through circumserced views or impulses, lacking a worthy and specific aim. As well might there be many heads to an army as many pastors for a single flock. The apostle James rebuked this error when he said, "My brethren, if a man be an approved preacher of the word, let him feed the flock, not for his own gain, but that he may minister effectually." (1 Pet. v. 2). If an entire flock be guided by the wisdom and zeal of a single responsible head. In this view Christian churches should not be too large, so that individual talent will be in danger of being overlooked or unemployed. When, however, by internal growth or centripetal attraction, a pastorate becomes too large for efficient superintendence or practical work, preaching, as a centrifugal force, should come to its relief by going forth with colonies to plant new centres of Church action. While in all these respects the wise pastor will encourage and guide the efforts of his people, he will not forget that he, too, is a preacher, and that, in order to make full proof of his ministry, he must personally "preach the word; be instant in season, out of season; reprove, rebuke, exhort, with all long-suffering and doctrine." (2 Tim. iv. 2).

The administration of the ordinance of baptism or of the Lord's Supper, is peculiarly a pastoral function, and its right discharge involves no little solicitude and personal attention to their subjects. The ordinances of Christianity are not to be administered heedlessly or by mere routine, but rather with a just discrimination as to their institution and signification. Not merely is the minister to act merely as a judge in discriminating character, but also as an instructor to the ignorant,
take the oversight of a flock that has been gathered by multiplied labors, of which preaching is usually the leading and principal agency.

While preaching is not limited to the Sabbath, yet the regular and most impressive occasions for its exercise occur on that day; whereas the most laborious duties of the pastoral office, such as pastoral visiting and the visitation of the sick, are necessarily to be performed on week-days.

Summarily stated, the chief duties of a pastor are: 1. To feed the flock of God; 2. To guide its members in the pathway of duty and holiness; 3. To guard them so far as may be possible from moral and spiritual evil of every kind. In the discharge of these duties, not only ministerial but personal influence must be employed with diligence. In this respect, the whole character of a pastor may be illustrated the design of the Saviour's gift of pastors and teachers as supplementary to that of apostles and evangelists, viz. "for the perfecting of the saints, for the work of the ministry, for the edifying of the body of Christ" (Eph. iv, 12). The coupling of the terms pastor and teacher together in this connection is in itself a comment on the meaning of both. It shows that the pastor is to feed his flock with intellectual and spiritual food, while as a religious teacher he is to communicate the saving knowledge of the Son of God, and thereby to nourish the spiritual life, make the body, and nourish the body of Christ. Pastors are also to be watchmen, as indicated in the apostolic injunction, "Obey them that have the rule over you, and submit yourselves: for they watch for your souls as they that must give account" (Heb. xii, 17). The watchfulness of souls had been strikingly illustrated in connection with the prophetic office among the Jews. "I set watchmen over you, saying, Hearken to the sound of the trumpet" (Jer. vi, 17). "If the watchman see the sword come, and blow not the trumpet, and the people be not warned; if the sword come, and take any person from among them, he is taken away in his iniquity, but his blood will I require at the watchman's hand" (Ezek. xxxiii, 6).

Paul, in the last epistle written by him inspired pen, specially enjoins watchfulness on Timothy as essential to the accomplishment of his ministerial work. "Watch thou in all things; endure afflictions, do the work of an evangelist, make full proof of thy ministry" (2 Tim. iv, 5). The human mind cannot grasp a higher sense of responsibility than that with which the watchman for souls is invested. He should recognise that he is responsible to the living Lord, that he should be recognised as one of the highest and most important sense, his brother's keeper. The care of souls rests upon him as an anxiety for which he can have no relief but in their salvation. Yet how has this sacred idea been trampled with in the perfunctory disorder of the love of a neglect of pastoral duties. True pastors, according to St. Paul, are made overseers of the flock of God by the Holy Ghost. Peter also enjoins the duty of oversight, not by constraint, but willingly, and thus teaches that pastoral oversight is not that of a taskmaster lording it over God's heritage, but rather that of the tender father and most disinterested solicitude for the welfare of each member of the flock. It is the solicitude of the nurse for her charge. "We were gentle among you, even as a nurse cherisheth her children; so, being affectionately desirous of you, we were willing to have imparted unto you not the Gospel of God only, but also our own souls, because ye were dear unto us" (1 Thess. i, 7, 8). The apostolic tenderness and solicitude rose higher than even that of the nurse, and became parental. "Ye know how we exhorted and comforted, and charged every one of you as a father doth his children; that ye would walk worthy of God, who had called you unto his kingdom and glory." The same apostle says to the Corinthians, "My beloved sons, I warn you. For though ye have ten thousand instructors in Christ, yet have ye not many fathers: for in Jesus Christ have I begotten you through the Gospel" (1 Cor. iv, 14, 15). Paul also enjoins upon Timothy filial respect toward elders in the Church,
"Rebuke not an elder, but entreat him as a father" (1 Tim. v. 1). Few ideas are more beautiful than that of a pastor attaining parental influence over his flock, and of his people gladly according to his parental oversight of their most sacred interests.

The Greek and Roman churches apply the term pastor to all who assume the clerical office, and in so doing indicate what the office and its possessor ought to be. Yet there is no doubt that the apostolic idea of spiritual fatherhood as an attribute of the pastoral office is less comprehended in those old and spiritually dead churches than in the living churches of Protestant countries. On the part of the people there is a greater appreciation and a deeper reverence for the clerical office, but on the part of the clergy, priests so-called, lax views of spiritual experience and obligation, and still looser practice. Happy would it be if the character of the true Christian father were consistently illustrated by pastors of every name and every branch of the Church.

The pastoral office has thus far been considered in the light of a personal agency, and as such alone it is sublime. But it rises to a still grander importance when seen to be invested with organic power. Pastors die, but they impress their stamp upon the church. A true pastor, by faithful service, contributes not only to the perpetuation, but to the wider extension of the Church. A Christian shepherd takes the oversight of souls. Aggregately they form a single flock. But the flock is designed to increase in numbers, and with its growth to become divisible, forming additional flocks and founding other churches, each of which will have expansive and self-multiplying power. Individuals in the original flock and in every Church that may grow out of it may, under pastoral influence, be themselves called to the ministry, and become, in due time, the founders and pastors of other churches which shall go on multiplying to the end of time.

"So shall the bright succession run Through all the courses of the sun."

See what glorious results have followed from the faithful ministrations of the apostles, and also from the initial labors of bosom men in the various countries of the world—results which would have been impossible to individual and disconnected effort, but which flowed as legitimate consequences of evangelical and pastoral effort, working through the divinely appointed agency of the Church of the Lord Jesus Christ. (D. P. K.)

PASTORAL LETTER, a letter addressed either at certain intervals or on some notable occasion, by a "pastor," but especially by a bishop to the clergy under his jurisdiction, to the laity of his flock, or to both. Of the former class, in the Church of Rome, are the so-called Lenences Mandates, or Instructions, issued before the commencement of Lent, and making known the regulations enacted for the observance of the Lenten fast, the dispensations granted, and the devotions and other pious works prescribed. Such also are the letters issued by a bishop on many of the chief festivals of the year. It is usual for bishops, besides their stated letters, to address to the clergy or people instructions suited to any particular emergency which may arise, and sometimes to take occasion from the issuing of the stated pastoral letter to offer instruction on some topic of importance which may engage public attention at the time, on some prevalent abuse or scandal, or some apprehended danger to the faith or to morals. To this class belong many of the remains of the early fathers, especially in the Western Church. In some countries the government, as formerly in Austria, claimed a right to exercise a censorship over the pastors and their letters to be issued by the bishops. This right, however, is regarded by churchmen as a usurpation, and, although submitted to, is admitted only under protest.

PASTORAL STAFF, sometimes also, although not properly, called crozier (q. v.) (Lat. baculus pastoralis, cam-bucia, pedum, crocia, virga, ferula, cambutta in Gregory's Sacramentary), a pastoral insignia of episcopal and palatine dignity. It may also be borne by an abbot. It is a tall staff of metal, or of wood ornamented with metal, having, at least in the Western Church, the head curved in the form of a crook, with which the bishop at all times was connected as a symbol of the pastoral office. The head of the pastoral staff of an archbishop, instead of the crook, has a double cross, from which its name of crozier is derived. In the Eastern Church, not in the West, it is shorter, and the head is either a plain Greek cross of the form of the letter Tau, or it is a double-headed crook, which sometimes appears in the shape of the epsilon, Γ. It is difficult to determine the time at which the pastoral staff first came into use. The first distinct allusion to it is in St. Augustine's commentary on Ps. cxxiv. Gregory of Tours, in his life of St. Martin, speaks of the pastoral staff. Maron, who was metropolitan of Ste. Severinus, who was bishop of Cologne at the end of the 4th century. From an early time the pastoral staff was connected with the actual possession of the jurisdiction which it symbolizes. The giving of it was one of the ceremonies of investiture; its withdrawal was part of the form of deprivation; its voluntary abandonment accompanied the act of resignation; its being broken was the most solemn form of degradation. So also the veiling of the crook of an abbot's pastoral staff during the episcopal visitation signified the temporary suspension of his authority to that of the bishop. An abbot being required to carry his pastoral staff with the crook turned inward, showed that his authority was purely domestic. In the 4th century the pastoral staff resembled a simple cane with a knob, or else a crook-like staff, like a Tau. After the 12th century the staffs increased in height and ornamentation, but the abbots, especially those of the Order of St. Anthony, long retained the Tau-shaped one. The pope gave up the use of the staff in the middle of the 12th century, and cardinal-bishops no longer carry it. The early staffs were generally made of cypress-wood. In the later period the material was often extremely costly, and, referring to the relaxation of the times, it was said "that formerly the Church had wooden pastoral staffs and golden bishops, but that now the staffs are of gold and the bishops of wood." The workmanship was usually extremely beautiful. We annex as a specimen of the highest art the pastoral staff of William of Wykeham, now in New College, Oxford. This is a sample of the Norman pastoral staff. The Saxon was by no means so tall. The Irish pastoral staff is of a type quite peculiar, and some of the sculptured specimens preserved in the Irish Museum, at the Royal Irish Academy, and elsewhere, are very interesting as illustrating the ecclesiastical costume of the period. See STAFF.

PASTORAL THEOLOGY. The recognition of four great divisions of the subject of theology (q. v.), viz. Exegetical, Historical, Systematic or Dogmatic, and Practical (q. v.), is now very general among theological writers and teachers. On this plan of division pastoral becomes a subdivision of practical theology. Whereas practical theology embraces whatever relates to the organization and the outward life and influence of the Church, e. g. polity, liturgies, homiletics (q. v.), and missionary agencies, foreign and domestic, pastoral theology limits itself to the personal and official duties of the pastors of churches. Even with this limitation, it covers a very wide field of study and discussion. The pastor, as the acknowledged head of a Church, has duties and relations with its individual members touching their whole moral and religious life, but also with whatever is done by the
PASTORAL THEOLOGY

Church in its public capacity. Hence, though he does not form the polity of the Church to which he belongs, unless it be a single and independent congregation, yet he is expected to administer that polity, while at the same time he is the chief celebrant or director of its worship, whether with or without prescribed forms. Such duties require him to be educated in the science of theology in all its branches, and skilled in such an application of its teachings as will produce appropriate pastoral results.

While it is generally conceded that the character and work of pastors should be modelled after the scriptural idea, yet there are wide variations in the development of that idea, growing out of different systems of Church polity, as well as of divergent doctrinal theories.

In the Roman Catholic Church the term "priest" has superseded that of "pastor," yet the idea of pastoral obligation is strongly expressed in the term "curate," which is officially given to the priest of a parish, or one to whom is committed the cure of souls. According to high Roman Catholic authority, the following are the duties of curates:

1. Instruction, including (1) catechization; (2) preaching.
2. The administration of the sacraments, viz. of baptism, of the Eucharist, of penance, which involves confessions often of the most extreme abuses committed, and of marriage. The sacraments of confirmation and of orders are administered by bishops. The sacraments first named being regarded as essential means of salvation, curates are most solemnly charged with the obligation to administer them through whatever danger of war, pestilence, or peril of life. It is specially enjoined on curates to visit the sick, and to be constantly in a state of grace to administer the sacraments appropriately.
3. Pastoral vigilance. Vigilance, or watch-care, is one of the most essential parts of pastoral obligation. It is not enough for the curate to pronounce the Word of God, to administer the sacraments, he must also be attentive to watch over the conduct of his parishioners, considering the welfare of all in general, and of each one in particular, that he may answer to God for their souls.
4. The saying of masses for their parishioners. This duty is rigorously prescribed for Sundays and feast-days. Votive masses, masses for the dead, and private masses may be said on other days. Besides these special duties, curates are held to certain common duties common to all sound ecclesiastics of the Roman Catholic Church, such as celibacy, the wearing of ecclesiastical dress, and the recitation of the divine offices. This latter duty consists in the daily recitation of the prayers prescribed in the (Latin) Breviary (q.v.) for the several canonical hours, viz. matins before light, prime at sunrise, terce at 9 A.M., sextes at mid-day, none at 3 P.M., vespers at sunset, and compline on retiring for the night.

The minutest of prescription in ecclesiastical law for all these duties leaves little to the discretion of the clerics who are to perform them and it has been possible for Church law to supply right dispositions of heart corresponding to so many outward ceremonies, the system above described might be pronounced perfect, except in its departures from scriptural truth, as in the pretended veritable sacrifice of the Lord Jesus Christ in the mass, and in the assumption of human power to forgive sins.

II. The Reformation reacted with great force against the whole system of priestly prerogatives which had become incorporated in the Church of Rome, and especially against auricular confession. In the Church of England, therefore, not only was the mass rejected, but all the so-called sacraments, except baptism and the Lord's Supper. Celibacy was not enjoined on the clergy, nor the ceremonial recitation of long prayers in a dead language. On the other hand, positive demands were made upon all who proposed devoting themselves to the service of the Church that they should have a true and established religious character, that they should lead holy lives, and give evidence not only of true faith in Christ, but of a divine call to the ministry of the Gospel. Corresponding to this, it was required of the clergy to be diligent in the reading and study of the Scriptures, and in all moral and religious duties.

Some churches, as the Lutheran and the Church of England, retained, in their ritual, forms of general confession, not as an act of submission in the fear of a priest, but for the public acknowledgment of sin before Almighty God. In the High-Church or Romanistic re-action of recent times, efforts have been made in both those churches to re-establish at least a modified confessional.

In the Church of England, notwithstanding the abolition of the mass, the term priest was retained, and with it various customs which have ever since been available to Romanizing reactionists. Hence, although the preponderating theory of that Church in reference to the ministry has been strongly Protestant, yet there have often, if not always, been those clerics or persons who were not far removed from the spirit and practice of Romanism.

In all Protestant churches connected with state governments the duties and relations of pastors are modified according to the spirit of the civil law, whereas in voluntary churches laws and regulations are made and modified with exclusive reference to spiritual ends. As the Church of England, for example, appropriated to itself not only the colleges and churches which had previously been built, but also the foundations and benefices by which they were supported, so it received with them an entailment of modes of appointment to ecclesiastical offices quite unknown to voluntary churches. Statutes passed during the reign of Henry VIII, and ostensibly enacted to prevent persons from having pluralities of livings, provided, "That all spiritual men now being, or which hereafter shall be, of the king's council, may purchase license or dispensation, and take, receive, and keep three parsonages or benefices, with cure of souls." The same act proceeds to specify a numerous list of dignitaries whose chaplains, to the number specified, may they one in like manner purchase, "retain, and keep two benefices, with cure of souls." The following are specimens of the parties which may each buy and hold two of the benefices in question: King's chaplains not sworn of his privy chamber; bishops and archbishops; any of the scholars of any of the king's children, brethren, sisters, uncles, or aunts; six chaplains of every archbishop and duke; five of every marquis and earl; four of every viscount and other bishop; three of every chancellor, baron, and knight of the Garter; two of every duchess, marchioness, countess, and baroness, being widows; also all doctors and bachelors of divinity, doctors of law, and bachelors of the law canon, and every one of them which shall be admitted to any of the said degrees by any of the universities of this realm, may purchase license, and take, receive, and keep two benefices or parsonages, with cure of souls." Thus, for the convenience and profit of the royal court, the aristocracy of the nation, and the scholars of the universities, a large number of benefices for the cure of souls were placed in the market like secular property, and thus subjected to a traffic that has existed ever since. Not only so, but by long custom, sustained by legal decisions, it has been settled that the owners of estates charged with the payment of the salaries of incumbents in churches have the nomination of persons who are to receive the livings. Accordingly, it indicates that the Church of England about 11,000 parishes. For these 992 of the pastors are chosen by the crown, 1248 by bishops and archbishops, 787 by deans and chapters, 1851 by other dignitaries, 721 by colleges, and 5996 by private patrons. When a patron presents a minister to a bishop to be settled as the pastor of a Church, the
PASTORAL THEOLOGY

Church has no voice in the transaction, and the bishop is almost as powerless. That the nominee is offensive to the people, either from incompetence or objectionable habits, is not a legal disqualification. Unless the bishop can show that he is unfit to be humbly or impartially admitted to be the pastor, or the patron may obtain damages in a temporal court, and the rejected nominee in an ecclesiastical court. It is obvious that under such laws the chances of a true pastoral relation subsisting between pastors and their flocks are greatly diminished, if not wholly ignored. That the prevalence of this custom of patronage in England, and in other countries where Church and State are united, together with the subjection of the clergy in many spiritual matters to the mandates of civil law, has greatly and unfavorably affected the spirituality of pastoral influence, is beyond question. Nevertheless, some excellent works setting forth the nature and duties of the pastoral office have been written, and many superior examples of pastoral zeal and success have been furnished, by clergymen of state churches. In such churches, on the voluntary principle, pastors can only assume spiritual relations to the members of their flock by the consent of the latter, and when their duties are unworthily administered the pastoral relation can usually be severed without much delay, and better services secured. Thus the principle enunciated by Paul, that the Gospel should live in the Gospel is brought to bear, in securing a higher degree of pastoral service than as a rule can be expected where pastors live on independent endowments. In free churches, the modes of pastoral appointment differ widely. In some, settlements, theoretically, for life prevail. In others contracts are made to last during mutual satisfaction, while still others have a system of regulated and periodical exchanges. See itinerancy. These variations of the mode of ministerial appointment, and consequently of the tenure of the office, are, in large measure, accounted for, in the separate systems of minor customs connected with pastoral duty. It can hardly be questioned that the most favorable circumstances for the free and full development of pastoral character after the scriptural model are not only in voluntary churches, but in countries free from any intimate connection between Church and State. Hence it has been claimed, and not without reason, that in the United States of America, where the Christian faith has its freest and fullest development, and where the separation of Church and State is real, the Christian ministry has been able to develop a general character, as it has ever assumed or can assume amid the repressive influences of the Old-World civilization. Certain it is that in this country whoever would cultivate and exemplify a truly apostolic character has every advantage for success. In the works of the Church in this country, it is equally certain that the standard of pastoral character as demanded by universal public sentiment is higher in this than in any other country.

But in whatever mode the pastoral relation is established or maintained, it carries with it responsibilities of the greatest import, demanding on the part of the pastor a character of the highest excellence, deportment the most exemplary, diligence unintermitting, quenchless zeal, whole-hearted consecration to his work, discretion equal to any emergency, and the highest skill in resolving doubts, and patient perseverence in settling differences and removing difficulties. In short, if the pastor needs to be a workman who needeth not to be ashamed, possessing the mind that was also in Christ, and rightly dividing the word of truth to all whom he may have to do.

III. To set forth these responsibilities and duties in their varied aspects and applications is the task of theological, and to this task many minds and pens have been devoted from the apostolic age down to the present. In fact, the pastoral epistles of Paul to Timothy and Titus form the inspired basis of all that can be wisely written upon the subject, unless it be founded upon other portions of the Scriptures. Nevertheless it is interesting to trace the deviations and correspondences of views that have prevailed in reference to so important a subject at different periods and in different countries.

Notwithstanding the very considerable number of books which may be enumerated as belonging to the literature of this subject, very few of them will be found to treat it systematically or from a strictly theological point of view. By far the greater number are simply prescriptive and explanatory, addressed in didactic form to young ministers. Some embrace teaching on the pastoral duties, and give homiletical advice to a greater or less extent. Others leave the subject of pulpit address to the more full discussion of treatises on homiletics. Aside from the books to be found in law, much that is valuable relating to this subject may be gleaned from clerical biography, especially from the lives of ministers who have had marked success as pastors. Summary views, often forcibly expressed, are also to be found in many pamphlets, such as ordination and installation sermons, and some in manuals relating to the charges of bishops to candidates for ordination. Occasionally sermons and charges of this nature are to be found in the published works of their authors. See, for example, the works of archbishop Secker and of Rev. Robert Hall, also the Remains of Richard Cocks, which will throw light on this subject. In conclusion of this article, and on occasional fragments bearing upon it, may be found in patristic and medieval literature, representing each successive century from the first to the sixteenth. Some of the fragmentary treatises referred to are embodied in letters, soot, in sermons, and some in manuals relating to the moral or ceremonial obligations of the clergy of different orders. The only ancient books of any value at the present time are those by Chrysostom on the Priesthood, and by Gregory of Nazianzum entitled Aριστολογίας, especially ch. ivi—xxv. These books, both dealing with this subject, are invaluable. The general idea of the Christian ministry had been perverted as early as the 4th century. Nevertheless a few interesting and excellent things may be gleaned from them. Between the 5th and 16th centuries inclusive the greater portion of what was written on the subject related to the mysteries, the sacraments, the vestments, and the ceremonies of the Church. Another considerable portion of the writings in question was of a melancholy type, indicating the low and declining condition of ministerial character. In the 6th century, Salvian of Marcellis inveighs against the clergy, and Venerable Bede writes against the vice of the clergy. In the 8th century John Damascenus contrasted the good and the bad bishop. The Roman Catholic Church relies mainly on the Offices by Ambrose, the De pastorali cura of pope Leo the Great, and especially on the Cura pastoralis of Gregory the Great. With the opening of the second chiliasm (i.e. the 11th century) better and more numerous productions in pastoral theology appeared—Bernard's Libri v de consideratione, his works De moribus et officio episcoporum and De vita et moribus clericorum. But pastoral theology then ran in a narrow groove—that of confession; all pastoral works were guides for the confessors (materials of this class of literature in the German are given by Geffken, Bilder-Ketterings des 15. Jahrh., vol. i). The reformatory tendencies of the Middle Ages found expression in works which pointed to the pastoral work of the Church in the 14th century Alvarus Paelgii produced a work on the Grief of the Church, describing the deplorable manners and vices of ecclesiastics. Others subsequently wrote on the Wounds of the Church and the Vices of the Clergy. A more cheerful picture of that of the pastoral work of the Church in the 15th century, who wrote on the Proprieties of the Bees, describing under that figure the office and endowment of prelates. From and after the period of the Reformation this class of writings appeared much more numerously, and now the literary, more or less systematic,
treatment became a distinguishing feature. At the begin-
ing of the 16th century Erasmus published his En-
thusiasmus Militis Christiani, in which he described and
sativized the loose habits and vices of the monks and
clergy. In 1585 he issued his Ecclesiasticae civitatis Con-
ociaetor Evangelicae. Luther in 1523 wrote a tract en-
titled De Institutione Ministerii Ecclesiae. Beza wrote De
Officij et Pastorali Ministerii, and Calvin De Ministerii
Brevissima Compendium, published a small work entitled
De Officiis Concionatoris. Zwingli also published a
tract entitled Pastor, quo docetur quibus nulla est pars
pastoris a fideis discerni possible. In fact, most of the Re-
formers were concerned with the practical administration and duties
of pastors to a greater or less extent in some form, most frequent-
ly, however, in sermons and commentaries on the Scrip-
tures, as did Wickliffe and Latimer.
At a later period more formal works began to ap-
pear, of which the following are the principal, as pub-
lished in the English language, arranged in chronolog-
ic order: Herbert, A Priest to the Temple, or the
Country Parson's Character and Rule of Holy Life
(1632); Bowles, Pastor Evangelicus (1649); Baxter,
Gudia Subruina, or the Reformed Pastor (1656); Bp.
Edwards, The Defect of Other Books Relating to the
Clergy (1689); Bp. Gilbert Burnet, A Discourse of the
Pastoral Cure (1692); Edwards, The Preacher and the
Hearer (1703-9, 6 vols.); Watts, An Exhortation to Min-
tistries (1729); Mason, The Student and Pastor (1758);
Fletcher of Saxley, The Portrait of St. Paul (1766); Edwards,
A Sermon on Ezekiel's Vision of the New Temple (1767);
and to a Young Clergyman (1791); Smith, Lectures on the Sacred
Office (1798); Gerard, Pastoral Cure (1799); Erskine,
Sermons on the Pastoral Character and Office (1800);
Bp. Thomas Coke, Discourses on the Duties of a Minis-
ter of the Gospel (1810); Coke, Lectures on the Pastoral
Character (1811); Brown, Christian Pastor's Manual
(Edinb. 1826, 12mo); Edmondson, The Christian
Ministry (1829); Jerram, The Christian Minister (1829);
Adam Clarke, Letter to a Preacher (1830); Bp.
E. Munt, The Clergyman's Obligations (1830); Morrison,
The Christian Pastor (1832); Thompson, Pastoralia
(1833); J. D. Coleridge, Practical Advice to the Young
Parish Priest (1834); Dale, The Young Pastor's Guide
(1835); Barrett, Essay on the Pastoral Office (1839);
Pike, The Christian Ministry (1839); Simpson, Clergy-
man's Manual (1842); Henderson, Pastoral and Visitation
Rules, and Rules for the Young Pastor's Guide (1844);
Bridge, The Christian Ministry (1844); Humphrey, Letters to a
Son in the Ministry (1845); Leichfield, Counsels to a
Young Minister (1846); Sawbridge, Manual for the Par-
ish Priest (1846); Bp. Mowle, Lectures on the Pastoral
Office (1847); Hall, Theological and Ethical Studies
(1849); Wallace, A Guide to the Christian Ministry
(1849); Cannon, Lectures on Pastoral Theology (1853).
J. J. Blunt, Obligations and Duties of the Parish Priest
(1856); Oxenham, The Pastoral Office (1859); Archbp.
Whately, The Parish Priest (1860); Kaye, Letters on the
Ministry of the Gospel (1863); Durston, The Pasto-
ral Office (1864); J. H. Blunt, Directory of Pastoral
(1865); Hoppin, Office and Work of the Christian
Ministry (1869); Kidder, The Christian Pastor (1871);
Tyg, The Office and Duty of a Christian Pastor (1874);
Plummer, Hints and Helps in Pastoral Theology (1874).
Protestant French writers on this subject have not been
numerous. Those whose works are best known are Ostervald (1781) and
Vinot (1850); but the most important
is Matter, Le Ministère ecclésiastique et sa Mission spirituelle dans ce siècle (Paris 1852). (D. F. K.)
We find a fully modern treatment of pastoral theology.
The stagnation of Protestant life in the 16th and 17th centuries prevented a lively activity in this line of theological thought. One of the most
important productions of this period is Valentin
Andre, The Pastoral Office and Duties of ministers and Clerics
(Hamb. 1619), and his Parametia ad ecclesiae ministros.
In Spener's day pastoral theology first came to reassert
its sway as in the period of the Reformation. His De
PASTORAL THEOLOGY 757
PASTORAL THEOLOGY
sideriens u. Bedenkem opens the list. It was succeeded by
Hartmann's Pastoralre (1678), which dis-
vides the whole material into four rubrics: (1) De pas-
toria (2), (2) vita, (3) sparta, (4) fortuna; and
was brought out in enlarged form by Francke, who in
1726 himself published Ideer (2d ed. 1789) and
Koerker's Museum Ministerii Ecclesiae (1690); Kortholt's Pastor
Juflesis (1696); Deving, Institutiones (1734); Fecht, In-
structio pastoralis (1717); Mieg's Meletemata sacrae de
officio pastoris, etc. (Frankf. 1747); Baumgarten-
Cruens, Theologische Institution der Pastoral (1752);
Jakoali, Beiträge (2d ed. 1768). The orthodox
and piestatic theologians vied with each other to
provide prominence to the pastoral office, and however great the
chasm between Gottfried Arnold and an orthodox
Lutheran pastor, in the Geistliche Gesellschaft eines evangelischen
Lehrers (1728), as the former depicted it, the latter
was obliged—in so far as it concerned only the pastoral and
not the dogmatical and liturgical—to recognise its
services to Christian truth. Quite a different atmosphere
prevails in the works of the rationalist period, even when they have not escaped the influence
of the fundamental principles for the current and popular
theology. Of the latter, Peter Miller's Andre, zur weisen u.
gewissenhaften Verwaltung (1777) is an interesting ex-
ample. The pastors of this period saw their avocation
principally in public enlightenment, as seen in Nikolaus'
II. Pastor, die Aufgaben des Pastor (1773); Seitz's,
Die Aufgaben des Pastoralwesens (1791); and in a general
insu zu Pastoralwissenschaft (1791). But a better and
higher view of the office was taken by Spalding, Nutz-
barkeit des Predigtes (1772); Seiler, Grundsätze zur
Bildung künftiger Volksehle (1788), and especially Ro-
senmuller, die Stütze der Geistlichkeit (1791); Niemeyer,
Hind Hutch f. Christl. Religionlehrer (1790); also
Oeler, Repertorium (1796-1800). Still higher
ground is taken by Griffy, Die Past. Theol. in ihrem
ganzen Umfange (1803); Schwarz, Der christl. Religion-
lehrer (1809); Kaiser, System der Past. Theol. (1816);
Hüffel, werd u. Beruf des evangel. Geistlichen (1822,
and often); Haas, Wissens. Darstellung des geistl.
Berufes (1834). Herder was the first to recognise in
the minister the priest and prophet, and not simply the
useful servant of the public (see his Briefe u. das Stud-
im der Theologie). But it took fifty years before
Herder's ideas were appreciated. The first
pastor was Harms, Past. Theol. (1830-31), and he
can be designated the father of the modern German
idea of the pastoral office. Excellent and more recent
productions are Lohse's Evangel. Theol. (1852, etc.);
Ringel, Der christl. Theologen (1852); Schleiermacher,
Die Christenheit im Zeitalter der Aufklärung, etc.,
and the special title, Die eigenthümliche Seelepflege des evan-
gel. Hirtenamtes (Bonn, 1857); Zimmermann, Das Antez
Würde u. Bürde (Zurich, 1859); Palmer, Evangel. Pasto-
ral-Theol. (Stuttg. 1860; 2d ed. 1863). There are be-
sides some papers devoted specially to this subject,
and the most important ones are Ilmar u. Müller, Pastoralrauth, Bühler, since 1861.
To the pastoral-theology literature of Germany belong
also some biographical works: the life of Oberlin, Hof-
scher, Flattich, etc. Burck's Past. Theol. in Beispielen
(1856), and his Spiegel edler Pfarrfrauen (1842), bring
 considerably rich biographical matter under the rubrics of
pastoral theology. What has been done for certain de-
partments of pastoral theology we have not space to
enumerate here. Yet reference might be made to
Kündig, Erfahrungen am Kranken- u. Sterbekatechismus (1856
2d ed. 1860); Haus, Gesch. der christl. Krankenpflege
(1857); cf. also Neumaier, Die Welt und das Geistes-
sorge (Biele, 1858); Beck, Das christl. Leben u. geistl.
Amt (1859). The Roman Catholic Church possesses
in the works of Povand, Luspschitz, Hinterberger, and
especially Sailer's Past.-Theol. (1786, 1820, 1885),
and in the more recent productions by Veit, Neil-
berger, most important works. A critique of pastoral-
theology literature from a scientific standpoint has
been furnished by Graf in his Krit. Darstellung, vol. i.
orders and transmitted them to the obedient multitude. Marching through Flanders and Picardy, he entered Amiens at the head of thirty thousand men; thence he passed to the Isle of France, gathering the whole laboring population in his wake. None of the cities dared to close their gates against him; the houses of ten thousand were opened. On their banners were emblazoned the Lamb and the Cross, the Virgin with her angels appearing to the “master.” In battle array they reached Paris to the number of one hundred thousand men. Blanche, the queen-regent, in some wild hope that these fierce peasants might themselves and in achieving or compel others to achieve the deliverance of her son, suffered them to be admitted into the capital. But now their hostility to the Church became apparent. They not only usurped all the priestly functions, performed marriages, distributed crosses, offered absolution to those who joined their crusade, but they inveigled against the vices of the priesthood. “They taunted,” says Matthew Paris, “the Minorites and the friar-preachers as vagabonds and hypocrites; the white monks” (the Cistercians) “as covetous of lands, and the robbers of flocks; the black monks” (the Benedictines) “as proud and gluttonous; the canons as half-laymen, given to all manner of luxury; the bishops as hunters, hawkers, and voluptuaries.” It is noteworthy that the popularity of the Pastoureaux, at least in the cities, was won by thus heaping reproaches on the medieval clergy. The master, the spiritual authority, (he had cut himself admitted into the presence of the queen), now worked his way to Paris. Mounted in the pulpit of the church of St. Eustache, wearing a bishop’s mitre, he preached and blessed and consecrated, married and granted divorces, while his warm followers mercilessly slew the priests who endeavored to oppose them. After a short stay they quit the city. The unwieldy host divided into three bodies. One went towards Orleans and Bourges; one towards Bordeaux; one to the Mediterranean coast. The first troop, led by the master in person, entered Orleans, notwithstanding the resistance of the bishop and clergy. Finding the populace favorable to the insurgents, the bishop issued his inhibition to all clerks, ordering them to keep aloof from the profane assembly. Unfortunately, the command was not obeyed. Some of the younger scholars were induced to assent and the preaching which had awed Paris and her university. One of them foolishly interrupted the preacher; he was immediately struck down; the scholars were pursued; many were killed. The bishop laid the city under an interdict and fled. Leaving Orleans they shortly reached Bordeaux, where they plundered the houses and massacred the inhabitants. Here the executive, at length convinced of their danger, decided to act. The moment selected was judicious, for the Pastoureaux were not expecting opposition. The master was about to or had failed to perform some momentous miracle, when the assault was commenced. A soldier rushed forth and drove the head of the master; the royal bailiff and his men-at-arms fell on the panic-stricken followers; the excommunication was read; such of the shepherds as were not massacred were hanged. Simon, the monk of Bordeaux, is said to have been cut to pieces over the second division. The leader was seized and thrown into the Garonne, and his followers cut down by the soldiery or hanged by the magistrates. The third division, which reached Marnelles about the same time, met with a similar fate; hundreds were butchered. A little later, in the time of Philip V, this spasm of fanaticism was repeated. This rising, which was almost identical in character with that already described, took place under the pretense of a crusade, though under a very different king. Again the leader was a priest and prelate, a monk claiming supernatural powers, and similar tribes were found among the miserable peasants. The insurrection, perhaps more extended in scope, meeting with no encouragement, was less terrible in result. These enthusiasts commenced their career as mere mendicants,
and it was not until many of them had been hanged that, in self-defense, they displayed any violence. It was with this object that the large body which entered Paris in the spring of A.D. 1320 commenced hostilities. Encamping in the Pré-aux-Clercs, they claimed the release of their imprisoned brothers, and, in default, they forced the prison of St. Martin, St. Germain, and the Châtelet. The authorities sent to the immense hosts that preceded this rescue, they set off southward. This time they appear to have passed by the great cities of Central France; about 40,000 entered Languedoc and commenced a massacre of the Jews. At Verdun, on the Garonne, a royal castle, whither the Jews had fled for protection, a frightful murder was committed in the place. At Angoulême, St. Gimont, Castel Sarrasin, Toulouse, and Gaillac similar cruelties were perpetrated. They then hurried to Avignon, but failed to enlist the sympathies of the pope. John XXII excommunicated them, alleging as the ground of this measure that they had taken the cross without papal authority. Further, he invoked the civil power, and founded the seneschal of Carcassonne only too obedient. By his orders all the roads in the district were rendered impassable, and all the supplies of provender stopped. Thus hemmed in on all sides in a malarious district, the greater part of the Pasteurouex perished of famine and disease, and the survivors were put to death. So suddenly began and ended these two outbreaks of religious Jacobite. The original authorities as to the early fanaticism are Matthew Paris, Avis de Flandres, and the Annals of Nante, of the Aubois, and Nangy. Of modern accounts, the most valuable are, Simonds's *History of France*, vol. vii and ix; Dugange, s. v. Pastorelli; Milman, *Hist. of Latin Christianity*, vi, 57-63; vii, 64 sq. *Pasture* (prop. מִּנָּה or מִנָּה הָאָדָמָה, from נָהַס, to feed, support). In one of their first period the Hebrews led an unsettled pastoral life, such as we still find among many Oriental tribes. One great object of the Mosaical polity was to turn them from this condition into that of fixed cultivators of the soil. Pasture was, however, only discouraged as a pursuit unfriendly to settled habits and institutions, and not as connected with agriculture. Hence, although in later times the principal attention of the Hebrews was given to agriculture, the tending of sheep and cattle was not at all neglected. The East was a great pastoral district. The shepherds who move about with their flocks from one pasture-ground to another, according to the demands of the season, the state of the herbage, and the supply of water, are called *nombres* — that is, not merely shepherds, but wandering shepherds. They feed them, care for them, guard them, or the disease of wild- dernesses, which no settled or cultivating people have appropriated. At first no pastoral tribe can have any particular property in such tracts of ground in preference to another tribe; but in the end a particular tract becomes appropriated to some one tribe, or section of a tribe, either from long occupation, or from digging wells therein. According to the ideas of the East, the digging of a well is so meritorious an act that he who performs it acquires a property in the waste lands around. In the time of the patriarchs Palestine was but thinly peopled by the Canaanites, and offered many such tracts of unappropriated grounds fit for pasturage. In these they fed their flocks, without establishing any exclusive claims to the soil, until they proceeded to dig wells, which, being considered as an act of appropriation, was opposed by some of the inhabitants (Gen. xxii, 25, 26). After the conquest of Canaan, those Israelites who possessed large flocks and herds sent them out, under the care of shepherds, into the "wildernesses," or commons, of the east and south, where there are rich and juicy pasturages during the moist seasons of the year (1 Sam. xvii, 26; xxxiv, 3-15; 1 Chron. xxvii, 29, 31; Isa. lxv, 10; Jer. i, 89). The nomads occupy, successively, the same stations in the deserts every year.

In summer, when the plains are parched with drought, the very green herbage is dried up, and the pastures are carried to the mountains, or to the borders of rivers; and in winter and spring, when the rains have re-echoed the plains with verdure, and filled the watercourses, they return. When these pastors remove, they strike their tents, pack them up, and convey them on camels, oxen, and mules. Nearly all the pastural usages were the same anciently as now. The sheep were constantly kept in the open air, and guarded by hired servants, and by the sons and daughters of the owners. Even the daughters of emirs, or chiefs, did not disdain to tend the sheep (Gen. xxiv, 17-20; xxix, 9; Exod. xiv, 3). The sheep was valued highly by the shepherds for its wool, and the marriage tie to be indissoluble by any human power, and that it is sinful to carry fasting so far as to injure health or destroy life.

*Patashkoe Soglasna* is the name of a Russian sect of Dissenters. They were founded by a shepherd, and during the time of peaceful Elizabeth, who held the marriage tie to be indissoluble by any human power, and that it is sinful to carry fasting so far as to injure health or destroy life.

*Patasci*, Phenician gods, whose images were used as ornaments to their ships.

*Patagonia*, the most southern country of South America, in lat. 38°-58° S., and in long. 62° 40'-79° 40' W., bounded on the north by the Argentine Republic and the Rio Negro, which separates it from the Pampas; on the north-west by the Chilian territories; on the west by the Pacific; on the south by the Strait of Magellan, which separates it from Tierra del Fuego; and on the east by the Atlantic; and has an area of about 350,000 square miles; and a population estimated at about 100,000. The coast of the Atlantic is much broken by extensive bays and inlets, none of which, however, are of much importance or advantage in a commercial point of view. Along the western coast, and stretching from 42° S. to the Strait of Magellan, are numerous islands of which the principal are the Chonos Archipelago, Wellington Island, the Archipelago of Madre de Dios, Queen Adelaide's Archipelago, and Desolation Island. These islands — which, together with several peninsulas, form a coast almost as rugged as that of Norway — are mountainous; but in none of them, on the east or west of the Desolation Island, do the mountains rise to the snow-line.

*Surface, Soil, etc.* — The country is divided by the great mountain-range of the Andes into Eastern and Western Patagonia. The latter, comprising the coast districts and the islands, is rugged and mountainous. Opposite the island of Chiloé are two active volcanoes, one of which, Minchinamvida, is 8000 feet high. The slope of the country from the Andes to the Pacific is so steep, and the strip of shore so narrow, that the largest river of this district has its origin only about thirteen miles from its entrance on the coast. In the island of Chiloé, in the north of Western Patagonia, the mean temperature of winter is about 40°; that of summer rather above 50°; while at Port Famine, in the extreme south of this region, and 800 miles nearer Antarctic latitudes than Chiloé, the mean temperature is not much lower, being in winter about 35°, and in summer about 50°. This unusually small difference in the mean temperature of the extremes of Western Patagonia, which extends over about 14° of latitude, is due to the great dampness of the atmosphere all along the coast. The year is hot only in the southern parts. The prevailing winds of this region blow from the west; and, heavily charged with the moisture they have drawn from the immense wastes of the Pacific Ocean,
they strike against the Andes, are thoroughly condensed by the cold high mountains, and fall in rains that are almost perpetual from Chiloé to the Strait of Magellan. South of 47° S. latitude hardly a day passes without a fall of rain, snow, or sleet. This continual dampness has produced forests of almost tropical luxuriance. A kind of deer wanderers in the east side of these mountains, and the water-fowl are met with; and along the coast, seals, otters, sea-elephants, fish, and shell-fish are found.

Eastern Patagonia, called the plains, comprises by far the larger portion of Patagonia, and extends eastward from the Andes, along the Pacific. Its face has not yet been thoroughly explored, and is described only in the most general terms. According to these accounts Eastern Patagonia, from its northern to its southern limits, is an immense stony, shingly waste, generally level, but gradually rising in terraced steps from the Atlantic to the Cordilleras. The elevation of the highest of these terraces is about 3000 feet. The surface is covered with stones and pebbles, mixed with earth of a whitish color, overlying great masses of porphyry, and strewn with immense boulders. Thorny brushwood, tufts of coarse brown grass, and patches of moss, an abundance of grass only six inches high beneath the dead level of the dreary landscape. The soil is strongly impregnated with saltpetre. Salt lakes of every variety of extent and level abound. Many of these lakes are surrounded by a brilliant snow-white crust; the waters of some of them are cold in summer and hot in winter. The lake is innumerable throughout the whole of Patagonia. Extending along the south coast for several hundred miles there is a great deposit of tertiary strata, underlying a stratum of a white pumiceous substance, a tenth part of which is marine infusion. Sea-shells are scattered everywhere on the country, and salt is everywhere abundant, from which circumstance it has been inferred that this tract was once a sea-bottom. The air of Eastern Patagonia is generally dry and hot, deriving no moisture from the prevailing west winds, which pass over the plains after having been drained by the Andes. Hurricanes, however, cutting and frigid, sweep over the plains with great fury, stripping the hides from the roofs of the rodoks or huts, and paralyzing the inhabitants with cold and fear. The above account, though in general correct, must be supplemented as well as modified by a few facts as to the surface of the plains, which is divided by deep ravines; but it is not, as has hitherto been believed, composed of sandy prairies, but is composed of mountains, altogether monotonous and even barren. The soil is a reddish brown. Their shoulders are large, and well thrown back; the chest is well expanded; the head large, the forehead open and prominent; the mouth large; the eyes black, and generally large; the nose frequently hooked, long, and thin, though among some tribes it is, as a rule, broad at the nostril; the ears are large, and elongated by the heavy ornaments of their own manufacture which they wear in them, and which are so large that they often rest on the shoulders. The hair, generally black, coarse, and lank, is sometimes rolled together on the top of the head. Their houses, called adobes, are constructed by driving stakes into the ground. The middle row is higher than the others, and the three rows are tied together with strings of hide, and so kept in their place. This frail framework is covered with hides which reach the ground on all sides, and with thatched roofs. The banks of the river are sometimes abundantly fertile. The same traveller further estimates that one third of the entire area of this country—which has hitherto been described as barren—is of great fertility, especially the regions on the east coast and on the Strait of Magellan in the south. Along the eastern base of the Andes also, the great tract of territory called Los Serranos is astonishingly picturesque and fertile. Here great forests abound, to which the Indians retire for shelter from the freezing winds of winter. There are also deep valleys, skirted by mountain torrents; and numerous lakes, the haunts of wild duck and other water-fowl, which would delight the European sportsman, but which are never disturbed by the Indians, and are almost as tame as barn-yard fowls. Except pasture, Eastern Patagonia has no production. However fertile the soil in some places may be, it is nowhere cultivated. The Indians live upon the produce of the chase alone, and seem to desire no better sustenance. The principal rivers are the Rio Negro; the Chupat, which flows through a good soil, producing excellent pasture and good firewood; and the Santa Cruz, which flows through a barren district, in a valley from one to five miles wide, and 1400 feet below the level of the plain. All these rivers rise in the Andes; the Chupat flows east, and the others south-east. Hords of horses are reared, dogs abound, and in the more favored regions cattle are bred; pumas and foxes are met with, as well as condors, hawks, partridges, and water-fowl in Los Serranos. But by far the most important animals are the guanaco (wild llama), the manllo (Patagonian ostrich), and the gauna, a kind of wild goose.

Inhabitants.—The Patagonians have hitherto been described only in the most general terms, and in many cases very inaccurately. Patagonia was visited at an early period by captains Byron, Wallis, and Cook in succession, and the accounts which they brought to Europe added the appearance of extra-territorial properties of the natives of Patagonia were of a marvellous character. Later accounts, however, greatly modify these extravagant statements. Captain Wallis, who went out after Byron's return, has been much more judicious and careful in his inquiries. So also Bougainville, who sailed along the coast in 1767. The next to enrich our knowledge of Patagonia was Captain FALKNER, and by this information we are enabled to definitely class the Patagonian monster of the early voyagers with Gulliver's giants. The tallest of the tribes are composed of men who, on an average, are only six feet two inches tall, break the average height of the tribe as a whole. The tribes the average height is an inch or two less. There is reason to believe, however, that instances of unusual height are as rare in Patagonia as in Europe. The peculiars of the Patagonians, which in most instances consists of a long mantle of hide, drooping with the weight of the ornaments which they wear in them, gives them the appearance of extraordinary height. Many of the tribes also are large in body, while they have comparatively short extremities; and these, when seen on horseback, covered with their long mantles, are almost gigantic. Their hair in some cases is a reddish brown. Their shoulders are large, and well thrown back; the chest is well expanded; the head large, the forehead open and prominent; the mouth large; the eyes black, and generally large; the nose frequently hooked, long, and thin, though among some tribes it is, as a rule, broad at the nostril; the ears are large, and elongated by the heavy ornaments of their own manufacture which they wear in them, and which are so large that they often rest on the shoulders. The hair, generally black, coarse, and lank, is sometimes rolled together on the top of the head. Their houses, called adobes, are constructed by driving stakes into the ground. The middle row is higher than the others, and the three rows are tied together with strings of hide, and so kept in their place. This frail framework is covered with hides which reach the ground on all sides, and with thatched roofs. The banks of the river are sometimes abundantly fertile. All these rivers rise in the Andes; the Chupat flows east, and the others...
and can remain attached to a certain tribe or separate from it at pleasure. The Patagonians form themselves into these communities for the purpose of self-defense. When they are at peace, they usually enjoy the security and happiness of families, for there is no seclusion, no division of labor, and each individual is free to do as he pleases. The sacredness of their religion is maintained by the fact that they do not eat their dead. The chief of a tribe is both the religious and the political head of the tribe, and his authority is absolute. In battle, the chief often leads the van, and the rest of the tribe follow in his wake. When not engaged in warfare, the Patagonians lead a peaceful existence, hunting and fishing, and occupied with the cultivation of the land. They are a warlike people, and are always ready to defend their homes and their religion.

The Patagonians are proud of their ancestry, and their history is full of tales of conquest and victory. They are a boastful people, and are always ready to夸耀 their prowess in battle. They are also a superstitious people, and are always ready to consult their shamans for guidance in matters of importance.

The Patagonians are a proud and independent people, and are always ready to resist any attempt to subdue them. They are a hardy and resourceful people, and are always ready to make the most of their situation, however adverse it may be.

PATAKA

upon the ground as helpless as a child. At length, one after another, the whole party perished from starvation. Several entries in captain Gardiner’s journal, which was recovered, witness to the personal piety and singular devotedness of the little band of sufferers. One of the catechists, Mr. Richard Williams, was a Wesleyan local preacher and a man of remarkable zeal and devotedness to God. He went out as surgeon to the mission, and Dr. James Hamilton published an invaluable memorial of his sufferings and death. Thus mournfully ended the Patagonian mission; and thus also ended the remarkable career of captain Gardiner. After the death of this good man and his companions, the friends of the Patagonian mission re-organized a society as the "South American Missionary Society," and stations were established at Keppel Island (one of the Falkland Isles), Patagones, Lota, Callao, and Panama, and laborers sent to these places. Laborers were also sent to the Chinchas Islands. This society is now in successful operation, and hopes are entertained for good results from its fields. At first the Patagonians were reached indirectly. Natives were induced to go over to Keppel Island, and there taught. Gradually the influence of the civilized nations made its way, until now a station is maintained on Navarin Island. The missionary minister was only able to communicate with the Patagonians, but also to the European Protestants and the Roman Catholics. See Grundemann, Missions-Atlas, No. 9, pt. iv; Brown, Hist. of Missions, iii, 458 sq.; Missionary World, p. 115 sq.; Wappaus, Patagonia, geographisch u. staatsm. dargestellt (Leipzig, 1871, 4to); Littell, Living Age, June 10, 1852, art. iv.

Patála (from pát, "fall"), is, in Hindu mythology, the name of those inferior regions which have seven, or according to some, eight divisions, each extending downwards ten thousand yojanas, or miles. The soil of these regions, as the Vaisnava-Purana relates, is severally white, black, purple, yellow, sandy, stony, and of gold; they are embellished with magnificent palaces, in which dwell numerous Dánavas, Dáityas, Yakshas, and great snake-gods, decorated with brilliant jewels, and happy in the enjoyment of delicious viands and strong wines. There are in these regions beautiful groves and streams and lakes, where the lotus blooms, and the skies are resonant with the kóla’s songs. They are, in short, so delightful that the saint Narada, after his return from them to heaven, declared among the celestials that Patála was much more delightful than Indra’s heaven. Prof. Wilson, in his "Vermibus," says, "The latter is the most copious description of Patála in any of the Puránas; that the most circumstantial are those of the Váyu and Bhágavata Puránas; and that the Mahabhárata and these two Puránas assign different divisions to the Dánavas, Dáityas, and Nágas. . . . The regions of the Patála and their inhabitants are often the subjects of profane than of sacred fiction, in consequence of the frequent intercourse between mortal heroes and the serpent-maidens. A considerable section of the Vrshisth-Kalád consists of adventures and events in this subterraneous world. For inferior regions of a different description, see NARAKA."

Patanjali is the name of two celebrated authors of ancient India, who are generally looked upon as the same personage, but apparently for no other reason than that they bear the same name. The one is the author of the system of philosophy called Yoga (q. v.), the other the great critic of Kátyáyana (q. v.) and the author of the Sarva-vritta (q. v.). Of the former, nothing certain is known, beyond his work—for which see the article YOGA. The few historical facts relating to the latter, as at present ascertained, may be gathered from his great work, the Mahabháráta, or "the great commentary." The name of his mother was Góma, his birthplace was Góma, situated in the east of India, and he re-

sided temporarily in Casmíre, where his work was especially patronized. From circumstantial evidence, Prof. Goldstücker has, moreover, proved that he wrote between B.C. 180 and 150 (Pánini, his date in Sanscrit Literature, p. 236 sq.). The Mahábhárata of Patanjali is not a full commentary on Pánini, but, with a few exceptions, only a commentary on the Vártikas, or critical remarks on Kátyáyana on Pánini. Its method is analogous to that of other classical commentators; it establishes, usually by repetition, the correct reading of the text, in explaining every important or doubtful word, in showing the connection of the principal parts of the sentence, and in adding such observations as may be required for a better understanding of the sentence. Frequently Patanjali also attaches his own critical remarks to the emendations of Kátyáyana, often in support of the views of the latter, but not seldom, too, in order to refute his criticisms, and to defend Pánini; while again, at other times, he completes the statement of one of them by his own additional rules." Patanjali being the third of the grammatical triad of India [see PÁNINI], and his work, therefore, having the advantage of profiting by the scholarship of his predecessors, he is looked upon as a paramount authority in all matters relating to classical Sanscrit grammar; and very justly so, for, so far as learning, lucidity, and consistency go, there is no grammatical author of India who can be held superior to him. The Mahábhárata has been commented upon by Kátyáyana, in a work called the Bháshya-Pradípsy; and the latter has been annotated by Nagābhaṭa, in a work called the Bháshya-Pradípsy-dguta. So much of these three latter works as relates to the first chapter of the first book of Pánini, together with the Vártikas connected with them, has been edited at Mirzapore (1850) by the late Dr. J. R. Ballantyne, who also gave a valuable literal translation of the first forty pages of the text.

Patára (Patára, neut. plur.), a considerable town of Lycia, in Asia Minor, opposite the island of Rhodes. Patara was a very ancient city, and is said to have been founded by Pataros (Strabo, xiv, 8, p. 665), a son of Apollo (Steph. Byz. s. v.). It was already celebrated in the time of Herodotus for a temple and oracle of this deity (i., 192), who is called by Horace on this account Pátaros (lib. iii, ode i, l. 64), and the coins of Patara bear the representation of his temple. In fact, the worship of this divinity prevailed in Lycia to an extent nearly equal to that of Diana in the neighboring province of Lydia. It appears to have been colonized by the Dorians. Strabo tells us that Ptolomy Philadelphus repaired it, and called it the Lýcian Aránon, but its old name was retained (l. c.). Patara was situated on the south-western shore of Lycia, not far from the left bank of the river Xanthus. The coast here is very mountainous and bold. Patara was practically the seaport of the city of Xanthus, which was ten miles distant (Appian, B. C. iv, 81). Its inhabitants availed themselves of the great commercial advantages of their situation, and carried on an extensive trade with Egypt, Syria, and Cypus.

The river Xanthus was navigable beyond the city of that name for vessels of large tonnage, and the whole valley was thickly peopled by a cultivated and lux-
The beauty of the scenery, the fertility of the soil, and the healthiness of the climate, all tended to make the valley of the Xanthus a favorite residence, and the magnificent ideas and taste of its inhabitants are proved by the extensive remains of antiquity found along the whole course of the river. Patara derived great benefit from the independence of the country of which it was the chief seaport, and it was not reduced to the ordinary condition of a Roman province till the reign of the emperor Claudius. The coast of Lycia about this city is rocky and picturesque, and the rugged spurs of the Taurian chain terminate here in the abrupt promontories of Croesus and Anti-croesus, the one on the east and the other on the west of the river Xanthus. Patara preserved its importance as a seaport through all the revolutions which affected Lycia. It furnished a considerable fleet in that memorable war waged against the Greeks by Persia, of which empire Lycia formed a part. In later and more anarchical times its inhabitants addicted themselves to piracy, and acquired an unenviable reputation by their depredations. These notices of its position and maritime importance introduce us to the single mention of the place in the Bible (Acts xxxi, 1, 2). Paul was on his way to Jerusalem at the close of his third missionary journey. He had just come from Rhodes (ver. 1); and at Patara he found a ship, which was on the point of going to Phoenicia (ver. 2), and in which he completed his voyage (ver. 3). This illustrates the mercantile connection of Patara with both the eastern and western parts of the Levant. A good parallel to the apostle’s voyage is to be found in Livy (xxxvii, 16). The commercial dealings of Lycia and Phoenicia made it extremely probable that Patara would be the place from whence such a passage could be made with the most certainty, and from hence the apostle sailed to Tyre. At the time of Paul’s visit it must have been a splendid as well as an influential and populous city. Some of its ruins are of great extent and beauty; and Livy, speaking of Lycia, calls Patara “caput gentis” (xxxvii, 15; comp. Pomp. Mela, i, 15; Polyb. xxi, 20). In sailing from Rhodes to Patara, Paul had before him some of the grandest scenery in the East. Crossing the channel from the little harbor of Rhodes, the vessel would skirt for a time the bold coast, and then, passing a noble headland, it would open up the rich valley of the Xanthus, and the little plain at its mouth, which extends some eight miles along the shore, and six or seven inland. Near the eastern extremity of this plain stood Patara, close upon the beach, separated from the river Xanthus by a broad belt of loose sand, which the wind and waves have drifted up into bare mounds and hills. The site of the city is now a desert; many of its principal buildings are almost covered with sand; and its harbor, into which Paul sailed, is now a dismal, pestilential marsh. The walls of Patara can still be traced. The triple arch of one of its gates is standing; so also are the remains of a theatre scooped out in the side of a hill (Lenke, Asia Minor, p. 320); of baths near the sea; of an old castle commanding the harbor; and of temples, altars, columns, and houses, now ruined and mutilated. A Greek inscription over the great city gateway mentions, “Patara the metropolis of the Lycians” (Fellows, Lycia, p. 222 sqq.; Beaufort, Karmania, p. 2 sqq.; Spratt and Forbes, Travels in Lycia, i, p. 30 sqq.; ii, 189). The desolate ruins now bear the same name. Paul did not remain long at Patara; he probably left a few hours after his arrival; yet Christianity obtained a footing in the city, and it subsequently became the seat of a bishop, and was represented in the Council of Nice (Hieroc. p. 684). See in addition to the works above cited, Conybeare and Howson, St. Paul, i, 226; Lewin, St. Paul, ii, 99; Smith, Dict. of Class. Geog. s. v. See Lycia.

Patara. See ALMS-BOWL.

Patarenes or Patareni, a name used in Italy during the 12th and 13th centuries as a general appellation to denote sects contending against the dominant
PATERAEUS

Church and clergy. Different opinions have been entertained in regard to the origin of the name, some believing it derived from a small city called Patara, where the heretics, as they were considered, held their meetings. The word Patarica (q. v.), however, in the dialect of Milan, signifies a popular faction; and as the sects in question were generally held in favor by the common people, it must be that the name was not adopted by them, but derived by the aristocracy. It may also have been used because, after the contest between the Pataria at Milan and the clergy, the term implied in general a spirit of hostility to the priesthood. The name of Tissarrais originated from the circus of their adherents, where spirits wore wigs. There were trade. The common characteristic of all these sects was opposition to the clergy and the hierarchy. They differed in the extent to which, and on which, they opposed the prevailing ecclesiasticism, and attempted to set up a Church of their own. The Patarii should be especially regarded as the Italian Manicheans, who were condemned by the Lateran Council of A.D. 1179. As in the East, so in the West, Gnostic speculations had in all probability continued to exist, though by secret tradition. In point of fact, we know that the Vandals had transported ships of Manicheans to the shores of Italy, while the Priscillianists of the Ferrers in Spain had done the same. Even the name of these sects proves the correctness of this assertion. The most general designation was that of Cathari (καθαροί); but they were also called Bulgari (whence, in popular parlance, the opprobrious name Bougre) or Gazzari, perhaps after the inhabitants of the Crimae (the Chazans), or else a different mode of pronouncing the word καθαροί, and Publicani, probably a transposition by which the foreign term of Pauline was converted into a well-known term of reproach. The Duchkovtzi (q. v.) of Russia are by Krasinski conjecturally referred to the Patarii, who existed in Russia also to the middle of the 18th century. See Moshe, Eccles. Hist., ii, 338; Neander, Ch. Hist. vol. v.; Hardouin, Conciliar, v, 168; Hardwick, Church Hist. of the Middle Ages, p. 204, 353.

Pateraeus, a surname of Apollo, derived from the town of Patara, in Lycia, where he had an oracle.

Pataria of Milan. Among the Lombard clergy simony, concubinage, and marriage of priests were very common. Accordingly the changes introduced by Hildebrand met with much stronger resistance from them. The opposition was headed by archbishop Guido of Milan, whom Henry III had, in 1046, appointed to that diocese. Guido was supported by the nobility and clergy. But two deans, Ariald and Landulf Cotta, organized a conspiracy among the common people, which their opponents, by way of decision, designated pataria, paterni (i.e. blackguard). The papal party adopted this name, and began a warfare against married priests, which for thirty years led to continual scenes of violence and bloodshed. See Giesebrecht, Deutsch-Gesch. vol. iii, pt. i; Hefele, Concilien- geset. vol. iv and v; Lea, Hist. of Sacred and Civil Law; Alzog (Rom. Cath.), Kirchengesch. Bazmann, Gesch. der Politik der Päpste, vol. ii.

Patch (Irish slauga, something put on, "piece," Matt, ix, 16; Mark ii, 21; Luke, 5, 30), taken (term of from pateus), from a fragment or remnant (σκοτα, literally rag, "cloth") of new material, to mend a rent in a garment. See Szw.

Patella, a surname of Opes (Plenty), as opening the stems of the corn-plant, that the ears might sprout out.

Paternae. See Paternae.

Paternian is the name of a Manichean heresies mentioned by St. Augustine and Prædæstinius as believing that the upper and intellectual part of the body was created by God, and the lower or sensual part by the evil one. They were also called Frusztiszi (from Venus, the heathen goddess, who patronized unchastity), and were condemned for their immorality as well as their heresy by Damasus in a council held at Rome in 379. See Hær. xxv, Hær. xxvi; Pecสด. Hær. xxv; Labbé, Concilia, ii, 1038.

Pater-Noster (Lat. for Our Father), the name among the Romans for the Lord's Prayer (q. v.). It is claimed by many Protestant that this prayer was not intended by Christ as a formula of Christian prayer, because it contains no allusion to his atonement, nor recognises the office of the Holy Ghost. It has nevertheless been generally adopted by the Protestant churches in worship on account of its beauty and terseness, and because Christ gave it in illustration of the simplicity of Christian prayer. But Protestants condemn the too general use made of it by the Romanists. Since the 15th century they have used it in the opening of divine service, and by the Council of Trent a catechism was published which contains a detailed exposition and commentary of it; and in all the services not only of the Roman Missal, Breviary, Ritual, Pontifical, and Ordinal, but in all the occasional services prescribed from time to time, it is invariably introduced. In the Rosary (q. v.) of the Virgin Mary it is combined with the Hail Mary, the prayer addressed to the Virgin (whence the larger heads of the "Rosary" are sometimes called Pater-Noster), and perhaps the most familiar short prayers used by Roman Catholics is the repetition a stated number of times of the "Pater," with one or more "Ave Maris,"
generally concluding with the Doxology. The Roman Catholics do not use the concluding form of this prayer as commonly used by Protestants, "For thine is the kingdom, and the power, and the glory forever. Amen."

Paternus, St. (1), a French prelate of the early medieval period, was born about 365. He was the founder of the church of Vannes, a city built on the solitude in which he lived to ascend the episcopal chair, then recently established by St. Mériade. Constrained by persecution to leave his church, Paternus returned to his hermitage, where he died about 446. His remains were successively carried to Mar- mondour and Vannes, and to the church of his own name at Vannes. He is honored by the Roman Catholic Church on April 13.

Paternus, St. (2), flourished in the second half of the 5th century. He was consecrated, in 461, in his own church by St. Perpet, archbishop of Tours. The bishops assembled for this ceremony dressed according to the discipline of the sixth century, as published by the Council of Vannes. Paternus died towards the close of the 5th century, after having experienced great annoyances from the people of his diocese.

Paternus, St. (3), called also St. Pair, or Paer, or Poi, was born at Poitiers about the year 822. His father, Patrunius, with the consent of his wife, went to Ireland, and Patrunius died there. Paternus, fired by this pious example, early embraced a monastic life in the abbey of Anson, called in succeeding ages Marne, and at present, after the name of a holy abbot of that house, St. Jovin des Marne, in the diocese of Poitiers. After some time, burning with a desire to extend the monastic influence, he passed over to Wales, and in Cardiganshire founded a convent called Llan-patern-vafr. He made a visit to his father in Ireland, but was soon recalled to the monastery. Shortly afterwards he retired with St. Scullion, and embraced an austere anchoretical life in the forest of Scely, in the diocese of Coutances, near the sea. This desert, which was then of great extent, but has since been gradually gained upon by the sea, was anecdotically a favorite resort of the Druids. St. Paternus occupied himself to the faithful conversion of many neighboring parts, as far as Bayeux, and prevailed upon them to demolish a pagan temple in this desert which was held in great veneration by the ancient Gauls. St. Senier, St. Gaul, and St. Aratoes, holy priests, were his fellow-hermits in this wilderness, and first, fellow-laborers in these missions. Paternus assisted in 557 at the third Council of Paris. He was consecrated bishop of Avranches by Germanus, bishop of Rouen. The Church of Avranches prospered greatly under his administration, and became noted. Paternus occupied the episcopal chair of Avranches for thirteen years and died April 16, 566, on the same day with St. Sculth. Both were buried at the same place, in the oratory of Scely, now the parish church of St. Pair, a village much frequented by pilgrims, near Granville, on the sea-coast. Paternus occupied a very large extent of a great number of churches in those parts of France. He is commemorated by the Roman Catholic Church on April 16. See Gallia Christiana, vol. xi; Abbé Treauv, L'Eglise de Bré- tagne; Bolland, Acta Sanctorum, April 16 and 16; Butler, Lives of the Fathers, Martyrs, and Saints, April 16.

Path, the general course of any moving body. So we say the path of the sun in the heavens; and to this the wise man compares the path of the just, which is, he says, like daybreak; it increases in light and splendor till perfect day. It may be obscure, feeble, dim, at first, but afterwards it shines in full brilliancy (Prov. iv. 18). The course of a man's conduct and general behavior is called the path in which he walks, by a very easy metaphor; and as when a man walks from place to place in the dark, he may be glad of a light to assist in directing his steps, so the Word of God is a light to guide those in their course of piety and duty who otherwise might wander or be at loss for direction. Wicked men and wicked women are said to have paths full of snares. The dispensations of God are his paths (Ps. 119. 51). The paths of God are paths of grace (Ps. xcvii. 5; lxv. 4). The phenomena of nature are paths of God (Ps. cviii. 19; Isa. xlviiil, 16). To those depths which are beyond human inspection the course of God in his providence is likened. If his paths are obscure in nature, so they may be in providence, and in grace too. See Cant. iv. 7.

Pitheas'us (Πίθηας ὁ βυζαντινός), a Grecized form (1 Esdr. i. 23) of PITHAHEIA (πιθαήια), the Lo- vite (Esa. x. 28).

Pathros [some Pathros] (Heb. Pathra, Πάθρα, prob. Egyptian [see below]: Sept. Πάθρα, but in Ezek. Ἡθρα, in Isa. xi. 11, Byzantia, Vulg. Rhe- trus, Pachates, Phuthres), a district of Egypt, mentioned by the prophets Jeremiah (xlv. 1, 15) and Ezekiel (xxix, 14; xxx, 14), is supposed to be the same as was afterwards inhabited by the Greeks (Thiris) and now known as Sais, or Upper Egypt. It gave its name to Pathres, descendants of Mitzram, who peopled it (Gen. x. 14). From Pathros it is said God would recall the Jews to their own land (Isa. xi. 11), the expression here denoting the whole of Egypt (see Journ. Soc. Lit., Oct. 1853). The following account of this country combines the Scriptural and the profane notices.

That Pathros was in Egypt admits of no question: we have to attempt to decide its position more nearly. In the list of the Mizraites, the Pathrusim occur after the Naphthuim, and before the Caalhim; the latter being followed by the notice of the Philiaties, and by the Septuagint (Gen. x. 13, 14; 1 Chron. i. 12). Isaiah prophesies the return of the Jews "from Mizraim, and from Pathros, and from Cush" (Isa. xii. 11). Jeremiah predicts the ruin of "all the Jews which dwell in the land of Egypt, which dwell at Migdol, and at Ta'anah, and at Noph, and in the country of Pathros" (xlix. 1, 1), and their reply is given, after this introduction, "Then all the men which knew that their wives had burned incense unto other gods, and all the women that stood by, a great multitude, even all the people that dwell in the land of Egypt, in Pathros, answered Jeremiah" (xlix. 15). Ezekiel speaks of the return of the captive Egyptians to "the land of Pathros, into the land of their habitation" (xxix. 14), and mentions it with Egyptian cities, Noph preceding it, and Zaan, No, Sin, Noph succeeding it in the order (xxix. 16). Philiaties followed it (xxx. 18-18). From the place of the Pathrusim in the list of the Mizraites, they might be supposed to have settled in Lower Egypt, or the more northern part of Upper Egypt. Four of the Mizraites tribes or peoples can probably be assigned to Egypt, the last four, the Philiaties being considered not to be one of these, but merely a colony: these are the Naphthuim, Pathrusim, Caalhvim, and Caphthorim. The first were either settled in Lower Egypt or just beyond its western border; and the last in Upper Egypt, about Coptos. It seems, if the order be geographical, as there is reason to suppose, that it is to be inferred that the Pathrusim were seated in Lower Egypt, or not much above it, unless there be a transposition; but that some change has been made is probable from the parenthetic notice of the Philiaties following the Caalhvim, in the order from other tribes, which it should rather follow the Caphthorim. If the original order were Pathrusim, Caphthorim, Caalhvim, then the first might have settled in the highest part of Upper Egypt, and the other two below them. The mention of Pathros, called Pathra, unexplained in Isaiah, is supposed to point that Pathros was Upper Egypt, if there were any sound reason for the idea that Mitzram or Mazar is ever used for Lower Egypt, which we think there is not. Rödiger's con-
PATHRUSIM

jecture that Pathros included part of Nubia is too dar-
ing to be followed (Encyclop. Germ., § ii., vol. xiii., p. 812), although there is some slender support for it. The occurrences in Jeremiah seem to favor the idea that Pathros was part of Lower Egypt, or the whole of that region; for although it is mentioned in the present passage, as being the land where they dwelt after Migdol, Tañpanhes, and Noph, as if to the south, yet we are told that the prophet was an-
swered by the Jews “that dwell in the land of Egypt, in Pathros,” as if Pathros were the region in which
these cities were. We have, moreover, no distinct evi-
dence in Nat. iv. 28; 29. We may see the main question of Pathros and the Nubian同学们 is the land where the
Thebaïs was probably inhabited before the rest of the
country (comp. Herodot. ii. 15; an opinion supported by
the tradition that the people of Egypt came from Ethiopia, and by the first dynasty’s being of Thinite kings.

Pathros has been connected with the Pathyrlic
nome, the Phatarie of Pliny (Hist. Nat. ix. 47), in which Thebes was situated. The first form occurs in a
letter of Herodotus written in Egypt (Herodot. v. 86. Gyptiaco, Fugio. Analect. vid. Religions, Lettres &c. de Ler
tromine, 3 let. p. 4, 30, ap. Parthey, Vocab. s. v.). This identification may be as old as the Sept.; and the Coptic version, which reads Papoilhous, Papoilhoues, does not contradict it. The discovery of the Egyptian
name of the town after which the name was called puts
the inquiry on a safer basis. It is written HA-HAT-
HER, “The Abode of Hat-her,” the Egyptian Venus. It
may perhaps have sometimes been written P-HA-
HER, in which case the P-H and T-H would have
coalesced in the Hebrew form, as did T-H in Caphtor. See CAPHTOR. Such etymologies for the
word Pathros as Petres, “that which is southern,”
and for the form in the Sept. Patroues (Gesen. Thes. s. v.), must be abandoned.

On the evidence here brought forward, it seems rea-
sonable to consider Pathros to be part of Upper Egypt, and to trace its name in that of the Pathyrlic nome.
But this is only a very conjectural identification, which
future discoveries may overthrow. It is spoken of
with cities in such a manner that we may suppose it
was but a small district, and (if we have rightly identi-
fied the place) it occurs Thebes, long the capital of Strabo (i. 5, 10) of its importance, and especially of its
isolation the island was used, under the Roman empire,
as a place of banishment, which accounts for the
exile of the apostle John thither “for the testimony of
Jesus” (Rev. 1. 9). See John. He was here fa-
vored with those visions which are contained in the
Apocalypse, and to which place owes its scriptural
interest. We may add that Patmos must have been
conspicuous on the right when St. Paul was sailing (Acts xx, 10; xxi, 1) from Samos to Cos.

The island is about twenty-five miles in circumference; it has a deeply indented sea-line, and possesses one
of the best harbors in the archipelago; lat. 37° 17’ N.,
long. 26° 35’ E. On the north-eastern side of the island was a town of the same name, with the harbor, and the southernmost point formed the promontory Amazonia. It is deficient in trees, but abundant in flowering plants
and shrubs. Walnuts and other fruit-trees are grown in
the orchards; and the wines of Patmos is the strongest
and best flavored of any in the Greek islands. Maize and barley are cultivated, but not in a quantity suffi-
cient for the use of the inhabitants, and for the support of the poor. The vineyards are especially
bountiful, and the wine put in at the great harbor for provisions. On the ridge of a hill overlooking the harbor of La Scala stand the ruins of the ancient acropolis, and round its

PATIOE or Patmos. Thus may be considered the divine long-suffering or forbearance with sinners. The Lord is called the God of patience, not only be-
cause he is the author and object of the grace of pa-
tience, but because he is patient or long-suffering in
himself, and towards his creatures. It is not, how-
ever, in the presence of a spirit of indifference, or acting in God, as in creatures, but belongs to the
very nature and essence of God, and springs from his
goodness and mercy (Rom. ii. 4). It is said to be
exercised towards his chosen people (Isa. xxx. 18; Rom.
iii. 23; 2 Pet. iii. 9). The end of his forbear-
ance to the wicked is that they may be without ex-
cuse, to make his power and goodness visible (Gen.
xxviii. 32; 2 Pet. iii. 9). His patience is manifested
by giving warnings of judgments before he executes
them (Hos. vi. 5; Amos i. 1; 2 Pet. ii. 5); in long
delaying the judgment (Eccles. viii. 16); even mixing mercy with them. There are many instances
of this patience recorded in the Scriptures, as with
the old world (Gen. vi. 3); the inhabitants of Sodom (Gen. xviii); with Pharaoh (Exod. ii. 6); with the
people of Israel in the wilderness (Acts xii. 18); with
the Gentile world (Acts xxi. 30); with fruitless pro-
sessors (Luke xiii. 6, 9); with Antichrist (Rev. ii. 21).

Patioi (Πατόις, etymology unknown), a rocky
and bare island in that part of the Εγηθαν called the Icarian Sea, about twenty miles south of Samos, and
about twenty-four west of the coast of Asia Minor, near Miletus, reckoned as one of the Sporades (Plin.; Itiner. Antiq. vii. 14); Strabo (i. 5, 10) says in allusion to
its isolation the island was used, under the Roman empire,
as a place of banishment, which accounts for the
exile of the apostle John thither “for the testimony of
Jesus” (Rev. 1. 9). See John. He was here fa-
vored with those visions which are contained in the
Apocalypse, and to which place owes its scriptural

The island is about twenty-five miles in circumference; it has a deeply indented sea-line, and possesses one
of the best harbors in the archipelago; lat. 37° 17’ N.,
long. 26° 35’ E. On the north-eastern side of the island was a town of the same name, with the harbor, and the southernmost point formed the promontory Amazonia. It is deficient in trees, but abundant in flowering plants
and shrubs. Walnuts and other fruit-trees are grown in
the orchards; and the wines of Patmos is the strongest
and best flavored of any in the Greek islands. Maize and barley are cultivated, but not in a quantity suffi-
cient for the use of the inhabitants, and for the support of the poor. The vineyards are especially
bountiful, and the wine put in at the great harbor for provisions. On the ridge of a hill overlooking the harbor of La Scala stand the ruins of the ancient acropolis, and round its
base lies the town, which contains more than half the population of the island. Its inhabitants are about six hundred in number, and between three and four hundred are scattered about the island besides. They subsist by fishing and the poor harvest their fields afford them. They wander away in the autumn months to richer soils, and work as agricultural laborers; or carry on a small commerce, leaving their homes to the care of the women: but this migration has diminished of late years. The educational state of the island is anomalous; the inhabitants are, as they ever have been, ignorant and superstitious, although quiet and peaceable; but the monastery in which Somnini found eighty monks, only three of whom could read, has now a staff of teachers, who afford their pupils a course of instruction comprising classic Greek, Italian, general literature, and logic. They have a considerable class from the neighboring islands, and even a few from the mainland. Patmos has been in one respect singularly favored. The Turks have never visited it, none dwell on the island; and the moderate tribute which they exact has been punctually paid, and sent by the islanders themselves to Smyrna. No mosque has ever been erected on the spot rendered sacred by the vision of the Apocalypse. Slavery has been unknown, piracy has never been practiced, and the orderly life of the inhabitants has rendered unnecessary the interference of any other police than that which they supply themselves: their poverty has stood them in good stead. The air of Patmos is pure and wholesome; and the plague, so fatal in the islands round about, has never been known there.

The aspect of the island is peculiarly rugged and bare. Such a scene of banishment for St. John in the reign of Domitian is quite in harmony with what we read of the custom of the period. It was the common practice to send exiles to the most rocky and desolate islands ("in asperrimas insularam"). See Sueton. Tit. 8; Juven. Sat. i, 73. Such a scene, too, was suitable (if we may presume to say so) to the sublime and awful revelation which the apostle received there. It is possible indeed that there was more greenness in Patmos formerly than now. Its name in the Middle Ages was Paimaat. But this has now almost entirely given place to the old classical name in the form Patmos; and there is just one palm-tree in the island, in a valley which is called "the Saint's Garden" (στην οικία του 'Οσιω). Here and there are a few poor olives, about a score of cypress trees, and other trees in the same scanty proportion.

Patmos is divided into two nearly equal parts, a northern and a southern, by a very narrow isthmus, where, on the east side, are the harbor and the town. On the hill to the south, crowning a commanding height, is the celebrated monastery which bears the name of "John the Divine." It was built by Alexius Comnenus, and in the library are a great many printed books. There were in it formerly also 600 MSS.; there are now 249. Two ought to be mentioned here, which profess to furnish, under the title of ιερά πανοράμα τοῦ Θεολόγου, an account of St. John after the ascension of our Lord. One of them is attributed to Prochorus, an alleged disciple of St. John; the other is an abridgment of the same by Nicetas, archbishop of Thessalonica. Various places in the island are incorporated in the legend, and this is one of its chief points of interest. There is a published Latin translation in the Bibliotheca Maxima Patrum (1677, tom. ii), but with curious modifications, one great object of which is to disengage St. John's martyrdom from Ephesus (where the legend places it), and to fix it in Rome. Half-way up the ascent of the mountain on which the monastery stands is the cave or grotto where tradition says that St. John received the revelation, and which is still called τό ενσηπτών τῆς Αποκαλυπτήρας. A view of it (said to be not very accurate) will be found in Choisel-Gouffier (t. pl. 27). In and around it is a small church, connected with which is a school or college, where the ancient Greek literature is said to be well taught and understood.

Among the older travellers who have visited Patmos we may especially mention Toursfort and Pococke, and later Dr. Clarke and Prof. Carlisle. See also Turner, Journal of a Tour, iii, 98-101; Schubert, Reise im Morgenland, l, 424-434; Walpole, Turkey, ii, 43; and Stanley, Sermons in the East, p. 225. Rosa visited it in 1841, and describes it at length (Reisen auf dem griechischen Inseln des Ägäischen Meeres, ii, 123-128). Guérin, some years later, spent a month there, and entered into more detail, especially as regards ecclesiastical antiquities and traditions (Description de l'île de Patmos et de l'île de Самос [Paris, 1856], p. 1-120).

The Island of Patmos.
PATOMAY 768

PATRARCH

Patonay, Léonard, a French Jesuit, was born in Salins in 1569. He joined the Jesuits at the age of 16. He studied for several years in the theology and the Holy Scriptures in different houses of his order. A skilful controversialist, he opposed the Lutheran heresy, and cardinal Richelieu, who esteemed his talent, several times employed him to reply to the ministers of the Reformed doctrine. Patonay left Besançon in 1629. He published, under a fictitious name, Declarations aliquis multitaurum deductarum ad Ecclesia Bulla. See Backer, Biblioth. des Ecriva. de la Comp. de Jésus, s. v.

Patonay, Philippe, a French prelate, was born at Salins in 1598. He joined the Order of Minims in 1611, and, after having taught philosophy and theology, devoted himself to preaching. His success in the pulpit caused him to be chosen by Ferdinand de Rye, archbishop of Besançon, for one of his suffragans, who consecrated him in 1632, under the title of Bishop of Nicopolis. He continued the same duties under the archbishops Francis de Rye and Claude d'Achery. He died at Besançon Aug. 1, 1639. This prelate, versed in ancient languages, only published some Theses upon theology, and left in manuscript several Sermons and an Abrégé des Controverses of cardinal Bellarmine. See Dunod, Hist. de l'Église de Besançon.

Patoilleau, Louis, a French Jesuit, was born at Dijon, March 31, 1639. His studies were finished in the College of Dijon, where he lived for some years among his teachers. He was admitted into the Order of the Jesuits, taught philosophy at Laon, and devoted himself at the same time to preaching. After several years, being recalled to Paris, he retired to the monastery, and took an active part in the religious quarrels of the time. From 1634 to 1648 he was one of the principal editors of the Supplément aux Nouvelles ecclésiastiques, which the Jesuits opposed to the publication of the Gazette Janséniste. The most of the articles written by him upon the refusal of the sacraments or for the defence of his order appeared anonymously, and it is difficult to distinguish exactly those that belong to him. The ardor with which he espoused the cause of M. de Beaumont against the parliaments, which drew upon himself, in 1736, the order to leave Paris. He was sent into the service of the Prince of Amiens, then with M. Banyon, bishop of Uses, both strongly attached to his society, and finally retired to Avignon. Patoilleau was, as well as father Nouette, a butt to the continual sarcasms of Voltaire, which he provoked by the unskilful manner of his attacks on the philosophers. He died at Avignon in 1779. We have of his works, Poëttes sur le mariage du Roi (1725): Cartouche, ou le séculaire justifié par la grâce du P. Queznel (La Haye, 1731, 8vo);—Vie de l'Églaise (1631, 12mo);—Dictionnaire des livres jansénistes (by P. de Colonia), a new and enlarged edition (Antwerp, 1734, 4 vols, 12mo); this work, in which the accusation of Jansenism is carried to excess, was forbidden at Rome in 1754; father Rulé has given a refutation of it:—La propriè du Jansenisme (Quillva, 1738, 12mo);—Histoire de la Conspiration des Jansénistes, 1763 or 1767; 2 vols, 12mo), dedicated to pope Clement XII. This Jesuit, charged with continuing the collection of Lettres édifiantes after the death of father Halde, published vols. xxiii, xxiv, xxv, and xxvi; vol. xxxi, which he had prepared, was published by father Marchal.

Patoilleau, René, who bore the same name, natives of Salins, and also Jesuits, have distinguished themselves in the pulpit. The older, Nicolas Patoilleau, born in 1622, was for a long time superior of the French mission to London, and died at Besançon Nov. 1, 1739. He was left Sentinelle home for some time to décorer à Dieu (1700, 12mo). The younger, Étienne Patoilleau, was born in 1634, and became abbé of Ancy (diocese of Besançon). See Lettres késiastiques, tom. vii (ed. Du J. Questell); Feller, Dict. Liturg. De Backer frères, Bibliè des Écriva. de la Comp. de Jésus.

Patres (Lat. for fathers) is a transfer of the Oriental idiom by which every teacher or governor is respectfully entitled abba, father. The officers of the early Church were termed Patres Ecclesiae or Patres Clerici. Presbyters, oldest bishops, were called Patres. Thus the name papa, pope, is a term of reverence and affection, corresponding to αββας, pāwos. This title of papa was first given to the bishop of Alexandria, and the first bishop of Rome who assumed it in any public document was Siricius, A.D. 384. This title was not, however, employed commonly until the time of Leo the Great; and it was afterwards applied exclusively to the bishop of Rome, according to an order of Gregory the Great. This ancient title was attributed to all bishops alike until about the 6th century. Jerome, for example, in writing to Augustine, salutes him as Domine eure sancete et béstissime (Ep. 94), and he gives the same title to other bishops. The title of Constantine was usually called urbis papa; and the bishop of Rome, in like manner, urbis papa, or Romane urbis papa, and simply papa. The title continued in general use throughout the 6th and 7th centuries. It was also frequently applied to the priques (q. v.) of the Christian Church in Africa; and there was a peculiar reason for giving them this name, as the prisci in the African churches was not attached, as in other places, to the civil metropolis, but was always chosen by the people who had succeeded to this dignity by virtue of his seniority, in whatever place he lived. The only exception to this was the Church at Carthage, where the bishop was a fixed and standing metropolitan for the province of Africa, properly so called. The term patris was also applied to the fathers of the monasteries, as Jerome and Augustine called them. See Father.

Patres Patrum (Lat. for Fathers of the Fathers), a designation sometimes given to bishops in the ancient Christian Church. Gregorius Nyssan was called by this name in the canons of the second Council of Nice; and others say that Theodosius, the emperor, gave Chrysostom the same title after death. See Paters.

Patres Sacrorum (i. e. Fathers of the Sacred Rites), a title given to the priests of Melitran (q. v.) among the ancient Romans under the emperors.

Patriarch (πατριαρχης, head of a family or tribe). Paul (Eph. iii, 15) calls attention to the fact that the term of πατριαρχης comes from πατρις, "the great father of all the πατριαρχης, both of angels and men" (Elliott); and thus, contrastively, "Patriarch," in its highest sense, is a title of him whose offspring all men are. In common use it is applied in the N. T. to Abraham (Heb. vii, 4), to the sons of Jacob (Acts vii, 8, 9), and to David (ii, 29); and is apparently intended to be equivalent to the phrase γὰρ πατέρας ἐν συνεσεβασμῷ, the "head" or "prince of a tribe," so often found in the O. T. It is used in this sense by the Sept. in 1 Chron. xxii, 2; xxii, 23; XX. xxiii, 20; xxvi, 12. In common usage the title of patriarch is assigned especially to those whose lives are recorded in Scripture previous to the time of Moses.

In the early history of the Hebrews we find the ascension of a family retaining authority over his children, and his children's children, so long as he lived, whatever new connections they might form. When the father died the branch-families did not break off and form new communities, but usually united under another common head. The patriarch was generally invested with this dignity. His authority was paternal. He was honored as the central point of connection, and as the representative of the
whole kindred. Thus each great family had its patriarch or head, and each tribe its prince, selected from the several heads of the families which it embraced.

By the "patriarchal system" it is accordingly meant that state of society which developed itself naturally out of family relations, before the formation of nations proper in so far as there was a state of political government; and by the "patriarchal dispensation" the communion into which God was pleased to enter with the families of Seth, Noah, and Abraham, before the call of the chosen people. In the following account we treat the subject from both a Scriptural and a philosophical point of view.

1. In the history of the antediluvian patriarchs, the Scripture record contains, after the first family, little except the list of the line from Seth, through Enos, Cainan, Mahalaleel, Jared, Enoch, Methuselah, and Lamech, to Noah; which includes the periods of generation and at their deaths. See CHRONOLOGY. To some extent parallel to this is given the line of Cain: Enoch, Irad, Mehujael, Methusael, Lamech, and the sons of Lamech, Jabal, Jubal, and Tubal-Cain. To the latter are attributed the first signs of art and culture regarded, in theology, as the division of classes, and the knowledge of mechanical arts; while the only moral record of their history obscurely speaks of violence and bloodshed. See LAMECH. In the former the line the one distinction is their knowledge of the arts in contrast with the first, the separation of the promised "seed of the woman" which is seen in its fullest perfection in Enoch and Noah; and the only allusion to their occupation (Gen. v, 29) seems to show that they continued a pastoral and agricultural race. The entire corruption, even of the chosen family of Seth, is traced (in Gen. vi, 1-4) to the union between "the sons of God" and "the daughters of men" (Heb. "of Adam"). This union is generally explained by the ancient commentators of a contact with supernatural powers of evil in the persons of fallen angels; most modern interpretation refers it to intermarriage between the lines of Seth and Cain. The latter is intended to avoid the difficulties attaching to the comprehension of the former view, which, nevertheless, is undoubtedly far more accordant with the usage of the phrase "sons of God" in the O. T. (comp. Job i, 6; xxxviii, 7), and with the language of the passage in Genesis itself (see Mainland's ERUVI, essay vi).

The line of Cain was continued by the children of Seth, who were traced to Abel and Seth. The sons of Seth were the progenitors of all the noblest races of the earth, and they were the first to introduce the arts and sciences. They were the first to cultivate the ground, to make implements of stone and metal, and to build cities. They were the first to invent the art of writing, and torearize the use of weapons. They were the first to learn the art of war, and to use it for the protection of their property and persons. They were the first to form governments, and to establish the laws of society. They were the first to train their children in the arts of peace and war. They were the first to form nations, and to establish the institutions of society. They were the first to build cities, and to erect temples. They were the first to form armies, and to establish the institutions of war. They were the first to use the arts of navigation, and to explore the seas. They were the first to use the arts of agriculture, and to cultivate the ground. They were the first to use the arts of commerce, and to trade with other nations. They were the first to use the arts of government, and to establish the institutions of society.
The Reformer Bullinger says: "Out of all this it is easy to understand what faith and knowledge Adam had of our Lord Christ; namely, that he knew in him the very Godhead and manhood, and that he saw in faith his passion and cross afar off." He even attributes to the "Holy Father" the teaching of the doctrine "that the Father, the Son, and the Holy Ghost are one God in the most reverent Trinity." Doubtless the first intimations of a Mediator were such as to include within them all subsequent revelation, but there is nothing to show that they were so understood by those who then received them. At the same time God did reveal himself to Adam, to Enoch, and to Noah, as well as to Abraham afterwards, and perhaps to many others. "The traditional knowledge concerning a promised Mediator was no doubt carefully cherished, and served to enlighten much which in the law, and even in the prophets, might otherwise have been unintelligible. Hence the Mediator, though but faintly shadowed out, was yet firmly believed in. We have our Lord's assurance that "Abraham rejoiced to see his day; he saw it, and was glad" (John viii, 56). We have Paul's assurance that the same Abraham, having received the promise of the Redeemer, believed in it, and was justified by faith (Rom. iv, 1-20; Gal. iii, 6-9, 14-19). And we may well suppose that the faith which guided Abraham guided others, being foreordained (Ps. Browne, On Art. ii). Then, as to their knowledge of a future state, we have (Gen. vi, 24) a statement concerning Enoch which seems to show that the antediluvian patriarchs were familiar with the idea of a better life than the present. It has been argued that the very brevity and obscurity of the phrase "God took him" proves this familiarity. His being "taken" was a reward for his piety, a still greater blessing than the long life vouchsafed to so many of his contemporaries. "Now people who knew of the transition of Enoch must have had some knowledge of the state of bliss to which he was removed" (Ps. Browne). But, besides, in the first 930 years of the world, Adam still lived, and the communion which he had enjoyed with God could by him never have been forgotten. Is it possible that Adam was not well acquainted with a future life? This communion of God with man is again noticeable in the case of Noah (Gen. vi, 13; vii, 1; viii, 16, 19), as with Abraham and others afterwards. In a general way the earliest patriarchs appear therefore to have lived the simple lives of a pastoral and also agricultural people, furnished with clothing and food ; they cultivated herbs and grain and fruits, and probably also, by sufferance, animals for food, offering to God both of the produce of the earth and also slain beasts in sacrifice, able to distinguish the clean from the unclean, speaking to one another, holding firmly to the promise of a great blessing to come, familiar with the idea of God's presence in the world, and looking for some better life when this should be ended.

11. The Patriarchs after the flood were at first, in all, four persons forming the whole race. Noah became the second father of the human race. They were exceedingly fruitful, as God had ordained they should be. The tenth chapter of Genesis is a wonderful document, describing the vast emigrations of the families of the sons of Noah. The number of nations there enumerated is reckoned by the Hebrew exposition from Abraham thirty, and from Shem twenty-six. But they no longer lived to the age of their antediluvian forefathers. Abraham was 90 at the birth of Ishmael, and about 100 at the birth of Isaac; Isaac was 60 at the birth of Esau and Jacob, and died at 180; Jacob died at 147, and Joseph at 110. It will be observed that as human life was shortened, children were usually born at an earlier period in the life of their parents. A providential compensation was thus supplied, by which the human family was multiplied, and large portions of the earth occupied. The language of men was, however, no longer one. When an attempt was made to concentrate the race, instead of occupying the earth and replenishing it, the scheme was defeated by the miraculous confusion of tongues. From that time the patriarchal state was preserved, or revived in its purity, chiefly if not wholly in the family of Abraham, the friend of God. Nations grew up on the right hand and on the left. In Assyria there arose the kingdom of Ninevah. "Out of that land he went forth to Assyria, and built Nineveh. Without notice posterior civilization of Egypt then sprang up, and the thirty centuries themselves were probably already built when Abraham first arrived in that land. Idolatry, moreover, was fast taking the place of the primeval religion, and if the name of the true God was ever in danger of being wholly forgotten in the world, it was probably then, when Abraham was called to go forth from Ur of the Chaldees. In the book of Joshua (xxiv, 2, 14) we read that the original fathers of the Jewish race, who dwelt beyond the Euphrates, served other gods. Such was probably the case with the father of Abraham. "If we are asked," says professor Max Müller, "how this one Abraham passed through the denial of all other gods to the knowledge of the one God, we are content to answer that it was by a special divine revelation." "It is true," adds dean Stanley, "that Abraham hardly appears before us as . . . a teacher of any new religion. As the Scripture represents him, it is rather as if he were possessed of the truth himself then as if he had any call to proclaim it to others. His life is his creed; his migration is his mission. . . . His faith transpires not in any outward pronouncement, but in his deeds, in the purity of his heart, in his more nearly concerning him and every one of us—in his prayers, in his actions, in the righteousness, the 'justice,' . . . the 'uprightness,' the moral 'elevation' of soul and spirit which sent him on his way straightforwardly, without turning to the right hand or to the left. In his deeds, Abraham must be regarded as the type, 'the hero,' as he has been called, of the patriarchal state. He was acquainted with civilization and organized government, but in his own person and family adhered to the simple habits of a nomad life. With him and his, the father of the family was the patriarchal priest, the family itself the patriarchal Church."
Patriarch

Deane Stanley has remarked how exactly, when Abra-
ham and Lot "went forth" to go into the land of Ca-
naan, they resembled two Arabian chiefs at the pres-
et day on a journey or a pilgrimage. He notes how at
this day, as so many centuries ago, "the chief wife,
the princess of the tribe, is her art her soul, who
make the cakes, and prepare the usual meal of milk
and butter; the slave or the child is ready to bring in
the red lentil soup for the weary hunter, or to kill
the calf for the unexpected guest. Even the ordinar-
y social state is the same; polygamy, slavery, the ex-
clusiveness of family ties, the period of service for
the dowry of a wife; the solemn obligations of hospi-
tality; the temptations, easily followed, into craft or
falsehood." (Lectures on Jewish Church, lect. i, p. 12.)

But if Abraham was in all outward respects like
any other sheik, there was that which distinguished
him, as it did Noah before him, and Isaac, Jacob, Jo-
seph, and others, after him, from all the world. This
distinction consists partly in the covenant whereby
these men were especially bound to God, and second-
ary in the typical character of their recorded actions.
Thus God made a league or covenant (q. v.) with Noah
(Gen. ix. 8, 9), and afterwards with Abram (Gen. xv.
8-18), when, as Deane Stanley says, "the first covenant,
the Old Testament, was concluded between God and
man, and when there was represented by outward
signs, which were to be necessary for a people more
different from the rest of mankind than those who,
far more than the Jewish people, reflected in his own
union of suffering and of triumph, the thick
darkness of the smoking furnace, the burning and the
shining light." This league was often renewed, as
with Abraham when circumcision was enjoined (xvii,
10), and with Isaac prospectively (xvii, 19), bind-
ing each of these as being themselves types of "another
seed . . . and another son of promise, in whom the
covenant was to be accomplished" (see Deex Jackson,
Obed, lex. ix, ch. xvi.

Joseph), periods more may be gathered
as to the nature of the patriarchal history. It is
at first general in its scope. The "covenant given
to Noah is one, free from all condition, and fraught
with natural blessings, extending to all alike; the one
great command (against bloodshed) which marks it
is based on a deep and universal ground; the fulfill-
ment of the blessing, "be fruitful and multiply, and
replenish the earth," is expressly connected, first with
an attempt to set up a universal kingdom round a
local centre, and then (in Gen. x) with the formation
of the various nations by conquest or settlement, and
when all the time the thought is of a coming age in
which the unammonished infant life seems to be
soon narrowed itself to that of a single tribe or family,
and afterwards touches the general history of the an-
cient world and its empires, only so far as bears upon
this.

Hence in this last stage the principle of the pa-
tria-chal dispensation is most clearly seen. It is
based on the sacredness of family ties and paternal
authority. This authority, as the only one which
is natural and original, is inevitably the foundation
of the earliest form of society, and is probably seen
most clearly in the Ordos (Scripture, Lev. xvi. 29-30,
not affected by local attachments and by the acquisition
of wealth. It is one, from the nature of the case,
limited in its scope, depending more on its sacredness
than its power, and giving room for much exercise of
freedom; and, as it extends from the family to the
tribe, it must become less stringent and less concen-
trated, in proportion to its wider diffusion. In Scrip-
ture this authority is consecrated by an ultimate re-
ference to God, as the God of the patriarch, the Father
(that is) both of him and his children. Not, of course,
that the idea of God's Fatherhood carried with it the
knowledge of man's personal communion with his
nature (which is revealed by the Incarnation); it rather
implied faith in his protection, and a free and loving
obedience to his authority, with the hope (more or less
assured) of some greater blessing from him in the
coming of the promised seed. At the same time, this
faith was not allowed to degenerate, as it was prone to
do, into an appropriation of God, as the mere tetrarch
of the tribe. The Lord, it is true, suffers himself
to be called "the God of Shem, of Abraham, of Jec-
chon and of Jacob"; but he also reveals himself (and
that emphatically, as if it were his peculiar title) as
the "God Almighty" (Gen. xvii. 1; xxviii. 3; xxxv.
11); he is addressed as the "Judge of all the earth"
(xxxvii. 25), and as such is known to have intercourse
with Pharaoh and Abimelech (xii. 17; xxx. 8-9), to
hallow the priesthood of Melchizedek (xv. 18-20),
and to execute wrath on Sodom and Gomorrah. All
this would confirm what the generality of the cove-
nant with Noah, and of the promise of blessing to
"all nations" in Abraham's seed, must have distinctly
taught, that the chosen family were, not substitutes,
but representatives, of all mankind, and that God's
relation to them was only a clearer and more perfect
type of that in which he stood to all.

Still the distinction and preservation of the chosen
family, and the maintenance of the paternal authority,
are the special purposes, which give a key to the mean-
ing of the history, and of the institutions recorded.
For this this birthright (probably carrying with it the
priesthood) was reserved to the first-born, belonging
to the tribe, but shared by him by inheritance, which
received his father's blessing; for this the sanctity of
marriage was jealously and even cruelly guarded, as
in Gen. xxxiv, 7, 13. 23 (Dinah), and in xxxvii, 24
(Tamar), from the license of the world without; and
all intermarriage with idolaters was considered as treason to the family and the God of Abraham (Gen.
xxxvii, 34, 35; xxvii, 46, xxxvii. 8. 6-9). Natural
obedience and affection are the earthly virtues espe-
cially brought out in the history, and the sins dwelt
upon (from the irreverence of Ham to the selling of
Joseph).

The type of character formed under such a dispen-
sation is one imperfect in intellectual and spiritual
growth, because not yet tried by the subtler tempta-
tions, or forced to contemplate the deeper questions
of life; but it is one remarkably simple, affectionate,
and free, such as would spring from a natural au-
thority, derived from God and centring in him, yet al-
lowing, under its unquestioned sacredness, a familiar-
ity and freedom of intercourse with him, which is
strongly contrasted with the stern and awful char-
acter of the Mosaic dispensation. To contemplate it
from a Christian point of view, is to see the unconscio-
usness and innocence of childhood, with that deeper
insight and strength of character which are gained by
the experience of manhood. We see in it the germ of
the future, of the future revelation of God, and the future trials and development of man.

It is on this fact that the typical interpretation of
its history depends—an interpretation sanctioned di-
rectly by the example of Paul (Gal. iv. 21-31; Heb.
vii. 1-17), indirectly supported by other passages of
Scripture (Gal. iv. 28-30; 1 Pet. ii. 14-16; Rom. xi.
10-13, etc.), and instinctively adopted by all who
have studied the history itself. By this is not
meant, of course, that in themselves the patriarchs
were different from other men, but that the record of
their lives is so written as to exhibit the type of char-
acter in them. "The materials of the history of
Genesis are so selected, methodized, and marshalled
as to be like rays converging steadily from various
points to one central focus. The incidents in the
lives of the patriarchs, which seem trivial when read
literally, and which would never have existed unless
they had possessed a prospective value, and unless he who guided the writer had perceived them
to have that prospective value, all fall into their prop-
er place when they are read by the light which is shed
PATRIARCHAL CROSS

on them by the Gospel of Christ. . . . They are so selected as to be full of instruction" (Wordsworth, Introdr. to Gen. etc. p. xxxiv). To this may be added, from the same authority, the beautiful inscriptions which are selected by the prophetic spirit either sent forth an articulate sound themselves, and pre-announce something that is future, or else they are there inserted in order that they may bind together the strings which proceed to the sound.

Even in the brief outline of the antediluvian period we may recognise the main features of the history of the world, the division of mankind into the two great classes, the struggle between the power of evil and good, the apparent triumph of the evil, and its destruction in the flood, the incidents which are selected by the prophetic spirit either sent forth an articulate sound themselves, and pre-announce something that is future, or else they are there inserted in order that they may bind together the strings which proceed to the sound.

In the ancient Christian Church patriarchs were next in order to metropolitans or primates. They were originally styled archbishops and exarchs, and were the bishops of certain great metropolitan sees, and though they held rank next to the patriarchs, in that they enjoyed a jurisdiction almost identical with that of the metropolitan in his own province. The territory over which they ruled was after their own office called a patriarchate.

The title Patriarch, which is of Eastern origin, is almost synonymous with primate (q. v.), and is by those who use it derived from Acts vii. 8. They claim that the apostles were so called because they were regarded by the apostolic Christians as the fathers of all other churches. Baronius and Scholasthrae derive it from St. Peter who, in the eyes of the Copts' supposes the pre-eminent position in Egypt, but other Romans assert that the patriarchs took their rise a short time previous to the Council of Nice; and a third party, among whom is Balzamon and other Greek writers, maintain that they were first instituted by that council. In confirmation of the last opinion, it may be asserted that the title of archbishop in the earlier origin is too strong to be easily set aside; and, further, that the word of Jerome, upon which the error is founded, refer to the canonical confirmation of those rights, titles, and privileges which cup had already established, and not to the creation of any new dignities. The patriarchates are so regarded by the Copts that the Council of Nice acknowledged as "of ancient custom." Originally the name patriarχας seems to have been given commonly to bishops, or at least was certainly given in a less special sense than what it eventually bore. The date at which it was assumed by the metropolitan of Alexandria is unknown, but we think cannot be exactly determined. It is certain, however, that even as late as the time of the Council of Nice no supremacy was recognised in the patriarchate over the provincial metropolitans, and that the authority which the patriarchs have since exercised was arrogated by them at a later period. It was by degrees that the supremacy of the patriarchate rose preeminent to all other ecclesiastical dignities; for we find that about the close of the 4th century the established privileges of the patriarchs included, among other things, the right of consecrating bishops, summoning diocesan councils, appointing vicars for remote provinces, in fact, with their own authority, and giving a decisive judgment in those cases of appeal which came before them from other courts.

In short, nothing was done without consulting them, and their decrees were executed with the same regularity as those of the apostles. Sometimes we meet with the name patriarch given to any bishop by public authority of the church is in the Council of Chalcedon, A.D. 451, which mentions the most holy patriarchs, particularly Leo, patriarch of great Rome. Among private authors, the first who mentions patriarchs by name is Sozomen, who wrote his history about the year 440, eleven years before the Council of Chalcedon. At first each quarter of the Christian world had its patriarch—Europe, Rome; Asia, Antioch; Africa, Alexandria: at a later period there were more—those of Jerusalem, as the mother of all churches, "the apostolic see" of St. James the First, founded by the Council of Chalcedon; and Constantinople, by the Council of Constantinople (A.D. 451), as Byzantium was then another Rome and imperial city. All these were independent of one another, till Rome by encroachment, and Constantinople by law, gained a superiority over some of the rest. The subordinate patriarchs nevertheless still retained the title of exarchs of the diocese, and continued to sit and vote in councils. The contests between the patriarchs of Rome and Constantinople were among the most bitter of the Greek schisms of the GREEK CHURCH. After the Greek schism, and particularly after the establishment of the Latin kingdom of Jerusalem, Latin prelates were appointed with the title and rank of patriarch in the four great Eastern sees. It was hoped that the union of the churches, effected at the Council of Florence, would have put an end to the con-
Patriarchs

test thus created; but that union proved transitory, and the double series of patriarchs has been continued to the present day. The Nestorian and Eutechian sections of the Eastern churches, too, have each their own patriarch, and the head of that portion of the former which in the 16th century was reconciled with the Roman see, although known by the title of Catholicoi, has the rank and authority of patriarch. See Nestorians. Besides these, which are called the Greater Patriarchates, there have been others in the Western Church known by the name of Minor Patriarchates. Of these the most ancient were those of Aquileia and Grado. The latter was transferred to Venice in 1451; the former was suppressed by Benedict XIV. France also had a patriarch of Bourges; Spain, for her colonial missions, a patriarch of the Indies, and Portugal a patriarch of Lisbon. These titles, however, are little more than honorary. The Armenians likewise have their own patriarch at Jerusalem.

In the non-united Greek Church the ancient system of the three patriarchates of Constantinople, Antioch, and Jerusalem is nominally maintained, and the authority of the patriarchs is recognized by their own communion. But the jurisdiction-limits of the patriarch of Constantinople, who is acknowledged as the head, have been much modified. The patriarch resides at Constantinople, and is styled the thirteenth apostle. The right of election is vested in the archbishops and bishops, but the power of confirming the appointment is exercised by the sultan of Turkey, who exacts twenty-five thousand crowns, and sometimes more, on the occasion of the patriarch’s installation. Besides this immense sum, the various fees of the ministers of state and other officers swell the oppressive amount so much that the patriarch is generally encumbered with heavy debts during the period of his patriarchate. Before an election, it is usual for the bishops to apply to the grand vizier for his license to proceed; he replies by summoning them to his presence, when he demands if they are fully determined to proceed with the election. Being answered in the affirmative, his consent is then given. The election over, the vizier presents the patriarch with a white horse, a black capuche, a crosier, and an embroidered caftan. A pompous and magnificent procession is then formed, consisting of the patriarch, attended by a long train of Turkish officials, the Greek clergy, and a vast concourse of people. The patriarch is received at the church door by the principal archbishops, who hold wax tapers in their hands; and the bishop of Heraclea, as chief archbishop, takes him by the hand and conducts him to his throne, and he is then invested with the insignia of his office.

When the patriarch subscribes any ecclesiastical document his title is, "By the mercy of God, archbishop of Constantinople, the new Rome, and ocumenical patriarch." The sultan retains the unmitigated power of deposition, banishment, or execution; and it is needless to add that even the paltry exaction on institution is motive sufficient for the frequent exertion of that power; and it has sometimes happened that the patriarch, on some trifling dispute, has been obliged to purchase his confirmation in office. He possesses the privilege (in name, perhaps, rather than in reality) of nominating his brother patriarchs; and, after their subsequent election by the bishops of their respective patriarchates, of confirming the election; but the barat of the sultan is still necessary to give authority both to themselves and even to every bishop whom they may eventually appoint in the execution of their office. The election of the other patriarchs, as they are farther removed from the centre of oppression, is less restrained, and their deposition less frequent. But this comparative security is attended by little power or consequence; and two at least of the three are believed to number very few subjects who remain faithful to the orthodox Church.

The patriarch of Antioch has two rivals who assume the same title and dignity; the one as the head of the Syrian Jacobite Church, the other as the Maronite patriarch, or head of the Syrian Catholics. The patriarch of Alexandria, who resides generally at Cairo, has also his Coptic rival: and the few who are subject to him are chiefly found in the villages or capital of Lower Egypt. The patriarchs of Antioch and Jerusalem reside usually at Constantinople, and enjoy very slender and precarious revenues. The Russo-Greek Church withdrew from the patriarchate of Constantinople partially in the 17th, and finally in the 18th century. There was then established at Moscow a metropolitan, whose name and authority was finally transformed into that of patriarch. But the emperor Peter the Great eventually abolished the titles altogether. See Russia. Greece
proper has been practically separated from the patriarchate of Constantinople since the independent establishment of the kingdom of Greece (q.v.), but its formal separation took place later.

In the Roman Catholic Church the title of patriarch is now little more than an honorary title. The dress of the five patriarchs of Rome, Constantinople, Antioch, Alexandria, and Jerusalem, ranking next to cardinals, resembles that of cardinals except that the color is purple. In the papal chapel they wear over their soutane and rocheta amices and a purple serge cappa, gathered up with a fold under the left arm, with a white ermine tippet, and when the pope officiates, plain linen mitres and copes of the color of the day. The Greek patriarchs have a lampadouchon, or lighted candlestick, carried before them. In the 12th century the right, hitherto exclusively attached to the pontificate, of having a cross borne before them was conceded to all patriarchs and metropolitans, and granted to all archbishops from the time of Gregory IX. See Bingham, Origines Eccles. bk. ii, ch. xvii, § 12, 19; Morin, De Patriarcharum origine Exerc. iii, etc.; Ziegler, Pragmat. Gesch. der kirchl. Verf.-Formen, p. 164 sq.; Siegel, Chriat. Alterthümer, iii, 288; iv, 195 sq.; Riddle, Christian Antiquities, p. 219, 228 sq.; Neale, Hist. Easter Church (Intro.), ch. i.

**Patriarchs (The Twelve), Testament of.** See Testament.

**Patricians, a Christian sect named by all the early heresiologists as followers of Patricius, of A.D. 410-412, are charged with believing, like all Manichean heretics in after-times, that the devil made man's body altogether; and that therefore a Christian may kill himself to become perfect through separation from his evil body (Augustine, Haeres. c. ixii; Præd. Iustin. Haeres. c. ixii). These tales, though originated with the saints and fathers of the Church, may seem too absurd to be believed in the 19th century, and it is even probable they were founded on haraeyra; yet the recent existence of Muggletonians and Southcottians shows that nothing is too ridiculous to find credit with some people. St. Augustine also classifies the Patricians with Basilides, Carpocrates, Marcion, and other precursors of the Manichees, as repudiating the Holy Scriptures (Contro Adversar. Leg. et Proph. c. xii). Nothing is known of Patricius himself beyond the bare statement of Philaster; and as the heresy of which he is said to be the founder is not mentioned by Ephraimios, Damarisius thinks it probable that it arose after his time, perhaps about A.D. 390. Præd. Iustin. says that the Patricians sprang from the northern parts of Numidia and Mauritania. See Turner's Hist. p. 188, 189.

**Patricius.** See Patricians.

**Patrick, St., one of the most noted of Christian saints, is distinguished as a missionary of the 5th century, and is commonly designated as the Apostle of Ireland. There is much uncertainty as to his personal history, and great difference of opinion regarding his religious sentiments. About his life we know very little, except what is derived from his own writings. He left only two short compositions, his Confession and his Epistle to Coroticus, both of which are well authenticated. Of the former the London Quarterly for April, 1866, says, 'There is now almost a universal agreement in regard to St. Patrick's Confession. Its genuineness is admitted by bishop Usher, Sir James Ware, Spelman, Tillotson, Mabillon, Ducange, Lanigan, and a long list of both Roman Catholics and Protestants. Formerly there was some difference in regard to the place of his birth; at present the best authorities are nearly unanimous in believing that he was born in Armoric Gaul, about A.D. 387.' According to his own account of himself (Conf. 5): 'I had for my father Calphornius, a deacon, the son of Potitus, a presbyter in the Church, who lived in the village of Benavem of Tiberia, near the hamlet of Enon, where I was captured.' In his Epistle to Coroticus, he adds (sect. 5), 'I was born free according to the flesh; I was the son of a father who was a deacon (a Roman magistrate). I sold my nobility for the advantage of this nation. But I am not ashamed, neither do I grieve; I became a servant for Jesus Christ our Lord, so that I am not recognised in my former position.' Elsewhere (Conf. 1) he says, 'I was about sixteen years old; but I knew not the true God, and was led away into captivity to Hibernia, with a great many men according to our deservings.' Uncontroverted tradition says he was bought by Milcho, who lived in Dalvilla, now the county of Antrim. He lived with him six years. His occupation was herding or keeping cattle. His conversion and employment are thus described (Conf. 6): 'My constant business was to keep the flocks; I was frequent in my prayers. The love and fear of God more and more inflamed my heart. My faith and spirit were enlarged; so that I said a hundred prayers in a day, and nearly as many at night. And in the woods and on the mountain I remained, and before the light I arose to my prayers, in the snow, in the frost, and in the rain; and I experienced no evil at all. Nor was I affected with sloth, for the spirit of God was warm in me.' Near the close of the sixth year of his captivity he dreamed that he was soon to return to his parents, and that on the sea-coast he would find a vessel to take him to them. He readily found the vessel, but at first he was very roughly refused a passage. On retiring he began to pray; soon one from the ship came after him, and kindly offered to take him with them. On the third day of their voyage they reached land, but not what land we have no account of, except that in his Confession, which is wholly defective in dates and places, and seems to have been intended merely as an acknowledgment of God's goodness in his deliverance. There is here a hiatus of unknown length in his life; a chasm, however, which his medieval biographers have filled up according to the
liveliness of their fancy, or the supposed credulity of their readers. They wrote of his studying with St. Germain, of his attending a monastery near the Mediterranean, and finally of his going to Rome and receiving instruction from the pope. All these stories, inventions, and were not put forth till more than five hundred years after St. Patrick's death, and all of them are presented without a shadow of proof. They are not worthy the time or the space to disprove them. As for the story by St. Patrick, during this interval time is from himself. Some time during the long interval St. Patrick had a dream. He says (Conf. 10), "I saw in my dream a man coming to me from Ireland, whose name was Victorius, with a great number of letters. He gave me one of them, in the name of my lord, St. Patrick, to this effect : While I was reading this, I thought I heard the voices of the inhabitants who lived near the woods of Flocin crying with one voice, 'We entreat thee, holy youth, that you come here and walk among us.' I was greatly moved in my heart, and could read no more; and then I awoke." This dream, and the several accompanying circumstances, led him to believe that it was a call to Ireland, and about it he was variously exercised, sometimes very happy, again strangely perplexed, till he felt "that the Spirit helped his infirmities." At some time in this interval, he says (Conf. 12), "I was brought down; but it was rather good for me, for from that time, by the help of God, I began to mend, and he prepared me that day for what I should be, which before had been far from me, to wit, that I should have a care and anxiety for the salvation of others. For after this I did not think of myself." Perhaps it was on this occasion that he made the vow to God (Conf. 15) "that he would go and preach to the Gentiles, and that he would never leave them." Afterwards (Conf. 15) he seems to have received some promises of succor, my parents, and the many rewards which had been promised to him, with tears and weeping I displeased them, and some of these were older than myself; but I did not act contrary to my vow (sed gubernante Deo nullo modo consensi nusque acudivi illis, ut ego venirem ad Hiberniam). God directing me, I consented to no one, nor yielded to them, nor what was grateful to myself. God had overcome me, and restored all things. So I went to Ireland, to preach to the Gospel." Thus it would seem that he was sent by no one, but relying wholly on his divine call, without bishop, pope, or council, he went to Ireland. Of the time or events of his passage to Ireland we have no trustworthy account. From tradition and contemporary history it appears that St. Patrick commenced his ministry in Ireland about A.D. 432, when nearly forty-three years of age. His early movements were not noticed. Gildas (A.D. 540) never alludes to him. The venerable Bede (A.D. 731) never mentions his name, but does that of Palladius, his predecessor, and rather tries to attribute the success of St. Patrick to him. There is ample evidence that the early Irish Church was not in repute among the Roman Catholic clergy of the 6th, 7th, and 8th centuries, nor, indeed, fully until the 12th. Then his mediavel biographers, in their legendary tales, write much about his movements generally; they represent the whole nation as immediately bowing to the new religion, so that Ger baldus, in the 12th century, doubted the genuineness of the Irish Church because it had not been founded in blood and persecution. But St. Patrick and the early Irish converts were persecuted, while the common people received the new faith with great readiness; the higher order of the Druids there still existed a secret though smothered opposition to Christianity, which was only kept in check by the masses of the people. St. Patrick writes thus (Conf. 22): "At a certain time they even desired to kill me, but my time had not come. Everything they found with us they seized, and bound myself with fetters; but on the fourteenth day the Lord delivered me, and what was ours they returned. In Conf. 16, he "thanks God who had given grace to his servants" that although they were threatened with terrors, they stood the firmer." Other instances of persecution might be presented. The Irish saint was very taciturn, scarcely ever alluding to his trials, unless to thank God for them. In the establishment of his church, St. Patrick in no instance ever appealed to any foreign Church, pope, or bishop. In his Epistles to Coroticus (sect. 1), he simply announces himself as bishop: "Ego Patricius, indoctus, sciellct, Hiberniense, constitutum episcopum me esse recr: ad Deo accepti, id quod in me est, est. St. Patrick was a bishop constituted in Ireland: what I am I have received from God"). Here is no appeal to any foreign authority; and solely on this authority he superintended the Irish Church for thirty-four years, and while in office he excommunicated the British pirate who had carried off an Irish saint. His recent converts into slavery. These well-authenticated statements of St. Patrick concerning himself are wholly at variance with those of Probus and Jocelyn, who, for the first time, put forth their fabrications full five hundred years later. In relation to his association with St. Germain at Tours, and of his going to Rome for ordination, all these stories were invented in the 10th or 12th century. Jocelyn, who wrote the fullest life of the saint, about A.D. 1130, has, in one sense, really the praise or dispraise of bringing the Irish Church into that of Rome. The abbe, not being embarrassed with facts, dates, or contemporary history, wrote easily and readily, and presented a life of the Irish saint that exactly suited his times, in the beginning of the 12th century. He represented St. Patrick and the early Church in Ireland in the following as exact models of his own in the 12th. This life was readily received and adopted as the only true one by the Roman Catholic Church, and it has been ever since the "storehouse" from which his numerous and papal biographers have drawn their materials. After the publication, and the general reception of this book, there was no hesitation in the full acknowledgment of all the Irish Christians, and of St. Patrick among them. Archbishop Usher, on the Religion of the Early Irish, asks (v, 820): "Who among them [the early Irish] was ever canonized before St. Malachias, or Malachy, at A.D. 1117? The story of St. Patrick seems never to have been sainted till all Ireland was sainted or canonized. From this mere papal acknowledgment the old evangelical Church of St. Patrick rapidly passed through several transformations. St. Malachy went all the way to Rome, and obtained for it the palliium, or papal investures. Lanfranc, archbishop of Canterbury, disregarding the old Irish ministerial line of seven hundred years, ordained several Dano-Irish bishops for the new hierarchy just set up, and in 1167 Henry II of England, by commission from pope Adrian, landed five thousand steel-clad soldiers in Ireland, and, after several sanguinary battles, called, in 1172, a synod at Cashel, to bring the Irish Church to papal conformity. But the old Irish Church was not yet extinct, for in 1170 they held a synod in Armagh, in which they confessed their sins, deprecated the "scourge of God," as they called the English papal soldiers, and liberated all English slaves then held in Ireland. Yet conformity to "papal practices" was very tardy; "Celtic tenacity" predominated in religious as it had in civil matters. The same Brehon laws of Bishop St. Patrick, which held the people in the hills in the 5th century were again, despite the most barbarous penalties of the English, proclaimed on the same hills and in the same language one thousand years afterwards. It has been asked, "Did St. Patrick give the Irish,"
PATRICK, KNIGHTS OF ST.

in whole or in part, a translation of the Scriptures in their own language? To this we reply, there is no positive argument brought to prove that he did; but in his Epistle to Corotiche he "calls upon every family to read it to the people." 4. Can we suppose that St. Patrick and his immediate followers, who founded Iona, "the star of the west," and who were enlightening Central Europe with religion and letters, could have left their own Church and country without some profession of the same doctrine in Ireland. Towards the close of his life, about A.D. 455, St. Patrick in Ireland wrote his Confession in which some call "holy Latin." He directed it (Conf. 6) to his "Gallican brethren, and the many thousand spiritual children whom God had given him." Most probably some copy of this and of his Epistle found their way to the Continent, and finally to some of the monasteries, then almost the only repositories of letters, where it seems to have remained unnoticed for a thousand years. When the Bollandists, in A.D. 1680, began their collections of the writings of the fathers, those of St. Patrick were collected, and thus preserved from extinction. In 1484-60 they were copied into abbé Migné's Patrology, and are in vol. liii of that great work.

According to tradition and contemporary history, St. Patrick died near Armath, March 17, A.D. 466, in the seventy-eighth year of his age. The anniversary of his death has ever been held as a festive day by the Irish, not only on their own green isle, but in every other part of the wide world to which wars and oppression have driven them. The early Irish, like the Asiatic Christians, celebrated the dying day of their saints, rather than, as with us, the day of their birth. He was the honored means of introducing Christianity to a people who, more than any other in proportion to their number, have spread themselves over the globe, and who have always carried their religion with them, whether in its pure and primitive state, or unhappily in its later and vitiated form. St. Patrick's piety was deep and abiding. He would have been a saint in any age or country. He was a man of great meekness; in his government of the Church and his intercourse among men, love and humility were always and everywhere predominant. His religion lifted him above the love of wealth or of worldly honor. Like the prophet Samuel in the Old Testament, he used to appeal to the people, after living with them thirty years: "If in any way I have taken aught from you, tell me, and I will restore you fourfold." He kept his vow to God "never to leave Ireland." During his mission of thirty-four years among them he nearly lost the use of his mother tongue. He was perhaps the most successful missionary of the 6th century. The Roman Catholics have proudly and exclusively claimed St. Patrick, and most Protestants have ignorantly or indifferently allowed their claim, thus giving to error a gratuity which it is difficult to recover. But he was no Romanist. His life and evangelical Church of the 5th century ought to be better known. The familiar story of the expulsion of the reptiles from Ireland by this saint has the signification of many other legends and allegories, and figures the triumph of good over evil. His resting-place at Down, in the province of Ulster, is still venerated by the people, and his remains were preserved many years, but his church at Down was destroyed in the reign of Henry VIII. and such relics of him as remained were scattered either by the soldiers of Elizabeth or by those under Cromwell. When represented as bishop, he wears the usual dress with the mitre, cope, and crozier, which he had, as regarded him with regard. As the apostle of Ireland, he should wear a hooded gown and a leathern girdle. The staff, wall, standard with the cross, and the Gospel are all his proper attributes. A serpent should be placed beneath his feet.

Those who desire all the knowledge so far obtained regarding this noted man and his relation to the Church must consult Potthast, Biblioth. Hist. Med. Atl., p. 840 sq. Of the latest biographies, that by Miss Cusack (1870) gives the Roman Catholic side of the case; that by Todd (Dublin, 1863) the Protestant view. Besides these, consult De Vienne's Hist. of the Irish Priestly Church, together with the Life of St. Patrick (New York, 1870, 12mo), where the authorities on St. Patrick's life, labors, and doctrines are given. See also Todd, Hist. of the Irish Church; Innes, Hist. of the Early English Church; Mrs. Jameson, Legends of Lea, Hist. of St. Patrick's Cathedral; Hill, Hist. of Eng. Monasticism, p. 63, and Append. iii; Maclear, Hist. of Missions in the Middle Ages; Contemp. Rev. Sept. 1868; Westminster Rev. Oct. 1868, p. 249; Brit. Qu. Rev. Oct. 1867, art. 1; Harper's Monthly, Oct. 1871; Friends' Review, iv, 427 sq. (D. D.)

Patrick (St.), Knights of, is the title of the members of an Irish order of knighthood founded by king George III of Great Britain on Feb. 5, 1783, in honor of the great Irish apostle. As originally constituted, the order consisted of the sovereign, the grand-master (who was always the reigning lord-lieutenant of Ireland), and fifteen knights; but in 1833 the number of knights was increased to twenty-two. The order is indicated by the initials "K. P." Their dress is as follows: The collar (of gold) is composed of roses alternating with harps, tied together with a knot of gold, the roses being enamelled alternately white within red, and red within white, and in the centre is an imperial crown surmounting a harp of gold, from which the badge is suspended. The badge or jewel is of gold, and oval; surrounding it is a wreath of shamrock proper on a gold field; within this is a band of sky-blue enamel charged with the motto of the order, "Qua separabis, mediceris," in gold letters, and within this band a saltire gules (the cross of St. Patrick), surmounted by a shamrock or trefoil slipped vert, having on each of its leaves an imperial crown. The field of the cross is either argent or pierced and left open. A sky-blue ribbon, worn over the right shoulder, sustains the badge when the collar is not worn. The star, worn on the left side, differs from the badge only in being circular in place of oval, and in

Badge of the Order of St. Patrick.
substituting for the exterior wreath of shamrocks eight rays of silver, four of which are larger than the other four. The mantle is of rich sky-blue tafetta, lined with white silk, and fastened by a cordon of blue silk and gold with tassels. On the right shoulder is the hood of the same materials as the mantle, and continuances another will signify? For it will, in effect, be to say that I am too good to be lost; but it is no matter if another be. Truly, I do not think myself so considerate to the world: and though my friends set a good price upon me, yet that temptation hath not yet made me of another mind; and I know that the love which makes me pass for more with them than I am worth. When I mention that word, love, I confess it moves me much, and I have a great passion for them, and wish I might live to embrace them once again; but I must not take any undue courses to satisfy this passion, which is but too strong a passion, and reason will lead me to go, and stay with my charge, which I take hitherto to be my duty, whatever come." A little later he writes: "During my confinement with these afflicted people I had many heavenly meditations in my mind, and found the pleasure wherewith they filled the soul was far beyond all the pleasures of the flesh. Nor could I fancy anything that would last so long, nor give me such joy and delight, as those thoughts which I had of the other world, and the taste which God vouchsafed me of it" (Autobiography, p. 52). It is said, further, that, out of a special regard to these people, he refused the archdeaconry of Huntingdon. Having sufficient reasons for dislike to his college at Cambridge, he went to Oxford for his degrees in divinity; and, entering himself of Christ Church, took his doctor's degree there in 1666. He then made chapel at King's College, singing there about the same time. In 1672 he was made prebendary of Westminster, and dean of Peterborough in 1679. In 1680 the lord-chancellor, Finch, offered him the living of St. Martin's in the Fields; but Dr. Patrick refused it, and recommended Dr. Thomas Tenison. In 1682 Dr. Lewis de Moulin, who had been bishop of London, died at Oxford, and had written many bitter books against the Church of England, sent for Patrick upon his sickness, and solemnly declared his regret upon that account, which declaration, being signed, was published after his death. During the reign of James II, Dr. Patrick was one of those champions who defended the Protestant religion against the papists. In the proposed revision of the Liturgy, his special share was the remodelling of the Collects; the process employed for which purpose is described in Birch's Life of Til- lotson, who at that time was archbishop of Canterbury, and was the soul of the commission. In Tilloston's commonplace-book was found a paper in short hand, entitled "Consecrations which will probably be made by the Church of England for the union of Protestants; and the degree of Nicaragua, in which I shall be early in the month of January, where I am to be arrived just in time to see the fleet, Sept. 13, 1682." There were seven heads, which it may not be foreign to our subject to transcribe, as Patrick was one of the most active commissioners: 

1. That the ceremony explained or recommended in the Liturgy as exclusive of the communion be entirely removed.

2. That the Liturgy be carefully reviewed, and such alterations and changes therein made as may supply the defects, and remove, as much as possible, all grounds of exception to any part of it, by leaving out the apocryphal lessons, and correcting the translation of the Psalms, used in the public service, where there is need of it; and in many other particulars.

3. That a new body of ecclesiastical canons be made, particularly with a regard to a more effectual provision for the reformation of manners both in ministers and people.

4. That a new body of ecclesiastical canons be made, particularly with a regard to a more effectual provision for the reformation of manners both in ministers and people.

5. That the clergy of both nations have a more personal con- trol over the magistrates, to guard against any attempt to pervert the law for the advancement of their own party interests.

6. That the clergy of both nations have a more personal control over the magistrates, to guard against any attempt to pervert the law for the advancement of their own party interests.

VII. 20
PATRICK

PATRIOTS IN CHRIST

"T. That for the future none be capable of any ecclesiastical benefice or preferment in the Church of England, theretofore held by bishops, and that those who have been ordained only by prebendaries shall not be compelled to renounce their ordination. But, because many bishops do still doubt of the validity of such ordination, where episcopal ordination is by the law not necessary, it shall be sufficient for such persons to receive ordination from a bishop in this or the like form: If thou art not already ordained, then, in case of necessity, the making of any one's baptism, is appointed by the Liturgy that he be baptized in this form: If thou art not baptized, I baptize thee," etc.

At the Revolution in 1688 great use was made of dean Patrick, who was very active in settling the affairs of the Church: he was called upon to preach before the prince and princess of Orange, and soon after the wars was appointed by the commissioners to give the review of the liturgy. In 1689 he was made bishop of Chester, and employed, with other bishops, to compose the disorders of the Church of Ireland. In 1691 he was translated to the see of Ely, in the room of Turner, who was deprived for his oaths to the government. Here he continued to perform all the offices of a good bishop, as well as a good man, which he had proved himself to be. In his early life he had regarded the Nonconformists with little favor, and had even written against them in a pamphlet entitled A friendly Debate between a Nonconformist and a Conformist, but in his latter years, especially while in the episcopate, he had had occasion to change his opinion. He had even a great share in the comprehension projected by archbishop Sancroft, in order to gain over the Dissenters. This may appear from the strange disaffectedness of a Conformist and a Nonconformist he had opposed such a design, and thereby given great offence to lord chief-justice Hale, who was zealous for it. His notices of the comprehension proceedings, in his autobiographical detail, are meagre, and cast no light upon the subject. The chief particulars are found in Calamy's Life of Baxter, Birch's Life of Tillotson, Burnet's Own Time, and other publications. Says Harris, the biographer of Dr. Manton: "Bishop Patrick, in advanced age, remarked, in a speech in the House of Lords in favour of the 'Conformity Bill,' that 'He had been known to labour against the Dissenters in his younger years, but that he had lived long enough to see reason to alter his opinion of that people, and that way of writing.'" The reason was, probably, his more intimate, and therefore more accurate acquaintance with the nature of the Nonconformists, with whom he was brought into personal contact he was disappointed, not to find violent political partisans, but men who professed the constitutional principles of the Revolution of 1688; men of devout and exemplary life, men who held the doctrinal articles of the Church of England, and lamented that a few things—and only a few—prevented their embracing its communion; for they entertained no opposition as to the utility of national ecclesiastical establishments. Indeed it remains an open question at this day whether Dissent might not have been forever ended in that period of English history had not the Altitudinarians, or Tractarians as we now call them, been so powerful in the Anglican Church. Indeed, we think, had there not been such moderate men as Tillotson and Patrick to alloy the storm which was then raging, it is possible there might have been a renewal of the melancholy scenes of the days of Charles I. Bishop Patrick's services to the English Church, and the English people as well, cannot, then, be too highly prized. He died at Ely May 31, 1707, and was interred in that city, a monument of which is erected to his memory. Bishop Patrick was one of the most learned men as well as best writers of his time. He published many and various works: some of the devotional kind, many Sermons, Tracts against Popery, and Paraphrases and Commentaries upon the Holy Scriptures. These last are excellent in their way, and perhaps the most useful of any ever written in the English language. They were published at various times, but as this preface did not proceed beyond the Song of Solomon, the commentators, and Paraphrases, so as to render their service generally added to complete the work. In this enlarged or completed form it is published, entitled A Critical Commentary and Paraphrase on the Old and New Testament and the Apocalypse, by Patrick, Lowth, Arnald, Whitby, and Lowman; corrected by the Rev. J. R. M'Padian (London, 1822, 6 vols. 4to)." The historical and poetical books of the Old Testament are by Bp. Patrick; the Prophets, by W. Lowth; the Apocalypses, by Arnald; the New Testament (with the exception of the Revelation), by Whitby; the Revelation, by Lowman. There is a new edition, with the text printed at large (not formerly given), 4 vols. Imp. 8vo, 1853, and other dates. There are various editions in folio, which are esteemed for the large type with which they are printed; but none of them contain Lowman, and but few copies contain Arnald. In that size the work is in auction without, in the Colony. Arnald, which makes a seventh when added. An edition of all Bp. Patrick's works was brought out in 1858 by the Rev. Alexander Taylor, A.M. (Oxf. 9 vols. 8vo). His Autobiography was published at Oxford in 1839. A list of all his writings is given by Darling, Obit. Oxonienses, ed. 2d, 1797, p. 104; and Gifford's History of Eledand, 1658-1717, p. 30, 81, 208, 380; Perry, Hist. of the Ch. of England, ii, 397; iii, 82; Stoughton, Eccles. Hist. of England, i, 388; ii, 140, 584; Christian Observer, Nov. 1848, art. 1.

Patri Dei (Lat. pater, "father," and Dai, "gods"), a name applied in heathen times to the gods from whom tribes were believed to be sprung, or to gods worshiped by their ancestors. Sometimes the name was given to the spirits of their deceased ancestors. Among the ancient Romans the term was sometimes used to denote the Furies or Eumenides.

Patrini and Matrini are names applied among the ancient Romans to children whose parents had been married according to the religious ceremony called Confarreatio. These were generally considered as more suitable for the service of the gods than the children of other marriages.

Patrimony is the term anciently given to Church estates or revenues. Thus we find mentioned, in the letters of St. Gregory, not only the patrimony of the Roman Church, but those likewise of the churches of Rimini, Milan, and Ravenna. This name, therefore, does not peculiarly signify any foreign dominion or jurisdiction belonging to the Roman Church or the pope. Churches, in cities whose inhabitants were but of foreign and estates left to them out of their own district; but those in imperial cities, such as Rome, Ravenna, and Milan, where senators and persons of the first rank inhabited, were endowed with estates in divers parts of the world. St. Gregory mentions the Church of Ravenna, in Sicily, and another of the Church of Milan, in that kingdom. The Roman Church had patrimonies in France, Africa, Sicily, in the Cottian Alps, and in many other countries. The same St. Gregory had a lawsuit with the bishop of Ravenna for the patrimonies of the two churches, which after was decided by an apostolic sentence.

Patriots in Christ, an appellation given to certain Wurttemberg Separatists, originated by the abbe Gregoire, who appeared in 1801, during the rising popularty of Bonaparte, and maintained that he was the second true Messiah, who was to destroy the spiritual Babylon, and to organize the people of God into themselves into an order of knighthood, called the Knights of Napoleon, but as the ambitious personage on whom their expectations rested made no pretensions to the dignity which they had marked out for him, they met with no encouragement, and speedily fell into oblivion.
PATRIARCHS 779

PATRISTICS

Patrissians (from Patrun Pason, *a suffering Father*), a title given by their opponents to those Christians who deny the distinct personality of the Father, Son, and Holy Ghost. The first to whom it was applied were the followers of Praxeas, against whom Tertullian published, about the year 200, one of his celebrated treatises, *De Corona*, and whom he condemned as a Rome, and exhorted himself there with great effect against the Montanists, whom the Roman bishop was almost on the point of admitting into the communion of the Church. His peculiar views on the Trinity were overlooked at the time. But Tertullian was afterwards a Montanist, and had a double motive for attacking Praxeas and his followers. His treatise is our chief authority for the opinions they held, but there is some obscurity about it. From some passages it would appear that Praxeas admitted no distinctions in the Godhead previous to the appearing of God in the person of Christ. From others it rather seems that he supposed him to have manifested himself as the Son under the old dispensation. But there can be no doubt that Praxeas believed, as the Sabellians did after him, that Father, Son, and Holy Ghost were merely names for the different modes under which one and the same person operated or was manifest. Tertullian argued that if this view was carried out to its legitimate consequences, it must be admitted that the Father was born of the Virgin Mary, and suffered on the cross. See also Hierominian; Nuptum; Sabellian; and Sabellius. The followers of Praxeas were also called Monarchians, because of their denying a plurality of persons in the Deity; and Patripassians, because they believed that the Father was so intimately united with the man Christ, his Son, that he suffered with him the anguish of an afflicted life, and the torments of an ignominious death. It does not appear that this sect set forth its own separate place of worship, or removed from the ordinary assemblies of Christians. See Néander, *Hist. of Dogmas* (see Index); *Planning and Training*, vol. ii. Milman, *Hist. of Latin Christianity*, i, 73; Alzog, *Historical Growth*, i, 19; Schaff, *Church Hist.* vol. i; Liddon, *Divinity of Christ* (see Index); Haag, *Hist. des Logos*; Hagenbach, *Hist. of Doctrines* (see Index in vol. ii).

Patristics is a department of ecclesiastical history, and more particularly of doctrinal history. It is an account of the lives, writings, and theological opinions of the Christian authors of the ancient Graeco-Latin Church before the separation into two antagonistic local churches. Sometimes ecclesiastical historians have defined that Patrology is defined to be biographical and literary, Patristics doctrinal and ethical. A complete work must cover both. There is a difference of opinion concerning the precise boundaries. Patristics begins with the apostolic fathers, and closes with Gregory I in the West, and with John of Damascus in the East. John of Damascus cannot be omitted, since he is the last authoritative divine of the Greek Church who sums up the labors of the earlier Greek fathers. But it is improper to carry patristics down to the Middle Ages, so as to comprehend Anselm, Peter the Lombard, Thomas Aquinas, and other schoolmen. It must be strictly confined to the fathers, i.e. to those writers who produced the Catholic dogmas, as distinguished from the schoolmen who digested, analyzed, and systematized these dogmas. The title *father, Church father* (*patrius ecclesiae* corresponding to the Heb. *Nasi*), is relative. Every Church has its fathers and founders. But it is usually applied to those divines of the early Christian centuries who excelled in learning, judgment, piety, and orthodoxy. Some of them were not only the heads of the school (e.g. Justin Martyr, Irenæus, Tertullian), but also the most celebrated divines and saints of the Church (*sacri patres*). In a wider sense it is extended to other ecclesiastical writers of merit and distinction. The line of the Greek fathers is usually closed with John of Damascus (d. 754), the line of the Latin fathers with Gregory I (d. 604). The Roman Church makes a distinction between *pater ecclesiae, doctor ecclesiae*, and *actor ecclesiasticus*. (1.) *Pater ecclesiae* are all ancient teachers who combine *aphorisms, doctrina orthodoxa, sanctitas vitae*, and *anagogia*, which make the most eminent class. These requisites, however, are only imperfectly combined even in the most eminent of the fathers; some excelled in learning (Origen, Jerome), some in piety (Polycarp), some in orthodoxy (Irenæus, Athanasius, Leo I), some in vigor and depth (Tertullian, Augustine), some in eloquence (Chrysostom), but none could stand the test of Roman orthodoxy of the Tridentine or Vatican stamp, and many of them would have to be condemned as heretics. This is especially the case with the fathers of the ante-Nicene age (see Schaff, *Church Hist.* i, 450). (2.) *Actor ecclesiasticus* were the most authoritative of the Church fathers, who, in addition to the above requisites, excelled in learning (*eminent erudito*), and have the express approbation of the Church (*expressa ecclesiae declarato*). The recognised Greek Church doctors are: Athanasius, Basil the Great, Gregory the Great, Chrysostom, and John of Damascus. The Latin Church doctors are: Ambrose, Augustine, Jerome, Leo the Great, Gregory the Great, also Hilary of Poitiers, to whom are added the leading medieval divine, Bernard of Clairvaux, Peter Lombard, Thomas Aquinas, and many modern divines, Bellarmine, Bosseut, and Perrone would deserve a place among the doctors of the Roman Catholic Church. (3.) *Actor ecclesiasticus* those ancient Christian writers who are less important for didactic theology, or held questionable or heterodox opinions, as Tertullian, Clement of Alexandria, Origen, Eusebius, Arnobius, Lactantius, Theodoret.

Patristics may be divided into three periods: (1) The Apostolic fathers, i.e. the immediate disciples of the apostles, who flourished at the end of the 1st and the beginning of the 2d century, and represent a faint echo of the age of inspiration. These are Clement of Rome, Polycarp, Ignatius (and Pseudo-Ignatius), Pseudo-Barnabas, Papias, Hermas, and the anonymous author of the beautiful Epistle to Diognetus. Important literary discoveries, which throw some light on doubtful questions of the sub-apostolic age, have recently been made, viz. the Syriac Ignatius, the Greek Hermas, the Greek of the first five chapters of Barnabas, and a new MS. of the Clementine Epistles, edited by Bryennios (1876). The best edition, now in course of publication, is *Patrium Apostolicorum Opera* (ed. P. Sabatier, Ad. Hare, and H. Erard, 5 vols. 1875). (2.) The Nicene fathers, i.e. the apologists and theologians of the 2d and 3d centuries, who were chiefly engaged in the defence of Christianity against Jews and Gentiles, and the refutation of the Eutychian and Gnostic heresies (see Otto, *Corpus Apologetorum Christianorum* [2d ed. Leips. 1876 sq.]; and the Anti-Nicene Library published by Clark [Edinb. 1867-72, 25 vols.]). (a) Greek fathers: Justin Martyr (d. 168), Irenæus (d. 202), Hippolytus (d. 236), Clement of Alexandria (d. 220), Origen (d. 254), and others of less importance. Of these Irenæus is the soundest divine, Origen the greatest scholastic. (b) Latin fathers: Tertullian (d. about 220), Cyprian (d. 258), Minucius Felix, Arnobius. (3.) The Nicene fathers of the 4th century, who chiefly developed and defended the doctrines of the Trinity and Incarnation in the Arian conflict from 318 to 339. (c) The Nicene fathers of the 5th century, who preserved the doctrines of the Trinity and Incarnation in the Pelagian controversy from 417 to 431. (4.) Latin fathers: Tertullian (d. 220), Cyprian (d. 258), Minucius Felix, Arnobius. (5.) The Nicene fathers of the 4th century, who chiefly developed and defended the doctrines of the Trinity and Incarnation in the Arian conflict from 318 to 339. (6.) Latin fathers: Hilary of Poitiers (*"the Athanasius of the West," d. 388). Ambrose of Milan (d. 397). (4.) The post-Nicene fathers, who developed the orthodox
CHRISTOLOGY AND THE FUNDAMENTAL DOCTRINES OF CHRISTIAN ANTHOLOGY AND APOLOGY. 

(a) Greek Church: 

Cyril of Alexandria (d. 444), Theodoret (d. 453), John of Damascus (d. about 750). 

(b) Latin Church: 

Jerome (d. 420), Augustine (d. 430), Leo the Great (d. 460), Gregory the Great (d. 604). 

LITERATURE—Patristics began with the work of Jerome (d. 420), De viris illustribus s. de scriptoribus ecclesiasticis, which contains biographical sketches of the most eminent Christian authors down to the 6th cent. 

It was continued by Gennadius (490), Isidore of Spain, and other medieval writers. Since the Reformation this study was especially cultivated by Roman Catholic scholars, as Bellarmine, Oudin, Du Pin, C. Nourry, Tillemont, Cellier, Lumper, Sprenger, Möllner, Fessler, Alzog; and by some Anglicans like Cave, Pearson, Fell, and the Tractarian school. The Germans have cultivated the biographical and critical department, and furnished a number of valuable patristic monographs, as Terrullian and Chrysostom by Neander, Origen by Thomasius and Redepenning, Gregory of Nazianzum by Ullmann, Jerome by Zöchler, Augustine by Bindemann. The best editions of the fathers are the Benedictine, as far as they go, and the most complete and convenient (though by no means the most critical) is Migne's Patrologia Latina completa s. Bibliotheca Universalis . . . omnium SS. Patrum, Doctorum Sanctorum, Theologorum . . . 119 vol. 

Patrology is the ecclesiastical literature from the apostolic fathers down to the age of Innocent III (Paris, 1844 sq.). 

A critical edition of the Latin fathers was begun under the auspices of the Academy of Vienna (1860), and embraces so far Sulpicius Severus, Minucius Felix, and Cyprian. Of modern works on patrology, the principal are: Möllner, Patrologie (ed. Reithmayr, Regensburg, 1850, only 1 vol. to close of 300); Fessler, Institutiones Patrum. (Osnob. 1850, 2 vols., to Gregory the Great); Alzog, Grundriss d' r Patrologie (2d ed. Freiburg, 1859). 

A Critical History of Christian Literature and Doctrine from the Death of the Apostles to the Nicene Council (Lon. 1864-66, 8 vols.). 

A biographical dictionary of the first ten centuries, under the editorship of William Smith, has been published in London as a sequel to the Dictionary of Christian Antiquities, of which the first volume was issued in 1875.See FATHERS OF THE CHURCH; PATROLOGY. (P. S.)

Patriarch, CONSTANTIN, a modern Italian prelate, the intimate companion of pope Pius IX, and cardinal-vicar, was born in Rome, Sept. 17, 1796. He was the son of a noble family, and was intended for military service, but being of a serious turn of mind he preferred the service of the Church, and in her ranks rapidly rose to places of responsibility and influence. In 1834 he was honored with the dignity of cardinal, and two years later was created a cardinal. Five years after this he was made the vicar-general of his holiness the pope, whom he served most faithfully his life long. 

Patriarch had been instrumental in the election of Pius IX, and became the most devoted, laborious, and perhaps important official, after Antonelli, in this pontificate. He was, however, the declared foe of the Jesuits, and in these latter years, when the Jesuits rule with high hand at Rome, Patriarch has had but little to say that was not carefully weighed, lest it were intended in injury to the Society of Jesus. But the pope knew if never wavered in his affection for Patriarch. Pius IX knew him to be an honest man whose counsels were worth heeding, and to the last esteemed his friend the vicar-general. 

Patriarch died Dec. 17, 1876. Besides the offices above referred to, he was bishop of Porto and Rinfusin, prefect of the Congregation of the Episcopal Residence, prefect of the Congregation of Religion, archbishop of the Maria Major, and, besides, dean of the Sacred College. His last years were embittered by the presence of a Methodist church just across the way from his vicarial palace. A few days before his death a mutual friend informed the pope that Patriarch avowed his "illness afflicted him only for two reasons: because it prevented his saying mass and seeing his holiness."

Pius IX, greatly moved by this declaration, resolved to break his villa on his improvement to afford him the benefit of his best friend. He gave orders accordingly, but his physicians effectively interfered, and Patriarch was denied this last favor.

Patriarch, probably for Patriarch, life of his father, see Wolf, Cure, ad loc., a Christian at Rome to whom Paul sent his salutation (Rom. xvi, 14). A.D. 55. According to late and uncertain traditions, he was the son of the Seventy disciples, became bishop of Puteoli (Pseudo-Hippolytus, De Sept. Apostoli), and suffered martyred together with Philologus on November 4 (Estius). Accordingly the Roman martyrology assigns that day as his anniversary. Like many other names mentioned by Quintus, to obtain restitution by at least one member of the emperor's household (Sueton. Galba, 20; Martial, Ep. ii, 32, 3).

Patriarch is a name for the festival annually observed by the Romanists to commemorate those saints under whose protection a church has been built or founded. See PATRON.

Patriarch, a frequent Greek name since the time of Homer), the father of Nicanor, the famous adversary of Judas Maccabaeus (2 Macc. viii, 3).

Patriarch of Arles, a French Roman Catholic prelate, lived in the early part of the 5th century as bishop of the diocese from which he is named. A dispute of long standing then existed between the bishops of Arles and Vienne with regard to metropolitan jurisdiction. The question was brought before a council at Turin in the year 401, when it was decided, for the sake of peace, that the dignity of metropolitan should belong to that prelate who could prove his see to be the civil capital of the province; and that meanwhile each should execute the office in the dioceses nearest to his own. The strife was thus suspended for the time; but in 417 Patriarch addressed himself to pope Zosimus, to obtain restitution of the rights which he maintained to be originally inherent in his see; and that pontiff, probably without sufficient examination, granted his request. He wrote to the bishops of Gaul, directing that the bishop of Arles should exercise metropolitan jurisdiction over these provinces, Vienne, and Prima and Secunda Narbonensis; that he should preside at the consecration of their bishops; that all clergy travelling abroad should obtain from him littera formati, or commendatory letters; and that he should decide ecclesiastical causes, with the exception of those which were too important to be resolved to the cognizance of the pope himself. These distinctions he declared to rest upon the apostolic foundation of the see; Trophimus having been despatched from Rome to be the first bishop of Arles, and the Christian faith having been diffused in that original source throughout Gaul. See Jarvis, Hist. of Ch. of France, i, 6 sq.; Riddle, Hist. of the Popes.

Patriology, a term which properly applies to the doctrinal and ethical systems found in the writings of the Christian Church fathers; while Patristics strictly relates to their life, history, and literary character. The two words, however, are generally used interchangeably. The writings of the ante-Nicene fathers are remarkable for their deference to the teaching of the Scriptures. Their doctrines and exhortations are based upon the New Testament, and fortified by citations from the Gospels and Epistles. This peculiarity aids one in determining how far the New Testament was the direct authority of these Fathers. Great has been the argument that this approach had then been made towards the settlement of the canon. The ante-Nicene fathers agree in their testimony to the reformation wrought by Christianity in private morals and in public manners. Thus Tertullian, in his Apology, boldly challenges the enemies of Christians to point out any evil in their lives that
can be fairly ascribed to their religion, and refers with exultation to their domestic purity, their integrity in business, their sobriety and order, and their abounding charities, as fruits of the Gospel. Nor are there wanting in the sound of the ancient spirit of philosophy and of oration which in their successors shaped the doctrinal gems of the New Testament into elaborate systems of theology, varying according to the influence of Plato and of Aristotle upon the thought of the age, though in general one finds the same strain of cultural and religious truth that belongs to one and to another era. But though we may not look to the early fathers for classic elegance of style or the perfection of rhetorical art, one is charmed with their simple fervor, with their earnestness of purpose, with their unfailing devotion to the cause they had espoused; and something of roughness, even of violence, may be pardoned in men who lived in stormy times, and spoke and wrote in view of the torture, the block, the arena. We owe to them a living picture of Christianity as a working power in the world and society at the beginning of its triumphs. See PATRISTIC.

Patron (Lat. *patronus*, from *pater*, "father")

Among the Romans originally signified a citizen who had dependents that under the name of *clients* were attached to him. Before the time of the Laws of the Twelve Tables the most frequent use of the term *patronus* was in opposition to *liber*, these two words being used to signify persons who stood to one another in the relation of master and manumitted slave. The Roman was not denuded of all right in his slave when he freed him; a tie remained somewhat like that of parent and child, and the law recognized important obligations on the part of the *liber* towards his patron, the neglect of which involved severe punishment. In some cases the patron could claim a right to the whole or part of the property of his freedman. The ornament and support of a patron part from the manumittes of slaves continued to exist. A Roman citizen, desirous of a protector, might attach himself to a patron, whose client he thenceforward became; and distinguished Romans were sometimes patrons of dependent states or cities, particularly where they had been the means of bringing them into subjection. Thus the Marcelli were patrons of the Sicilians, because Claudius Marcellus had conquered Syracuse and Sicily. The patron was the guardian of his client's interest, public and private; as his legal adviser, he vindicated his rights before the courts of law. The client was bound, on numerous occasions, to assist the patron with money, by paying the costs of his suits, contributing to the marriage portions of his daughters, and defraying in part the expenses incurred in the discharge of public functions. Patron and client were under an obligation never to accuse one another; to violate this law amounted to the crime of treason, and any one was at liberty to slay the offender with impunity. One obvious effect of the institution of *clientes* was the introduction of an element of union between classes of citizens who were otherwise continuous in opposition to each other. As the patron was in the habit of appearing in support of his clients in courts of justice, the word *patronus* acquired, in course of time, the signification of advocate, or legal adviser and defender. The client being the party defended; hence the modern relation between counsel and client. Patron, in time, came to be a common designation of every protector or powerful promoter of the interests of another; thus also the saints, who were believed to watch over particular interests of persons, places, trades, etc., acquired in the Middle Ages the designation of patron saints. These patron saints of professions, trades, conditions, and callings were called, in Church language, *defensores*. Several such are closely connected by a sort of pantheon (as St. Clair, of lamp-lighters; St. Cloud, of the tailors; and St. Blanche, or Blanchard, of landdressers), or are derived from some incident in their life (as St. Peter, of fishmongers) or in their legend (as St. Dunstan, of goldsmiths; St. Sebastian, of archers; St. Blaise, of comb-makers; St. Lawrence of carpenters and cooks; St. Hubert and Eustace, of huntsmen; St. Cecilia, of musicians; St. Catharine, of philosophers). Some preside over different trades, as St. Eloi, patron of hangmen, coachmen, timmers, nail and shoeing smiths, and metal workers; St. George, of soldiers, clothiers, and horsemen; St. Anne, of grooms, toymen, turners, and comb-makers; St. Michael, of fencing-masters and pastry-cooks; St. John at the Latin Gate, of printers; attorneys, and paper-makers; IV Coronati, of masons and builders; SS. Cosmas and Damian, of physicians and surgeons; SS. Crispin and Crispinian, of cordwainers and embroiderers; St. Nicholas, of butchers, scholars, seamen, and thieves; St. Vincent, of vine dressers and vinegar-makers.

We append a list of patron saints, as popularly understood:

Artillery, and engineers and mechanics, and married women, St. Barbara.
Bakers, SS. Wilfred and Honorius.
Basketmakers, St. Anthony.
Blind men, St. Thomas a Becket.
Bookbinders, the Ascension.
Book-sellers, St. John the Evangelist.
Boys, St. Gregory.
Brewers, SS. Honorius and Clement.
Brokers, St. Francis.
Builders, SS. Coronati, Severus, Severiana, Carphophorus, and Victor.
Butchers, SS. Anthony the Abbot and Francis.
Carpenters, SS. Joseph and Andrew.
Carriers, SS. Simon and Jude.
Chandlers, the Purification (Candiasma). 
Charcoal-burners, St. Anthony.
Children, the Holy Innocents, St. Felicita.
Chimney-sweeps, St. Anthony of Padua.
Common women, SS. Bride and Afra.
Confectioners, the Purification.
Coopers, SS. Mary Magdalen and Hilary.
Carpenters, SS. Crispin and Crispinian.
Carriers, SS. Simon and Jude.
Divines, St. Thomas Aquinas.
Drapers, SS. Blaise and Leodegar.
Drummers, SS. Martin and Urban.
Falconers, St. Tibur.
Ferrymen, St. Christopher.
Foole, St. Mathurin.
Fellows, St. Severus.
Gardeners, SS. Urban of Langes and Faure.
Girls, St. Catharine.
Gladiators, St. James of Germany.
Grave-diggers, millers, St. Anthony.
Grocers, the Purification, St. Anthony.
Grostiers, the Purification, St. Anthony.
Hatters, SS. James and William.
Horse-dealers, St. Lucy.
Hotel-keepers, St. Thiodotos.
Jockeys, St. Eligius.
Labours, SS. Vian and Idaire.
Lawyers, St. Ives.
Locksmiths, St. Peter-aux-Liens.
Lovers, St. Valentine.
Master-hoemakers, St. Martin.
Matmakers, the Nativity.
Meechers, St. Florin.
Milkers, SS. Martin and Arnold.
Mowers and reapers, St. Walstan.
Nurses, St. Agatha.
Paviers, St. Roche.
Peasants, St. Luci.
Physicians, St. Paulinum.
Pilgrims, St. Julian.
Plummers, St. Sebastian.
Plasterers, IV Coronati.
Ploughmen, St. Urban.
Potters, St. Gore.
Saddlers, St. Girard.
Seamen and fishersmen, SS. Nicholas, Diams, Christopher, and Elmo.
Shepherds, SS. Neomaye, Drugo, and Wendolin.
Spinners, St. Catharine.
Squarers, the Nativity.
Students and scholars, SS. Jerome, Lawrence, Mathurin, Mary Magdalen, Catharine, Gregory the Great, Ereulia.
Tailors, St. John Baptist, Simon, and Anne.
Tanners, SS. Simon, Jude, and Clement.
Taverners, St. Lawrence.
Theologians, SS. Augustine and Thomas Aquinas. Thieves, St. Dismas. Travellers, St. Julian. Virgins, St. Winifred. Weber, St. John Huss and Lidzibbe. Weavers, St. Stephen. Woolcombers, SS. Blaise and Mary Magdalene. The saint in whose name a church is founded is considered its patron saint. But the dedication of a church often commemorates the patron of the staple trade of the vicinity.

Patrons in Diseases, etc.:
St. Agatha presided over fire and valleys; St. Barbara, over St. Florian, over relics; St. Anne, over riches; St. Oryth, over house-keys; St. Sylvester, over woods; St. Vincent and St. Anne, over lost goods; St. Urban, over crows; St. Lucy, over pears; St. Gall, St. Leodegar, or St. Ferrell, over geese; St. Leonard, over ducks; St. German, over hen-rots; St. Gertrude, over eggs; St. Magnus, over locusts; St. Pelagius, over oxen; St. Martin, over sheep. St. Barbara took care that none died without the viaticum. St. Judocis preserved from milkew; St. Magnus, from sudden death. St. Leonard broke prison chains. St. Orilla watched over the head; St. Blaise, over the neck; St. Pancras, at the chest; St. Catherine, the tongue; St. Lawrence, the back; St. Burght, the lower members. St. Roch cured away splittings. St. Roche cured pestilence; St. Apollonia, toothache; St. Orilla, healed eyes; St. Entropius, dropsy; St. Chicere, eye-complaints; St. Wenceslaus, over palsy; St. Valentine, the falling sickness; St. Esmunse, the colic; St. Blaise, the quinsy; St. John, inborn; St. Pernel, the ague; St. Virgine, over leprosy; St. Lawrence, rheumatism; St. Wilford and Uncumber, bad husbands. St. Susanna helped in infancy; St. Florian, in fire.

Patrons of Countries, Cities, and Towns:

Many cities and towns bear the name of their principal saint, to whom the principal church is dedicated, as St. Peter, St. Sebastian, St. Malo, St. Omer, St. Quentin, St. Die, Peterborough, Bury St. Edmund's, St. David's, St. Asaph, St. Alban's, Boston (St. Botolph's town), Kircudbright (St. Cuthbert's Church), Malmesbury (Maiden's town), St. Neot's, St. Ive's, St. Bede's, St. German's, St. Marychurch, St. Andrew's, etc. Other special saints: St. Fredwode, of Oxford; St. Sebald, of Nuremberg; St. Giles, of Edinburgh; St. Peter and Paul, of Rome; St. Mark, of Venice; St. Stephen, of Vienna; St. Genevieve, of Paris; St. Januarius, of Naples; St. Nicholas, of Abbeville; St. Brussel, of Brussels; St. Anthony, of Padua; St. Antwerp; St. George, of Genoa; St. Ursula, of Cologne; St. Bavon, of Ghent; St. Ambrose, of Milan; St. Vincent, of Lisbon; St. Boniface, of Ments; St. Domiatian, of Bré; St. Romuald, of Mechlin, etc.

The term patron has also been applied to those who endowed or supported churches and convents. See Patronage, Ecclesiastical. Patronage, Ecclesiastical, is a term for the right of presenting a fit person to a vacant ecclesiastical benefice. See Patron. In the early period of Christian history, when the see of bishops was secularized, benefices were granted to secular priests, who, when the new dioceses were adopted were parcelled out into large districts or provinces, under the superintendence of a bishop, who usually resided in the neighborhood of one of the religious houses. Within such district the bishop had the nomination of the priests, who supplied religious instruction to the people. The priests were paid out of the episcopal treasury, and travelled about in the exercise of their duties, having their residence with the bishop, and forming that episcopici clerus which constituted the notion of cathedral churches and monasteries in the beginning. Occasionally a bishop endowed a church in his diocese, and built it, and appointed to it a priest, and regarded it as his, and kept it permanently to it; and in Gaul, in the 5th century, a bishop who founded a church in a neighboring diocese was allowed to appoint an incumbent of his choice. As Christianity became more universal, and the population increased, the means of worship supplied by the bishops, the monasteries, and occasional episcopally endowed churches, became inadequate for the demands of the people, and the proprietors of lands began to build and endow churches in their own possessions. In such cases the chaplain or priest was not paid by the bishop, but was allowed to receive for his maintenance, and for the use of his church, the whole or a part of the profits of the lands with which the founder had endowed it, and the offerings of those who frequented the church for worship. A district was defined by the founder, within which the functions of the officiating priest were to be exercised; and both the burden and the advantages of his ministry were limited to the inhabitants of that district. As these pious foundations tended both to the advancement of religion and to the relief of the episcopal treasury, they were encouraged by the bishops, and the conscientious and zealous founders thus established, and consented that the incumbent should be resident at the church, and receive the tithes and offerings of the inhabitants and what endowment the founder had annexed to the church. Eventually it came to pass that the churches so endowed with the money of the founder and his heirs should have a share in the administration of the property, and have the right to nominate a person in holy orders to be the officiating minister whenever a vacancy occurred. It also became a not unusual arrangement that when owners of estates rebuilt such churches as were dependent on the cathedral, or undertook to pay the incumbent, to the relief of the cathedral, the right of presentation was transferred from the bishop to these persons, who thenceforward stood in the same relation to these churches as if they had been the original founders. Out of these private endowments arose the peculiar divisions of a later time, which thus owe their origin rather to accidental and private donation than to any legislative scheme for the ecclesiastical subdivision of the country. The bounds of a parish (q.v.) were at first defined with the church, and the lord of the manor was the hereditary patron. The person enjoying the privileges of a founder was called patronus and advocatus. He had a pre-eminent seat and a burial-place in the church; he enjoyed a precedence among the clergy in processions; his name and arms were engraved on the church and on the...
church bells, and he was specially named in the public prayers. He had the right to a certain portion of the Church funds, called patronomy, and enjoyed the fruits of the benefice during a vacancy. In the course of time it sometimes happened that, with the concurrence of the patron, the church with its revenues and appurtenances, were made over to a religious house, which thus became both patron and perpetual incumbent of the parish, while the immediate duties of the cure were devolved on a vicar or stipendiary curate. In France the right of patronage was often extended to churches not originally private foundations by the necessities of the sovereigns, which led them to take possession of Church property, and bestow it in fee on laymen, who appropriated the greater part of the revenues, and took the appointment of the clergy into their own hands. For a length of time not merely the nomination but the investiture of the clergy came to be exercised by lay patrons, a state of things which roused the indignation of successive popes and councils; until it was at last ruled by the third and fourth Lateran councils (A.D. 1179 and 1215) that the presentation of the patron should not of itself suffice to confer any ecclesiastical benefice, even when qualified by the discretionary power of rejection given to the bishop, when the presentee was a layman. It was declared necessary that the presentee should not merely have the temporalities of the benefice, but should be imbued by the rights of the patron as well be invested with the spiritualities by institution. When the bishop was patron of the benefice, the ceremonies of induction and institution were united in that of collation.

With the growth of the papal power, however, a practice arose by which the right of presentation or induction, which had nominally been left to the patrons, became in some degree nugatory. Towards the close of the 12th century, letters of request, called mandates or expectations, were begun to be issued by the popes to patrons, praying that benefices should be bestowed on particular persons. What had at first been requested as a favor was soon demanded as a right, and a code of rules was laid down with regard to grants and revocations of expectations. In the 13th century the patronage of all livings whose incumbents had died at the seat of Rome (sacrami in curiâ) was claimed by the pope; and as ecclesiastics of all ranks from every part of Europe frequently visited Rome, the number of benefices sacrami in curiâ was always very great. Clement V went so far as to declare that the right of appointment to the full enjoyment of all ecclesiastical benefices. The practice next arose of the pope making reversionary grants, called provisi, of benefices, during the lifetime of the incumbent, and reserving what benefices he thought fit for his private patronage. By means of permissions to hold benefices in commendam, and dispensations for non-residence and holding of pluralities, upwards of fifty benefices were often held by one person; and throughout all Europe the principal benefices were filled by Italian priests, nominees of the popes, who were often ignorant of those whom they ministered. In the 14th century these claims encountered much opposition. England took the lead in an organized resistance, which was in the end successful. A series of English statutes was passed, beginning with the Statute of Provisions, 25 Edw. II, 6, 8, 15, 54, 4 th February 1259. These established ecclesiastical patronage, and subjecting to severe penalties all persons who should attempt to enforce the authority of papal provisions in England. The principles adopted by the third and fourth Lateran councils have since been substantially the law of patronage in Roman Catholic countries. A lay patron is, by the canon law, bound to exercise his right of presentation within four, and an ecclesiastical patron within six months, failing which the right to present accrues jure de solito to the bishop of the diocese. Patronage has always been more or less subject to alienation, transmission, and the changes incident to other kinds of property. The modern practice of patronage in the Roman Catholic Church is detailed under the head of College.

In England, where the modified canon law, which was in use before the Reformation, is still in force, the right of patrons do not materially differ from those which they possess in Roman Catholic countries. When, in the reign of Henry VIII, the monasteries were abolished and their Church property confiscated, it passed into the hands of the friends and supporters of the king, and so has descended to laymen to the present time. In England the lay patrons were greatly increased in number, and in many cases the titles and other income which before belonged to the Church, and went to the support of its incumbent, passed directly into the hands of laymen. At the present time there is no common law governing the various parishes, but the financial government of each one depends largely upon its historical foundation. In some cases the patron has simply the right to present a candidate for the office of parson, who, when approved, receives all the income of the parish, and who in such case is called rector (q. v.). In some cases a portion of the income belongs to the patron, while a portion is set apart to the incumbent, who in that case is called vicar (q. v.). In other cases the patron is dependent on the will of the patron for his salary, in which case he is called curate (q. v.). The ecclesiastical living or prebend is called a benefice (q. v.), and the patron's right of presentation an advowson (q. v.). The service of patrons has begun of late years some earnest agitation in the Church of England to get rid of patronage altogether; and the evils of a system which places the appointment of the clergy in the hands of laymen, who are often indifferent to the spiritual interests of the Church, are conceded by all parties. But the vested rights are so immense, and the system is so incorporated into the whole organization of the Established Church, that for the abuses of patronage no adequate remedy has yet been discovered; and it is hardly too much to say that there is no radical remedy except in the abolition of the Church Establishment, and the substitution of the voluntary system of Church support as maintained in the United States. In order to prevent the transfer of patronage from the laity to the episcopal dignitaries of the Church of England, some of its laity formed themselves in 1875 into an association, The Church of England Clergy Association, "the object of which is to counteract by every available means the invasion of the immemorial rights of private patrons, and the consequent monopoly, in case of its success, tending to deter independent clergymen from entering the service of the Established Church. It is a special object of the association to disabuse the public mind of many errors on the subject, fostered by much ignorance and prejudice, to correct prevailing fallacies as to the nature of simony, to show the obvious distinction between a spiritual office and the secular designation of a 'benefice' as a profession, and to make it clear that the unfettered transfer of benefices, under certain approved regulations, is the most likely means to improve the quality of the clerical profession, and to add increased stability to the Established Church of England.

In Scotland, at the Reformation, the rights of patrons were reserved, and presbyteries were bound by several statutes to admit any qualified person presented by the patron. The principle of these statutes was retained in the enactments introducing Episcopacy. On the establishment of Presbyterianism, after the civil war, patronage was abolished by act 1649, c. 23, and the election of the clergy was committed to the kirk-session. At the Restoration this statute fell under the act rescissory, and patronage was replaced on its
former footing. On the reintroduction of Presbyterianism at the Revolution, patronage was again cancelled, and the right to present conferred on the Protestant hereditary aristocracy. The right to present, as such, was abolished, and the power of expressing any opinion about the appointment of the minister may be entirely in their hands, or they may have merely a right to reject the presentee after he has been subjected to the ordeal of a trial sermon; and if in either case this right may be exercised, according to local usage, either by the parishioners at large, by a committee of their number, or by the Bürgermeister of the place. When there is no patron, the choice generally rests with the consistory in East, and with the parishioners in West Germany. Induction by the superintendent completes the right of the presentee.

In the Greek Church the right to present is generally in the hands of the bishops, excepting in Russia, where lay patronage exists to a limited extent.—Chambers, Cyclop. s. v. See Lipperw, Versuch einer historisch-dogmatischen Entwicklung der Lehre vom Prot. onat (Giessen, 1810); Hirschius, Das Kirchenrecht der Katholiken u. Protestanten (Berlin, 1870); Brit. Q. Rev. Oct. 1874, art. vii (on England); Eadie, Eccles. Dict. s. v. (on Scotland); Gardner, Faiths of the World, ii, 633 sq.; Alzog, Kirchengesch. i, 385, 502 (on Roman Cath. Ch.); Riddle, Christian Antiquities, and Bingham, Origins Evangelicalis Patriarch period).

Patrohillos or SCOTThOPOLIS, one of the leaders of the Reformation in Scotland. Alexander Forbes, 1560, was from the consistory of the Church party in the 16th century. flourished as bishop of Selcua in 1569, when he was the depositor in the Council of Schewa for contumacy, having refused to appear before, but that he is by the charges of the presbytery Dorotheus (Socrates, Hist. Eccles. ii, 40; Zoasmen, iv, 22). He must have died soon after, for his remains were discovered and insultingly treated (Theophases, Chronographus) during the reaction which followed the temporary triumph of paganism (A.D. 861-363) under Julian the Apostate. See JULIAN. Patrohillos appears to have been an emigrant from Emesa. Epiphanius of Emesa is said to have derived his expositions of Scripture from the instructions of Patrohillos and Eusebius of Cesarea (Socrates, ii, 9); but Sixthi Senensis is mistaken in ascribing to Patrohillos a translation of the Old Testament from Hebrew into Greek (Sixtus Senensis, Biblioth. Sacra, recentiores a A. G. Masch. pt. ii, vol. ii, div. 1, § 29; Fabricius, Biblioth. Græc. iii, 716). The scanty notices of the life of Patrohillos have been collected by Tillemon, Mémoires, vol. vi and vii.

Patallorhychites. See PASSEOLRHYCHITES. See PATTÉE. Cross, in heraldry (Lat. patera, spreading), also called Cross Formé, a cross with one broad limb set towards the ends, and flat at their outer edges.

Paton, Robert, an English divine, flourished under the reign of queen Anne. He was minister at Allendale, Northumberland, and private chaplain to Mr. Forster. He is the author of a History of the Rebellion of 1715 (Lond. 1745), which is reviewed in the London Interspective Review, xi (1825), 220-239.

Patten, Thomas, D.D., an English divine, was born about the first quarter of the 18th century. He was educated at the University of Cambridge, and was honored with a fellowship by Corpus Christi College of the University, having made a mark, which he afterwards became rector at Childrey, in Berkshire. He died in 1790. His Sermons and Theological Treatises were published from 1755-62 at Oxford. He wrote principally on Christian evidences. See Darling, Cyclop. Bibliogr. ii, 2609.

tozwich, Ezek. xliii, 10, on arrangement; τινος, a type; Tit. ii, 7; Heb. viii, 5; elsewhere "example," etc.; ἀντικύριος, a specimen, Heb. ix, 23, elsewhere "example;" εὐαγγελιον, a representation, 1 Tim. i, 16; "form," 2 Tim. i, 15; ἔμμονα, resemblance, Eccles. x, 20, etc. Several of the models, as the Lord Moses, were shown to Moses on the Mount (Numb. viii, 4; Heb. viii, 4), or a life to copy after (Tit. ii. 7).

Patterson, A. O., D.D., a Presbyterian clergyman and home missionary, was born in Fayette Co., Pa., July 1, 1794. He graduated at Washington College, Pa., and afterwards at Princeton Theological Seminary. He began to dwell in the ministry in 1830. He was varid and his pastorates were numerous. First, as a missionary, he travelled from Pittsburgh, through Steubenville, Wheeling, Marietta, Oxford, Hamilton, Zanesville, Cleveland, and intermediate points, preaching the Gospel of Christ. During the succeeding fourteen years he was pastor at Mount Pleasant and Sercwicke, Pa., when, after much persuasion, he again engaged in missionary work. He, however, remained in this field only a short time; and returning to his pastoral work, he labored successively at Beaver, Pa., New Lebanon, Newton Falls, Bethel, Ohio, and Patterson, Pa. The record of his labors in all these places, and also in connection with the Board of Missions, fully demonstrates his usefulness and efficiency. In 1864 he went to Oxford, Ohio, where he died, Dec. 14, 1868. See Appleton's Amer. Acad. Cyclopedia, viii, 664.

Patterson, James, a Presbyterian minister, was born at Ervina, Bucks Co., Pa., March 17, 1772. His early educational opportunities were very limited, yet, having entered Jefferson College, he graduated in 1804; studied theology at Princeton, and was licensed to preach Oct. 5, 1808. On August 9 following he was ordained, and installed pastor of the Church of Bound Brook, N. J., and the charge he retained in June, 1813. In September following he was unanimously chosen pastor of the First Presbyterian Church of the Northern Liberties, in Philadelphia, where his ministrations were successful, and where he continued until his death, Nov. 17, 1837. His publications consist of a Missionary Sermon and several Tracts. A Memoir of his Life was published by Rev. Robert Adair (Phila. 1840, 8vo). See also Sprague, Annals of the Amer. Pulpit, iv, 423 sq.

Patterson, James Cowan, D.D., a Presbyterian divine, was born in Abbvville District, S. C., Oct. 26, 1803. He was the child of pious parents, who brought him up in the nurture of Christ, and added to his religious training in early life he felt called to the ministry, and obeyed. He graduated among the first of his class at Franklin College, under the presidngoing of his early friend and pastor, the Rev. Dr. Moses Waddel. Immediately after graduating he was elected to a tutorship in his alma mater. During the years of his connection with the college he studied theology under Dr. Waddel, and was licensed to preach by Hopewell Presbytery; was ordained Oct. 11, 1829, and called to the care of the Presbyterian churches of Macon and Milledgeville, Ga. He has ever since been engaged in the duties of a pastor. In 1834 he felt called to Lawrenceville and Decatur, and was called to the presidency of the Gwinnett Institute, a high school for boys and young men. From Gwinnett, N. J., he became, in 1842, pastor of the Synodical Female College at Griffin, Ga., which, under his devoted care and management, became a complete success and ornament to society and the Church. His health soon after began to fail, and he died July 18, 1866. Dr. Patterson possessed a mind clear, retentive, and accurate; a voice direct, majestic, and unimpassioned; as a teacher, faithful and thorough, so uniting decision with kindness as to gain the respect and love of his scholars. His steady, uniform piety was the distinguishing feature of his life, and elicted the confidence of all who knew him. See Wilson, Prefab. Hist. Almanac, 1867, p. 449. (J. L. S.)

Patterson, James H., M.D., a minister of the Methodist Episcopal Church, was born in Peru, N. Y., March 16, 1810. His earlier days were spent in Canada and Vermont. He was converted in 1826, licensed to preach in 1829, and received on probation into the New Paltz Conference shortly after. He was admitted to full Conference connection in 1838. His appointments in the ministry were as follows: South New Market, Paterborough, Francisctown, and Greenland, in New Hampshire; Peacham, White River, Corliss, and Linden, in Vermont. While at Linden the Conference in 1846 invited him and he became a missionary of the Vermont. His next appointments were to Northfield and Woodstock. During his pastorate at the latter place he studied medicine, and took his degree. His voice failing him in 1848, he practiced medicine until recovered strength permitted his resumption of the pastoral work. He now joined the Vermont Conference, and was in 1851 appointed to Glen's Falls, N. Y. His next appointment was Castleton, Vt., and then he went to Cambridge, N. Y. In 1857 he located at Schenectady to supervise the collegiate education of his sons. In the spring of 1859 he was appointed to the post of Secretary to the City Mission in Albany; in 1858 and 1859 in Amsterdam; in 1860, to Schaghticoke; and in 1861 he was superannuated, and he continued in this relation until his death, Dec. 24, 1873, at Glen's Falls, N. Y., where he had settled in 1863. Dr. Patterson was a man of more than usual ability. Had he been training as a college, it is likely that he would have risen to great prominence in any profession. He was much respected as a man, and his Christian virtues are praised by all who were brought into fellowship with him. See Minutes of Conferences, 1874, p. 64, 65.

Patterson, John Brown, an English divine, celebrated as a student of antiquities, especially those of Greece, was born at Alnwick, Northumberland, Jan. 29, 1804, of pious parentage. From his earliest years John gave indications of superior talents, of fine taste, and of a pure and elevated tone of moral feeling, qualities which, as he had engaged in age, became more and more conspicuously developed in his character. In 1810 his father died, and his mother removed to Edinburgh, and John was entered a student at the high school of that northern Athens. He rose to the first place in his classes, and at graduation carried off the highest prize. He became, consequently, the envy of his early acquirements, and, having become deeply convinced of his call to Gospel labors, he entered, in 1824, the divinity hall, then under the charge of the and learned Dr. Ritchie. He now considered all other pursuits secondary to the study of theology, and applied the full energies of his mind to the subjects of that sacred science. He endeavored by unremitting application to increase his stock of theological acquirements, and engaged successively in the study of natural history, chemistry, and anatomy, both human and comparative, from an anxiety to render all the talents he possessed and all his acquirements subservient to the duties of that holy profession to which he had dedicated his future life. Mr. Patterson, after becoming a licentiate, deferred all thoughts of an immediate engagement, and, after a few years' settlement, and accepted a proposal made to him, in 1828, to become the master of the young students at Oxford. After a brief absence Mr. Patterson returned to Scotland, and had not been long established at home, when Mr. Peel, then the home secretary, made him an unexpected offer of the vacant parish of Falkirk; and from the time of entering on the duties of the parish, which Patterson did in 1830, his ministry fully realized the highest expectations that had been formed of him. The exquisite beauty, the sparkling imagery, and the fine taste displayed every Sabbath in
his pulpit compositions; the laborious visitations he made from house to house, in the town as well as in the country; the lively interest he took in the religious education of the young; and the many judicious plans he formed for the general improvement of the moral and religious well-being of the people, rendered him every day more dear to the affections of all. But his bright career on earth was destined to be brief. He died suddenly, June 29, 1835, greatly mourned by all his people. Patterson wrote, besides a prize essay On the National Character of the Athenians (Loud. 1828; new ed. with Memoir by Prof. Pillans, London, 1839, cr. 8vo), Lectures on St. John’s Gospels (Loud. 1840, 12mo). His other Literary Remains were published with a Life (Edinb. 1837, 2 vols. 8vo). See Jamieson, Cyclop. of Relig. Biogr. s. 1.; Allibone, Dict. of Amer. & Eng. Authors, s. v.

Patterson, Joseph, a Presbyterian minister, was born in the north of Ireland, March 20, 1752. Little is known of his youth. In 1772 he emigrated to this country, taught school for a while, joined the Revolutionary army, from which he retired in 1777, and having gone West, was, in 1785, induced to turn his attention to the study of theology; he was licensed to preach in August, 1788, and for ten or twelve years from the following April had charge of the united churches of Racoon and Montour’s Run, Washington County, Pa., after which period he confined himself to the former. At the latter place he remained more or less a resident, and spending several months among the Shawnee Indians in 1802. In 1816 his health compelled him to resign his charge, and he retired to Pittsburgh, where he still preached occasionally until his death, Feb. 4, 1828. See Sprague, A Memoir of the Amer. Pulpit, iv. 322.

Patterson Joseph A., a Presbyterian minister, was born near the Academy, Juniata County, Pa., in 1838. He received his preparatory education at Tuscarora Academy, and in 1858 entered Lafayette College, Pa. After graduating, he spent a year teaching in Tuscarora Academy, and while there, and during a great revival, he received a fresh baptism, which, along with other influences, determined him to study for the ministry. In 1860 he graduated at the theological seminary at Princeton, N. J., and immediately went into the employ of the Board of Domestic Missions, laboring for several months in the vicinity of Luzerne, Warren County, N. J. Subsequently he accepted a unanimous call from Lick Run Church, Jacksonville, Pa.; was ordained and installed July 18, 1862; and, after a short pastorate of two years and a half, died Dec. 31, 1864. Mr. Patterson was a systematic, practical, earnest minister. See Wilson, Pref. Hist. Almanac, 1866, p. 140. (J. L. S.)

Patterson, Michael A., a Presbyterian minister, was born in Path Valley, Cumberland County, Pa., Oct. 1, 1792. He pursued his preparatory studies first in Chambersburg, Pa., then in the academy at Summersville, N. J.; graduated in the college at Princeton, N. J.; studied theology in the Princeton Theological Seminary; was licensed in 1816, and ordained in 1821. He labored for many years in Delaware, and died in Wilmington, Del., Jan. 7, 1865. Mr. Patterson was a simple-hearted, good man, an excellent preacher, and a favorite pastor. See Wilson, Pref. Hist. Almanac, 1866, p. 222. (J. L. S.)

Patterson, Robert L.L.D., an American philanthropist and educator, was born in the north of Ireland, May 30, 1743. In 1768 he emigrated to Philadelphia. In 1774 he was appointed principal of the academy at Wilmington, Delaware. In the Revolutionary war he acted as brigade major. In 1779 he was appointed professor of philosophy and mathematics in the University of Maryland, and then vice-provost. In 1805 he was appointed director of the Mint of the United States. In 1819 he was chosen president of the American Peace Society, and later president of the American Philosophical Society. He died July 22, 1824. A remarkable trait of Mr. Patterson’s character, and its crowning excellence, was his fervent piety. It influenced all his conduct from his youth. He was an elder of the Scotch Presbyterian church nearly half a century. In the transactions of the Philosophical Society, he published many papers.

Patterson, Stearns, a minister of the Methodist Episcopal Church, was born in Dunstable, now Nashua, N. H., Jan. 2, 1813. He was converted in 1826, and connected himself with the Congregationalist Church, to which his parents belonged. In 1829 he entered the academy at Exeter, a few years later he entered Yale College; but his health failing, he was compelled to relinquish his studies and engage in other pursuits. From 1837 to 1840 he filled a clerkship in the city of New York. In November, 1840, he went to Maryland and engaged in teaching. In August, 1841, Rev. Enos H. Williams held a camp-meeting on Kent Island. Patterson attended, and was inclined towards Methodism. In 1842 he joined the Methodist Episcopal Church on Kent Island. In August of the same year he removed to St. Michaels, Talbot County, Maryland, and took charge of a school. On Feb. 15, 1844, he was licensed to exhort, and on Feb. 15, 1844, he was licensed to preach, and recommended to the Philadelphia Conference. He was admitted in 1844, and appointed to Strasburgh. His subsequent appointments were as follows: Brandywine, Cecil, two years supernumerary, Grove, Mount Zion, Medford, six years professor in Wesleyan Female College in Wilmington, Del., then to Merion Square, and afterwards to Radnor and Bethesda. In 1866 he granted the relation of superannuate, and so continued until his death, May 19, 1871. He united in himself all the qualifications necessary for success in the ministry. He was devoted to God and the Church, scholarly in his habits of study, systematic in the performance of his duties, and kind towards all with whom he was brought into fellowship. See Minutes of Conferences, 1872, p. 24, 25.

Patterson, William D., a Presbyterian minister, was born near Mercersburg, Pa., July 22, 1833. He received a careful parental training, graduated at Marshall College, Pa., in 1852, and at the Western Theological Seminary in 1856; was licensed June 17, 1858, and having preached with great acceptance for a year to the churches of Dilisburg and Petersburg, Pa., a call for his services as pastor was presented to him, which being accepted, Aug. 14, 1858, he removed and installed him. But his health gave way so seriously about the time of the meeting of the Presbytery that he could not be present to be ordained; nor was he ever able after this to resume his labors. He spent some time in a hospital, returned to his home, Aug. 24, 1859, Patterson was a man of deep piety, cultivated mind, and genial disposition, and was more than ordinarily endowed for the work to which he had been called. See Wilson, Pref. Hist. Almanac, 1863, p. 194. (J. L. S.)

Patterson, John Coleridge, an English divine, whose life was one of remarkable self-denial, unremitted labor, and repeated exposure to perils by land and sea, was born April 1, 1827. His maternal great-uncle was the celebrated Samuel Taylor Coleridge. His father, judge Patterson, was a lawyer, unsurpassed in his day. Under his immediate supervision John Coleridge was trained until ready for Eton. He was then a bright, conscientious, painstaking boy, "ever ready for fun, but never for mischief." He was the leader in his class and of his playmates. In 1845 he entered Merton College, at Oxford University, and distinguished himself as he had at Eton. In 1849 he obtained a college fellowship and subsequently a fellowship. After the examination for his degree he went abroad and travelled, in the companionship of a family whom he served as tutor, in Germany and Italy. In 1858, after his return home, he was ordained for the priesthood, and was made country parson at Aldington. He had not been there
Patteson, Robert Everett, D.D., an American Baptist divine who distinguished himself in the pulpit and the rostrum, was born at Bensenville, Vt., Aug. 19, 1800, and was educated at Amherst College, Mass.,
Pattison, Robert E., D.D., a minister of the Methodist Episcopal Church, was born near Cambridge, Md., Jan. 22, 1821. He was the child of Methodist parents, and at ten years of age was converted, and at once joined the Methodist Episcopal Church. At fourteen he entered the preparatory department of Dickinson College, and, after passing successfully through the entire curriculum of study, he graduated in the class of 1843. During his residence at Carlisle he was licensed to preach, but failed. After the close of his collegiate career he taught for two years at Baltimore. He was admitted into the Philadelphia Conference in April, 1846. His first appointment was Dorchester Circuit as junior preacher. His subsequent appointments were: Seaforad, Princess Anne, Church Creek, Quantico, Snow Hill, Middletown, and Cantwell's Bridge, Del. Asbury, Philadelphia; Kensington; Twelfth Street, Philadelphia; Port Deposit; St. George's, Philadelphia; Tabernacle, Philadelphia; St. Peter's, Reading, Harrisburg District; West Philadelphia, where he died, Feb. 14, 1873. At the conference of 1868 Dr. Pattison was chosen its secretary, and he continued to hold that office until his death. In 1868 he was a delegate to the General Conference, and was chosen by that body as one of its assistant secretaries. He was also associated with the management of the various religious and benevolent organizations connected with the Philadelphia Conference, and for several years a member of the Parent Missionary Board. "Dr. Pattison was a good man, a true Methodist, a faithful pastor, an acceptable and earnest preacher, and a Christian gentleman, whom to know was to esteem and love. Less brilliant, perhaps, than some, he was wiser and more consistent than many, while his sound judgment, unswerving integrity, unfailing courtesy, unwearying diligence, kindly sympathy, and unwavering loyalty to religion, freedom, and patriotism, made him a pillar of honor, trust, and love." See Minutes of Conferences, 1857-60, p. 40.

Patterson, Samuel D., D.D., a distinguished minister of the Methodist Episcopal Church, South, was born in Lancaster District, S. C., Jan. 27, 1857, of Presbyterian parents. His childhood was serious. He was converted in 1865, at the age of fourteen, and was licensed to preach in 1868. He was soon persuaded of the duty to preach the Gospel, but for a time strove much against these impressions. He emigrated with his parents to Georgia, and from thence to Tennessee, in 1819. Soon after he was licensed to preach, and joined the Tennessee Conference, and was stationed at Sequatchy Valley, Tenn.; he was next successive preacher in charge at Clinch, West Va.; Tuscaloosa Circuit, Ala.; and the so-called Alabama Circuit. His health failing him, he located, and finally removed to Heber Springs, in the Territory of New Mexico, where he was a presiding elder on Abingdon District the same year; was on stations and districts till 1888-9, when he was made agent for Holston College; then on districts and stations till 1847, when he was made editor of the Holston Christian Advocate, in which work he died, August, 1854, in holy peace, trusting in the merits of Christ, and declaring "all is well." Dr. Patterson was a studious and earnest man and preacher. He stood in the first ranks of the ministry of his Church. See Deems, Annals of Southern Methodism for 1855, p. 341.

Patrick, George, L.L.B., a pious Calvinistic English divine, was born near Colchester in 1746. He was educated at St. Paul's School; studied the law and practiced at Dedham, but relinquished his profession, received orders in 1770, and entered himself at Sidney Sussex College, Cambridge. He became vicar of Avelsey, Essex, in 1772; chaplain of Morden College, Blackheath, in 1787. In 1790 he was suddenly dismissed for being a Methodist, but was finally reinstated as lecturer of Woolwich in 1792, and of St. Bride's, Fleet Street, and of St. Leonard's, London, in 1797. He died in 1800. His Sermons, with a Help to Prayer; to which are prefixed Memoirs of the Life of the Author (London, 1801, 8vo), were published after his death.

Paú (Heb. Pâúa, פִּיו, a bleeding, or vomiting; but in 1 Chron. i. 50, Paú, פיו, though some copies agree with the reading in Gen.; Sept. Φόνταρ, i.e. θόνταρ: Vulg. Phoam), the capitol of Maabar, king of Edom (Gen. xxxvi, 39). The only name that bears any resemblance to it is Pharaoh, a ruined place in Idumea mentioned by Seezten.

Paul (Παῦλος, the Greek form of the common Latin name Paulus), originally (see below) Saul (q. v.), the specially appointed "Apostle to the Gentiles." (In the following treatment of this important character, we endeavor to weave in the Scripture narrative whatever illustration may be gathered from modern researches and speculations.

I. Preliminary Inquiries.—1. Original Authorities.—Nearly all the authentic materials for the life of the apostle Paul are contained in the Acts of the Apostles and the Epistles of the New Testament. Out of all the literary works of these authorities the biographer has to construct his account of the really important period of the apostle's life. The early traditions of the Church appear to have left almost untouched the space of time for which we possess those sacred and abundant sources of knowledge; and they aim only at supplying a few particulars in the biography beyond the points at which the narrative of the Acts begins and terminates.

The inspired history and the Epistles lie side by side, and are to all appearance quite independent of one another. It was not the purpose of the historian to write a life of Paul, even as much as the received name of his book would seem to imply. The book called the Acts of the Apostles is an account of the beginnings of the kingdom of Christ on the earth. The large space which the apostle occupies in it is due to the important part which he bore in spreading that kingdom, and to the Epistles, nothing can be plainer than that they were written without reference to the history; and there is no attempt in the canon to combine them with it so as to form what we should call in modern phrase the apostle's "life." Little can be said of the composition and meaning of this portion of our Bibles; the writer of the Acts cannot be the same as the writer of the Epistles.
bigenus (Paulus der Apostel Jesus Christi [Stuttgart, 1845]), who finds so much opposition between what he holds to be the few authentic Pauline Epistles and the Acts of the Apostles that he pronounces the history to be an interested fiction. But his criticism is the very caricature of its opposite. We have no right to imagine that it applied to any history and letters of acknowledged authenticity, and we feel irresistibly how arbitrary and unhistorical it is. Putting aside this extreme view, it is not to be denied that difficulties are to be met with in reconciling complicated events of modern times with the narrower and more restricted life of Paul. What the solutions of such difficulties may be, whether there are any direct contradictions, how far the apparent differences may be due to the purpose of the respective writers, by what arrangement all the facts presented to us may best be dovetailed together—these are the various questions which have given so much occupation to the critics and expositors of Paul, and upon some of which it seems to be yet impossible to arrive at a decisive conclusion. We shall assume the Acts of the Apostles to be a genuine and authentic work of Luke, the companion of Paul, and as a sure speak of the Epistles at the places which we believe them to occupy in the history.

2. Name. — There can be no doubt that the apostle's name, as a Jew, was Saul; but when or how he received the Roman name Paul, which he bears in the Acts of the Apostles and in all the Epistles, is unknown. It is quite probable that he had borne the name of Paul as a Roman citizen; and it is no objection to this view that this name would have appeared first, and that of Saul later (Witiaul, Adelbert, L. p. 47). If it is not merely accidental that Luke first calls him Paul in the passage mentioned, the reason may be that the apostle then first commenced his public and separate ministry; and Paul, a Gentile name, was that by which the apostle of the Gentiles always stood in Church history, and a name that will not be soon dropped. For the old Jewish name, there was afterwards no occasion for Luke to mention it. The account of Jerome that Paul assumed this name upon the conversion by him of Sergius Paulus (Acts xii, 2, comp. August. Confrat. viii, 4; Bengel and Olshausen, on Acts xiii, 9) is perhaps not a tradition, but a mere suggestion of that father himself, on the ground that the name Paul first appears in the passage following that account. Indeed, Baur (p. 93) would have us believe that this was the view of Luke himself, and that the whole account of the conversion of Sergius Paulus was but an illusory fiction of this contact of a man of name Paul? But if there had been any connection between the two events, it would have been natural for the writer to indicate it (see Neander, p. 108). It is easy to suppose simply that, in becoming a Christian, according to the Eastern custom [see Name], he assumed the name Paul, as one common among Greeks and Romans, and quite similar in sound to Saul (comp. Chrysost. and Theophyl. in Suicer, Theoret. ii, 648), perhaps with some reference to the etymological signification of the name (comp. 1 Cor. vi, 9; Paulus. Lat. small, little; comp. Gr.小微ος). Yet we should then expect that Luke would employ the name Paul from Acts ix, 19 onward. (For another view, see Kuinmi, Comment. ad loc.) See SERGIUS PAULUS.

II. Personal History. — We propose under this head to gather together all the information given either directly or incidentally in the Acts and Epistles concerning the apostle's life, relating to a subsequent head the various disputes that have been raised on some of them.

1. Youth and Early Career. — Paul was a native of Tarsus, a city of Cilicia (Acts xii, 28), and was attached to the tribe of Benjamin (Phil. iii, 5). From his father he inherited the rights of Roman citizenship, which had probably been earned by some of his ancestry through services rendered to the Roman state (Lardner, Works, i, 238, ed. 1786, s.v.; Grotius, ad

Acts xxii, 28). The supposition that he enjoyed them in virtue of being a native of Tarsus is not well founded; for though that city had been created by Augustus an urbs libera (Dion. Chrysost. ii, 36, ed. Reiske; Pliny, Hist. Nat. v, 27), it does not follow from this that all its natives enjoyed the privileges of Roman citizenship. However, from his receiving the name Saul it has been supposed that he was the first-born son of his parents, and that they had long desired and often asked for such a favor from God; that he was not their only child, however, appears from the mention made (Acts xxiii, 10) of his "sister's son." Whether Andronicus, Junia, and Herodion, whom he terms, in the Epistle to the Romans (xiv, 7, 11), en mystic on, were of the number of his blood relations, or only belonged to the same tribe with him, is a question on which learned men have taken different sides (comp. Lardner, Works, vi, 235; Estius, Comm. ad loc.). (See below.)

At that time Tarsus was the rival of Athens and Alexandria as a place of learning and philosophical research (Strabo, xiv, 5); but to what extent the future "Apostle of the Gentiles" enjoyed the advantages of its schools is not accurately known. Many things that have been made to show from his writings that he was familiar with Greek literature, and Dr. Bentley has not hesitated to affirm that "as Moses was learned in all the wisdom of the Egyptians, so it is manifest from this chapter of Acts (xxvii, 20), if nothing else had been now extant, that Paul was a great master in all the learning of the Greeks" (Bogle Lectures, serm. iii, sub init.). An authority like that of Bentley in a question of Greek literature is not to be lightly set aside; yet on referring to the evidence in support of this opinion it must be observed that he does not even justify it. However, that the mere circumstance of his having spent his early years in such a city as Tarsus could not but exert a very powerful influence on the mind of such a man as Paul, in the way of sharpening his faculties, refining his tastes, and enlarging the circle of his sympathies and affections, "if even to a degree of commoncitizen," as Eichhorn remarks, "such a circumstance affords—unless he be by nature utterly unobservant—much information which otherwise he could not have obtained, and in consequence of this a certain activity of mind, how much the greater in proportion as the object of his investigation was a great mind like that of Paul? To his birth and early residence in Tarsus may be traced the urbanity which the apostle at no time laid aside, and of which he was frequently a perfect model, many instincutary things which he gives in his epistles and a perfect knowledge of the Greek tongue than a Jew born and educated in Palestine could well have attained" (Einstein, ins N. T., iii, 5). (See below.)

But whatever uncertainty may hang over the early studies of the apostle in the department of Greek learning, there can be no doubt, being the son of a Pharisee, and destined, in all probability, from his infancy to the pursuit of a doctor of Jewish law, he would be carefully instructed from his earliest years in the elements of Rabbinical lore. It is probable also that at this time he acquired his skill in that handicraft trade by which in later years he frequently supported himself (Acts xvii, 3; 1 Cor. iv, 12, etc.). This trade is described by Luke as that of a περασιος, a word regarding the meaning of which there has been no small difference of opinion. (See below.) It does not follow that the family were in the necessities of life, for which such manual labor commonly implies; for it was a wholesome custom among the Jews to teach every child some trade, though there might be little prospect of his depending upon it for his living. See HANDICRAFT.

When Paul made his defence before his countrymen
Paul 790

PAUL

at Jerusalem (Acts xxii), he told them that, though born in Tarsus, he had been "brought up" (ἰδρυτὶς ἐκ τῆς Ἐφεσου) in Jerusalem. He must, therefore, have been a boy when he was removed, in all probability for the sake of his education, to the Holy City of his fathers. We may imagine him arriving there—perhaps at some age between ten and fifteen, already a Hellenist, speaking Greek and familiar with the Greek version of the Scriptures, possessing, besides the knowledge of his trade, the elements of Gentile learning—to be taught at Jerusalem, and become acquainted with the persons and manners of the law of the fathers. He learned, he says, "at the feet of Gamaliel." He who was to resist so stoutly the usurpations of the law had for his teacher one of the most eminent of all the doctors of the law. Gamaliel is supposed to be the person of that name who is celebrated in the writings of the Talmudists as one of the seven teachers to whom the title "Rabbi" was given (Lightfoot, Hora Hebr. in Act. v, 84; Neander, Apostol. Zeitd. p. 62; Otho, Lese Rabbincæ-Phil. s. v. Rabbi). Besides acquaintance with the Jewish law, and a sincere conviction of the divine excellence of Judaism, Gamaliel appears to have possessed a singularly calm and judicious mind, and to have exercised a freedom of thought as well as pursued a range of study very unlike what was common among the party to which he belonged (Acts v, 34-39; comp. Neander, c. c.). How much his own example and teaching may have influenced the mind of Paul favorably we may imagine, but cannot affirm. See Gamaliel. It is singular that on the occasion of his well-known intervention in the apostolic history the master's counsels of toleration are in marked contrast to the persecuting zeal so soon disciplined by the pupil. The temper of Gamaliel himself was moderate and candid, and he was personally free from bigotry; but his teaching was that of the strictest of the Pharisees, and bore its natural fruit when lodged in the ardent and thoroughgoing zeal of Paul. Better than any other fruit, besides that of a zeal which persecuted the Church, may no doubt be referred to the time when Saul sat at the feet of Gamaliel. A thorough training in the Scriptures and in the traditions of the elders under an acute and accomplished master must have done much to exercise the mind of Saul, and to make him feel at home in the subjects in which he was afterwards to be so intensely interested. Nor are we at all bound to suppose that, because his zeal for the law was strong enough to set him upon persecuting the believers in Jesus, he had therefore extinguished his eagerness to learn and to teach, according to his subsequent testimony, it was the nature of the law to produce (see Rom. vii.). On the contrary, we can scarcely imagine these as absent from the spiritual life of Saul as he passed from boyhood to manhood. Earnest persecutors are, oftenest than not, men who have been tormented by inward struggles and perplexities. The pupil of Gamaliel may have been crushing a multitude of conflicts in his own mind when he threw himself into the holy work of extirpating the new heresy. See Moral Sense.

Paul is introduced to us for the first time by the sacred historian for the first time in connection with the martyrdom of Stephen, in which transaction he was, if not an assistant, something more than a mere spectator. A.D. 39. He is described at this time (Acts vii., 58) as "a young man" (πρεσβύτερος); but this term was employed with so much latitude by the Greeks that it is impossible from the mere use of it to determine whether the party to whom it was applied was under thirty, or between that and forty. The probability is that Paul must have reached the age of thirty at least; for otherwise it is impossible he would have attended the councils of the chief priests, or been intrusted by them with the entire responsibility of executing their designs against the followers of Jesus, as we know was the case (Acts xxvi., 10, 12). For such a task he showed a painful spirit, and discharged it with a zeal which spared neither age nor sex (Acts xxvi., 10, 11). At that time the Church experienced the sudden expansion which was connected with the ordaining of the Seven appointed to serve tables, and with the special power and inspiration of Stephen. Among those who disapproved of Stephen were several of the Elders. We naturally think of Saul as having been one of these, when we find him afterwards keeping the clothes of those suborned witnesses who, according to the law (Deut. xvii., 7), were the first to cast stones at Stephen. "Saul," says the sacred writer significantly, "was consenting unto his death." The angelic glory that arose from Stephen's face, and the divine truth of his words, failing to subdue the spirit of religious hatred now burning in Saul's breast, must have embittered and aggravated its rage. Saul was passing through a terrible crisis for a man of his nature. But he was not one to be moved from his stern purpose by the native refinement and tenderness which he must have been stifling within him. He was the most unwearying and unrelenting of persecutors. "As for Saul, he made havoc of the Church, entering into every house (ἐν κάθε καιρῷ ἐξορύσσειν, house by house), and haling men and women, committed them to prison" (Acts viii., 3).

2. Conversion.—But while thus, in his ignorance and unbelief, he was seeking to be "injurious" to the cause of Christ, the great Author of Christianity was about to make an example of him. Saul may have been one of the most devoted and successful of its advocates. The persecutor was to be converted. A.D. 30. What the nature of that conversion was we are now to observe.

Having undertaken to follow up the believers "unto strange cities," Saul naturally turned his thoughts to Damascus, expecting to find among the numerous Jewish residents of that populous city some adherents of "the way" (παρὰ τὴν ἡμῶν, and trusting, we must presume, to be allowed by the connivance of the governor to approach the city before he took his journey). But it was not until later that the convert's work in Damascus was related in detail three times in the Acts, first by the historian in his own person, then in the two addresses made by Paul at Jerusalem and before Agrippa. Three these narratives are not repetitions of one another: there are differences between them which some critics choose to regard as corroborative of each other. Considering that the same author is responsible for all the accounts, we gain nothing, of course, for the authenticity of their statements by bringing them into agreement; but it seems quite clear that the author himself could not have been deceived by the narratives. He could scarcely have had any motive for placing side by side inconsistent reports of Paul's conversion; and that he should have admitted inconsistencies on such a matter through mere carelessness is hardly credible. Of the three narratives, that of the historian himself must claim to be the most purely historical: Paul's subsequent accounts were likely to be affected by the purpose for which he introduced them. Luke's statement is to be read in Acts ii., 3-19, where, however, the words, "It is hard for thee to kick against the pricks," included in the Vulgate and English versions, is to be omitted. The sudden light from heaven; the voice of Jesus speaking with authority to his persecutor; Saul struck to the ground, blinded, overcome; the three days' suspense; the coming of Ananias as a messenger of the Lord; and Saul's baptism—these were the leading features, in the mind of the historian, of the great event, and in these we must look for the chief significance of the conversion.

Let us now compare the historical relation with those which we have in Paul's speeches (Acts xxii. and xxvi.). It was well to have them in each place. But we have here to deal with the bare facts of agreement or difference. With regard to the light, the speeches add to what Luke tells us that the phenomenon occurred at mid-day, and that the light shone round, and was visible to Saul's companions as well as to him-
The second speech says that at the shedding of this light the whole company ("we all") fell to the ground. This is not contradicted by what is said (ix, 7), "The men which journeyed with him stood speechless, for fear." Saul stood speaking, in contrast to the others who were speechless. His act is therefore not antithetical to Saul's falling down. We have but to suppose the others rising before Saul, or standing still afterwards in greater perplexity, through not seeing or hearing what Saul saw and heard, to reconcile the narratives without forcing either. After the question, "Why persecutest thou me?" the second speech adds, "It is hard for thee to kick against the goads." Then both the speeches supply a question and answer—"I answered, Who art thou, Lord? And he said, I am Jesus (of Nazareth), whom thou persecutest. In the discussion, get attendances as a witness of the first speech agrees with Acts ix. But whereas according to that chapter the men with Saul "heard the voice," in the first speech it is said "they heard not the voice of him that spake to me." It seems reasonable to conclude from the two passages that the men actually heard sounds, but not, like Saul, an articulate voice. With regard to the visit of Ananias, there is no collision between the ninth chapter and the first speech, the latter only attributing additional words to Ananias. The second speech ceases to give details of the conversa- tion after "the light shone round about" and the second speech persecutes. But rise, and stand on thy feet." Saul adds, from the mouth of Jesus, an exposition of the purpose for which he had appeared to him. It is easy to say that in ascribing these words to Jesus, Paul or his professor reporter is violating the order and sequence of the earlier accounts. But, if we bear in mind the nature and purpose of Paul's address before Agrippa, we shall surely not suppose that he is violating the strict truth, when he adds to the words which Jesus spoke to him at the moment of the light and the sound, without interpolating any narrative, on a later occasion, that fuller exposition of the meaning of the crisis through which he was passing, which he was not to receive till afterwards. What Saul actually heard from Jesus on the way as he journeyed was afterwards interpreted, to the mind of Saul, into those definite expressions. For we must not forget that, whatever we hold as to the external nature of the phenomena we are considering, the whole transaction was essentially, in any case, a spiritual communication. That the Lord Jesus manifested himself as a living person to the man Saul, and spoke to him so that his very words were his, and that fact declared itself. The purport of the three narratives is that an actual conversation took place between Saul and the Lord Jesus. It is remarkable that in none of them is Saul said to have seen Jesus. The grounds for believing that he did so are the two expressions of Ananias (Acts ix, 17), "The Lord Jesus, who appeared unto thee in the way," and (Acts xxi, 14) "That thou shouldst see the Just One," and the statement of Paul (1 Cor. xv, 8), "Last of all he was seen of me also." Comparing these passages with the narratives, we conclude either that Saul had an instantaneous vision of Jesus as the flash of light blinded him, or that the seeing" was that apprehension of his presence which would go with a real conversation. How it was that Saul "saw" and "heard," we are quite unable to determine. That the light, and the sound or voice, were both different from any ordinary phenomena with which Saul and his companions were familiar, is unquestionably implied in the narrative. It is also implied that they were specially significant to Saul, and not to those with him. We gather therefore that there were real outward phenomena, though Saul was made invisible. It is literally true of phenomena revealed to him alone. (See below.) Externally, there was a flash of light. Spiritually, "the light of the Gospel of the glory of the Christ, who is the image of God," shone upon Saul, and convicted the darkness of the heart which had shut out love and knew not the glory of the cross. Externally, Saul fell to the ground. Spiritually, he was prostrated by shame, when he knew whom he had been persecuting. Externally, sounds issued out of heaven. Spiritually, the Crucified said to Saul: You have been committing sacrilege. You see the very sacrifice by which you persecuted me? Whether audible to his companions, or audible to the Lord Jesus only, Saul confessed himself in the spirit the servant of him whose name he had hated. He gave himself up, without being able to see his way, to the disposal of him whom he now knew to have vindicated his claim over him by the very sacrifices which formerly he had despised. The Pharisee was converted, once for all, into a disciple of Jesus the Crucified.

The only mention in the Epistles of Paul of the outward phenomena is in Acts xvii. 11. "There is one important passage in which he speaks distinctly of his conversion itself. Dr. Baur (Paul, p. 64), with his readiness to find out discrepancies, insists that this passage represents quite a different process from that recorded in the Acts. He is much more in sympathy with the repetition of what we have been reading and considering, but it is in the most perfect harmony with it. In the Epistle to the Galatians (i, 15, 16) Paul has these words, "When it pleased God, who separated me from my mother's womb and called me by his grace, to reveal his Son in me, that I might preach him among the heathen ..." (σαρκιονών τιν υἱόν αὐτοῦ ἐν σοι). What words could express more exactly than these the spiritual experience which occurred to Saul on the way to Damascus? The manifestation of Jesus as the Son of God was clearly the main point in the narrative. This manifestation was brought about through a removal of the veil of prejudice and ignorance which blindered the eyes of Saul to a crucified Deliverer conquering through sacrifice. Whatever part the senses may have played in the connection; the essence of it in any case must have been Saul's inward vision of a spiritual Lord close to his spirit, from whom he could not escape, whose every command he was henceforth to obey in the spirit. It would be groundless to assume that the new convictions of that mid-day immediately cleared and settled themselves in Saul's mind. It is sufficient to say that he was then converted, or turned round. For a while, no doubt, his inward state was one of awe and expectation. He was "led by the hand" spiritually by his Master, as well as bodily by his companions. Thus as a servant he addressed the Jews, and the Jews, in his turn, sought the house of one whom he had, perhaps, intended to persecute. Judas may have been known to his guest as a disciple of the Lord. Certainly the fame of Saul's coming had preceded him; and Ananias, a devout man according to the law," but a believer in Jesus, when directed by the Lord to visit him, wonders at what he is told concerning the notorious persecutor. He obeys, however; and going to Saul in the name of the Lord Jesus, who had appeared to him in the way," he puts his hands on him that he may receive his sight and be filled with the Holy Ghost. If in any case Saul's eyes are immediately purged, and his sight is restored, "The same hour," says Paul (Acts xxiii, 13), "I looked up upon him. And he said, The God of our fathers hath chosen thee, that thou shouldst know his will, and see the Just One, and shouldst hear the voice of his mouth. For thou shalt be his witness unto all men of what thou hast seen and heard." Every word in this address strikes some chord which we hear sounded again and again in Paul's Epistles. The new convert is not, as it is so common to say, converted from Judaism to Christianity, but from the God of the Old Testament to the God who chooses him. He is chosen to know God's will. That will is manifested in the Righteous One. Him Saul sees and hears, in order that he may be a witness of him to all men. The eternal will of the God of Abraham; that will revealed in a righteous Son of God; the testimony concerning him, a Gospel to mankind—these are
the essentially Pauline principles which are declared in all the teaching of the apostle, and illustrated in all his actions.

10 Paul in Damascus and Arabia.—After the recovery of his sight, Saul received the external symbol of the washing away of his sins in baptism. He then broke his three days' fast, and was strengthened—an image, again, of the strengthening of his faint and hungering spirit through a participation in the divine life of the Church at Damascus. He was at once received into the fellowship of the disciples, and began without delay the work to which Ananias had designated him; and to the astonishment of all his hearers he proclaimed Jesus in the synagogues, declaring to him to be the Son of the living God. From the most intellectual way in which it is opposed to a visit to the apostles at Jerusalem, we infer that it took place before he deliberately committed himself to the task of proclaiming Jesus as the Christ; and also, with some probability, that he was seeking seclusion, in order that, by confessing "not with flesh and blood," but with the Lord in the Spirit, he might receive more deeply into his mind the commission given him at his conversion.

That Saul did not spend the greater portion of the "three years" at Damascus seems probable, for these two reasons: (1) that the anger of the Jews was not likely to have borne with two or three years of such a life as Saul's was now without coming to a crisis; and (2) that the disciples at Jerusalem would not have been likely to mistrust Saul as they did if they had heard of him as preaching Jesus at Damascus and Arabia. Consideration of these reasons adds little weight (comp. Olshausen, on Acts ix, 20-25).

Now that we have arrived at Saul's departure from Damascus, we are again upon historical ground (A.D. 33), and have the double evidence of Luke in the Acts (ix, 21) and of the apostle in his Second Epistle to the Corinthians (xi, 32). According to the former, the Jews lay in wait for Saul, intending to kill him, and watched the gates of the city that he might not escape from them. Knowing this, the disciples took him by night and led him down in a basket from the wall. According to Paul (2 Cor. xi, 22), it was the ephors of the crowd. The necessity was more likely ascertaining how an officer of king Aretas should be governing in Damascus, and why he should lend himself to the designs of the Jews. But we learn from secular history that the affairs of Damascus were, at the time, in such an unsettled state as to make the narrative not improbable.

Having escaped from Damascus, Saul betook himself to Jerusalem, and there "assayed to join himself to the disciples: but they were all afraid of him, and believed not that he was a disciple." In this natural but trying difficulty Saul was befriended by one whose name was henceforth closely associated with his. Barnabas became his sponsor to the apostles and Church at Jerusalem, assuring them—from some personal knowledge, we must presume—of the facts of Saul's conversion and subsequent behavior at Damascus. It is noticeable that the first record of the external secular action of Saul after his conversion, and the name of Jesus in the preaching, Barnabas declared how "Saul had seen the Lord in the way, and that he had spoken to him, and how that he had had a vision boldly at Damascus in the name of Jesus." Barnabas's introduction removed the fears of the apostles, and Paul "was with them coming and going out at Jerusalem." His Hellenistic education made him, like Stephen, a successful disputant against the "Grecians;" and it is not strange that the former persecutor was singled out from the other believers as the one who had considerably more to prove. Barnabas again urged them to flee; and by way of Caesarea took himself to his native city, Tarasus (Acts ix, 26-30). In Gal. i, 20, the order of the localities is not strictly observed.

In the Epistle to the Galatians (i, 17-22) Paul adds certain particulars, in which only a perverse and capricious criticism could see anything contradictory to the facts just related. He tells us that his motive for going up to Jerusalem rather than anywhere else was that he might see Peter; that he abode with him fifteen days; that the only apostles he saw were Peter and James the Lord's brethren; and that afterward he came into the regions of Syria and Cilicia, remaining unknown by face, though well known for his conversion, to the churches in Judea which were in Christ, Paul's object in referring to this connection of his with those who were apostles before him was to show that he had never accepted his apostleship as a commission from them. On this point the narrative in the Acts entirely agrees with Paul's own earnestasseverations in his Epistles. He received his commission from the Lord Jesus, and mediately through Ananias. This is the only proper explanation of the "c]\textsuperscript{2}

4. Ministry at Antioch.—During this stay of Paul at Tarasus, which lasted several years, occupied doubtless with those elsewhere unrecorded labors to some of which he occasionally refers (2 Cor. xi, 24, 25), a movement was going on at Antioch which raised that city to an importance second only to that of Jerusalem itself in the early history of the Church. In the life of the apostle the Gentiles Antioch claims a most conspicuous place. It was there that the preaching of the Gospel to the Gentiles first took root, and from thence that it was afterwards propagated. Its geographical position, its political and commercial importance, and the presence of a large and powerful Jewish element in its population, were the more obvious characteristics which adapted it for such a use. There came to Antioch, when the persecution which arose about Stephen scattered upon their different routes the disciples who had been assembled at Jerusalem, men of Cyprus and Cyrene, eager to tell all who would hear them the good news concerning the Lord Jesus. Until Antioch was reached, the new movement could only be "for the Gentiles only" (Acts xi, 19). But here the Gentiles also (of
"Ελληνικά— not, as in the A. V., "the Grecians"— were among the hearers of the word. A great number; and when this was reported at Jerusalem, Barnabas was sent on a special mission to Antioch.

Adapted to his hand, several dozen, as many people was added into the Lord," Barnabas felt the need of help, and went himself to Tarsus to seek Saul. Possibly at Damascus, certainly at Jerusalem, he had been a witness of Saul's energy and devotedness, and skill in discoursing on the things of God. So it was to him that he was sent by the Lord to minister there. His appointment was that of a most brotherly affection. He therefore longed for him as a helper, and succeeded in bringing him to Antioch. There they labored together unremittingly for "a whole year," mixing with the constant assemblies of the believers, and "teaching much people." All this time, as Luke would have us to understand, the Gentiles were subordinate to Barnabas. Until "Saul became "Paul," we read of "Barnabas and Saul" (Acts xi. 30; xii. 25; xiii. 2, 7). Afterwards the order changes to "Paul and Barnabas." It seems reasonable to conclude that there was no marked peculiarity in the teaching of Saul during the Antioch period. He held and taught, in common with the other Jewish believers, the simple faith in Jesus the Christ, crucified and raised from the dead. Nor did he ever afterwards depart from the simplicity of this faith. But new circumstances stirred up new questions. Saul's Stodfy of the truth; it was given to see, more clearly than any others saw, those new applications of the old truth, those deep and world-wide relations of it, with which his work was to be permanently associated. In the mean time, according to the usual method of the divine government, facts were silently growing, which were to suggest and occasion the future developments of faith and practice, and of these facts the most conspicuous was the unprecedented accession of Gentile proselytes at Antioch.

An opportunity soon occurred, of which Barnabas and Saul joyfully availed themselves, for proving the affluence of God towards his holy people. And for knitting the two communities together in the bonds of practical fellowship. A manifest impulse from the Holy Spirit began this work. There came "prophets" from Jerusalem to Antioch: "and there stood up one of them, named Agabus, and signified by the Spirit that there should be great dearth throughout all the world." The "prophets" who now arrived may have been the Simeon and Lucius and Manaen mentioned in xiii. 1, besides Agabus and others. The prediction of the dearth need not have been purposefully made. It was, perhaps, for the needs of the poorer brethren and the duty of the richer. It is obvious that the fulfilment followed closely upon the intimation of the coming famine. For the disciples at Antioch determined to send contributions immediately to Jerusalem; and the gifts were sent to the elders of that church by the hands of Barnabas and Saul. The time of this dearth is vaguely designated in the Acts as the reign of Claudius. It is ascertained from Josephus's history that a severe famine did actually prevail in Judea, especially at Jerusalem, at the very time fixed by the event recorded in Acts xii. the death of Herod Agrippa. This was in A.D. 44.

See AGABUS.

It could not have been necessary for the mere safe conduct of the contribution that Barnabas and Saul should go in person to Jerusalem. We are bound to see that the work flowed under his hands, and "much labor" of Antioch, of which this visit is illustrative, examples of the deep feeling of the necessity of union which dwelt in the heart of the early Church. The apostles did not go forth to teach a system, but to enlarge the church. They preached directly, and their labors was essentially the spirit of fellowship. By this spirit Saul of Tarsus was actually trained in strict co-operation with his elders in the Church. The habits which he learned now were to aid in guarding him at a later time from supposing that the independence which he was bound to claim should involve the slightest breach or loosening of the bonds of the universal brotherhood.

Having discharged their errand, Barnabas and Saul returned to Antioch; the new church, with them another helper, John named Mark, sister's son to Barnabas. The work of prophesying and teaching was resumed. Several of the oldest and most honored of the believers in Jesus were expounding the way of God and organizing the Church in that busy metropolis. Travellers were incessantly passing in and out. And Antioch was in constant communication with Cilicia, with Cyprus, with all the neighboring countries. The question must have forced itself upon hundreds of the "Christians" at Antioch, "What is the meaning of this faith of ours, of which we have been so intimate a part? Is it for the Son of God, for the world?" The Gospel is not for Judea alone; here we are called by it at Antioch. Is it meant to stop here?" The Church was pregnant with a great movement, and the time of her delivery was at hand. We forget the whole method of the divine work in the nurture of the Church if we acclimate to the impulses of the Holy Ghost any theatrical suddenness, and disconnect them from the thoughts which were brooding in the minds of the disciples. At every point we find both circumstances and inward reasonings. It is not a "miracle." Something of an inner meaning seems to be implied in what is said of the leaders of the Church at Antioch, that they were "ministering to the Lord, and fasting," when the Holy Ghost spoke to them. Without doubt they knew it for a seal set upon previous surmises, when the voice came clearly to the general mind, "Separate me Barnabas and Saul for the work whereunto I have called them." That "work" was partially known already to the Christians of Antioch: who could be so fit for it as the two brothers in the faith and in mutual affection, the son of exhortation, and the highly accomplished and undaunted convert of the first who had been named a "chosen vessel" to bear the name of the Lord before the Gentiles, and kings, and the people of Israel?" When we look back, from the higher ground of Paul's apostolic activity, to the years that passed between his conversion and the first missionary journey, we cannot observe without reverence the patient humility with which Saul waited for his Master's time. He did not say for once only, "Lord, what wilt thou have me to do?" Obedience to Christ was thenceforth his ruling principle. Submitting, as he believed, to his Lord's dispensation, he set forth as a servant of God, and as a subordinate colleague of his seniors in the faith. He was thus the better prepared, when the call came, to act with the authority which that call conferred upon him. He left Antioch, however, still the second to Barnabas. Everything was done with ordering gravity in the sending forth of the two missionaries. Their brethren, after fasting and prayer, laid their hands on them, and so they departed. A.D. 44.

5. First Missionary Journey.—Much must have been hidden from Barnabas and Saul as to the issues of the journey on which they embarked. But one thing was clear to them, that they were sent forth to speak the Word of God. They did not go in their own name or for their own purposes; they were instruments for uttering what the Eternal God himself was saying to men. We shall find in the history a perfectly definite representation of the whole mission and method of the journeyed from city to city. But the first characteristic feature of his teaching was the absolute conviction that he was only the bearer of a heavenly message. It is idle to discuss Paul's character or views without recognizing his direct and unique mission, as of a man who was capable of cherishing such a conviction with perfect assurance. We are bound to bear in mind the unspoken influence which that conviction must have exerted upon his nature. The writer of the Acts proceeds upon the same assumption. He
Paul's First Missionary Voyage.

tells us that as soon as Barnabas and Saul reached Cyprus, they began to "announce the Word of God."

The second fact to be observed is, that for the present they delivered their message in the synagogues of the Jews only. They trod the old path till they should be drawn out of it. But when they had gone through the island, from Salamis to Paphos, they were called upon to explain their doctrine to an eminent Gentile, Sergius Paulus, the proconsul. This Roman officer, like so many of his countrymen, had already come under the influence of Jewish teaching; but it was in the corrupt form of magical pretensions which throng so luxuriantly upon the godless credulity of that age. A Jew, named Barjesus, or Elymas, a magus and false prophet, had attached himself to the governor, and had no doubt interested his mind, for he was an intelligent man, with what he had told him of the history and hopes of the Jews. See Elymas. Accordingly, when Sergius Paulus heard of the strange teachers who were announcing to the Jews the advent of their true Messiah, he wished to see them, and sent for them. The impostor, instinctively hating the apostles, and seeing his influence over the proconsul in danger of perishing, did what he could to withstand them. Then Saul, "who is also called Paul," denouncing Elymas in remarkable terms, declared against him God's sentence of temporary blindness. The blindness immediately fell upon him; and the proconsul, moved by the scene and persuaded by the teaching of the apostle, became a believer.

There is a singular parallelism in several points between the history of Paul and that of Peter in the Acts. Paul presents it in a highly effective form (Paul, p. 91 etc.), to support his theory of the composition of this book; and this is one of the services which he has incidentally rendered to the full understanding of the early history of the Church. Thus Paul's discomfiture of Elymas reminds us of Peter's denunciation of Simon Magus. The two incidents bring strongly before us one of the great adverse elements with which the Apostles had to contend in that age. Everywhere there were counterfeits of the spiritual powers which the apostles claimed and put forth. It was necessary for the preachers of Christ, not so much to prove themselves stronger than the magicians and sorcerers, as to guard against being confounded with them. One distinguishing mark of the true servants of the Spirit would be that of not trading upon their spiritual powers (Acts viii, 20). Another would be that of shunning every sort of covenants, and amulets, and incantation. Saul had two of these in his day: the light of open truth. Paul's language to Elymas is studiously directed to the reproof of the tricks of the religious impostor. The apostle, full of the Holy Ghost, looked steadily on the deceiver, spoke in the name of a God of light and righteousness and straightforward ways. The position of that God was against the indication of truth against delusion. The punishment of Elymas was itself symbolical, and conveyed "teaching of the Lord." He had chosen to create a spiritual darkness around him; and now there fell upon him a mist and a darkness, and he went about seeking on his face to lead him by the hand. If in reading this account we refer to Peter's reproof of Simon Magus, we shall be struck by the differences as well as the resemblance which we shall observe. But we shall undoubtedly gain a stronger impression of this part of the apostolic work, when we contrast it to be thus cast out of the Spirit of Christ and of the Church and the evil spirits of a dark supposition to which men were surrendering themselves as slaves. We shall feel the worth and power of that candid and open temper in which alone Paul would commend his cause; and in no person of any distinction of Sergius Paulus we shall see an exemplary type of many victories to be won by truth over falsehood.

This point is made a special crisis in the history of the apostle by the writer of the Acts. Saul now becomes Paul, and begins to take precedence of Barnabas. Nothing is said as to the change of name. No reader could resist the temptation of supposing that there must be some connection between Saul's new name and that of his distinguished Roman convert. But on reflection it does not seem probable that Paul would either have wished, or have consented, to change his own name for that of a distinguished convert. If we put Sergius Paulus aside, we know that it was exceedingly common for Jews to bear, besides their own Jewish name, another borrowed from the country with which they had become connected (see Conybeare and Howard, l. 186, full illustration). Thus Simon called Niger, Barsabas also named Justus, John also named Marcus. There is no reason therefore why Saul should not have borne from infancy the other name of Paul. In that case he would be Saul among his own countrymen, Paulus among the Gentiles. We must regard the name as a later one, the transition point between Saul's activity among his own countrymen and his new labors as the apostle of the Gentiles, by calling him Saul only during the first, and Paul only afterwards. (See above.)

The conversion of Sergius Paulus may be said, perhaps, to mark the beginning of the work among the Gentiles; otherwise, it was not in Cyprus that any change took place in the method hitherto followed by Barnabas and Saul in preaching the Gospel. Their public addresses were as yet confined to the synagogue: but it was soon to be otherwise. From Paphos "Paul and his company" set sail for the mainland, and arrived at Perga in Pamphylia. Here the heart of their companion John failed him, and he returned to Jerusalem. From Perga they travelled on to a place, obscure in secular history, but most memorable in the history of the kingdom of Christ—Antioch in Pisidia (q. v.). They "went into the synagogue on the Sabbath-day, and sat down." Small as the place was, it contained its colony of Jews, and with them proselytes who worshipped the God of the Jews. The degree to which the Jews hastened and settled themselves upon the soil, and the influence they had gained over the more
respective of their Gentile neighbors, and especially over the women of the better class, are facts difficult to appreciate justly, but are proved by undisputed evidence, and are very important for us to bear in mind. This Pisidian Antioch may have been more Jewish than most similar communities, but it was not more so than many of much greater size and importance. What took place here in the synagogue and in the city is interesting to us not only on account of its bearing on the history, but also because it represents more or less exactly what afterwards occurred in many other places. It cannot be without design that Paul has single but detailed examples given us in the Acts of the various kinds of addresses which he used to deliver in appeal to his different audiences. He had to address himself, in the course of his missionary labors, to Jews, knowing and receiving the Scriptures; to ignorant barbarians; to cultivated Greeks; to mobs enraged against him personally; to magistrates and kings. It is an inestimable help in studying the apostle and his work that we have specimens of the tone and the arguments he was accustomed to use in all these situations. These will tell us much about the synagogues in Antioch. In what he said in the synagogue in Antioch we recognize the type of the addresses in which he would introduce his message to his Jewish fellow-countrymen.

The apostles sat silent with the rest of the assembly, while the Law and the Prophets were read. They and their hearers were engaged in meditating on the Word of God, while the Law and Prophets, handed down by the scribes, were read. The rulers of the synagogue sent to invite them, as strangers but brethren, to speak any word of exhortation which might be in them to the people. Paul stood up, and, beckoning with his hand, he spoke. (The speech is given in Acts, 13:14-41.) The address begins by acknowledging the God of this people Israel. He ascribes to him the calling out of the nation and the conduct of its subsequent history. He touches on the chief points of that history up to the reign of David, whom he brings out in prominence. He then names Jesus as the promised Son of David. To convey some knowledge of Jesus to the minds of his hearers, he recounts the chief facts of the Gospel history; the preparation of the function and of the John; the condemnations of the rulers who knew either him nor the prophets, and his resurrection. That Resurrection is declared to be the fulfillment of all God's promises of life, given to the fathers. Through Jesus, therefore, is now proclaimed by God himself the forgiveness of sins and the remission of their guilt The same passages are quoted from the prophets a warning against unbelief. If this is an authentic example of Paul's preaching, it was impossible for Peter or John to start more exclusively from the Jewish covenant and promises than did the apostle of the Gentiles. How entirely this discourse resembles those of Peter and of Stephen in the earlier chapters of the Acts! There is one only specially Pauline touch in the whole—the words in ver. 39, "By Him all that believe are justified from all things, from which ye could not be justified by the law of Moses." Erv. 10:38. It is used unbelievably and "It is evident that we are dealing with a mere fiction, 'to prevent the speech of appearing too Petrine, and to give it a slightly Pauline air." Certainly, it sounds like an echo of the Epistles to the Romans and Galatians. But is there therefore the slightest incongruity between this and the other parts of the address? Does it not rather suggest the distinctness of sins" which Peter and Paul proclaimed with the most perfect agreement connect itself naturally, in the thoughts of one exercised by the law as Saul of Tarsus had been, with justification not by the law but by grace? If so, just the right moment for a decree of Lysa and Derbe, the church of which the old apostles held in Jesus of Nazareth, the Messiah of the Jews, crucified and raised from the dead according to the teaching of the prophets, and in the remission of sins through him confirmed by the gift of the Holy Ghost; and that he had also had those experiences, not known to the older apostles, of which we see the working in the Epistles to the Romans and Galatians, this speech, in all its parts, is precisely what we might expect: this is the very teaching which the apostle of the Gentiles must have given according to the ways set forth, when he was speaking "God's Word" for the first time to an assembly of his fellow-countrymen.

The discourse thus epitomized produced a strong impression; and the hearers (not "the Gentiles," which was the best MSS. omit) requested the apostles to repeat their message on the next Sabbath. During the week so much interest was excited by the teaching of the apostles that on the Sabbath-day "almost the whole city came together to hear the Word of God." It was this concern of the Gentiles which appears to have first alienated the minds of the Jews from what they had heard. They were filled with envy. They probably felt that there was a difference between those efforts to gain Gentile proselytes in which they had themselves been so successful and this new preaching of a Messiah in whom a justification which the law could not give was offered to men. The eagerness of the Gentiles to hear may have confirmed their instinctive apprehensions. The Jewish envy once roused became a power of deadly hostility to the Gospel; and these Jews at Antioch set themselves to oppose bitterly the words which Paul spoke. We have here, therefore, a new phase in the history of the Church. In the countries in whichAntioc hia is the cross or Nazareth which is immediately repulsive to the Jews in the proclaiming of Jesus. It is the word given to Jewish importance in the association of Gentiles with Jews as the receivers of the gospel tidings. If the Gentiles had been asked to become Jews, no offence would have been taken. But the proclamation of the Christ could not be thus governed by its own force, these narrowing methods. It was felt to be addressed not to one nation only, but to mankind. The new opposition brought out new action on the part of the apostles. Rejected by the Jews, they became bold and outspoken, and turned from them to the Gentiles. They remembered and declared what the prophets had foretold of the enlightening and deliverance of the whole world. In speaking to the Gentiles, therefore, they were simply fulfilling the promise of the Covenant. The gift, we observe, of which the Jews were depriving themselves, and which the Gentiles who believed were accepting, is described as "eternal life" (σωτηρίας). It was the life of which the risen Lord was speaking in the garden, which was declared at Jerusalem, and of which all acts of healing were set forth as signs. This was now poured largely upon the Gentiles. The Word of the Lord was published widely, and had much fruit. Henceforth Paul and Barnabas knew it to be their commission, not the less to present their message to Jews first, but in the absence of an adequate Jewish medium to deal directly with the Gentiles. But this expansion of the Gospel work brought with it new difficulties and dangers. At Antioch now, as in every city afterwards, the disciples were threatened by two things: with the prohibition among the Gentiles, and especially the women of the higher class, to persuade the authorities or the populace to persecute the apostles, and to drive them from the place.

With their own spirits raised, and amid much enthusiasm of their disciples, Paul and Barnabas now travelled on to Iconium, where the occurrences at Antioch were repeated, and from thence to the Lycaonian country, which contained the cities Lystra and Derbe. Here they had to deal with uncivilized heathens. At Lystra the driving of a cripple, in which the name of which runs very parallel to the account of the similar act done by Peter and John at the gate of the Temple. The agreement becomes closer, if we insert here, with Lachmann, before "Stand upright on thy feet," the
words, "I say unto thee in the name of the Lord Jesus Christ." The parallel leads us to observe more distinctly that every messenger of Jesus Christ was a herald of life. The spiritual life—the ζωή—was which is of faith, is illustrated and expounded by the invigoration of impotent limbs. The same truth was to be conveyed to the inhabitants of Jerusalem, and to the heathens of Lycaonia. The act was received naturally by these pagans. They took the apostles for gods, calling Barnabas, who was of the more imposing presence, Zeus (Jupiter), and Paul, who was the chief speaker. However, the apostles were mistaken here by the attempt to offer sacrifices to them, given occasion to the recording of an address in which we see a type of what the apostles would say to an ignorant pagan audience. Appeals to the Scriptures, references to the God of Abraham and Isaac and Jacob, would have been out of place. The apostles name the living God, who made heaven and earth and the sea, and all things therein; the God of the whole world, and all the nations in it. They declare themselves to be his messengers. They expatiate upon the tokens of himself which the Father of men had not withheld, in that he did them good, sending down his Son and fruiting them as the supporters of life and joy. They protest that in restoring the cripple they had only acted as instruments of the living God. They themselves were not gods, but human beings of like passions with the Lycaonians. The living God had not so far lost his videlicet, his desire to men, desiring that henceforth the nations should not walk in their own ways, but his. They therefore call upon the people to give up the vanities of idol worship, and to turn to the living God (comp. 1 Thess. i. 9, 10).

In this address the name of Jesus does not occur. It is easy to understand that the apostles preached him as the Son of that living God to whom they bore witness, telling the people of his death and resurrection, and announcing his coming again.

Although the people of Lystra had been so ready to worship Paul and Barnabas, the repulse of their idolatrous instincts appears to have provoked them, and they allowed themselves to be persuaded into hostility by Jews who came from Antioch and Iconium, so that they attacked Paul with stones, and thought they had killed him. He recovered, however, as the disciples were standing round him, and went again into the city. The next day he left it with Barnabas, and went to Derbe, and thence they returned once more to Lystra, and so to Iconium and Antioch, renewing their exhortations to the disciples, bidding them not to think their trials strange, but to believe as numerous as the stars in the sky, through which the kingdom of heaven, into which they were called, was to be entered. In order to establish the churches after their departure, they solemnly appointed "elders" in every city. Then they came down to the coast, and from Attalia they sailed home to Antioch in Syria, where they related the successes which had been granted to them, and especially the "opening of the door of faith to the Gentiles." Thus the First Missionary Journey ended.

6. Apostolic Council at Jerusalem (Acts xv; Gal. ii.)—The journey follows the main narrative up to the next important scene which the historian sets before us—the council held at Jerusalem to determine the relations of Gentile believers to the law of Moses. A.D. 47. In following this portion of the history, we encounter two of the greater questions which the biographer of Paul has to consider. One of these is historical. What were the relations between the apostle Paul and the twelve? The other is critical. How is Galatians ii to be connected with the narrative of the Acts?

The relations of Paul and the twelve will best be set forth in the narrative. But we must examine what we accept Paul's statements in the Galatian epistle as additional to the history in Acts xv. The first impression of any reader would be a supposition that the two writers might be referring to the same event. The one would at least bring the other to his mind. In both he reads of Paul and Barnabas going up to Jerusalem, reporting the Gospel preached to the uncircumcised, and discussing with the older apostles the terms to be imposed upon Gentile believers. In both the conclusion is announced that these believers should be entirely free from the necessity of circumcision. These are main points which the narratives have in common. On looking more closely into both, the second impression upon the reader's mind may possibly be that of a certain incompatibility between the two. Many joints and members have been detached from the body of the Law, as states in the account of Paul. Others in one or two cases are substituted. Further, the visit to Jerusalem is the third mentioned in the Acts, after Saul's conversion; in Galatians, it is apparently mentioned as the second. Supposing this sense of incompatibility to remain, the reader will go on to inquire whether the visit to Jerusalem mentioned in Galatians coincides better with any other mentioned in the Acts—as the second (xi, 30) or the fourth (xviii, 22). He will, in all probability, conclude without hesitation that it does not. Another view will remain, that Paul refers to a visit which is impossible hypothesis; and it is recommended by the vigorous sense of Paul. But where are we to place the visit? The only possible place for it is some short time before the visit of ch. xv. But it can scarcely be denied that the language of ch. xv depicts the visit distinctly, visiting his own country, first paid by Paul and Barnabas to Jerusalem after their great success in preaching the Gospel among the Gentiles. We suppose the reader, therefore, to recur to his first impression. He will then have to ask himself, "Granting the considerable differences, are there after all any plain contradictions between the two narratives, taken to refer to the same occurrences?" The answer must be, "There are no plain contradictions." This, he will perceive, is a very weighty fact. When it is recognized, the resemblance first observed will return with renewed force to the mind. (The chronological question will be considered below.)

We proceed then to combine the two narratives. While Paul and Barnabas were staying at Antioch, "certain men from Judea" came there and taught the brethren that it was necessary for the Gentiles to be circumcised. This doctrine was vigorously opposed by the two apostles, and it was determined that the question should be referred to the apostles and elders at Jerusalem. Paul and Barnabas themselves, and certain others, were selected for this mission. In Gal. ii, 2 Paul went up not merely to learn what was going on, but to lay the question before the Church. We are to understand him as receiving a private intimation from the Divine Spirit, as well as a public commission from the Church at Antioch. On their way to Jerusalem, they announced to the brethren in Phocasia and Samaria the conversion of the Gentiles; and the news was received with great joy. "When they were come to Jerusalem, they were received by the Church, and by the apostles and elders, and they declared all things that God had done with them" (Acts xv, 4). Paul adds that he communicated his views in a private interview with his "counsellors of reputation," through anxiety as to the success of his work (Gal. ii, 2). The apostles and the Church in general, it appears, would have raised no difficulties; but certain believers who had been Pharisees thought fit to maintain the same doctrine which had caused the disturbance at Antioch. In either place, Paul would have been reaching for a single hour (Gal. ii, 5). It became necessary, therefore, that a formal decision should be reached upon the question. The apostles and elders came together, and there was much disputing. Arguments would be used on both sides; but there was no statement of higher authority, since they appealed to what was stronger than arguments—the course of facts, through which the will of God had been manifestly shown. Peter, reminding his hearers that he himself had been first employed to
open the door of faith to Gentiles, points out that God had himself bestowed on the uncircumcised that which was the seal of the highest calling and fellowship in Christ, the gift of the Holy Ghost. "Why do you not acquiesce in this token of God's will? Why impose upon Gentile believers ordinances which we ourselves have found unnecessary?" Have not you been taught, "When there is no more giving of a law, there is no more trusting in our law, to depend only on the grace of our Lord Jesus Christ?" Then, carrying out the same appeal to the will of God as shown in facts, Barnabas and Paul relate to the silent multitude the wonders with which God had accompanied their preaching among the Gentiles. After they had done, James, with incomparable simplicity and wisdom, binds up the testimony of recent facts with the testimony of ancient prophecy, and gives a practical judgment upon the question.

The judgment was a decisive one. The injunction that the Gentiles should abstain from pollutions of idols and from fornication explained itself. The abstinence from things strangled and from blood is desired as a concession to the customs of the Jews who were to be found in every city, and for whom it was still right, when they had believed in Jesus Christ, to observe the law. Paul had completely gained his point. The older apostles, James, Cephas, and John, perceiving the grace which had been given him (his effectual apostleship), gave to him and Barnabas the right hand of fellowship. At this point it is very important to observe precisely what was the matter at stake, conforming to the law of Moses. That was not what Paul was protesting against. The case stood thus: Circumcision and the ordinances of the law were witnesses of a separation of the chosen race from other nations. The Jews were proud of that separation. But the Gospel of the Son of Man proclaimed that the time had come in which the separation was to be done away, and God's good-will manifested to all nations alike. It spoke of a union with God, through trust, which gave hope of a righteousness that the law was powerless to produce. Therefore to insist upon Gentiles being circumcised would have been to deny the Gospel of Christ. If there was to be simply an enlarging of the separated nation by the receiving of individuals into it, then the other nations of the world remained as much on the outside of God's covenant as ever. Then there was no Gospel to mankind; no justification given to men through faith in the Messiah, as it was to the Jew as to the Gentile. Paul felt this the most strongly; but Peter also saw that if the Jewish believers were thrown back on the Jewish law, and gave up the free and absolute grace of God, the law became a mere burden, as heavy to the Jew as it would be to the Gentile. The hope for the Jew was in a Saviour who must be the Saviour of mankind. It implied therefore no difference of belief when it was agreed that Paul and Barnabas should go to the heathen, while James and Cephas and John undertook to be the apostles of the Jews, and that Peter would be the first to preach "to the Jew first;" Peter was to preach to the Jews as free a Gospel as was to teach the admission of the Gentiles without circumcision as distinctly as Paul himself. The unity of the Church was to be preserved unbroken; and in order to nourish this unity the Gentiles were to remember their poorer brethren in Palestine (Gal. ii. 10). How zealously Paul cherished this beautiful testimony of the common brotherhood we have seen in part already (Acts xi, 29, 30), but it is yet to appear more strikingly.

The judgment of the apostles was immediately recorded in a letter addressed to the Gentile brethren in Antioch and Syria and Cilicia. That letter might carry greater authority, it was intuited to "chosen men of the Jerusalem Church, Judges surnamed Barnabas, and Silas, chief men among the brethren." The letter speaks affectionately of Barnabas and Paul (with the elder Church Barnabas still retained the precedence, xv, 25) as "men who have hazardcd their lives for the name of our Lord Jesus Christ." So Judas and Silas came down with Paul and Barnabas to Antioch, and comforted the Church there with their message, and when Judas returned "it pleased Silas to abide there still."

It is usual to connect with this period of the history that rebuke of Peter which Paul records in Gal. ii, 11-14. The connection of subject makes it convenient to record the incident in this place, although it is possible that it took place before the meeting at Jerusalem, and perhaps most probable that it did not occur till later, when Paul returned from his long tour in Greece to Antioch (Acts xviii, 22, 23). (The presence of Peter, and the growth of Jewish prejudice, are more easily accounted for, if we suppose Paul in the meanwhile to have left Antioch for a long time; and there was but a very short interval between the council at Jerusalem and his second missionary tour.) Peter was at Antioch, and had shown no scruple about "eating with the Gentiles," until "certain came from James." These Jerusalem Christians brought their Jewish exclusiveness with them, and Peter's weaker and more timid mood came upon him, and through fear of his stricter friends he too began to withdraw himself from his former free association with the Gentiles. Some example had to be set in Antioch. Barnabas and the other Jews at Antioch were partly seduced by it. It was an occasion for the intertrepid faithfulness of Paul. He did not conceal his anger at such weak dissembling, and as publicly remonstrated with his elder fellow-apostle. "If thou, being a Jew, after the manner of Gentiles, and not as the Jews, why complest thou the Gentiles to live as do the Jews?" (Gal. ii, 14). Peter had abandoned the Jewish exclusiveness, and deliberately claimed common ground with the Gentile: why should he, by separating himself from the uncircumcised, require the Gentiles to qualify themselves for full communion by accepting circumcision? This "withstanding" of Peter was no opposition of Pauline to Petrine views; it was a faithful rebuke of blamable moral weakness.

7. Second Missionary Journey.—The most resolute courage, indeed, was required for the work to which Paul was now publicly pledged. He would not associate with himself in that work one who had already shown a want of constancy. This was the occasion of what must have been a most painful difference between Paul and Barnabas in the church in Antioch and among the Gentiles. After remaining a while at Antioch, Paul proposed to Barnabas to revisit the brethren in the countries of their former journey. Herod the Barnabas desired that his nephew John Mark should go with them. But John had deserted them in Pamphylia, and Paul would not try him again. "And the contention was so sharp between them that they departed asunder one from the other; and so Barnabas took Mark, and sailed unto Cyprus; and Paul chose Silas, and departed." A.D. 47. Silas, or Silvanus, now becomes a chief companion of Paul on his subsequent apostle. The two seem to have been in Syria and Cilicia, visiting the churches, and so came to Derbe and Lystra. Here they found Timotheus, who had become a disciple on the former visit of the apostle, and who so attracted the esteem and love of Paul that he would have him go forth with them. Him Paul took and circumcised. If this fact had been evident before, it was stated in another narrative, how utterly irreconcilable it would have been, in the eyes of some critics, with the history in the Acts! Paul and Silas were actually delivering the Jerusalem decree to all the churches they visited. They were no doubt trusted in the mission secured to the Gentiles. Yet at this very time our apostle had the wisdom and largeness of heart to consult the feelings of the Jews by circumcising Timothy. There were many Jews in those parts, who knew that Tim-
othy's father was a Greek, his mother a Jewess. That Paul should have had, as a chief companion, one who was uncircumcised, would of itself have been a hindrance to him in preaching to Jews; but it would have been a still greater stumbling-block if that companion were half a Jew by birth, and had professed the Jewish faith. Therefore in this case Paul “became unto the Jews as a Jew that he might gain the Jews.”

Luke now steps rapidly over a considerable space of the apostle’s life and labors. “They went throughout Phrygia and the region of Galatia” (xvi, 6). At this time Paul was founding “the churches of Galatia” (Gal. i, 2). He himself gives us hints of the circumstances of his preaching in that region, of the reception he met with, and of the ardent though unstable character of the people, in the following words: “Ye know how through infirmity of the flesh (υἱὸν εἰς ἀσθένειαν τῆς σαρκός) I preached the Gospel unto you at the first (τῷ πρώτῳ), and my temptation which was in my flesh ye despised not, nor rejected; but received me as an angel of God, even as Christ Jesus. Where is then the blessedness ye spake of (τῷ μακαρισμῷ ὑμῶν, q. d. your beatification) of me? for I bear you record that, if it had been possible, ye would have plucked out your own eyes, and have given them to me” (iv, 13). It is not easy to decide as to the meaning of the words ἐν ἀσθένειᾳ τῆς σαρκός. Undoubtedly their grammatical sense implies that “weakness of the flesh”—an illness—was the occasion of Paul’s preaching in Galatia; and De Wette and Alford adhere to this interpretation, understanding Paul to have been detained by illness, when otherwise he would have gone rapidly through the country. On the other hand, the form and order of the words are not what we should have expected if the apostle meant to say this; and professor Dowett prefers to assume an inaccuracy of grammar, and to understand Paul as saying that it was in weakness of the flesh that he preached to the Galatians. In either case Paul must be referring to a more than ordinary pressure of that bodily infirmity of which he speaks elsewhere as detracting from the influence of his personal address.

It is hopeless to attempt to determine positively what this infirmity was. But we may observe here (1) that Paul’s sensitiveness may have led him to exaggerate this personal disadvantage; and (2) that, whatever it was, it allowed him to go through sufferings and hardships such as few ordinary men could bear. It certainly did not repel the Galatians; it appears rather to have excited their sympathy and warmed their affection towards the apostle. (See below.)

Paul at this time had not indulged the ambition of preaching his Gospel in Europe. His views were limited to the peninsula of Asia Minor. Having gone through Phrygia and Galatia, he intended to visit the western coast of Asia Minor; but “they were forbidden by the Holy Ghost to preach the Word” there. Then, being on the borders of Myisia, they thought of going back to the north-east into Bithynia; but again “the Spirit of Jesus (so the best MSS. read in Acts xvi, 6) suffered them not.” So they passed by Myisia, and came down to Troas. A.D. 48. Here the Spirit of Jesus, having checked them on other sides, revealed to them in what direction they were to go. Paul saw in a vision a man of Macedonia, who besought him, saying, “Come over into Macedonia and help us.” The vision was at once accepted as a heavenly intimation: the help wanted by the Macedonians was believed to be the preaching of the Gospel. It is at this point that the historian, speaking of Paul’s company, substitutes “we” for “they.” He says nothing of himself; we can only infer that Luke, to whatever country he belonged, became a companion of Paul at Troas. It is perhaps not too arbitrary a conjecture that the apostle, having recently suffered in health, derived benefit from the medical skill and attendance of the beloved physician. The party, thus reinforced, immediately set sail from Troas, touched at Samothrace, then landed on the continent at Neapolis, and from thence journeyed to Philippi. They hastened to carry the “help” that had been asked to the first considerable city in Macedonia. Philippi was no inapt representative of the Western world. A Greek city, it had received a body of Roman
settlers, and was politically a Colonia. We must not assume that to Saul of Tarsus, the Roman citizen, there was anything very novel or strange in the world to which he had now come. But the name of Greece must have represented very imposing ideas to the Oriental and the Jew; and we may silently imagine what it meant to him when he came round the apostolic company joined their countrymen at the place by the river-side where prayer was wont to be made (οδόν εὐφωνῆς προσευχής, where was the usual prosenuchē or chapel which supplied the purpose of a synagogē). The narrative in this fourth very great chapter, "We sat down," says the writer (xvi. 13), "and spoke to the women who had come together." Among these women was a proselyte from Thyatira (εisherιs τοῦ θεοῦ), named Lydia, a dealer in purple. As she listened "the Lord opened her heart" to attend to what Paul was saying, and she called the servant of Paul, a certain Asian woman who already worshipped the God of the Jews; but she was a very earnest believer, and besought the apostle and his friends to honor her by staying in her house. They could not resist her urgency, and during their stay at Philippi they were the guests of Lydia (Acts xvi. 14).

But a proof was given before long that the preachers of Christ had come to grapple with the powers in the spiritual world to which heathenism was then doing homage. A female slave, who brought gain to her master by her divination when she was in the promised state, beset Paul and his company, following them as they went to the place of prayer, and crying out, "These men are servants of the Most High God, who publish to you (or to us) the way of salvation." Paul was vexed by her cries, and addressing the spirit in the girl, he said, "I command thee in the name of Jesus Christ to come out of her." Comparing the confession of this "spirit of divination" with the analogous confessions made by evil spirits to our Lord, we see the same singular character of a true acknowledgment extorted as if by force, and rendered with a certain insolence. The subject of this spirit, and the spirit itself, not only being, in the sight of the slave, not a willing subject, were not willingly subject. The cries of the slave-girl may have sounded like sneers, mimicking what she had heard from the apostles themselves, until Paul's exorcism, "in the name of Jesus Christ," was needed. The spirit might have known that in truth a servant of the Most High God, giving an example of the salvation which he brought, in the deliverance of this poor girl herself from the spirit which degraded her. See Pythoness.

But the girl's masters saw that now the hope of their gains was gone. Here at Philippi, as at Ephesus, the local trade in religion began to suffer from the manifestation of the Spirit of Christ, and an interested appeal was made to local and national feelings against the dangerous innovations of the Jewish strangers. Paul and Silas were dragged before the magistrates, the multitude clamoring to cast out the spirit, and upon the vague charge of "troubling the city," and introducing observances which were unlawful for Romans. If the magistrates had desired to act justly they might have doubted how they ought to deal with the charge. On the one hand Paul and Silas had absolute authority, as the preachers of Christ always did, from disturbing public order, and had as yet violated no express law of the state. But on the other hand, the preaching of Jesus as King and Lord was unquestionably revolutionary, and aggressive upon the public religion in its effects; and the Roman law was certainly general, in terms against such innovations (see in Coneybear and Howson, i, 324). But the preators or duumviri of Philippi were very unworthy representatives of the Roman magistracy. They yielded without inquiry to the clamor of the inhabitants, caused the clothes of Paul and Silas to be torn from them, and themselves to be beaten, and then committed them to prison. The jailer, having received their commands, "thrust them into inner chambers of the house, and made them fastest by chains. This cruel wrong was to be the occasion of a signal appearance of the God of righteousness and deliverance. It was to be seen which were the true servants of such a God, the magistrates or these strangers. In the night Paul and Silas, sore and sleepless, but putting their trust in God, prayed and sang Songs of Salvation before the ground beneath them was shaken, the doors were opened, and every prisoner's hands were struck off (compare the similar opening of prison-doors in xii, 6-10, and xvi, 19). The jailer awoke and sprang up, saw with consternation that the prison-doors were open, and, concluding that the prisoners had all fled, drew his sword to kill himself. But Paul called to him loudly, "Do thyself no harm; we are all here." The jailer's fears were then changed to an overwhelming awe. What had called for this punishment, this outcry, this trembling before the feet of Paul and Silas. Bringing them out from the inner dungeon, he exclaimed, "Sirs, what must I do to be saved?" (τι μὴ διὰ τούτου εἰσάχθω). They answered, "Believe in the Lord Jesus Christ, and thou shalt be saved, and thy house." And they were commanded to him and to his household to believe in the "Word of the Lord." The kindness he now showed them reminds us of their miseries. He washed their wounds, took them into his own house, and spread a table before them. The same night he received baptism, "he and all his," and rejoiced in his new-found faith in God.

In the morning the magistrates, either having heard of what had happened, or having repented of their injustice, or having done all they meant to do by way of pacifying the multitude, sent word to the prison that the men might be let go. But legal justice was more clearly vindicated in the persons of these men, who had been charged with subverting public order. Paul denounced plainly the unlawful acts of the magistrates, informing them moreover that those whom they had beaten and imprisoned without trial were Roman citizens, and that they might do as they pleased, "Nay, verily, but let them come themselves and fetch us out." The magistrates, in great alarm, saw the necessity of humbling themselves ("Facinus est vinciri cive Romanum, seilis verbearb"); Cicero, in Verres, v, 45), so that they might have the opportunity of leaving the city. Paul and Silas consented to do so, and, after paying a visit to "the brethren" in the house of Lydia, they departed.

The Church thus found at Philippi, as the first-fruits of the Gospel in Europe (save the nucleus already formed at Rome, Acts ii, 10), was called, as we have seen, in the name of a spiritual deliverer, of a God of justice, and of an equal Lord of freemen and slaves. That a warm and generous feeling distinguished it from the first we learn from a testimony of Paul in the Epistle written long after to this Church. "In the beginning of the Gospel," as soon as he left them, they began to send him gifts, some of which reached him at Thessalonica, others afterwards (Phil. iv, 15, 16). Their partnership in the Gospel (κοινωνία ἐκ τοῦ τόπου) had gladly the apostle from the first day (Phil. i, 5), leaving Luke, and perhaps Timothy for a short time, at Philippi, Paul and Silas travelled through Amphipolis and Apollosa, and stopped again at Thessalonica. At this important city there was a synagogue of the Jews. True to his custom, Paul went in to them, and for three Sabbath-days proclaimed Jesus to be the Christ, as he would have him circumscribe the circuit of Macedonia. As usual, the proselytes were those who heard him most gladly, and among them were many women of station.
Again, as in Pasidian Antioch, the envy of the Jews was excited. They contrived to stir up the lower class of the city to tumultuous violence by representing the preachers of Christ as revolutionary disturbers, who had come to proclaim one Jesus as king instead of Caesar. They described the house of Jason, with whom Paul and Silas were staying as guests, and, not finding them, dragged Jason himself and some other brethren before the magistrates. In this case the magistrates, we are told, and the people generally, were "troubled" by the rumors and succincted to hear the truth. But they seem to have acted wisely and justly in taking security of Jason and the rest, and letting them go. After these signs of danger the brethren immediately sent away Paul and Silas by night.

The Epistles to the Thessalonians, written soon after the apostle's visit, contain much anathematization in found in that Church than we find in any other Epistle. The whole of these letters ought to be read for the information they thus supply. Paul speaks to the Thessalonian Christians as being mostly Gentiles. He reminds them that they had turned from idols to serve the living and true God, and to wait for his Son from heaven, whom he raised from the dead, "Jesus who delivers us from the coming wrath" (1 Thess. i, 9, 10). The apostle had evidently spoken much of the coming and presence of the Lord Jesus Christ, and of the need of every one already desiring the Lord's coming to be found in harmony with the Jews (ii, 16, 19, etc.). His message had had a wonderful power among them, because they had known it to be really the word of a God who also wrought in them, having had helps toward this conviction in the zeal and disinterestedness and affection with which Paul (notwithstanding his recent shameful treatment at Philippi) proclaimed his Gospel among them (ii, 2, 8, 13).

He had purposely wrought with his own hands, even night and day, that his disinterestedness might be more apparent (1 Thess. ii, 9; 2 Thess. iii, 8). He exhorted them not to be drawn away from patient industry by the example of the kingdom of the kings into which they were called, but to work quietly, and to cultivate purity and brotherly love (1 Thess. iv, 8, 9, 11). Connecting these allusions with the preaching in the synagogues (Acts xvii, 3), we see clearly how the teaching of Paul had turned upon the person of Jesus Christ as the Son of the living God, prophesied of in the Scriptures, suffering and dying, raised up and exalted to a kingdom, and about to appear as the Giver of light and life, to the destruction of his enemies and the saving of those who trusted in him (Acts xxvii, 23, etc.). Paul and Silas left Thessalonica they came to Beroea. Here they found the Jews more noble (ὁμολογούμενοι) more disposed to receive the news of a rejected and crucified Messiah, and to examine the Scriptures with candor, than those at Thessalonica had been. According they gained many converts, both Jews and Greeks; but the Jews of Thessalonica, hearing of it, sent emissaries to stir up the people, and it was thought best that Paul should himself leave the city, while Silas and Timothy remained behind. Some of "the brethren" went with Paul (probably by sea) as far as Athens, where they left him, and made request to Timothy that they would speedily join him. He apparently did not like to preach alone, and intended to rest from his apostolic labor until they should rejoin him; but how could he refrain, with all that was going on at Athens round him? There he witnessed the most profuse idolatry side by side with the most pretentious philosophy. Either of these would have been enough to stimulate his spirit. To idolaters and philosophers he felt equally urged to proclaim his Master and the living God. So he went to his own countrymen and the proselytes in the synagogue and declared to them that the things which they had come; but he also spoke, like another Socrates, with people in the market, and with the followers of the two great schools of philosophy, Epicureans and Stoics, naming to all Jesus and the Resurrection. The philosophers encountered him with a mixture of curiosity and contempt. The Epicurean, teaching himself to seek for tranquill enjoyment as the chief object of life, heard of One claiming to be the Lord of men, who had shown them the glory of dying to self, and had promised to give his righteousness to those who trust in him. To the Stoic, cultivating a stern and isolated moral independence, heard of One whose own righteousness was proved by submission to the Father in heaven, who had promised to give his righteousness to those who trust in him, and do not allow themselves to be led by the desires of the flesh, but to him. To all, the announcement of a Person was much stronger than the publishing of any theories would have been. So far as they thought the preacher anything but a sly trifler, he seemed to them, not a philosopher, but a "sester forth of strange gods" (Acts xviii, 17). But one thing was novelty was welcome to those who "spent their time in nothing else but either to hear or to tell some new thing." They brought him therefore to the Areopagus, that he might make a formal exposition of his doctrine to an assembled audience. See AREOPOGUS.

We are not to think here of the council or court, renowned in the oldest Athenian history, which took its name from Ares' Hill, but only of the elevated spot where the council met, not covered in, but arranged with benches and steps of stone, so as to form a convenient or pulpit. The speech delivered there has been well delivered that wonderful discourse in Acts xxvii, 22-31, which seems as fresh and instructive for the intellect of the 19th century as it was for the intellect of the 1st. In this we have the Pauline Gospel as it addressed itself to the speculative mind of the cultivated Greeks. How the "report" was obtained by the words of the history we have no means of knowing. Possibly we have it in notes written down before or after the delivery of this address by Paul himself. Short as it is, the form is as perfect as the matter is rich. The loftiness and breadth of the theology, the dignity and sublimation of the language, the eloquence which went forward and reverent nature of the testimony delivered — all the characteristics so strikingly displayed in this speech — help us to understand what kind of a teacher had now appeared in the Greek world. Paul is well understood, did not begin with calling the Athenians "too superstitious." "I perceive you," he said, "to be eminently religious" (ἄλληλοι σαμφαίνεσθαι, see CONYBEARE and Howson, ad loc.). He had observed an altar inscribed "ΑΓΑΠΗΡΑΤΩΡ ΘΕΟΣ," "To an unknown God." It meant, no doubt, "To some unknown God." "I come," he said, "as bringing tidings of God unknown of you." They proceeded to speak of God in terms which were not altogether new to Grecian ears. They had heard of a God who had made the world and all things therein, and even of One who gave to all life, and breath, and all things. But they had never learned the next lesson which was now taught them. It was a special truth of the new dispensation that "God hath made of one blood all nations of men for to dwell on all the face of the earth, and hath determined the times before appointed, and the bounds of their habitation, that they should seek the Lord, if perhaps they might feel after him, and find him." See UNKNOWN GOD.

Comparing this with the teaching given to other audiences, we perceive that it laid hold of the deepest convictions which had ever been given to Greeks, while at the same time it encountered the strongest prejudices of the Greeks. We see, as at Lystra, that an apostle of Christ had no need to refer to the Jewish Scriptures when he spoke to those who had not received them. He could speak to men as God's children, and subjects of God's educating discipline, and was only bringing them the full tidings of a God whom they were always feeling after. He presented to them the Son of Man as acting in the power of him who had made all nations, and who was not far from any single man. He began to speak of him as risen from the dead, and of the
power of a new life which was in him for men; but his audience would not hear of him who thus claimed their personal allegiance. Some mocked, others, more courteously, talked of bearing him again another time. The apostle gained but few converts at Athens, and he soon took his departure and came to Corinth. A.D. 49. See Acts x7, 17-19.

Athens still retained its old intellectual predominance; but Corinth was the political and commercial capital of Greece. It was in places of living activity that Paul labored longest and most successfully, as formerly at Antioch, now at Corinth, and afterwards at Ephesus. The rapid spread of the Gospel was as obviously promoted by the preaching of it in cities where men were continually coming and going; but, besides this consideration, we may be sure that the apostle escaped gladly from dull ignorance on the one side, and from philosophic dilettantism on the other, to places in which the real business of the world was done. The Gospel, though unworshipfully, was yet a message to practical and inquiring men, and it had more affinity to work of any kind than to torpor or to intellectual frivolity. One proof of the wholesome agreement between the following in the Gospel and the commercial world, was that he went himself during his stay at Corinth. Here, as at Thessalonica, he chose to earn his own subsistence by working at his trade of tent-making. This trade brought him into close connection with two persons who became disciples of the Gospel. Aquila and Priscilla were Jews born at Tarso, and they were of Tarsus, and had lately left Home in consequence of an edict of Claudius [see CLAUDIUS]; and as they also were tent-makers, Paul “abode with them and wrought.” Laboring thus on the six days, the apostle went to the synagogue on the Sabbath, and there by expounding the Scriptures sought to win both Jews and proselytes to the belief that Jesus was the Christ.

He was testifying with unusual effort and anxiety (πανίκησα γνώριμον, when Silas and Timothy came from Macedonia and joined him. We are left in some uncertainty as to what the movements of Silas and Timothy had been since they were with Paul at Berea. From the statements in the Acts (xvii, 15, 16) that Paul, when he reached Athens, desired Silas and Timotheus to come to him with all speed, and waited for them there, compared with those in 1 Thess. (iii, 1, 2). “When we could no longer forbear, we thought it good to be left at Athens alone, and sent Timotheus, our brother and minister of God, and our fellow-laborer in the Gospel of Christ, to establish you and to comfort you concerning your faith,” Paley (Horn Pauline, 1 Thess. No. iv) reasonably supposes that they were not then in Athens, but had soon been despatched thence, Timothy to Thessalonica, and Silas to Philippi, or elsewhere. From Macedonia they came together, or about the same time, to Corinth, and their arrival was the occasion of the writing of the First Epistle to the Thessalonians.

This is the first extant example of that work by which the apostle Paul has served the Church of all ages in as eminent a degree as he labored at the founding of it in his lifetime. All commentators upon the New Testament have been accustomed to notice the position which the First Epistle to the Thessalonians and these Letters. Paley’s Horn Pauline is famous as a special work upon this subject. But more recently important attempts have been made to estimate the Epistles of Paul more broadly, by considering them in their mutual order and relations, and in their bearing upon the question of the development of the writer’s teaching. Such attempts must lead to a better understanding of the Epistles themselves, and to a finer appreciation of the apostle’s nature and work. It is notorious that the order of the Epistles in the book of the N.T. is not their real, or chronological order. The mere placing of them in their true sequence throws considerable light upon the history; and happily the time of composition of the more important Epistles can be stated with sufficient certainty. The two Epistles to the Thessalonians belong—and these alone—to the present missionary journey. The Epistles to the Galatians, Romans, and Corinthians were written during the next journey. Those to Philenmon, the Colossians, the Ephesians, the Philippians, and the Hebrews belong to the captivity at Rome. With regard to the Pastoral Epistles, there are considerable difficulties, which require to be discussed separately.

The First Epistle to the Thessalonians was probably written soon after Paul’s arrival at Corinth, and before he turned from the Jews to the Gentiles. It was drawn from Paul by the arrival of Silas and Timothy. The largest portion of it consists of an impassioned re-calling of the facts and feelings of the time when the apostle was personally with them. But we perceive gradually that those expectations which he had taught them to entertain of the appearing and presence of the Lord Jesus Christ had undergone some corruption. There were symptoms in the Thessalonian Church of a restlessness which speculated on the times and seasons of the future, and found present duties flat and unimportant. This evil tendency Paul seeks to correct, by re-viving the first spirit of faith and hope and mutual fel-lowship, as he had taught them first at Athens. Christ—not indeed as distant, but as the full shining of a day of which all believers in Christ were already children. The ethical characteristics apparent in this Letter, the degree in which Paul identified himself with his friends, and surrendered himself, as a re-calling as a preacher of Christ, his anxiety for the good fame and well-being of his converts, are the same which will reappear continually. See THESAULONIANS, FIRST EPISODE TO THE.

What interval of time separated the Second Letter to the Thessalonians from the First we have no means of judging, except that the later one was certainly written before Paul’s departure from Corinth. The Thessalonians had been disturbed by announcements that those convulsions of the world which all Christians were taught to associate with the coming of Christ were immediately impending. To meet these assertions, Paul delivers express predictions in a manner not usual with him elsewhere; and while reaffirming all he had ever taught the Thessalonians to believe respecting the early coming of the Saviour and the blessedness of waiting patiently for it, he informs them that certain events, of which he had spoken to them, must run their course before the full manifestation of Jesus Christ could come to pass. At the end of this epistle Paul guards the Thessalonians against pretended letters from him, by saying that nothing can happen to them except by his written by his hand throughout, would have at least an autograph salutation at the close of it. See THESAULONIANS, SECOND EPISODE TO.

We now return to the apostle’s preaching at Corinth. When Silas and Timotheus came, he was testifying to the Jews with great earnestness, but with little success. So “when they opposed themselves and blasphemed, he shook out his raiment,” and said to them, in words of warning taken from their own prophets (Ezek. xxxiii, 4), “Your blood be upon your own heads; I am clean, and henceforward depart from you.” The experience of Judas Iscariot was repeating itself. The apostle went, as he threatened, to the Gentiles, and bega- 

To this subject of Paul’s preaching in the house of a proselyte named Justus. Already one distinguished Jew had become a believer, Cephas, the ruler of the synagogue, mentioned (1 Cor. 1, 14) as baptized by the apostle himself, who was joined to him by night, and said, “Be not afraid, but speak, and hold not thy peace: for I am with thee, and no man shall set on thee, to hurt thee; for I have much people in this city.” Corinth was to be an important seat of
the Church of Christ, distinguished, not only by the number of believers, but also by the variety and the fruitfulness of the teaching to be given there. At this time Paul himself stayed there for a year and six months, "teaching the Word of God among them." On the west side of the city of Ephesus, he set up his office held by Gallio, a brother of the philosopher Seneca. See Gallio. Before him the apostle was summoned by his Jewish enemies, who hoped to bring the Roman authority to bear upon him as an innovator in religion. But Gallio perceived at once, before Paul could "open his mouth" to defend himself, that the movement was due to Jewish prejudice, and refused to go into the question. "If it be a question of words and names and of your law," he said to the Jews, speaking with the tolerance of a Roman magistrate, "look ye to it; for I will be no judge of such matters." Then a singular scene occurred. The Corinthian spectators, either favoring Paul, or actuated only by anger against the Jews, seized on the principal person of those who had brought the charge, and beat him before the judgment-seat. (See on the other hand Ewald, Geschichte, vi, 463-466.) Gallio left these religious quarrels to settle themselves. The apostle therefore was not allowed to be "hurt," and remained some time longer at Corinth unmolested. See Corinthians. See Galatians. From the above it appears that the Corinthians many details of the founding of the Church at Corinth. The main body of the believers consisted of Gentiles ("Ye know that ye were Gentiles," 1 Cor. xii, 2). But, partly from the number who had been proselytes, partly from the mixture of Jews, it had so far a Jewish character that Paul could speak of "our fathers" as having been under the cloud (1 Cor. x, 1). The tendency to intellectual display, and the traffic of Sophists in philosophical theories, which prevailed at Corinth, made the apostle more than usually anxious to be independent in his life and receiving his remittances. He wrought for his living, that he might not appear to be taking fees of his pupils (1 Cor. ix, 18); and he put the person of Jesus Christ, crucified and risen, in the place of all doctrines (1 Cor. ii, 1-5; xiii, 4). What gave infinite significance to his simple statements was the nature of the Christ who had been crucified, and his relation to man. Concerning these mysteries Paul had uttered a wisdom, not of the world, but of God, which had commented itself chiefly to the humble and simple. Of these God had chosen and called us to the faith in his Son Jesus Christ, the Lord of men" (1 Cor. ii, 6, 7; i, 2, 7, 9).

Having been the instrument of accomplishing this work, Paul took his departure for Jerusalem, wishing to attend a festival there. A.D. 51. Before leaving Greece, he cut off his hair at Corinth, in fulfillment of a vow (Acts xviii, 18). The act may be that of Aquila, but the historian certainly seems to be speaking not of him, but of Paul. We are not told where or why he had made the vow; and there is considerable difficulty in reconciling this act with the received customs of the Jews. Some regard his passage in Josephus, if rightly understood (War, ii, 5, 1), mentioning in it, besides a sacrifice, the cutting of the hair and the beginning of an abstinence from wine thirty days before the sacrifice. If Paul's was such a vow, he was going to offer up a sacrifice in the Temple at Jerusalem, and the "shearing of his head" was a preliminary to the sacrifice. The principle of the vow, whatever it was, must have been the same as that of the Nazarite vow, which Paul afterwards countenanced at Jerusalem. There is therefore no difficulty in supposing him to have made the vow, for some reason not explained to us, a custom of his countrymen. When he sailed from the Isthmus, Aquila and Priscilla went with him as far as Ephesus. Paul paid a visit to the synagogue at Ephesus, but would not stay. He was anxious to be at Jerusalem for the approaching feast, but he promised, God willing, to return to them again. Leaving Ephesus, he sailed to Caesarea, and from thence went up to Jerusalem, and "saluted the Church." It is argued (Wieseler, p. 48-50), from considerations founded on the suspension of navigation during the winter months, that this festival was probably the Pentecost. From Jerusalem, almost immediately, the apostle went down to Antioch, thus returning to the same place from which he had started with Silas.

8. Third Missionary Journey, including the Stay at Ephesus (Acts xix, 1 ff. to 20, 16).—We now come to the facts or details for which we have no authority, we may connect with this short visit of Paul to Jerusalem a very serious raising of the whole question. What was to be the relation of the new kingdom of Christ to the law and covenant of the Jews? Such a Church as that at Corinth, with its affiliated communities, composed chiefly of Gentile members, appeared likely to overshadow by its importance the Mother-Church in Judaea. The jealousy of the more Judaized believers, not extinguished by the decision of the council at Jerusalem, began now to show itself everywhere in the form of an active and irritating party-spirit. This disordered movement could not indeed alienate the heart of Paul from the law or the calling or the people of his fathers—his antagonism is never directed against these; but it drew him into the great conflict of the next period of his career, in which he has to fight for those who were the least tolerant of his nature. To vindicate the freedom, as regarded the Jewish law, of believers in Christ—but to do this for the very sake of maintaining the unity of the Church—was to be the earnest labor of the apostle for some years. In thus laboring he was carrying out completely the principles laid down by the elder apostles at Jerusalem; and we may not believe that, in deep sorrow at appearing, even to displease the law and the covenant, he was the more anxious to prove his fellowship in spirit with the Church in Judaea, by "remembering" those among the Galatians, the Corinthians, and Romans—show how the "Judaizing" question exercised at this time the apostle's mind.

Paul "spent some time" at Antioch, and during this stay, as we are inclined to believe, his collision with Peter (Gal. ii, 11-14) occurred. Before he left Antioch, he went over all the country of Galatia and Phrygia in order, strengthening all the disciples, and giving directions concerning the collection for the saints (1 Cor. xvi, 1). A.D. 51. It is probable that the Epistle to the Galatians was written soon after this visit. See Galatians, Epistle To. When he was with them he had found the Christian communities infected by Judaizing teachers. He had "told them the truth" (Gal. iv, 16), he had warned them against the deadly tendencies of Jewish exclusiveness, and had reaffirmed with all authority the Christ of Jesus, the Son of God, which he had preached to them on his first visit (τό νεοτερον, Gal. iv, 13). But after he left them the Judaizing doctrine raised its head again. The only course left to its advocates was to assail openly the authority of Paul, as they did. They represented him as having derived his commission from the older apostles, and as therefore acting disloyally if he opposed the views ascribed to Peter and James. The sickle minds of the Galatian Christians were influenced by such hard assertions; and this act of hatred, when he had confined himself to Ephesus, that his work in Galatia was nearly undone, and his converts were partially seduced from the true faith in Christ. He therefore wrote the Epistle to reunite with them—an Epistle full of indignation, of
warning, of direct and impassioned teaching. He recalls to their minds the Gospel which he had preached among them, and asserts in solemn and even awful language its absolute truth (2, 8, 9). He declares that he had received it directly from Jesus Christ the Lord, and that his position towards the other apostles had always been that of a pupil, but of an independent fellow-laborer. He sets before them Jesus the Crucified, the Son of God, as the fulfillment of the promise made to the fathers, and as the Judge and giver of freedom to men. He declares that in him, and by the power of the Spirit of sonship sent down through him, men have inherited the rights of adult sons of God; that the condition represented by the law was the inferior and preparatory stage of boyhood. He then, most earnestly and tenderly, impresses upon the Galatians the responsibilities of their fellowship with Christ the Crucified, urging them to fruitfulness in all the graces of their spiritual calling, and especially to brotherly consideration and unity.

This Letter was, in all probability, sent from Ephesus. This was the goal of the apostle's journeys through Asia Minor. He came down upon Ephesus from the upper districts (τα ἀνωτέρωτα μισθία) of Ithrygia. What Antioch was for the region of Syria and Cilicia, what Corinth was for Greece, what Rome was, we may add, for Italy and the West—that Ephesus was for the important province called Asia. Indeed, with reference to the spread of the Church Catholic, Ephesus occupied the central position of all. This was the meeting-place of Jew, of Greek, of Roman, and of Oriental. Accordingly the apostle of the Gentiles was to stay a long time here, that he might found a strong Church, which should be a kind of Mother-Church to Christian communities in the neighboring cities of Asia. See Ephesians.

A new element in the preparation of the world for the kingdom of Christ presents itself at the beginning of the apostle's work at Ephesus. He finds there certain disciples (τοὺς μαθητὰς) about twelve in number—of whom he is led to inquire, "Did ye receive the Holy Ghost when ye believed? They answered, No, we did not even hear of there being a Holy Ghost. Unto what then, asked Paul, were ye baptized? And they said, Unto John's baptism. Then said Paul, John baptized with the baptism of repentance, saying to the people that they should believe on him who was coming after him, that is, on Jesus. Hearing this, they were baptized into the name of the Lord Jesus, and when Paul had laid his hands upon them, the Holy Ghost came upon them, and they began to speak with tongues and to prophesy" (Acts xix, 1-7) —It is obvious to compare this incident with the apostolic act of Peter and John in Samaria, and to see in it an assertion of the full apostolic dignity of Paul. But besides this bearing of it, we see in it indications which suggest more than they distinctly express, as to the spiritual movements of that age. These twelve disciples are mentioned immediately after Apollos, who also had been at Ephesus just before Paul's arrival, and who had taught diligently concerning Jesus (τα παρεκολούθη υπόνοια), knowing only the baptism of John. But Apollos was of Alexandria, trained in the intelligent and inquiring study of the Hebrew Scriptures, which had been fostered by the Greek culture of that capital. We are led to suppose therefore that a knowledge of the baptism of John and of the ministry of Jesus had spread widely, and had been received with favor by some of those who knew the Scriptures most thoroughly, before the message concerning the exaltation of Jesus and the descent of the Holy Ghost had been received. What the exact belief of Apollos and
these twelve "disciples" was concerning the character and work of Jesus, we have no means of knowing; but we gather that it was wanting in a recognition of the kingdom of God, and of the Saviourship of the Holy Ghost. The Pentecostal faith was communicated to Apollos by Aquila and Priscilla, to the other disciples of the Baptist by Paul.

The apostle now entered upon his usual work. He went into the synagogue, and for three months he spoke openly, disputing and persuading concerning "the kingdom of God." At the end of that time the obstinacy and opposition of some of the Jews led him to give up frequenting the synagogue, and he established the believers as a separate society, meeting "in the school of Tyrannus," as we are told, "by the hands of Paul." \[It is evident that the arts of sorcery and magic—all those arts which betoken the belief in the presence of a spirit, but not of a Holy Spirit—were flourishing here in Nicolaus. \]and when everything in the writings of the Old or New Testament would suggest the thought that the exhibitions of Divine power took a more startling form where superstitions grounded mainly on the reverence for diabolical power were prevalent; that they were the proclamations of a beneficent and orderly government, which had been manifested to counteract and overcome one that was irregular and malevolent" (Maurice, _Unity of the New Testament_, p. 515).

The powers of the new kingdom took a form more nearly resembling the wonders of the kingdom of darkness than was usually adopted, when handkerchiefs and aprons from the body of Paul (like the shadow of Peter, Acts x, 15), were allowed to be used for the healing of the sick and the casting out of demons. But it was to be clearly seen that all was done by the healing power of the Lord Jesus himself. Certain Jews, and among them the seven sons of Sceva (not unlike Simon Magus in Samaria), fancied that the effect was due to a magic formula, an _iēthō_. They therefore attempted to exorcise, by saying, "We adjure you by Jesus whom Paul preacheth." But the evil spirit, having a voice given to it, cried out, "Jesus I acknowledge, but I know not whom Paul is." And the man who was possessed fell furiously upon the exorcists and drove them forth. The result of this testimony was that fear fell upon all the inhabitants of Ephesus, and the name of the Lord Jesus was magnified. This produced here striking practical fruits. The city was well known for its _Eisēma glycarmata_, forms of incantation, which were sold at a high price. Many of those who had these books brought them together and burned them before all men, and when the cost of them was computed it was found to be 50,000 drachmas = 8850. "So mightily grew the word of the Lord, and prevailed." While Paul was at Ephesus his communications with the Church in Achaia were not altogether suspended. There is no good reason, however, to believe that a personal visit to Corinth was made by him, nor any lost letter sent, of which there is no mention in the Acts. (See below.) The first of the extant epistles to that place, however, dates at this time. Whether the first Epistle to the Corinthians was written before or after the tumult excited by Demetrius cannot be safely decided. It seems an allusion in that Epistle to "a battle with wild beasts" fought at Ephesus (_iōtmaia_ in_ Ephes, 1 Cor., x, 32), which is usual to understand figuratively, and which is many connected with that tumult. But such a connection is arbitrary, and without much reason. As it would seem from Acts xx, 1, that Paul departed immediatly after the tumult, it is probable that the Epistle was written before, though not long before, the raising of this disturbance. Here then, while the apostle's residence in the city of the Ephesians was one of constant activity, he was giving instructions to believers and inquirers at Ephesus and from the neighboring parts of "Asia," we find him throwing all his heart and soul into the concerns of the Church at Corinth.

There were two external inducements for writing this Epistle. (1.) Paul had received information from members of Chloe's household (ἐκχειρὶ μὲν ἐκ τῷ ἐν Χλοῖ, i, 11) concerning the state of the Church at Corinth. (2.) That Church had written him a letter, of which the bearers were Stephanas and Fortunatus, and Achaicus, and his grace had been given to them (Acts xvi, 11, 21, 22; which were submitted to him (vii, 1; xvi, 17). He had learned that there were divisions in the Church; that parties had been formed which took the names of Paul, of Apollos, of Cephas, and of Christ (i, 11, 12); and also that moral and social irregularities had begun to prevail, of which the most conspicuous and scandalous example was that a believer had taken his father's wife, without being publicly condemned by the Church (v, 1; vi, 7; xi, 17-22; xiv, 33-40). To these evils we must add one doctrinal error, of those which were characteristic of the time and the theological sociology of the Old Testament. (Acts xvii, 21, 22.) It is probable that the teaching of Apollos the Alexandrian, which had been characteristic and highly successful (Acts xviii, 27, 28), had been the first occasion of the "divisions" in the Church. We may take it for granted that his adherents did not form themselves into a party until he had left Corinth, and therefore that he had been some time with Paul at Ephesus. But after he was gone, the special Alexan- draian features of his teaching were remembered by those who had delighted to hear him. Their Grecian intellect was captivated by this doctrine, more than to all other scripture and spiritual features of the Jewish Scriptures. The connection which he taught them to perceive between the revelation made to Hebrew rulers and prophets and the wisdom by which other nations, and especially their own, had been enlightened, dwelt in their minds. That which especially occupied the Apostle school must have been a _philosophy of the Scriptures_. It was the tendency of this party which seemed to the apostle particularly dangerous among the Greeks. He hardly seems to refer specially in his letter to the other parties, but we can scarcely doubt that in what he says about the Corinthians, and about the Greeks, he is referring not only to the general tendency of the Greek mind, but to that tendency as it had been caught and influenced by the teaching of Apollos. It gives him an occasion of delivering his most characteristic testimony to the integrity and power of the gospel of God; and that wisdom was not only a _Zöcris_ or a _Aīgiō_ through which had given to men; it had been perfectly manifested in Jesus the Crucified, Christ crucified was both the Power of God and the Wisdom of God. To receive him required a spiritual discernment unlike the wisdom of the great men of the world; a discernment given by the Holy Spirit of God, and manifesting itself in sympathy with humiliation and in love.

For a detailed description of the Epistles the reader is referred to the special articles upon each. But it belongs to the history of Paul to notice the personal characteristics which appear in them. We must not omit to observe therefore, in this Epistle, how loyally the apostle represents Jesus Christ the Crucified as the Lord of men, the Head of the body with many members, the head of the Church of Unity, the Bond of men to the Father. We should mark at the same time how invariably he connects the Power of the Spirit with the name of the Lord Jesus. He meets all the evils of the Corinthian Church—the intellectual pride, the party spirit, the loose morality, the disregard of decency and order, the false belief about the resurrection.
tion—by recalling their thoughts to the person of Christ and to the Spirit of God as the Breath of a common life to the whole body. We observe also here more than elsewhere, the 
universally recognized and admired, with which the
apostle discusses the practical problems brought
before him. The various questions relating to mar-
riage (ch. vii), the difficulty about meats offered to idols (ch. 
(viii), the behavior proper for women (ch. xi, 
XIV), the use of the gifts of prophesying and speaking 
with tongues (ch. xiv), are made examples of a treat-
ment which may be applied to all such questions.
We see them all discussed with reference to first prin-
ciples; the object, in every practical conclusion, be-
ing to set the people free. We see Paul no less a lover of order and subordina-
tion than of freedom. We see him claiming for him-
self, and prescribing to others, great variety of con-
duct in varying circumstances, but under the strict
obligation of being always true to Christ, and always
seeking the highest good of men. Such a character,
so steadfast in motive and aim, so versatile in action,
it would be difficult indeed to find elsewhere in history.

What Paul here tells us of his own doings and move-
ments refers chiefly to the nature of his preaching at Corin
th. Some action brought on the people, and the apostolic life (iv, 9-12); to his cherished custom
of working for his own living (ch. ix.); to the direct
révelations he had received (xi, 23; xv, 8); and to his present plans (ch. xvi). He bids the Corinthians
raise a great sum which he could not possibly pay
by something on the first day of the week, as he had
directed the churches in Galatia to do. He says
that he shall tarry at Ephesus till Pentecost, and then
set out on a journey towards Corinth through Mac-
donia, so as perhaps to spend the winter with them.
He expresses his joy at the coming of Stephanas and
his companions, and commends them to the respect
of the Church. See CORINTHIANS, FIRST EPISTLE TO.

Having despatched this Epistle, he stayed on at Eph-
esus, where "a great door and effectual work was
opened to him, and there were many adversaries." The affairs of the Church at Corinth continued to be an object of
the gravest anxiety to him, and to give him occupa-
tion at Ephesus: but it may be most convenient to put
off the further notice of these till we come to the
time when the Second Epistle was written. We have
now almost reached the work of Acts at Ephesus, and
until that tumult occurred which is described in Acts
xix, 24-41. The whole narrative may be read there.

We learn that "this Paul" had been so successful,
not only in Ephesus, but "almost throughout all
Asia," in turning people from the worship of gods
made with hands, that the craft of silversmiths, who
made little shrines for Artemis, were alarmed for their
manufacture. They raised a great tumult, and not
being able, apparently, to find Paul, laid hands on two of
his companions and dragged them into the theatre.
Paul himself, not willing that his friends should suffer
in his place, wished to go in among the people; but
the disciples, supported by the urgent request of cer-
tain magistrates called Asiarchs, dissuaded him from
his purpose. The account of the proceedings of the
mob is highly graphic, and the address with which
the tumult was quieted is both a specimen of a
discreet and experienced magistraté. His statement
that "these men are neither robbers of churches nor
yet blasphemers of your goddess" is an incidental
testimony to the temperance of the apostle and his
friends in their dealings with others; and we may reasonably doubt, but Paul is only personally concerned in this tumult so
far as it proves the deep impression which his teaching
had made at Ephesus, and the daily danger in
which he lived.

Paul had been anxious to depart from Ephesus, and
this to a certain extent the work which had kept him there
determined him to stay no longer. He set out there-
for Macedonia, and proceeded first to Troas (2 Cor. 
i, 12), where he might have preached the Gospel
with good hope of success. But a restless anxiety to obtain
new tidings concerning the Church at Corinth urged him
on, and he advanced into Macedonia, where he met Ti-
utus, who brought him the news for which he was
thirsting. The receipt of this intelligence drew from
him a letter, the Second to the Corinthians, which re-
counts to us what manner of man Paul was when the
fountains of his heart were stirred to their inmost
depths. How the agitation which expresses itself in
every sentence of this letter was excited is one of the
most interesting questions we have to consider. Every
reader may perceive that, on passing from the First
Epistle, by which the sound of the Gospel was changed,
in the First, the faults and difficulties of the Corinthian Church are before us. The apostle
writes of these, with spirit indeed and emotion, as he
always does, but without passion or disturbance. He
calmly asserts his own authority over the Church, and
threatens to deal severely with offender. In the Sec-
ond, he writes as one whose personal relations with
those whom he addresses have undergone a most pain-
ful shock. The acute pain given by former tidings,
the comfort yielded by the account which Titus of a successful work of faith had brought from Corinth
urged the necessity of self-assertion, content together for utterance.

What had occasioned this excitement?

We have seen that Timothy had been sent from Epehus to Macedonia and Corinth. He had rejoined
the Second Epistle was almost exclusively associated with him in the salutation (2 Cor. i. 1). We
have no account, either in the Acts or in the Epistles,
of this journey of Timothy, and some have thought it
probable that he never reached Corinth. Let us sup-
pose, however, that he arrived there soon after the First
Epistle, conveyed by Stephanus and others, had been
received by the Corinthian Church. He found that a
movement had arisen in the heart of that Church which
threw (let us suppose) the case of the incestuous per-
son (1 Cor. v, 1-3) into the shade. This was a deliber-
ate and sustained attack upon the apostolic authority
and personal integrity of the apostles of the Gentiles.
The party-spirit which, before the writing of the First
Epistle, had been content with undermining the powers
of Paul compared with those of Apollo, and with protest-
ing against the laxity of his doctrine of freedom, had
at last thrown its burden on the shoulders of Paul,
or persons who came from the Judean Church, armed
with letters of commendation, and who openly ques-
tioned the commission of him whom they proclaimed
to be a self-constituted apostle (2 Cor. iii. 1; xi, 4, 12-
15). As the spirit of opposition and detraction grew
strong, the tone of the letter of the Gentiles (may
probably a Corinthian than the stranger himself) seems
to have been loosed. He scoffed at Paul's courage and
constancy, pointing to his delay in coming to Corinth,
and making light of his threats (i, 17, 23). He de-
manded proofs of his apostleship (xii, 11, 12). He de-
rided the weakness of his personal presence and the
simplicity of his speech (x, 10). He even threw out
insinuations touching the personal honesty and self-
declaration of Paul (i, 12; xii, 17, 18). When some such
attack was made openly upon the apostle, the Church
had not immediately called the offense to account: the
better spirit of the believers being bowed, apparent-
ly, by the confidence and assumed authority of the
assailants of Paul. A report of this melancholy state of
things was brought to the apostle by Timothy or by
some other; and we may imagine the sense which must be attended
ed his sensitive and most affectionate nature, and also
how critical the juncture must have seemed to him for
the whole Western Church. He immediately sent off
Titus to Corinth, with a verbal message re-enforcing
his former letter with the sharpest rebuke (see Acts
iv, 18, 21), a church which had been assigned to
and threatening to enforce it speedily by his personal
Paul, and for the particular expressions relating to the offender; nor does it find places so consistently for the missions of Timothy and Titus. It does not seem likely that Paul would have treated the sin of the man who took his father's wife as an offense against himself, nor that he would have applied to it by preference the word of "wrong" (ἀδικία) done to another (supposed to be the father). The view we have adopted is, in De Wette's Exegetisches Handbuch, to have been held, in whole or in part, by Bleek, Croxton, Olshausen, and Neander. More recently it has been the one most commonly adopted by Ewald, in his Schriftdenkere des A. P. p. 223-222.

The ordinary account is retained by Stanley, Alford, and Davidson, and with some hesitancy by Conybeare and Howson. See Corinthians, Second Epistle to.

The particular nature of this Epistle, as an appeal to facts in favor of his own apostolic authority, leads to the mention of many interesting features of Paul's life. His summary, in xi, 28-28, of the hardships and dangers through which he had gone, may probably be referred, as above suggested, to the period of his first labors at Tarasus. Of the particular facts stated in the following words, "Of the Jews five times received I forty stripes save one; thrice was I stoned, thrice I suffered shipwreck, a night and a day I have been in the deep"—we know only of one shipwreck, and the manner of his release from the force of the Acts. The daily burden of "the care of all the churches" seems to imply a wide and constant range of communication, by visits, messengers, and letters, of which we have found it reasonable to assume examples in his intercourse with the Church of Corinth.

The mention of "visions and revelations of the Lord" and of the "thorn (or rather stake) in the flesh," side by side, is peculiarly characteristic both of the mind and of the experiences of Paul. As an instance of the visions, he alludes to a trance which had befallen him fourteen years before, in which he had been cast up into paradise, and had heard unspeakable words. Whether this vision may be identified with any that is recorded in the Acts must depend on chronological considerations; but the very expressions of Paul in this place would rather lead us not to think of an occasion in which words that could be recorded were spoken. We observe that he speaks with the deepest reverence of the privilege thus granted to him; but he distinctly declines to ground anything upon it as regards other men. Let them judge him, he says, not by any such pretensions, but by facts which were cognizable to all. To such words we may add his language of himself, glory in visions and revelations without remembering how the Lord had guarded him from being puffed up by them. A stake in the flesh (ἐκκατάθηκα τῇ ὀργῇ) was given him, a messenger of Satan to buffet him, lest he should be exalted above measure. The different interpretations which have prevailed of this ἐκκατάθηκα have a certain historical significance. (1) Roman Catholic divines have inclined to understand it as a strong sensual temptation. (2) Luther and his followers take it to mean temptation to uncleanness. But it is more likely to be a figure of speech. He was not the less able for the building up of the Church (ch. x.). He would ask them to excuse his anxious jealousy, his folly and excitement, while he gloried in the practical proofs of his apostolic commission, and in the infirmities which made the power of God more manifest; and he would plead with them earnestly that they would give him no occasion to find fault or to correct them (ch. xi, xii, xiii).

The hypothesis upon which we have interpreted this Epistle is not precisely that which is most commonly received. According to the more common view the offender is the incestuous person of 1 Cor. v, and the message which proved so sharp but wholesome a medicine was simply the First Epistle. But this view does not account so satisfactorily for the whole tone of the
this passage, as laboring under some degree of ill-health, is clear enough. But we must remember that his constitution was at least strong enough, as a matter of fact, to carry him through the hardships and anxieties and toils which he himself describes to us, and to sustain the pressure of the long confinement at Cæsarea and in Rome. See THORN IN THE FLESH.

After writing this Epistle, Paul travelled through Macedonia (A.D. 54), perhaps to the borders of Illyricum (Rom. xvi, 19), and then carried out the intention of which he had spoken in his letter to the Galatians, and himself at Corinth. The narrative in the Acts tells us that "he when he had gone over those parts (Macedonia), and had given them much exhortation, he came into Greece, and there abide three months" (xx, 2, 3). A.D. 56. There is only one incident which we can connect with this visit to Greece, but that is a very important one—the writing of another great Epistle, addressed to the Church at Rome. That this was written at this time from Corinth appears from passages in the Epistle itself, and has never been doubted.

It would be unwise to attempt to suppose that Paul was insensible to the mighty associations which connected themselves with the name of Rome. The seat of the imperial government to which Jerusalem itself, with the rest of the world, was then subject, must have been a grand object to the thoughts of the apostle from the first day of his residence in the holy city. He had come repeatedly under the jurisdiction of Roman magistrates; he had enjoyed the benefits of the equity of the Roman law, and the justice of Roman administration. And, besides its universal sway over all the nations of the earth, Rome was the natural head of the Gentile world, as Jerusalem was the hub of the Jewish world. In this august city Paul had many friends and brethren. Romans who had travelled into Greece and Asia, strangers from Greece and Asia who had gone to settle at Rome, had heard of Jesus Christ and the kingdom of God which he preached; and they had become his preachers of Christ, and had formed themselves into a community, of which a good report had gone forth throughout the Christian world. We are not surprised therefore to hear that the apostle was very anxious to visit Rome. It was his fixed intention to go to Rome, and from Rome to expound his journeys as far as Spain (Rom. xvi, 24, 28). He would thus bear his testimony both in the capital and to the extremities of the Western or Gentile world. For the present he could not go on from Corinth to Rome, because he was about to complete their punishers. Indeed he was likely enough to meet with dangers and delays (xv, 23-32). But from Jerusalem he proposed to turn towards Rome. In the meanwhile he would write them a letter from Corinth.

The letter is a substitute for the personal visit which he had longed for so many years to pay; and, as he would have made the visit, so now he writes the letter, because he is the apostle of the Gentiles. Of this office, to speak in common language, Paul was proud. All the labors and dangers of it he would willingly encounter; and he would also jealously maintain its dignity and its powers. He held it of Christ, and Christ's commission should not be dishonored. He represents himself grandly as a priest, appointed to offer up the faith of the Gentile world as a sacrifice to God (xv, 16). He then proceeds to speak with pride of the extent and independence of his apostolic labors. It is in harmony with this language that he should address the Roman Church as consisting mainly of Gentiles; but we find that he speaks to them as to persons deeply interested in Jewish questions. To the Christian he appoints the apostle of the Gentiles writes to declare and commend the Gospel which he everywhere preaches. That Gospel was invariably the announcement of Jesus Christ the Son of God, the Lord of men, who was made man, died, and was raised again, and whom his heralds present to the faith and obedience of mankind. Such a savior might be variously commended to different hearers. In speaking to the Roman Church, Paul represents the chief value of it as consisting in the fact that, through it, the righteousness of God, as a righteousness not for God only, but also for men, was revealed. It is natural to ask what led him to choose and dwell upon this aspect of his proclamation of Jesus Christ. The following answers suggest themselves: (1) As he looked upon the condition of the Gentile world, with that of the Jews, when he was writing the letter, it was natural for Roman Church to be likely to suggest, he was struck by the awful wickedness, the utter dissolution of moral ties, which has made that age infamous. His own terrible summary (i, 21-32) is well known to be confirmed by other contemporary evidence. The profligacy which we shudder to read of was constantly under Paul's eye, especially at Corinth. Along with the evil he saw also the beginnings of God's judgment upon. He saw the miseries and disasters, begun and impending, which proved that God in heaven would not tolerate the unrighteousness of men. (2) As he looked upon the condition of the Jewish people, he saw them claiming an exclusive righteousness, which, however, had manifestly no power to preserve from them being truly unrighteous. (3) Might not the thought also occur to him, as a Roman citizen, that the empire which for which he was willing to die was a thing of which righteousness had been built up by righteousness, by that love of order and that acknowledgment of rights which were the great endowment of the Roman people? Whether we lay any stress upon this or not, it seems clear that to one contemplating the world from Paul's point of view, no thought would be so naturally suggested as that of the need of the true Righteousness for the two divisions of mankind. How he expounds that God's own righteousness was shown, in Jesus Christ, to be a righteousness which men might trust in were by their own profession they would submit to it, and so receive it as to show forth the fruits of it in their own lives; how he declares the union of men with Christ as subsisting in the divine idea and as realized by the power of the Spirit may be seen in the Epistle itself. The remarkable exposition contained in ch. ix, x, xi, xii, and the rest of the letter illustrates the personal character of Paul, by showing the intense love for his nation which he retained through all his struggles with unbelieving Jews and Judaizing Christians, and by what hopes he reconciled himself to the thought of their punishment. In the meantime he goes on to show how he treats his subject, he goes on to exhibit in practical counsels the same love of Christian unity, moderation, and gentleness, the same respect for social order, the same tenderness for weak consciences, and the same expectation of the Lord's coming and confidence in the future which appear more or less strongly in all his letters. See ROMANS, EPISTLE TO.

Before his departure from Corinth, Paul was joined again by Luke, as we infer from the change in the narrative from the third to the first person. We have already seen that he was last met by Luke at Jerusalem, for a special purpose and within a limited time. With this view he was intending to go by sea to Syria. But he was made aware of some plot of the Jews for his destruction, to be carried out through this voyage; and he determined to evade their malice by changing his route. Several brethren were associated with him in this expedition, the bearers, no doubt, of the collections made in all the churches for the poor at Jerusalem. These were sent on by sea, and probably the money with them, to Troas, where they were to meet Paul. He set sail, accompanied by Luke, went northwards through Macedonia. The style of scripture witness again becomes manifest. "From Philippi," says the writer, "we sailed away after the days of unleavened bread, and came unto them to Troas in five days, where we abode seven days. The marks of
time throughout this journey have given occasion to much chronological and geographical discussion, which brings before the reader's mind the difficulties and uncertainties of travel in that age, and leaves the precise determination of the dates of this history a matter for reason and conjecture. He was to depart the next morning, and midnight found them listening to his earnest speech, with many lights burning in the upper chamber in which they had met, and making the atmosphere oppressive. A youth named Eutychus was sitting in the window, and was overpowered with sleep, and so that at last he fell into the street or court from the third story, and was taken up dead. The meeting was interrupted by this accident, and Paul went down and fell upon him and embraced him, saying, "Be not disturbed, his life is in him." His friends then appear to have taken charge of him, while Paul went up again, first presided at the breaking of bread, after wards took a meal, and continued conversing until daybreak, and so departed.

While the vessel which conveyed the rest of the party sailed from Troas to Assos, Paul gained some time by his journey by land. After he had left Assos he went on board again. Coasting along by Mitylene, Chios, Samos, and Troglygium, they arrived at Miletus. The apostle was thus passing by the chief Church in Asia; but if he had gone to Ephesus he might have arrived at Jerusalem too late for the Pentecost, at which festival he had set his heart upon being present. At Miletus, however, there was time to send to Ephesus; and the elders of the Church were invited to come down to him there. This meeting is made the occasion for recording another characteristic and recurring address of Paul (Acts xx, 18-35). This spoken address to the elders of the Ephesian Church may be ranked with the Epistles, and throws the same kind of light upon Paul's apostolical relations to the churches. Like several of the Epistles, it is in great part an appeal to their memories of him and of his work. He refers to his labors in "serving the Lord" among them, and to the dangers he incurred from the plots of the Jews, and asserts emphatically the nearness with which he had taught them. He then mentions a fact which will come before us again presently, that he was "inspired" to deposit the epistles as he advanced from city to city, of the bonds and afflictions awaiting him at Jerusalem. It is interesting to observe that the apostle felt it to be his duty to press on in spite of these warnings. Having formed his plan on good grounds and in the sight of God, he did not see, in dangers which might even touch his life, however clearly set before him, reasons for changing it. Other arguments might move him from a fixed purpose—not dangers. His one guiding principle was to discharge the ministry which he had received of the Lord and of his God. This is a principle which has been increasing ly occupying his mind. In terms that resemble the language of the Epistles to the Thessalonians and Corinthians, he pleads his own example, and entreats them to follow it, in "laboring for the support of the weak." And when he had thus spoken, he knelt down and prayed to God for them all, and they entreated God for him that a way into God's favor was opened to the Gentiles, and that this way did not lie through the door of the Jewish law. He had moreover actually founded numerous and important communities, composed of Jews and Gentiles together, which stood simply on the name of Jesus Christ, apart from the Jewish forms. Even before he arrived at Ephesus he had thus roused against himself the bitter enmity of that unfathomable Jewish pride which was almost as strong in some of those who had professed the faith of Jesus as in their unconverted brethren. This enmity had for years been vexing both the body and the spirit of the apostle. He had no rest from its persecutions, and his joy in proclaiming the free grace of God to the world was mixed with a constant sorrow that in so doing he was held to be disloyal to the calling of his fathers. He was now approaching a crisis in the long story of his ministry. The Gentiles had been made to rest upon his mind throughout his journey to Jerusalem. He came "ready to die for the name of the Lord Jesus," but he came expressly to prove himself a faithful Jew, and this purpose emerges at every point of the history.

Luke does not mention (except incidentally, Acts xxiv, 17) the contributions brought by Paul and his companions for the poor at Jerusalem. But it is to be assumed that their first act was to deliver these funds into the proper hands. This might be done at the instant of their arrival, and all was for "James and all the elders." As on former occasions, the believers at Jerusalem could not but glorify God for what they heard; but they had been alarmed by the prevalent feeling concerning Paul. They said to
him, "Thou seest, brother, how many thousands of Jews there are which believe; and they are all zealous of the law. And they teach the Jews which are among the Gentiles to forsake Moses, saying that they ought not to circumcise their children, neither to walk after the customs." This report, as James and the elders assume, was not a true one; it was a perversion of Paul's real teaching, which did not, in fact, differ from theirs. In order to dispel such rumors, they ask him to do publicly an act of homage to the law and its observances. They had four men who were under the Nazaritian vow. The completion of this vow involved (Num. vi. 18-21) a considerable expense for the offering made in the temple; and it was a meritorious act to provide these offerings for the poorer Nazarites. Paul was requested to put himself under the vow with those other four, and to supply the cost of their offerings. He at once accepted the proposal, and on the next day, having performed some ceremony which implied the adoption of the vow, he went into the temple, announcing that the due offerings for each Nazarite were about to be presented and the period of the vow terminated. It appears that the whole process undertaken by Paul required some time and preparation. It is not unlikely that this time certain Jews from "Asia," who had come up for the Pentecost feast, and who had a personal knowledge both of Paul himself and of his companion Trophimus, a Gentile from Ephesus, saw Paul in the temple. They immediately set upon him, and stirred up the people against him, and not against Paul himself, but this is the man that teacheth all men everywhere against the people, and the law, and this place; and further brought Greeks also into the temple, and hath polluted this holy place." The latter charge had no more truth in it than the others. It was only suggested by their having seen Trophimus with him, not in the temple, but in the city. They raised, however, a great commotion: Paul was dragged out of the temple, of which the doors were immediately shut, and the people, having him in their hands, were proposing to kill him. But tidings were soon carried to the commander of the force which was serving as a garrison in Jerusalem, that "all Jerusalem was in an uproar:" and he, taking with him soldiers and centurions, hastened to the scene of the tumult. Paul was rescued from the violence of the multitude by the Roman officer, who made him his own prisoner, causing him to be chained to two soldiers, and then proceeded to inquire who he was and what he had done. The inquiry only elicited confused outcries, and the "chief captain" seems to have imagined that the apostle might perhaps be a certain Egyptian pretender to the prophetic office, of whose name a number of the people, apparently the same impostor mentioned by Josephus (Ant., xx, 7, 6; War, ii, 18, 5). The account in the Acts (xxi, 34-40) tells us with graphic touches how Paul obtained leave and opportunity to address the people in a discourse which is related at length. This discourse was spoken in Hebrew—that is, in the native dialect of the country—and was on that account listened to with more attention. It is described by Paul himself, in his opening words, as his "defence," addressed to his brethren and fathers. It is in this light that it ought to be regarded. As we have seen, the desire which occupied the apostle's mind at this time was that of vindicating his message and work as those of a faithful Jew. The discourse spoken to the angry people at Jerusalem is his own justification of himself, and in which all the recorded appeals to Jewish audiences are framed. He is a servant of facts. He had been from the first a zealous Israeliite like his hearers. He had changed his course because the God of his fathers had turned him from the error of his ways. It is thus that he is led into a narrative of his conversion. We have already noticed the difference, in the statement of bare facts, between this narrative and that of the 9th chapter. The business of the student, in this place, is to see how far the purpose of the apostle will account for what he is special to this address. That purpose explains the detailed reference to his rigorously Jewish education, and to his history before his conversion. It gives point to the announcement that it was by a direct operation from without upon his spirit, and not by the gradual influence of other minds upon him, that his course was changed. Incidentally we may see a reason for the admission that his companions "heard not the voice of him that spake to me" in the fact that some of them, not believing in Jesus with their former leader, may have been at Jerusalem, but were not among the audience. In this speech the apostle is glad to mention, what we were not told before, that the Ananias who interpreted the will of the Lord to him more fully at Damascus was "a devout man according to the law, having a good report of all the Jews which dwell there," and that he made his communication in the name of Jehovah, the God of Israel, saying, "The God of our fathers hath chosen thee, that thou shouldest know his will, and see the Righteous One, and hear a voice out of his mouth; for thou shalt be a witness for him unto the people and the nation of Israel, of what thou hast seen and heard. Having thus claimed, according to his wont, the character of a simple instrument and witness, Paul goes on to describe another revelation of which we read nothing elsewhere. He had been accused of being an enemy to the temple. He relates that after the visit to Damascus he went up again to Jerusalem, and was praying one in the temple itself, till he fell into a trance. Then he saw the Lord, and was bidden to leave Jerusalem quickly, because the people there would not receive his testimony concerning Jesus. His own impulse was to stay at Jerusalem, but he pleaded with the Lord that there it was well known how he had persecuted those of whom he was now one—implying, it would appear, that at Jerusalem his testimony was likely to be more impressive and irresistible than elsewhere; but the Lord answered with a simple command, "Depart; for I will send thee far hence unto the Gentiles." Until this hated word, of a mission to the Gentiles, had been spoken, the Jews had listened to the speaker. They could bear the name of the Nazarene, though they might despise it; but it meant the declaration of God's grace to the Gentiles, of which Paul was known to be the herald, stung them to fury. Jewish pride was in that generation becoming hardened and embittered to the utmost; and this was the enemy which Paul had come to encounter in its stronghold. "Away with such a fellow from among us," the multitude shouted; "it is not fit that he should live." The Roman commander, seeing the tumult that arose, but not understanding the language of the speech, might well conclude that Paul had committed some heinous offence; and, carrying him off, he gave orders that he should be forced by scourging to confess his crime. Again the apostle took advantage of his Roman citizenship to protect himself from such an outrage. To the rights of that citizenship he, a free-born Roman, had a better title than the chief captain himself; and if he had been chosen to assert it before, he might have saved himself from the indignity of being manacled. The Roman officer was bound to protect a citizen, and to suppress tumult; but it was also a part of his policy to treat with deference the religion and the customs of the country. Paul's present history is the resultant of these two principles. The chief captain set him free from bonds, but on the next day called together the chief priests and the Sanhedrim, and brought Paul as a prisoner before them. We need not suppose that this was a regular legal proceeding; it was probably an exception of policy and arrangement on the one hand, the commandant of the garrison had no power to convokse the Sanhedrim, on the other hand he would
not give up a Roman citizen to their judgment. As it was, the affair ended in confusion, and with no semblance of a judicial termination. The incidents select ed by Luke from the history of this meeting form striking points in the biography of Paul, but they are not easy to understand. The difficulties arising here, not out of question, but out of two independent narratives, but out of a single narrative which must at least have appeared consistent and intelligible to the writer himself, are a warning to the student not to draw unfavorable inferences from all apparent discrepancies. Paul appears to have been put upon his defense, and with the peculiar habit, mentioned elsewhere also (Acts xiii, 9), of looking steadily when about to speak (ἀπεστειλας), he began to say, "Men and brethren, I have lived in all good conscience (or, to give the force of παρεστηκας, I have lived a conscientiously loyal life) unto God, until this day." Here the high-priest Annas commanded them that stood by to smite him on the mouth. With a fearless indignation, Paul exclaimed, "God shall smite thee, thou whited wall: for sittest thou to judge me after the law, and commandest me to be smitten contrary to the law?" The bystanders said, "Re vielest thou God's high-priest?" Paul answered, "I knew not, brethren, that he was the high-priest; for it is written, Thou shalt not speak evil of the ruler of thy people." The evidence furnished by this admission of Paul's respect both for the law and for the high-priesthood gives the title "high-priest" its religious character, which it followed. Whether the writer thought that outburst culpable or not does not appear. St. Jerome (contra Peac. iii, quoted by Baur) draws an unfavorable contrast between the vehemence of the apostle and the meekness of the law; and he is followed by many critics, as, among others, De Wette and Alford. But it is to be remembered that He who was led as a lamb to the slaughter was the same who spoke of "whited sepul chers," and exclaimed, "Ye serpents, ye generation of vipers, how shall ye escape the damnation of hell?" It is by no means certain, therefore, that Paul would have been a truer follower of Jesus if he had held his tongue under Ananias's lawless outrage. But what does his answer mean? How was it possible for him not to know that he who spoke was the high-priest? Why should he have been less willing to rebuke an iniquitous high-priest than any other member of the Sanhedrim, "sitting to judge him after the law?" These are difficult questions to answer. It is possible that Ananias was personally unknown to Paul; or that the high-priest was not distinguished by dress or place from the rest of the Sanhedrim. The least objectionable solution seems to be that for some reason or other—either because of some defect in his eyesight, or of some obstruction or confusion, or temporary inadvertence—he did not at the moment recognise the rank of the person who ordered him to be smitten; and that he wished to correct the impression which he saw was made upon some of the audience by his threatening protest, and therefore took advantage of the fact that he really did not know the speaker to be the high-priest, to explain the defence he felt he had to be in person holding Paul's hand. His answer cannot have been a mere apology for a sudden outburst of passion is clear from his own direct assertion that he did not at the time know whom he was addressing, and is confirmed by the apparently prophetic impulse under which he spoke. See ANANIAS, 13.

The next incident which Luke records seems to some, who cannot think of the apostle as remaining still a Jew, to cast a shadow upon his rectitude. He perceived, we are told, that the council was divided into two parties, the Sadducees and Pharisees, and therefore he addressed them "as brethren, the sons of a Pharisee; concerning the hope and resurrection of the dead I am called in question." This declaration, whether so intended or not, had the effect of stirring up the party spirit of the assembly to such a degree that a fierce discussion arose, and some of the Pharisees actually took Paul's side, saying, "We find no evil in this man: suppose a spirit or an angel has spoken to him?"—Those who impugned the authenticity of the Acts point triumphantly to this scene as an utterly impossible one; others, who regard the narrative asapology for the apostle to be living in a disingenuous attitude. But it is not so clear that Paul was using an artifice at all, at least for his own interest, in identifying himself as he did with the professions of the Pharisees. He had not come to Jerusalem to escape out of the way of danger, nor was the course he took on this occasion the course he could have chosen. Two objects, we must remember, were dearer to him than his life: (1) to testify of Him whom God had raised from the dead, and (2) to prove that in so doing he was a faithful Israelite. He may well have thought that both these objects might be promoted by an appeal to the nobler professions of the Pharisees. The creed of the Pharisee, as distinguished from that of the Sadducee, was unquestionably the creed of Paul. His belief in Jesus seemed to him to supply the ground and fulfillment of that creed. He wished to lead his brother Pharisees into a deeper and more living apprehension of their own faith.

Whether such a result was in any degree attained we do not know: the immediate consequence of the discussion which occurred in the assembly was that Paul was like to be torn in pieces, and was carried off the court, as to the Sanhedrin, under guard, by the officers, as at Corinth (xviii, 9, 10) and on the voyage to Rome (xxvii, 23, 24), of the Lord standing by him, and encouraging him. "Be of good cheer, Paul," said his Master; "for as thou hast testified of me in Jerusalem, so shall thou witness at Rome," was not safety that the apostle longed for, but opportunity to bear witness of Christ. Probably the factious support which Paul had gained by his manner of bearing witness in the council did away as soon as the meeting was dissolved. On the next day a conspiracy was formed, which the historian relates with a singular fullness of details. More than forty of the Jews bound themselves under a vow neither to eat nor to drink until they had killed Paul. Their plan was to persuade the Roman commandant to send down Paul one morning to the council and then to set upon him by the way and kill him. This conspiracy became known in some way to a nephew of Paul, his sister's son, who was allowed to see his uncle and inform of it, and by his desire was taken to the captain, who was thus put on his guard against the conspirators. In the mean time this was to be presumed that they obtained some dispensation from their vow. The consequence to Paul was that he was hurried away from Jerusalem. The chief captain, Claudius Lysias, determined to send him to Caesarea, to Felix, the governor or procurator of Judæa. He therefore put him in charge of a strong guard of the soldiers, who took him by night as far as Antipatris. Thence a smaller detachment conveyed him to Cæsarea, where they delivered up their prisoner into the hands of the governor, together with a letter, in which they wrote, "The captain,Claudius Lysias, sends Paul, and announces that his accusers would follow. Felix, Luke tells us, with that particularity which marks this portion of his narrative, asked of what province the prisoner was; and being told that he was of Cilicia, he promised to give him a hearing when his accusers should come. In the mean time he ordered him to be guarded—chained, probably, to a soldier—in the government-house, which had been the palace of Herod the Great.

(2) Deportation to Caesarea.—Paul was therefore, to the joy of his friends and the dismay of the Antithesists, at the end of his life, in Roman custody. This custody was in fact a protection to him, without which he would have fallen a victim to the animosity of the Jews. He seems to have been treated throughout with humanity
and consideration. His own attitude towards Roman magistrates was invariably that of a respectful but independent citizen; and while his franchise secured him from open injustice, his character and conduct could not fail to win him the good-will of those into whose hands the government of him whom he was now to be tried, according to Tacitus and Josephus, was a mean and disinterested sort. See Felix. "Per omnem sventitiam ac libidinem jus regionum servill ingenio exercuit" (Tacitus, Hist., v. 9). But these characteristics, except perhaps the servile ingenium, do not appear in our history. The orator or counsellor retained by the Jews, and brought down by Ananias and the elders, when they arrived in the course of five days at Caesarea, begins the proceedings of the trial professionally by complimenting the governor. The charge he goes on to set forth against Paul shows precisely the light in which he was regarded by the fanatical Jews. He is a pestilent fellow (λαοκός); he stirs up divisions among the Jews throughout the world; he is a ringleader of the sect (æpístauq) of the Nazarenes. His last offence had been an attempt to profane the Temple. Paul met the charge in his usual manner. He was glad that his judge had been for some years governor of a Jewish province; "because it is in thy power to ascertain that, not more than twelve days since, I came up to Jerusalem to worship. The em- pious and religious course to which I have devoted myself positively the charges of stirring up strife and of profaning the Temple. But he admitted that "after the way (τρόπος τοῦ) which they call a sect, or a heresy"—so he worshipped the God of his fathers, believing all things written in the law and in the prophets. Again he gave prominence to the hope of a resurrection, which he held, as he said, in common with his accusers. His loyalty to the faith of his fathers he had shown by coming up to Jerusalem expressly to bring alms for his nation and offerings; and by undertaking the ceremonial purification in the Temple, in case of fault, then could any Jew possibly find in him?—"The apostle's answer was straightforward and complete. He had not violated the law of his fathers; he was still a true and loyal Israelite. Felix, it appears, knew a good deal about "the way" (τρόπος) as well as about the customs of the Jews, and was probably satisfied that Paul's account was a true one. He made an excuse for putting off the matter, and gave orders that the prisoner should be treated with indulgence, and that his friends should be allowed free access to him. After a while Felix heard him again. His wife, Drusilla, a convert to Judaism, was present, and he was doubtless there to be moved by the earnest preacher of the new faith in Christ. But Paul was not a man to entertain an idle curiosity. He began to reason concerning righteousness, temperance, and the coming judgment, in a manner which alarmed Felix, and caused him to put an end to the conference. He frequently saw him afterwards, however, and allowed him to understand that a bribe would procure his release. But Paul would not resort to this method of escape, and he remained in custody until Felix left the province. Unprejudiced governors had good reason to seek to ingratiate himself with the Jews; and to please them he handed over Paul, as an untried prisoner, to his successor Festus.

At this point, as we shall hereafter see, the history of Paul comes into its closest contact with external chronology. Festus, like Felix, has a place in secular history, and he bears a much better character. Upon his arrival in the province he went up without delay from Caesarea to Jerusalem, and the leading Jews seized the opportunity of asking that Paul might be brought up there, that the defence in him might be by the law. But Festus would not comply with their request. He invited them to follow him on his speedy return to Caesarea, and a trial took place there, closely resembling that before Felix. Festus saw clearly enough that Paul had committed no offence against the law, but he was anxious at the same time, if he could, to please the Jews. "They had certain questions against him," Festus says to Agrippa, "of their own superstition (or religion), and of one Jesus, who was dead, whom Paul affirmed to be alive. And besides, part as to such inquiries, I asked him whether he would go to Jerusalem and there. This proposal, not a very likely one to be accepted, was the occasion of Paul's appeal to Caesar. In dignified and independent language he claimed his rights as a Roman citizen. We can scarcely doubt that the prior sect of being forwarded by this means to Rome, the goal of all his desires, presented itself to him and drew him onwards, as he virtually protested against the indecision and impotence of the provincial governor, and exclaimed, "I appeal unto Caesar." Having heard this appeal, Festus consulted with his assessors, found that there was no impediment in the way of its prosecution, and then replied, "Hast thou appealed to Caesar? To Caesar shalt thou go." Properly speaking, an appeal was made, from the sentence of an inferior court to the jurisdiction of a higher. But in Paul's case no sentence had been pronounced. We must understand, therefore, by his appeal, a demand to be tried by the imperial court, and we must suppose that a Roman citizen had the right of electing whether he would be tried in the province or at Rome. See Appendix.

The appeal having been allowed, Festus reflected that he must send with the prisoner a report of "the crimes laid against him." But he found that it was no easy matter to put the complaints of the Jews in a form which would be intelligible at Rome. He therefore took advantage of an opportunity which offered itself in a few days to seek some help in the matter. The Jewish prince Agrippa arrived with his sister Bernice on a visit to the new governor. To him Festus communicated his perplexity, together with an account of what had occurred before him in the case. Agrippa, who must have known something of the sect of the Nazarenes, and had probably heard of Paul himself, expressed a desire to hear him speak. The apostle therefore was now called upon to bear the name of his Master before Gentiles and kings. The audience which assembled to hear him was the most distinguished which he had yet addressed, and the state and ceremony of the scene proved that he was regarded as no vulgar criminal. Festus, when Paul had been brought into the council-chamber, explained to Agrippa and to the Jews the differences between himself and he himself, and then expressly referred the matter to the better knowledge of the Jewish king. Paul, therefore, was to give an account of himself to Agrippa; and when he had received from him a courteous permission to begin, he stretched forth his hand and made his defence.

In this discourse (Acts xxvi) we have the second explanation from Paul himself of the manner in which he had been led, through his conversion, to serve the Lord Jesus instead of persecuting his disciples; and in the third he gave a vision of the whole dispensation from the beginning to Agrippa as to one thoroughly versed in the customs and questions prevailing among the Jews, Paul appeals to the well-known Jewish and even Pharisaical strictness of his youth and early manhood. He reminds the king of the great hope which sustained continually the worship of the Jewish nation—the hope of a deliverer, promised by God himself, who should be a conqueror of death. He had been led to see that this promise was fulfilled in Jesus of Nazareth; he proclaimed his resurrection to be the pledge of a new and eternal life. He prayed that the Gentiles might come in by the way of the mystery revealed in him. To what extent the Jews were Jew only; and had thought it his duty to be earnest in hostility against his name. But his eyes had been opened: he would tell how and when.
The story of the conversion is modified in this address, as we might fairly expect it to be. We have seen that there is no absolute contradiction between the statements of this and the other narratives. The main points — the light, the constriction, the voice from heaven, the instructions from Jesus — are found in all three. But in this account, the words "I am Jesus whom thou persecutest" are followed by a fuller explanation, as if then spoken by the Lord, of what the voice in the garden said to be. The other witnesses give for this explanation a subsequent occasion. But when we consider how fully the mysterious communication made at the moment of the conversion included what was afterwards conveyed, through Ananias and in other ways, to the mind of Paul; and how needlessly it was for Paul, in his present address, to Agrippa, to mark the stages by which the whole lesson was taught, it seems merely capricious to base upon the method of this account a charge of disagreement between the different parts of this history. They bear, on the contrary, a straightforward and genuine truth in the degree in which they approach contradiction without reaching it. It is most natural that a story told on different occasions should be told differently; and if in such a case we find no contradiction as to the facts, we gain all the firmer impression of the substantial truth. It is Mr. Howson's view that the former accounts by the present narrative are, that the words of Jesus were spoken in Hebrew, and that the first question to Saul was followed by the saying, "It is hard for thee to kick against the goads." (This saying is omitted by the best authorities in the 9th chapter.) The language of the commission which Paul says he received from Jesus deserves close study, and will be found to bear a striking resemblance to a passage in Colossians (i, 12–14). The ideas of light, redemption, forgiveness, inheritance, and faith in Christ, belong architecturally to the Gospel which Paul preached among the Gentiles. Not less striking is it to observe the older terms in which he describes to Agrippa his obedience to the heavenly vision. He had made it his business, he says, to proclaim to all men "that they should repent and turn to God, and do works meet for repentance." — words such as John the Baptist uttered, but not less truly Pauline. He finally reiterates that the testimony on account of which the Jews sought to kill him was in exact agreement with Moses and the prophets. They had taught to the Gentiles to do "that he should be the first that should rise from the dead, and should show light unto the people and to the Gentiles. Of such a Messiah Saul was the servant and preacher. At this point Festus began to apprehend what seemed to him a manifest absurdity. He interrupted the apostle discourteously, but with a compliment contained in his loud remonstrance: "Paul, thou art beside thyself; much learning doth make thee mad." The phrase ταύτα πολλά γράμματα may possibly have been suggested by the allusion to Moses and the prophets; but it probably refers to the books with which Paul had been supplied, and which he was known to study during his imprisonment. As a biographical hint, this phrase is not to be overlooked. "I am not mad, most noble Festus," replied Paul; "but speak forth the words of truth and soberness." Then, with an appeal of mingled dignity and solicitude, he turns to the king. He was sure the king understood him. "King Agrippa, believest thou the prophets? I know that thou believest." The answer of Agrippa can hardly have been the serious and encouraging remark made by our English version before Agrippa, if literally rendered, it appears to be, You are briefly persuading me to become a Christian; and it is generally supposed to have been spoken ironically. It rather signifies, You are slightly (ταύτα πολλά) successful. "I would to God," is Paul evident answer, "but not only thou, but also all that hear me this day were filled with the same grace and power as I."

(5.) Voyage to Rome.—No formal trial of Paul had yet taken place. It appears from Acts xxviii, 18 that he knew how favorable the judgment of the provincial government was likely to be. But the vehement opposition of the Jews, together with his desire to be conveyed to Rome, was sufficient reason for his being sent to the imperial court. After a while arrangements were made to carry "Paul and certain other prisoners," in the custody of a centurion named Julius, into Italy; and among the company, whether by favor or from any other reason, we find the historian of the Acts. The narrative of this voyage is accordingly minute and circumstantial in a degree which has excited much attention. The nautical and geographical details of Luke's account have been submitted to an apparently thorough investigation by several competent critics, especially by Dr. Bevan and Mr. Howson. Whether the former accounts to the subject, and by Mr. Howson. The result of this investigation has been that several errors in the received version have been corrected, that the course of the voyage has been laid down to a very minute degree with great certainty, and that the account in the Acts is shown to be written by an accurate eye-witness, not himself a professional seaman, but well acquainted with nautical matters. We shall hasten lightly over this voyage, referring the reader to the works above mentioned, and to the articles on the names of places and the nautical terms which occur in the narrative. See also SHIPWRECK.

The centurion and his prisoners, among whom Aristarchus (Col. iv, 10) is named, embarked at Cesarea on board a ship of Adramyttium, and set sail for the coast of Asia. On the next day they touched at Sidon, and Julius began a course of gentle and respectful treatment by allowing Paul to go on shore to visit his friends. The westerly winds, still usual at the time of year (late in the summer), compelled the vessel to run northwards under the lee of Cyprus. Off the coast of Cilicia and Pamphylia they were suddenly caught by the north wind, which enabled them to reach Myra in Lycia. Here the voyagers were put on board another ship, which had come from Alexandria and was bound for Italy. In this vessel they worked slowly to windward, keeping near the coast of Asia Minor, till they came over against Crete. The wind being still contrary, the only course now was to run southwards, under the lee of Crete, passing the headland of Salamis. They then gained the advantage of a weather shore, and worked along the coast of Crete as far as Cape Matella, near which they took refuge in a harbor called Pharos, identified with one bearing the same name to this day.

It now became a serious question what course should be taken. It was late in the year for the navigation of those days. The fast of the day of expiation (Lev. xxiii, 27–29), answering to the autumnal equinox, was past, and Paul gave it as his advice that they should winter where they were. But the master and the owner of the ship were willing to run the risk of seeking a more commodious harbor, and the centurion followed their judgment. It was resolved, with the concurrence of the master and the owner of the ship, to take a harbor called Ephesus, situated from the south-west winds, as well as from the north-west. (The phrase βιασύνης καθάρισμα is rendered either "looking down the south-west [Smith and Alford]," or "looking towards the south-west," when observed from the sea and towards the land enclosing it [Howson].) See SHIPWRECK. A change of mind

"coni vi dul congressman vi nolos" such as I am, except these bonds. He was wearing a chain upon the hand he held up in addressing them. With this prayer, it appears, the conference ended. Festus and the king, and their companions, consulted together, and came to the conclusion that the accused was guilty of nothing that deserved death or imprisonment. Agrippa's final answer to the inquiry of Festus was, "This man might have been set at liberty, if he had not appealed unto Caesar."
curred which favored the plan, and by the aid of a light breeze from the south they were sailing towards Phoenix (now Lutro), when a violent north-east wind [see Euroclydon] came down from the land (εικάς aërig, see Koryerg), caught the vessel, and compelled them to let her drive before the wind. In this course they arrived under the lee of a small island called Claudia, about twenty miles from Crete, where they took advantage of comparatively smooth water to get the boat on board, and to undergird, or frap, the ship. There was a fear lest they should be driven upon the Syriss on the coast of Africa, and they therefore “lowered the gear,” or sent down upon deck the gear connected with the fair-weather sails, and stood out to sea “with storm-sails set and on the starboard tack” (Smith). The bad weather continued, and the ship was lightened on the next day of her way-freight, on the third of her loose furniture and tackle. For many days neither sun nor stars were visible to steer by, the storm was violent, and all began to despair of safety. The general discouragement was aggravated by the abstinence caused by the difficulty of preparing food, and the spoiling of it; and in order to raise the spirits of the whole company, Paul stood forth one morning to relate a vision which had occurred to him in the night. An angel of the God “whoso he was and whom he served” had appeared to him and said, “Fear not, Paul: thou must be brought before Caesar; and lo, God hath given thee all them that sail with thee.” At the same time he predicted that the vessel would be cast upon an island and be lost.

This shipwreck was to happen speedily. On the fourteenth night, as they were drifting through the sea [see Adria], about midnight, the sailors perceived indications, probably the roar of breakers, that land was near. Their suspicion was confirmed by soundings. They therefore cast four anchors out of the stern, and waited anxiously for daylight. After a while the sailors lowered the boat with the professed purpose of laying out anchors from the bow, but intending to desert the ship, which was in imminent danger of being dashed to pieces. Paul, aware of their intention, informed the centurion and the soldiers of it, who took care, by cutting the ropes of the boat, to prevent its being carried out. He then addressed himself to the task of encouraging the whole company, assuring them that their lives would be preserved, and exhorting them to refresh themselves quietly after their long abstinence with a good meal. He set the example himself, taking bread, giving thanks to God, and beginning to eat in presence of them all. After a general meal, in which there were two hundred and seventy-six persons to partake, they further lightened the ship by casting overboard the cargo (ρύς σίτος, the “wheat” with which the vessel was laden). When the light of the dawn revealed the land, they did not recognize it, but they discovered a creek with a smooth beach, and determined to run the ship aground in it. So they cut away the anchors, unloosed the rudder-paddles, raised the foresail to the wind, and made for the beach. When they came close to it they found a narrow channel between the land on one side, which proved to be an inlet, and the shore; and at this point, where the “two seas met,” they succeeded in driving: the fore part of the vessel fast into the clayey beach. The stern began at once to go to pieces under the action of the breakers; but escape was now within reach. The soldiers suggested to their commander that the prisoners should be effectually prevented from gaining their liberty by being killed; but the centurion, desiring to save Paul, stopped this proposition, and gave orders that those who could swim should cast themselves first into the sea and get to land, and that the rest should follow with the aid of such spars as might be available.
By this creditable combination of humanity and discipline the deliverance was made as complete as Paul's assurances had predicted it would be.

The land on which they had been cast was found to belong to Malta. See Malta. The very point of the rock was out with great difficulty by Mr. Smith. The inhabitants of the island received the wet and exhausted voyagers with no ordinary kindness, and immediately lighted a fire to warm them. This particular kindness is recorded on account of a curious incident connected with it. The apostle was helping to make the fire, and had gathered a bundle of sticks and laid them on the fire, when a viper came out of the bough and fastened on his hand. When the natives saw the creature hanging from his hand they believed him to be poisoned by the bite, and said among themselves, "No one ever yet mastered a viper, whom, though he has escaped from the sea, yet vengeance suffers not to live." But when they saw no harm come of it, they changed their minds and said he was a god. This circumstance, as well as the honor in which he was held by Julius, would account for Paul being invited with some others to stay at the house of the chief man of the island, whose name was Publius. By him they were courteously entertained for three days. The father of Publius happened to be ill of fever and dysentery, and was cured by Paul; and when this was known many other sick persons were brought, and they were all cured. So the pleasant interchange of kindness and benefits the people of the island showed the apostle and his company much honor, and when they were about to leave loaded them with such things as they would want. The Roman soldiers would carry with them to Rome a deepened impression of the character and the powers of the kingdom of which Paul was the herald.

After a three months' stay in Malta the soldiers and their prisoners left in an Alexandrian ship for Italy. A.D. 56. They touched at Syracuse, where they stayed three days, and at Rhegium, whom, though he has escaped from the sea, yet vengeance suffers not to live. At Puteoli they found "brethren," for it was an important place, and especially a chief port for the traffic between Alexandria and Rome; and by these brethren they were exhorting to stay awhile with them. Permission seems to have been granted by the centurion; and while they were spending seven days at Puteoli news of the apostle's arrival was sent on to Rome. The Christians at Rome, on their part, sent forth some of their number, who met Paul at Cæsarea in Cæsarea, on this first introduction to the Church at Rome the apostle felt that his long desire was fulfilled at last. "He thanked God and took courage." (4.) Confinement at Rome.—On their arrival at Rome the centurion doubtless delivered up his prisoners into the proper custody, that of the praetorian prefect. Paul was at once treated with special consideration, and was allowed to dwell by himself with the soldier who guarded him. He was not released from this gallant annoyance of being constantly chained to a keeper; but every kindness which this necessary restraint was not readily allowed him. He was now therefore free to preach the Gospel to them that were at Rome also; and proceeded without delay to act upon his rule—"to the Jew first. He invited the chief persons among the Jews to come to him, and explained to them that though he was brought to Rome to answer for his name by the Jews in Palestine, he had really done nothing disloyal to his nation or the law, nor desired to be considered as hostile to his fellow-countrymen. On the contrary, he was in custody for maintaining that "the hope of Israel" had been fulfilled. The Roman Jews replied that they had received no tidings to his prejudice. The sect of which he had implied he was a member they knew to be everywhere spoken against; but they were willing to hear what he had to say. It has been thought strange that such an attitude should be taken towards the faith of Christ by the Jews at Rome, where a flourishing branch of the Church had existed for some years; and an argument has been drawn from this representation against the authenticity of the Book of Acts. But it may be said that it may show a justifiable prediction of the future violence from what we know and may probably conjecture. (1.) The Church at Rome consisted mainly of Gentiles, although it must be supposed that they had previously been for the most part Jewish proselytes. (2.) The real Jews at Rome had been persecuted and sometimes entirely banished, and their unsettled state may have checked the contact and collision which would have been otherwise likely. (3.) Paul was possibly known by name to the Roman Jews, and curiosity may have persuaded them to listen to him. Even if he were not known to them, yet here, as in other places, his courteous bearing and strong expressions of adherence to the faith of his fathers would win a hearing from them. A day was therefore appointed, on which a large number came expressly to hear him expound his belief; and from morning till evening he bore witness to the kingdom of God, persuading them concerning Jesus, both of the law of Moses and of the prophets. So the apostle of the Gentiles had not yet unlearned the original apostolic method. The hope of Israel was still his subject. But, as of old, the Gentiles of the islands were received with favor. They were slow of heart to believe at Rome as at Pidian Antioch. The judgment pronounced by Isaiah had come, Paul testified, upon the people. They had made themselves blind and deaf and gross of heart. The Gospel must be proclaimed to the Gentiles; among whom, if not at first, it would be well received. He returned therefore again to the Gentiles, and for two years dwelt in his own hired house, and received all who came to him, proclaiming the kingdom of God, and teaching concerning the Lord Jesus Christ with all confidence, no man forbidding him.

These are the last words of the Acts. This history of the planting of the kingdom of Christ in the world brings us down to the time when the Gospel was openly proclaimed by the great apostle in the Gentile capital, and stops short of the mighty convulsion which was shortly to pronounce a profound judgment on that kingdom established as the divine commonwealth for all men. The work of Paul belonged to the preparatory period. He was not to live through the time when the Son of Man came in the destruction of the Holy City and Temple, and in the throes of the New Age. The most significant part of the work was accomplished. In the admirably written history of the Church which he had declared his Gospel, "to the Jew first, and also to the Gentile." But his career is not abruptly closed. Before he himself fades out of our sight in the twilight of ecclesiastical tradition, we have letters written by himself, which contribute so particularly to his external biography, and give us a far more precious insight into his convictions and sympathies.

10. Subsequent History.—(1.) Later Epistles. — We might naturally expect that Paul, tied down to one spot for three years, would not be a candidate for a great and extensive activity. Yet from his imprisonment he pleased, would pour out in letters his love and anxiety for distant churches. It has hence been supposed by some that the author of the extant Epistles wrote very many which are not extant. But of this there is not a particle of evidence; nor was the circumstance of the Acts that its style and tone are similar to that of the extant epistolary correspondence. It is difficult enough to connect in our minds the writing of the known Epistles with the external conditions of a human life; to think of Paul, with his incessant chain and soldier, sitting down to write for us, is a thought too remote to be favored for the sake of an inspired epistle. But it is almost more difficult to imagine the Christian communities of these days, samples of the population of Macedonia or Asia Minor, receiving and reading such letters. Yet the letters
were actually written; and they must of necessity be accepted as representing the kind of communications which marked the intercourse of the apostle and his fellow-Christians. When he wrote, he wrote out of the fulness of his heart, and the joy which he had dwelt were those of his daily and hourly thoughts. To that imprisonment to which Luke has introduced us—the imprisonment which lasted for such a tedious time, although tempered by much indulgence—belongs certainly the noble group of Letters to Philemon, to the Colossians, to the Ephesians, and to the Philippians, and probably also that peculiar one, the Letter to the Hebrew Christians. The first three of these were written at one time and sent by the same messengers. Whether that to the Philippians was written before or after that to the Ephesians, we cannot determine, but it seems to imply that a crisis was approaching, and therefore it is commonly regarded as the latest of the four.

Paul had not himself founded the Church at Colossae. But during his imprisonment at Rome he had for an associate— he calls him a "fellow-prisoner" (Philemon 23)—a chief teacher of the Colossian Church named Epaphras. He had thus become deeply interested in the condition of that Church. It happened that at the same time a slave named Onesimus came within the reach of Paul's teaching, and was converted and became a faithful servant of the Colossian Church. This Onesimus had run away from his master; and his master was a Christian of Colossae. Paul determined to send back Onesimus to his master; and with him he determined also to send his old companion Tychicus (Acts xxvii. 22). These events are described by Paul in a letter to the Colossians in the form of a letter to their Church. In two other Epistles Paul expresses a confident hope that before long he may be able to visit the persons addressed in person (Phil. i, 24, άλλη, κ. τ.λ.; ii, 24, πίστις, κ. τ.λ.; Heb. xiii, 19, ινα γ'ογγώς, κ. τ.λ.; 28, ευλογημ ἐμαυ). Whether this hope was fulfilled or not belongs to a later history. But the main question is, has this subject been of much controversy. According to the general opinion, the apostle was liberated from his imprisonment and left Rome soon after the writing of the letter to the Philippians, spent some time in visits to Greece, Asia Minor, and Spain, returned again as a prisoner to Rome, and was put to death there. In opposition to this view it is maintained by some that he was never liberated, but was put to death at Rome at an earlier period than is commonly supposed. The arguments adduced in favor of the first view are: (1) the confirmation by Tychicus and Onesimus of his imprisonment to the Colossians; (2) a number of allusions in thePastoral Epistles, and their general character; and (3) the testimony of ecclesiastical tradition. The arguments in favor of the single imprisonment appear to be wholly negative, and to aim simply at showing that there is no proof of a liberation or departure from Rome. It is contended that Paul's expectations were not always realized, and that the passages from Philemon and Philippians are effectually neutralized by Acts xxv, 25, "I know that ye all (at Ephesus) shall see my face no more;" inasmuch as the supporters of the ordinary view hold that Paul went again to Ephesus. This is a fair answer, but inconsistent, inasmuch as it assumes the certainty of Paul's expectations, which this theory had just denied. The argument from the Pastoral Epistles rests upon an oversight of the denial of their genuineness. The tradition of ecclesiastical antiquity is affirmed to have no real weight.

The decision must turn mainly upon the view taken of the Pastoral Epistles. It is true that there are many arguments in favor of the genuineness of these Epistles, and that Dr. Hort, who admits the genuineness of these Epistles, and yet, by referring 1 Timothy and Titus to an earlier period, and by strained explanations of the allusions in 2 Timothy, get rid of the evidence they are generally understood to give in favor of a second imprisonment. The voy-

Digital by Google
ages required by the two former Epistles, and the writing of them, are placed within the three years spent chiefly at Ephesus (Acts xx, 31). But the hypothesis of voyages during that period not recorded by Luke of just such a distance as that of a release from Rome which is objected to expressly because it is arbitrary; and such a distribution of the Pastoral Epistles is shown by overwhelming evidence to be untenable.

The whole question is discussed in a masterly and decisive manner by Alford in his *Ephesians* (Ep. 1 ad Cor. c. 5), refers to Paul as an example of patience, and mentions that he preached ἐν τῷ ἐθνῷ καὶ ἐν τῷ συναγωγῶν, and that before his martyrdom he went ἐν τῷ γένοις τῶν εἰρήνων. It is probable, but can hardly be said to be certain, that by this expression, "the goal of the west," Clement was describing Spain, or some country yet more to the west. The next testimony labors under a somewhat similar difficulty from the imperfection of the text, but it at least names unambiguously a "profectionem Pauli ab urbe ad urbem" (ib. 32). This is not only Clement's Fragment on the Canon (Routh, *Rel. Sac. iv*, 1-12). (See the passage quoted and discussed in Wieseler, *Chron. d. apost. Zeitatl.* p. 556, et al., Alford, iii, 39.) Aftewards Chrysostom says simply, ἡ χαῖρε πρὸς τὸν Παύλου ταύτης ἐκ τῶν δύο ἀποστόλων (on 2 Tim. iv, 20); and Jerome speaks of Paul as set free by Nero, that he might preach the Gospel of Christ "in Occidentis quoque partibus" (Cat. Script. Eccl. "Paulus"). Against these assertions nothing is produced, except the absence of allusions to a journey to Spain (as Ephesus) in the private or public correspondence of the latter. The references may be less important, perhaps more or less be expected. Dr. Davidson (*Intro. to the New Tes. iii*, 15, 84) gives a long list of critics who believe in Paul's release from the first imprisonment. Wieseler (p. 511) mentions some of these, as well as others, with reference, and with a judicious German critic who believes with him in but one imprisonment. These include Schrader, Henseen, Wiener, and Baur. The only English name of any weight to be added to this list is that of Dr. Davidson. (See further below.)

We conclude, then, that after a wearing imprisonment of two years or more at Rome, Paul was set free, and spent some years in various journeys eastwards and westwards. Towards the close of this period he pours out the warnings of his less vigorous but still brave and faithful spirit in the letters to Timothy and Titus. The first to Timothy and the latter to Titus were evidently written at very nearly the same time. After these were written, he was apprehended again and sent to Rome. As an eminent Christian teacher Paul was now in a far more dangerous position than when he wrote these letters. He had been subjected to much cruel persecution. The apostle appears now to have been treated, not as an honorable state-prisoner, but as a felon (2 Tim. ii, 9). But he was at least allowed to write this second letter to his "dearly beloved son" Timothy; and though he expresses a confident expectation of his speedy death, he yet thought it sufficiently probable that it might be delayed for some time, to warrant him in urging Timothy to come to him from Ephesus. Meanwhile, though he felt his isolation, he was not in the least daunted by his danger. He was more than ready to die (iv, 6), and had a sustaining experience of not being deserted by his Lord. Once already, in this second imprisonment, he had appeared before the authorities; and "the Lord was with him and strengthened him," and gave him a favorable opportunity for the one thing always nearest to his heart, the public declaration of his Gospel.

This epistle, surely no unworthy utterance at such a time of his life, on such an hour even of a Paul, brings us, it may well be presumed, close to the end of his life. For what remains, we have the concurrent testimony of ecclesiastical antiquity that he was beheaded at Rome, about the same time that Peter was crucified there. The earliest allusion to the death of Paul is in that sentence from Cl. *Men. Romanae*, already quoted,
"Having gone to the boundary of the West, and tes-
titulated before rulers, so he departed out of the world" (παν το τέρμα της έπος πολέως και ματατηρία τις των έναγων, ούτως ἀνήλιον τού κύρους), which just fails of giving us any particular upon which we can conclusively rely. The next authorities are those quoted by Eusebius in Hist. Eccl. i, 26. Dionysius of Alexandria, bishop of Corinth (A.D. 170), says that Peter and Paul went to Italy and taught there together, and suffered martyrdom about the same time. This, like most of the statements relating to the death of Paul, is mixed up with the innumerable legends which are not immedi-
cately concerned, of the work of Peter at Rome. Caius of Rome, supposed to be written within the 2d century, names the grave of Peter on the Vatican, and that of Paul on the Ostian Way. Eusebius himself entirely adopts the tradition that Paul was beheaded under Nero at Rome. Among other early testimonies, we have that of Tertullian, who says (De Francisc. Haret. 36) that at Rome "Petrus passionis Dominice adequantur, Paulus Johannis [the Baptist] exitu coro-
natur," and that of Jerome (Cat. Ser. "Paulus"). "Hic
erog; in Gieseler, Eckli. Hist., i., 698.
III. Special Investigations.—We propose here briefly
to take up the various disputed points above referred to,
the discussion of which, in their respective connections,
would have interrupted the narrative.

The subject of our investigation is that of Paul the Apostle. The following works: Pearson, Annum Pauli, in his Isthom. (Loc. Labini, and separately at Halle, 1719); Hottinger, Pentas dissertat. Bibl. Chron. p. 905 sq.; Vogel, in Gabel-
lientia loci (L. iv., 1806); Hug, Künkel, ii., 283; Sitka von
Bengels' Archiv, i., 156 sq., 297 sq.; Schmidt, in Keil's
Analog. III., i., 128 sq.; Schrader, Paulus, i.; Schott,
Erörterung wichtiger chronol. Puncte in d. Æltest.-
p. F. (Jena, 1823); Anger, De tempor. in Actis. (Leips. 1853); Zeller, in his Hebräisch-Christl. (Leips. 1855); Wieseler, Chronologie des apostol. Zeitalters (Gottingen, 1848); Conybeare and Howson, Life and Letters of St. Paul (London, 1850); Davidson, Introd. to the New Test. (Bibl.) vol. ii.; Lewin, Elements of Early Christ. Chron.; Brown, Oro Socleorum. The fundamental points on which this chronology depends are his joining the Chris-
tian church (Kichler, De Amo quo, i. 10; Zacar. Concr. etc., Leips., 1826), and his journey to Jerusalem. It is of course utterly impossible to determine the year of Paul's birth. According to an old tradition (Oro.
Apol. de Patris et Pauli in Carthag. Opin. ed. Benedict, viii., 10), it falls in the second year after Christ. Schrader places it in the fourteenth year after Christ. It is easier to
determine the time of his joining the Church than of his
visit to Jerusalem (comp. Acts ix., 22 sq. with 2 Cor.
xxi., 32). But two difficulties arise: first, we are not cer-
tain whether this open act of allegiance to Christianity
took place during the first or second stay of Paul, after
his conversion, at Damascus (Gal. i. 17; the latter seems
probable, according toActs ix., 26); and, second, the year
in which an edict of the Arabian king Aretas ruled in
Damascus is not satisfactorily ascertained, according to
chronology. (Yet see Neander, Phthian., i. 127 sq.)
It is even urged that the Arabian edict was present only as a pri-
vate matter (Anger, p. 181); but this is improbable in view
of the expressions used by Paul (2 Cor. xii., 32). We
must, however, consider the matter to lie between these
years 32, which we adopted, and 65, which we have consid-
ered as a safe starting-point for Paul's chronology. See
Aretas. We have, however, the death of king Agrippa
(Acts xii.), and the arrival of the procurator Porcius Festus
in his province of Judea (Acts xxiv., 27), as the two extreme points between which the active mission-
ary life of Paul lies. Now we know certainly that king
Agrippa died in the year 44, and the arrival of Festus
may be fixed with high probability in the summer of
the year 55. See Festus. But with regard to the de-
tails of the events which occurred between these periods
the absolute certainty of opinion exists, even among the
ablest investigato, of ground on which they are set forth.
See Chronology. The chronological ar-
rangement which seems, on the whole, the most proba-
ble, is given under the head Acts (q. v.)
2. On the family of Paul, Jerome remarks that Paul was of the race of Benjamin, and possessor of a
farm at Scita Gischala, in Judea (comp. Gamaliel, a small city in Galilee; Joseph. War, i, 29, 6; i, 11; Life, x. 38; and Re land, Pilast., p. 813), and, when this town was taken by the Romans, he emigrated with his parents to Tarsus, in Cilicia. But this is plainly contradicted by Acts xxii, 3, where Paul speaks of himself as a native of Tarsus; nor is it easy to see how Gischala could have been taken by the Romans during Paul's childhood, so that resi-
dents judged it prudent to emigrate. A story of the
Eliometrics (Epiphan. Hær., xxxi., 25) tells us that Paul was birth a heathen, but became a Jew in Jer-
salem, in order to obtain the high-priest's daughter in marri age! It is not certainly known how Paul's father
obtained the right of Roman citizenship (see Becker, Röm. Alterthumsk., ii. 1, sqq.; Cellaris, Dissertatione, ii, 710
sq.; Deleying, Observ. iii., 399 sq.; Arntzen, Dic de ci-
stitutio Paoli, Traj. ad Rhen., 1726). Either some an-
tor, perhaps the father of Paul himself, had obtained it
by great service to the state (Grotius, ad loc.; Cellaris, ut sup., p. 276 sq.), or he had purchased it (Gronov. Ad
Joseph. Deo, pra. Paul. p. 42; Deleying, ut sup., p. 893, sqq.), or that the whole city of Tarsus did the honor to the
right from Augustus is without ground (comp. Beu-
gel, in Acta xvi., 27). See Tarsus. If the reading
of the text, s thông a. "son of a Pharisee," in Acts xxiiii, 6, were correct, we might infer that only Paul's father had
belonged to this sect; but if, with the best manuscripts, we read, "son of a Pharisee," it would imply that his ancestors had been Pharisees for several or many generations; and perhaps that they had been reckoned amongst the most aristocratic of the Jews. We
know nothing further of Paul's family, save that he had a sister (Gal. iv. 15; comp. Acts xxiii., 16), and that he was not himself married (1 Cor. vii., 7; comp. ix., 5; and see Schmid, De Apostolis,"Uraortis", p. 80 sq., where also the account of Clemens Alexander. In Eusebi. iii., 30, is examined; see also Uscher, Prologem. in Ignat. c. 17; Appendix to 3d vol. Patres Apoll. apud. C. Michaelis, p. 272). The condition which affirms that Paul led with him for some time as a companion the young woman Thecla, of Iconium, whom he had converted (Minovg, Græc. i, 66).
3. As to Paul's travels, on the word "tent-maker" (πατρωνοματες) we may refer to the Lexicon of Hierholdt (v. 3968 sq), and Schurtzfeltisch (De Paullo πατρωνοματες, Leips. 1699). Luther makes it "carpet-maker"; Morus (in Act. xvi., 3) and others, "maker of mats or mat-
tresses;" Michaelis (Eul. ins. N. T. § 216) and Hain-
Paul (Eins.l. N. T. iii, 501), "tool-maker;" Chrysostom and others, "worker in leather" (= κερατοφυτής); Hug (Intro.d. p. 505, Foskell's tr.1al. and Eichhorn (Eins.l. N. T. iii, 8), "maker of tent-cloth;" but most critics agree with our translators in rendering it "tent-maker." Com' Robinson, Dion (1713); Neander, Schleuniger, G. Shepherds, travellers, and others used small tents of cloth or leather as a protection against the weather, especially at night. The manufacture of them was a flourishing and profitable employment. See TEXT. Paul accordingly preferred, when opportunity offered, to support himself by laboring at this trade, rather than to live upon the gifts of the Church (Acts xviii. 8; 1 Cor. iv. 12; 1 Thess. ii. 9; 2 Thess. iii. 8). There was a goat's-hair cloth called Cilicium, manufactured in Cilicia, and largely used for tents. Paul's trade was probably that of making tents of this hair-cloth.

4. As to Paul's education, there was a flourishing Greek academy in Tarsus, and the residents were respected in other countries for their cultivation. Whether and how far this circumstance influenced Paul while young cannot be determined. He was not a very young when he went to Jerusalem, and obtained his facility in the use of the Greek language and his Hellenistic education rather by his travels among the Greeks than in his native city. It is not in itself probable that he attended a Greek school in Tarsus, nor can it be supposed that, with his studies in the Law, and his natural gifts, he would have required a rabbinical education. Rather than the learning of a Jewish rabbi, for which position he had been educated (Gal. i. 14), and the logical training of a Pharisee (Ammon, Opuscula, p. 63 sq.), supported by a remarkable natural endowment; and the few quotations from Greek poets which are found in his epistles and speeches (see Jerome, on Jas. i., as in 1 Cor. xv. 38; Acts xvii. 28 (see Progr. by Benner [Gies. 1758], on Tit. i. 12; Schickendantz, De trib. a Pavlo prof. scripta allegata [Servest. 1764]; Von Seelen, Medit. Eryc. ii, 612 sq.; Hoffmann, De Pavlo Apost. Scriptor. prof. all g nata [Tüb. 1770]), might have been picked up in the course of his travels, as they are merely general, and perhaps proverbial, sentences. So regards the few words quoted from Aratus, we need not suppose, with Tholuck, that the apostle had read them, although this is very improbable (Neander, i. 111); nor must we suppose that Paul seems to indicate (Gal. vi. 11) that it was not easy for him to write in Greek letters (see Thalemann, De E adicione Pavli Judaice non Graec. [Leips. 1679]; Michaelis, Einl. i. 192 sq.; Henke, on Paley, Horse Pilgr. P. vii. passim), and the controversy concerning the text of the Pseudo-Epictetus, De Erudione Pavli (Leips. 1768); Schramm, De stupenda Eruditione Pavli [Herib. 1781]; Möller, in the Biblioth. Luebic. v. 104 sq. The active mind of the apostle did not remain ignorant even of the philosophical speculations of the day. But by the philosophy of Paul (see Zobel, De Paullio philosopho [Al- dorf, 1701]; Feller, De Pavlo philosopho pleno divino [Viteb. 1737]; Bieck, De Paulli philosophia, in Heu- mann's Act. Philos. xiii. 124 sq.), it is not meant a formal system or scientific view, but simply that his mind had been trained in it. In the case of the acquaintance he betrays occasionally with the Roman law does not at all pass beyond the most common legal relations, and cannot be called jurisprudence (Kirk- maier, De jurisprudentia Paulinae [Viteb. 1780]; Westen- burgh, Opusc. Academ. ed. Pittmann [Leips. 1794]; Strack, De jurispr. Pauli [Halle. 1806]; Freiholz- beh, De jurispr. Pauli. [Leips. 1840]). The style of Paul's Epistles shows that he had acquired a real facility in expressing himself in Greek; and the Greek coloring which appears through all the Hetrainsm of his speech shows that he was well acquainted with the Hebrew. The same may be said of the several passages from the Hebrew by a foreign hand, and that, as it is urged in excess of learned tritling, an unskilled one, would read quite otherwise. The Greek style of Paul rises even at times to eloquence (Hug, Eul. it. ii. 285), although he may have seemed to the Greeks "rude in speech" (2 Cor. xi. 6), and a better Pauline system of rhetoric could easily be derived from his works than Baur suggests (Halle, 1782, ii. 6; see Kirchmaier, De arch. der ersten Petrusbriefe [Tübing. 1829]; Dr. can there be any doubt of the acquaintance of the apostle with Latin, and his ability to speak it (see Ehrhardt, De Latinitate Pauli [Silius. 1763], ii. 4). But perhaps his idiomatic facility in the Greek had failed him, and led to his employment of an ammended version. Extraordinary services have often been made on the apostle's behalf as to his classical education, based upon slender evidence. This evidence consists (1) of a few supposed references in the discourse alluded to by Dr. Bentley, to certain dogmas of the Greek philosophers; but even supposing an apostle to have had these in his eye, it will not follow that he must have studied the writings in which these dogmas were unfolded and defended, because he might have learned enough of them to guide him to such references, as by the supposition he makes in that discourse, from those controversial encyclopaedists who wrote against the "Epumenidae of the Stoics" which we are told he had in the market-place of Athens, previous to the delivery of his oration on the Areopagus; (2) of three quotations made by him from Greek poets: one from the Phenomena (ver. 9) of his countryman Aratus (Acts xvii. 28), from a lost play of Menander (1 Cor. xv. 38), and one from Epimenides (Tit. i. 12), all of which, however, bear the general character of gnomes or proverbs, and might consequently find their way to the apostle merely as a part of the current coin of popular conversation, without his having once visited the treasury where claims were originally drawn; and (3) of certain similarities of idea and expression between some passages of the apostle and some that are found in classic authors (Horne, Intro.d. iv. 549); but none of which are of such a nature as to necessitate the conclusion that the coincidence is more than purely accidental. See Erucha- tion.

5. On the conversion of Paul there are various views (see Lyttleton, Observ. on the Comers of Paul [Lond. 1747], and Kuinol, Comment. iv. 329 sq.). The older view is based on the Acts (abs. xxviii. 29) and on the writings of the Greek Church of the East, which represents the apostle as coming from Antioch, and passing through America, which interprets the account literally, and supposes a visible manifestation of Jesus, is brought forward by Miller (De Je u. Pavlo Vici [Got. 1778]). But the prevailing current of German opinion, opposed to rationalistic influence, has for a long time been to explain away the supernatural elements in this narrative, either by referring them to the imagination of Paul and his followers, working on natural events (see Ammon, De repentina Sauli ad doctr. Christi cons- tomate [Erl. 1792], also in his Opusc. Theol. i. 97; see also Rinne, De thesaur. SS.): by a comparison of Henke's Misc. iii. 226 sq.; Schulz, in Heinrich's Heirtz. a. Refor., d. theol. Wis. i. 47 sq.; Bongel, Observ. de Pavlo ad rem Christ. confer. [Tübing. 1819], ii. 4 [this work takes, however, a middle course, and shows more than usual regard for the narrative]; Piisch, De origine Pauli in theophras. Hist. Plant. 16. 16. 25; and Neander [i. 116] and Olshausen [on Acts x. 1] return partially to the old view), or reject the narrative entirely as a relation of actual facts (see Breischneider, Hand.; der Dogmatik, i. 825 sq., who considers all as a vision; Bux, p. 62, who makes the whole a symbolical parallel of Paul's internal experience, by his defenders, as an offset to Peter's vision, Acts x. 11).

The apologetic bearing of Saul's conversion, according to the obvious meaning of the Scripture narrative,
mu cannot be rendered "this is the third time I have purposed to come to you," as De Wette remarks (Einleitung, ad loc.), it is only when the purpose is close on its accomplishment, not of an earlier purpose, that ἵππαμι can be so used. But in this case the ἵππαμι does not refer to any previous purpose; that is implied only in the ὑπερμαχόμεθα, but the instance fairly comes under the usage of the pres. for the determined fut. (Krüger, Griech. Sprachl. 1, 148, 149; Winer, Grundriss, 281). Moreover, we have the apostle's own epexegesis of his usus locandi in the parallel passage, where he distinctly states the church intended (ὑπερμαχόμεθα) only (2) The contrast of τριῶν in xii, 1 with ἵππαμι in ver. 2 leads to the conclusion that it is of a third visit, and not of a third purpose to visit, that Paul is writing; he had told them formerly when he was present with them the second time, and when absent, in announcing a third visit, he tells them again, etc. Some render, as in the A. V., ἵππαμι by as if present, so as to make the apostle intimate that he had not been oftener than once before at Corinth; but it is very doubtful if ἵππαμι is ever used to express a purpose of a case. But nowhere could he in behalf of the poor Christians in Jerusalem and Judea (Rom. xv, 25 sq.; 1 Cor. xvi; 2 Cor. vii sq.; Gal. ii. 10; Acts xxiv, 17), he extended his apostolic labors from Syria to the north and north-west (Rom. xv, 10), where he could not fear to do good and to work of faith (Gal. ii. 10; Rom. xv, 20); but even there he was not, it seems, altogether unaffected by the authorities of the Church in Palestine (1 Cor. i, 12; iii, 22). His whole life was a struggle against adversaries as wily as they were unwearying (Scharling, De Paullo ἐναρ. adversariis, Harn. 1836). Not only did the Jews in Palestine and elsewhere persecute his former companion with the whole weight of their national and religious hatred (Acts i, 23; xiii, 50; xiv, 5 sq.; xvii, 5; xviii, 12; xxi, 27 sq.; xxii, 12), but even within the Christian Church itself, openly and secretly, Judaizing Christians and philosophizing Christians opposed him; and while Paul was defending Christian freedom against the stiff legality of the former, he was compelled to rescue the historical basis of Christianity from the errors of the latter. Like other great teachers, too, he was forced sometimes to meet misunderstanding of his own instructions (1 Cor. xiv, 10; vii, 9). Although Paul saw the necessary end of the Jewish ritual, yet, in dealing with the weak, he was no bigot opponent of it (ix, 19, 20); he not only had Timothy circumcised, but he himself submitted in Gal. vii. 18 (Rom. xiv, 24 sq.; see Nazarites, and Lakemacher, Obserr. vi, 364 sq.). Only where Jewish prejudices pressed in with bold demands, and threatened serious trouble, did he manifest severity (Gal. ii. 4 sq.). On the other hand, his opponents left nothing untried to diminish his apostolic authority, descending even to slander (2 Cor. i; comp. x). They had even forged letters under Paul's name (2 Thees. ii. 2; see Neander, i, 281). Thus his life was really a series of continuous strife and danger (2 Cor. xvi, 23 sq.).

7. Three Visits. From several passages of 2 Corinthians (i, 1; xii, 14, 21; xiii, 1, 2) it has appeared to many that before the writing of that epistle Paul had twice visited Corinth, and that one of these visits had been after the Church there had fallen into an evil state. The words (2 Cor. xii, 14) τριῶν τοῦτο ἴππαμι τριῶν τοῦτο ἴππαμι are usually explained as meaning only, "I am a third time prepared to come," and in accordance with this it is thought that τριῶν τοῦτο ἴππαμι (2 Cor. xiii, 1) may be rendered "This third time I am purposing to come to you," so that it is not a third visit, but simply of a third purposed to visit that Paul speaks. And the following arguments are urged: (1) That ἵππαμι may signify "I am coming" in the sense of "purposing to come," the whole phrase τριῶν τοῦτο ἴππαμι...
makes Paul's imprisonment end with his execution. But since the 4th century the prevailing tradition has been that Paul was at that time released, and made several apostolic journeys afterwards (Nisch. ii. 54, especially note 52, and Cyril. of Jerusalem. Cyril. c. xvii.; Jerome, in Jes. xi. 14; see also Weller, De verbis. P. in Hist. muriario [Arg. 187]; comp. against this view Spier, Diss. qua testimonium putram de Pauli timore Husb. lab. fectantur [Viteb. 1740]; Hist. Cris. de Husb. P. timore [1742]; Harenburg, Oliba Gandershem. p. 161 sqq.); or even farther (Theodoret, in Ps. cxxv.); as into Britain (Minster, Stud. u. Krit. 1883, i. 55); and at last was again imprisoned in Rome, and put to death at the same time with Peter (Eusebius, Hist. Eccles. ii. 22, 25; comp. Acta Petri et Pauli, Gr. ed. Thilo [Hal. 1838]. The oldest tradition of Paul's release, and the only one worthy of any attention, is that in Eusèbii (Hist. Eccles. ii. 22; comp. Danz, Pr. de loco Euseb. H. E. ii. 21 [Jena, 1816]. But he simply mentions it as a report (λογίας τούτος); and the confirmation which he draws from the Second Epistle to Timothy would lead us to suppose that those who originated this report had derived, as the moderns have, the idea of a second imprisonment of Paul from that epistle. But no such stress should be laid upon the First Epistle of Clement Romanus to the Corinthians, as has been given it, for example, by Neander (1. 658 sqq.) and Böhl (p. 95 sqq.; comp. Baur, u. Epp., p. 150; Schenkel, in the Stud. u. Krit. 1841, p. 56 sqq.; yet see Neander, i. 454). It is mainly the peculiar difficulty of referring this Second Epistle to Timothy to any point in the known life of the apostle which has led to the supposition of a second imprisonment. This argument has been urged with great acuteness by Neander (1. 458 sqq.). The following authors have opposed the idea of a second imprisonment of Paul: Oldendorp, in D. Breun. u. Verdenach. Biblioth. iii, 1072 sqq.; Schmidt, Einführung in die N. T. p. 199 sqq.; Eichhorn, Einleit. iii, 804 sqq.; Wolf, De adlocut. P. ap. capitulat. (Leips. 1812), ii. 8; Schrader, Paulus, i. 227 sqq.; Günther, in Hemsen, p. 736 sq.; Schenkel, in the Stud. u. Krit. 1841, i. 53 sqq.; Baur, Paul. p. 229 sqq.; Niedner, Kirchengesch. p. 104 sqq.; De Wette, Einleit. ii. 229 sqq. On the other hand, on the favor of the journey, see Heydenreich, Baurpfl. d. Pastoraler, ii. 6 sqq.; Mynter, Kleine theol. Schriften, p. 291 sqq.; Neander, ut sup.; Böhl, Abfass. der Briefe an Tim. u. Tit. p. 81 sqq.; Schott, Erörterungen, p. 116 sqq.; Wurm, in the Tübinger Zeitzrk. 1855, i. 82 sqq.; Guericke, Einleit. in die N. T. p. 638 sqq.; Walch, Biblioth. theol. iii. 455. Others are cited above. 9. Personal Appearance and Character.—All testimony, his own included (2 Cor. x. 10), leads to the conclusion that in outward appearance the apostle had

Portrait of Paul. (From a Roman Diptych not later than the 4th century.)
nothing to command admiration or respect. His figure was diminutive, his eyesight defective (comp. Acts xxiii, 5; Gal. iv, 15), and his speech such as produced little effect. An ancient writer adds that he was bald, and had a hooked nose like an eagle's beak. The combination of these features presents such a figure as one may often see among the Jews of our own day, especially in the humber class of them. Such pictorial representations of the apostle as have come down to us in paintings and mosaics agree in the main with this, though they give more power and dignity to the apostle's countenance than this would lead us to expect. They are the early pictures and mosaics described by Mrs. Jameson, and passages from Malalas, Nicephorus, and the apocryphal Acta Pauli et Theolo (concerning which see also Conybeare and Howson, i, 197). They all agree in ascribing to the apostle a short stature, a long face with high forehead, an aquiline nose, close and prominent eyebrows. Other characteristics mentioned are baldness, gray eyes, a clear complexion, and a winning expression. According to Heg, the apostle's temperament was sanguine; but as Tholuck, with better reason, says (Stud. u. Krit. loc. cit.), sanguine-bilious. On his person, we have only an unrustworthy tradition (in the Dialog. Philopatris, c. 12, and Malalas, Chron. x, p. 237, Bonn). Too much importance has been laid upon the references in the Epistles (1 Cor. xv, 9; 2 Cor. x, 10; see Bengel, on Acts xiii, 9; Tholuck, op. cit. p. 881). It is probable, however, that the general appearance of Paul did not correspond well with his greatness of mind and heart. But a strong, healthy body he must have had, to endure such journeys and hardships (2 Cor. xii, 29 sq.), and he seems to have had great mental energy and endurance (comp. Acts xx, 7; 2 Cor. xi, 28), but could not undergo much bodily toil (1 Thes. ii, 9; 2 Thes. iii, 8).

Of his mental temperament and character Paul is himself the best painter. His speeches and letters convey to us, as we read them, the true impressions of those qualities which helped to make him the great apostle. We perceive the warmth and ardor of his nature, his deep affectionate disposition, the tenderness of his sense of honor, the courtesy and personal dignity of his bearing, his perfect fearlessness, his heroic endurance; we perceive the rare combination of subtility, tenacity, and versatility in his intellect; we perceive also a practical wisdom which we should have associated with a cooler temperament, and a tolerance which went with such a disposition. When he first comes before our view in the history, we see a man of intense energy, firm decision, iron resolution, and uncompromising zeal; and these qualities, tempered by pure religious feeling, guided by God's wisdom and modified by his experience, continue to characterize him so long as he appears upon the stage of life. His natural mental endowments were of the highest order. He had great breadth of view, great clearness of apprehension, a capacity of firmly grasping principles, the power of arranging his thoughts in their proper logical order, and the ability to utter them in forcible and fitting words. The dialectic predominates in his writings; but he could also play the orator after no mean fashion; and there are passages in his epistles which could have come only from the pen of one who had in him the faculties of the poet. In his moral development everything is great and noble. To honesty of purpose and sincerity of speech, he added humility and self-distrust, generous regard for the welfare of others, a tender sympathy with those he loved, and a philanthropy that embraced the race. In the absence of any thing meritorious, mercenary, or selfish, and a noble devotion, at whatever cost, to the interests of a great cause, combine to shed around a character, in other respects so beautiful, traits of sublimity and grandeur. Here is a man who was admired and loved—a teacher at whose feet one might sit with unhesitating docility—a friend on whose bosom one might lean with confidence and affection. The vigorous intellect and the large heart which belonged to him by nature would have brought him distinction; and if his piety and honor is derived from his having, under the constraining power of the love of Christ, consecrated himself, body, soul, and spirit, to the service of God in promoting the best interests of men. In this respect he stands foremost among the Church's heroes and the benefactors of the race. The principle which harmonized all these endowments and directed them to a practical end was, beyond dispute, a knowledge of Jesus Christ in the Divine Spirit. Personal allegiance to Christ as a living Master, with a growing insight into the relation of Christ to each man and to the world, carried the apostle forward on a straight course through every vicissitude of personal fortunes and amid the various habits of thought which he had to encounter. The conviction that he had been instructed with a Gospel concerning a Lord and Deliverer of whom was what sustained and purified his love for his own people, while it created in him such a love for mankind that he only knew himself as the servant of others for Christ's sake.

A remarkable attempt has recently been made by Professor Jowett, in his Commentary on some of the Epistles, to qualify what he considers to be the blind and undiscriminating admiration of Paul, by representing him as having been, with all his excellences, a man "whose appearance and discourse made an impression of harshness and austerity on the mind and heart," a "confused thinker, uttering himself "in broken and hesitating forms of speech, with no beauty or comeliness of style," and so undecided in his Christian belief that he was preaching, in the fourteenth year after his conversion, a Gospel concerning Christ which he himself, in four years more, confessed to have been carnal. In these paradoxical views, however, Prof. Jowett stands almost alone; the result of the freest, as of the most reverent, of the numerous recent studies of St. Paul and his works (among which Prof. Jowett's own Commentary is one of the most interesting) having been only to add an independent tribute to the ancient admiration of Christendom. Those who judge Paul as they would judge any other remarkable man confess him unanimously to have been "one of the greatest spirits of all time;" while those who believe him to have been a shrewd and shrewdly useful man, and inspired by the Holy Ghost, to do a work in the world of almost unequalled importance, are lost in wonder as they study the gifts with which he was endowed for that work, and the sustained devotion with which he gave himself up to it. On the intellectual and moral character of Paul, see Niemeyer, Charakter, i, 206 sq.; Huyg. Einlei. ii, 288 sq.; Hartmann, in Scherer's Schriftenverk. i, 1 sq.; Journ. f. Pred. xxviii, 298 sq.; Palmer, Paulus u. Ganael, ein Beitrag zur ältesten Christengesch. (Gless. 1866); Olshausen, Bibl. Comment. I1, i, 11 sq. Apocryphic Writings.
PAUL
823

Paul, Father, whose original name, before he embraced the monastic profession, was Pietro Sarpi, is celebrated as the historian of the Council of Trent. He was born at Venice Aug. 14, 1552, of a respectable commercial family. His father, however, was unsuccessful in trade; and his mother, a woman of sense and virtue, was early left a widow in indigent circumstances. Fortunately her brother was the master of an excellent school, and under his care she placed her son, who from infancy displayed a quick apprehension, a rapid thought, and quick and graceful penmanship, in short, an extraordinary aptitude for study. Before the completion of his fourteenth year he had made great progress in mathematics and logic, as well as in general literature, and in the languages, particularly the Greek and Hebrew; and at that boyish age, having become a pupil of the logician the Caoccupi of Cremona, who was of the Servite Order, this connection led him, contrary to the urgent advice of his uncle and mother, to adopt the monastic habit and rule of his preceptor. In his twentieth year he solemnly took the vow of the order. At the same period the ability which he displayed in a public disputatio, held at Mantua during a chapter of his order, attracted the favorable notice of the reigning prince of the house of Gonzaga, and he was appointed to the professorship of divinity in the cathedral of that city. But though this appointment was to many a happy one to the Mantuan duke, a public life was little to his taste; and he shortly resigned his office, and returned to the learned seclusion which he loved. In that retirement he continued to cultivate learning and science; and in his twenty-second year he was not only acknowledged master of the Latin, Greek, Hebrew, and Chaldee languages, but was also noted as a proficient in the civil and canon law, in various departments of philosophy, in mathematics and astronomy, in chemistry, medicine, and anatomy. In these last sciences he became deeply versed for his times, and it is probable that he was one of the earliest to reject the Galenic canons of the circulation of the blood, for the discovery of which Harvey is celebrated. The claim of Sarpi as the discoverer rests on the authority of Veslingius, who states, in his Epist. Anst. et Medice, ep. xxvi, that he had read a MS. by Sarpi, belonging to his pupil and successor Fulgentius, in which the circulation was described. George Ent (Harvey's commentator and friend) admitted the testimony, but said that whatever Sarpi knew of the circulatation he learned from Harvey. Ridanor, Harvey's chief adversary, gives no credit for the discovery to Sarpi; and Ridanor himself was only second to Harvey in the discovery. Several writers attribute to Sarpi the discovery of the valves of the veins, which gave Harvey the first idea of a circulation; but Fabricius was acquainted with them in 1574, when Sarpi was but twenty-two years old, and it is certain that he (Fabricius) taught Harvey their existence. The above is on the authority of Haller (J. Bibliotheca Anatomica), who does not attribute any part of the discovery to Sarpi. The pursuit of such diversified studies, and the renown which they procured for father Paul, no less than the freedom of his opinions in the course of his labors, and the kindred minds of his age, drew upon him the envy and suspicion of the mean and bigoted; and he was twice arraigned before the Inquisition on a false and absurd accusation of heresy, and on a better-founded charge of having declared in a letter his adherence to the papal pretensions of Gregory XIII. His high reputation protected him in both cases; but the court of Rome never forgave him, and at a subsequent period revenged and justified his bad opinion of its administration by refusing him a bishopric.

But even before this, father Paul was at the time of these trials before the Inquisition on a Protestant; but, even if these were true, his Protestantism was confined to an acceptance of the first simple positions of the Augsburg Confession, if he real
ly hled even these. At least father Paul, all his life long, daily read mass. Indeed it would be impossible to give a name to the creed to which, in his own mind, he was attached; it was a body of opinions, symptoms or peculiarities of the popes at that period devoted themselves to the natural sciences; deviating from the common standards of orthodoxy, inquisitive and searching, yet in itself neither decided nor completely matured. But this much is certain, that father Paul indulged towards the secular jurisdiction, the senate of Venice, not contented with setting these papal weapons at defiance, desired and even required of them their subjection to their usual cause. The most eloquent and successful advocate whom they employed for this purpose was father Paul; and, animated both by zeal in the service of his native state and by indignant opposition to the Roman usurpations, he fulfilled his task with equal courage and ability, and signally exposed the papal pretensions. Father Paul was finally compelled to consent to an accommodation very honorably to the Venetian state. The papal party, however, though reduced to yield to the power of that republic and the strength of her cause, was not satisfied with this; on the contrary, it continued, and her defenders, and among them father Paul was signally marked for a victim. Several attempts were made to assassinate him; and even in the apparent security of his retreat at Venice he was attacked one night as he was returning home to his monastery by a band of ruffians, who inflicted on him no fewer than twenty-three wounds. The assassins escaped in a ten- oared boat; and the papal nuncio and the Jesuits were naturally suspected of being the authors of a plot prepared with such a command of means and expensive preparation. The attempt seemed a mortal one; and preserving one of the stilettoes which the assassins had left in his body, he surmounted it with the inscription, "Stilo della chiesa Romana" (The pen or dagger of the Romish Church). The life of Paul life compelled father Paul to confine himself to his monastery, where he employed his constrained leisure in the great literary composition by which he is chiefly remembered—the History of the Council of Trent (Historia del Concilio Tridentino di Pietro Saverio Polano)—a work which has been not more deserved of commendation for its style and a model of historical composition than for the extent of its learning, the generous candor of its spirit, the unbiased integrity of its principles, and the unostentatious piety of its sentiments. While occupied in this and other labors of minor import, a neglected cold produced a fever, and after lying for nearly twelve months on a bed of sickness, which was supported with the most edifying cheerfulness and piety, he expired in the beginning of the year 1623. His memory was honored by the gratitude of the Venetian republic with a public funeral, which was distinguished by its magnificence, and the vast concourse of nobility and persons of all ranks attending it; and the senate, out of gratitude to his memory, erected a monument to him, the inscription upon which was written by John An- thony Palma, the Venetian. Father Paul was of middle stature: his head very large in proportion to his body, which was extremely lean. He had a wide forehead, in the middle of which was a very large vein. His eyebrows were well arched, his eyes large, black, and spirited; his nose long and big, but large; his mouth small but large, and his grave, was extremely soft and inviting; and he had a fine hand. Cardinal Perron thought proper to deliver himself concerning our author in these terms: "I see nothing eminent in that man; he is a man of judgment and good-sense, but has no great learning. I observe his qualifications to be more common ones, and little superior to an ordinary monk's." But the learned Morhoff (Polyhistor, p. 298 sq.) has justly remarked that this judgment of Perron is absurd and malignant, and directly contrary to the clearest evidence; since those who are acquainted with the great things done by father Paul, and with the vast extent of his learning, will allow him to be superior, not only to monks, but cardinals, and even to Perron himself." Courayer, his French translator, says, in his Vie abrégée de Fras Paolo, prefixed to the Histoire du Concile de Trent, that, "in imitation of the English, French, and other great men, Paul was a Catholic in general, and sometimes a Protestant in particulars. He observed everything in the Roman religion which could be practiced without superstition, and in points which he served the reformers in the care of the church. In short, he was equally averse to all extremes; if he disapproved the abuses of the Romanists, he condemned also the too great heat of the Reformed; and used to say to those who urged him to declare himself in favor of the Luther, that God had not given him the spirit of Luther." Courayer likewise observes that "Paul wished for a reformation of the papacy, and not the destruction of it; and was an enemy to the abuses and pretenses of the popes, not their place." Walton tells us that the contests between the court of Rome and the senate of Venice were the occasion of the glorious knowledge and interest with king James, for whose sake principally he was compiled that eminent history of the remarkable Council of Trent; which history was, as fast as it was written, sent in several sheets in letters by Sir Henry Wotton, Mr. Bedell, and others, unto king James and the then bishop of Canterbury, into England." Wotton relates that James himself "had a hand in it, for the benefit," he adds, "of the Christian world." (Religious Wottonianum, p. 486.) This history of the Council of Trent was first published at London in 1619, and was immediately translated into the Latin, the English, French, and other languages; a new translation of it into French by Dr. Le Courayer, with notes critical, historical, and theological, was published at London in 1736 (2 vols. fol.). Burnet's account of this work may serve to show the opinion entertained of it by the Protestants even of that time; "The Title and way of writing," says he, "is so natural and masculine, the intrigues were so fully opened, with so many judicious reflections in all the parts of it, that it was read with great pleasure, and it was generally looked on as the rarest piece of history which the world ever saw. The author was soon guessed, and this raised the esteem of the work; for as he was accounted one of the wisest men in the world, so he had great opportunities to gather exact information. He had free access to all the archives of the republic of Venice, which has been long upon the several ages of the church; being in such a high opinion, it is not to be doubted.
there were frequent and particular informations both
of more public and secret transactions transmitted
thither. He had also contracted a close friendship
with Camillus Oliva, that was secretary to one of the
legates, from whom he had many discoveries of the
practices of the legates, and of their correspondence
with Rome; besides many other materials and notes
of some prelates who were at Trent, which he had
gathered together. His work came out within fifty
years of the conclusion of the council, when several
who had been present there were still alive, and the
things as well as the men's memories that he thought
a man of so great prudence as he was would have ex-
posed his reputation by writing in such a nice manner
things which he could not justify. Never there was
a man more hated by the court of Rome than he was,
and now he was at their mercy if he had abused the
world by such falsehoods in matter of fact as have
since been charged on his work; but none appeared
against him for fifty years" (preface to a book entitled
The Policy of Rome, or the Sentiments of the Court
and Cardinals there concerning Religion and the Gospel
as they are delivered by Cardinal Pallavicini in his History
of the Council of Trent (London. 1681, 8vo.). Ranke says:
"The memory of Paul Sarpi is justly held in high
honour throughout all Roman Catholic states. He it
was that fought for and won the fundamental princi-
pi] to which we may refer the spiritual privileges
which the Church acquired in the subsequent period of
it beyond his power to set him aside." Father Paul is
also the author of A Treatise of Benefices Matters, or
a History of Ecclesiastical Benefices and Revenues, in
which are set forth their Rise and Progress, and the va-
rious Methods by which they have accrued to the Church,
translated, with the notes of Antonio Morelli (Westmin-
ster. 1727, 8vo.). A complete edition of father Paul's
works in the original language was published at
Verona and Naples in 1761, 1768, and 1790. See,
besides the memoir appended to the different editions
of Father Paul's History of the Council of Trent and his
collected works. Ranke, Hist. of the Popes, i. 616 sq.;

2 vols. 8vo.); Werner, Gesch. der opos oogischen u.
poles, Literatur, iv. 886 579: and the references un-
der Pallavicini and Trent (Council of).

Paul von Bernhard. See Paulus von Bern-

ried.

Paul of Burgos. See Paulus Burgensis.

Paul of Constantinople, a historian of note, was
a native of Persia, and is said to have been a disciple
of the heresiarch Nestorius. Nothing is known of his
personal history except that he was a deacon of the
Church of Constantinople, and one of the most ardent
supporters of Nestorianism at the time of the out-
break of the controversy respecting it. He wrote a
work, De Judio, and apparently another work, De
vero Bono. A fragment of the former is quoted in
the proceedings of the Lateran Council, held under
pope Martin I. A.D. 649 (Actio & Secretarius V, spad
Concilii, vel, cc. 5, de Judio, & Labethi), and by the
archbishop St. Maximus, in his Tomus Dogmaticus ad-
versus Heraclii Euthyns (Opera, ii. 91, ed. Combes).
An extract on the subject indicated by the title of the
second work, and from which the existence of the
work itself is inferred, is among the Excerpta
Miscellanea extant in Ms. in the Imperial Library at
Vienna. It may be that the title is appropriate only
to the extract, and this may have been taken from the
work De Judico. See Cave, Hist. Litt. ad ann. 436, i.
426.

Paul I. Patriarch of Constantinople, was born
in the work introduced in the early part of the
4th century. On the death of patriarch Theophilus
(A.D. 386), Paul, one of the prebendaries of that Church,
and comparatively a young man, was chosen to suc-
cede him by the Homoon tan, or orthodox party, while
the Arians were anxious for the election of the deacon
Macedonius, who sought to prevent the election of
Paul by some charge of misconduct, which, however,
he did not persist in. Both men appear to have been
previously marked out for the succession by their
respective partisans; and Alexander had, before his
death, placed the case as a judgment on the two charac-
ters. The Homoonians had carried their point; but the
election was annulled by a council summoned by the
emperor, either Constantine the Great or his son Con-
stantinus II, and Paul, being ejected, was banished
from Constantinople (Athenaeus, Hist. ii. c. c. Memnon,
c. 7), and Eusebius, bishop of Nicomedia, was appoint-
ed by the council in his place. On the death of Eu-
sebius, who died A.D. 342, the orthodox populace of
Constantinople restored Paul, who appears to have
been previously released from banishment, or to have
escaped to Rome, while the bishops of the Arian party
elected Macedonius. The emperor, Constantius II,
being absent, the contest led to many disturbances,
in which a number of people were killed; and an at-
tempt by Hermogenes, mages, to quell the
riot and expel Paul, led to the murder of many
other
by the mob. The emperor immediately returned
Constantinople and expelled Paul, without, how-
ever, as yet confirming the election of Macedonius.
Paul hastened back to Rome and sought the support
of Julius I, bishop of that city, who, glad to exercise
the authority committed to him by the emperor, re-
sumed the correspondence with Paul and invited him
back with a letter to the bishops of the Eastern
churches, directing that he and some other expelled
prelates should be restored to their respective sees,
and bitterly accusing those who had deposed him.
Paul regained possession of thesee of Constantin-
ople, but the Eastern bishops, in a council at Anti-
och (A.D. 345), returned a spirited answer to the ar-
rogant pretensions of Julius; and the emperor, who
was also at Antioch, wrote to Philippus, prefectus
pratorius, to expel Paul again. Philippus, to avoid a
commotion, sent the prelate away privately; but when
he attempted to establish Macedonius in possession of
the Church, a riot occurred, in which above three
thousand lives were lost. Paul was banished, accord-
ing to Socrates, to Thessalonica, and then into the
Western empire, being further accused of rebellion in
the East. But the account of Socrates is disputed,
and Tillemont's opinion is probably correct, that it was
at this time that Paul was loaded with chains and exiled
to Singara, in Mesopotamia, and afterwards to Emissa,
in Syria, as mentioned by Athanasius (l. c.). If Til-
lemont is correct, Paul was banished to Thessalonica,
the empire may probably be referred to the former expulsion
of Paul, when he appealed to pope Julius I, or pos-
sibly Paul may have been released from banishment
and allowed to retire to Rome, which, according to
Phocas, he did three several times. The cause of
Paul and of Athanasius, who was also in banishment,
was still supported by the Western Church, and was
taken up by the Western emperor Constantius, brother
of Constantinus; and the Council of Sardica (A.D. 347)
declared their: restoration. Constantinus, however, re-
fused to remove the charges until compensated for
the loss of his brother; upon whose death, shortly after, Paul
was again expelled by Constantinus, and exiled to Cu-
cesus, in Cappadocia, amid the deiles of the Taurus,
where, it is said, he was privately strangled by his
keeper (A.D. 351), and buried at Ancra. It was re-
ported that Paul was murdered, and in order to
attempt to starve him to death. Great obscurity
hangs over his death; and it is not clear whether he
died by violence or disease. But he was regarded
by his party as a martyr; and when orthodoxy tv-
 triumphed under the emperor Theodosius the Great,
that prince brought his remains in great pomp to Con-
stantinople, and deposited them in a church which
was subsequently called by his name. See, besides
Athanasius, Socrates, Hist. Eccles. ii. 6, 7, 12, 13, 15,
of faith, in which the term "Scriptur" was applied to the Virgin Mary, and had joined in anathematizing Nestorius. Having satisfied Cyril in these points, Paul concluded the negotiations successfully. The few facts known of the life of Paul are given by Tillemon, Miraurea, vol. xiv, and by Christianus Lupus, in his scholia et Nota ad varias PP. Epistolam, formularum, etc., 1869. He wrote, Libellus quasi (s. Libelli quo) Paulus Episcopus Eusebii Cyriici Archiepiscopi Alexandriae ostulti, a Joanne Antichoene Episcopo mission. — Hominis Pauli Episcopi Eusebii ... de Nationati Domini et Salutaris nostri Jesu Christi, qui in multo saevo, sed unum Filium et Domini Christi ducam, etc. — Ejusdem Pauli Hominis. Nos, in Christi Domini et Salvatoris nostri Nativitatem. These papers are given in the Concilia, vol. iii, col. 1690, 1695, 1896, ed. Labbé.—Epistula Pauli Eusebii Episcopi ad Anathematam Magistrum Militarem, given in a Latin version in the Ad Ephesumus Concilium sive "Sirius Petrum Epistola of Christianus Lupus (Lou- vain, 1869, 4to), Ep. 107. Paul of Emesa is to be distinguished from a predecessor of the same name, who was present at the Council of Ephesus, and was, according to the party of Acacius (Le Quien, Oxensa Christianus, vol. ii, col. 889, but he does not give his authority); but who seems afterwards, under the emperor Jovian, to have united himself with the orthodox (Secretes, Hist. Eccles. i, 23; iv, 12; Socmen, Hist. Eccles. vi, 1, 12), and to have acted with them possibly at the Synod of Antioch (A.D. 368), certainly at that of Syana (A.D. 367 or 368). Gennadius (De Vitr. Illustrius, c. 31) mentions "Paulus Episcopus," he does not say of what, as having written a little book on repentance (De Penitentiis Libellus), in which he cautions the penitent against such an excess of sorrow as might lead to despair. We have no means of identifying this Paul. The period occupied by the writers enumerated by Gennadius includes that in which Paul of Emesa flourished; and as he was the most eminent prelate of the time of his name, he may possibly be the writer mentioned by Gennadius. 

Paul (St.) the Hermit. See Anthony, St. 

Paul of Pannonia lived probably in the 5th century; according to Trithemius and Cave, in A.D. 490. Gennadius calls him Paulus Presbyter, and states that he had a hospital and an own institution, (De Missionibus) that he was a Pannonian, but does not say to what Church he belonged. Paul wrote De iurisprudentia serv- en via et contentum Mundi ad Vitas Institutione libri duo, addressed to a holy virgin, Constantia. He took the opportunity of abusing "the heretic Jovinian," the great opponent of monasticism, as a luxurious glutton. The work is lost. In some MSS, of Gennadius, and by Honorius of Autun (De Scriptor. Eccles. ii, 74), he is called, not Paulus, but Petrus. See Cave, Hist. Litt. i, 414; Trithemius, De Scriptor. Eccles. c. 146; Fabriiuses, Biblioth. Med. et Infarn. Lut. var. ii, 217, col. 183. 

Paul the Presbyter. See Paul of Pannonia. 

Paul of Samosata, a noted Eastern ecclesiastic of the 3rd century, was a native of Samosata, and must have been born shortly after the opening of the century. Very little is accessible to his early personal history. He was elevated to the bishopric of Anti- och in A.D. 260. His original calling seems to have been that of a sophist; how he obtained admittance into the clerical order is unknown; his elevation, or at least his continuance in the see, he owed to the cele- brated Zenobius, to whom his literary attainments and his political talents may be supposed to have recommended him. The charge that his personal life was not all that could be desired for the episcopal office seems groundless, when we consider the silence of the ecclesiastical writers of that period, who, if they had had the opportunity, would have gladly laid hold of anything to his disadvantage; and we should rather think that his character must have been remarkably pure and worthy to have led to his being raised from an originally obscure condition to the highest dignity in the Church. After his elevation he was apparently the less solemn and humble in the discharge of his duties, so inferentially from what his enemies say of him—and they are the only ones who have written about Paul of Samosata—that he manifested in the episcopal office great capacity, arrogance, and vanity. The encyclo- pedical letter he sent to the Church of Antioch (see below) was published at the time of his condemnation (A.D. 289), and if the charges had been capable of refutation or denial, Paul would not have suffered them to go unanswered. He obtained, while holding his bishopric, the secular office of procurator decessorium (so called from the holder of it receiving a yearly salary of two hundred sesterces), and is said to have loved the pomp and state of his secular calling better than the humbler and more staid deportment which became his ecclesiastical office; and it was probably by the exercise, perhaps the abuse of his procuratorship, that his character was contrasted with his original poverty, so scandalized his opponents. He was led also by his habits of sec- ular grandeur, and the pride they inspired, to introduce into the Church a greater degree of pomp than had as yet been seen in the east, erecting for himself a tribunal (Silla) and a lofty seat (Scribae Sinapis), and having this seat placed in a recess screened from public observation, in imitation of the higher judges and magistrates (see Eusebius, Hist. Eccles. vii, 80). When abroad he assumed all the airs of greatness, being at- tended by a numerous retinue, and affecting to read letters and to dictate as he went, in order to inspire the spectators with an idea of the extent and pressing character of his engagements. The decency of public worship he also violated. He encouraged his ad- mirers of both sexes to manifest their approval by waving their handkerchiefs and rising up and shouting, as in the theatres, and rebuked and insulted those whom a sense of propriety restrained from joining in these000 appliances. His style of preaching tended to aggravate the disaffection which his general deport- ment indirectly excited. He was especially liable to his strictures on those former teachers of the Church whose memory was held in reverence, and in his praises of himself, "after the manner rather of a rhetori- cian or a mountebank than of a bishop" (Eusebius). He allowed and excited women to sing his praises publicly in the churches, and held to the solemnity of the altar, and encouraged his flatterers among the neighboring bishops to praise him in their discourses to the people, and extol him "as an angel from heaven." To these charges of open and ascertenable character, his ac- cuasers add others of more secret and therefore of more dubious nature, resting in fact on mere suspicion. But it is very probable that these offensive traits would have excited less animadversion had they not been connected with heretical theological opinions. Indeed, his accusers admit that, "though all graunted and la- mented the wickedness in secret," they could not bear too much to provoke him by attempting to accuse him; but the horror excited by his heresy inspired a courage which indignation at his immorality had failed to excite; and they declare that, when he set himself in opposition to God, they were compelled to depose him and elect another bishop in his place (Eusebius), Mosheim, who is inclined to take the most favorable view of Paul's fallings, says: 

"That Paul was publicly landed by women, and by neighborhood, is doubtless probable, I can believe without much difficulty: but that he was so intemperate and so greedy of praise as boldly to urge forward these proclamations of his virtues, I cannot believe so easily. I sus- spect that Paul, after the controversy arising from his

mments of Paul: God the Father, Son, and Spirit are one God. The Word and spirit are everywhere in God as reason is in man. The God and Father of our Lord Jesus Christ, the God in whom the whole truth is contained, and which in him all things consist. The Son is in the Father, as reason (not speech, notion, or Peter, is in the Jewish law), as the light is in the lamp. Epiphanius, who as an author was not distinguished for his accuracy and research, has not stated all that I shall expressly state, but he is as a father to me as a man to a man. Similar citations from Athanasius and others, that the divine person of the Trinity is the Father, are not to be overlooked. Since he declared Christ to be a mere man, born of Mary: and denied that the Wisdom of God, combined with the Christ, is contained under the title of the eternally Son of God, by whom the world was created, dwelt in the man Christ; and as he also called the man Christ the Son of God, and applied the same appellation, Son of God, to that power of the divine Wis- dom, there is a manifest disagreement. Paul in his epistle (p. 274) blamed Paul for saying, *see the word of *Wisdom* of God (2:13). He has this in the sense before explained, i.e., as the *Wisdom of God*, dwelt in Christ. But he added that God dwelt in Christ, and suffered the penalties of the world. More passages of a similar character might be drawn from this epistle; but they are not necessary. II. In the ten questions proposed by Paul to Dinius, the sole aim of Paul is to prove that the son of Man is the Son of God, and that Jesus Christ is the word dwelling in him. He brings forward the texts in which the soul of Christ is said to be troubled and sorrow- ful, and that the soul of Adam was in the beginning of the nature of God be sorrowful and troubled (p. 712). He also lays before his antagonist the words of Christ to the Father, which he attributes to Dinius, and the words of the demands, *Can God be dissolved?* This objection, so easily answered, has been changed into a mystical interpretation. For he would have Paul believe that by the temple which Christ represents as a miracle must be understood the temple of Christ, because these Jews actually dissolved, that is, dispersed and scattered. Some of the other answers are no better. In Question V (p. 58) Paul says: Luke tells us (ch. II. 40) that Christ prays. But can God grow? If, therefore, Christ grew, then his body is a great example of a man. With this argument the good Dinius is greatly puzzled. But at length he finds his way out, and says: "The boy was not only a man, but he was also a God, and that the nature of God, the growth of God, relates to the Church: for it is recorded in the Acts of the apostles, that the salvation of the Church was completed and that the word of God increased every day." How in- genious the hypothesis of the preservation of the word of God! If we were like this Dinius for sentences and genius, I do not wonder they could not refute him. And lest this last response should lose its force and beauty, Dinius closes it with exquisite taunts. But I will desist. Paul, undoubtedly, had wrong views in some of these passages; but in the great majority of the Scriptures inculcate. But his adversaries also appear to have been on the right track; for the attacks of Paul on the critics are sufficiently precise and clear on the subject they discus- sed. These statements, derived from the best and most extensive examination and comparison, will give us easy access to the real sentiments of Paul of Samosata. The system he embraced, so far as it can be ascertained at the pres-
ont any community of action with the human nature) operated in him, and afterwards returned to God" (Meinel, *History of Christianity in the First Three Centuries*, ii, 298 sqq.).

The writers on the history of doctrines vary in their opinions as to the relation of Paul to Severinus. Paul of Samosata stands, whether to Sabellianism or to the Unitarianism of the Armeontes (see Euseb. v, 28, ad init.), comp. Schleiermacher, p. 389 sqq.; Baumgarten-Crullus, i, 204; Augusti, p. 59; Meier, *Dogmengesch.* p. 76, 75; Dorner, p. 510). The difference between Sabellians and Paul may be said to have consisted in this, that the former thought that the whole substance of the divine Being, the latter that only single divine power had manifested itself in Christ. Trenchel (Geschichte des Antirationalismus, i, 81) agrees with this view. Dr. Meichsman in *Theodicy* (1837), with the measures of the more understanding. The divine here comes only into an external contact with man, touches human nature only on the surface; while, on the other hand, the human element comes to its rights more than in the system of Sabellians. Dionysius of Alexandria, as we have seen, was the first to write against Paul, and afterwards assembled some councils against him at Antioch, about 264. In the last of these councils, which appears to have met in the year 269, one Malchion, a rhetorician, an ascetic, and eloquent and skilfully directed by Paul out of the subterfuges in which he had before lurked that his error became manifest to all. As he would not renounce his error, he was divested of the episcopal office, and excluded from the communion by common suffrage. This decision Paul resisted; and relying perhaps on the patronage of queen Zenobia, and on the favor of the people, he refused to give up the house in which the bishop resided, and in which the Church was accustomed to assemble. But when Zenobia was conquered by the emperor Aurelian, in the year 272, and the contest was taken before the emperor, Paul was referred for judgment to the Roman and Italian bishops, who decided against Paul. It is probable that Paul, notwithstanding his deposition, continued to preach and to propagate his opinions. Nothing subsequent, however, is known of him. His followers, and he himself, had many formed themselves into a sect, and flourished under the name of Paulians (q. v.), or Paulinists, for some time after.

Paul does not seem to have written much. The ten questions and propositions extant under his name, and addressed, according to the existing title, to Dionysius of Alexandria, have been noticed, as P. S. work, and ascribed by some to John of Damascus, contains a fragment of a work by Paul, entitled Οἱ πρὸς Σαμιαν λόγους (Ad Sabamum Libri), and some fragments of this are cited in the Concilia (iii, 888, ed. Labbé). Vincent, in his *Schriften*, in his *Correspondence*, states that the writings of Paul abounded in quotations from the Scriptures both of the O. T. and the N. T. To introduce his Christology into the mind of the people, he undertook to alter the Church hymns, but was shrewd enough to accommodate himself to the orthodox formulas, calling Christ, for example, "God of the Virgin" (ἀπὸ τῆς παρθένου), and ascribing to him even homousia with the Father, but of course in his own sense. See, besides the authorities already referred to, Eusebius, *Hist. Eccles.* vii, 27–80; Manili, *Conc. Concili. i, 1083 sqq., especially Epipol. Episcop. ad Paul. v. 293; Epipol. Episcop. ad Paul. vi, 293; *Epipol. Episcop. ad Paul. vii, 1, p. 68, 299 sqq.; Fragments in Leont. Byz. Contr. Nestor. et Eutych. iii; Ehrlich, *Diss. die Erbth. Pauli Samos.* (Leips. 1845, 4to), p. 23; Fuellert, *Die Kirche Pauli Samos.* (Gottingen, 1814, 4to); Schwab, *Die Schriften des Paulus Samosatensis.* (Hamburg, 1853); Currie, *Hist. Biog. and Mythol.* ii, 147 sqq.

**Paul the Sylentiarian.** A Christian post of the 5th century, was a noble family, the son of Cyrus and grandson of Florus, and possessed of great wealth. He held in the palace of Justinian the office of chief of the Sylentiarians, a class of persons who had the care of the emperor's palace. When the church of St. Sophia at Constantinople was rebuilt by Justinian in 562, Paul made it a present (see *Acts* 21:20; *Acts* 28:9) of the Greek hexameters, with a proemium consisting of 134 iambic verses. It is evident from this poem that he was a Christian. The work was edited, with notes and a Latin translation, by Ducange (*Paris*, 1670); the text, edited by Becker, is contained in the *Bonn edition* of the "Byzantine Historians" (1837), with a second part, consisting of 275 hexameters and a proemium of 29 iambics, not included in the edition of Ducange. Paul was also the author of a poem entitled Εἰς τὰ οὖν Ἀγάλλη σαπόνα, and of several epigrams, which are introduced in *The Idea of Religion* and in *Ecclesiastical History*, *Biblioeca Graeca* (ed. Harle), iv, 457; vii, 561; Smith, *Dict. of Gr. and Rom. Biog. and Mythol.* iii, 151 (18); *Darling, Cyclop. Bibliog.* vol. ii, s. v.

**Paul the Simple (Paulus Simples),** so called on account of the childlike simplicity of his character, was a disciple of St. Anthony, who flourished in the 4th century. His native country appears to have been Egypt, but the place of his residence is not determined. He was a poor countryman, who, till the age of sixty, had served God in the married state. His retirement into the desert was occasioned by his surprising his wife, who was exceedingly beautiful, and must have been much younger than himself, in the presence of Anthony, with whom she appears to have long carried on a criminal intercourse. Abandoning, to the care of the adulterer, not only his guilty wife, but also his innocent children, according to Paul and Socrates, he took his departure, after having, "with a placid smile," said to the adulterer, "Well; well; truly it matters not to me. By Jesus! I will not take her again. Go; you have her, and her children; for I am going away, and shall become a monk." The incident affords a curious illustration of the apathy which was cherished as a prime monastic virtue, and which is perhaps not quite extinct in the modern East. He was placed in a cell at three miles' distance from Anthony's, who came to regard Paul as the holiest among his followers. Paul is reputed to have possessed the gift of miracles in a far more eminent degree than his great master; and to him, it is said, St. Anthony was in the habit of sending such sick or possessed persons to be committed to his care. The date of Paul's retirement and the time of his death are not known; but an anecdoté recorded in the *Eccles. Græc. Monumenta* of Cotelerius (i, 351) shows that he was living at the accession of the emperor Constantius (337)."
Paul of Thebes, a saint of the early Christian Church, whose personal history is enshrined in mystery by legends and traditions, was born, according to Jerome, in the second half of the 3rd century. He early lost his rich Christian parents, and during the Diocletian persecutions fled into the Theban wilderness, where he labored much in company with his God, to be seen only by man in his dying hours, when the anchorite Antonius found him.

Paul Veronese. See Paolo Veronese.

Paul I, pope of Rome, was a native of the city of Rome, a brother of pope Stephen III (q. v.), whom he succeeded, and by whom he was employed in important political missions. Paul I began his pontificate March 10, 817, and died much earlier.

There were at the time two parties at Rome, the Frankish and the Italian. He owed his elevation to the Frankish party. The Italians were led by Theophylactus, who disputed for a while the right to the pontificate with Paul; the latter, however, proved strongest in the contest, and finally secured submission.

Paul's pontificate is distinguished partly by efforts for the complete and secure papal possession of the territories which were claimed as granted by the Frankish king, and partly by the remarkable growth of papal power over Rome, which is exemplified by the Papal Politik der Päpste, ii, 251) says: "Very seldom have the politics of Rome seen so much deceit and fraud, or so borne the character of unconscientiousness and double-tonguedness, as under pope Paul I." In order to retain the power, the pope acquired the island of Ischia, and strengthened himself against the attacks of the Lombards and the Byzantines. Paul sought the good graces of the king of Pepin, and prevented this ruler from alliance with the Iconoclastic Greeks (see Codex Carolinus, in Muratori, vol. iii, pt. ii, p. 110 sq.). One of the most troublesome neighbors of the papal territory was the Lombard king Desiderius, who devastated it several times. He was, however, conciliated in A.D. 766, and we find Desiderius at Rome that year engaged in his devotions, and putting the Church in possession of some portions of his property. Pope Paul I is venerated by the Roman Church at a saint (June 26). He was a friend of the monks, and erected a monastery in his paternal home. He was kind towards the poor, and exhibited a compassionate spirit for all troubled hearts. He died June 26, 767, and was succeeded by his legate Constantine. Pope Paul's letters are preserved in the collections of the councils, and in Gregorii's collection; but as one of them bears a date after the decease of this pontiff, their genuineness is called in question. See Raynolds, Annales; Chazan, I.4 Pontificum Romanorum; Bower, Hist. of the Popes, vol. iii; Dölling, Hist. of the Popes, i, 222-224; Reichel, Hist. of the Roman See in the Middle Ages, p. 118 sq.; Neander, Church Hist. vol. iii; Millman, Hist. of Lat. Christianity, ii, 428-432; Aschbach (R. C.), Kirchen-Lexikon, s. v.

Paul II, pope of Rome, was a Venetian by birth. His original name was Pietro Barbo, and he was the nephew of John Barbo, archbishop of Bologna and bishop of Cervia. He entered upon the pontificate in 1464. Paul II began by correcting abuses, and checking the exactions of the officers and secretaries of the papal court, who levied contributions at pleasure from those who had occasion to apply to Rome for licenses, receipts, and other official papers. He endeavored also to form a league of the Christian princes against the Turks. But while he resumed the design of his predecessor for a general crusade against the Mohammedans, Paul adopted a course of policy which perpetuated dissension in Christendom. He aided Ferrand in expelling the partisans of Anjou from Naples (q. v.), and consequently quarreled with that monarch respecting certain titles and armories of tribute claimed by the Holy See; he attacked Podiebrad, king of Bohemia, on the ground that he favored the Hussite movement, and sent a legate to Louis XI to claim the definite revocation of the Pragmatic Sanction. And so, while Paul opposed the king of France, excited a civil war in Bohemia (q. v.; see also Husites; Poland), and fomented the dissensions of Italy, the common interests of Christendom were forgotten, and the Turks continued to acquire new territory. When, by their taking of Negrupont, the establishment of the naval power of the Turks in Europe seemed a certainty, and the Turks were about to press into Italy, the pope proclaimed (in 1469) a general peace among the Italian governments, by an agreement with the Turkish ambassadors who did not observe it. But the decision had been reached too late, and the final preparations for a united attack of the Turks had been perfected, pope Paul II died suddenly, July 25, 1471. He was the first pontiff who openly declared himself a foe to the progress of knowledge. An academy had been formed at Rome for the cultivation of Greek and Roman antiquities and philology, of which Pomponius, Leo, Platina, and other learned men were members, who, unlike his predecessor Pius II, had no taste for professional learning, and became the friends of humanists and academicians and their meetings. Some one probably excited his suspicions by accusing them of infidelity and of treasonable designs. The academy was proscribed, some of its members ran away, others were seized and put to death, and among them Peter Martyr, who was sent to prison for a year's imprisonment was released through the intercession of several cardinals. It may easily be supposed that Platina, in his Cena of the Popes, which he wrote afterwards under Sixtus IV, did not spare the memory of Paul II. But besides Platina, other contemporary writers, such as Corio Ammirato, an anxious chronicler of Bologna, and the monk Jacopo Filippo of Bergamo, all speak unfavorably of this pope. Cardinal Querino has undertaken the defense of Paul II in his Fideicommis Romanum ab Obruc tatoribus, and Romanius claims that Paul II is malignantly castigated by Protestants because he proved the persecutor of the Hussites. There is however no justice in this accusation, for many Romanists themselves confess that Paul II was envious, malicious, and hypocritical. His vacillating policy speaks for itself. He was ambitious for the extension of papal power, and resolved to maintain the privileges of ecclesiastics, and their exemption from the jurisdiction of temporal courts, as is most clearly proven in his conduct towards Louis XI, and the treacherous cardinal Bolluc, who deserved to be executed at the behest of the emperor Charles of Burgundy at Pernonne. See Munster, Script. Rom. vol. iii, pt. ii, p. 993; Bower, Gen. Römische Päpste, ii, 312; Artaud, Hist. des Souverains P. titifs Rom. (Paris, 1847), iii, 841 sq.; Hist. of Popery (London, 1889, 8vo), ch. xvi; Reichel, Hist. of the Roman See in the Middle Ages, p. 255 sq.; Weizel u. Welte (R. C.), Kirchen-Lexikon, s. v.; Aschbach, Kirchen-Lexikon, s. v.

Paul III, a noted pope of Rome, flourished in a most critical period of the history of the Christian Church, when the national name of Rome was Savi. He was born at Carino, in Tuscany, in 1468. He was educated at the university of the Medici at Florence, and there acquired great familiarity with the Latin and the Greek. After this he lived at Rome, largely given up to pleasure and frivolity. He kept low company, supported mistresses, and procured the discharge of all duties. In 1485 he was made bishop of Montefiascone, and in 1490 was created a cardinal. As such he served in important trusts, and eventually became bishop of Ostia and dean of the Sacred College.
Paul

On the death of Clement VII, in 1534, Farnese was elected pope, just at the crisis when the most urgent applications were made by the various states of Europe to Rome for the assembling of a general council, which was required by the state of the Western Church, disturbed at that time by the progress of the pious reformers Luther and Zwingli, as well as by the measures of Henry VIII of England. For a while it seemed as if the new pontiff was well adapted for the settlement of the great controversies. He showed himself favorable to the Reforming party within the Church. He made choice of discreet and honorable men for his college of cardinals. Of those to whom Paul III gave the red hat shortly after his accession were Contarini, Caraffa, Pole, Sadolet, and others, most of whom had belonged to the Oratory of Divine Love, and some of whom were friendly to the Protestant doctrine of salvation. He also appointed commissioners of reform, whose duty it was to point out and remove the much-complained-of abuses in the Roman curia. He even entered into negotiations with the Protestants of Germany, through his nuncio, Peter Paul Vergerius, and it seemed not impossible that the concessions which he was ready to make would once more unite these and all Protestants with the Romish body. In 1537 Paul gave further expression to his desire for peace and union by his call of the council to meet in Mantua in the month of May. The general belief of the people in his endeavors, were encouraged to appoint Luther to draw up a clear statement of their grievances and differences of opinion, and at the meeting of the League of Smalcald (q. v.), in February, adopted the articles which Luther had written out and presented. But as they feared that their radical position about the papal and episcopal authority would not be likely to find favor with Romanists, the assembly rejected the invitation to the council, and simply placed in the hands of the papal nuncio and the imperial vice-chancellor the mission. The League was discouraged and maddened by the boldness of the Protestant party, now hoped to bring about by threats what they had failed to carry in kindness. They encouraged the leading Roman Catholic estates to join themselves together in Christian union, or, as they called the body, the Holy League (q. v.). The Protestants, seeing the hostile array of the Romanists, now strengthened the Smalcald leaguers, and entered into friendly relations with Switzerland. Every preparation was made on both sides for war and not for peace; and both the leaders claimed to be preparing simply for defence. In 1540 the emperor Charles of Germany called another conference, for the purpose of effecting a religious union that might have the approval of the pope. See Interim of Kaiserswerth. The good feeling which prevailed at the first conference was entirely lost in 1541, when Cardinal Pole made the sanguine Contarini and his friends very hopeful; but while Bucer and Melancthon were moderate and yielding, Luther was dissatisfied with the platform adopted on account of its want of definiteness, and had no confidence in the practicalness of a union. On the Romish side, the same opposition and distrust manifested itself. Caraffa would not approve of the terms of the agreement which Contarini had sanctioned, though he conceded that there was need of practical and immediate reforms. "Caraffa stood forth as the representative and leader of those who were resolved to defend to the last the polity and dogmas of the Church against all innovation, while at the same time they aimed to infuse a spirit of strict and even ascetic purity and zeal into all its officers, from the highest to the lowest." Paul III took sides with Caraffa and his party. Some, and it seems reasonably, claim that there was jealousy of Charles V at Rome, and that the project of this conference was frustrated because it was feared that Charles V, strengthened by the destruction of the Protestant league of Smalcald, would prove treacherous to the papacy, like Henry VIII of England. The papal party, therefore, not only broke up the Ratisbon conference, but shortly after the papal troops which had been sent Charles were recalled, and Francis I was even induced to side with the Protestants, who were now in conflict with the imperial forces. Francis wrote to Paul III that the moment when it was possibly on the verge of extinction, was strengthened by its worst enemies (see Fisher, p. 49, 165). A general council of the Church was indispensable, if the Protestants were ever to be gained over again to the old fold. Henry VIII had been excommunicated, and England was greatly distanced from papal interests; and the Jesuitical order, which had been sanctioned, had failed to effect a healing of the discord. In 1542, finally, the call was issued by papal will, but the war between Charles and Francis which was now waging delayed the assembling of the council (at Trent) until 1545. These delays are also charged upon Paul, but it can hardly be doubted that much of it was due to the difficulties of the times. We need hardly add that the council [see Trent] failed to be convoked, and the promised result, Paul himself did not live to see the close of the council, which occurred in 1563. He died Nov. 10, 1549, and was succeeded by Julius III (q. v.). Pope Paul was devotedly attached to his own friends, and though he never had a lawful and holden heir, he lived under much from deflections, which were probably never intended, or even conceived, except in his own imagination. The charges of vacillation in his dealings with the Protestants may be true or not, but the charges of simony and selfishness which have been presented against him are not so easily answered. He was anxious to aggrandize his own family. His natural son, Pier Luigi Farnese, he made first duke of Castro, and afterwards duke of Parma and Piacenza. For his grandson Ovetario he obtained the hand of Margaret, a natural daughter of Charles V, and made him duke of Camerino. The pope subdued the people of Perugia who had revolted against him, put to death several of the leaders, and built a citadel to keep the citizens in awe. He also attacked the Colonna, the most powerful baronial family in the neighborhood of Rome, took all their strongholds, and obliged the members of that family to take refuge in the fiefs which they held in the kingdom of Naples. He received in the same year the news of the tragic death of his son Pier Luigi, who was murdered at Piacenza, where he had made himself lord in 1544, and later was made Duke of Querini. Welte, Kirchen-Zeitschrift (R. C.), viii, 331.

Paul IV, pope of Rome, was the descendant of a noble Neapolitan family named Caraffa, and was born in Naples in 1476. His early career was distinguished for ascetic rigor. In 1507 he was appointed bishop of Chieti, in which see he labored most earnestly for the reform of morals, reform of monasteries, and the regeneration of society. He was made cardinal in 1556, and organized the tribunal of the Inquisition in Rome. On the death of Marcellus II in 1556, al-
though in his seventy-ninth year, he was elected to succeed. He entered upon the wider career which his new position opened for him with all the ardor of a young man, and with all the stern enthusiasm which had characterized him during life. He was remarkably large and lean, walked with a hurried step, and seemed to be all sinews. As he never confided himself hitherto in his daily habits to any precise rules—he would often sleep during the day and study at night—but he ever followed in other matters the impulses of the moment. But these were swayed by opinions formed in his own mind, and by the literature of his times, of which he had made himself master.

He seemed to know no other duty and no other business than the restoration of the old faith to its former domination. He enforced vigorously upon the clergy the observance of all the clerical duties, established a censorship, and completed the organization of the Roman Inquisition. But while he was thus intent upon strengthening the papal hierarchy, he also manifested good qualities of head and heart. Thus, e.g., he took measures for the alleviation of the burdens of the poorer classes, and for the better education of his nephews, whom he banished from Rome on account of their corrupt conduct and profligate life. His foreign relations involved him in much perplexity. He was embroiled with the emperor Ferdinand, with Philip II of Spain, and with Cosimo, grand-duke of Tuscany. He was excommunicated by the Inquisition. He left a number of decrees, and these were declared invalid by the Church of Augsburg, he protested against its provisions. Under the weight of so many cares his old age gave way. He died Aug. 18, 1559. As soon as the news of his death became known to the people of Rome, they rose in insurrection, ran to the prison of the Inquisition, wounded a Dominican monk who acted as commissary, and delivered all the prisoners, and burned the papers. They then threw down the statue of the pope, crying out, "Death to the Caraffa!" The tumult lasted several days, after which the conclave elected as new pope Pius IV (v. r.). On the 20th of Oct. 1562, wrote, Tractatus de symbolo, de emendanda ecclesia ad Paulum III, regulæ Thesaurinorum.—Tractatus de ecclesia Vaticana et jure suæ legaturum principali de quadruplialis observantia.—Paæmae ad Bernardum Ochium.—Nota in Aristotelis Ethicam.—Publ. et. saec. prosopon.—Oratimia et Epistola. See Caracostili, Collectanea hist. nat. Paul V, a noted pope of Rome, was originally named Camillo Borghese. He was born at Rome in 1552. In his early life he was a distinguished canonist and theologian; and, after the ordinary prelacial career at Rome, he rose first to the post of nuncio at the Spanish court, and afterwards to the cardinalate in 1571. On the 6th of May 1572 he was elected pope. His pontificate is rendered memorable by the concern to maintain its pretensions in Italy in all their integrity. Thus he was involved in the celebrated conflict with the republic of Venice, in which he placed himself in the very vanguard of his career. The original ground of dispute was the question of immunity from the jurisdiction of civil tribunals conceded to the clergy, who claimed to be tried by ecclesiastical tribunals alone. This claim the senate resisted; and further inroads were made on the pontifical authority by the Inquisition, a law, and a law prohibiting the establishment of new religious orders or associations unless with the sanction of the senate. Each party remaining inflexible in its determination, Paul V issued a brief directing a sentence of excommunication against the doge and the senate, and placing the republic under an interdict unless submission should be made within twenty-four days. The senate forbade the publication of the bull; and as the members of several monastic orders protested that they could not observe such infamous worship in a country placed under interdict, they were allowed to quit Venice, and the senate appointed secular priests to perform service in their stead. The people remained perfectly quiet, and the bishops and clergy of Venice made up their minds to resist. The pope was, nevertheless, an animated conflict maintained by the pen, in which the celebrated Fra Paolo Sarpi [see PAUL, FATHER], on the side of the republic, and on the papal side Bellarmine and Baronius, were the leaders. There were three points at issue between the pope and the senate: (1) The senate had made a decree that no new convent or religious congregation should be founded without their permission; (2) that no property or perpetual revenue of any kind should be bequeathed to the Church without their approbation; (3) that clerical jurisdiction should be lodged in the secular power, like other civil duties. The king of Spain and the emperor took the part of Venice, the court of Spain that of the pope, and Italy was threatened with a war that of the Investitures (v. q.r.). Henry IV of France, however, proposed his mediation, and sent De Jovellanos to Venice, who was received with the pope, proceeded to Rome, where he succeeded in effecting a compromise in 1607, and peace was restored, although dissatisfaction afterwards arose on the subject of the nomination of a patriarch. The decrees of the senate were maintained, but the two clerical customs, in compliance with the wish of the French king, were given up to the pope, "saving the right of the republic to punish all offenders, clerical or lay, within its dominions." Upon this arrangement being made the interdict was removed. A misunderstanding of a similar nature arose between the pope and the crown of France (Louis XIII) as to the right of censorship of books, and as to the approval of the disciplinary decrees of the Council of Trent; but it was removed by mutual explanation. See SCAREZZI. Pope Paul's administration was vigorous and enlightened. He reformed many abuses in the tribunals of the Roman court, and did much for the promotion of public works, for the restoration and preservation of antiquities, the improvement of the museums and libraries, and the embellishment of the city of Rome. He enlarged the Vatican and Quirinal palaces, restored the church of Santa Maria Maggiore, gave hands to the repaired aqueducts, made additions to the Vatican Library, collected statues and other antiquities, and built the handsome villa Mondragone at Frascati. Paul V was also much given to the improvement and providing of charitable and pious institutions. He likewise established the fortune of the Borghese family, which is one of the wealthiest of the Roman families. Paul V died Jan. 28, 1621, and was succeeded by Gregory XV. Paul V avoided decisions in all dogmatical controversy. Thus he reserved his judgment in the controversy about the salvation of the Turks (condamnation of Rome, 1607), and commanded silence to both parties in the controversy regarding the immaculate conception. He sainted Loyola and Charles Borromeo. See BROVIUS, Vita Pauli V; De Mentor, Hist. des sons Pont. Romains; Muratori, Annum decretalium, ii, 371 sq.; Ranke, Hist. of the Popes, i, 604; Bower, Hist. of the Popes, vol. xii; Schröck, Kirchenkong, seit der Reform, iii, 246 sqq.; iv, 805 sqq.; Le Brecht, Gesch. d. Italien, iii, 203 sqq.; Riddle, Hist. of the Popes, vol. ii; Wetzer u. Welte, KirchenLexicon (Rom. Cath.), viii, 283, 293.

Paul, David, a celebrated Polish Unitarian divine, flourished near the middle of the 16th century. In 1568 he took part in a discussion against the Lu-
themselves at Weissenburg, and was so persuasive in his arguments that the princes and the chief nobles of the country embraced his doctrines. There is scarcely anything canonical in his history. See Krasinski, Hist. of the Ref. in Poland, i, 356.

Paul, Vincent de, one of the most eminent saints of the modern Romish Church, and founder of the congregation of "Priests of the Missions," was born of very humble parentage at Ranquinos, in the diocese of Dax, France, in 1574. The indications of ability which he exhibited as a youth interested him in several people of influence and means, and he was sent to Toulouse to be educated. He became an ecclesiastical student, and was admitted to priest's orders in 1600. At a time when a priests' tonsure in a noble family was the usual mode of proceeding, and was then the named principal of the college "Des Bons Enfans." On a voyage which he was making from Marseilles to Narbonne the ship in which he had taken passage was captured by corsairs, and he was sold into slavery at Tunis. After having spent several years in the most forlorn condition, he succeeded in reclaiming his master, a renegade Christian, to the true faith, and together with him Paul made his escape from Barbary. They landed in France in 1607. Shortly after this he went to Rome, and was intrusted by the pontiff with an important mission to the French queen. He spent twenty-five years in Paris, and became the abnon of Marguerite de Valois. He also taught, and as tutor of the children of M. de Gondy, the commandant of the galleys at Marseilles, gained the friendship of this distinguished man, and secured the appointment as attorney-general of the galleys in 1619. It was at this time that the well-known incident occurred of his offering himself and being accepted in the place of one of the convicts, whom he found overwhelmed with grief and despair at having been obliged to leave his wife and family in extreme destitution. But Vincent de Paul is especially noted for having laid the foundation of what eventually grew into the great and influential congregation of "Priests of the Missions," an association of priests who devote themselves to the work of assisting the parochial clergy by preaching and hearing confessions periodically in those districts to which they may be invited by the local pastors. The rules of this congregation were approved by Urban VIII in 1632, and in the following year the fathers established themselves in the so-called priory of St. Lazare, in Paris, whence their first rule (q. v.) is derived. From this date his life was devoted to the organization of works of charity and benevolence. To him Paris owes the establishment of the Foundling Hospital, and the first systematic efforts for the preservation of the lives and the improvement of the morals of the neglected, or left to the operation of chance charity. The pious Sisterhood of Charity is an emanation of the same spirit, and Vincent was intrusted by St. Francis de Sales with the direction of the newly founded order of Sisters of the Visitation. The queen, Anne of Austria, warmly rewarded his exertions, and Louis XIII chose him as his spiritual assistant in his last illness. Vincent de Paul was placed by the queen-regent at the head of the Conseil de Conscience, the council chiefly charged with the direction of the crown in ecclesiastical affairs; and the period of his presidency was long looked for to as the golden era of reason and honest distribution of ecclesiastical patronage in France. Vincent was not, in any sense of the word, a scholar; but his preaching, which (like that of the fathers of his congregation of Lazarists) was of the most simple kind, was so effecting and so effective, that he left nothing behind him but the Rules or Constitutions of the Congregation of the Mission (1685); Conferences on these Constitutions (4to), and a considerable number of letters, chiefly addressed to the priests of the mission, or to other friends, on spiritual subjects. He died at an advanced age at St. Lazare, Sept. 27, 1670, and was canonized by Clement XII in 1737. His festival is held on July 19, the day of his canonization. See Mrs. Jameson, Legends; Jarvis, Hist. of the Church of France, i, 319 sq.; ii, 11; Hook, Eccles. Bisog. vii, 592.

Paul, William, D.D., an English prelate, flourished near the middle of the 17th century. Of his early history we know scarcely anything. He was not educated for the sacred office of the ministry, but had entered the mercantile profession, and, possessed of a large property, had made himself quite prominent in that walk of life, when, through the influence of bishop Sheldon, Paul was called into the ministry, and finally given the important see of Oxford. It was hoped that his vast wealth would be expended for the good of the bishopric, and, to judge from the preparations he made for the rebuilding of the dilapidated episcopal palace at Cuddesdon, the hope was not unfounded. He died suddenly in 1666, having held the see only two years. He also held the valuable rectory of Chinnor in commendam. See Stoughton, Eccles. Hist. of England (Church of the Restoration), i, 490.

Paula, Sr. (Λυκια Παύλα), was a noble Roman matron, a pupil and disciple of Jerome. Though descended from the Scipios and the Gracchi, and accustomed to luxurious self-indulgence, she preferred to follow her saintly teacher to Bethlehem and devote herself to a religious life. The church dedicated to St. Jerome at Rome is said to be upon the spot where the saint stayed, in which he entertained that holy man during his stay in Rome, A.D. 582. She studied Hebrew, in order to understand the Scriptures better. She built a monastery, hospital, and three nunneries at Bethlehem. Her daughter St. Eustochia was with her. The rule for these convents was very strict, and her own austerities were so severe that she was reprimanded for them by St. Jerome. Her granddaughter Paula was sent to her at Bethlehem to be educated, and succeeded her as superior of the monastery. Paula died (A.D. 404) making the sign of the cross on her lips, and was buried in the church of the Holy Manger, where her empty tomb is now seen near that of St. Jerome. Her relics are said to be at Sens. She is commemorated Jan. 26.

Paula, Francis of. See Francis.

Paula, Vincentius. See Vincentius.

Pauli, Ernest L. See Pauli, Philip Reinhold.

Pauli, Gregorius, a Unitarian divine of Italian descent, flourished at Brzeziny in Poland near the middle of the 16th century. In 1556 he attended the Council of Trent, and his name (q. v.) who there proclaimed his anti-Trinitarian opinions. Being accused at the Synod of Pinczow on that account, he threw off every restraint, and proclaimed from the pulpit his opinions respecting the mystery of the Trinity. He rejected the Nicene Creed and the doctrine of the first five ecumenical councils. He went even much farther than Gnesius and Arius, maintaining that Christ did not exist before his birth, and consequently reduced him to the condition of man. He condemned the baptism of infants, and maintained that Christ had abolished the temporal powers, that death did not separate the soul from the body, and that the body did not in reality die; that the Holy Scriptures do not establish any difference between the resurrection of the soul and of the body, but that they will both have a common resurrection; that the spirit forms the body contrary to the soul. He preached with great success that God raised from the dead the body of Christ, which entered heaven; that the doctrine about the death of the body was introduced by the antichrist, who established by it purgatory and the invocation of the saints. Pauli was also inclined to a community of goods. These daring propositions were strenuously
Paulini, Philip Reinhold, one of the pioneer ministers of the German Reformed Church in this country, was born in the city of Magdeburg, Prussia, June 17, 1759. He was a clergyman of high standing, and at one time court-preacher. Paulini completed his literary course in the universities of Halle and Leipzig, travelled for some time in Europe, and came to this country in 1783. For several years he taught school, last at Philadelphia Academy; in 1790 he was ordained to the ministry, and placed over several congregations in Montgomery County, Pa. In 1793 he removed to Reading, Pa., where he labored with great zeal and activity as pastor of the German Reformed Church for a period of twenty-one years and nine months; at the same time conducting a "Latin and French School." He died Jan. 27, 1815. Mr. Paulini was a man of good parts and finished education. He was regarded in his day as an eloquent preacher. Two of his sons entered the ministry of the Church. See Harbaugh, Fathers of the Ref. Church, iii, 21-24.

Paulanieta, a name given to the Attingians, and sometimes all the Paulicians.

Paulicians, the followers of Paul of Samosata, who was made bishop of Antioch in 260, and deposed by the unanimous sentence of a great council held in Antioch in 268. Schaff's Creeds, p. 380. Thence the Paulicians were scattered, and were not made converts to their sect. The renewal of persecutions against them in the 11th century forced them into Western Europe. Their first migration was into Italy (comp. Baird, Sketches of Protestantism in Italy, p. 14), whence, in process of time, they sent colonies into almost all the other provinces of Europe, and gradually formed a considerable number of...
religious assemblies who adhered to their doctrine, and who were afterwards persecuted with the utmost violence. One such assembly, for instance, was called Pataria (q.v.), from a certain place called Pataria, being a part of the city of Milan, where they held their assemblies; and Gathari, or Gozari, from Gazarria, or the Lesser Tartary. In France they were called Albigenses (q.v.). The first religious assembly which the Paulicians formed in Europe is said to have been discovered at Orleans in 1017, under the reign of Robert, when many of them were condemned to be burned alive. A few Paulicians, of course, remained in the East for some time after the migration of the general body. Danubius, as late as the 17th century there was a remnant of them existing in Bulgaria (Moshein, ii, 236). Whether any Paulicians exist at present it is difficult to tell. There are so-called Paulicians in the Danubian provinces, but these heretics practice bloody sacrifices, and by their barbarism would seem to have more kinship with the Bogomites (q.v.). At present an accurate account of the religion and opinions of the Paulicians is really a desideratum.

The Paulicians, as we have said above, have been accused of Manichaeism; but there is reason to believe that they were only a dangerous report raised against them by their enemies, and that they were, for the most part, men who were disgusted with the doctrines and ceremonies of human invention, and desirous of returning to the apostolic doctrine and practice. They refused to worship the Virgin Mary, the saints, and the Virgin Mary's feast, and in other respects procured for them the name of atheists; and they also refused to partake of the sacraments of the Greek and Roman churches, which will account for the allegation that they rejected them altogether, though it is asserted by Neander and Gieseler that they simply denied the material presence of Christ in the Eucharist. It is, however, barely possible that some may, like the Quakers and some other sects, actually have discarded them as outward acts. See Mosheim, Church Hist. ii, 263; Gibbon, Decline and Fall of the Roman Empire (student's edition, p. 306 sq.; large edition, ch. iv); Jones, Hist. of the Christian Church; Neander, Church Hist. vol. iii; Gieseler, Eccles. Hist. vol. 1; and Theol. Studien und Kritiken, 1829, vol. ii, no. 1; Journal der theolog. Lit. by Winer u. Engelhart, vol. vii, no. 1 and 2; Harless, Geschichte der Kirche, 2nd ed., vol. ii, 84, 91, 201, 302, 303 sq.; Marsden, Dict. of Church Hist. (see Index).

Paulinus of Antioch flourished as bishop of that see in the 4th century. He was ordained presbyter by Eusebius, who was a leader among the Eustathian party in that city. When Athanasius, after his return from exile, on the death of the emperor Constantius II, and the murder of George of Capadocia, the Arian patriarch, assembled a council at Alexandria, Paulinus sent two deacons, Maximus and Calinurus, to take part in its deliberations. He was shortly after ordained by the hasty and impetuous Lucifer of Cagliari bishop of the Eustathians at Antioch—a step unwarrantable and mischievous, as it prolonged the schism in the orthodox party, which would otherwise probably have been soon healed. His ordination took place in A.D. 362. He was held, according to Socrates (Hist. Eccles. iv, 2) and Sozomen (Hist. Eccles. vi, 7), in such respect by the Arian emperor Valens as to be allowed to remain when his competitor Melitius was banished. Possibly, however, the smallness of his party, which seems to have occupied only one small church (Socrates, Hist. Eccles. iii, 99; Sozomen, vi, 13), rendered him less obnoxious to the Arians, and they may have wished to perpetuate the division of the orthodoxy by exciting jealousy. Paulinus's refusal to ordain Melitius and his connexion with the schism is mentioned elsewhere [see MELEITUS OF ANTIOCH], but he at length consented that whichever of them died first, the survivor should be recognised by both parties. On the death of Melitius, however (A.D. 381), this agreement was not observed by his party, and the election of Paulinus in Isala was confirmed by Paulinus, and embittered the schism still more. In A.D. 388 Paulinus was present at a council of the Western Church, which had all along recognised his title, and now ardently supported his cause; but the Oriental churches generally recognised Flavianus, who was elected in his place. In A.D. 388 or 389 his partisans chose Evagrius to succeed him. A confession of faith by Paulinus is preserved by Athanasius and Epiphanius in the works cited below. See Epiphanius, Hær., lxxvii, 21, ed. Per. Paris.; Euseb. Schol. in Ev. Matt. c. 33; Sozomen, Hist. Eccles. v, 12, 13; vi, 7; vii, 3, 10, 11, 15; Theodoret, Hist. Eccles. iii, 5, 8, 23; Athanasius, Concil. Alexandrin., Epistol. seu Tomus ad Antiochenos, c. 9; Jerome, Epistol. ad Eustoch. No. 2, ed. vest.; 36, ed. Benedict; 108, § 5, ed. Vallarsa; In Eun. lib. iii, 22; Chronicon, ed. Vallarsa; Theophanes, Chronogr. p. 47, 57, 69, ed. Paris; p. 37, 45, 47, ed. Venice; p. 88, 104, 109, ed. Bonn; Le Quèin, Oriens Christian. vol. ii, col. 715; Tillemont, Mém.ors, vol. viii; Fabricius, Biblioth. Graec. ix, 814; Neale, Hist. of the Eastern Church (Patriarchate of Alexandria), i, 199 sq.

Paulinus of Aquileia, St., a noted prelate of the Eastern Church in the second half of the 8th century, is known especially for his exertions to maintain the orthodox standard of the Trinitarian dogma. He was a native of Friuli, and appears to have been a teacher of philosophy, at least Charlemagne calls him in 778 "Artis grammaticae magister." He was elevated to the patriarchal dignity in A.D. 716, and belonged to that class of scholars upon whom Charlemagne depended for counsel in all literary and ecclesiastical affairs. Paul of Aquileia took part in the synods at Regensburg in 792, and in Frankfort in 794, which dealt with the heresy of the Adoptionists (q.v.). He also attended several provincial councils, and labored with zeal for the Christianizing of Carinthia and the Avari. He probably died A.D. 804. His works, whose authenticity is not in part called in question, were published by Madrisch in Venice in 1737. His memory is observed on January 21. Paulinus, in the council held at Forum Julium (Friuli) (A.D. 791 or 796), defended the Western Church against the charge of falsifying the creed on the doctrine of the Holy Ghost. These were explainable, not by any perversion of the meaning of his author, it could not be said that it was altered. As the fathers of the council at Constantinople had enlarged the Nicene Creed according to the mind of the original framers of it by the statements respecting the Holy Spirit, in the same manner it was added by the Church that the Spirit proceeded from the Son. As Christ himself said, the Father is inseparably in the Son and the Son in the Father, but the Holy Spirit is of the same nature with the Father and the Son, so must we say that he proceeds from both essentially and inseparably. See Neander, Dogm. ii, 436; Acta SS., Jan. 1, p. 317 sq.; and the biographical sketches prefixed to his works.

Paulinus St. Bartholomaeus, a noted Origenist, of the Order of the Carmelites, whose original name was John Philip Werdin, was born near Mannersdorf, in Austria, April 25, 1748. He studied philosophy and theology at Prague, and afterwards learned some of the Oriental languages in the college of his order at Rome, which he had joined in 1765. He was sent as missionary to the coast of Malabar in 1774, where he remained for fourteen years, and was successively appointed vicar-general and apostolic vicar. In order to superintend the religious works which were being printed by the Propaganda for the use of the missionaries in Hindostan. He died at Rome Jan. 7, 1806. Paulu-
Paulinus was one of the earliest Europeans who acquired a knowledge of the Sanscrit language. In consequence of his being settled in the south of Hindostan, he could not obtain so accurate a knowledge of the Sanscrit language in that part of the world as he obtained in the East in his youth. He mastered the language so well that he became a master in it, and was able to translate the books of the Brahmins, but he nevertheless gained quite a mastery of the tongue, and even published a Sanscrit grammar (in the Tamil characters instead of the Devanagari) at Rome in 1790, under the title of Siddharam, or Græmatissa Samacritandica, cum Dissertatione historico-criticà in Linguam Samacritandicam; and also in 1795, under the title of Siddharam, seu locupletissima Samacritandica Lingua initii; but both these works are entirely superseded by later, more accurate, and complete grammars. Paulinus also wrote and edited many other works, of which the most important are, Systema Brahmanicum liturgicum, mythologicum, ciclicum, ex monumentis Indicis, etc., descriptioibus historico illustratum (Rome, 1791)—India Orientalis Christiana, contemae Fundationes Ecclesiarum, Seriem Episcoporum, Missiones, Schismata, Persuasiones, Vivos illustrat (Rome, 1794)—Vigiliae in Indi Orientali (Rome, 1796)—Amaravitha, seu indicissoria Samacritandica secto prima, de Calo; et tribus inedititis Codicibus inctica Manuscripta, cum Versione Latina (Rome, 1798) (the whole of this dictionary, of which he published the first part only, was completed at Scampore, in 1806, under the care of Cebrone).—De Antiquitate, et Affinitate Linguae Zendae et Samacritandicae Germanicae Die erat (Rome, 1798); Padua, 1799)—De Lingua Latina in Orienti et orientalibus Linguis Connessione (Rome, 1802). See Darling, Cyclop. Bibligr. ii, 2313.

Paulinus of Biterrea (the modern Béziers), in Gaul, an ecclesiast of note, was bishop of that city about A.D. 330. Some have thought that the Acta S. Genesii notissim cuiusdenim Aretulensis are to be ascribed to Paulinus rather than to Paulinus of Nola, under whose name they have been commonly published. Paulinus of Biterrea wrote an encyclical letter, giving an account of several alarming portents which had occurred at Biterrea. This letter is lost. Oudin has mistakenly said that it is cited in the Annales of Baronius. Possibly Paulinus of Biterrea is the Paulinus to whom Gennadius (De Viris Illustribus, c. 66) ascribes several Tractatus de Inchoato Quadrupravisius, etc. See Idatius, Chron. ad ann. xcv. Arcad. et Honor.; Mirum, Arbor, de Scrip. Scr.; Ecles. c. 63; Tillemont, Memoires, v. 669; Cava, Hist. Litter., ad ann. 410, i, 859; Oudin, De Script. Scripability; vol. i., col. 293; Fabriques, Bibl. Græc. ix, 815; Ibid. Myst. Mag., i., col. 12, etc.; Alt. v. 293; Fabricius, Arbor, de Scrip. Scr.; vol. i., col. 295 (ed. Paria, 1739); Hist. Litter, de la France, ii, 181.

Paulinus of Milan, an Eastern ecclesiastic of much celebrity near the opening of the 5th century, was the secretary of St. Ambrose, after whose death he became a deacon, repaired to Africa, where, at the request of St. Augustine, he was sent as a missionary to the city of his former patron, while residing at Carthage he encountered Celestius, detected the dangerous tendency of the doctrines disseminated by that active disciple of Pelagius, and, having preferred an impeachment of heresy, procured his condemnation by the council which assembled in A.D. 212 under Aurelius. The accusation was divided into seven heads, of which six will be found in that portion of the Acts of the Synod preserved by Marinus Mercator. At a subsequent period (217, 218) we find Paulinus appearing before the synod of Antioch, which was held against this decision, and refusing obedience to the adverse decree of the pope. Nothing further is known with regard to his history, except that we learn from Isidore that he was eventually ordained a presbyter.

We possess the following works of this author: His Ambrosii, which, although commenced soon after A.D. 200, could not, from the historical arrangements which it contains, have been finished until 212. This piece will be found in almost all the editions of St. Ambrose. In many it is attributed to Paulinus Episcopus, and by others to Paulinus Episcopus.—Liberina adversus Celestium Zosimo Papa oblatus, drawn up and presented towards the close of A.D. 217. It was printed from a Vatican MS. by Baronius in his AnticÌàles, under A.D. 218; afterwards by Labbe, in his Collection of Councils (Par. 1671, fol. ii.); in 1578; in the Benedictine edition of St. Augustine, vol. x, App. pt. ii; and by Constant, in his Epistolicon Pontificum Romanorum (ibid. 1721, fol.), i, 963;—De Beneficiis locus Patriarcharum is mentioned by Isidore (De Viris Illustr., c. 4), but the book has not been traced in any form until it was discovered by Migarelli in a very ancient MS. belonging to the library of St. Salvador at Bologna, and inserted by him in the Anecdoti, published at Bologna (1751, 4to), vol. ii., pt. i, p. 199. A corrupt fragment of this tract will be found in the fifth volume of the Benedictine edition of St. Jerome, where it is ascribed to Rufinus. The three productions enumerated above are placed together in the Bibliotheca Patrum of Galland (Venet. 1773, fol.), i, 25. See Cassianus, De Incur., c. 7; Isidoro, De Viris Illustr., c. 4; Gallus, Bibli. Litter. vol. i., Proleg. c. ii.; Schönenb. Bibl. Patrum Lat. vol. ii., § 21.

Paulinus (Pontius Meropius) of Nola, St., a noted prelate of the early Christian Church, was born about A.D. 386, at Bordeaux, of a noble family. He was a pupil of Ambrose, and was recommended by him to the emperor Gratian, who appointed him consul in 378, and afterwards advanced him to several offices of great importance. Through the influence and exhortations of St. Ambrose, he was induced to relinquish the world, and devote himself to the service of the Church. He retired from official life, caused himself and his wife to be baptized, and lived quietly for a while in the vicinity of the Pyrenees. But he was finally induced to enter the service of the Church, and was ordained presbyter, in 393, at Barcelona, in Spain. He did not, however, long remain to exercise his ecclesiastical functions in this region of country, but crossed over the Alps to Italy. Passing through Florence, where he was greeted with much cordiality by St. Ambrose, he proceeded to Rome, and, after meeting with a cold reception from an abbot, who perceived in him a man endowed with suspicion on the hasty irregularity of his ordination, reached Nola, in Campania, where he possessed some property, soon after Easter, A.D. 394. In the immediate vicinity of this city were the tomb and miracle-working relics of Felix, a confessor and martyr, over which a church had been erected, with a few cells for the accommodation of pilgrims. In these Paulinus, with a small number of followers, took up his abode, conforming in all points to the observances of monastic establishments, except that his wife appears to have been his companion. After nearly fifteen years, passed in holy meditations and ascetic acts of charity, he was chosen bishop of Nola in A.D. 409 (or, according to Pagi, in A.D. 405), and during the stormy inroad of the Goths attended in the episcopal capacity the Council of Ravenna (q. v.) in 418. He died in 419. Paulinus wrote several works, of which only a few have come down to us; the principal of them are a discourse on almsgiving, some letters, and some thirty poems on religious subjects. Paul was intimate with the most distinguished theologians of his time, and is frequently mentioned in the Epistles of St. Augustine and St. Jerome. Paul of Nola was, in a sense, to the believer in image and saint worship. He caused Biblical pictures to be exhibited annually at the festival season, on the ground "that by them the Bible scenes were made clear to the uneducated rustic as they could not otherwise be, and impressed themselves on his
memory, awakened in him holy feelings and thoughts, and restrained him from all kinds of vice." His poems, too, are full of direct prayers for the intercession of the saints, especially of St. Felix, in whose honor he erected a basilica, and annually composed an ode, and when he died, his father, anticipat- ing that the people came in great crowds around the wonder-working relics of this saint on his day, and could not look on them enough. His works were published for the first time by Badius (Paris, 1510); but the best editions are by Muratori (Verona, 1756, fol.), and by Le Brun (Paris, 1685, 2 vols. 4to). See Jortin, Remarks on Eccles. Hist. ii, 389 sq.; Schaff, Ch. Hist. ii, 442; iii, 689, 598; Cave, Hist. Litt. ii, 278; Alzog, Patrologie, § 69; Cellier, Hist. des Autres Saintes, vol. viii; Tillemont, Mémoires Ecclesiastiques, vol. xiv; Schleiermacher, Biblioth. Patr. Lat. vol. i, cap. 4, p. 80; Bähr, Gesch. der Römischen Literatur (supplement vol.), pt. i, § 23-23; pt. ii, § 100; Buse, Paulinus von Nola und seine Zeit (Reussnitz 1868, 2 vols. 8vo); Gilly, Vigilantius und his Times (London 1844). This article in Smith's Dict. of Greek and Roman Biog. and Mythol., we think, underestimates the pious character of Paul of Nola, and belittles his ability and scholarship. It is, however, a nearly exhaus- tive sketch of the life and writings of this person- age.

Paulinus of Pella, surnamed the Penitent, was born in A.D. 376, at Pella, in Macedonia. He was the son of Hesperius, proconsul of Africa. He was taken at three years of age to Bordeaux, where he appears to have been educated. An illness at the age of fifteen interrupted his studies, and the indulgence of his parents allowed him to pursue a life of ease and pleasure, in the midst of which, however, he kept up a regard for morality. At the age of twenty he mar- ried a lady of ancient family and of some property. At thirty he lost his father, whose death was followed by a dispute between Paulinus and his brother, who wished to invalidate his father's will to deprive his mother of her dowry. In A.D. 414 Paulinus joined Atticus, who attempted to resu- me the purple in Gaul under the patronage of the Gothic prince Ataulphus, and from whom he accepted the title of "Comes Re- rum Privatarum," thinking thus to be secure from the hostility of the Goths. He was, however, disap- pointed. The city where he resided (apparently Bor- deaux) was taken, and his house plundered; and he was forced to flee. He then went to Vienne, where he had resided, was besieged by the Goths and Alans. He proposed now to retire to Greece, where his mother had rich estates, but his wife would not consent. He then thought of becoming a monk, but his friends di- verted him from that plan. Mistakenly, he now thick- ened about him: he lost his mother, his mother-in-law, and his wife; his children forsook him, with the excep- tion of one, who was a priest, and who suddenly died soon after. His estates in Greece yielded him no rev- enue; and he retired to Massilia (Marseilles), where he hired and farmed some land, but this resource failed him, and alone, destitute, and in debt, he was reduced to depend on charity. During his residence at Mas- silia he became acquainted with many religious per- sons, and their conversation combined with his sorrows and disappointments to impress his mind deeply with religious sentiments. He was baptized in A.D. 422, in his forty-sixth year, and lived at least till his eighty- fourth year (A.D. 460), when he wrote a poem embody- ing his Christian sentiments. Some have supposed, but without good reason, that he is the Benedictus Pauli- nus of the Vita Benedicti, a vita of various points of theology and ethics Faustus Reinsius wrote an answer (Historie Littéraire de la France, ii, 345, etc., 461, etc.). See also Fabricius, Biblioth. Med. et Infim. Lutetia, v, 205, ed. Mansi; and Cave, Hist. Litt. i, 290, in his article on Paulinus Nolensis.—Smith, Dict. of Gr. and Rom. Biog. and Mythol. s. v.
ory I in A.D. 601. He soon made himself the favorite of the English princes, and obtained positions of influence and trust at court. In A.D. 625 he was consecrated bishop by archbishop Justus to attend Ethelbert, daughter of Ethelbert, king of Kent, to the North on her marriage with Edwin, king of the Northumbrians. In A.D. 626 and 627 his missionary labors resulted in marvellous successes; thousands were baptized by him, and his fame was in all the land. He was made bishop of York, where he founded the cathedral, about 626, and in 631 consecrated Honorius archbishop of Canterbury at Lincoln. In 633, on the death of King Edwin, he was obliged to flee before the invading Northumbrians, and settled in Kent. He there became bishop of Rochester, and died about 643. Wurdowath gives a word-picture of Paulinus of York thus:

"...of shoulders curved, and stature tall, Black hair and vivid eye, and mangye cheek. His prominent feature like an eagle's beak."

See Mrs. Clement, Handbook of Legends and Mythology, p. 248; Inlett, Hist. of the Church of England (see Index); Millman, Hist. of Latin Christianity, ii, 186 sq.

Paulists (or Paulitii), also called Hermits of St. Paul, are a class of Roman Catholic monastics who profess to imitate the life of the great apostle. They have no written rules, and are not strictly a particular order. They have no superior except the bishop in whose diocese they reside. They usually wear a short cloak, with cowl attached, and go barefooted. They are to be met with in Italy, France, Spain, Germany, and many other countries. There is also a congregation of Paulists sometimes called Burnabiles (q. v.). In Hungary a congregation of Paulists was formed in the 18th century, but was made subject to the rules of the Augustinians (q. v.), and ranked with them. During the Reformation movement they became extinct in Hungary; but at Rome the Paulists still maintain a religious house. Their dress is white. They wear a woollen shirt, and hood attached to the collar, which covers the shoulders. When they go to town they wear a black hat, and a mantle of the same color. In Portugal an order of Paulists was founded in 1652, and their principal monastery is on Mount Ose. They are also subject to the Augustinian rule.

In the United States the "Congregation of the Missionary Priests of St. Paul the Apostle," commonly called "Paulists," was established in New York City, in 1884, by Bishop Matthew H. Healy and seven Jesuits, whom the pope allowed to leave the Redemptorists for the purpose of founding an independent organization for missionary purposes better suited to this country. This congregation reports a house and church in New York, a superior, six other priests, and twelve students preparing for the priesthood. The Paulists are the originators of the Catholic Publication Society, of its monthly periodical, The Catholic World, etc., and occupy a very influential position.

Paulite, an obscure sect of the Acrphallii, followers of Paul, a patriarch of Alexandria, who was deposed by a council (A.D. 641) for his uncanonical consecration by the patriarch of Constantinople, and who after his deposition sided with the Monophysites (Nicephorus, Hist. Eccles. c. xlix). The Paulite are mentioned under the name of Paulinians in the treatise on the reception of heretics which was written by Timothy of Constantinople (Timothy, De Triptich Recept. Heret. in Cotelerii Monument. iii, 377).

Paul, George, a missionary of the Presbyterian Church, was born near Connellsville, Fayette Co., Pa., Feb. 3, 1837. He pursued his preparatory studies first under Rev. Ross Stevenson, of Ligonier, Pa., then in the Dunlap Creek Presbyterian Academy, and afterwards under Prof. John Frazer; graduated at Jefferson College, Canonsburg, Pa., in 1856, in the spring of which year he made a profession of religion, and united with the Church at Connellsville; after leaving college he went South, and engaged in teaching for a time in Mississippi; but, feeling called to preach the Gospel, he returned, entered the Western Theological Seminary, Allegheny City, Pa.; was licensed by Redstone Presbytery in April, 1861, and graduated at the seminary in 1862. He gave his name to the General Assembly's Board of Foreign Missions as a candidate for missionary work, but owing to the embarrassed state of the board, arising from the civil war, he could not be sent on his mission immediately. For a time, therefore, he supplied the vacant churches of Tyrone and Sewickley, in his own presbytery; then ministered to a weak Church in Morrison, Whiteide Co., Ill., in Rock River Presbytery; but in 1863 he entered on his own chosen work, being ordained as missionary to Africa, by Redstone Presbytery, at Connellsville. He was appointed to take charge of the mission at Evangaisims, where he labored till, in 1865, at his urgent request, he received an appointment to Benito, a point on the continent where he hoped to build up a new station. His labors of preaching and teaching, together with the supervision of building, proved too great even for his strong physical powers, and he died May 14, 1865. Mr. Paul was a man who sought to consecrate all his powers to the service of his Divine Master. He was endowed with a comprehensive understanding, sound judgment, and refined tastes. As a preacher, he was eminently popular—his thought always being pungent, tender, earnest, and practical. See Wilson, Presbyterian Historical Almanac, 1866, p. 141. (J. L.S.)

Pauli, Just Henrik Volteles, a Danish Lutheran divine, was born at Copenhagen in 1629. In 1635 he was appointed curate at the church of the Holy Spirit; in 1837 he became chaplain of the Christiansburg palace-chapel; and in 1637 he was elected pastor of the church of the Virgin, and dean of the Zealand diocese. He lived to be eighty-two; he was for thirty years one of the most noted preachers in Copenhagen. From 1854 till his death, in 1865, he also lectured at the theological seminary. See Bofordt, Fortalinger, p. 889. (H. B. A.)

Paulo, Antoine de, a grand-master of the Order of Malta, was born at Toulouse in 1551, and was de
scended of a family originally from Genoa. In 1590
he was received Chevalier of Malta, and became suc-
cessively commander of Marseilles, of Sainte-Eulalie,
Grand-Cross in 1612, and shortly after prior of Saint-
Gilles. Elected grand-master of the order March 10,
1623, three days after the death of his predeces-
sor, and on the following year was called before the
pontifical tribunal, accused of disorderly conduct, and
with having purchased his nomination with money.
Antoine fully justified himself, but was nevertheless
engaged in quarrels with pope Urban VIII on the
subject of the commanderies of Italy. Under his
command the order experienced several reverses on
the part of the Turks, and in 1631 there was a general
chapter which reformed several statutes of the pre-
ceiling chapters, especially that of 1602, which gave
the illegitimate sons of the dukes and peers of France,
and of the grandees of Spain, admission into the order.
This privilege was then limited to the illegitimate
children of kings and princes only. Paulo died June
10, 1636. See De Vertot, Hist. des Cheval. de Saint-
Jean de Jerusalem; Bléau, Toulounai; Moret, Dict.
histoire, t. v.

Paulsen, HERMANN CHRISTIAN, a German divine,
noted for his researches in Palestine, flourished as pastor
at Cremp, and died there in 1780. He wrote, in Latin, the
ecclesiastical history of the Tartars, with a map of Tar-
tary according to modern geographers, which was pub-
lished as Mosheim's production, because the latter had
found his manuscript and revised the tables. Paulsen
also wrote Die Regierung des Morgenlandes (Altona,
1755), and Zuzuernische Nachricht vom Ackerbau des
Morgenlandes (Heilmädt, 1748).

Paulus (us) von Bernried, an eclesiastic of the first half
of the 12th century, was canon of the cathedral at
Regensburg. He was a devoted adherent of the cause
of Henry II, and a bitter foe of pope Gregory VII.
Persecuted by the clergy, he took refuge in the Augustinian convent at Bernried, in Bavaria. In 1128
he went to Rome, and wrote there an apology and a life
of Gregory VII (in which are inserted some documents),
and a life of St. Hencul, a prophetess and contemporary
of his.

Paulus Burgensis, de SANTA MARIA, a noted
Christian convert from Judaism, whose original name
was rabbi Solomon Levi, was born about 1352, and
flourished at Burgos. Until his fortieth year he was
a teacher among the Jews, eminent alike for birth and
learning. He was a great admirer of Maimonides, with
whose writings of Thomas Aquinas, whose treatise De Legi-
bus made so deep an impression upon his mind that
his national prejudices against Christianity fell to the
ground, and he finally embraced Christianity. In the
year 1392 he received baptism, together with his four
sons, then young children, but who all in after-life in-
herited their father's high character and great cele-
brity. His wife was already dead, but his mother and
his brothers followed his example, by making public
profession of their faith in Christ. He now devoted
himself with all the energies of his mind. His ser-
mons were of a religious character, and he became the
champion of religious truth. The success of his
oral sermons was such that he was able to publish them in book form. His works were well calculated to guide and advise kings." Paulus
Burgensis died in the year 1435; on a journey which he
made to visit the different churches of his diocese, al-
though the bishopric itself had already passed to his
son Alphonso. His indefatigable activity as a student
and prelate has been remarkable, and from the fact of
which two, in particular, deserve our notice: his Ad-
ditions to the Postilla of Nicholas de Lyra (q. v.), and
his Scrutinium Scripturarum. The latter is of the later
date, although published first, and contains, in the
form of a dialogue between Paulus and Saul, a defence
of Jewish objeets to the Christian faith. The intro-
duction, in which the venerable bishop dedicates his
work to the whole Bible to his son Don Alphonso
of Carthagena, at that time archdeacon of Compostella,
affords us an insight into his character and private
feelings. He speaks of his own blindness and incre-
dultry, and how he was called from darkness to light,
and from the depth of the pit to the open air of heav-
en. He gives his son the experience of his past life in
order that what he has not seen with his eyes may
yet be engraved on his mind by the tips of his father, that in his turn he may tell to those
who are younger than himself, and they to their
cendants, not to forget the works of the Lord,
our cease from the study of his holy Word. He con-
tinued to labor at it in his old age, and had the satis-
faction of seeing a last night before a royal throne,
which was chiefly intended to bring conviction to his former
collegians, and for that purpose is filled with striking
passages in support of the Christian faith, quoted
from rabbinical writers, giving their views of the person,
the distinguishing characteristics, and the present
kingdom of Dom Messias. That the bishop was not only sincere in his convictions, but also in his zeal for the Church
and the conversion of his former collegians, cannot
be denied, but the more remarkable is the malicious
manner in which the Jewish historian Grätz speaks of this
work. See Grätz, Gesch. d. Juden, viii, 84 sq.; Da Costa,

don, 1870), p. 57 sq. (B. P.)

Paulus Canosba, a PARADISUS, a convert from
Judaism, flourished in the 16th century in Italy. For
about five years, from 1538-1538, he was professor of
Hebrew, and wrote Divinos de modo legendi Hebraicos.
(Pariis, 1534). John Quinquaroburio (in Colomnesius,
Italia et Hebræan, p. 68) says of him that, like his great
namesake, he was also of the tribe of Benjamin; and
in a work which he dedicated to Paradusus he ad-
dresses him in his dedication in the following manner,
"Omnes in tuo admiratim ingenii dextariet Erat-
has," Paradius died in 1548, greatly lamented by
Quinquaroburio, who gives vent to his feelings in the
following lines: "Descende hie iterum, tibi precator,
Nam postquam invisa fata te tulerunt, Nemo substina
ibi meretur. Haec ergo ratione nunc necesses, ut
us suppositos tibi ipsa. See Furst, Bibl. Jud. iii, 65;
Wolf, Bibl. Hebr. iii, n. 1811 b; i, 950, n. 1811 f; Jö-
cher, Allem. Gelehrten-Lexikon, s. v.; Kalker, Israel
et die Kirche, p. 76 (B. T.)
Paulus (or Paulinus) of Fulda, a convert from Judaism, flourished towards the end of the 11th century. Of his early life we know nothing, not even the year when he embraced Christianity. He entered the monastery at Fulda, and wrote the Life of St. Erkarius, bishop of Regensburg (reprinted in Hollandi Acta Sancctorum, vol. i., Jan. 8), and De Conversione S. Pauli Apostoli. Whether he is the same as Paulus Bernriedensis, as some suggest, is difficult to say. See Jöcher, Allgem. Gelehrten-Lexikon, s. v. (B. P.)

Paulus of Prag, originally named Elchanan ben-Menascham, was born of Jewish parents about the year 1540, and embraced Christianity at Nuremberg in 1560. Near the close of his life, Paulus wrote, in Hebrew verse, a treatise on the Messiah according to the Jewish Kabbalah (Heinestadt, 1580; afterwards translated into Latin, Demonstratio cubilistica, ibid. 1580): — Solida et perspicua demonstratio de SS. Trialetic. etc. (Leips. 1754): — Confes- sie fidei et testimonium Scripturae suae de resurrectione mortuorum, printed in the 2nd edition of his Solida (ibid. 1576): — Symbolum apostolicum ex Vetere Testamento confirmatum (Wittenberg, 1580): — Jona quadruplex, the book of Jonah in Hebrew, Greek, Latin, and German, with an English translation, Paris, 1575, ii. 69; Wolf, Bibl. Hebr. i. 143, 964; iii. 910; Statt auf Hofmann (Erlangen, 1869-1870), vii. 374; Fabricii Delectus argumentorum et syllabus scriptorum (Hamburg, 1725), p. 581. (B. P.)

Paulus, Alvarens, of Cordova, the biographer of his friend the martyr Eulogius, flourished in the middle of the 9th century. Of his early life nothing is known beyond the fact that he was of Jewish parentage. The times in which Alvarens lived were very troublesome to the Christians. When, in July, A.D. 711, the last Gothic king, Rodriguez, perished at the great fight near Xeres de la Frontera, and Spain had become a province of the eastern caliphate, an im- petuous ambition moved the Arab leaders to extend their conquests beyond the Pyrenees, and from the borders of Catalonia they reached the walls of Tursa. Here, however, they had to meet face to face the chivalrous Charles Martel, who utterly overthrew the invading host, thus washing away the insult offered to his country in a deluge of blood. By this most critical and decisive victory the European countries were saved from the ravages of a universal war, and the infancy of subjugation to the Mohammedan power. In the battles fought in those times many Christians fell, who not a few were his relatives. From these events, the rigid and the more liberal: the latter thought that under these difficult circumstances everything should be done to preserve and foster the friendly relations subsisting between them and the Mohammedan magistrates, while the former looked upon such conduct as being a violation of the duty to confess Christ before men, and not be ashamed of him. One of the foremost representatives of the latter class was Paulus Alvarez, who, in his Indiscus Luminosi, casts it as a reproach upon the Christians that by accepting offices at court they became guilty of participating in infidelity, and styles them leopards, taking upon themselves every color. He justified those who voluntarily entered the Mohammedan circles in order to deny the false prophet, and thus become martyrs for Christ's sake. He compared these martyrs with the Jews in the true faith, who, fearing no more danger in the face of fire, ran into the flames, and perished with great applause. As a theological writer he was anxious to warn his readers equally against a one-sided nationality and a speculative deviation from the original doctrines of Christianity, as from mysticism and Judaism. With these ideas he began in 1825 a theological journal called Jesus, which continued with great applause from 1825 to 1829, and another journal called Kirchen- beleuchtungen, published in 1827. From his numerous writings we select for mention the following: Memora- bilium (Leips. 1791-1798); — Summaria der merkwürdig-
Paulus de Heredia of Aragon was born about 1405. When yet in connection with the synagogue he used to dispute with Christian theologians about the merits of Judaism; nevertheless he afterwards became a convert of Christianity. He wrote, Ensis Postrí:—

ten Reim in den Orient (Jena, 1792-1808, 7 vols.):—
Leben Jesu, als Grundlage einer neuen Geschichte des Urchristenthums (Heidelberg, 1826, 2 vols.):—
Aufklärende Beiträge zur Dogmen- Kirchen- und Religionsgeschichte (Bremen, 1809):—
und Exegetisches Handbuch über die ersten Evangelien (Heidelberg, 1809-1830, 3 vols.). His service to the Church literature and history is not small, and is important.

While at Jena he edited the “Reptory of Biblical and Oriental Literature,” the Arabic version of Isaiah by Saadias, and Abdalotif’s “Compendium Memorabil. Egypti,” etc. As a theologian, he is generally looked upon as the type of profound and sound rationalism—a man who, in the main, examined the Bible with the profound conviction that everything in it represented as supernatural was only natural or fabulous, and that true criticism consisted in endeavoring to prove this. Perhaps none of the German Rationalists have done more to spread the infection of mechanical opinions and modes of thinking than Paulus. Under the imposing pretence of superior deference to the reasoning power in man, he, with others, had great success in weakening the hold of salutary divine truth on the educated mind of Germany, and sowed great scepticism, not only as to the doctrines, but the authority of revelation. Paulus died Aug. 10, 1851, having lived long enough to see his own rationalistic theory of Scripture give place to the “mythical” theory of Strauss, and that in its turn to be shaken to its foundations partly by the book of the Non-churchmen, and partly by those of Neander and the “Broad Church” divines of Germany. See his Skizzen aus meiner Bildungs- und Lebensgeschichte an denken an mein fünfzigjährige Jubiläum (Heidelberg, 1839); Meldeg, Paulina u. a. Zeit (Stuttgart, 1833, 3 vols.); Kahnis, Hist, of German Protestantism, p. 171; Hurst, Hist, of Rationalism, p. 86; Hurst’s Hague Meeting, Church Hist, of the 18th and 19th Centuries; Eberard, Kirchen- u. Dogmengeschichte, vol. iv.

Paulus de Heredia of Aragon was born about 1405. When yet in connection with the synagogue he used to dispute with Christian theologians about the merits of Judaism; nevertheless he afterwards became a convert of Christianity. He wrote, Ensis Prst.:

\[ \text{Isa.} \text{ Ha-Salot, treating of the divinity, death, and resurrection of the Messiah, which a certain Nechunjah ben-ha-Kanah, who lived towards the end of the second Temple, is said to have written.} \]

De Mysteria Ficti, De Leben der Eucharistie, and Concerning the Immaculacy of the blessed, which he dedicated to pope Innocent VIII. When Paulus died is uncertain, but in 1485 he was yet alive. See Furst, Bibl. Jud. i, 885; Wolf, Bibl. Bibr. i, 963; De Castro, Bibl. J. i, 963 sqq.; Gritzi, Gesch. d. Juden, viii, 281 sqq. (2 ed. Leips, 1855, p. 392); and Ammon. Kirchen u. Geschichte, B. F.)

Pouperism is the state of indigent persons requiring help, or, as it is technically called, "relief," or, as the Bible terms it, "charity." "The poor shall never cease out of the land" was said ages ago, when land was "free," and of a "chosen people," watched over by a "special providence," pasturing their flocks in fertile valleys, bright with the sunshine of a genial climate—a nature which needed no stimulus from "high-farming," but flung her wealth with prodigal hand into the lap of a community whose primitive manners ignored fashion, and whose social life was unfettered by the lavish expenditure of a high civilization. As the possession of every natural advantage was no preventive to want, but "the poor" were there, so there and everywhere they will "never cease out of the land," because human nature is weak, self-contradictory, and therefore sinful; because it is self-sufficient and indolent, and therefore ignorant and mischievous, because it is proud and haughty, and therefore liable to fall. Besides, in so far as poverty depends upon passion and error, the poor will increase pari passu with an artificial condition of society, for civilization intensifies the vices as well as the virtues of mankind. Therefore it is no amiss to call the poverty of the masses a product of modern civilization. It may be specially called the product of our progress in the industries, and of the employment of steam instead of simple manual labor. By these, our progressive steps, casualties and accidents have increased in this age at such a ratio among the working people that it must stand out as one of the most provoking causes of pauperism. Besides, the tremendous spread of the bad habits of intemperance [see Temperance] has considerably lessened the resources of this stratum of society, and thereby provoked a vast increase in paupers.

Pouperism, then, is a subject of our day which requires the gravest consideration of the philanthropist, and forces itself upon the attention of the Church as well as of the State. Indeed, we believe that the suppressing of this evil is a task not given to paupers. Although the solution of the problem is within the province of politics, it is nevertheless true that Christian ethics must provide the motive and pave the way. It may, therefore, be well to point out in this place the principle on which all poor-legislation should rest.
Paley affirms that the claim of the poor is founded on the law of nature, because all things having been originally given for the benefit of all, the possession of anything was and is permitted on the expectation that every one should have enough for subsistence, or the means of procuring it. We may doubt whether this opinion is sound, notwithstanding that it has the advocacy of some of the ablest English thinkers, and that even such an unassuming mind as Mill approved it, but we cannot doubt that the Poor Laws rest upon moral and political considerations of great weight.

If statesmen cannot contemplate masses of population in a condition of semi-starvation without anxiety and fear, Christians certainly should not suffer society to be thus endangered so long as the ethical principles of Christianity can be brought to influence not only the private life of the individual, but all conditions and numbers. For the successful, i.e. prompt and general alleviation of all suffering and want, the State has stepped in to enforce obedience to an admitted moral obligation, which might otherwise be recognised by the conscientious and disregarded by the selfish. This is the purpose of the modern Poor Laws. Different states have different methods by which this principle is evolved in practice. The generous sympathy of the State should in all cases be delegated to the proper officials the power of the execution of the Poor-Law principle, supplying homes called workhouses for those who are homeless, and affording assistance in money and provisions for those who are temporarily or permanently out of employment. The charges which are brought against this system are many, and some of them are serious enough to require consideration here.

It was the wise rule of Napoleon the Great that the first duty of a charitable institution is to prevent the need of charity. Hence he favored domiciliary visitation, or what is technically called in the science of pauperism "out-door relief." In England, on the other hand, the maxim of the State is that the poor have a right to relief, or, in other words, that charity is a fund on which they can confidently depend. By Napoleon's principle, the object of charity is the reduction of pauperism; by the English, relief is the privilege of the poor, regardless of the consequences. Both systems have been tried nearly all over the Continent, and it is quite clear that Napoleon's rule alone is adapted to modern society, and should govern in the dispensing of charity. Poor law reformers may in their own estimation so quickly come to the conclusion that relying on the Poor Law for the reduction of pauperism is a stern necessity. But when the State makes a working man sure of charitable support in time of need, it takes from him the sharpest spur to self-exertion. This is done under the old system, which enables him to lean on its support in his possible emergencies, instead of stores provided by his own economical forethought for the sure-coming "rainy day." This feeling demoralizes him by sapping his self-respect, his pride of character, and his sense of manly independence. In other words, the legal provision of pauperism is to make certain, perhaps to him to become a pauper whenever the battle of life waxes hot. That this is not a mere theory, but a condensed statement of historic fact, can be shown by reference to the painful results of the English poor laws. Those laws, strangely enough, were made necessary by the abolition of serfdom in the 14th century. At first they were wisely framed, making provision for the "impotent poor" only, and for the punishment of vagrant laborers. Gradually, however, they gave birth to the idea of the "right of all persons to claim relief of the State." This came the era of workhouses and the establishment of "poor rates." Finally, the idea culminated in a law, passed in 1792, granting out-door relief through the agency of the State officers. The effect was to multiply the number of paupers with fear and anxiety, and it has only been accomplished, its apologists have aptly said, to bring the "country almost to the verge of ruin. . . Poor rates rose to such an extent that it became hardly worth while in some instances to retain the land in cultivation." So clearly did this peculiar provision work to the disadvantage of the poor, that in 1834 an act was passed chiefly aiming "to check out-door relief, . . . and then, within a few years, both rates and pauperism decreased to no small extent."

The maxim of Malthus in (Essay on Population, op. cit. 480) that it is in the highest degree important to the general happiness of the poor that no man should look to charity as a fund on which he may confidently depend, and it is a good one to be adopted by those who regard charity as a Christian obligation; but with this maxim should be coupled a recognition of the obligation upon society to make education widely diffused. It is a noteworthy fact that both in England and in France pauperism has been on the increase, although the efforts have been most persistent for its diminution; and it is further evident that in countries where education is general, free, and obligatory, as, e.g. in Germany, school training has acted as a direct counter-agent to pauperism. It may reasonably be supposed that, "had the right of education been as familiar an axiom with the English masses as the 'right of relief,' we might have had by the end of a million paupers in a population of 22,000,000, and known that the evil of pauperism in England presents itself as an almost insoluble question to the best of the English reformers" (Charles L. Bruce). The influences of workhouse or almshouse life are pernicious in the extreme to the occupants. It is of the utmost importance to society that pauperism should not be inherited and transmitted, from the familiar scientific principle that inherited evil is intensified in each new generation. It has been found that places of refuge for the poor, as such, are the propagators of pauperism, inasmuch as they take in from its occupants all self-respect and independence. Hence in our day France and England, as well as Germany, are abandoning the workhouse system, and are adopting, or are taking steps for the adoption of what is called the "out-of-door relief" principle; but the relief is given by a local relieving officer, and in that to prevent absolute independence, or, as it may be really stated, to prevent the needy from acquiring the habits of pauperism.

In the United States of America, where the influence both of general suffering and of the Protestant faith largely cultivates individual self-respect and independence, the workhouse system has no existence. Some go so far as to claim that the abundance of arable land, and the comparatively slight pressure of population on subsistence, as well as our methods of popular education, must prevent a development of pauperism. But the feeling is so strong that this way is not always taken. While the Old World pours in upon us continually such vast numbers of idlers, vagabonds, and poor, to whom independence is as natural as breathing, and in whom that feeling of self-respect which spurs reliance on public charity has never been developed, and that pauperism is therefore sure to come sooner or later, a fixed element in our population. In view of this possibility, if not probability, the subject requires most considerate attention from the Church of Christ. It is true the State has here and there created central boards of charity, which tend to give unity of administration to parish and town management of the poor; classification is introduced into the care of paupers; and, above all, the effort has begun in New York State and Massachusetts to withdraw all pauper children not diseased in mind or body from almshouses, and to place them in private families,乡镇, and parish institutions. These measures, but none of these measures, we fear, adequately meet our coming wants. Were our society stationary we might succeed, but in our surging condition there must be a judicious system of out-door relief, and it can be done so, and so effectually, as to be accomplished only by the close cooperation of society. This in our body politic the Church alone is fitted to assume. Voluntary associations of the best citizens in every com-
PAUPERISM

About $17,000 in 1873. The average cost of relief in 1855-59 was only some $18,000 per annum. A still greater reduction of the cost of pauperism is shown for the increased prices of provisions and all commodities during the past few years.

We realize that in our review of the subject the wandering pauper, or, as he is familiarly called, 'tramp,' has been somewhat neglected. The pauper is a person so lazy or vicious that they prefer to be supported rather than to labor for their bread; it is scarcely necessary to say that it is not the proper province of either the State or charitable individuals to relieve such drones. The alternative of work or starvation should be forced upon all with unceasing importunity. Those who, away from home and friends, need help, we can safely trust to the benevolent intentions of such individuals as we would see placed in charge of the charities of every town in the land. See WALKER, Science of Wealth, p. 411 sq.; GREENE, Political Economy, p. 17; North Amer. Rev., April, 1875, art. iii., where much important literature is quoted. See also Brit. Quarterly, April, 1876, art. vi; Westminster Review, April, 1874; January, 1875.

FAVANNE

A name given to the priests of Isis (q.v.) at Rome, because in their religious processions they were wont to make pauses at certain places, where they engaged in singing hymns and performing other sacred rites.

PAWU, CORNELIUS, a Dutch divine, noted as a writer, was born at Amsterdam in 1739. He studied at Göttinngen, and was afterwards made canon of Xanten, in the duchy of Cleves. He applied himself to literature, and wrote several works in French on the history and physiology of various nations and countries. His Recherches historiques sur les Américains contain some curious information, many sensible reflections, and also many unsupported assertions set forth in a dogmatic tone. Pawu had not visited America, and his object seems to have been to collect all the passages which he could find in other writers, and which could support some preconceived opinion of his concerning the great inferiority of that part of the world, its productions and its native races. (See Perney, Dissertation sur l'Amerique et les Americains, pp. 613-615.) It seems most probable that he had never seen a native American, but trusted to the information of others. His work was published in 1779.

Pauw, a Hindū deity who is believed to preside over the winds. He was the father of Hanuman, the ape-god.

FAVANNE, JACQUES, a Christian martyr to the Protestant cause, was born in France about the opening of the 16th century. He became an early convert to the Reformations doctrines, but in 1524, at Christmas, recanted. After this he lost his peace of mind, and could do nothing but weep and sigh, until he was one day brought before the tribunal of the Sorbonne because he had been to Meaux, and had had converse with the hefretical teachers. This was all that Favnne desired—another opportunity to confess his true Lord and his cause. "He felt his mind relieved as soon as the fetters were fastened on his limbs, and recovered all his former joy and confidence of Jesus as his great Advocate and Sub- burgis). The proceedings against him were conducted with all possible dispatch, and a very short time had
PAVELS

clapped before a pile was erected in the Place de Grève, on which Pavanne made a joyful end. See D’Aubigne, Histoire de la Réformation, iii, 482, 483.

Pavel. Claus, a Norwegian Prelate, was born Aug. 1, 1568, in Vaude parish, near Christianand, in Norway. He graduated with the highest honors at the academy in Christianand and at the University of Copenhagen. From 1739 to 1805 he preached in Copenhagen, but was then called to Christianand, Norway, where he remained until 1817. From 1817 until he died, in 1822, he was bishop of Bergen. He enjoyed a great reputation as a pulpit orator, and published a number of sermons and religious treatises. He also wrote poetry, and kept a diary, in which he recorded all the more important events of his time. His grandson, C. F. Rus, has published two of his writings; the one, Bishop Claus Pavel Limited Abroad (Christianand, 1884); the other, Claus Pavela Dagbog (Christianand and V современности). (R. A. B.)

Pavement is the rendering in the A. V. of θυρίζω, ritephak, originally a stone heated for baking purposes, and hence a tesselated pavement (2 Chron. vii, 13; Esth. i, 6; Ezek. xi, 17, 18; xiii, 3), once of the cognate term ἱππατία, a paved floor (2 Kings xvi, 17). In John xix, 13 it is the rendering of λαοποιευτήρος, which is immediately explained by the Heb. equivalent גבעזקה (q. v.). In the account of the sacrifice of Absalom we read that he removed the brazen oxen upon which the base in the Temple rested, and substituted a stone pavement (2 Kings xvi, 17). The lower stories of Eastern houses and palaces, in later days, were usually paved with marble (Esth. i, 6), but in the time of Moses marble was not used for pavements. The “paved work of a sapphire stone” mentioned in Exod. xxv, 10 is therefore supposed to refer to the splendid floors known in Egypt, which were formed of painted tiles or bricks. Champollion and Rosellini have given specimens of these ornamented floors, and fragments of such may be seen in the British Museum. This taste still prevails in the East. Le Brun tells us that the mosque at Jerusalem is almost all covered over with green and blue bricks, which are glazed, so that when the sun shines the eye is perfectly dazzled; and Dr. Russell likewise mentions that a portion of the pavement of some of the houses in Syria is composed of mosaic work. See House.

PAVEMENT OF CHURCHES. From the 4th century churches were carefully paved, as the Jewish Temple had an artificial floor. The narthex was laid with plaster, the nave with wood, and the sanctuary with mosaic. The custom of burying within churches between the 7th and 10th centuries led to the practice of covering the pavement with memorials of the departed; and at length the floors were laid with stone, marble, or tesselated or plain tiles. Rich pavements, like marquetry in stone or Roman mosaic, occur in most parts of Italy, at St. Omer, St. Denis, in the Rhine country, at Canterbury, Westminster, and in the churches of St. Mary Major, St. Laurence without the Walls, of the time of Abbot Linton and St. Mary the Virgin, the period of Constantine at Rome. The patterns are usually geometrical, but figures, flowers, animals, and the zodiac are frequently introduced with an effect equal to the richest tapestry. The decoration lasted in the 12th century, but at that time, and in the subsequent period, marble became rare, and hard blocks of freestone were used, and lastly tiles.

PAVIA

Pavia, a city of Northern Italy, capital of the province of the same name, on the left bank of the Ticino, twenty miles south of Milan, and three miles above the confluence of the Ticino and the Po, was in ancient times called the “city of a hundred towers.” It was a very old city, and many of its antiquities remain to this day; but the palace of Theodoric and the tower where Boethius wrote the treatise De Consolatione Philosophiae no longer exist; among the remaining ones are those of Belvederi and Del Manno, which are each 169 feet high. Its oldest church, and perhaps the oldest in Italy, is that of San Michele, which, although the date of its foundation is uncertain, is first mentioned in 661. The cathedral, containing some good paintings, was commenced in 1494, but was never finished. In a beautiful chapel attached to it are the ashes of St. Augustine, in a sarcophagus ornamented with fifty bas-reliefs, ninety-five statues, and numerous grotesques. In the church of San Petri in Ciel d’Auro are deposited the remains of the unfortunate Boethius. The Certosa of Pavia, the most splendid monastery in the world, is four miles without the city. It was founded in 1536. The University of Pavia is greatly celebrated for its learned professors, large libraries, and museums. About 1600 students attend here annually. Pavia is the ancient Ticinum (afterwards Papio, whence the modern name), and was founded by the Ligurii; it was sacked by Brennus and by Hannibal, burned by the Huns, conquered by the Romans, and became a place of consider-

Specimens of Tesselated Pavement. (From the British Museum.)
Benedict VIII in this council complained of the licentious life of the clergy, and showed that it dishonored the see; he declared that they consumed the wealth given to them by the liberality of princes in keeping women and providing for their children. A decree in seven articles was published for the reformation of the clergy, which the emperor confirmed, adding temporal penalties against the refractory. See Labbé, Concil. ix, 819.

4. At a council held at Pavia in 1160 the anti-pope, Victor III (Octavianus), was acknowledged as pope immediately by the emperor Frederick I. See Labbé, Concil. x, 1387.

5. At a council held at Pavia in 1428, convoked by the Council of Constance, and opened in the month of May, some deputies from England, France, and Germany were present. On June 22 this council was transferred to Siena, on account of the plague which threatened Pavia, and the enactments are given under the heading of Siena. See Hefele, Concilienrecht. vol. iv and v; Milman, Hist. of Latin Christianity, iv, 299; viii, 534.

Pavia, Giacomo, a painter, was born at Bologna Feb. 18, 1655, according to authentic documents. There is much discrepancy as to the time of his birth, and about his instruction. He is said to have studied under Antonio Crespi, who was twenty-six years his junior. He may have been the pupil of Cav. Giuseppe Maria Crespi, who ten years his junior was the son of the canon Luigi Crespi, son of Giuseppe, states, in the third volume of the Felietan Pictoric, that he was instructed by Gio. Giossef dal Sole, four years his junior. He acquired considerable reputation at Bologna, and executed several works for the churches which were admired for the fine taste displayed in their composition. The most esteemed of these is a picture of St. Anne teaching the Virgin to read, in S. Silvestro; and the Nativity, in S. Giuseppe. He went to Spain, where he distinguished himself, and executed many works for the churches. He died in 1740.

Pavlé, Jean-Baptiste-Raimond de, abbé De Fourguevaux, grandson of Francois, was born in 1693 at Toulouse. He enlisted in the regiment of the Bois d'Infanterie, and obtained a lieutenantcy. Upon the urgent entreaties of his mother he left the profession of arms, and in 1717 entered the society of Saint Hilaire, in Paris. He died Aug. 2, 1768, at the château De Fourguevaux. In devoting himself to works of piety, he took part in religious quarrels, and in the spirit of denunciation. On a very serious charge of parricide we cite from him, Traité de la Conscience Chrétienne (Paris, 1728, 1781), which occasioned great disputes; and Cathéchisme historique et dogmatique (ibid. 1729, 2 vols. 12mo; reprinted in 1766 in 5 vols. with the sequel). See Nouv. Ecclésiast., Feb. 7, 1769.

Pavilion, the rendering in the A. V. of נֶפֶל, נֵפֶל (Psa. xxxvii, 5; elsewhere "tabernacle," "den," or "cove," which last is the literal meaning), or נֶפֶל (2 Sam. xxi, 12; 1 Kings xx, 12, 16; Psa. xlvii, 11; xxi, 20), נֶפֶל, which signifies a booth, hut, formed of green boughs and branches interwoven (Gen. xxxiii, 17; Jonah iv, 5). It is rendered "bush" (Lxx. xxiii, 40-43; Nehi. vii, 15, 17); "tabernacles" (Lxx. xxiii, 34; Deut. xvii, 13, 16; Isa. iv, 6); "cottage" (Isa. i, 8). It sometimes signifies tent, tents for soldiers; rendered "tent" (2 Sam. xi, 11); "pavilions," margin "tents" (1 Kings xx, 12, 16). See TEST. It is also used poetically for the dwelling of God (Psa. xxvii, 11), where the Psalmist symbolically describes Jehovah as surrounding himself with dark waters, and thick clouds of the skies, as with a tent, or a "pavilion" (Job xxxvi, 29). See TABERNACLE. Among the Egyptians pavilions were built in a similar style to houses, though on a smaller scale, in various parts of the country, and in the foreign districts through which the
Egyptian armies passed, for the use of the king; and some private houses occasionally imitated these small castles by substituting for the usual parapet wall and windows the battlements that crowned them, and which were intended to represent Egyptian shields (Wilkinson, Anc. Eg., 33). The Hebrew word קֵרֹן, kérón, rendered "royal pavilion" (Jer. xiii, 10), is properly throne-ornament, tapestry, with which a throne is hung. See THRONES.

Throne-Room at Theben.

Pavillon, Nicolas, a noted French prelate, celebrated especially for his relation to the Jansenistic retreat in Paris known as "Port-Royal," and one of the chief of the Gallican Church advocates, was born in Paris Nov. 17, 1657. Even as a boy he displayed purity of character seldom seen in youth, and as a student was all that the most exacting could expect. Gifted with remarkable intellectual power, he was the favorite of St. Vincent de Paul, his confessor, who employed Pavillon, as soon as his age would permit, in different missions, and finally placed him at the head of the assemblies of charity and the conferences of St. Lazar. Pavillon had great misgivings about assuming any responsibility, and did not enter the priesthood until he was thirty years of age, and then, without being attached to any parish, devoted himself to the exercises of the holy ministry by assisting different curates, especially in the pulpit. He had determined in his own mind never to preach at Paris, but Vincent de Paul prevailed upon him to change his mind, and in 1637 he preached at the church of St. Croix. Crowds were attracted by his eloquence and simplicity, and the city was soon in a general excitement concerning the new preacher. Cardinal Richelieu and others of distinction went to hear him, and were so pleased that he was appointed to the bishopric of Alet, and was consecrated Aug. 21, 1638, at Paris. He left that city Oct. 8, with the resolution of never returning to it. In his diocese his predecessor, Étienne de Polverel, had maintained a conduct little edifying, and his clergy had imitated him—only too well. Nicolas Pavillon set himself to work immediately for the instruction and reform of the clergy, and in consequence of his wise regulations he succeeded in remedying the most deplorable abuses. His diocese very soon changed its condition; ignorance and disorders were banished from it. In 1647 bishop Pavillon got into difficulties with the Jesuits, who refused to acknowledge his diocesan power, and from this time forward his work was more or less impeded by their opposition, which, at first confined to his own see, gradually reached the court, and he fell under a cloud, notwithstanding his devotion to the good work, and his piety and untiring industry. Thus Pavillon had founded a seminary for theological instruction, and one for lady teachers; had paid special attention to the secular school, and by his personal supervision greatly improved their condition. As he was in intimate relations with Dr. Arnauld (q. v.) and his partisans, the Jesuits accused Pavillon of heresy and disloyalty, and by every means in their power plotted his destruction. His friend, Vincent de Paul, made strenuous efforts to draw Pavillon away from his Port-Royalist associations; but Pavillon took no notice of his opponents, and unhesitatingly endorsed the good doctor. After the death of St. Vincent Pavillon pronounced against the spreading of the heretical practices in Mariology even more openly.

In the year 1656 Pascal brought out his Provincial Letters, and shortly after Arnauld directed to Pavillon a pamphlet on the Jansenistic propositions which had just been condemned by the Jesuitical interpretation. The result was that Pavillon was so impressed with the justice of the Jansenistic complaints that, when Pascal was replied to in the Apology for the Curia, he felt constrained to call a provincial council (1658), and by it caused the Apology to be condemned as containing "doctrines false, precipitate, scandalous, and calculated to corrupt the manners and to injure the discipline of the Church" —a censure which the clergy of Paris approved. Of course such a step forever sealed the fate of the bishop of Alet. In 1661, by request of the king, an assembly of the clergy of France pronounced it incumbent upon all bishops to sign the formulary which condemned the five propositions supposed to be contained in the Jansenistic heresy. Pavillon saw in this measure not only injustice to the Jansenists, who rightly claimed that none of Jansenius's true views were embodied in it, but also against the bishop whose authority was thereby impaired. All the bishops of France looked to Pavillon to take the lead. He was not long in deciding. Aware that the king must have been moved to the measure by the intriguing Jesuits, he wrote to the king in remonstrance, but in all kindness, explaining the inconsistent action of a state like France, which had recognised the supremacy of the
Church in things spiritual, yet directing her bishops how to judge of and deal with heresy. The king, unable to free himself from the influence that surrounded him, was only the more decided in his course, and in 1666 he issued a royal edict, in the importance of the formularies still remains to pass. In 1669 the new archbishop of Paris also demanded compliance with the king's edict. Now Pavilion could no longer hesitate as to his future course. The courageous bishop, disdaining to equivocate under such circumstances, published a a mandate, June 1, 1665, in which his views as to the limits of Church authority were set forth with transparent clearness. Truths revealed by God, of which the Church is the ordained guardian, must be accepted on her testimony, with an entire subjection of the reason and of all the faculties of the mind; but with regard to other truths, not so revealed, God has not provided any infallible arbiter; so that when the Church declares that certain propositions are contained in a given book, or that such and such is the meaning of a particular author, she acts only by human knowledge, and may be mistaken. For decisions of this kind the Church cannot require positive internal belief; nevertheless the faithful are not permitted to impugn her judgments, which in all cases must be treated with submission, for the preservation of due order and discipline. The high character and saintly life of Pavilion added immense weight to his influence. The ecclesiastical documents which were shared by other prelates, particularly by Henri Arnauld, bishop of Angers; Nicolas Choart de Buzanval, bishop of Beauvais; and Francois de Caulet, bishop of Pamiers; these issued mandates of precisely similar import, as did also the bishops of Kryon and Lann; but the two latter, on receiving notice of the displeasure of the court, retracted, and adopted a tone of exact accord with the papal bull. An act of the council of state, July 20, cancelled the mandates of the four refractory bishops, and forbade the clergy to obey them. It was, of course, a judicial question between the prelates who had thus boldly constituted themselves the apostles of Jansenism; but this was an affair of considerable delicacy and difficulty. According to Roman jurisprudence, the pope was the sole judge of bishops; on the other hand, it was one of the most cherished of the Gallican liberties that bishops in France could only be tried, in the first instance, before their metropolitan and his com provincials. Application having been made to the pope by the subject of Rome, his holiness proposed to name a commission of nine cardinals and bishops, who would be delegates for hearing the cause; but the king decidedly objected to this method of adjudication, as an invasion of the privileges which he was bound to defend. After a tedious negotiation, it was at length arranged that the pope should name a commission of nine prelates to proceed to the trial of their colleagues; that seven should be competent to act; that the president should have power to appoint substitutes in the room of those who might decline to act; and that the accused should not be at liberty either to challenge the judges or to appeal from their decision. The mandates of the four bishops were at the same time denounced by a decree of the Congregation of the Index; upon which the bishops of Languedoc wrote to the king in terms of energetic remonstrance against the encroachments of the court of Rome on the rights of the episcopate, and Louis replied by assuring them that he would not interfere in their lawful jurisdiction and the liberties of the Gallican Church. The prosecution of the bishop was suspended by the death of Alexander VII, which occurred May 20, 1667. Cardinal Giulio Rospigliosi, who succeeded him under the name of Innocent XI, was solicitous of his sentiments, and of moderate opinions, and disposed to a pacification; and measures were immediately concerted in France for taking advantage of this favorable change of circumstances. It was proposed that the bishops, without being required to retract their mandates, should sign the formulary aforesaid, as if they had taken no steps in the matter before, and should cause it to be signed by their clergy; but any explanatory remarks which they might wish to make should be made by a procès-verbal at the discretion of the cardinals, such written statements not to be published, but to be deposited in the papal diocese; and that they should afterwards join in a letter to the pope, informing him of this new act of dutiful submission to his authority. This expedient was approved by the nuncio, accepted on his recommendation by the pope, and ultimately adopted. The bishop of Alet proved for some time intractable. Courier after courier was despatched to urge him to compliance, but in vain. At last, persuaded that the peace of the Church would be maintained by his submission, he yielded to the importunate entreaties of the bishop of Comminges, Antoine Arnauld, and other friends, and appended his signature, Sept. 10, 1668. The other prelates asserted without difficulty, and the matter was forever closed. In 1675 Pavilion was involved in a conflict with the state authority. By the decree of the crown, ratified by Parliament, during the law of Régale in general force, in 1673 the question had been forced home to Pavilion whether he would suffer in his own diocesan appointments by the crown while he was at the head of the see. The treasurership of his cathedral was conferred in 1679 in Régale upon a young prelate, whose good name and earnestness made his preferment come to take possession. When Pavilion returned, he prohibited this appointee from assuming the duties of the office; and when he appealed to the archbishop of Paris to assist him against the court at which the appointee was invested, Arnauld replied to, and he found himself obliged to stand in his own strength. In March, 1676, he published an ordinance against the intrusion of any person into any benefice or dignity in virtue of the Régale. Of course a decree of the ecclesiastical council of Paris, readily granted upon his request, set Arnauld against the king; and though the good bishop wrote to the king, and pleaded for the rights of the Church as he interpreted them, his position was condemned, and he was only suffered to remain in his see by reason of his great age. He died Dec. 8, 1677. Pavilion published a sort of "Compendiium Theologicum," which he entitled Règle à l'usage du Diocèse d'Aléa (Paris, 1667, 4to, and 8vo), and which was designed especially for his own diocese. It was published anonymously; and, as it was attributed to Arnauld, it was condemned at Rome by a decree of April 25, 1668. By this act the name of Pavilion is now universally appeared for clear statements of doctrine and sound Christian instruction. Pavilion published in July 1678 following a pastoral letter against this brief, and, notwithstanding the anathemas, he had his book printed again, adding to it the approvals of twenty-nine French prelates. The ritual continued to be observed in the diocese of Alet, and was extensively circulated throughout France. The death of pope Clement only a few months later terminated this unpleasant affair, especially as the casuists could get no encouragement from the new pope, Innocent XI, who became a most ardent adumbrateur of Pavilion. Indeed, our good prelate was highly esteemed by all honorable characters, for he was a brave defender of the Christian doctrine of grace, maintained strictly the rules of Christian morality, and protected, or strove to protect, the rights and immunities of the Church by his bishop Pavilion, de Sacrifice et Statuts Synodaux (Toulouse, 1676; Paris, 1875, 12mo) — Lettre écrite au Roi (1664, 4to). There was a question of the royal prerogative to which Pavilion refused to submit; and this letter, upon the charge of the pope, Clement XI, was condemned by his bishop Pavilion of the Parliament of Paris of Dec. 12, 1664. See Vie de H. Nicolas Pavillon, évêque d'Aléa (Saint Hiel, 1738, 3 vols. 12mo); Nicrologe de Port-Royal, p. 464; Mrs. Schimmel penning, Select Memoirs of Port-Royal; Life of Nicos Pavillon, by a Layman of the Church of England
PAXTON, George, D.D., a Scottish divine of note, was born at Dalgowry, East Lothian, in 1762. He entered the work of the ministry before 1789, and was in that year a member of the General Associate Synod, and subsequently under the same authority was presbyter of divinity at Edinburgh. His places of pastoral labors were Kilmaurs and Stewarton. He died in 1837. He was a man greatly respected in the denomination to which he belonged, and possessed in his youth and prime rare gifts of popular eloquence. He wrote an Inquiry into the Obligations of Religious Causes on Posteriorly (1801, 8vo):--Illustrations of the Holy Scriptures (London, 1819, 2 vols, 8vo; and often in England and America); a valuable supplement to Harmer, containing a large amount of various and useful knowledge on subjects relating to Eastern geography, natural history, and manners and customs. See Orme, Biblioth. Biblia, a. v.; Nevin, Biblical Antiquities (Appendix), p. 441.

Paxton, William, D.D., a Presbyterian minister, was born in Lancaster County, Pa., April 1, 1760. His early education was limited, and when the Revolution broke out he joined the Continental army. When about twenty-four years of age he entered the Strasburg Academy, near Lancaster City, Pa., where he greatly distinguished himself, and was by the Newcastle Presbytery licensed to preach April 8, 1789. After spending a while in the western part of Scenery and in Little Britain, he was, Oct. 3, 1792, ordained and installed pastor of the churches of Lower Marsh Creek and Toms Creek. After a lapse of some years he devoted himself exclusively to the former congregation, where the greatest success and usefulness attended the forty-nine years of his ministry. His health obliged him to resign his charge Oct. 19, 1841, after which he gradually declined until his death, April 16, 1845. Although his sermons and other literary productions were marked by great talent and profound
PAYNE

PAYSON

**Payne, Joseph**, one of the noted English educators of our times, was born in 1808. He received his educational training at the University of London, and early distinguished himself as a teacher of English. For a number of years he was connected with his alma mater. In 1837 he was appointed to the newly founded professorship of education in the College of Preceptors, the first chair in any public institution in England assigned to that subject. He devoted himself in this position, and also by his writings, to the promotion of education, making the improvement of methods of teaching his special object. He was the author of *Lectures on Education*, and numerous lectures and pamphlets on allied subjects. He also took an active part in the work of the Woman's Educational Association. Mr. Payne contributed several papers to the *Proceedings of the Philological Society*, chiefly on English dialects, and the relation of Old English to Norman French. Among his other publications were text-books in English literature, entitled *Studies in English Poetry* (4th ed. 1871, 8vo), and *Select Poetry for Children*; the last of which especially had a very large circulation (15th ed. 1868, 18mo.). Payne died at Bayswater April 30, 1876.

**Payne, William, D.D., F.R.S.,** an excellent and learned English divine, flourished in the second half of the 17th century. He was rector of St. Mary's, Whitechapel, in 1681, and prebendary of Westminster in 1694. In 1681 he was admitted Fellow of the Royal Society; and died in 1696. His publications are, *Learning and Knowledge recommended to the Scholars of Brentwood School*, at their First Founding: a sermon on Prov. i. 7 (Lond. 1682, 4to); — *A Discourse concerning the Adoration of the Host, in Answer to T. G. and Mr. Boyle's* (Gibson's *Preservation*, x, 116; originally published 1683); — *A Discourse concerning Communion in One Kind, in Answer to the Archbishop of Mousse* (Gibson's *Preservation*, viii, 320, and i, 1; originally published anonymously, 1687, 4to); — *A Discourse on the Sacrifice of the Mass* (Lond. 1688, 4to; also in Gibson's *Preservation*, vi, 215); — *The Texts examined which Papists cite out of the Bible to prove their Doctrine concerning the Obolary of Works and Voice of Confidence*: in two parts (ibid. ii, 382; originally published 1688); — *Belarmine examined, 6th Note: Agreement in Doctrine with the Primitive Church* (ibid. iii, 292; originally published 1688); — *Family Religion, or the Duty of taking Care of the Education of Children*: a sermon on Josh. xxiv, 15 (Lond. 1691, 4to); — *A Practical Discourse of Repentance, rectifying the Mistakes about it, especially such as lead to Despair or Presumption, perverting and directing to the true Practice of it*, and demonstrating the necessity of a Death-bed Repentance (ibid. 1693, 8vo); — *Discourses upon several Practical Subjects*: with a Preface, giving some Account of his Life, Writings, and Death (ibid. 1698, sm. 8vo).

**Payson, Edward, D.D.,** a noted American divine, one of the most illustrious of the orthodox Congregational body, was the son of the succeeding, and was born at Ridge, N. H., July 25, 1788, where his father was then pastor. Both the intellectual and moral powers of young Payson were developed at an unusually early age; and from the age of three years old he was well read at four. He entered Harvard College in 1809, and graduated in 1813. It was said of him while there, by his fellow students, that he had left off taking books from the alcove of the library because he could read all that he brought back from there. His religious awakenings seem to have come powerfully after the death of his brother in 1804; and, when finally resolved to live for God and his cause altogether, he consecrated himself fully to the service in a written covenant. After three years spent as principal of a school in Portland, feeling that he could not work the ministry, he began his theological studies under the direction of his father. His great aim and purpose was to be a thorough Biblical scholar—not so much to acquaint himself with systems of divinity, or to learn about the Bible, but to know the truth. Having obtained his theological training, he returned to Maine and ordained colleague of Mr. Kellogg, Dec. 16, 1807, and afterwards the sole pastor of the Congregational Church of Portland, Maine. This was his first and only pastoral charge, and he remained in it for a period of twenty years, though his most utterances were of the most startling and uncompromising character. It may be truly said of Edward Payson that he labored not to please men, but God; and his pulpit thunders and lightened like another Sinai against every form of ungodliness and iniquity. Nor must it be supposed that his pastorate was lengthened in one charge because his labors were not appreciated elsewhere. Calls came to him from Boston and New York, but he persistently declined them. So conscientiously devoted was Payson to his work that he refused to receive more than his salary, although many hospitals and other institutions had generously offered him by his people. Over seven hundred persons were received by him under his ministrations, and many happy souls in other places will rise up in the final day to bless the name of Edward Payson. These vast labors heavily taxed his physical strength, and the impossibility of traveling, due to his lameness, soon exhausted him when sickness finally came. He died Oct. 22, 1837. In his distressing sickness he displayed, in the most interesting and impressive manner, the power of Christian faith. Smitten down in the midst of his days and usefulness, he was entirely resigned to the divine will; for he perceived distinctly that the infinite wisdom of God could not err in the direction of events, and it was his joy that God reigneth. His mind rose over bodily pain, and in the strong visions of eternity he seemed almost to lose the sense of suffering. In a letter to his sister, Sept. 19, 1827, he says:

> "Were I to adopt the figurative language of Bunyan, I might date this letter from the land of Beulah, of which I have been for some weeks a happy inhabitant. The celestial city is full in my view. Its glooms beam upon me, its odors are wafted to me, its sounds strike upon my ear. I have been induced into my chamber, and the Body Hall of the Soul separates me from it but the river of death, which now separates them from me! I am still, that I may not stand at a single step whenever God shall give permission. The Sun of Righteousness has gradually been drawing nearer and nearer, nearer and nearer, and brighter and brighter, and brighter, and brighter, and now he fills the whole hemisphere, pouring forth a flood of glory, in which I seem to float like an insect in the beams of the sun; existing, yet almost trembling, while I gaze on this excessive brightness, and wondering, with unsayable wonder, why God should deign to shine upon a sinful worm. A single heart and a single tongue seem altogether inadequate to my wants. I want a whole heart for every separate emotion, and a whole tongue to express that emotion."
PAYSON 851 PEABODY

occasion to say of Dr. Payson: "To a close and fa-

miliar acquaintance with the Scriptures, he added great

breath of intellect and varied literary attainments. In-

timate knowledge of the human conscience was joined
to manliness of thought vouching the ways of God to
teach them the religious lessons of the world. Again,
again had suggested to us one in whom these features
found an almost perfect expression—the late Edward
Irving. . . . We are not acquainted with any recent
work in practical theology which better deserves a
place in the library of every Christian gentleman and
minister than the address and the memoir and works of
Dr. Payson." We regret to say that the edition of
Dr. Payson's life and works is now exhausted. They
should certainly be reissued in a more popular and abridged
form, so as to have a wide circulation among ministers
and Christians of all denominations. The Rev. E. L.
James, of the Methodist Episcopcal Church, has done a
good work in extracting from the volumes referred to
some of their choice gems, and giving a very concise view
of the salient points of his character and ministry. In
the absence of the large volumes, this book (N.Y. 1872,
8vo) may be read with great profit. See also Sprague,
Annales of the American Pulpit, ii, 503; Allen, Dict. of a Mer.
Bibl. s. v.; Dr. Levi R. Dunn, in Christian Advocate,
1872; Our Pastor, or Reminiscences of Rev. E. Payson,
D.D., by one of his flock (Boston, 1858, 12mo); Sketches
of Educated Teachers (1864, 12mo); Allibone, Dict.
Bibl. and Amer. Authors, vol. ii. s. v.

Payson, Seth, D.D., a Congregational minister, son
of the father, was born in September, 1758. He
graduated at Harvard College in 1777, and was ordi-
ained pastor at Rindge, N. H., December, 1782. He
was married D.D. by Dartmouth College in 1809, and
trusted in 1813; and in 1813 was one of a committee
to choose a site for Williams College, about to be re-
worked. Immediately after finishing this duty, he was
taken sick, and died Feb. 28, 1820. Dr. Payson pub-
lished "Proofs of the Existence and dangerous Tend-
ency of Modern Illuminism" (1802), and several occasional
sermons. See Sprague, Annales of the American Pulpit,
ii, 209.

Pax. See Gold.

Paxmany, Peter, a Hungarian cardinal, was born
Oct. 4, 1570, at Grosswardein. At the age of thirteen
he was converted to Romanism, and shortly after en-
tered the Order of the Jesuits, and taught theology at
the University of Prague. In 1607 he returned to his own
country, and devoted himself from that time to combating
the progress of Protestantism. Joining to an enchanting eloquence
the most charming manners, he succeeded well in his efforts.
Appointed in 1616 archbishop of Gran, he used his posi-
tion as primate of the kingdom to elect to the throne,
in 1618, Ferdinand, archduke of Austria. In 1622 he re-
turned to Rome, to negotiate the mediation of pope
Urban VIII in favor of the establishment of peace. Three
years previously he had been appointed cardinal. He
died at Presburg March 19, 1637. Paxmany spent more than
half a million of florins in founding institutions of
learning, such as the University of Tyrnaus, which, trans-
portated to Pesth, still exists; the Pazmannerium, at Vienna,
etc. He wrote in Latin and Hungarian; the latter tongue
he used better advanced and with greater purity than any of his contemporaries. Fifteen works of his are polenric and devotional, and among them we will quote, Hodies, seu duz ad veritatem, in quo
celebratur divinis sacrificis Catholicae rite observant
(Pesth, 1613, 8 vols. fol.); Conciones in Evangelia omni
Dominicarum (1636 and 1767, fol.). See Horanyi, Memoriae
humaniores Austriae, and Hunyady, Life of Pazmany, in Hungarian (Buda,
1836).

Pazzi, Cosmo, an Italian prelate, was born at Floren-
tence in 1467, and was on his mother's side a descendent
of the Medici. He was provided by pope Alexander VI
with a caianicate in the church of Olior, in France,
and soon after with his episcopal chair, of which he never
took possession. The Florentines had already sent him, Sept. 14, 1496, to the emperor Maximilian to
mediate concerning the war of Pisa and the league of
Italy. On his return he was elected, April 14, 1497,
bishop of Pistoia, and renounced his pretensions to the
seat of Olior. Alexander VI died before the ceremony,
with a diplomatic commission to Spain, and then to France.
Pope Julius II transferred him to the archbishopric of
Florence, July 5, 1508, and premature death alone de-
prived him of the purple, to which he would certainly
have been raised by his maternal uncle, Leo X. Pazzi
died at Florence April 9, 1515. He first became known
by a Latin translation, the Dissertations of Maximus of
Tyre. Three editions of this translation (Rome, 1517; Basle, 1519; Paris, 1584, fol.) preceded the
publication of the original Greek text brought out by
Estienne at Paris (1517, 8vo). The translation of
Pazzi was published under the editorship of his
brother, Pierre Pazzi. See Italia Sacra, i, 481; ii, 182;
v.; Combes-Douzons, Dissertations de Maximus de
Tyre (1st ed.).

Pazzi, Pietro Antonio, an Italian engraver, was
born at Florence in 1706. It is not known under
whose he studied, but he executed many plates of
portraits and other subjects, after the Italian
masters, which are held in estimation. His works are to be
found in the Museo Fiorentino, Museo Capitolino, and
the Museo Sterbini in Rome. Among them the following
are of interest to us: The Holy Family (after L. Ca-
biati); The Assumption of the Virgin (after Raffaelle):
The Virgin and Infant Child (after Vandyck); St.
Zanobi reconstituting a dead Person (after Bettì); St.
Philip refusing the Papacy (id.); A Suil (after Crespi).

Peabody, David, a Congregational minister, was
born April 16, 1805, in Topsfield, Mass. He graduated
at Dartmouth College in 1828; entered the ministry
April, 1831, and was ordained pastor of the First Church,
Lynn, Mass., November, 1832, from which charge he
was, however, soon dismissed, on account of ill-health.
He became pastor of the Calvinist Church, Worcester,
June 15, of the following year. In 1838 he accepted the
professorship of rhetoric at Dartmouth College, but died
the next year, Oct. 17, 1839. Mr. Peabody published
A Memoir of Horace Bushnell (1860)—A Dis-
course on the Conflict of Men considered in Conflict
with the Law of God (1836)—A Sermon on the Sin of Coron-
ousness considered in respect to Intemperance, Italian Op-
pression, etc. (1838)—The Martyrdom of Ihebron, or the
History of Abraham (1841); and wrote a number of valuable
articles, etc. See his Memoir. See Sprague, Annales of
the American Pulpit, ii, 744; Dr. Lord's Sermon
on his death.

Peabody, Ephraim, D.D., a Unitarian divine of
distinction, was born at Wilton, N. H., in 1807, and
was educated at Bowdoin College, class of 1827. He
subsequently studied theology at Cambridge, and in 1831
became pastor of a Unitarian congregation, and in 1846 accepted a call to the
pastorate of King's Chapel. He died in 1846. Dur-
ing his lifetime he published a number of addresses, es-
says, and sermons; also several review articles. After his death appeared Sermons with a Memoir of
A. Elliot (Boston, 1857, 12mo) —Christian Days and
Thoughts (1858, 12mo, and one; London, 1868, 8vo).
Dr. Peabody also wrote a number of poems. He was a pious man, and practical in his purposes. He
displayed a fertile yet chastened imagination, and vigorous
expression in all his writings, and they therefore impress
the reader. Favorable notices were given of his works,
not only in this country, but also in Europe. See Lord,
Athen. 1840, p. 926; Weems, Rev. Oct. 1827; North Amer.
Peabody, George, an American merchant, whose name deserves to be held in remembrance on account of his munificent philanthropy, was born at Danvers, Mass., Feb. 18, 1795. His parents were poor, and his only education was received at the district school. At the age of eleven he was placed with a grocer, and at fifteen in a haberdasher's shop. When he was about twenty-two years old, he was a partner with Elias Riggs in Baltimore. In 1827 he went to England to buy merchandise, and to transact financial business for the State of Maryland. In 1837 he permanently removed to London, and in 1843 became a banker. He accumulated a large fortune, and did not forget his native city, place of origin or place of birth. In 1852, on the two hundredth anniversary of the settlement of his native town, he sent home $20,000 to find an educational institute and library, a sum which he afterwards increased to $60,000, with $10,000 to North Danvers. He also contributed $10,000 to the first Grinnell Arctic Expedition, $500,000 to the city of Baltimore for an institute of science, literature, and the fine arts; and in 1863, on retiring from active business in London, he made the splendid donation of £150,000 sterling for the benefit of the poor of London, and towards the endowment of a donation he made the contribution of £150,000. He also gave to Harvard University $150,000 for a museum, etc.; and in 1867 devoted $2,000,000 to found common schools in the Southern States. He died in London, Nov. 4, 1869. His adapted condition, his personal example, his radical and his native country honored itself by sending a government ship of war to convey the body of this philanthropist to the place of his birth for interment. Great Britain, however, would not suffer any but one of her own ships to take the remains from her country, and the transportation consequently took place in the British man-of-war Monarch.

Peabody, Oliver, a Congregational minister, was born in 1698 at Boxford, Mass. He graduated at Harvard College in 1721, and was immediately employed by the commissioners for propagating the Gospel to preach at Natick (1721). There were then but two families of white people in the town. The Indian Church, which the apostolic Elliot had founded, was now extinct, the Indian preacher, Tannahompait, having died in 1716; and all records were lost. A new Church was formed, Dec. 3, 1729, consisting of three Indians and five white persons, and Peabody was ordained at Cambridge, Dec. 15. The influence of the Indians was so great as to induce them to abandon savage life, and to attend to husbandry as the means of subsistence. He had the happiness of seeing many of the Indian families with comfortable houses, cultivated fields, and flourishing orchards. But his chief aim was to teach them the religion of Jesus Christ. There were added to the Church in the first year twenty-two persons, several of whom were Indians; in July, 1743, he stated that in the two preceding years about fifty had been received into the Church. Against the vice of intermarriage among the Indians he set himself with great zeal and much success. Altogether during his residence at Natick he baptized one hundred and eighty-nine Indians and four hundred and twenty-two whites; and he received into the Church thirty-five Indians and thirty whites; and there died two hundred and fifty-six Indians, one of whom was a hundred and ten years old. During one season he went on a mission to the Mohicans. He died in great peace, Feb. 2, 1752. Mr. Peabody was eminently pious, and greatly beloved and lamented. He published Artillary Election Sermons (1732):—On a Good and Had Hope of Inagination (1742). See Allen, J. G.; Sprague, Of the American Puritan, i, 318.

Peabody, William Bourne Oliver, D.D., a Unitarian clergyman, was born at Exeter, N. H., July 9, 1799. He entered Harvard University in 1813, and after graduation also studied theology at Cambridge.

He was ordained to preach in Springfield Oct. 12, 1820. He was a preacher of so-called liberal doctrines, but he avoided controversy, and sought only to do good. In 1823 he published A Poetical Catechism for the Young. Several pieces were subjoined to this catechism, including the hymn found in some of our principal collections. It is among the most popular of his productions. He was one of the founders of the New Englander in 1824, and its editor till 1829. He wrote a few works on natural history, and edited a volume of the journals of Captain James Cook. Dr. Peabody's tastes extended over a wide field, including poetry, biography, theology, and natural history. In 1838 he supplied the account of the birds in the report of the survey of the State of Massachusetts. Besides biographical review articles, he wrote several lives in the Jour. of the Bibliographical Society of America, etc. In 1854 he was a delegate to the General Synod of American Disciples of Christ. In 1855 he was a corresponding member of the American Geographical Society.

Peace. The Hebrew word שלום, shalom, usually translated peace, means, properly, health, prosperity, welfare. It is the same as the salam of the modern Arabs, and is in like manner used in salutations (q.v.). The Greek ζωον, zoon, also translated peace, is described by St. John as 'the water of life' (Rev. 21, 6). 'Peace be with you' (John 20, 19); 'The peace of God' (Phil. 4, 7); 'The peace of God' (Rom. 14, 17). Peace is love, the water of life, the breathing of the Spirit. Peace is deliverance from having we were were addressed as a rendering of the Heb. word, naturally passed over in the same sense as the N.T. Accordingly 'peace' is a word used in Scripture in different senses. Generally it denotes quiet and tranquillity, public or private; but often prosperity and happiness. It is used also as a metaphor to denote God's action in peace; "God give you peace;" "Peace be within this house;" "Pray for the peace of Jerusalem." Paul in the title of his Epistles generally wishes grace and peace to the faithful, to whom he writes. Our Saviour recommends his disciples to have peace with all men, and with each other. God promises his people to water them as with a river of peace (Isa. 11, 12), and to make with them a covenant of peace (Ezek. xxxiv, 25).

Peace, properly, is that state of mind in which persons are enabled to avoid open violence to interrupt their tranquillity. 1. Social peace is mutual agreement one with another, whereby we forbear injure one another (Ps. xxxvi, 14; cxxii). 2. Ecclesiastical peace is freedom from contentions, and rest from persecutions (Isa. xi, 13; xxlii, 17; Rev. xvi, 14). 3. Spiritual peace is deliverance from having we were were addressed as a rendering of the God of Christ (2 Thess. iii, 16). It is a blessing of great importance (Ps. cxix, 165). It is denominated perfect peace (Jer. vi, 17); peace of the heart (Phil. iv, 7); permanent (Job xxxiv, 39; John xvi, 32); eternal (Isa. liii, 2; Heb. iv, 9). See HAPPIINESS.

Peace of God. See PAX.

Peace, Kiss of. See KISS.

Peace-offering (fully, טָבִיט הָנֵבָה, tevet heneba), also simply הָנֵבָה, heneba [but this sometimes in a singular sense, as Ezek. xiv, 15; comp. Lev. vii, 14; ix, 22, etc.], once merely the sing. הָנֵבָה, Amos v, 22; Sept. usually עֲנַבָּה, sana. nota etiam ʿannabāh, sana; Vulg. victuaria phacidiārum, or simply phacidiārum, a voluntary sacrifice offered by the pious Jews in token of gratitude (thank-offering [hence Josephus calls it γαμησίων; Ant. iii, 9, 1 sq.; comp. xix, 6, 1]. These sacrifices, which are often mentioned in connection with burnt-offerings (Exod. xx, 24; xxiv, 5; Lev. iii, 5; Josh. viii, 31; 1 Kings ii, 15, etc.), consisted of spiced (yet see Lev. xxii, 23) neat or small cattle or either sex (Lev. i, 5; ix, 4, 5; xxii, 19; Deut. xii, 19; comp. Josh. iii, 3, 29; comp. Exod. xxiv, 5; 1 Kings vii, 63), and were offered, along with meat-offerings and drink-offerings (in the same manner as burnt-offerings), either by individuals or in the name of the people. The latter was customary on occasions of festive inauguration (Exod. xxv, 17 sq.; 1 Sam. ii, 17 sq.; 1 'American Bible' Ezek. xliii, 27; comp. 1 Macc. iv, 56); on the election of kings (1 Sam. xi, 15); and upon the fortunate issue of important enterprises (Deut. xxvii, 7; Josh. viii, 31):

Drafted by Google
but they were expressly prescribed at the Feast of Pentecost (the young lamb, Lev. xxiii, 19). Private peace-offerings were the result of free impulse (דְּבֶר), or in fulfillment of a vow (Lev. vii, 16; xxii, 21; Num. xv, 8), so regularly at the expiration of a Nazarath vow (Num. vi, 14), and were often determined upon in consequence of a special favor received from Jehovah (thank-offering, fully מִנְתָּנָה לְיהוָה, or more briefly מִנְתָּנָא, or simply מְנָא, סְמָא אֱיוֹנָא, Lev. vii, 12; xxii, 29). The festivals were honored by peace-offerings (Deut. xii, 10; 2 Chron. xxxii, 22): Solomon arranged three times a year a sacrifice of burnt-offerings and drink-offerings (1 Kings ix, 25). All peace-offerings were to be presented with imposition of hands (Lev. iii, 2; vii, 18), only the fat part (which in the case of cattle and goats consisted of the fat covering the inwards) [between them], the kidneys with the fat connected with them [leaf-fat], the fat on the thigh-muscles, and finally the large lobe of the liver; in the case of a lamb, the fat tail ["rump"] and the inside fat; see Josephus, Ant. iii, 9, 2; comp. Bähr, Symbolic, ii, 354 sq.; Lebien, Liturgie, ii, 14 sq.; Deut. iv, 19 sq.; vi, 12; Amos v, 22), and the blood was sprinkled around the altar (Lev. iii, 2; vii, 14; ix, 18; xxvi, 6; 2 Kings xvi, 11). The remainder of the flesh belonged, in the peace-offerings of the Pentecost and other public occasions, to the priests (Lev. xxiii, 20); in the case of private offerings, the priests were entitled to the breast and shoulder (Num. vi, 20; comp. Exod. xxix, 27; Lev. xi, 21; xiv, 14), which were the heave-offering and the wave-offering (Lev. vii, 36, 34; ix, 1; Num. vi, 20), and the rest was used by the offerer in joyful meals at the sanctuary (Lev. xix, 6 sq.; xxii, 30; Deut. xii, 17 sq.; xxxii, 7; comp. Jer. xxxiii, 11). Yet the whole must be consumed in the case of thank-offerings on the same day (Lev. vii, 15; xxix, 29), or in other cases at festivity on the second day (Lev. vii, 16 sq.; comp. xix, 6); if anything remained on the third day it was to be burned. The reason of this last prescription is not to be sought so much in the intention of the lawgiver to set a limit to the feasting, as in the design that the flesh of the offering, instead of being dried and preserved (comp. Rosenmüller, Marginal, iii, 150), should really be employed for the meals of the time. Bähr (Symbol, ii, 674 sq.) has not fairly met the point, since putrefaction, which he assigns as the ground of the objection to the retention to the third day (תְּחַא, Lev. vii, 18; xix, 7), might be obviated in the mode suggested, as in the modern East. A special rule respecting "thank-offerings proper" was that concerning the wave-offering, in which the present sacrificial cakes (see on the contrary Amos iv, 5) must be presented, of which, however, only one belonged to Jehovah, while the remainder went to the priest (Lev. vii, 12 sq.). But these cakes were deposited in a basket only in the peace-offering (attendant upon a Nazarath vow (Num. vi, 15 sq.). The Mishnah adds but little to the Biblical ordinances. The Penticostal peace-offerings were reckoned among the most sacred offerings, in comparison with which all the other peace-offerings are of trifling esteem. The pieces of the flesh (cooked or raw) might be eaten anywhere in the Holy City, and in the enjoyment of the portions of the offering allotted to the priests, their wives, children, and slaves also might share (see Zeb. ch. v, 5 sq.). The quantity of meal to be used in making the thank-offering cakes is prescribed (Men. iv, 1). See Ofer- ring.

The דְּבֶר were, according to etymology and definition, compensation offerings (from דְּבֶר, to requite), i.e. such as, so to speak, repair Jehovah by way of thanks, praise, or vow, and hence had (especially in the repasts which were peculiar to these sacrifices, Josephus, Ant. iii, 9, 1) the character of cheerfulness and joy (see 1 Sam. xi, 15; comp. Bähr, Symbol ii, 568 sq.). This signification, however, as a token of gratitude, sometimes becomes obscure (1 Sam. xiii, 9), and occasionally disappears altogether (Judg. xx, 26; xxi, 4; 2 Sam. xxiv, 25). In the first instance, just cited, the offering in question was presented before a military undertaking; in the three others it followed a public instruction, the twofold import of the מִנְתָּנָא is reconciled by the statement of Philo (Opp. ii, 244) and the Rabbins (see Otram, De Sacrificiis, p. 108), that they were offered for a deliverance to be obtained, as well as for one already secured; and thus the Israelitish system of offerings did not lack precocious sacrifices. But that the last-named character and relation belonged to the מִנְתָּנָא, or מִנְתָּנָא, is not only improbable from the nature of the case, but also from the signification of the term מִנְתָּנָא, thank-offering, itself, although in some instances (as 2 Sam. xxiv, 25) the peace-offering had that significance. On the other hand the other passages cited above, in which מִנְתָּנָא were offered after a public misfortune, are explainable upon no theory of this kind of sacrifice hitherto adduced, and we are left to conclude that they were irregularly introduced during the ritual confusion of the period of the Judges. See generally Reoland, De Gratia, p. 917 sq.; Otram, De Sacrificiis, i; Scholl, in the Stud. d. Wirt. Beil. Gesell. V, i, 108 sq. See Thank-offering.

Peace Societies. See War.

Peacorn, Henry, an English writer who in early life was intending to enter the ministry, but finally became a travelling teacher, is supposed to have been tutor in the earl of Arundel's family. He was reduced to poverty in his old age, and wrote for bread. He published in early life a Sermon upon the last Three Verses of the First Chapter of Job (London 1590, 16mo). But he is principally known to readers of polite literature. Among his publications are some complimentary poems, The Gentleman's Exercise, intended as a treatise on art; Minerva Britannica, a collection of emblems in verse, illustrated with plates; and The Complete Gentleman. This latter work is the one for which he was most celebrated, and it has been frequently reprinted. He died about 1640. See Chambers, Cyclop. of Engl. Literature; Allibone, Dict. of Br. and Amer. Auth.

Peacock. It is a question, perhaps, more of geographical and historical than of Biblical interest to decide whether דְּבֶר (tukkiyām; Sept. τουκιεία; Vulg. puri, i Kings x, 22; also written דָּבֶר, 2 Chron. ix, 21) denotes peacocks strictly so called, or some other species of animal or bird; for on the solution of the question in the affirmative depends the real direction of Solomon's feet; that is, whether, after passing the Strait of Bab-el-Mandeb, it proceeded along the east coast of Africa towards Sofala, or whether it turned eastward, ranging along the Arabian and Persian shores to the peninsula of India, and perhaps went onwards to Ceylon, and penetrated to the great Australian, or even to the Spicelands. Bohemian is unable to discover a Hebrew word in tukkiyām, rather arbitrarily proposes a transposition of letters by which he converts the word into Cuthiyām, denoting, as he supposes, the country of the Cuthi, which, in an extended sense, is applied, in conformity with various writers of antiquity, to Media and Persia; and Greek authorities show that the kingdom abounded in Babylonia, etc. (See Eilan, Ass. iii, 18; Curtius, i, 1, 18; Diod. Sic. ii, 63. Peacocks are called "Persian birds" by Aristophanes, Acharn. 484; see also Achamn. 63). This mode of proceeding to determine the question is, indeed, costly and altogether insensible, since Greek writers speak of Persian peacocks at a much later period than the age of Solomon; and it is well known that they were successively carried westward till they passed from the Greek islands into Europe, and that, as Juno's birds,
the Romans gradually spread them to Gaul and Spain, where, however, they were not common until after the 10th century. They do not occur on the Assyrian or Egyptian monuments. But even if peacocks had been numerous in Media and Northern Persia at the time in question, they seem hardly to be furnished with an exotic wild plant, implying "tufted" or "crested," which, though true of the peacock, is not so obvious a character as that afforded by its splendid tail; and therefore a crested parrot has been supposed to be meant: so Huét (Udiac de Nat., Vol. 7, § 5) and others. However, though many species are indigenous in Africa, do not appear to have existed in ancient Egypt; they were unknown till the time of Alexander, and then both Greeks and Romans were acquainted only with species from Ceylon, destitute of crests, such as Psittacoa Alexandri (see Antiquaries in Athen., xiv, 604; Horace, Sat. ii, 29, 29, and esp. Bochart, Hieros. ii, 709 sq.); and the Romans for a long time received these only by way of Alexandria, though in the time of Pliny others became known. Keil (Udiac de Ophi., p. 104, and Comment, on 1 Kings x, 22), with a view to support his theory that "the" peacock was the bird found to the east of the Red Sea, derives the Hebrew name from Tucca, a town of Mauritania and Numidia, and concludes that the Aves Numidicae (Guinea-fowls) are meant; which birds, however, in spite of their name, never existed in Numidia, nor within a thousand miles of that country. Again, the pheasant has been proposed as the bird intended; but Phas. Colchius, the only species known in antiquity, is likewise without a prominent crest, and is a bird of the colder regions of the central range of Asiatic mountains. Following a line of latitude, it gradually reached westward to high Armenia and Colchis, whence it was first brought to Europe by Greek merchants, who frequented the early emporium on the Phasis. The centre of existence of the genus, rich in splendid species, is in the woody region beneath the snowy peaks of the Himalayas, reaching also eastward to Northern China, where the common pheasant is abundant, but not, we believe, anywhere naturally in a low latitude. (Other interpretations are supported in Hase's Biblioth. Etrus. ii, 468 sq.; Ugolino, Thessaur. vii.)

All versions and comments agree that after the Cobi, or Cebi, or Phas. Colchius from the "Columba Eustellia, one of the sacred species of India," some kind of remarkable bird is meant; and none are more obviously entitled to the application of the name than the peacock, since it is abundant in the Jungles of India, and would be met with, both wild and domesticated, by navigators to the coasts from Camboge to Ceylon, and would better than any of the others bear a long sea voyage in the crowded ships of antiquity. Moreover, we find it still denominated toges in the Malabar dialects of the country, which may be the source of that, as well as of the Arab. From this Indian term (Thesaur. p. 1502) cites many authorities to prove that the tucci is to be traced to the "Tamul or Malabar toges," "peacock," which opinion has recently been confirmed by Sir E. Tenmunt (Ceylon, ii, 102, and i, p. xx, 3d ed.), who says, "It is very remarkable that the terms by which those articles, ivory, agate, are designated in the Hebrew Scriptures are identical with the Tamil names, by which some of them are called in Ceylon to the present day—tukkyin may be recognised in tokei, the modern name for these birds." Thus Keil's opinion, that the tables may be furnished to a reader who sufficiently ascertained" (Comment, on 1 Kings x, 22) is satisfactorily met. With regard to the objection that the long ocelated feathers of the rump, and not those of the tail, as is commonly believed, are the most conspicuous object offered by this bird, it may be answered that if the name toges be the original, it may not refer to a tuft, or may express both the erectile feathers on the head of a bird and those about the rump or the tail; and that those of the peacock have at all times been obtained to form artificial crests for human ornaments. One other point remains to be considered, namely, whether the flight went to the East, or proceeded southward along the African shore? No doubt, had the Phoenician trade guided the Hebrews in the last-mentioned direction, gold and sapphires might have been obtained on the east coast of Africa, and even some kinds of spices in the ports of Abyssinia; for all that region, as far as the Strait of Madagascar, was at that early period in a state of comparative affluence and civilization. But in that case a great part of the commercial produce would, as has been observed, be obtained within the borders of the Red Sea, and beyond the Strait; the distance to be traversed, therefore, being but partially affected by the monsoons, never could have required a period of three years for its accomplishment; and a prolonged voyage round the Cape to the Guinean and Gold Coast is an assumption so wild that it does not merit serious consideration; but intending to proceed to India, the fleet had to reach the Strait of Bab-el-Mandeb in time to take advantage of the western monsoon; be in port, perhaps at or near Bombay, before the change; and after the storms accompanying the change it had been intended, when the opportunity of the easterly monsoon came, to sail to the land to Cordobrassó, or the port of Palaesiumimus in Taprobana, on the east coast of Ceylon; thence to the Coromandel shore, perhaps to the site of the present ruins of Mahabalipuram; while the return voyage would again occupy one year and a half. The ports of India and Ceylon could furnish gold, precious stones, Eastern spices, and even Chinese wares; for the last fact is fully established by discoveries in very ancient Egyptian tombs. Silks, which are first mentioned in Prov. xxxi, 22, could not have come from Africa, and many articles of advanced and refined social life, not the produce of Egypt, could alone have been derived from India. See ORNIT.

Though in this short abstract of the arguments respecting the direction of Solomon's fleet there may be errors, none, we believe, sufficient to impugn the general conclusion which supports the usual rendering of tukkyin by "peaceocks;" although the increase of species in the West does not appear to have been remarkable till some ages after the reign of the great Hebrew monarch, when the bird was dedicated to Juno, the peacock was the first Indian bird known to the later temple 형. But in India and China are only two species of true peacocks, viz. that under consideration, which is the Paro cristatus of Linna., and another, Paro Mutica, more recently discovered, which differs in some particulars, and originally belongs to Japan and China. Peacocks bear the cold of the Himalayas; they run with great swiftness, and where they are serpents do not abound, as they devour the young with great avidity, and, it is said, attack with spirit even the cobra of copleto when grown to considerable size, arresting its progress and confusing it by a display of variety of hue. "The bird, worn out, till, exhausted with fatigue, it is struck on the head and dispatched. The ascription of the quality of vanity to the peacock is as old as the time of Aristotle, who says (Hist. An. i, 3, § 15), "Some animals are jealous and vain like the peacock."

The A. V. in Job xxxix, 18, speaks of "the goodly wings of the peacock;" but there the Hebrew words are different (םינש המוטיב וסינש המוטיב), the wing of the ram (is lifted up, or flutters joyously), and have undoubted reference to the "ostrich" (q. v.). See also ADAM.

PEACOCK in Christian symbolism was an emblem of the resurrection. It is well known that this bird loses its brilliant plumage every year at the approach of winter,
character were zeal, firmness, and perseverance in the discharge of his duties. See Minutes of Conferences, i, 405; Conable, Hist. of the Genesee Conference (N. Y. 1875, 8vo), p. 201, 202.

Pep, Prickly. See Thorn.

Pearce, Samuel, an English Baptist divine, was born at Plymouth July 29, 1766. In 1786 he became a student at Bristol College, and was there converted. He was also the pastor of Cannon Street Baptist Church, in Birmingham, in 1790, on recommendation of Robert Hall, who had been one of his tutors. He was one of the founders of the Baptist Missionary Society at Kettering in 1792, and shortly after offered himself as one of its missionaries to India. But as his ministry was continually renewed of religion, and his counsel seemed necessary in the successful management of the society, he was dissuaded from going. He died of consumption Oct. 10, 1799. Samuel Pearce was the author of several hymns, of which those entitled Gymn in a Storm and In the Floods of Tribulation have found their way into several collections. He also published, Corporation and Test Acts Expired (1790, 8vo), and Sermons (Lond. 1791, 8vo). His memoirs were published by Andrew Fuller in 1800, and have passed through numerous editions in England and America. "There have been few men," says Fuller, "in whom has been united a greater portion of the contemplative and the active; holy zeal and genuine candor; spirituality and rationality; talents that attracted almost universal applause, yet the most unaffected modesty; faithfulness in bearing the cross with Christ, with a continued compassion to the soul of the evil-doer; fortitude that would encounter any difficulty in the way of duty, without anything bittenter, noisy, or overbearing; deep seriousness with habitual cheerfulness; and a constant aim to promote the highest degree of good in himself, with a resolution to hope the best of the lowest." See, besides the Memoirs, Allibone, Dict. of Brit. and Amer. Authors, &c.; Brown, Religious Cyclop. &c.

Pearce, Zachary D.D., an eminent British divine and scholar, and a prelate of the English Church, was born at London in 1586. He was the son of a stonemason in Holborn, and went to Westminster Grammar School; thence he passed to Trinity College, Cambridge, where he obtained a fellowship. At Cambridge Pearce was best known as a polite classical scholar, and it was in 1716, before he took orders, that he published his edition of Cicero De Officiis. He declined it, at a friend's suggestion, to lord chief-justice Parker, afterwards earl of Macclesfield, though he was not known to him, and this circumstance led to a friendship and patronage which were of the greatest use to him. The lord chief-justice, being made lord chancellor soon after, took Mr. Pearce into his family as his domestic chaplain. Pre ferment now opened up to him. He was presented to the living of Stapleford Abbots in Essex, St. Bartholomew, near the Royal Exchange, and finally of St. Martin's-in-the-Fields, London. The last appointment was in 1725. He was made dean of Winchester in 1726, in 1748 bishop of Bangor, and in 1756 bishop of Rochester, with the deanship of Westminster annexed. Bishop Pearce, though well fitted for the episcopal dignity, was a man of great modesty and humility, and as anxious to avoid preferments, and to resign them when forced upon him, as most men were to gain and hold them. His anxiety to retire from the high station to which he was thus involuntarily raised was so sincere, as well as strong, that at length, in 1768, the government yielded to his repeated request, and allowed him to resign the valuable appointment, his deanship, in favor of Dr. Thomas; Pearce retaining, however, the bishopric, to the retiring from which there existed some objections of an ecclesiastical nature. He died at Little Ealing Jan. 29, 1774. Bishop Pearce was as distinguished for his charity and munificence as for his learn-
ing. He enriched the Widow’s College, in the immediate neighborhood of his palace at Bromley, by a donation of £5000. His tracts on theological subjects are numerous and valuable. Of these the principal are, A Commentary on the Gospel of St. Mark and the Acts of the Apostles (3 vols. 4to), greatly praised by Dr. Adam Clarke and other eminent Biblical scholars:—Letters to Dr. Conyers Middleton, in Defence of Dr. Waterland:—A Reply to Woolton on the Miracles: of which Leeland says that it was a work deservedly much esteemed:—A Review of the Text of the New Testament, and an Essay on the Sublime, with a Latin translation annexed; and another of Ciceri’s Offices; also, four volumes of Sermons, etc. See his Life prefixed to his Commentary; Jones, Christ. Biopt. s. v.; Allibone, Dict. of Brit. and Amer. Authors, vol. ii. s. v.; Perry, Hist. of the Church of England, iii. 331, 333.

Pearl ( 사실), gabish, from a root which in the Arabic means to freeze, but in the Chaldee to collect; Sept. merely Grecizes, χατίς; Vulg. eminentia). The Heb. word occurs in this form, only in Job xxviii, 18, where the price of wisdom is contrasted with that of may by the ancient Orientals have been held in high vey, with the prefixed syllable of (31), is found in Ezek. xiii, 11, 13; xxxviii, 22, with abud, “stones,” i. e. “stones of ice” (A. V. “hailstones”). The ancient versions contribute nothing by way of explanation. Schultens (Comment. on Job, l. c.) leaves the word untranslated: he gives the signification of “pearls” to the Heb. term precisely as the LXX, which Piper, with some same verse. Gesenius, Frits, Rosenmuller, Maurer, and commenters generally, understand “crystal” by the term, on account of its resemblance to ice. Lee (Comment. on Job, l. c.) translates ῥαύλιον εὐχρή; “things high and massive.” Carey renders gabish by “mother-of-pearl,” though he is by no means content with this explanation. On the whole, the balance of probability is in favor of “crystal,” since gabish denotes “ice” (not “hailstones,” as Carey supposes, without the addition of abud, “stones”) in the passages of Ezekiel where the word occurs. There is nothing to which ice can be so well compared as to crystal. The objection to this interpretation is that crystal is not an article of much value; but perhaps reference may here be made to the beauty and pure lustre of rock crystal, or this substance which in Arabic, according to Schultens (Horv. Com. in, i. 12; ii, 102), are called pearls. See Parkhurst, Cr. Lex. s. v. Μαραγιρυό). Other words supposed by some to mean pearls (besides ब्रम्बिन्न) above are ब्रोज, bedi- lich ("bellidium," Gen. ii. 12), and घ्य, dar (“white,” Esth, i. 6). See each in its place.

The above intimations seem to indicate that pearls were more common among the Jews after than before the Captivity, while they evince the estimation in which they were held in later times (Pliny, Hist. Nat. ix, 54; xii, 41; Elian. Anim. x, 18; comp. Ritter, Erdkunde, ii. 161; Wellsted, Travels, i. 181 sq.). The island of Bahrain was especially renowned for its fishery of pearls (Pliny, vi, 23; Strabo, xv, 1. 767; Athen. iii, 98; Heeren, Ile, ii, 244 sq.) the Indian Ocean was also known to produce pearls (Arrian, Indica, p. 194; Pliny, iv, 54; xxxiv, 48; Strabo, xv, p. 717). Heeren feels assured that this indication must be understood to refer to the strait between Taprobana, or Ceylon, and the southernmost point of the mainland of India, Cape Comorin, whence Europeans, even at present, derive their principal supplies of these costly natural productions (Idea, i, ii, 224). See further, Bochart, Hieron. ii, 601 sq.; Hartmann, Hebr. iii, 84; Wellsted, Travels, iv, 458 sq.; Gesen. Thes. p. 24, 1118.

The excessive passion for the use of pearls in decorative costume which prevails at the present day in the East is shown by the state costume of the shah of Persia. Sir Robert Ker Porter, describing it, mentions “the diamonds, pearls, rubies, and emeralds” of which the tiara is composed, “the pear-formed pearls of an immense size” with which the plumes are tipped; the “two strings of pearls, probably the largest in the world,” which crossed the king’s shoulders; and the “large cushion encased in pearls of which he is reclin’d (Traveils, i, 320). Sir Harford Brydges dilates on other objects: “The king’s tippet is a piece of pearl-work, of the most beautiful pattern; the pearls are worked on velvet, but they stand so close together that little, if any, of the velvet is visible. It took me an hour to count the pearls in an armlet, which was so closely set, that I have no fear in saying cannot be matched in the world. The tassel which on such occasions is appended to the state dagger is formed of pearls of the most uncommon size and beauty; and the emerald which forms the handle is a stone as large as the sun, and a quarter of a foot one in the world” (Mission to Persia, p. 593). Sir William Ousley, describing the “royal apparel” of Fuzel Ali Shah, says: “Of the king’s dress I could perceive that the color was scarlet, but to ascertain exactly the materials would have been difficult, from the profusion of large pearls that covered it in various places, and the multiplicity of jewels that sparkled all around; for the golden throne seemed studded at the sides with precious stones of every possible tint, and the back resembled a sun of glory, of which the radiation was imitated by diamonds, garnets, emeralds, and rubies. In such, also, was chiefly composed the monarch’s ample and most splendid crown, and the two figures of birds that ornamented the throne, one perched on each of its beautiful enamelled shoulders” (Travelles, iii, 131). From the immutability of custom in the East we are ready to conclude that the elements of this magnificence must have been common to the ancient Oriental courts. But there are some circumstances which seem to militate against the very great antiquity of the use of pearls, at least to an extravagant extent. The costume of the modern Persians is described in the preceding passage, the pendants which have come down to us from their own times, is comparatively simple; the principal article of adornment which can be called jewelry being the collar. This indeed was rich and elaborate, and seems to have been composed either of gold or of gems set in gold. Yet pearls do not seem, so far as we can judge from the representations, to have taken a prominent place in the construction of these or similar articles. Many examples of ladies’ jewelry, as necklaces, bracelets, and earrings, have been found in the tombs, and are preserved in the museums and cabinets of Europe. In these pearls are sometimes mounted, as well as gems; but their occurrence is by no means profuse. The discovery of Ninevite remains has made us comparatively familiar with the appearance and usages of the Assyrian court: it is not a much later period than that of the Egyptian monuments. The portraits of successive monarchs have been examined, and numerous representations exist of royal costume. Generally this is gorgeous enough, but there is little evidence to show that pearls were much used in personal decoration. The circlets, smaller than those of the Egyptian kings, and the armlets and bracelets, the sword and dagger hilts, all show the jeweller’s art; but for most part these objects were evidently wrought in gold. Insettings and strings of gems do occur, but the angled and faceted stones of these almost invariably show that stones or imitations of stones are intended. According to
PEARL 887 PEARNE

Colonel Rawlinson's reading of the inscription on the Black Obelisk, however, Temenbar received as "tribute from the kings of the Chaldee gold, silver, gems, and pearls." What we think manifest from the evidence of Egyptian and Assyrian monuments is not the absolute lack of pearls in theatum but great modern use in the use of them. "A necklace of twenty-seven pearls" is mentioned in the Rambduny (λ, sect. 14), a Hindu poem of an antiquity probably at least as great as that of the Assyrians. The possession of the rich pearl-laden waters of the Persian Gulf would naturally have the court of Shusban the chief depository of these elegant luxuries; and the taste for effeminate luxury in costume which has always distinguished that court, at least from Grecean times, would suggest the manner of appropriating them. We know that the fishery was actively prosecuted, both in the gulf and the Indian Ocean, in the time of Pliny and Strabo. The island called Elindo, the modern Bahrein, on the southern shore of the Persian Gulf, was the seat of the former, and that of the latter probably the strait between Ceylon and the shore of India; and Pliny's text constitute the chief sources of pearls to this day. From the Persian court the taste for pearls spread to that of the Prolemies. Cleopatra, at a supper with Antony, of which Pliny has given us the details, took from her ear one of a pair of pearls of the value of $500,000 sterling—"the singular and rarest of her pearls, and the greatest of her jewelry;" and having dissolved it in vinegar, swallowed the absurdly precious draught; and would have done the same with its fellow had it not been rescued from her "pride and wanton traverie." From Egypt the fashion passed to Rome; and the degenerate descendants of the imperial republican rule died even the Persian monarchs in their ambition to be a "Wear." The spoils of nations in an ear, Chang'd for the treasure of a shell.

Pliny's picture of a Roman lady is amusing enough, especially as seen through the glass of old Philomene Holland's translation: "I myself have seen Lollia Paulina (late wife, and after widow, to Caius Caligula the emperor), when she was dressed and set out, not in stately wise, nor for purpose for some great solemnity, but only when she was to go to a withering supper or rather unto a feast, when the assurance was made, and great persons they were not that made the said feast; I have seen her, I say, so beset and bedecked all over with her maidens and pearls, disposed in rows, ranks, and courses one by another round about the attire of her dress, her hair, her penk of hair, her gold grace and chaplet; at her ears pendant, about her neck in a caruncle, upon her breast in bracelets, and on her fingers in rings; that she glistened and shone again like the sun as she went. The value of these ornaments she esteemed and rated at four hundred thousand sesterii, and offered openly to prove it out of hand by her bookes of accounts and recknonings," etc. Julius Cesar is reported to have presented Servilia, the mother of M. Brutus, with a pearl worth a quarter of a million of dollars; and Claudius, the son of Jep, the successor of the Roman actor, imitated and even exceeded the wanton folly of Cleopatra.

Pearls are accidental concretions of shelly matter deposited within the valves of certain bivalve Molluscs, of which the most celebrated species is the Arionula murgaritifera, which is spread over the whole of the tropical parts of the Indian and Pacific oceans. In all bivalves the surface of the mantle has the power of depositing calcareous matter in thin layers, which hardening forms a shelly coat on the inner side of the valves, and in most species this lining has a pearly luster. A pearl is nothing but an almost perfect sphere, that is to say, the nacreous coat is here external. The peculiar lustre of nacre is dependent on the fact that the surface is not perfectly smooth, but covered with the irregularly minute edges of innumerable layers of in

Pearl-oyster (Arionula Margaritifera).

Pearne, William N., a minister of the Methodist Episcopal Church, was born in Rochester, England, and came to this country in 1822. He resided at New York Mills some years as the principal business agent and accountant of a large manufacturing establishment. We are not able to state at what time he became a member of the Methodist Church. Most likely it was before his immigration to this country. His social relations in England were of a high order. Dr. Paddock, when stationed in St. Louis, made him a leader. He sustained an unblemished character, and his powers rapidly developing, he soon became an able minister. He was calm and dispassionate, but there was enough of emotion and of thought to command a deep and profound attention. In 1853 he joined the

PEARSON

Late Oneida Conference, and filled acceptably some of the most important appointments, among which were Bing-
hamton, Cortlandville, and Utica. He was possessed of an amiable disposition, was a faithful friend and a
Christian gentleman. As a minister, he was clean,
chaste, practical, and fearless, and a passionate admirer of
the beautiful. His poetical productions found ad-
mirers, and as an amateur painter in his later years he
manifested a measure of genius. When inquired of
concerning the state of his mind in his last hours he
exclaimed, "I am happy! I am happy!" while his beaming
countenance and uplifted eye told better than words
could do the rapture of his closing hour. He died in
Kingston, N.Y., April 30, 1868. He had the happiness
and honor of giving to the ministry of the Church the two
sons of his last marriage, who are well known, both, Rev.
Ham. Pearse, of Memphis, and Rev. Thomas Hall Pearse,
D.D., of Knoxville, Tenn. See Minutes of Annual Con-
ferences, 1868.

PEARSALL, Richard, an English Dissenting divine,
was born at Kidderminster in 1698, and was educated at
Jones's Academy in Tewkesbury. After having
been for some time a minister, he became pastor at
Bromyard, Herefordshire, where he remained ten years;
was then made pastor at Warmington, and sixteen years
later became pastor at Taunton, where he served his
congregation for fifteen years. He died in 1772. He
published a Poem on the Death of a Gentleman (Lond.
1744, 8vo);—Sermons (1578, 8vo);—Religious Sufferer, or
Meditations on select Passages of Scripture, etc. (1765,
12mo), of which last named Hervey says that "refined
fancy and a delicate philosophy compose a chapter for
evangelical divinity." See Allibone, Dict. of Brit. and

PEARSE, Edward, an English Nonconformist di-
vine, flourished in the second half of the 17th century.
He was minister of St. Margaret's, Westminster, but was
ejected at the Restoration for nonconformity, though
a pious man and a useful preacher. He died in 1673, about
forty years old. He published, The best Match, or the
Souls's Supposal to Christianity (Glasgow, 1712, 12mo;
Lond. 1673, sm. 8vo; new ed. 1843, 8vo)—A Brief of
Divine Glory, and the Soul's Rest in God (1674, 8vo;
1704, 12mo) — The Grand Concern (17th ed. 1692,
12mo; new ed. 1840, 18mo). See Darlington, Cyclop. Bib-
liog. vol. ii. p. 221.

PEARSE, James, an English Dissenting divine,
flourished near the middle of last century as minister in
Tadley, Hants. He published Twenty-one Sermons
(Lond. 1678, 8vo), which are "excellent, but of rare

PEARSON, Edward, D.D., a learned English divine,
and the great champion of Armenianism in the Church
of England, near the close of last century and the open-
ing of this, was born about 1760 at Ipswich, Suffolk,
and educated at Sidney College, Cambridge. He was
for a while fellow and tutor of Sidney College, and after-
wards master (1808), and was elected the Christian ad-
vocate in 1809. He was also appointed rector of Remp-
some, in Nottinghamshire. He died August 17, 1811.
Dr. Pearson was considered an excellent preacher, and
one of the most learned men of his times. Besides
numerous single sermons preached by him on public
occasions, he was the author of a volume of Thirteen
Sermons addressed to Academic Youth (delivered in
St. Mary's Church, Cambridge). He published also A
Collection of Prayers for the Use of Families:—Twelve
Lectures on the Subject of the Prophecies relating to the
Christian Church; being a portion of the Lectures found-
ed at Lincolns-Inn Chapel by the late Bishop Warburton
(Lond. 1814, 8vo) and A Sermon on the Divine Providence
written at the end of 1797. Dr. Pearson's sermons are
professedly controversial. But his fame chiefly rests
on his controversial writings against antagonists of
necessary proclivities. There are two treatises of
his against those who adopt Dr. Paley's views on the
general theory of moral obligation, and those who follow
him in some of the practical conclusions to which that
celebrated divine and moralist conducts his readers.
These treatises, entitled Amotions on the Practical
Part of Dr. Pley's Moral and Political Philosophy (Ipswich, 1811, 12mo), contain the Theory of Mor-
als; in which is contained an Examination of the Theoret-
ical Part of Dr. Pley's Moral and Political Philosophy
(ibid. 1800, 8vo), excited, when first published, great
attention, and well deserve to be read by all in connection
with the treatise on Moral and Political Philosophy to
which they relate. On the subject of this Theory of Mor-
als, among the first to sound an alarm respecting the danger
to which the Church was exposed by the spread in it of
Calvinistic views of Christian doctrine. On this subject he published various tracts at the beginning of
the present century, a number of which were expressly
directed against Mr. Simeon, who was the great maintai-
nor of Calvinism in the university to which Dr. Pear-
son belonged. In fact, Dr. Pearson was the champion of
the Armenian clergy in the Church, and the cham-
pion of the Church itself against whatever seemed to
threaten its integrity and perpetuity. The most im-
portant on this subject are, Remarks on the Doctrine of
Justification by Faith; in a Letter to the Rev. John Ocer-
ton (Lond. 1802, 8vo) — Remarks on the Controversy sub-
nitting, or supposed to subsist, between the Armenian and
Calvinistic Party in the Church of England; to which is
second Letter to the Rev. John Oertson (ibid. 1802, 8vo).
We have no room, nor does it seem necessary, to give
the titles of all his writings; but it may be useful to say
that a complete list, arranged chronologically, may be
seen in the Gentleman's Magazine for 1811, where it is
also said of him that he was a good man, of gentle
and benevolent manners, kind and charitable, easy
and pleasant in conversation, modest, unassuming,
much respected, and beloved. See also Hunt, Memoirs
of the Life of E. Pearson (1845); English Review, iii.
vol. ii. p. 231.

PEARSON, Eliphalet, L.L.D., an eminent Congre-
gional minister, was born June, 1752, in Byfield, Mass.
He graduated at Harvard College in 1778, and was soon
after licensed to preach. In April, 1778, he was made
preceptor of Phillips Academy, then just started, in
which place he remained until 1776, when he was elect-
ed professor of Hebrew in Harvard College, and after
president Willard's death, in 1804, he acted as president.
In 1806 he resigned and moved to Andover, where he
was very active in founding the theological seminary,
in which he was chosen professor of sacred literature in
1808, but resigned this position after serving only one
year. In 1814 he was elected a member of the society
and other associations. He died Sept. 12, 1826. He
published a Lecture on the Death of President Willard
(1804), and four separate Sermons (1811, 1812, 1813,

PEARSON, John, an English prelate of high cele-
brity, and one of the greatest divines of his age, was
born in 1612 at Snoring, in Norfolk, of which place his father
was rector. He was educated first at Eton, and then at
King's College, Cambridge, and took the degree of M.A.
in 1639. In the same year he took orders, and was col-
lated to a prebend in Salisbury Cathedral. In 1640 he
was appointed chaplain to Finch, lord-keeper of the
great seal, and on the outbreak of the civil war became
chaplain to lord Goring, and afterwards to sir Robert
Cook, in London. In 1650 he was appointed minister
of St. Clement's, Eastcheap, London; and this was the
beginning of his public life. His character was various
and controversial. In 1659 he published the great work by which he will be remembered as long as the English tongue shall last and Christian theology continue to have any interest for
men, An Exposition of the Apostle's Creed. 'It was dedi-
cated to his flock, to whom the substance of it had been
PEASENTS WAR

PEASENTS WAR

preached some years before in a series of discourses. The laborious learning and the judicial calmness displayed by the author in this treatise have long been acknowledged, and command the respect even of those who take exception to his elaborate argumentation. It was republished, with some corrections, in folio, first in 1676, and again in 1686; since that time it has gone through many editions, and still sustains its reputation. It is used as a text-book at the universities, and is regarded as one of the principal standards of appeal in all cases of difficulty in the Church. It was translated into Latin for use on the Continent. It has also been republished in this country in Dobson's edition of 1840 (see Allibone); besides which there are editions by Burton (1847) and Chevalier (1849). It is generally acknowledged to be one of the most remarkable productions of what is usually called the greatest age of English theology—the 17th century. Dibdin says: "The Exposition of the Creed has nothing superior to it in any language. Metaphysics, logic, classical and theological erudition, are all brought to bear upon that momentous subject, in a manner happy and so rational that the depth of research and variety of knowledge are most concealed by the felicitous manner of their adaptation. Well might the great Bentley say of this yet greater man that his "very dust was gold." (Literary Companion, p. 56). Dr. Samuel Johnson recommends it as one of the great classics, and Grotius and Gellius are the others) whom every man whose faith is unsettled should study. During the same year which brought out the Creed, Dr. Pearson published The Golden Remains of the ever-memorable Mr. John Hales, of Eton. At the Restoration a proper regard was had for Pearson's eminent merits, and honors and emoluments were lavishly showered upon him. Before the close of 1660 he received the rectory of St. Christopher's, in London; was created D.D. at Cambridge; installed prebendary of Ely and archdeacon of Surrey, and made master of Jesus College, Cambridge. He filled the Margaret professorship of divinity, and was one of the most prominent commissioners in the famous Savoy Conference; in 1662 he was made master of Trinity, Cambridge, and assisted in the course of that year in the revision of the Liturgy—a task for which his previous publications had indicated him as peculiarly well fitted. In 1673 he was promoted to the bishopric of Chester. The year preceding he had published his Viaticum Epistolarium S. Ignatii, in answer to Dailly, who had denied the genuineness of the Epistles. It was called "the most trumpet of the trumpet of these times," and was the origin of this controversy, but recent investigations have weakened Pearson's arguments. See Ignatius. In 1682 bishop Pearson published Ammule Cyprianci, together with bishop Fell's edition of Cyprian. See Fell. He edited, with a preface of 19 pp., Vetus Testamentum Græcum ex Vett. LXX (1665, 12mo), and was one of the editors of the Civita Sacra. Bishop Pearson died July 16, 1686. His Opera Posthuma Chronologica were published by Dodwell (Lond. 1688, 4to, in Le Clerc's Bibl. Univ. ix, 127). They contain (1) the Ammule Pausiani, which Bishop Rawlinson referred to in his Erasmian Theologium, of which an English translation, with notes, was published by Williams (Cambr. 1825, and often)—a critical dissertation on the series of events in the life of the apostle Paul; (2) the Lectures in Acta Apostolvarum, which extend from the first to the ninth chapter of the Acts, and (as might be expected) contain many valuable critical and chronological observations for the elucidation of the apostle Luke's narrative" (Horne, Bibl. Bibl. p. 315). Both the lectures on Acts and Annals of St. Paul were brought out in an English version with notes (1853, 8vo, etc.)—Minor Theological Works, with memoir, notes, and index by Curton (Oxf. 1844, 2 vols. 8vo). His Orationes, Conciones, et Determinationes Theologicae contain much valuable matter. Bishop Bur-
a rising of the peasants on all sides throughout the south of Germany. Many of the princes and nobles at first regarded the insurrection with some measure of complacency, because it was directed in the first instance chiefly against the ecclesiastics. But some, too, who had long seen little likelihood of promoting the interests of the exiled duke of Württemberg, who was then upon the point of reconquering his dominions by the help of Swiss troops; and others, because it seemed to set bounds to the increase of Austrian power. But the archduke Ferdinand hastened to raise an army; the troops of the empire being for the most part engaged in the emperor's wars in Italy, and intrusted the command of it to the Truchsess von Waldburg, a man of stern and unscrupulous character, but of ability and energy. Von Waldburg negotiated with the peasants in order to gain time, and defeated and destroyed some large bodies of them, but was himself defeated by them on April 22, when he made a treaty with them, not having, however, the slightest intention of keeping it. Meanwhile the insurrection extended, and became general throughout Germany, and a number of towns took part in it, as Heilbronn, Milhhausen, Fulda, Frankfort, etc., but there was a total want of organization and co-operation. Towards Easter, 1525, there appeared in Upper Swabia a manifesto, which set forth the grievances and demands of the peasants. Their demands were: the abolition of the tithe of grain, after competent maintenance of the parish clergy, to the support of the poor and to purposes of general utility; the abolition of servility, and of the exclusive hunting and fishing rights of the nobles; the restoration to the community of forests, fields, and meadows which the secular and ecclesiastical lords had appropriated to themselves; release from arbitrary augmentation and multiplication of services, duties, and rents; the equal administration of justice, and the abolition of servile, and servile-like, exactions from the peasants. The conduct of the insurgents was not, however, in accordance with the moderation of their demands. Their many separate bands destroyed the convents and castles, murdered, pillaged, and were guilty of the greatest excesses, which must indeed be regarded as partly in revenge for the cruelty practiced against them by Von Waldburg. A number of princes and knights concluded treaties with the peasants conceding their principal demands. The city of Würzburg joined them, but the castle of Liebfrauenberg made an obstinate resistance, which Von Waldburg, aided by powerful enemies to collect and strengthen their forces. In May and June, 1525, the peasants sustained a number of severe defeats, in which large bodies of them were destroyed. The landgrave Philip of Hesse was also successful against them in the north of Hesse. Von Waldburg, and other towns which had joined them, suffered the terrible revenge of the victors, and torrents of blood were shed. It is supposed that more than 150,000 persons lost their lives in the Peasants' War. Flourishing and populous districts were desolated. The loss of the defeated insurgents became harder than ever, and many burdens of the peasantry originated at this period. The cause of the Reformation also was very injuriously affected. See Sartoris, *Versuch einer Geschichte des deutschen Bauernkrieges* (Berlin, 1878); Oechel, *Reichsträge zur Geschichte des deutschen Bauernkriegs* (Heilbronn, 1829); Wachsmuth, *Der deutsche Bauernkrieg* (Leipzig, 1834); Zimmermann, *Allgemeine Geschichte des grossen Bauernkriegs* (Stuttgart, 1841-45, 3 vols.).

Pease, Calvin, D.D., an eminent presbyterian minister (O.S.), was born in Cassan, Conn., Aug. 12, 1818. He graduated at the University of Vermont in 1838, became a teacher in Montpelier, and professor of Greek and Latin in the University of Vermont in 1842. He held this post until 1855, when he was ordained to the ministry, and appointed to the chair of Greek and Latin in the university. In 1861 he became pastor of the First Presbyterian Church in Rochester, N. Y., and died on a visit to Burlington, Sept. 17, 1868. His scholarly culture was wide, yet thorough; and both in the university and in his parish he ministered fully up to the demands of duty. See *Mem. of the University of Vermont*, vol. ii, p. 434, and a number of articles to the *Bibliotheca Sacra*. See Wilson, *Presb. Hist. Almanac*, 1864, p. 188; *Appleton's Annual Cyclopædia*, 1869, p. 737; Allibone, *Dict. of Brit. and Amer. Authors*, vol. ii, s. v.

Pease, Ebenezer, a minister of the Methodist Episcopal Church, was born in Georgia, Franklin County, 1817, Sept. 9, 1842. He was converted, and soon after united with the Methodist Church, and became a bright example of youthful piety. He received a license to exhort in 1823. His first local preacher's license was granted in 1826. In 1840 he joined the Black River Conference, and successively served the following charges: Brasher and Massena, two years; Chauteaugay, two years; Heuvelton and Depeyster, two years; Massena, two years; Lisbon, one year; Bangor, two years; next, and last, Hopkinton. He served all of these charges with great acceptability and profit to his people. He was a good and instructive preacher, and a faithful pastor. A few years previous to his death he was afflicted with what was supposed to be softening of the brain. His mental attention to religious and temporal affairs entirely failed him, so that he had to be treated as a child. He died at Lawrenceville, St. Lawrence County, N.Y., Dec. 1, 1873. See *Minutes of Annual Conferences*, 1874, p. 72; Smith, *Memorials of N.Y. and N. Y. East Conf.* p. 226.

Peck, Francis, a learned English divine, noted especially as an industrious antiquary, was born at Stamford, in Lincolnshire, May 4, 1692. He received his preliminary education at his native town. Peck was sent to Trinity College, Cambridge, where he took the degree of B.A. in 1716, and M.A. in 1727. In 1723 he was presented to the rectory of Godley in that county; and in 1736 he received a prebendal stall in the cathedral of Lincoln. He died in 1779. His works are: *History of the Bishops of York*; *The Lives of the Bishops and Archbishops of York*; *Histories of Ambrose, and of the Disputes between the Bishop for and against Popery in the Time of King James II* (London, 1735, 4to); — *Memoirs of the Life and Writings of Oliver Cromwell* (1740, 4to); — *New Memoirs of the Life and Poetical Works of John Milton* (1740, 4to). He also published some sermons and discourses. His first publication was *Tō Evōc Gýôv; or an Exercise on the Creation, and a Hymn to the Creator of the World; written in the express Words of the Sacred Text, as an Attempt to show the Beauty and Sublimity of the Holy Scriptures* (1716, 8vo). See *Chalmers, Biog. Dict.* xxvi, 293; Allibone, *Dict. of Brit. and Amer. Authors*, vol. ii, s. v.; Darling, *Cyclop. Bibliogr.* vol. ii, s. v.}

Peck, George, D.D., a noted minister of the Methodist Episcopal Church, one of the pioneers in American Methodism, and a most valued leader in the literary department of this branch of the Wesleyan body, was born in Millfield, Otsego County, New York, August 8, 1792. He was graduated from Drew University, and is a descendant of sturdy Puritan stock. His mother was gifted with a strong mind and possessed great force of character; she was eminently pious and devotional, which constituted her a remarkable woman in her religious and social influence, and enabled her to give all her five sons to the Methodist ministry. His father was a
Methodist class-leader, and to the time of his death a devoted Christian. Under these genial influences George united, in 1812, with the Methodist Episcopal Church. In 1816 he commenced his useful career as a Methodist preacher, being then only nineteen years of age. He travelled circuits till 1821, and that year he took charge of his first circuit. In 1824 he was called to his first pastoral station at Utica. So rapidly did the young, gifted preacher advance in his earnest pulpit efforts and devotion to the work, that he was appointed, in 1824, presiding elder of the Susquehanna District, which large district embraced all the territory contained in the Wyoming Conference previous to the General Conference of 1820, and nearly as much more now within the bounds of the Central New York and Genesee Conferences. The same year he was elected delegate to the General Conference, and he was chosen a delegate to every General Conference since, except the last, during his lifetime. Early in his history the youthful preacher was drawn into controversy, and soon gave evidence of special talents in that direction. In 1825 he was challenged to a public debate by a Unitarian preacher at Kingston, Pennsylvania; so decisive was the victory in favor of the young champion that his opposition was apparently vanquished. One year afterward he accepted a challenge to write in a Universalist magazine, which event led to his first appearance as an author. In 1835 he was elected principal of the Oneida Conference Seminary, which was then in a very uncured condition, and combined with the great interest and enthusiastic devotion he felt in the cause of education and the establishment of this young, promising seat of learning, peculiarly adapted him to fill successfully this new, honorable sphere of usefulness. After four years of trials and labors as the head and controlling spirit of this now so well-known school, he determined to return once more to the active duties of the ministry, and was again appointed to the eldership of the Susquehanna District, the early field of his achievements and triumphs. In 1840 he was elected editor of the Methodist Quarterly Review, which position he filled with honor and credit to the Church for the period of eight years. Under his able management the Review took its place among the first literary journals of the country, commanded the esteem and favorable criticism of the most erudite and cultivated scholars, and exerted a benignant and salutary influence even beyond the pale of the Methodist Episcopal Church. In 1846 the New York Central Conference appointed Dr. Peck delegate to the great General Convention of the Evangelical Alliance in London, and in that extraordinary meeting the delegates clung to his side and came out in his favor for the adoption of his resolutions. In 1848 Dr. Peck was elected editor in chief of the Christian Advocate and Journal, published at New York, and he served the Church in that distinguished position for four years. It was during this period that the great political debates took place which at one time threatened to convulse the country into anarchy and rebellion. Being naturally averse to exciting political discussions and exhibitions of violent partisanship, and not liking the animosity of the controversy on such subjects, he declined to have a place in the heated councils of the day. On returning to his early home and the scenes of his early ministry in the beautiful Valley of Wyoming, where he was cordially received by his many friends. He was successively made preacher in charge of Wilkesbarre, Scranton, Providence, and Dunmore, and presiding elder of the Lackawanna District and Wyoming District. He was superannuated in 1873, and died May 20, 1876. In Church and Conference Dr. Peck was always eminent and useful, whether as counselor or advocate. The faithful discharge of all important trusts committed to his charge insured for him a high position in the Church. He was conservative, but at the same time eminently progressive. Says one of his contemporaries: "I view him as one of the most remarkable men of our times—one whose genius and piety are indubitably stamped on the ecclesiastical polity and wonderful growth of the Church—whose wise counsels and herculean labors are interwoven in its development for the past fifty years. His whole life has been distinguished by devoted love to the Church, and unsparing loyalty to honest convictions of truth. Young preachers have looked up to him as a father, and to whom they could look as 'a father in Israel.' I have for the past twenty-five years mingled with all classes of professional and business men in our valley, but I have never yet heard one word of censure from preacher or layman against Dr. Peck, which fact I esteem as the highest tribute that could be paid to him as a truly Christian character." As a preacher, Dr. Peck ranked among the foremost and ablest pulpit orators in our country. The symmetrical structure of his mind, and his analytical powers, were of the highest order, combined with a clearness of perception and connecting reason and logic. Whenever the strong powers of his mind were brought into full play on a subject, and he felt the heavenly unction on his sympathetic heart, the effect of his preaching was overwhelming. His public labors included a period of sixty years. It thus appears that the distinguished Methodist printer had outlived the period of his supremacy, and it is but fitting to test his consecration and integrity by pioneer exertions requiring the heroism of the fathers. He "endured hardness as a good soldier," on very large circuits, with no railroads or steamboats, in the new and struggling Church of the West. He traversed the Pennsylvania, travelling immense distances on horseback, through forests, and in the midst of wild beasts, and rude people, preaching in log-shanties, schoolhouses, barns, and groves, all without a murmur, and taking his appointments without being consulted, and in the most unquestioning loyalty. He had therefore original experience in the great circuit system to prepare him for any other work to which he might be called. When stations were demanded and cautiously conceded, and George Peck was one of the younger men called to fill them, he was found to have the habits of devotion and study which they required. His library had grown (one can hardly tell how) to be large and valuable, and he was master of its contents. The progress in available scholarship which ministers of other churches made with tuition, he made largely without. He preached two or three sermons every Sunday to the same congregation, with fresh research and elaborations, characterized by thorough originality and great spiritual power. He was besides a faithful pastor. He had marked success in revivals, and fully equal success in the training of officers for the Church. As a presiding elder he shrunk from no honest task of discipline or labor or discipline, and rendered available marked executive ability in every department of official responsibility. As an educator he promptly qualified himself to teach in studies nearly as new to him as to his students, and when he resigned the principalship of the seminary, he with unimpaired zeal pushed forward the enterprizes of learning in the Church, and gave to young ministers the guidance and help of his large intelligence and ripe experience. In the most responsible editorial councils he held a firm hand on the historical positions of Methodism, and advanced every Christian enterprise in the true spirit of progress. When by reason of age he found his strength failing, in a calm, dignified manner he resigned the effective relations, and gracefully accepted superannuation. When complicated diseases gathered in strength he was wont to die with the same composure and dignity which characterized his most difficult labors when in health. The humility so marked in his history was more conspicuous, more humble, and tender as he approached the cold river. This faith which gave him a lifetime near the cross made him a conqueror in his struggle with the grave. Dr. Peck's published works are, Universalism Examined (1826); History of the Apostles and Evangelists (1856): Scripture Doctrine of Christian Perfection (1841);

clerical in 1845, and revised in 1848)—Rule of Faith (1848)—Reply to Beecher (1845)—Mumy Character (1832)—History of Wyoming (1858), a work which received high commendations not only in this country but in Europe (see North Amer. Rec. July, 1858, p. 280; London Athenæum, Aug. 28, 1858, p. 260)—Early Methodists within the Bounds of the Old Geneve Conf. from 1788 to 1800—North American Trinitarian literature (New York, 1858).—"It has the charm of romance, together with the edifying qualities of religious annals"—Our Country, its Trials and its Triumphs (1865).—Dr. Peck was literally a "father of ministers," having left two sons and two nephews in the pastoral work in his former conference, and one daughter, Mrs. Rev. Dr. Crane, of the Newark Conference. See Ladies' Repository, 1871; Pulpit and Pew, 1871, p. 90 sq.; Northern Christian Advocate, June 26; Life and Times of Gro. Peck, D.D., written by Himself (N. Y. 1874, 12mo); Cook, Hist. of the Genevese Conf. ch. i, § 4, 7, 8, 9; ch. iv, § 3 and 52; Meth. Qu. Rec. Oct. 1874, p. 693-696.

Peck, James, a minister of the Methodist Episcopal Church, of whose early history we have no data, was one of the four ministers who constituted the Washington Conference, organized by bishop Scott Oct. 27, 1864. He was then appointed to Asbury Church, in Washington, D. C. After six months he was appointed presiding elder of the Potomac District, in which capacity he served until he was appointed to Sharp Street, Baltimore; but after eight months he was reappointed presiding elder of the Potomac District. He was elected delegate to the General Conference held in Brooklyn, N. Y., 1872. He was next sent to Asbury Church, Balti more, where he died in peace, March 6, 1874. See Minutes of Annual Conferences, 1873, p. 14.

Peck, John, a Baptist minister, was born in Stanford, Dutchess County, N. Y., Sept. 11, 1780. His early education was limited. He began preaching as a licentiate at Nottawa, N. Y., and in 1804 became pastor of the First Baptist Church in Cazenovia, N. Y., where he was ordained June 11, 1806, and remained until November, 1834, during which time he had the satisfaction of witnessing several revivals among his congregation. He had been appointed general agent of the Baptist Missionary Convention in 1824, and after resigning his pastoral charge he devoted himself entirely to that institution. In May, 1839, he was appointed general agent of the Baptist Home Mission Association. He travelled extensively in that connection, and his services proved very valuable. He continued to visit his church whenever possible until his death, Dec. 15, 1849. Mr. Peck was associated editor of a religious periodical called The Vehicle, and afterwards of The Western Baptist Magazine, which was commenced in 1814, and some twelve years after merged in The New York Baptist Register. In 1837, in connection with the Rev. John Lawton, he published A Historical Sketch of the Baptist Missionary Convention of the State of New York, etc. He also published a Scriptural Catechism, and two Discourses in 1845. See Sprague, Annals of the Amer. Pulpit, vi, 481.

Peck, John Mason, D.D., a Baptist minister of note, was born at Litchfield, Conn., Oct. 31, 1729. He had limited early advantages for education, but made such use of them as to find employment as a school-teacher. He removed in 1811 to Greene County, N. Y., where he united with a Baptist Church, and in 1812 was licensed to preach. In 1814 he was pastor of a church in Amenia, N. Y. In 1816 he repaired to Philadelphia, and spent some time in study with the Rev. Dr. Stoughton, who was accustomed to receive students for the ministry into his family. In 1817 Peck went as an itinerant missionary to the West, laboring in Illinois and Missouri. He visited New England in 1829 to plead for missions, and solicit aid for a literary and theological seminary. A school was established at Rock Spring, Ill., on land given by him for the purpose, of which he was the principal in 1829-31. In 1832 he was connected with the Rev. Dr. Jonathan Goss in organizing the American Baptist Home Mission Society." Shurtleff College having been established at Upper Alton, Ill., in 1835, the Rock Spring Seminary was merged in it. Mr. Peck travelled 6000 miles, and raised $20,000—a small sum compared with the millions given for educational and benevolent purposes in this country, but not without a taut contribution. He was also actively interested at a later period in founding the "Covington, Ky., Theological Seminary," and in 1848-49 was secretary of the "American Baptist Publication Society." He was the author of several tracts on spiritual and practical topics and an industrious writer. He established in 1829 a publication, The Pioneer, which was published several years. As an antiquarian he was an assiduous and successful collector of books and pamphlets. He died March 15, 1868. He published in 1862 The Emigrant's Guide, which had a large circulation, and in 1864 a Gazetteer of Illinois. He was the author of the Life of Daniel Boone, in Sparks's "American Biography," and of a Life of Father Clarke, a Western preacher. See Forty Years of Pioneer Life; Memoir of John Mason Peck, D.D., edited from his journals and correspondence by Rufus Babcock (Phil. 1864, 12mo); ibid.; the American Missionary, vol. iv, 429; Allibone, Dict. of Bril. and Amer. Authors, vol. ii, s. v.; Drake, Dict. of Amer. Biog. s. v.; New-Englander, 1865. (L. E. S.)

Peck, Solomon, D.D., another Baptist minister, was born at Providence, R. I., Jan. 25, 1800; graduated at Brown University in 1823, and was ordained in 1825 as pastor at Hope, R. I., where he served as tutor. He spent four years in Andover Theological Seminary, one year as a resident graduate, and was elected in 1825 to a professorship in Amherst College. He was an instructor in Brown University in 1834-5, but declined a professorship offered to him, and urged upon him by Dr. Wayland. He was appointed in 1856 assistant corresponding secretary, and in 1858 corresponding secretary of the American Baptist Missionary Union, holding the office till 1856. During his period of service as secretary he visited the Baptist missions on the continent of Europe, and also in the United States, as a deputation, visited the missions in Southern India and in Burmah. He was pastor of a colored Church at Beaufort, S. C., from 1861 to the close of the war, and was chaplain of the Disabled Soldiers' Home, Boston, and secretary of the Freedmen's Aid Society. He died at Rochester, N. Y., June 12, 1874. (L. E. S.)

Peckham, John. See Peckham.

Peckham, John, D.D., a noted English prelate of the Church of England, was the son of Sir John, a humble parentage. He was born probably in 1240. He received his early education in the poor-school of the Cluniac monks of Lewes. He then went to Oxford, and was there a favorite student of St. Bonaventura. To continue his theological studies, Peckham also went to Paris University, and had the honor to be a doctor of both these schools. He also made the tour of all the Italian universities, and in the pope's own palace lectured on sacred letters to a crowd of bishops and cardinals who were proud to be his attentive listeners, and who every day, as he passed through their ranks to his pulpit, arose from their seats to show him reverence. He subsequently became a Minorite friar, but was suddenly drawn from his retirement by the pope in 1278, and elevated to the archbishopric of Canterbury. The crown did not oppose the appointment, and Peckham zealously discharged the duties of the primate in all parties in England esteemed him. He began his administration by calling a provincial synod, and among its most memorable acts is the one enjoining every parish priest to explain to his flock the fundamentals of the Christian faith, and to hold it as a matter of pride and distinction. Peckham not only visited his whole diocese, but travelled over the greater part of England, informing himself of the exact state of ecclesiastical affairs in
the country. He also took an active interest in the university reform at Oxford. He was such a rigid disciplinarian that he made many enemies, and was by them accused of a too great love of money, and of having favored his own family in the disposition of offices. But these charges seem unreasonable when we consider his simplicity of character and habits, and his studied application to the wants of all, poor or rich, exalted or humble. Thus he hesitated not to remonstrate with king Edward I for his tyranny, and to rebuke the great earl of Warren for allowing his deer and cattle to trample down a poor man's field of corn. It is a significant fact that he always retained a prebend attached to the see of Lyons, in case he might at any time be forced to quit England; and Godwin tells us that after Peckham's time this benefice continued to be annexed to the see of Canterbury, in order to provide against the case of the more than probable exile of the primates. He died in 1292. He is spoken of in appearance as "stately in gesture, gait, and outward show, yet of an exceeding meek, facile, and liberal temper" (Harpsfield). Archbishop Peckham was a voluminous writer. Besides his pastoral homilies, there are sermons, treatises on ecclesiastics, the relation of the ecclesiastics to the temporal state; and besides these, his voluminous writings on ecclesiastics, the relation of the ecclesiastics to the temporal state; and besides these, his voluminous writings on the literal interpretation of Holy Scripture (l. c., p. 153.; and also by A. Soreg., e. 1475, fol.):— **Perspectiva Communis** (Venice, 1504, 4to; Norimb. 1542, 4to; Paris, 1556, 4to; Colon. 1592, 4to).—De Summa Triinitate, et Fide Catholica (Lond. 1510, 16mo).—Collectanea Bibliothec, libri quinque (Colon. 1510, 1519, Paris, 1514). See Hier. Novn. Hier. Gland., s. v.; Wood, Amela; Wharton, Anglia Sacra; Arch. vol. x; Churton, Hist. of the Early English Church, p. 870 sq.; Collier, Eccles. Hist. of England, vol. i, i. v., p. 494; Fleury, Hist. Eccl. aissiatique, xvii. 562; Green, Short Hist. of the English People, p. 174.

**Pecori, Domenico Arretino**, a painter of Arezzo, who flourished about 1450, studied under Don Bartolomeo della Gatta, and afterwards improved himself by studying the works of other masters. In the pictorial church of his native city is a picture by him of the Virgin receiving the body of the Saviour, and the child Jesus embracing the young man, which is remarkable in the perfectness of the expression. He used less painting than was usual at the time.

**Pectorale (breast-covering), the same as pallium** (q. v.).

**Peculiar (Fr. peculiar, i. e. private)** is in English ecclesiastical law a particular parish or church having jurisdiction within itself, and which is not subject to the ordinary of the diocese in which it is locally situated, but has an ordinary of its own. There are various kinds of peculiaris: 1. Royal peculiaris, subject only to the king. The king's chapel is a royal peculiar, reserved to the immediate government of the king himself. 2. Archbishops' peculiaris, exclusive of the jurisdiction of bishops and archdeacones. The archbishop has many such peculiaris, being an ancient privilege of the see of Canterbury that whenever any manors or advowsons belong to it, they forthwith become exempt from the ordinary, and are peculiaris of that see. 3. Bishops' peculiaris, exclusive of the jurisdiction of the bishop, and in which they are situated. 4. Bishops' peculiaris of bishops in their own diocese, exclusive of archidiaconal jurisdiction. 5. Peculiaris of deanies, deaneries, and chapters, prebendaries, and the like, which are places wherein, by ancient compositions, the bishops have parted with their jurisdiction. Under the statute

1 George I and II, c. 10, all donatives (which are in their nature peculiars) receiving augmentation from queen Anne's bounty are thenceforth to become subject to the jurisdiction of the bishop of the diocese. See Donative.

**Peculiar People** is the name of a recently founded religious sect which originated in England, and is to be met with chiefly in the county of Kent, but they themselves claim to be strong in numbers in the counties of Essex, Sussex, and Surrey. Their principles are very similar to some of the American *Tunkers* (q. v.). They are a sort of *Perfectionists*. They claim to be the real exemplars of true and undefiled religion. If a man cannot say he lives without sin, they set him down as no Christian. Religion is the only difficulty for them; no mysteries; nothing beyond the reach of man; neither heights to which he cannot ascend, nor depths which he cannot fathom. To come together and declare their unspeakable joy is all that they have to do. For this the beginner is as competent as the gray-haired believer, the sister as well as the brother, the ignorant as well as the learned; and thus, in turn, they all preach and pray. In Church membership they have no preliminaries. All who come are of the Church; those whom the Lord calls will surely join them. They consider that every service is the sacred work of God, and they have no special form. In the same way they have no baptism; infant or adult creeds, confessions of faith, forms of prayer, ministers—all these things they have done away with. They profess to have no leaders; yet they have elders, but they claim that they are simply elders for the time being. They have great faith in prayer. If one lack anything, it is to be looked for by asking of God. Hence it is a prime article of faith of this denomination never, under any circumstances, to call in a doctor. They believe only in anointing with oil and prayer as a means of restoring the sick. The English government has therefore interfered with them in recent times, and several trials of members of this sect have occurred. Thus, at Plumstead, a little girl of an elder of the Peculiar People had the small-pox. The elders prayed over her; they laid hands on her; they anointed her; and, generally speaking, "put their trust in God." In eleven days, without the administration of any medicine, with only a little arrow-root and wine to nourish the body, the poor thing died. Of course the Peculiar People are consistent enough to believe neither in vaccination nor contagions. In this case a jury returned a verdict of "manslaughter" against the father. There are no statistics or extensive data from which to judge of their number and the power of the sect. We have given all that is accessible to outside parties by personal observation.

**Peculium Clericale** is that property of a priest which is derived from benefices conferred on him, and from the performance of clerical duties. Ancient ecclesiastical usage did not permit the disposal of its surplus either by gift or will, but this was returned to the Church; and so also the Council of Trent ordered (cens. xxv, cap. i, De Reform.). But in modern times the priest has given up the privilege of disposing of the "peculium clericale" as over his own private property and private earnings.

**Pedagogics.** See *Pedagogics*.

**Ped'ahel** (Heb. Pedahel), הַדֶּאֵל, preferred of God; Sept. Φαθάθ, the son of Amminadab, and the prince or chief man of the tribe of Naphtali, appointed by Moses, in connection with each of the other tribes, to divide Western Palestine (Num. xxxiv. 29). B.C. 1618.

**Pedahzur** [many *Pedahzur*] (Heb. Pedahzur), הַדַּהֵצֹר, preferred of the Rock; Sept. Φάθαζορ, Φάθαζορ, the head of a family in the tribe of Manasseh; father of the Gamaliel who was appointed with
others to aid Moses in numbering the people (Num. i, 10; ii, 20; vii, 54, 59; x, 23). B.C. ciri. 1567.

\textbf{Pedai}ah [some Pedaiyah] (Heb. Pedayahu, \textit{πεδαιαχ}, preserved of Jehovah; written also Pedayahu, \textit{πεδαιαχ}, with the same meaning, I Chron. xxvii, 20; Sept. \textit{φαδαια} or \textit{φαδαιαν}, the name of at least six Hebrews.

1. The father of Jehoiachin, whose elder was ruler of the halacah of Manasseh during the last part of David's reign (1 Chron. xxvii, 20). B.C. ante 1018.

2. A citizen of Rumah, and the father of the Zebudiah who was wife to Josiah, and mother of Jehoiakim (2 Kings xxiii, 96). B.C. ante 648.

3. The father of Zerubbabel, the widow of his brother Salathiel (1 Chron. iii, 18), under the Levirate law (comp. Strong's \textit{Harmony}, p. 17). B.C. ante 586.

4. A "son of Poroch," an Israelite who aided in repairing the walls of Jerusalem under Nehemiah (Neh. iii, 25); B.C. ciri. 445.

5. Son of Kukai, and father of Joab of the tribe of Benjamin, mentioned only in the genealogy of Salu (Neh. xi, 7). B.C. ante 445.

6. A Levite whom Nehemiah appointed one of the sacred treasurers, or disbursers (Neh. xii, 18); apparently the same who stood on the left of Ezra while he read the law, but from nothing further is known (Neh. viii, 4). B.C. 445.

\textbf{Pedalia} is an ecclesiastical term used to denote (1) foot-cloths in front of the altar; (2) collections of the creeds and canons of general councils in the Greek Church.

\textbf{Pedaries} is an ecclesiastical term used to designate consecrated sandal or pilgrim's garb.

\textbf{Peedie, James}, D.D., an able and judicious English divine, was born at Pembroke, in 1758. He entered the University of Edinburgh in 1775; was admitted a student in the divinity hall of the Secession Church, under the Rev. John Brown, of Haddington, in 1777; was ordained minister of Bristo Street congregation, Edinburgh, in 1783, and continued in that charge until his death in 1845. His sermons are eminently clear, well arranged, scriptural, and instructive. In expository lectures he greatly excelled. He published, \textit{The Revolution the Work of God, and a Cause of Joy}; two sermons on Ps. xxxvi, 5 [Nov. 5] (Edinb. 1789, 8vo)—\textit{The Perpetuity, Authority, and Universality of the Christian Religion}; a sermon preached before the Edinburgh Missionary Society on Ps. lxxiv, 17 (ibid. 1796, 8vo)—Jehovah's Care to perpetuate the Redeemer's Name; a sermon preached before the Missionary Society on Ps. lxxiv, 17 (London, 1809, 8vo)—A Practical Exposition of the Book of Job, in Ten Lectures (Edinb. 1842, 12mo). After his death appeared \textit{Discourses, with a Memoir of his Life}, by his son, the Rev. William Peddie, D.D. (ibid. 1816, 8vo).

\textbf{Pedersen}, Christian, one of the most noted characters of Denmark and Sweden in the Reformation period, was born at Svendborg, in Denmark, in 1490. He studied in Roskilde, and, after completing his course there, he became a canon in Lund. Later he studied for several years in Paris, and upon his return to Denmark he was appointed chancellor under Hans Weze, archbishop of Lund. But the archbishop fled, Pedersen remained to take charge of the affairs of the diocese, but he was constantly suspected and persecuted by his enemies. When Soren Nordby entered Skene, in 1525, he joined him as a faithful adherent of the legitimate king; but for this he was found guilty of high-treason, his goods were confiscated, and he was obliged to leave Denmark. He sought his fugitive king, Christian II, in the Netherlands, and there he spent several years advocating the cause of the Reformation. But when King Christian II was taken prisoner in 1532, and confined in the castle of Stockholm, Pedersen was permitted to return and live in Malmo, where he is said to have died as Jorgen Kok's secretary during the Court's Feud. The last ten years of his life he spent with a relative who was minister at Helsing, in the northern part of Zealand. He died there, Jan. 16, 1554. He was not one of the leading Reformers in Denmark, partly because he was a member of the most important struggle, and partly because he lacked courage and force of character, and oftentimes thought the Reformers proceeded too violently. He had always loved peace and quiet, and during the most turbulent times he withdrew to his friends. Besides he was not, like so many of the friends of the Lutheran Reformation in his day, an enemy of the past, and he sought to reconcile his love of the old songs and stories of his fatherland with his love of the emancipated Gospel. During his whole life, both while he was yet a Catholic and after he had become a Protestant, he labored zealously for the enlightenment of his countrymen, and he is justly considered the founder of modern Danish literature. At Antwerp he published in 1529 a Danish translation of the New Testament and of the Psalms of David, and he was one of the main workers in the translation of the so-called Christian III's Bible, published in 1550. His principal theological works are his book on the Mass and his \textit{Book of Miracles}, both of which he wrote while he was yet a Catholic. His \textit{Right Way to Heaven, or a Mirror to the Bridegroom of Children}, and his \textit{Studies of the Education of Children} are free translations from Luther. His patrioticism led him to rescue from oblivion the famous work of Saxo Grammaticus, which, at the request of Christian II, he published in Paris in 1514. This work, translated into Danish by Grontowig, is deservedly the most popular of all secular books in the Danish tongue. He fought against the absurdity of using Latin instead of Danish, and insisted that if the apostles had preached in Denmark, they would have talked Danish. By his translation of the Bible and other works he accomplished for Denmark what Luther had already accomplished for Germany. See Barfod, \textit{Forlæggninger}, p. 427—429. (R.B.A.)

\textbf{Pedlaviam}. See Foot-washing.

\textbf{Pedobaptism}. See \textit{Pediobaptism}.}

\textbf{Pedraioli}, Giacomo, an Italian painter of Brescia, was born about 1590. It is not known with whom he studied; but he associated himself with Domenico Bruni, in conjunction with whom he executed several of the frescoes for the church of the native city, and also in Venice, which are highly commended by Orlandi. He died about the year 1660.

\textbf{Pedrella} is a name for the thing on which the altar-shrine rears, or cases in which formerly the relics of saints were kept.

\textbf{Pedretti}, Giuseppe, a Bolognese painter, was born in 1596. He studied under Marc Antonio Franceschini, whose manner he adopted. Soon after leaving his master, Pedretti passed through Germany to Poland, where he resided many years in the employment of the court. Ip afterwards returned to his native city, and painted a great many pictures and altar-pieces for the churches: the most esteemed are the \textit{Martyrdom of St. Peter}, in S. Petronio; \textit{Christ Bearing the Cross}, in S. Giusepppe; and \textit{St. Margaret}, in the Annunziata. He died in 1787.

\textbf{Pedro, Alfonso}, a noted convert from Judaism, whose original name was \textit{Moses Cohen}, a native of Huesca, in Aragon, was born in the year 1062. At the age of forty-four he was baptized in the cathedral of his native city, in 1106, on St. Peter's day; and, in honor of the saint, and his godfather, king Alfonso VI, he took the name of Pedro Alfonso. He afterwards wrote a defence of Christianity and a refutation of Jewish in-
credulity, in the form of a dialogue between Moses and Pedro Alfonso, under the title Diologs in quibus impius Judeorum opiniones evidenter tum natura tum philosophiae sacrae argumenta contra eorum majorem partem spectantur (Cologne, 1536). This work is spoken of in high terms, and has been of great use in Spain. We have also by him a Disciplina clericalis, under the title of "Proverbs," in which he seems to have borrowed from the Arabic philosophy, especially the works of Averroes. A part of this work still exists in the Hebrew translation, and is known as the Book of Enoe (Idrisi). See First, Bibl. Judaica, i. 36; Da Costa, Israel and the Gentiles, p. 312; Finn, Sephardim, p. 191; Linda, Jesos in Spain, 1st ed. 1764; Seligmann, Kalkai, Israel, etc. (Köln, 1869), p. 22; Steinschneider, Jewish Literature, p. 147; Cattol, bibl. Hebr., ibid. Bibl. Cod. No. 3546; Jost, Gesch. d. Judenwirtschaft, iii. 38; De Castro, History of the Jews in Spain (Cambridge, 1874), p. 57; Adams, History of the Jews (Boston, 1812), i. 259; Delitzsch, Jeschurun (Grimsby, 1838), p. 137 sq.; id., Sontant Hofhagen (Erlangen, 1856), xiii. 142 sq.; Evangelical (Lutheran) Rec. (Gettysburg, 1876), p. 350 sq. (B. P.)

Pedroni, Pietro, an Italian painter, was born at Pontremoli, in the Lunigiana territory. He first studied at Florence, and afterwards at Parma and Rome. He executed a few excellent works for the churches of Florence, and by his native place; but in consequence of ill-health, he opened an academy under the protection of the senator Martelli, which produced many able artists. "If not a rare painter," says Lanzu, "he was at least an able master, profound in theory and eloquent in conversation, knowledge to heights of which few will treat in the ensuing age. Their success, their affection and esteem for Pedroni, is the best eulogium on him which I can transmit to posterity." He died in 1638.

Pedum rectum (straight stuff) is a name for the straight sheep crook of the pope, adorned with a cross on the top. See Urobor.

Peet, Stephen, a somewhat noted missionary of the Congregational Church in Wisconsin, was born at Sandgate, Vic., in 1795. He was educated at Yale College, where he graduated in 1823, and after entering the ministry preached seven years at Euclid, near Cleveland, Ohio; was afterwards a chaplain at Buffalo, editing the Beloit Magazine and Buffalo Spectator; became minister of Green Bay, Wis., in 1837; assisted in founding Beloit College and thirty churches; was settled as minister of Milwaukee; afterwards took charge of an institute at Batavia, Ill., and was then agent of a mission in Michigan and Upper Canada. He entered the seminary. He died at Chicago March 21, 1855. He published Hist. of the Presb., and Cong. Churches and Ministers of Wisconsin (1851, 18mo).

Peglau, in Greek mythology, a winged horse which arose with Chrysorho from the blood of the Gorgon Medusa, when she was slain by Perseus. He is said to have received his name because he first made his appearance beside the springs (myanos) of Oceanus. He afterwards ascended to heaven, and was believed to carry the thunder and lightning of Zeus. According to later authors, however, he was the horse of Eos. The myth concerning Peglau is interwoven with that of the victory of Bellerophon over the Chimera. Bellerophon had in vain sought to catch Peglau for his combat with this monster, but was advised by the seer Polydor of Corinth to sleep in the temple of Minerva, and the goddess appearing to him in his sleep gave him a golden golden horse, Peglau, upon which he acted, and made use of Peglau in his combat with the Chimera, the Amazons, and the Salyms. Peglau is also spoken of in modern times as the horse of the Muse, which, however, he was not. The ancient legend on this subject is that the Muse of the Muses and the nine daugh- ters of Pieros engaged in a competition in singing by

Helicon, and everything was motionless to hear their song, save Helicon, which rose higher and higher in its delight, when Peglau put a stop to this with a kick of his hoof, and from the point arose Hippocrene, the inspirer of poetical matter of the Muse, and the song of the horse of the Muses is entirely a modern idea, being first found in the Orlando Innamorato of Bardi.

Pegee, Samuel, LL.D., F.A.S., an eminent English divine, noted especially as an industrious antiquarian, was born at Chelsea, Staffordshire, in 1704. He was educated at John's College, Cambridge, of which he became fellow in 1726. He became rector of Godmersham, Kent, in 1731; and rector of Whittington, Staffordshire, in 1751. He was also rector of Heath, perpetual curate of Wingerworth, and prebendary of Lichfield and of Lincoln. He died in 1796. He published, Examenation of the Inquiry into the Meaning of Demoniacs in the New Testament. In a Letter to the Author. Whereas it is shown that the word Daemon does not signify a Departed Soul, either in the Classics or the Scriptures: and, consequently, that the whole of the Inquiry is without Foundation (Lond. 1789);—Popery, an Encourager of Vice and Immorality; an address to the Irish Members of Parliament (ibid. 1790);—Life of Robert Grote, the celebrated Bishop of London, with an Account of the Bishop's Works, and an Appendix (ibid. 1758, 4to). Other works of his are, Dissertations on some Ancient Monuments (ibid. 1785, 4to);—Memoirs of Roger de Wesby (ibid. 1751, 4to);—Essay on the Coins of Cuneboinc (ibid. 1756, 4to);—The Formation of the Curie (ibid. 1780, 8vo);—Anonymous (ibid. 1809), etc. See Darling, Cyclop. of Bibliog. s. v.; (London) Gentleman's Magazine, 1726, pt. ii. p. 66 sq.; Nichol, Literary Anecdotes, xii. 1813, 1814.

Pelehvi (Value, Power) is the name of an ancient West-Iranian (Median and Persian) idiom, in use chiefly during the period of the Sassanides (A.D. 225-640), who, wishing fully to restore the ancient Persian empire, endeavored also to reanimate the primitive Iranian language, fallen into disuse as a court-language since the time of Alexander's conquest. Yet they did not fix upon the pure Persian as it was still spoken in the interior, but upon the dialect of the western provinces, largely mixed with Semitic words, to which Aryan terminations were affixed. The grammatical structure of the Pelehvi presents almost the same poverty of inflections and formations as the present Persian, although, however, less rich than Zend (q. v.) in inflection and accentuation, it yet boasts of the same copiousness of words as that dialect, to which it in reality succeeded. It is written from right to left, and the letters are mostly joined. The remnants of Pelehvi extant consist of coins, inscriptions (found at Hajarabad, Persepolis, Kirmanshah, etc.), and a number of books, all relating to the religion of Zoroaster. The most important of these are the translation of the chief part of the Zend-Avesta (Zanbo, Viparad, and Vendidad), and such original religious works as the Bundehesh, Shkandgumâni, Dinkart, Astâ Bahram, etc. The Pelehvi of the books differs from that of the inscriptions and coins to such a degree—according to the larger or smaller preponderance of the Semitic element—as to have misled many students. See also the two utterly distinct languages, a purely Iranian and a Semitic one, had been used somewhat indiscriminately at the time. The non-Iranian element is called Huzvareh (Huzvresh) by the Parsee priests, who, taking advantage of the ambiguity of the Pelehvi alphabet, often substituting the corresponding Persian for the foreign words. The Iranian part of the Pelehvi differs little from the Persian of our own day, and, in fact, the Pelehvi changed first into Parsee, and subsequently into modern Persian, simply by getting rid first of its Chal- dean and then of those of its remain words which had become obsolete. The chief use of the Pelehvi direct
had by their rash measures only strengthened it, and at Exeter in a very short time very little was known of Presbyterianism. It is needless to add here that the difficulties in other parts of England and England as a whole resulted in the dismemberment of the Presbyterian Church in England. See PREACHER. Peirce continued to preach at Exeter until his death in 1726. He is charged with double-dealing. But there seems to be no reasonable ground for so severe an accusation. He was probably semi-Arian in tendeney, but not in princi- tile. At a conference of ministers, when all were asked to give individually their declaration on the Trinitari- an doctrine, Peirce said: "I am not of the opinion of Sabellius, Arius, Socinians, or Sherlock. I believe there is one God, that God is no more, God and Holy Ghost to be divine persons, but subordinate to the Father; and the unity of God is, I think, to be resolved into the Father's being the fountain of the divinity of the Son and the Spirit." Opposition drove him into Lutuadism (q.v.), and finally he came to be a Unitarian. His publications are numerous, amounting in all to twenty-four; but that by which he is best known is his continuation of Mr. Hal- lett's Paraphrase and Notes on the Epistle to the He- breus (Lond. 1735, 4to). This work was translated into Latin by Michaelis, and published at Zürich in 1743. These are the highest terms of ad- miration of the profound learning and acute discern- ment of Peirce. He also gave to the public a volume containing Fifteen Sermons on various Occasions, and an Essay on the Ancient Practice of giving the Exe- cutant to Children. See Jones, Christ, Biog. s. v.; Auchin- Dict. of Brit. and Amer. Auth. s. v.; Bogue and Burn- nett, History of Dissenters, vol. iii; Sketes, Hist. of the Free Churches of England, p. 302-10; Prot. Dissenter's Magazine, vol. ii.

Pe'kah (Heb. Pikach, מְפָּח, an opening, as of the eyes; Sept. Φακης; Josephus, Φακῆς; Vulg. Phace) son of Remaliah, originally a captain of Pekahiah, king of Israel, murdered his master, seized the throne, and became the eighteenth sovereign (and last but one) of the northern kingdom. His native country was probably Galilee. As fifty Giladites joined him in the con- spiration against Pekahiah; and if so, he furnishes an instance of the same undaunted energy which distin- guished, for good or evil, so many of the Israelites who sprang from that country, of which Jephthah and Eli- zaphan were the most famous. See JENNY, Gilla- (Pol. p. 527). Under his predecessors Israel had been much weakened through the payment of enormous tribute to the Assyrians (see especially 2 Kings xxv, 20), and by internal wars and conspiracies. Pekah seems steadily to have applied himself to the restoration of its power. For this purpose he sought the support of a foreign alliance, and fixed his mind on the plunder of the sister kingdom of Judah. He must have made the treaty by which he proposed to share its spoil with Rezin, king of Damascus, when Joatham was still on the throne of Jerusalem (2 Kings xv, 37); but its execution was long delayed, probably in consequence of that prince's righteous and vigorous administration (2 Chron. xxvii). When, however, his weak son Ahaz succeeded to the crown of David, the allies no longer hesitated, and formed the siege of Jerusalem. The history of the war, which is the subject of this MEMOIR, is first treated in the 1 Chronicles, and in the A.V. of the Old Testament. See II Chron. xvi and 2 Chron. xxviii; and in the latter (ver. 6) we read that Pekah "slew in Judah one hundred and twenty thousand in one day, which were all valiant men." A statement which, even if we should be obliged to dimin- ish the number now read in the text, from one hundred and twenty thousand to one hundred thousand, as in the current MSS. of the books of Chronicles (Kemnecott, Hebrew Text of the Old Testament Considered, p. 592), proves that the charac- ter of his warfare was in full accordance with Gileiad- kinestrian (Judges xi, 38; xii, 6). The war is famous as the occasion of the great prophecies in Isz.
PEKAHI AH

PELAGIANISM

PE'KOD (Heb. Pekod, פְּקֹד; פֶּקֹד, visitation), a symphonic appellation applied to the Chaldeans in Jer. 1, 21, and to the Chaldeans in Ezek. xxiii, 23, in the latter of which passages it is connected with Shoa and Ko'a, as if these three were the inhabitants of a subdivision of these Chaldeans and all the Chaldeans. Authorities are undecided as to the meaning of the term. It is regularly formed from the root pākād, to visit, and in its secondary senses means "to punish," and "to appoint a ruler." Hence Pe'kod may be applied to Babylon in Jer. 1 as signifying its impending punishment, as in the margin of the A. V; "visitation." But this sense will not suit the other passage, and hence Gesenius here assigns to it the meaning of "prefect" (Thesaur. p. 1121), as if it were but another form of pokēd. It is certainly unlikely that the same word would be applied to the same object in two totally different senses. Hirzeg seeks for the origin of the word in the Sanscrit bharāna, "noble"—Shoa and Ko'a being respectively "prince" and "lord," and he explains its use in Jer. 1 as a part for the whole. The Sept. treats it as the name of a district (פְּקֹד; Alex. Φακός) in Ezekiel, and as a verb (πακεύω) in Jeremiah. First, however, remarks (Hier. Lex. s. v.) that the name is selected in Jeremiah by association with פָּקְדָו, to punish (1, 18), and פָּקִית (1, 27, 81), while the association in Ezekiel shows it must have been a people. Hence he suggests the Περιγίμων of Herodotus (iii, 98; vii, 67), and the city of Pekod in the Talmud (Jersa. Nest. 109a), both in Babylonia. See Kir. 

Pelagianism is the system of doctrine respecting sin promulgated by Pelagius (q. v.) in the early Christian Church.

I. Origin of these Views.—From a very early period the Church discussed the question of the origin of the human soul, and the speculations indulged in on this subject tended very directly to give form and complexion to the views held on the doctrines of sin and of grace. "Whence sprang the soul of each individual human being?" "What is its precise relation to the body as regards the time when they both began to exist?" Such questions as these presented matter of deepest interest to many of the most thoughtful minds among the writers in the early ages of Christianity. The influence of Grecian philosophy still lingered among them, and blended itself with their speculations. This influence is very apparent in the manner in which these questions are discussed by the Church of that time. The Greek philosophy, especially prevalent in the East, while other and healthier influences controlled the practical mind of the West; thus there arose in process of time a divergence between the anthropology of the Eastern or Greek Church and that of the Church of the West. In the Eastern Church, particularly in that of Alexandria, the doctrine of Origen, and his peculiar manner of interpreting Scripture, prevailed. They further maintained the doctrine that all human souls, in the aggregate, were created by God in the beginning before the creation of man; that these souls were at their original angelic beings, but that, having sinned in their angelic state, they were, as a punishment, doomed to dwell in human bodies, and to sojourn for a certain time on this earth, where, by the discipline through which they must pass, they would all in due time be prepared for resuming again their original angelic life. This strange theory has its roots in the Pythagorean doctrine of metempsychosis, and in the speculations of Plato, though Origen attempts to find support for it in the teachings of Scripture, by his favorite mode of allegorizing, according to his own particular view of the nature of the Book of Genesis, and certain other portions of Scripture, which he regarded as furnishing illustrations of the same principle. This "stulta persuasio" of Origen's, as Jerome styles it, found but few to embrace it; nay, it met with very strenuous opposition from many quarters, and by the end of the 4th century was almost wholly forgotten.
There were, however, two other opinions propounded regarding the origin of the human soul which gained more currency. 1. The theory advanced by Jerome, that God “quiaeditur animas.” This view was mainly advocated in the East, although it also found a few advocates in the West. According to this theory, each human soul is a distinct and separate creation out of nothing. This position, it is obvious, leaves no room for such a doctrine as that of original sin; for every separately created soul, coming directly from the Creator’s hands, must be absolutely pure and holy. If so, how comes it to be polluted by sin? If polluted by sin at all, this must be by the direct act of God; and, therefore, the restoration and recovery of such a soul must be an act of justice on the part of God, and not of grace. 2. The theory that is specially associated with the name of Tertullian, because it was first maintained and defended by him, viz. that human souls are propagated against ducias. This, which is generally styled the theory of traducianism—as Jerome’s is called the theory of creationism—affirms that the souls as well as the bodies of men are propagated; that God’s work of creating de nihilo was finished absolutely on the sixth day, and that since then the work has been continued. This proposition, if entertained by God no creative energy; that the soul has the power of reproducing itself in individual souls, just in the same manner as the first created seed of any given kind in the vegetable world possesses the power of reproducing others of the same kind. Mainly through the influence of Origen, who adopted it, the tradition which Origen was most extensively embraced in the North African and the Western churches. True, that father nowhere in his writings formally exhibits and advocates it, yet all his discussions on the doctrine of sin, and on the relation of men individually to God, are evidently based upon it, and take it for granted. These speculations regarding the origin of individual human souls imparted, to a very large extent, a particular complexion to the opinions promulgated regarding sin. Both in the East and the West the great doctrinal conflict of the early Christians was against the assaults of Gnosticism. The Gnostic idea that man, by his very creation, is sinful, and that he has no freedom of will, was keenly opposed by them. They strenuously affirmed, on the contrary, that man at his creation was holy, that he was absolutely free from all taint of moral evil, and that he became a sinner only by his voluntary rebellion against God. The prevalence of Gnosticism led them to give much prominence to the doctrine that man is a free moral agent, and that he is the author of his own sin. But while strongly and rightly maintaining in the necessity that man is a responsible moral agent, they did not at all entertain the question of the influence of depravity and apostasy from God on the actions of the human will. This question did not arise till the time of the Pelagian controversy, and then it was found that there existed a variety of opinion concerning it. The Alexandrian school, e.g., Origen and Clement, strongly affirmed man’s entire freedom of will, his full power to believe or not to believe, to obey God or not to obey him. The fathers of that school asserted that the first movement of man towards holiness was wholly the spontaneous self-caused action of his own will; although they acknowledged that he afterwards needed the help of the Divine Spirit to bring his own effort to a satisfactory issue. They taught that the soul has an inherent power to begin the work of renewal; that God conformed with and helps this willingness on the part of man; that the beginning of all action was wholly of man, although its accomplishment depended on divine help; that original sin did not dwell in the soul, the pre-existent spiritual nature which came down from the angelic sphere to inhabit the body consequent to it, but that it stood alone, only in the σῶμα and the ψυχή, the body and the sensible nature; and that the πνεῦμα, though living, so to speak, in contact with sin, was not necessarily defined by it, but, on the contrary, had the inherent power of warring against it, and of finally overcoming it. Hence it followed that there was no guilt in this corruption, since guilt could only be predicated of the πνεῦμα, being only possible when the πνεῦμα transgressed God’s law. While corruption therefore descends from God, guilt, properly speaking, does not descend, because it is only the result of the action of the individual πνεῦμα; and where the πνεῦμα does transgress, and thereby incur guilt, its doing so is of its own free choice, and not because of any connection with Adam or with his transgression. The theory of traducianism, proposed by Clement and Origen, was universally accepted in the East, and was also received with much favor in the West. It experienced some modification from the fathers of the Antiocchian and the later Alexandrian school, by their adoption of the doctrine of the origin of the soul of man; and in this modified form continued dominant in the East. Here we may find all the germns of Pelagianism. In his Liber apologeticus contra Pelagianos de arbitrio libertate, as quoted by Wörter, Orsius affirms that in Pelagius and Celestius Origen lived and taught. "And he who maintains that the habit etiam nunc viventes mortuos, mortuose viventes. Nam Origines et Proculus eiusstium et Jovianus, olim apud se mortui in vivent; et non solum vivent verum etiam loquentur: nunc vero Pelagius et Celestius, si in hanc perseveraverint viventes mortuos, ecce etiamsi fuisse, quia etiam se in eum, si non eum, sanctissimi, ecce, in ecclesia palam sibiabant, petulatet. Pelagianism is certainly countenanced by the Greek anthropology. The latter prepared the way for Pelagianism when it taught that original sin exists only as a disorder in the soul, and that it is not culpable, but guilt, till the πνεῦμα yields to the temptation which arises from this disorder; that our physical nature has, in virtue of its derivation from Adam, strong animal and sensual passions which tempt to sin; and that this is all the corruption we inherit from Adam; that sin is not inherited, but is the result of the action of the individual will of man, and that the will is in no respect whatever influenced or biased one way or another because of our descent from Adam, further than what is implied in its being tempted by the sensuous nature: which temptation it has abundant power to resist. Holding such a doctrine regarding sin, the fathers of the Eastern Church, as a natural consequence, held also the doctrine of Synergism in regeneration. They maintained that man in his natural state has a certain tendency towards that which is good; and that by giving his consent and co-operating with the grace of God or with the Divine Spirit, towards the attainment of holiness. The Spirit and man, they said, co-operate in this great work; but the first step towards its accomplishment is taken by man. The natural result of teachings such as these was Pelagianism. There was, however, a current of thought at the same time moving in a different direction. Tertullian occupies a prominent and chief place among those who guided and gave intensity to the force of this current. He found existing in the public opinions expressed by the fathers in the West indistinct traces of the theory of traducianism—the theory which affirms that man in his entire humanity, soul as well as body, is procreated: that the entire of human nature was originated by God in creation; and that that nature is individualized by procreation. Tertullian gave form and prominence to this theory and made it the tertium gregis of the Christian dispensation as the theory of the origin of human souls by the whole Western Church. Hence it was rightly argued, if the soul is propagated, there must be also a propagation of man—"traxit animus, traxit peccati." Juster views then began to be expressed in the West, that the soul can be the soul, and as a consequence also regarding the true nature of regeneration as the effect of the agency of the Divine Spirit alone—monergism—seeing that the soul
the *evil,* has no tendency, no inclination, and can have none towards holiness till it is acted upon by the power of the Spirit of God. Man has no desire towards holiness in himself. That desire is *originated* and carried forward solely by the Spirit of God. Tertullian did not fully evolve this doctrine, but he was the one who most clearly saw the result. The North African Church gave them fuller development, till in the time of Augustine they received their utmost fulfillment.

Cyprian in the 3d, and Ambrose and Hilary in the 4th century, made very considerable advances on Tertullian. They were more saturated from the influences of the Greek anthropology than Tertullian was, and hence presented in a clearer light than he did the doctrine of man's original sinfulness, and of his utter moral inability and disinclination towards holiness. They began to grapple with the doctrine of the distinction between the *guilt* and the *corruption* of man, both of which they assumed had descended from Adam, and to exhibit the doctrine with considerable clearness of statement, according to the mode of argument adopted by the apostle in the fifth chapter of the Epistle to the Romans.

At the close of the 4th century, when this was the state of matters in the Christian Church, touching the opinions that had been published on the subjects of *sin* and of divine grace, Pelagius appeared, and developed, and gave full expression to, the doctrines which he had learned at Rome in the Church of St. Peter; and for a greater system of doctrine that had already in some degree been unfolded in the writings of Augustine influenced him also in the direction of leading him to assume more decidedly the attitude of antagonism. He conceived that certain practical consequences resulted from Augustinian doctrine of man's moral inability and of grace, which in his view were hurtful to the interests of holiness. He saw around him, in Rome and elsewhere, many errors of practical life among professing Christians, which he supposed had their roots in the system of doctrine taught by Augustine, and generally accepted throughout the Church.

Thus we may regard Pelagius as influenced by two tendencies in the development of his doctrinal views: by the false elements which had in the course of the past ages mingled themselves with the speculations on Christian doctrine, partly in the West, but more especially in the East; and by the tendency to pervert Christian truth, and to convert the doctrine of human depravity, and of the necessity of divine grace, into a cloak to practical ungodliness. Such a perversion of Christian doctrine is the whole product of this connexion to the doctrines with which it was connected. From the beginning there had been those who had said, "Let us continue in sin, that grace may abound.” His abhorrence of such a principle, together with other influences operating in the same direction, led him to construct a system by which he might counteract the evils which he looked upon as resulting from the doctrine of "salvation by grace," as it may have been imperfectly or falsely taught by some, especially as it was falsely and perversely practiced by many. His effort was in all interests, as he supposed, of virtue and holiness. He ignored altogether the doctrine of the sinfulness of human nature and the necessity of divine grace, and constructed a system of pure naturalism—a system from which everything peculiar to the Gospel as a revelation of God's plan of mercy towards man is eliminated.

II. Life and Writings of Pelagius.—Very little trustworthy information can be obtained regarding the personal history and character of Pelagius, though his name is associated with one of the most extensive and important controversies within the domain of Christian doctrine. His life was not ministerial, and the very existence of his contests with the contemporaryPelagius Brito, and hence it has been concluded that he was a native of Britain. Jerome also speaks of him as "Scootorum pultibus praegravitum." He seems to have spent the earlier and greater part of his life in the retirement of the cloister, where he probably gave himself to the diligent study of the writings of the fathers of the Eastern Church, who were held to be of authority in Britain. These writings undoubtedly moulded his forms of thought, and gave a complexion to all his theological speculations. He was a man of great learning, and there is no evidence that his writings were of profundity of thought or of depth of feeling. Augustine says of him, "Istum, sicut eum qui noverrunt, loquuntur bonum ac predicandum virum." He appears to have borne among his contemporaries the reputation of a man of blameless moral excellence, but the development of his character in its relation to sin seems to have been altogether imperfect. In forming an estimate of his character from the spirit and tendency of his writings, Neander remarks that it is manifest he had never passed through any great mental struggle like that which his great opponent Augustine had passed through ere he attained to fixed conceptions of Christianity. He had never known any deep inner conflicts with sin. He had never vividly realized the true nature and the need of Christian holiness. His whole system proves that he failed to recognize the difference between morality and true evangelical holiness; and indeed this was an error into which his whole training as a monk was very apt to lead him.

About the beginning of the 5th century we find Pelagius at Rome. Acted upon by such influences as we have noted, he began his part in the great controversy, and wrote a commentary on the Pauline epistles: *Expositiones in Epistolam Pauli libri xiv.* This work, in which he brings out his peculiar views, consists of brief comments on all the epistles of Paul, with the exception of that of the Hebrews. It has a place in the Benedictine edition of Jerome's works. Indeed, all that remains to us of the writings of Pelagius, with the exception of extracts which are found in Augustine's controversial treatises, are usually printed along with the works of Jerome. For a long time they were regarded as the genuine works of that father. The original editors of Jerome's works considered it as a part of their duty carefully to purge away everything that, to them,avored of heresy from his productions, and therefore they used great liberties with the books which passed through their hands. We have the works of Pelagius therefore only in a mutilated form.

In 411 Pelagius passed over to North Africa, in company with his disciple and admirer Celestius. The name of Celestius now becomes prominent, mixed up with the controversy which soon began to agitate the whole of Africa. Mercator says of him, "Pelagio adhesit Celestius, nobilis natu quidem, et illius temporis auditoriius scholasticus." On reaching Carthage, Pelagius wrote a respectful letter to Augustine, who was bishop of Hippo, and received from him a friendly reply. He does not seem to have given prominence to his peculiar opinions, and he escaped at this time all suspicions of heresy. After a short time Pelagius proceeded to Palestine, where he was warmly welcomed by Jerome, then residing at Bethlehem as the head of a theological school of great repute. From this time the letters of Jerome, which he left behind him in Carthage, came under the particular notice of the Church there. He gave himself forth as a candidate for the office of presbyter, and his doctrinal opinions were therefore narrowly inquired into. Paulinus, a deacon of Milan, challenged them as heretical. A council of the Church of Carthage was convened (412), presided over by bishop Aurelius, to investigate the accusations of unsoundness in the faith that had been laid against him. Marius Mercator, in his *Contra Pelagianos* (412), records the charges brought against Celestius on this occasion by Paulinus. They are the following, as quoted by Witter: "1. That Adam was created mortal, and would have died whether he had sinned or not. 2. That Adam's sin injured himself
alone, and not the human race. 3. That new-born in-
"jants are in the same condition in which Adam was be-
fore his transgression. 4. That since neither by the
deaTl nor transgression of Adam the whole human race
dies, so neither will the whole human race rise again
from the dead on account of Christ's resurrection. 5. That
the law guides into the kingdom of heaven as well
as the Gospel. 6. That there were men who lived
without sin (impeccabiles, i.e. sine peccato) before the
ad
vent of our Lord." Thus far quoting Mercator, Wör-
ter continues: "If we add, 7. That the grace of God is
not absolutely necessary to lead a man to holiness; and
8. That grace is given to men in proportion to their
merit, we will then have a pretty complete summary
of the doctrines taught by Pelagius and his followers."

Celestius, in his defence, endeavored to argue that
the points of difference between him and his accusers
were quite unimportant, and, therefore, that he ought
not to be condemned for his opinions. The council, how-
ever, judged differently. They would make no compro-
mise. They unanimously declared the opinions of Ce-
lestius to be heretical; and, on his refusing to retract
his errors, excommunicated him. This is the first of a
succession of ecclesiastical decisions come to by differ-
ent synods and councils of the Church of that age on
the great Pelagian controversy.

Up to this time the controversies that had been car-
rried on with the Pelagians had mainly been directed to the
doctrines of the person of Christ and of the Holy Trin-
ity, as the Ariian, the Nestorian, the Eutychian, and the
Monophysite controversies. But now, for a number of
years, the whole energies of the Church were concen-
trated on the discussion of the doctrines of sin and of
grace in connection with the Pelagian controversy.
The controversy did not terminate with Pelagius and his
immediate associates. Others arose after them. The
forms and aspects of the controversy gradually
changed. In some respects, indeed, that controversy
may be said to have continued to the very close of the
Church's history; for the battle is not yet over to expose
and condemn the deadly errors which were growing up
under the sanction, seemingly, of the Eastern synods.
Jerome condemned these sym-
doms as themselves heretical. The vigilant and ener-
getic Augustine now girded on his armor, and stood in
the foreground as the great champion of the doctrine
of grace. His penetrating and philosophic mind, and
the deep insight he had gained in the school of Chris-
tian experience into the true nature of the Gospel, en-
abled him to see through the disguise under which the
errors of the Pelagians and theジー was characterized by an
fatal character of its doctrines. He contended earnestly
for the faith. He agitated the African Church to in-
vestigate the whole matter, and to give forth an unam-
biguous decree on the subjects in dispute. At the same
time he published his first work on the controversy,
titled De genio Pelagii, in which he spoke strongly
against the Eastern bishops in allowing themselves to
be so grievously misled by the plausible reasonings and
ambiguities of Pelagius. This was the first of a series
of works which Augustine published from time to time
during the space of twelve years who were engaged
mainly in conducting this controversy.

Two provincial synods were held in the year follow-
ing (416): one at Mileum, in Numidia, composed of six-
ty-one bishops, among whom was Augustine, presided
over by Silvanus, and the other at Carthage, presided
over by Aurelius, by both of which the decisions pro-
mulgated by Pelagius and Celestius were examined,
and being found heretical were solemnly condemned.
These synods respectively sent letters to Innocent I,
the Roman bishop, giving him an account of their pro-
ceedings, and assuring his accusers that they had declared
what they had pronounced. A third letter, sent in the names
of five African bishops — Augustine, Aurelius, Alypius,
Euseobus, and Possidius—conveyed to him fuller infor-
mation regarding the heretical character of the opinions
entertained by Pelagius. They at the same time also

which Pelagius was again accused of holding and propa-
gating unsound opinions. Two bishops from the Gal-
lican Church, viz. Heros of Arles and Lazarus of Au-
ara (Aix), took a prominent part in the proceedings
against him. They appeared, indeed, as his chief accusers.

But when the Heresies (ollector. temp. i, 257), thus describes the appearance
he made on this occasion: "Ab ilia interrogatus Pelagi-
us, facile Graecos homines lingue illius ac fraudulis igna-
tos captiosis responsibus elusit." The following was the
sentence pronounced by his judges: "Since we are satis-
\fied with the declarations of the monk Pelagius, here
present, who acknowledges the holy doctrine, and con-
demns whatever is contrary to the faith of the Church,
we declare that he is in the communion of the Catholic
Church." This singular condition, however, was at-
tached to the sentence, that he should anathematize all
who taught the contrary opinions, not as heretics, but
as schismatics, and as such to be excluded from the
Church. The Eastern Church had never, with such fulness and
precision of expression as the Western, given an au-
thoritative deliverance on the doctrines of sin and of
divine grace. The anthropology there prevailing, and
moulding all their forms of thought, was still that of
the second and third centuries, and thus Pelagius es-
caped so easily when his opinions were inquired into.

It seemed as if in the East the cause of Pelagius and his
followers would triumph. They exulted at the vic-
tories they had gained over their opponents. But the
storm was not over; for the victory of the West was
only a truce, and a truce, longer than ever to expose and condemn the deadly errors
which were growing up under the sanction, seemingly,
of the Eastern synods. Jerome condemned these sym-
doms as themselves heretical. The vigilant and ener-
getic Augustine now girded on his armor, and stood in
the foreground as the great champion of the doctrine
of grace. His penetrating and philosophic mind, and
the deep insight he had gained in the school of Chris-
tian experience into the true nature of the Gospel, en-
abled him to see through the disguise under which the
errors of the Pelagians and theジー was characterized by an
fatal character of its doctrines. He contended earnestly
for the faith. He agitated the African Church to in-
vestigate the whole matter, and to give forth an unam-
biguous decree on the subjects in dispute. At the same
time he published his first work on the controversy,
titled De genio Pelagii, in which he spoke strongly
against the Eastern bishops in allowing themselves to
be so grievously misled by the plausible reasonings and
ambiguities of Pelagius. This was the first of a series
of works which Augustine published from time to time
during the space of twelve years who were engaged
mainly in conducting this controversy.

of grace. His penetrating and philosophic mind, and
the deep insight he had gained in the school of Chris-
tian experience into the true nature of the Gospel, en-
abled him to see through the disguise under which the
errors of the Pelagians and theジー was characterized by an
fatal character of its doctrines. He contended earnestly
for the faith. He agitated the African Church to in-
vestigate the whole matter, and to give forth an unam-
biguous decree on the subjects in dispute. At the same
time he published his first work on the controversy,
titled De genio Pelagii, in which he spoke strongly
against the Eastern bishops in allowing themselves to
be so grievously misled by the plausible reasonings and
ambiguities of Pelagius. This was the first of a series
of works which Augustine published from time to time
during the space of twelve years who were engaged
mainly in conducting this controversy.

Two provincial synods were held in the year follow-
ing (416): one at Mileum, in Numidia, composed of six-
ty-one bishops, among whom was Augustine, presided
over by Silvanus, and the other at Carthage, presided
over by Aurelius, by both of which the decisions pro-
mulgated by Pelagius and Celestius were examined,
and being found heretical were solemnly condemned.
These synods respectively sent letters to Innocent I,
the Roman bishop, giving him an account of their pro-
ceedings, and assuring his accusers that they had declared
what they had pronounced. A third letter, sent in the names
of five African bishops — Augustine, Aurelius, Alypius,
Euseobus, and Possidius—conveyed to him fuller infor-
mation regarding the heretical character of the opinions
entertained by Pelagius. They at the same time also
sent him one of the books published by Pelagius, that he might examine it for himself. Innocent, in reply to those letters, expresses himself well pleased with the useful labours of the North African bishops in refuting the errors of Pelagius and Caelestius, and the legitimate head therefore of Christendom! He then declares his full concurrence in the sentence they had pronounced against the heresy. "We can neither affirm nor deny," he says, "that there are Pelagians in Rome; because, if there are any, they take care to conceal themselves, and are not discovered in so great a multitude of people." It had been reported to him that the Eastern Council had acquitted Pelagius. With reference to this he says, "We cannot believe that he has been justly acquitted, unless the same learned men who convicted him, and the council by which he was convicted, have been absolved. But we doubt the authenticity of these acts, because they have not been sent us by the council, and we have not received any letters from those who assisted at it. For if Pelagius could have relied on his just defence, he could not have failed to oblige his judges to account with us. Even in these acts he has not justified himself clearly, but has only sought to evade and perplex matters. We can neither approve nor blame this decision. If Pelagius pretends he has nothing to fear, it is not our business to judge by his own witness. It is for those who have to come and get himself absolved. For if he still continues to entertain the same sentiments, whatever letters he may receive, he will never venture to expose himself to our sentence. If he is to be succorced, that ought rather to be done by those whom we believe are in a state of grace and in union with us. We have perused the book said to be written by him, which you sent us. We have found therein many propositions against the grace of God, many blasphemies, nothing that pleased us, and hardly anything but what displeased us, and ought to be rejected by all the world." Pelagius' letter, dated from Mysia, at this time was rejected; and he was not absolved but condemned. Zosimus, who came probably originally from the East, a man whose knowledge of Christ's astounding miracles was superficial and indefinite. Caelestius went to Rome to prosecute in person his appeal against the decree of the African synods. Zosimus readily favored the appeal to his judgment. He was so far influenced by the written statements of the appeal (dated in April, 418, "Epistola deceptus," says Petavius), and by a letter in favor of Pelagius from bishop Praylus of Jerusalem, as well as by the more detailed oral explanation and promises of submission to the papal decision made by Caelestius, that he reversed the sentence of his predecessor Innocent, and declared in very strong terms his disapprobation of the decision of the councils of Milenum and Carthage. He sent two letters to the African Church, in which he declared that they were guilty of doing a great wrong to Pelagius and his associate, by condemning them as heretics on grounds altogether insufficient. He complained that they had too hastily given heed to the representations of Heren and Lazarus, "whose ordinances," says he, "we have found to be irregular; and no accusation ought to have been received from them against an absent person, who being now present explains his faith and answers his accusers. If these accusers do not appear at Rome within two months, to convict him of having other opinions than those which he professes, he ought to be deemed innocent to all intents and purposes.

The African clergy were by no means satisfied with this reversal, as might be expected. They accordingly again met in general council in Carthage in 418, and drew up a full statement of their views, showing why they could not accept the explanation of Pelagius and Caelestius, and why they still adhered to their former sentence against them. In their letter to pope Zosimus they say, "We have ordained that the sentence given by the venerable bishop Innocent shall subsist until they shall confess without equivocation that the grace of God is free from all conditionality, but also to do justice in every action; insomuch that without it we can neither think, say, nor do anything whatever that belongs to true piety. Caelestius' having said in general terms that he agrees with Innocent's letter is not satisfactory in regard to persons of inferior understanding, but you ought to anathematize in clear terms all that is bad in his writings, lest many should believe that the apostolical see approves of their errors." The council having entered fully into an examination of the various heretical opinions of Pelagius and Caelestius, drew up and published in nine separate propositions—censa theocristianae—in opposition to the errors which they condemned.

Zosimus was induced, by the various representations that were made, to reconsider the matter. He accordingly summoned Caelestius before him, that he might examine into his opinions. However, from Rome without submitting to such a trial, whereupon Zosimus recalled the sentence of approval he had formally given, and confirmed that of his predecessor, "haareticum calliditate detecta." At the same time he sent an "Epistola Tractatoris," or circular letter, in which he stated the new decisions, excepting the decision of the Council of Carthage against Pelagius, addressed to all the bishops of the Western Church for their approval. They all subscribed it, with the exception of eighteen Italian bishops, the chief of whom was St. Julian, bishop of Eclanum, a small village in Apulia, "a man of a penetrating genius, learned in the Scriptures, and an accurate scholar both in the Greek and Latin languages." These refractory bishops were all deposed from their office as favorers of the opinions of Pelagius. They afterwards fled to Constantinople, and the bishop of that city and his associates were deposed and replaced by party. Some of them, however, again returned to Rome, and, retracting their errors and professing penitence, they were restored to their office. Julian continued to espouse the cause of Pelagius, whereupon, as Petavius remarks, "Cum Augustino grande certaminem imitito, homo linguis promptus ac desiratus sed proacx et temerarius." The civil as well as the ecclesiastical authorities were now moved to pronounce against Pelagianism. The case having been represented to the emperor Honorius, he issued a "Sacrum Rescriptum," dated from Ravenna, 420, Aug. 26. (Add. to this ed. "Sacramentes", who immediately, in conjunction with the prefects of the East and of Gaul, published an edict, commanding that all who were convicted of holding the errors of Pelagius should suffer banishment and confiscation of their goods. Such an appeal to the civil power was in accordance with the opinions which Augustine had already propounded during the Donatist controversy as to the sphere of the magistrate's authority. In replying to Julian, who complained that an appeal had been made to the civil magistrate in a matter that ought to be decided by an appeal to reason," he says—"Vidis non timere potestatem? bonum fac. Non est autem bonum, contra apostolicum sensum exserere et asserere heretici sensum. Damnata ergo heresia ab episcopis non ait acque examinanda, sed coerenda est a potestati Christianiae." Jesus Christ does assist us not only to know, but to do justice in every action; inasmuch that without it we can neither think, say, nor do anything whatever that belongs to true piety. Caelestius' having said in general terms that he agrees with Innocent's letter is not satisfactory in regard to persons of inferior understanding, but you ought to anathematize in clear terms all that is bad in his writings, lest many should believe that the apostolical see approves of their errors." The council having entered fully into an examination of the various heretical opinions of Pelagius and Caelestius, drew up and published in nine separate propositions—censa theocristianae—in opposition to the errors which they condemned.

III. Subsequent Controversies on the Subject.—In 429 Marius Mercator published in the East, and dedicated to Theodosius II, his work entitled Commontorium adversa heresiam Pelagii et Caelestii. It was translated into Latin, and published in the West in 431. That
work contains a powerful vindication of the Christian doctrine of sin and of grace, in opposition to Pelagianism, very much as Augustine did in his doctrine of grace. The prevailingly Eastern Ecumenical Council of Ephesus, also held in 431, gave forth a sentence in harmony with those that had been issued at Carthage against Pelagius and his opinions. Thus it became manifest that the agitations of these years had resulted in a triumph overthrown for the heresy which was taught by Pelagius. Yet it is obvious that the influence of the teachings of Origen, which prevailed so generally in the East, mitigated and modified to a great degree the opposition of the Church there to Pelagius and his opinions.

There was, as a result, another contingency, the object of divine grace, between the views of Pelagius and those of Augustine. Augustine held the doctrine of salvation by grace in the strictest Calvinistic sense of the phrase—that every one who is saved owes his salvation entirely to divine grace, without any meritorious co-operation of his own.

There were, even opponents of Pelagianism, who held that such a view necessarily led to the conclusion that the withholding of divine grace must be the cause of the eternal ruin of the non-elect, and that, therefore, every human being is absolutely responsible for his state. This led to the adoption of a middle course between Pelagianism and Augustinianism. Hence there sprang up a sect at first known by the name of Massaliotians, but afterwards styled by the schoolmen Semi-Pelagians. This was a doctrine more Pelagian than Augustinian in its essential characteristics. They said that the efficacy of grace depended on the manner in which it was received by man. This form of doctrine became dominant in the Church of Rome. Augustinianism had but few to defend it. It was as a system of doctrine almost forgotten, till the time of the Reformation, it once more rose to new life, and was embodied in the theology of Luther and Calvin. The Council of Trent gave full sanction in its canons to the doctrine of Pelagius on the subjects of sin and of regeneration. This is evident from the expositions given to these canons by such divines as Bellarmine. The Tridentine theologians vigorously maintain the Synergistic theory of regeneration, and as vigorously condemn the Monergistic theory taught by Augustine, and entering as an essential part into the theology of the Reformation.

IV. Analysis of Pelagianism.—Much importance attaches to the forms which the Pelagian controversy assumed when it first appeared for the first time on the field of Church history. What are called the "doctrines of divine grace," although always forming an essential part in the systems of both Augustine and Pelagius, were never an especial matter of controversy in the Christian Church, had never been the subject of controversy, and, consequently, had never been stated with any definiteness or precision of form till the time of Pelagius. The controversy, as at first conducted, while it cannot be said to have been exhausted, was carried on with so much skill, both on the one side and on the other, that scarcely anything new in the form of argument can be adduced. In the writings of Augustine, the great defender of the catholic truth of that age, there is found such a vast store of arguments, both philosophical and scriptural, in support of the cardinal doctrines of divine grace, that modern controversialists find little else remaining for them than to gather and present them anew. They are as valid now as when first exhibited in opposition to the ingenious and plausible reasonings of Pelagius and his immediate followers, Cæcilius and Julian of Eclanum.

The fathers before Augustine, in making reference to the doctrine involved in the controversy, certainly do not always use language which is sufficiently explicit, or which might not be interpreted as being antagonistic to Pelagianism; yet the manner in which they quote the Scripture, and the whole tone and tendency of their teachings, sufficiently demonstrate that they held substantially the same doctrines that Augustine afterwards fully developed into a system. Augustine quotes the fathers that preceded him as agreeing with him in his doctrine of grace. The principal conclusions of the fathers of the earlier centuries were with Gnosticism in its various manifestations. This led them to magnify unduly the power of man's free will. At this point the divergence in the direction of what afterwards was known as Pelagianism first made its appearance. The roots of that system may indeed, in this respect, be found in the ambiguous and frequently inconsistent language of the earlier fathers when speaking of man's possessing a freedom of will—a power of will in which they were more akin to the Gnostics than to the nihilists. The more than consistency with the other truths they maintained required, in affirming that man had a power to obey God. They failed to give due weight and importance to the influences of human depravity on the human will; and thus, while acknowledging that depravity, they attributed a power to the human will in the doing of good which it does not possess. They moreover confounded morality with evangelical holiness. A power to perform outward duties which belong to the sphere of morality is not to be confounded with a power which belongs to the sphere of holiness. The Pelagians, therefore, endeavored to establish the independence of the germs of his system are to be found in the writings of the fathers.

A scientific exhibition of the system of Pelagianism must rest on its primary or central principle, and must trace the connection of its several parts with that principle. Theologians are not at one as to what this fundamental principle in reality is. Starting from the circumstance that Augustine, in his first anti-Pelagian work, De peccatorum merits et remissione, combats the opposition to the proposition that physical death is purely natural, and that the first man would have died even though he had not sinned, Jansen and Garnier have maintained that this doctrine is the root of the whole system of Pelagius, out of which all its parts have sprung. Wiggers begins his development of the system with the doctrine of infant baptism, because that doctrine, though not the first, was one of the first about which the controversy arose. Another theologian of our own time, Julius Müller, finds the ground-principle of the Pelagian heresy in a superficial apprehension of sin—in the want of a true, heartfelt knowledge of sin. Such a defective understanding would lead to a denial of the condescension of Christ, in view of the necessity which God demands of us, and which Christ, the living law, shows us in the mirror of his own life. The existence of sin, with its dominion in the soul, is the fundamental supposition of Christianity, and its subjective recognition is the condition of its pardon; therefore error as to the inner being and operation of sin must result in a false doctrine of the saving grace of Christ. But since the chief and most general contrast does not lie between sin and holiness, but between nature and grace, it is plain, argues Wörtler, that we must look for the proper root and fountain-head of all Pelagian doctrine elsewhere. To know properly the principle on which Pelagianism rests, we must inquire thoroughly into the history of its dogmas as they develop themselves in the 4th and in the early part of the 5th centuries. This will lead us to inquire into the relation of cosmology, or, rather, of anthropoology, to soteriology, or into the question of the transition from creation to salvation, as Cyril of Alexandria has already briefly but distinctly indicated when, in expounding Is. xiii. 18; 1 Cor. v. 17; and Rev. xxi. 5, he has advanced the problem whether the salvation of Christ is not to be considered as a creation of the not altogether unseathed, but yet not altogether destroyed human nature, or as a restoration of man despoiled by the fall of his orig-
The doctrine of Pelagius stood in antagonism to this view of the state of man's will. His primary position is that moral freedom—the power to choose right or wrong—the "possibilitas utriusque partis," as he defined it—can never by any means be lost or impaired, that man must always and unchangeably stand in the same relation to good and evil. He would delete his Epistola de Dei et mortem Dei, c. 8, that if we would not place both good and evil in the region of physical necessities, but in that of moral freedom, man must possess an equal relation to both, and be able equally to choose, and to act upon his will. In other words, "Nec in manu sunt manifestum nature bonum, ut eam dicamus malum non facere posse, quam utique boni et maii capacem etiam profemer, sed ab hac eam tantummodo injuria vindicandas, ne ejus vitio ad malum videatur impelli, qui nec bonum sine voluntate faciamus, nec malum." The sin is not man's, he reasons, if it is necessary. Much more, if it is his, it is free: and if it is free, then he can avoid it. Now if the will is free, he continues, ever ready to do one of both, then it follows that it is able to do both, i.e. to sin or to avoid sinning. In his Confession of Faith, sent to Innocent the pope, Pelagius says, "Libermur sicut etiam a virtute," etc. He claims, "Non in animo meo Dei indigere auxilio; et tam illos errare qui cum Manichaei dicunt hominem peccatum vitare non posse, quam illos qui cum Joviniano asservant hominem non posse peccare; uterque enim tollit libertatem arbitrii. Nos sine Deo non salutare, nos vero dicens, "Sed etiam futurum esse humanae semper libertas, ut peccare posse, ut semper nos liber consenum esse arbitrii." He places the freedom that appertains to the will in an abstract indifference to good and evil. "Neque enim aliter spontaneum habeat poteret bonum, nisi aequi etiam malum habere potuisse." In like manner Julian also thus defines what he means by the freedom of the will: "Libertas igitur arbitrii possibilissimae est vel admittendi vel vitandi peccati, exors cogitantis necessitatem, quae in suo utpote jure habet ursum surge ram partem sequatur, i.e. vel arius asperaque virtutem vel demersa et palustria volupatum." The freedom of the will, he says, is nothing else than the "proximatis necessitatis;" so that no one is either good or bad in any other way than by his choosing freely to be that which he is. Freedom is, he says, "the possibilitas peccandi et non peccandi;" and as such is the "facultas in quod voluntatem latus suscipit insistendi arbitrii." In answering his arguments, Augustine thus states Julian's doctrine; "Libram tuum conarias ex utrique parte per equa lima membra suspendere, ut voluntas quantum est ad malum, tantum etiam sit ad bonum libera." In the conflict to which the amplification of such opinions gave occasion, Augustine took, as might be expected, the foremost place. He strenuously maintained, and this was his great doctrine—the doctrine which he was peculiarly honored to develop—that there is a distinction between nature and grace; and that grace is always, and only, the efficient cause of all that is truly good in men; yes, even in holy angels, beings who have never sinned, all their goodness and holiness they owe to grace alone, sustaining and confirming grace, though not, as in man's case, renewing and sanctifying. He affirmed that it was impossible for any one to occupy a just and elevated station in this life, as well as true happiness, which Pelagius declared was the essence of freedom; but that, on the contrary, as an intelligent, active moral agent, man must possess a positive character; that is, he must either be determined towards that which is good or towards that which is evil, so that man must have some moral bent or bias of his mind; that he must be either inclined towards God or away from him, and this before, in actual outer life, there is any manifestation of such a bias. According to the anthropology of the Western Church, the will is always regarded as in a state of determination or decision either towards good or evil. The Eastern anthropology, on the other hand, presented the will of man as intrinsically and essentially in a state
of equilibrium, a state of indecision, having a determinative neither to good nor to evil. According to the teaching of the former, freedom is self-determination, the acting from motives that are within ourselves—the not being compelled to act by a foreign power without us. Therefore, the freedom of the will is that it be self-moving; that is, be uncompelled in all the choice it makes. According to the teaching of the latter, the Eastern or Greek anthroplogy, the freedom of the will consists in its being in a state of indecision, indifference—the possibility of being in one part or the other, without being compelled to choose either of two contrasts—the power of choosing differently from what it actually does choose.

In speaking of the sinfulness of man there are two questions which must be carefully distinguished: 1. The question of his depravity or sinfulness, or inherent ungodliness of character; and, 2. The question of his guilt (reatus), or liability to punishment. In the Reformed Confession the two doctrines are kept distinct.† The guilt of Adam’s first sin is regarded as an actual part of the guilt which rests upon all his posterity. Adam and his descendants are regarded as being so identified that the guilt which rested upon him rests upon them also. The inherent depravity of man’s nature is to be regarded as the penal consequence of this guilt. But in the time of the Pelagian controversy, as concerning the justification and the regeneration, the question was, Does man come into the world in a state of innate depravity? and not, Does he come into the world with a sentence of guilt resting upon him? Hence, while the development given by Augustine to the doctrine of grace, in certain directions, has been of permanent and essential service to the Church, there was in it this defect, that he did not fully apprehend the doctrine of man’s inherited guilt. He did not deal with that question as apart from the doctrine of inherited corruption; and hence also his views of the doctrine of justification as being deliverance from this guilt, were defective. He was in this way led, not into the question of the provision that was necessary for securing pardon and acceptance to man, but into the provision necessary for his deliverance from corruption; or into the doctrine of a change of nature in conversion and regeneration.

If the will is only free when it is in a state of equilibrium—a state of indifference to either good or evil—having the same power in the one direction as in the other; if freedom exists in the will, determining it either towards right or wrong, there is an actu definitivum, an act, and has no existence apart from that act.† The act of sin does not change the nature of man, it only exposes him to punishment for the act itself. Taking up this position, Pelagius and his followers reasoned that man’s freedom consisted in this, that he is free to pronounce or tendency to sin—that he has not a sinful and depraved disposition. Sin is only something actual and personal, they affirmed, and cannot be of the character of a taint spreading over the nature and defiling it. This was one of their cardinal principles: Omne bonum ac malum quo vel laudabiles vel vituperabiles.

* The Dutch lexicographers, however, and as it seems to us the calvinistic Confessors that they did not keep these two questions sufficiently distinct. The guilt, and with it the penalty, of Adam’s sin was made to rest upon his posterity, and not his depravity simply. The confusion has arisen from not duly observing that depravity is properly predicable only of the moral affections, and guilt is the result of these affections voluntarily. Hence, although man’s moral nature is wholly depraved, his will is nevertheless free, so long as his affections are not held to exercise a necessarily dominant control over his determinations. For it makes but little difference whether the will comes under extra or sub intra, if in either case it is equally absolute. Depravity is inherited, guilt is not.—Ed.

† The writer here uses "sin" in an ambiguous sense. Strictly speaking sin is simply an act of transgression (Acts 15:5), but this implies sinfulness, which is a moral disposition.—Ed.

sumus non nobiscum oritur sed agitari nobis. Julian, who was the ablest and most systematic defender of Pelagianism, thus defines what sin is, and whence it arises, according to his theory: Constat esse peccatum. Quae- rimus quid sit; uterum corpus aliquod sicut quod ex multis agentibus ad eosque causas, ex aliis aliud aliquod elementum vel per cognitioem a reliquiorum communione purgatum. Puro nihil hominum est. Quid est ignorant? Appetitus libera voluntas quem prohibet justitia; vel ut definitione utriusque: Voluntas facienda quidquid justitia vetat, et unde liberum est absteniendae.† Again Julian says, If it is asked, Whence arises the first sinful will in man? I answer, A motu animi cogente nullo.

What is the true relation of man to God? Is he in the condition of one who needs redemption, who needs a divine power to act upon him, so as to raise him morally and spiritually from misery and ruin? This is the prominent question in the controversy as conducted between Pelagius and Augustine. The former asserted that human nature has continued in all its spiritual and moral capacities to that same state as it was when it emanated originally from the Creator—that till men individually, by the exercise of free will, chose that which was evil, they continued in the same sinless, innocent condition in which Adam was before he sinned. The Pelagians did not deny that Adam’s sin did affect his posterity, but they held that the sin of Adam, according to them, was a bad example. Augustine held that a sinful nature had descended from Adam to all his posterity, and that, as a consequence, they were all under the bondage of evil, from which a divine power was needed to rescue them. Men come, said the Pelagians, into the world in a state of primitive purity. It has no taint of corruption about it, so that men may live on through a long life—nay, have so lived—in a state of perfect holiness, such as Abel, Isaac, and Jacob, etc. Yet the influence of example they regarded as such that in general man was destined to the same, the same that deteriorated them and continually increasing. Such deterioration they looked upon, however, as only accidental, and as not essentially and necessarily belonging to man. Man they regarded as possessing perfect power to resist this deteriorating influence if he so willed it, and to grow up by the natural development of the faculties in the possession of which he was created into the character of perfect innocence before God. In order to this development there needed no divine power or influence whatever.

On the subject of grace, the Pelagians altogether denied that there was need for, or that God did at all exercise, any power upon man so as to determine the bent of his will. Maintaining the theory of the freedom of the will we have already described, they admitted no divine power to act upon the world with it. In this respect, as it might be deemed, speak of “grace” as bestowed upon man, but by the word they did not mean the “gratia praevieniens” or “preparans,” the divine influences going before and producing by an irresistible power the first motions of the soul towards goodness, but only the outward revelation made by God to man in the Scriptures and among those moral and spiritual powers bestowed upon him at his creation. The idea of a divine power influencing man’s inner nature, and bending his will, and determining the action of his mind, they altogether rejected. There was in the Pelagian system no place at all for the doctrine of a divine life being imparted to man through the redemption of Christ, and by the power of his Holy Spirit. They did not, indeed, deny to Christ the title of Redeemer, but the idea attached to that word was simply, as by his preaching and his life, he gave a perfect example—"exacta formae normae"—which, by our giving heed to it, will enable and elevate our nature to a position higher than that originally belonging to it by creation. As Adam gave a bad example to his posterity, so Christ gave a good example, and in this consists his excellence as the Re-
DEMETOR OF MAN. Christ, by his whole life on earth, and by his sufferings and death, and by the communication he made as the Teacher sent from God, supplied valuable motives which ought to induce men to greater efforts to resist temptation, and to imitate his example in a holy life; and beyond this there was in their system no room for the Saviour, the Lamb of God, for the redemption of evil.

V. LITERATURE.—Voss, Hist. Controversiarum Pelagianarum (Lud. Batav. 1618, 4to); Noss, Hist. Pelag. (Lov. 1702, fol.); Tillemont, Memoires Ecclésia.; Schröckh, Kirchengeschichte, vol. xiv; Neander, Kirchengeschichte, vol. iii; Petrius Latinorum, vol. ii; Bühler, Geschicht der röm. Literatur, suppl. vol. pt. ii; Versuch einer Progr. Darstellung des Augustinus und Pelagianismus nach ihrer geschichtlichen Entwicklung, by G. F. Wiggers, professor of theology (Kostock, Hamburg, 1858). The first part of this work was first published in 1821. It was translated into English by Prof. Emerson, of Andover, and published in 1840. The second part deals with the semi-Pelagian controversy down to the time of the second Synod of Orange. Wörters Der Pelagianismus nach seinem Ursprunge und seiner Lehre, (ei. triffr. 1846) The Time and Circumstances of the Birth of Pelagius, the first of which was published a few years previously under the title Gebrüder der christlich-lettische vordruck am Verhältnisse von Gnade und Freiheit, the last before 1847. The second volume of the author's History of Pelagianism, the first of which was published a few years previously under the title of Geschicht der christlichen Lehre über das Verhältnisse von Gnade und Freiheit bis auf Augustinus, C. ducis Pontanus, Theological Essays, by the Rev. John Keener. Rev. first series. Brit. and For. Exq. Rev. 1867. Cunningham, Historical Theology (Edinb. 1864), vol. i; Shedd, Hist. of Christian Doctrine; Hagenbach, Hist. of Doctrines (W. G. E.).

Pelagius, a very noted ecclesiastical character of the latter century, whose origin and early history is much obscured, was the exponent of a heretical theory concerning the dogma of original sin (q.v.) and the necessity of divine grace. His contemporaries applied to him the title of Birens, from which it has been concluded that he was a British monk. His real name is said to have been Morgan (Marieman), which was translated into Pelagius (παλαγιος). About the year 400 he went to Rome, when he began to teach the system of doctrine with which his name is generally associated. The chief events of his history are noticed under the article PELAGIANISM (q.v.). The time and circumstances of his death are unknown. He was the author of the following works: Exposition in Epistola Pauli libri xiv. These commentaries, consisting of brief, simple explanatory notes on all the Epistles of Paul, with the exception of that of the Hebrews, were at first attributed to a bishop of Tarentum. He is found a place among the MSS. of Jerome. They are printed in the Benedictine edition of that father's works, and also in that of Vallarsi. Quotations made from them by Augustine led Marcus Mercator and others to the conclusion that they were the work of Pelagius, although as they have come down to us in a somewhat mutilated form, as the editors of Jerome's works regarded it as their duty to expunge from every passage which seemed to them to favor of heresy (see Gairner's ed. of Mercator, App. ad Dia. vi, 367).—Epistola ad Deuteronomium; after addressing to a much larger distinc- tion. Like the other works of Pelagius, this also was assigned to Jerome, and is found in the best editions of his works. Its real authorship was ascertained from the quotations made by Augustine in his De Gratia Christi. It was published separately by the monks of 1775 Libellus Fidei ad frequentissimam Populorum. This also had a place among Jerome's works, and its real authorship was only discovered by quotations in Augustines De Gratia Christi;—Epistola ad Cæsarem Matronem de Ratione pie vivendi, found among Jerome's correspondence. The parallel 148, in Vallarsi's ed. of his works. Erasmus assigned it to Paulinus of Nola, and Vallarsi to Suecicus Severus; but Semler has shown from its style and tone it was the work of Pelagius.

The following fragments of works are also found: Eclogiæ Liber, designated by Gennadius as Elopig—

us pro actualis conversatione ex divinis scriptoribus Lib.—er Honorios pro actuali vita Liber. It was a collection of Scripture texts, arranged and illustrated after the manner of the Vitae of Cyprian (see Jer. Mart. Rome, 4th ed.) In addition to the Pelagianorum, op. iv, 8; De Gestis Pelagii, comp. Garnier, Ad M. Merc. Append. ad Dia. vi: De natura Liber, to which Augustine's De natura et Gratia was a reply.—Liber ad viduam consolatoria atque eruditorum (see Jerome, De vita ad. Pelag. lib. iii); Augustine, De Gestis Pelagii, c. 6;—Epistola ad Augustinum (see De Gestis Pelagii, c. 26);—Epistola ad Augustinum secundam (see De Gestis Pelagii, c. 30). See Augustinus, De Grat. Pelag. ch. xxx; Voss, Hist. Controver. Pelag. (Lug. 1618); Tillemont, Memoires Ecclésiast.; Schröckh, Kirchengeschichte, vol. ii; and the literature quoted in the art. PELAGIANISM.

Pelagius, Sr., an Eastern ecclesiastic, flourished in the second half of the 4th century. He was made bishop of his paternal city, Laodicea, notwithstanding that he was a married man, because he abstained on religious grounds from all sexual connection. He was one of the leaders of the Arian party in the controversy with the Arians took part at the synods of Antioch (A.D. 361) and Tyana (367). He was banished to Arabia by the emperor Valens in 370, but was permitted to return in a few years, and was present at the Council of Constantinople in 861, and was one of its most honored attendants.

Pelagius I, pope of Rome, succeeded Virgilius in the see of Rome (A.D. 566). Like his predecessor, he was involved in dogmatic controversy with most of the Western bishops concerning certain theological tenets condemned by the Council of Constantinople, and known in controversial history by the name of the Three Chapters. His support of Arians in his views by the emperor Justinian, who was fond of interfering in theological disputations. He died in 560, and was succeeded by John III (see Norris, De Synodo Quinto). Sixteen of his Epistles are extant in the Concilia, tom. v.

Pelagius II succeeded Benedict I as pope of Rome in 579. He was likewise embroiled in disputes concerning the Three Chapters above mentioned. In the mean time a council which assembled at Constantinople be- stowed on the patriarch of that city the title of ecumenic, or "universal" bishop, at which Pelagius was greatly offended. He died at Rome in 590, and was succeeded by Pelagius III. Ten of his Epistles and six Decrees are extant in the Concilia, tom. v.

Pelagius, Alvarus, a noted Spanish Franciscan, flourished in the first half of the 14th century. He was a scholar of Duns Scotus, and first became grand penitentiary of pope John XXII (1316-34), and later bishop of Silves, in Algarve. He is noted especially as the defender of extreme Ultramontanism by his De planctu ecclésiae (Ulm, 1474; Lyons, 1570; Venice, 1560). He regarded the power of the pope as limitless, and not even bound by the laws he might himself have given. Everything is subject to the pontiff, even of course all councils included, even the eccumenical. The tri- sional of Christ and of the nation earth are one. Pelagius' work belongs to the classical documents of the curialistic system of the Middle Ages. See Schwab, Johannes Gerson (Würzburg, 1855).

Pela'ah [some Pela'ah] (Heb. Pelagh, פֶּלֶג) [and briefly Pela'h, Pela'ah, פֶלֶג], distinguished of Jah, i.e., Elce-<hovah, Sept., פלַה, פֵלֶג, פֵּלָה, etc.), the name of two Jews.

1. A Levite who aided Ezra in instructing the people (Neh. viii, 7). B.C. 445. He afterwards joined in the covenant with Nehemiah (Neh. x, 10).

2. Son of Elioenai and a descendant of David (1 Chron. iii, 24). B.C. post 400.

Pele'lat'ih (Heb. Par'leh, נֵלְלָה, delivered of Jehovah; also in the prolonged form Pel'ālu', נֵלָלָה, Ezek. xii. 15; Sept. Φαλαλία, Φαλαλία, Neh. Φαλαλία, in Ezek. Φαλαλία), the name of four Jews.

1. Son of Isah, of the tribe of Simeon, and one of the captains of the five hundred men who made a successful attack on the Amalakites in Mount Seir, in the reign of Hezekiah (2 Chron. iv. 42). B.C. cir. 730.

2. The son of Beniaiah, and one of the princes of the people against whom Ezekiel was directed to utter the words of doom recorded in Ezek. xi, 5-12. The prophet in spirit saw him stand at the east gate of the Temple, and, as he spoke, the same vision showed him Pel'atiah's sudden death (Ezek. xi, 1, 18). B.C. cir. 592.

3. The first named of two (three) sons of Hananiah, among the descendants of David (1 Chron. iii. 21).

4. One of the heads of the people who joined in the covenant with Nehemiah (Neh. x. 92). B.C. cir. 440.

Pelayo, a noted medieval royal character, and a counterpoise to the brightness and power of the first Christian king in Spain after the conquest of that country by the Arabs. Contemporary historians make no mention of him, but this may be accounted for on the ground of the insignificant size of his kingdom, which comprised only the mountainous district of Asturias. He is said to have been a son of the royal Visigothic line, and to have retired before the conquering Arabs to the mountains of Asturias, where he maintained himself against the armies which were sent to attack him, defeating them in various pitched battles, and in numberless minor engagements. One of his most famous exploits was the destruction of a large army sent against him by Tarik, near Cangas-de-Onis. His men were posted on the heights bounding the valley through which the Arabs were to pass, and, waiting till the enemy had become involved in the defile, at a given signal overthrew them with enormous masses of rock. This great success caused Pelayo to be recognised as sovereign by the surrounding districts, and the Christians flocked to him from all parts of Spain. He was much engaged in contests with the Arabs, but never had the time to initiate and superintend the reconstruction of churches, and the establishment of a civil administration. He died in 737. Such is the account given us by later historians, who trace from him the genealogy of the royal family of Spain.

Pelbart, Oswald, a Hungarian Franciscan monk, noted for his learning and as a pulpit orator, flourished near the opening of the 16th century at Tem-csvari. We possess the following works of his, which are mostly homiletical, and have passed through numerous editions: Pomerian sermonum de tempore (Norimb. 1498, fol. et al.); Pomerian sermonum de sanctis (Hagenov. 1475, 1498, 1564, 2 vols. fol.); Quadragesimale triplex de penitentia, de vittis, de conceptis Decalogi (ibid. 1475, fol. et al.); Stellariurn coronae gloriisiam Virginmissum sive Pomerianum sermonum de b. Virginie (Argentin. 1496, fol. et al.); Expositio compendiosa socian litieranem et mysticam complectens libri Psalmorum, collect Pelhah chorum libris Hymnorum septem. Libri Canticorum de genere Prophectis, item Expositio Canticorum V. Posterius, Canticorum N. T., Symboli Aetheni, Hymni universalis creaturae (ibid. 1487, fol. et al.).

Pele'gh (Heb. id. יב, division; Sept. Φαλία v. r. Φαλία, Φαλία; Josephus, Φαλεα, Ant. i. 6, 5), the son of Eber, and father of Reu (Gen. xi. 16-19). B.C. 2415-2176. He was the elder brother of Joktan, and the fourth in descent from Shem. This name is said to have been given him "because in his days was the earth divided" (Gen. x. 25; 1 Chron. i. 19). This title is usually thought to refer, not to the general dispersion of the human family subsequently to the Deluge, but to a division of the family of Eber himself, the younger branch of whom (the Joktanites) migrated into southern Arabia, while the elder remained in Mesopotamia. The name Phaleg occurs for a town in the junction of the Chaboras with the Euphrates; but the late date of the author who mentions the name (Isidorus of Charax) prevents any great stress being laid upon it. The separation of the Joktanids from the stock whence the Hebrews sprung finds a place in the Mosaic table, as marking an epoch in the age immediately preceding the Deluge. According to others, however, the name indicates a mere earthquake, or at most an actual division of the earth in some geological conduction, in which islands and continents were separated and formed by volcanic agency, and followed by extensive emigrations (Gen. ix. 19; x. 32; Deut. xxxii. 8, 9). Peleh is called Phale (Φαλε) in the New Test. (Luke iii. 83). See DISPERSION OF NATIONS.

Pele'let (Heb. id. יב, deliverance; Sept. Φαλία, Φαλία, v. r. Φαλία and Ισωκαλία), the name of two Jews. See also Beth-Pal'elet.

1. The fourth named of the six sons of Jahdai, of the family of Caleb the Hezronite (1 Chron. iv. 47). B.C. post 1612.

2. "Son of" Azmaveth (q. v.), and brother of Jeziel, one of David's Benjamine captains at Ziklag (1 Chron. xii. 8). B.C. cir. 1056.

Pe'leth (Heb. id. יב, living; Sept. Φαλήθ, Φαλήθ), the name of two Jews.

1. The father of On, of the tribe of Reuben, who joined Dartham and his brethren in their rebellion (Num. xvi. 1). B.C. ante 1657. "Josephus (Ant. iv. 2, 2), omitting all mention of On, calls Peleth Φαλήθος, apparently identifying him with Φαθλο, the son of Reuben. In the Sept. Peleth is made the son of Reuben, as in the Sam. text and version, and one Heb. MS. supports this rendering.

2. Son of Jonathan, and a descendant of Jerahmeel through Onam, his son by Arath, being apparently the fifth in descent from Hezron, grandson of Judah (1 Chron. ii. 35). B.C. cir. 1618.

Pele'thithe [most Pelethite] (Heb. Pele'tith, Φαληθίτης, Sept. Φαληθίτης, Φαληθίτης; but 1 Chron. xviii. 17, Φαληθίτης), a class of persons mentioned only in the phrase Φαληθίτης, rendered in the A.V. "the Cherethites and the Pelethites." These two collectives designate a force that was evidently David's body-guard. These names have been supposed either to indicate their duties or to be Gentile nouns. Gesenius renders them "executioners and runners," comparing the Φαληθίτης, "executioners and runners" of a later time (2 Kings xi. 4, 19); and the unused roots לְעַל and בָּעַל, of both of which we shall speak later, admit this sense. In favor of this view, the supposed parallel phrase, and the duties in which those guards were employed, can also be cited. On the other hand, the Sept. and Vulg. retain their names untranslated; and the Syriac and Targ. Jon. translate them differently from the rendering above and from each other. In one place, moreover, the Gittites are mentioned with the Cherethites and Pelethites among David's troops (2 Sam. xxv. 18); and elsewhere we read of the Cherethim, who bear the same name in the plural, either as a Philistine tribe or as Philistines themselves (1 Sam. xxx. 14; Ezek. xxv. 16; Zeph. ii. 5). Gesenius objects that David's body-guard had already been chosen from the Levites to be a force to hateful to the Israelites as the Philistines. But it is
must be remembered that David in his latter years may have distrusted his Israelite soldiers, and relied on the Philistine troops, some of whom, with Ittai the Gittite, who was evidently a Philistine, and not an Israelite from Gath [see ITTAI], were faithful to him at the time of Absalom’s rebellion. He also argues that it is improbable that two synonomic appellations should be thus used together; but this is on the assumption that both names signify Philistines, whereas they may designate Philistine tribes. (See Thesaur. p. 719, 1107.)

The Egyptian monuments throw a fresh light upon this subject. From them we find that kings of the 19th and 20th dynasties had in their service mercenaries of a nation called Skyrygetana, which is pronounced Khk, almost letter for letter the same as the Hebrew Cherethim; and since the Skyrygetana were evidently cognate to the Philistines, their identity with the Cherethim cannot be doubted. If the Cherethim supplied mercenaries to the Egyptian kings in the 12th century B.C., according to our reckoning, it cannot be doubted that the same name in the designation of David’s body-guard denotes the same people or tribe. The Egyptian Skyrygetana of the Sea are probably the Cretans. The Pelethites, who, as already remarked, are not mentioned except with the Cherethites, have not yet been similarly traced in Egyptian geography, and it is rash to suppose their name to be the same as that of the Philistines, Typhand, for *t̠yphand;* for, as Gesenius remarks, this contraction is not possible in the Semitic languages. The similarity, however, of the two names would favor the idea which is suggested by the mention together of the Cherethites and Pelethites, that the latter were of the Philistine stock as well as the former. As to the etymology of the names, both may be connected with the migration of the Philistines. As already noticed, the former has been derived from the root *šáx* [he cut, cut off, destroyed] in Niphal, he was cut off from his country, driven into exile, or expelled, as we might say, as well as from the root *šáx* [he wandered or emigrated]. These previous inferences seem to become irresistible. The appropriate-ness of the names of these tribes to the duties of David’s body-guard would then be accidental, though it does not seem unlikely that they should have given rise to the adoption in later times of other appellations for the royal body-guard, definitely signifying “executioners and runners.” If, however, *typhand* meant nothing but executioners and runners, it is difficult to explain the change to *šáx* [he wandered or emigrated]. See Cheret-

Talmud, *buk* and *šépt*; *sepḥ* *šépt* *lev*, Lev. xvi, 18; *era* *šépt* *lev*, Deut. xiv, 17; *šépt* *lev*, Ps. cix, 6; *šépt* *lev*, Isa. xxxiv, 11; *šépt* *lev*, Zeph. ii, 14; Vulg. *pelican*, a scruple about the uncleanness of the bird; *pelican* is made of the *šépt* *lev* (Lev. xvi, 18; Deut. xiv, 17). The suppliant Psalmist compares his condition to “a *šépt* *lev* in the wilderness” (Ps. cix, 6). As a mark of the desolation that was to come upon Edom, it is said that “the *šépt* *lev* and the bittern should possess it” (Isa. xxxiv, 11). The same words are spoken of Nineveh (Zeph. ii, 14). In these two last places the A. V. has “corromant” in the text, and “pelican” in the margin. The expression “pelican of the wilderness” has, with no good reason, been supposed by some to prove that the *šépt* *lev* has been denoted by the Hebrew *šépt* *lev*, as in the beginning of Ps. cix, 6, 8vo ed.) says “the pelican must of necessity starve in the desert,” as it is essentially a water bird. In answer to this objection, it will be enough to observe that the term *mišrāb* (‘wilderness’) is by no means restricted to barren sandy spots destitute of water. “The idea,” says Prof. Stanley, “is that of a wide open space, with or without actual pasture; the country of the nomads, as distinguished from that of the agricultura

Pelian (πλέκα, καθ’; Syriac, kaka; Arabic and

Pell’as (Πelled v. r. Houding; Vulg. Pelias), a corrupt form (1 Esdr. ix, 34) of the name of BUXDILAA (Exta x, 35).

Pelian (πλέκα, καθ’; Syriac, kaka; Arabic and
they are said to dart down upon fish from a considerable height. Notwithstanding their perfect development of the nataotial structure, they are good flyers, and the form of their feet does not interfere with their perching on trees, in which habit they are somewhat peculiar among swimming birds. They are all remarkable for voracity. The skin which extends from the throat between the rami of the lower mandible is extensible, and this structure attains its highest point of development in the true pelicans, in which the distented pouch is capable of holding ten quarts of water. The use of this membrane is that of a reservoir for the temporary retention of the fishes that are captured; enabling the bird to dispose of the superabundant quantity for its own future consumption or for its sitting mate and young. The face of the pelican is naked; the bill, long, broad, and flat, is terminated by a strong, crooked, and crimson-colored nail, which, when fish is pressed out of the pouch, and the bird is at rest, is seen reposing upon the crop, and then may be fancied to represent an enamelled spot. This, as above observed, may have occasioned the fabulous tale which represents the bird as wounding her own bare breast to revive its young brood; for that part of the bag which is visible then appears like a naked breast, all the feathers of the body being white or slightly tinged with rose color, except the great quills, which are black. The feet have all the toes united by broad membranes, and are of a nearly orange color. *Pelecanus onocrotalus*, the species here noticed, is the most widely spread of the genus, being supposed to be identical at the Cape of Good Hope and in India, as well as in Western Asia. It is very distinctly represented in ancient Egyptian paintings, where the birds are seen in numbers congregated among reeds, and the natives collecting baskets of their eggs. They still frequent the marshes of the Delta of the Nile, and the islands of the river high up the country, and resort to the lakes of Palestine, excepting the Dead Sea. The *Pelecanus onocrotalus* (common pelican) and the *Pelecanus crispus* are often observed in Palestine, Egypt, etc. Of the latter Mr. Tristram noticed an immense flock swimming out to sea within sight of Mount Carmel (Ibì, i, 37).

**Common Pelican** (*Pelecanus onocrotalus*).

**PELICAN**, in Christian symbolis. A figure of this bird "rubbing herself"—that is, feeding her young with her own blood—was common in old churches, the allusion being emblematic of our redemption through the sufferings of Christ. The pelican often surmounts the cross. A brass pelican was employed as a lectern prior to the use of the eagle. See EAGLE; LECTERN.

**Pelisson.** See PELLISON.

**Pell, John,** a learned divine and mathematician, who settled at Breda as professor of philosophy and mathematics, and was a great correspondent of Cavenagh, who was born at Southwick, in Sussex, in 1610, and died in 1685. Besides the works published by him, his MSS. and letters in the British Museum occupy nearly forty folio volumes.

**Pell, W. E.,** a clergyman of the Methodist Episcopal Church, was born near the beginning of the 19th century. He was for many years a member of the North Carolina Conference; but, his health failing, he was obliged to resign travelling, whereupon he turned his attention to journalism, and subsequently became one of the editors of the Raleigh Sentinel. He was an advocate of Southern rights. He died at Raleigh, N.C., Nov. 11, 1870. See Appleton, Amer. Cyclop., xvi., 581.

**Pelea** (Gr. Πήλα), a city of Palaestina and one of the towns of the Decapolis in Peraea, being the most northerly place in the latter district (Pilny, v, 16, 18; Josephus, War, iii, 8, 3; comp. Ptolemy, v, 15, 23, and Stephanus, s. v.). It was also called Butis (ου Βουρις). The place is not named in the Bible, but the district of "Decapolis, and its cities, of which Pella was one, is mentioned in Matt. xxv, 25, Mark v, 25, John xiv, 2, 3, 4, etc. The district must have extended round to the south-east as well as to the east and north-east of the Sea of Galilee. Gerasa, Gadara, and Hippos, three cities of the Decapolis, lay to the south-east of that sea, and Pella is mentionèd in the list of cities (Wβιλα Πηλα) that must therefore have been somewhere in that direction. Eusebius and Jerome say that it was six miles from Jabesh-Gilead, on the road over the mountains from Gerasa to Bethshan, and twenty-one miles north of Amathus, now Amman, near the junction of the Zerka or Jabock with the Jordan. The name of Jabesh is still retained in Wady Yâbes, or the valley of Jabesh, which comes down from Jebel Ajjûn, or the mountains of Northern Gilead, in a south-westerly direction, and enters the Ghur, or the plain of the Jordan, about eight or ten miles below the latitude of Bethshan. Jabesh-Gilead no doubt lay somewhere within or upon that valley. The only ancient site with ruins within that valley, and on the old road from Bethshan to Gerassa, is one called Ed-Deir, on a height, on the south side of Wady Yâbes, a little to the south of Kefr-Abil—Arbel of Jeremias, and Arabel of Eusebius, in the borders of Pella. This, i.e. Ed-Deir, is supposed to be the site of Jabesh-Gilead (see Robinson, Lat. Bible Res., p. 319; Van de Velde, Palest, ii, 352). In early times a convent probably stood on the site of Jabesh-Gilead, or a convenit (ambiguously the last building that remained) hence probably the name of Ed-Deir, or "the convent," called perhaps at first "the convent of Jabesh-Gilead," and afterwards simply "the convent," meaning the convent of Yâbes or Jabesh. About two hours or six miles from Ed-Deir, on the old road to Bethshan, and about twenty-one miles north of Amâlich, on an elevated plateau in the side of the mountains of Gilead, immediately above the plain of the Jordan, and about 1000 feet above the level of that plain, almost directly opposite to, or to the east of, Bethshan, and immediately above Sukkot, or ancient Sochoth, in the plain below, is an ancient site with extensive ruins, called Tubâkkat Fahel, or Tubâkkat Felah, as Dr. Thomson's Arab guide called it, who insisted upon this being the true name (Land and Book, ii, 176). This no doubt is Pella. The Arabs pronounce it Felah, or Fahel, as they have corrupted their language, and use ω for b or p. The place is described by Porter as a low flat tell, in a nook among higher hills, having around it on the north, west, and south a narrow plain, with a ravine on its south side intersecting the plain. The tell and a part of the plain are covered with ruins—veritable remains of an ancient very important city. Columns of the Doric, Ionic, and Corinthian orders were observed by Irby and Mangles in 1818. Portions of the walls are still standing, and the line of
Pellegrini, Girolamo, an Italian painter, flourished at Rome, according to Zanetti, in 1674. None of his works are mentioned at Rome, but he was employed at Venice, where he executed several frescos on a large scale for the churches, which Lanzi says indicate a painter sufficiently elevated, though not very select, varied, or spirited in his forms.

Pellegrini, Pietro, a French missionary, was born in 1665 at Bordeaux. Admitted to the Society of Jesus, he taught philosophy and theology in several colleges of the order. At Paris his talents in the pulpit soon gained him a reputation. In 1683 he embarked for the missions, and, after having visited several houses of the society, went to Mexico, where he journeyed огромно far. He died April 21, 1667, at La Puebla de los Angeles (Mexico). We have of his works, Prolusiones sororiorum (Paris, 1644, 8vo), a collection of discourses: — Relation des Missions des Jésuites dans les îles et dans la terre ferme de l'Amérique méridionale (ibid. 1655, 8vo); — Introduction à la langue des Guayas, savages de l'Amérique méridionale (ibid. 1655, 8vo), a rare work. See Sottwell, Biblioth. scriptor. Soc. Jau; Brunet, Manuel du lib.; A. e. A. de Becker, Biblioth. des écriv. de la Compagnie de Jésus, 3e série.

Pellew, Sir Edward Pellew, G.C.B. He was educated at Eton and at Corpus Christi College, Oxford; received his orders in 1817; became in 1823 dean of Norwich; and in 1829, rector of Chart. His death took place at Great Chart, Kent, Oct. 13, 1866. He was an accomplished scholar, and published among other works The Life of Lord Sidmouth, and several volumes of Sermons. See Appleton's Amer. Cyclop. vi. 599.

Pellican, Konrad Rümker, a noted German divine of the Reformation period, was born at Ruffbach, in the Rhenish province of Alsace, in 1478. He was kept at school in his native place until he was fifteen years old, when his parents, who were poor, sent him to an uncle at Heidelberg to study there. But in 1493 he was deprived of all help, and he entered the Order of Cordeliers. Some time after he returned to Heidelberg, and thence went to Tubingen, where his success in study commanded great admiration. His proficiency in Hebrew was indeed surprising. He was a great favorite of the learned Franciscan — general Paul(us) Scriptorius, and while travelling found a companion in the conversation of Pederkrone, who undertook to supply him with a copy of the Hebrew prophets Isaiah, Ezekiel, and the minor ones. Although he had never studied Hebrew, he yet, by the aid of Reuchlin's rules on Hebrew conjugations simply, applied himself to its acquisition with such zeal that by the end of three months he had finished reading it, selected the roots, and arranged them in the form of a concordance. In the last — named work, however, he had the help of a Jew from Spain, Matthaeus Adriani. In the year 1501 Pellican was ordained presbyter. In that year he lost his parents, and on the occasion he transcribed seven penitential psalms in Hebrew, Greek, and Latin, to which he subjoined many appropriate prayers. The year following he received the degree of D.D. at Basle, and was made divinity lecturer at the Minorite convent. About this time he assisted in the preparation of Augustine's treatise on the Mass. In 1517 he went to Rome on business for his order, and was in that city impressed with the corrupt condition of the papacy, just as Luther had been, whose reformatory steps Pellican could therefore most heartily approve. Returning to Basle, he assumed again the duties of the guard-room, which the Jesuits could cloister there. In 1522 he became acquainted with Ecolampadius, and was soon suspected of reformatory tendencies. Thus in this very year, at a chapter of the
order in Leobn, in Suabia, and at another in Basle, he was constantly inquired about and watched by one Satzger, the provincial of the order. But as the senate of Basle interceded in Pellican’s behalf, no measures of censure were put in force against him. Shortly after he was, together with Céolamundus, made lecturer in divinity, he was induced to expose the Scriptures, and to adopt reformatory measures, he was sorely per-secuted and malign’d, as were all reformers. So long as he had remained a friar he had been universally es-teemed for his learning and integrity; but when it pleased God to convince him of the errors and absurd-ities of the papal calendar, and he began publicly to ex-pose them, he was directly made the object of its hate and persecution. In 1526, having at the request of Zwingli gone to Zurich for the purpose of hearing the lectures of Leo Judil on Hebrew, he there renounced popery; and was soon after married. A little while later he was by Zwingli’s interest made a professor of Greek and Hebrew at Zurich, and he evinced his fitness for the position by the publication of an edition of the Hebrew Bible, with the comments of Aben-Ezra and R. Salamon (1527). In his first lectures on the 15th chapter of the Gospel of Matthew, he proved that God who had taught him out of the Egyptian and papistic captivity, helped him to pass the Red Sea, and sing the song of Miriam with joy—“Sing ye to the Lord, for he has triumphed gloriously.” He diligently applied himself also to the study of the Turkish language, that he might be useful to his country, and become his neighbour’s efforts for their conversion to the Christian faith. During the thirty years that he was professor at Zurich, he was universally admired for his extensive learning and unwar-ned labours. He died in 1556, and was succeeded in his position by the illustrious Peter Martyr. His works consist principally of lectures and annotations upon the Scriptures, translations from the Greek, Latin, Hebrew, and Chaldee; as also the exposition of several books of the Old and New Testaments, together with a trans-lation from Ludovicus Vives, designed to convince the Jews of the truth of Christianity. His most important publications are, Pastrerium Davides ad Hebraicam veritatem interpretatum cum scholis brevisimis (Stras-burg, 1527, 8vo); the Zurich edition of 1552, in 8vo, is more carefully prepared and more complete.--Commentariorum Bibliorum cum rutilia editione, sed ad Hebraicam lecturam accurate emendata (Zurich, 1531-36, 5 vols. fol.). Richard Simon says of this work: “He keeps to the literal sense, and does not lose sight of the words of his text. Though well read in rabbinical authors, he seeks more to be useful to his readers than to display his knowledge. He considers it his business to borrow nothing from the Jews but grammatical observations.” The characteristics of Pellican were sincerity, candor, uprightness, and humanity, rendering him eminent in public life, and in private most amiable. See, besides the chronicle of his life which he has himself written, Fabrictius, Orationi de vita Pellicani (1608); Hesse, Pellicani’s Jugendgeschichte (1758); Hottinger, Altes u. Neues aus der Gelehrsamkeit; Merle d’Aubignié, Hist. of the Ref. in Switzerland; Adam, Vite teol. German., i, 126 sq.; Hagenbuch, Väter u. Begründer der ref. Kirche; Erich u. Graber, Altgermanische Encyklopädie; Middlesten, Lexan-gel. Biog., ii, 60.

Pellica, Alexicus Aurelius, an Italian theologian of note, was born at Naples in 1744, and was educated at the high school of his native place. When only twenty-one years old, and shortly after graduation, he translated Tillemon’s Life of Christ into Italian, and enriched it with learned notes. Two years later he was teacher of literature at the Conferenza, and at twenty-seven was appointed professor of ethics and archaeology at his alma mater. A year later he wrote a dissertation on the origin of the Church to the Senate, which was followed by other learned dissertations; but his chief-d’œuvre is De Christiana ecclesia primae, medium, et novissima aetatis politis libri iv (Naples, 1777, 3 vols. 8vo); new ed. by Ritter (Col. 1829), with add. by Brown, in 1838), which is one of the best archaeological works written by Romanists. He died in 1823.

Fellig, Edward, D.D., an English divine, flourished in the second half of the 17th century. He was a graduate of Cambridge University, and was vicar of St. Helen’s, London, in 1674; rector of St. Martin’s, Ludgate, in 1687; and vicar of Westminster, for many years rector of Petworth. He died about the opening of the 18th century. He published A Discourse, philosophical and practical, on the Existence of God (London, 1693-1705, 2 pts. 8vo), and many occasional Sermons (1675-1708), some of which were in opposition to the dogmas of the Church of Rome. See Watts, Bibl. Brit. s.v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Pellini, Andrea, an Italian painter, was born at Cremona probably near the opening of the 16th century. Very little is known of his personal his- tory. He is supposed to have been a scholar of Bernardino Campi. Luzzi says that "Pellini, though unknown in his native city Cremona, is celebrated at Milan for his Descent from the Croos, in the church of St. Eustorgius." This is a grand compo-sition, correctly designed and well colored, dated 1563.

Pellini, Marc’Antonio, an Italian painter, was born, according to Orandi, at Pavia in 1664. He first studied under Tommaso Gatti at Pavia, and after wards visited Bologna and Venice for improvement. He executed a few works for the churches in his native city, but did not rise above mediocrity. He died in 1709.

Pellisson-Fontanler, Paul, a noted French character of the reign of king Louis XIV, a renegade from the Huguenots, and the principal government agent for the conversion scheme of the Protestants through bribery, was born at Beziers in 1624. He was deprived of his father at an early age, and was educated by his mother in the principles of the Reformed Church. His family had for a long time been distinguished in the profession of the law, and to that profession he was also devoted. He studied successively at Castres, Montauban, and Toulouse, and acquired an intimate knowledge of the best classical writers, and of French, Spanish, and Italian literature. To the study of civil law and jurisprudence he especially devoted himself; the fruits of this shortly afterwards appeared in a paraphrase of the Institutes of Justinian, which was published at Paris in 1645. He commenced his legal career with considera-ble success, but his rise was speedily arrested by a most severe attack of small-pox, which permanently af-fected his sight, and so distiguished that he was com-pelled to abandon the practice of his profession. He retired into the country, and devoted himself to gen-eral literature. In 1652 he settled in Paris, where his writings had already made him advantageously known. The French Academy, in acknowledgment of the ser-vices he had rendered it by writing its history (the work perhaps by which he is best known), decreed that he should be appointed a member of it on the first va-cancy that should occur, and that in the mean time he should be permitted to attend their sittings: to enhance the honor, they further decided that a similar privilege should on no consideration be granted in future to any man of letters. The same year Pellisson purchased the office of secretary in the Academy; in the same year he was ap-pointed first clerk to the minister of finances. In this employment, where vast sums of money passed through his hands, he maintained his reputation for integrity, while his increased means enabled him to render pecu-niary services to the distressed men of letters in the capital. He resided in Paris until 1660, when he was appointed to the office of state counsellor. The following year, when the minister was found guilty of defalcation, Pellisson, as the supposed confidant of the
minister, was imprisoned in the Bastille. He remained upwards of four years in captivity. During this imprisonment he composed three memoirs in behalf of Fouquet, which have been reckoned the finest models of that species of writing in the French language. They became however the plea for additional severity to be exercised on Fouquet. But, to increase his confinement, he was deprived of the use of ink and paper, the want of which compelled him to have recourse to divers ingenious expedients, such as writing on the margin of his books with the lead of the casements. The persevering influence of his friends was at length successful in guiding him to liberty; and he was even received into favor by a king whose characteristic was seldom to forgive any opposition to his despotic will. The sufferings Pellisson had undergone at the Bastille were compensated by a pension and the appointment of historiographer to the king. In 1670 he abjured Protestantism for the Roman Catholic faith. This change, followed soon after by his entrance into holy orders, enabled Louis XIV to bestow upon him the abbacy of Giomont and the priory of St. Orens, a benefit of considerable value in the diocese of Auch. However, he insisted, distinguishable from the submission which be the lenient and tolerant disposition which he evinced towards those who disagreed with him in opinion, and, when high in royal favor, he publicly disapproved and opposed by his influence and writings the violent measures of the régime which employed the Inquisition to bring his Protestant subjects within the pale of the Roman Church. He persuaded his royal master to empower him to use money as he might see fit for the conversion of the Huguenots; and, as the king consented, Pellisson became the advocate of the policy of bribing the Nonconformists into the Church's fold. He communicated with the bishops, and placed in their hands sums of money, with instructions to employ them in indemnifying persons who might abjure heresy for any loss they sustained, or might imagine they sustained, by taking that step. Of course the plan worked well for there are always many whom gold will tempt, and it is not at all surprising that Madame de Maintenon could write in 1688, "M. Pellisson works wonders. He may not be so learned as M. Bossuet, but he is more persuasive. One could never have ventured to hope that all these conversions would have been obtained so easily" (sic). "I can well believe," she writes in another place, "that all these conversions are not equally sincere; but God has numberless ways of recalling heretics to himself. At all events, their children will be Catholics. If the parents are hypocrites, their offspring will at least be convinced and convinced to the truth; they bear the signs of it in common with the faithful. Pray God to enlighten them all; the king has nothing nearer to his heart" (Lettres et Mémoires de Madame de Maintenon, viii, 90). In 1671, on the occasion of the reception of the archbishop of Paris as member of the Academy, he delivered a panegyric on Louis XIV, which was translated into the Latin, English, Spanish, Portuguese, Italian, and even Arabic languages. In 1673, having incurred the displeasure of Madame de Montespan, he was deprived of his office of royal historiographer at least, but as the specious request continued to write the life of the king, and for that purpose accompanied him in several of his campaigns. Nearly every succeeding year of Pellisson's life was marked by some instance of royal favor. His death took place at Versailles in February, 1693. The fact of his not receiving the sacrament in his last moments has been explained by the Roman Catholic writers to be owing to the suddenness of his death; by Protestants to his unwillingness to sanction, by a solemn act of hypocrisy, a conversion which they allege to be insincere. The argument on both sides will be found in a pamphlet published by Bayle (art. "Pellisson"). It may reasonably be supposed that Pellisson was never truly won over to the Church of Rome, and that he professed conversion for selfish purposes. His efforts to win over Protestants was only to give them advantages of which he saw them deprived, and to avoid persecution. He corresponded with Leibnitz regarding the question of religious toleration, and laid down his views in Réflexions sur les différences en matière de Religion (1688). See Weiss, Réflexions, pp. 449, 452. Pellisson (Paris, 1683, 12mo), p. 65 sq., especially p. 78; Jervis, Hist. of the Church of France, ii, 63 sq.; Smiles, Hist. of the Huguenots after the Revocation (see Index).

Pelloma, an ancient Roman deity, was believed to ward off the attacks of the enemy.

Pelloutier, Simoux, a French historian, was born at Leipsic, Germany, Oct. 27, 1574. His father, a merchant established at Lyons, had been driven from France by the revocation of the Edict of Nantes. In 1584 he was elected member of the Academy of Sciences at Berlin, and was chosen for its librarian in 1745. He died at Berlin Oct. 3, 1757. His principal work is, Histoire des Celtes et particuliérement des Grecs et des Germains depuis la bonne fin jusqu'à la prise de Rome par les Grecs (La Haye, 1740-1750, 2 vols. 12mo). This edition is full of faults; Chiniac de la Bastide has given a second, revised and enlarged after the MSS. of the author (Paris, 1771, 2 vols. 4to, or 8 vols. 12mo), which was translated into German by Purmann (Frankfort, 1777-1784, 3 vols. 8vo). "This work," says the Journal des Savants, "is very curious and agreeable in many respects; it is full of an extremely varied erudition. The author, not satisfied with proving what he advances, always accompanies his proofs with judicious reflections, from which he arrives at very extended conclusions, calculated to throw light upon the history and antiquities of all the different peoples of Europe." The editor has added to the Histoire des Celtes several dissertations by Pelloutier; among others the Discours sur les Celtes, which gained for him in 1742 a prize from the French Academy of Inscriptions. See Brucker, Pindarez, déc. ii, No. 9; Tourney, Éloges; Haag, La France Protestante.

Pelón. See Pelonite.

Pelónite (Heb. se the art. hap-Pelón, "אֶפְּלוֹנְי"), as if from a place or man Pelon, otherwise unknown; Sept. "אֵפְּלוֹנְי" v. v. "אֵפְּלוֹנוּן" 1 Chron. xi, 27; "אֵפְּלוֹנְי"; 1 Sam. xiv, 36; "אֵפְּלוֹנוּן" 10; Vulg. Phalanotes, Phalanotes, Phalanote). Two of David's mighty men, Helez and Ahijah, are called Pelonites (1 Chron. xi, 27, 36). From 1 Chron. xxvii, 10 it appears that the former was of the tribe of Ephraim, and "Pelonite" would therefore be an appellation derived from his place of birth or residence. But in the Targum of rabbi Joseph it is evidently regarded as a patronymic, and is rendered in the last-mentioned passage "of the seed of Pelon." In the list of 2 Sam. xxiii Helez is called (ver. 20) "the Pelonite," that is, as Bertheau (on 1 Chron. xi) conjectures, of Beth-Pael, or Beth-Phelet, in the south of Judah. But it seems probable that "Pelonite" is the correct reading. See Paltite. "Ahijah the Pelonite" appears in 2 Sam. xxiii, 34 as "Eliam the son of Abitheloph the Gilonite," of which the former is a corruption of "Ahijah" forming the first part of "Abitheloph," and "Pelonte" and "Gilonite" differing only by כ and ב. If we follow the Sept. of 1 Chron. xxvii, the place from which Helez took his name would be of the form Phallu, but there is no trace of it elsewhere, and the Sept, must have had a differently pointed text. In Heb. יִפְלוֹנִי, peloni, as an appellative, corresponds to the Greek Ἐφαλωνή, "such a
PECOPEIA 882 PEMBERTON

solely of the Church in Havenstar, N. J. He died July 10, 1864. Mr. Petton was a man of strong mind, a ready preacher, and a good pastor. See Wilson, Prea. Hist. Almanac, 1866, p. 160.

Peleus (-us) (from πελας, μού), a name applied by the Origenists in the 5th century to the orthodox Christians, denoting that these were earthly and not heavenly, because they differed from them in their apprehension of spiritual and heavenly bodies.

Pelver, Bon-François Rivière (called the abbe), a French theologian, was born Aug. 5, 1714. He was a member of a community of clergymen formed in the parish of Saint-Germain-l'Auxerrois, and was admitted to orders by Bossuet, bishop of Troyes, who procured him the benefice of the title of sub-dean of the seminary. Dismissed by bishop Poncet de la Riviere, he retired to the community of Saint-Josse at Paris, and in 1765 assisted at the Council of Utrecht. His refusal to adhere to the formulary prevented him from performing any ecclesiastical duty. He died in Paris Jan. 18, 1781. His principal writings are, Dictionnaire sur l'approbation nécessaire pour administrer le sacrement de pénitence (1765, 12mo)—five Lettres sur la distinction de la religion naturelle et de la religion révélée (1769-70, 2 vols. 12mo)—six Lettres où l'on examine la doctrine de quelques scélérats au sujet de leurs sacrements (1776, 2 vols. 12mo); directed against the Jesuits Delarme, Floris, Paulian, and Nonotte—Dissertation sur la sacrisce de la messe (1779, 12mo), which drew him into a sharp controversy with Plowden, and were followed by a Réponse (1781, 2 vols. 12mo)—Exposition de la réunion de la doctrine des anciens et des nouveaux philosophes (1787, 2 vols. 12mo), in which the necessity of revelation is established. Abbé Pelver edited the treatise De Gratia of the abbe Gourin (1781, 3 vols. 4to), and left a large number of manuscripts. See Freire. Bibl. Normandie. vol. ii; Feller et Weiss. Bibl. Univ. a.v.

Pelvicia Amulárum is a term applied to the metal stands for the cruets (q. v.).

Pemberton, Ebenezer (1), a Congregational minister, was born about 1661, and was educated at Harvard University, where, after graduation, he taught for a while. Aug. 28, 1700, he became pastor of the Boston "Old South Church," and remained in that place until his death, Feb. 13, 1734. He published a number of Sermons, three preatory Epistles, etc. (1710-19; published collectively in 1727, 8vo). His Election Sermon of 1710 was highly esteemed. See Sprague, Annals of the Amer. Pulpit, i, 260.

Pemberton, Ebenezer (2), a Congregational minister, son of the preceding, was born in 1704, in Boston. He graduated at Harvard College in 1724; served for some time as chaplain at Castle William, and in 1727 became pastor of the Presbyterian Church in New York, where he labored until 1758, when he resigned, and was installed pastor of the Middle Street Church, Boston, March 6, 1754, and there remained until it was closed by the Revolution in 1775. Though one of the most popular preachers of his time, his friendship for governor Hutchinson, one of his rocks, caused an imputation of disloyalty, and created difficulties in the Church. He died in Boston Sept. 15, 1777. He published, Sermons on several Subjects, preached in the Presbyterian Church in New York (1738) —Dulce- lien Lecture (1766) —Salvation by Grace through Faith; Eight Sermons preached at Boston (1774); and a few occasional Sermons (1731-71). See Sprague, An- nals of the Amer. Pulpit, i, 260.

Pemberton, Israel (1), a Quaker preacher of great usefulness, was the son of Thineas Pemberton, one of the early settlers of Pennsylvania, and was born in Bucks County of that state in 1864. He was apprenticed to a merchant in Philadelphia, and subsequently became one of the most considerable merchants of that
city. He took an active part in the public affairs of the province, and was for nineteen years a member of the General Assembly. Having been trained religiously, he sustained through life an unblemished character by his justice, integrity, and uprightness. He was endowed with a peculiar sweetness of disposition, which rendered his company agreeable and instructive. He devoted himself to the administration of the truth, and approved himself a faithful elder, manifesting by his meekness and humility that, having submitted himself to the discipline of the cross, he was qualified to counsel others in the way of holiness. While attending the funeral of an acquaintance, he was seized with a violent stroke of apoplexy, and expired in about an hour, Jan. 19, 1754. See Janney, Hist. of Friends, iii, 384.

Pemberton, Israel, (2), a Quaker philanthropist, was brother of James and John, and grandson of Phineas, who came over with Penn, and settled near the Falls of Delaware. Israel, his grandson, a man of eloquence and liberality, devoted the latter part of his life to acts of benevolence, especially to the Indians. He died at Philadelphia in 1779, aged 63 years.

Pemberton, John, a devoted Quaker preacher, a native of Pennsylvania, and brother of the preceeding, was born Nov. 27, 1727. John was early interested in the Gospel labors of his society, and travelled extensively in the service of his divine Master. His first visit to Europe was in company with John Churchman, in the year 1750; his second was undertaken in 1782, and occupied him until 1789. His return to his relatives and friends after so long an absence was exceedingly gratifying to them all; but this pleasure was blunted by the early discovery that he came home under a bounded mind, from an apprehension that his duty was not fully performed, which occasioned so great distress and conflict as sometimes to affect his bodily health. In his disordered state he was more modest; but while he was among the great and distinguished, his manner was plain, solid, and dignified. To the different ranks of sober people he was open and communicative. To the poor he addressed himself with great tenderness and condescension, and might indeed be said to have been the poor man's confiding counsellor and friend. Like his Lord and Master, he went about continually doing good. He embarked for Amsterdam in the spring of 1774, and on his arrival in that city engaged in religious labors which occupied him some weeks. He then proceeded towards Pyrmont, in Westphalia, Germany, where he continued some time in meeting with the brethren. Bielefeld he was taken ill with a fever; yet he recovered sufficiently to travel, and reached Pyrmont early in the ninth month. He remained in that vicinity about four months, being in very poor health, yet most of the time occupied in religious labors. He died Jan. 31, 1775. See Janney, History of Friends, iv, 80.

Pembly, William, a learned Calvinistic English divine, was born in 1591; educated at Magdalen College, Oxford; removed to Magdalen Hall in 1618, and there became a noted divinity reader and tutor. He appears to have been a good Hebrew scholar, and employed his learning very advantageously in explanations of obscure passages of Scripture, and thorough expositions of the first nine chapters of Zechariah and the book of Ecclesiastes. He was a famous preacher, a good orator, an excellent scholar, and an ornament to society. He died in 1625. His works were published at London in one vol. (1655; 4th ed. Oxford, 1659), and embrace: Vindicia Fidel, or a Treatise of Justification by Faith; A Treatise of the Providence of God; Solomon's Reconcilation and Repentance, or the Book of Ecclesiastes explained; The Period of the Persian Monarchy, with its ancient Places of Ezra, Nehemiah, and Daniel: the chief Parts of the Hierarchies, and an Exposition upon the First Nine Chapters of Zechariah; Sermon on 1 Cor. xv, 20; Introduction to the worthy Receiving of the Lord's Supper; Five godly and profitable Sermons: A Summe of Moral Philosophy. See Wood, Athenae Oxonienses, Bickersteth, Christian Student; Darley, Cyclopaedia Biblica, Allibone, Dict. of Brit. and Amer. Authors.

Pembroke, Anne, Countess of, a noted English lady philanthropist, was the daughter and sole heir of George Clifford, earl of Cumberland. She was born at Skipton Castle, in Craven, in 1589. "To endowments naturally of a high order she added all those accomplishments which her high rank and extensive wealth brought within her reach. According to bishop Rain- bow, "she could discourse with virtuosos, travellers, scholars, or divines, with equal ease and liveliness without losing the graces of conversation. She was skillful in domestics in any kind." But she preferred "the study of those noble Beroeas, and those honorable women who searched the Scriptures daily; with Mary, she chose the better part of hearing the doctrine of Christ." She was twice married: her first husband was Richard, earl of Dorset; her second, Philip, earl of Pembroke and Montgomery. She survived the latter forty-five years, during which time she employed herself in a constant series of good works, extensive charities, and generosity to learned men; also in erecting sacred edifices, a noble hospital in many other stately buildings, both for the honor of her family and for the public good. While she was exemplary in her own religious observances, she was careful also that none of her servants should be remiss or negligent in that respect. In her intercourse with others she was condescending, and ever strove to oblige and alleviate others in their minds any consciousness of inferiority. She died in 1674.

Pen (27), Job xix, 14; Ps. xlv, 1; Jer. viii, 8; xvii, 1; and (27), chéret, Isa. viii, 1) properly means a style or reed. The instruments with which characters were formed in the writing of the ancients varied with the materials to be written upon. The proper pen was made of reed, calamus, hence a reed pen (Jer. xxxvi, 4; 3 John, 13). This was perhaps the most ancient pen for writing on soft materials; and it is still used by the Turks, Syrians, Persians, Abyssinians, Arabs, and other Orientals, as their languages could not be written without difficulty with pens made like ours from quills. Upon tablets of wax a metallic pen or stylus was employed. In engraving upon hard substances, such as stone, wood, or metallic plates, "an iron pen," or graver of iron or copper, was employed (Job xix, 24). See Ink; Reed; Writing. From the size and general appearance of some of the ancient reeds, as preserved in pictures found at Herculanum, we may perceive how easily the same word for stylus, slimmus, might denote the sceptre or badge of authority belonging to the chief of a tribe, and also a pen for writing with. For although the two instruments are sufficiently distinct among us, yet, where a long rod of cane, or reed perhaps, was (like a general's truncheon, or baton, in modern dress) the ensign of command, and a lesser rod of the same nature was formerly formed into a pen and used as such, they had considerable resemblance. This may account for the phraseology and parallelism in Judges v, 14: "Out of Michmim came down governors (legislators); Out of Zebulun they that hold the scepter of writers." The ancients also used styles to write on tablets covered with wax. The Psalmist says (Ps. xlv, 1), "My tongue is the pen of a ready writer." The Hebrew signifies rather a style, which was a kind of boltkin, made either of horn, bone, or bone and horn formed like a little spoon, or spatula. The sharp end was used for writing letters, the other end expunged them. The writer could put out or correct what he disliked, and yet no erasure appear, and he could write anew as often as he pleased on the same place. On wood this is founded that slimmus, "reed or cane," furnishing the style, and blotting out, "Seeme styllum vertas iterum, sua digna legi sent spiritus," Scripture alludes to
PENAL LAWS

the same custom (2 Kings xxvi, 13), "I will blot out Jerusalem as men blot out writing from their writing tables." I will turn the tablets, and draw the style over the wax, till nothing appear—not the least trace. Isaiah (viii, 1) received orders from the Lord to write in a great roll of parchment, with the style of a man, what should be dictated to him. It is asked, What is meant by the style of a man in this clause? It is one of these styles of metal; they were not used for writing on parchment. It is probable that the style of a man signifies a manner of writing which is easy, simple, natural, and intelligible. For generally the prophets express themselves in a style opposite to that of a paradoxical and an obscure style. Here God intended that Isaiah should not speak as the prophets, but as other men used to do. Jeremiah says (viii, 9) the style of the doctors of the law is a style of error; it writes nothing but lies. Literally, "The pen of the scribes is in vain." They have promised you peace, but the sword shall be in all their heart, and the sin of Judah is written with a pen of iron and with the point of a diamond. It is graven upon the table of their heart," or engraved on their heart, as on writing tables. The Hebrew says, a graver of shanir.

Penal Laws are statutes enacted for the secular punishment of those who are supposed to be in religious error. As such laws against Nonconformists in England were as follows:

1. An act for well governing and regulating corporations, 13 Car. II, c. 211. By this act all who bore office in any city or corporation in England, as mayor, aldermen, or freedom were to take the oaths and subscribe the declaration therein mentioned, and the same were to be published at the first meeting of the corporation, according to the rites of the Church of England. This turned the dissenters out of the government of all corporations.

2. An act for the better government of the Church of England, 16 Car. II, c. 4, which declared the nonconformists, vicars, and ministers, who enjoyed any prebendery in the Church, were obliged to declare their unfeigned assent and consent to the doctrine and ceremonies contained in the book of Common Prayer, etc., or be ipso facto deprived; and all schoolmasters, and other public teachers were disqualified for teaching or preaching without license from the archbishop or bishop, under pain of three months' imprisonment.

3. An act to prevent and suppress seditionist conventicles, 16 Car. II, c. 4, in which it was declared unlawful to be present at any meeting for religious worship, except according to the usage of the Church of England. This act prescribed a penalty of £50 for every person being in or assisting any such conventicle, and £20 for every second offence.

4. An act to restrain Nonconformists from inhaling in corporations, 17 Car. II, c. 11. By it all persons in any corporation in England would not take an oath therein specified against the lawfulness of taking up arms against the king on any pretense whatsoever. This act was in a state of suspension, and the administration of government in Church and State, were banished five miles from all the market towns, and subject to a fine of £20 in case they should preach in any conventicle.

5. Another act to prevent and suppress seditious conventicles, 17 Car. II, c. 5. Any person who should hold any conventicle in which conventicles were subject to a penalty of £20 for the first, and £40 for every subsequent offence; and any person who permitted such a conventicle to be held in his house was liable to a fine of £20; and justices of peace were empowered to break open doors where they were informed such conventicles were held, and take the offenders into custody.

6. An act for preventing danger which might happen from possessing arms in common, called the nonconformists, whereby every person was incapacitated from holding a place of trust under the government, without taking the sacrament according to the laws of the Church of England, and subject to a fine of £20 in case they should preach in any conventicle.

It may be added that in Scotland, about 1568, it was enacted that every examinable girl or striping must communicate in the parish church or pay a fine. In 1600 and in 1641 fines were imposed on all non-conformists under fifteen years of age. Dr. Lee prints a portion of a session record in which he orders: "Meggitt, spous to Thomas Clark, in Rosline, and Helen Denholme, spous to James Clerk, yr, for not communicating at this last communion, confessit, and credit them never to omit the said occasion, and payet 10a. Aug. 22. Then certain men in Rosline, for not communicating, were penated, and payed everie one of them 4s. 6d."

Severe laws were enacted against papists or trafficking priests, and again, against all who would not conform to prelacy in the days of the Stuarts. Ministers were banished and forbidden to preach, and tortured from the thumbkin and boot in many cases was resorted to. Protestant penal laws against papists are as bad in principle as popish penal laws against Protestants. As late as 1700, in Scotland, a statute was sanctioned by king William against the following effect: It rewards a great number of old acts which make it a capital offence, imposes fines and imprisonment upon every man who should harbor papists, or sell them books, or remove their children out of the country without the authority of the presbytery. It then goes on to state at large what a presbytery shall do. It says:

1. That every one who shall seize a popish priest in the country shall receive a reward from government; and if the priest shall attempt to conceal his profession, he shall be banished; and if he should return, be put to death. 2. If any person whatever shall be found in a place where there are any of the vestments or images used in popish worship, and refuse to leave the place of prayer he shall be banished, with certificate of death if he should return.

3. That the children of papists shall be taken from them by their Protestant relations. 4. No papist shall purchase land; and should he do so, and the seller come to the knowledge of the fact, he shall retain both the price and the land, and the papist shall have no redress.

5. That no papist, above fifteen years of age, shall inherit any property, moveable or immovable, and no papist above fifteen years of age, if he does not then become a Protestant, shall succeed his father. 6. No papist shall be in the power of any papist to sell and dispose any heritable property whatever. 7. That no money can be left to any papist. 8. That no papist shall be authorized to apostatize from Protestantism to Romanism, he shall forfeit his estate to his next Protestant heir. 9. That no papist shall be reigning or exercising the functions of any kind whatever. 10. That no Protestant shall keep a domestic servant who is a papist. 11. The presbytery of the bounds has power to apply the oath of purgation, which was as solemn andiquiet as man could frame it.

When will men learn that the forcible repression of opinion is not the way to change it? When it was proposed to alter some of those last penal laws, Scotland rose in terrible uproar, and the first attempt had to be abandoned. Those who enjoyed freedom themselves would not allow it to others; those who had smothered under poverty made it smart in turn, for they had not learned the lesson of tolerance. See Toleration.

Penalosa, Juan de, a Spanish historical painter, was born at Baesa in 1581. He was one of the ablest scholars of Pablo de Cepedes at Cordova, and assiduously imitated his style. He painted some works for the churches, but more for the convents. His picture of St. Barbe, at the cathedral of Cordova, is one of the most perfect performance, executed entirely in the style of his master. Penalosa died in 1636.

Penalties of the Mosaic Law. In this the controlling principle was the simple and natural, and therefore in early times general, one of recompense or revenge (Wachsmuth, H.W., Alte, ii, 118), the last lex (see Rothmaler, Jass Talioms, Jen. 1700; comp. Polyb. v, 9, 6), which was directed even against beasts (Exod. xxii, 23 sqq., Lev. xxiv, 17 sqq.: Deut. xix, 16 sqq.; comp. Gen. ix, 5; 1 Kings xi, 19), and the kindred notion of compensation for private trespasses (Exod. xxiii, 1 sqq., xxi, 28 sqq., Deut. xiii, 6). The object of all these laws was to deter men from wrong by terror was held in view (Deut. xvii, 18; xix, 20; xxi, 21); but this should not (with Michaelis, Mos. Recht, v, 6 sqq.; and Kleinsehch., Pen. Recht, ii, 138) be pressed too far, although it cannot be (with Welken, letzte Grunds, p. 252) wholly denied. These laws form a link between the ancient legislation of the Greeks, Romans, and Egyptians (on the last, see esp. Dion. Sic. i, 75). The particular penalties among the Israelites consisted in death, stripes, imprisonment, and in the payment of sums of money, which was done by dividing the payment among the party or left to the determination of the injured party (Exod. xxii, 28), or took the place of certain personal penalties (ver. 29 sqq.), for the redemption of which in this way
PROVISIONS

Penalty

Penance (Lat. penitentia) is the outward profession of sorrow, as repentance (q.v.), is the principle and inward feeling of sorrow for sin. The word is used in a negative and a positive sense. In a negative sense penance is manifested in the neglect of ordinary attention to the services of God. In a positive sense the word is useful to denote the performance of some acts of ecclesiastical discipline, enjoined or authoritatively imposed either as a punishment for offences by which the party has exposed himself to the censures of that ecclesiastical body called the Church, or as an expression of his penitence. For the sake of affording a historical treatment of the subject, we shall first consider the views and practices of the early Christian Church. (A pretty full account is given by Bingham, Origins Ecclesiae, and a more concise one by Coleman, Ancient Christianity Exemplified.)

The word is used so as to denote the expiation of sins committed by the worst criminals with simple death, in very recent times (Abbegg, Lehrb. d. Strafrechtsgesch. p. 187). The pardoning power, with which the administration of justice is associated in modern states, accords with this character of punishment; but prescription, in the criminal law, as a means of expiating guilt, may be traced back to the ancient right of blood-revenge. Of a gradation of penalties, increasing with each repetition of the offence, the Mosaic law knows nothing (comp. Abbegg, Op. cit. p. 230), but it appears in the criminal jurisprudence of the later Jews (Mishnah, Sanhedrin, ix, 5). The exemption by children of the offences of their parents is nowhere ordered in the law, although it was usual among other ancient nations (Cicero, Ad Brut. 15). On the contrary, Deut. xxiv, 16 directly opposes this practice (comp. 2 Kings xiv, 6; 2 Chron. xxvi, 4). But in Josh. vii, 24 some understand that the whole family were sharers in the guilt. (But see Achian. Keil's remarks on the passage are childish.) It may be seen from 2 Kings ix, 26 that lawless tyranny sometimes punished children with the father; but the children in the case of Naboth were heirs, and Ahab's main design could not be fulfilled only by the condemnation of the Naboths (1 Kings xi. 1). The punishment of whole nations at the will of an individual (see Esther iii, 6) is a work of Oriental despotism, of which examples have been witnessed even in modern times (Arvieux, i, 591 sq.). The only exception is the exemption of children of the second and third degree of relatives, who were made bondmen by heartless creditors (2 Kings iv, 1; Matt. xviii, 25). The threat in Exod. xx. 5 has nothing to do with civil jurisprudence (see Wegner's Interpretatio of the passage, Viteb. 1790).

There remains for examination the vexed question, which has an important bearing on the determination of the date of the crucifixion, whether the criminal trials and executions of the Jewish authorities could take place on the Sabbath and high feast-days. There can be no doubt, in the nature of the case, that offenders could not be executed on the Sabbath or high feast-days, and that it was done appears from John vii, 32; Acts xii, 3. But it cannot be shown from the Mishna (Sanhedrin, lxxvi, 1) that sessions of the Sanhedrin were held on such days. See PASSOVER. They certainly were not then usual (Mishna, Moma Tob, v, 2) and even on the preceding day they were avoided, if possible, lest in any way they should be held over into the Sabbath. It appears also from Acts xii, 4 that a condemnation, where possible, was postponed until after the festivals. But that executions were held during the feast cannot be doubted (Mishna, Sanhedrin, lxxi, i) and there were days, and that it was done appears from John vii, 32; Acts xii, 3. It is not supposed that the Sabbath, or a feast-day which was regarded as a Sabbath, could be chosen for such a purpose (see esp. Bleek, ivit, sur Evangelenkritik, p. 140 sq.). See PUNISHMENT.
the offender, but leaves him to the judgment of God.

"What have I to do to judge them that are without?" (ver. 12), i.e. those who are not Christians, to which class the uncommunicated person would belong. "Do not I sit in judgment within the members of the Church. But them that are without God judgeth; or, rather, will judge, apart, as the reading should be. It appears from 2 Cor. ii, 1-11, that the Church had not restored such to the privileges of communion, but was willing to do so, and that the apostle very gladly authorized the measure. It is important to remark that in the primitive Church penance related only to such as had been excluded from the communion of the Church. Its immediate object was, not the forgiveness of the offender by the Lord God, but his reconciliation to the Church. Hence, it could, therefore, only be open and scandalous offences. De occultis non judicii eccl:—the Church takes no cognizance of secret sins—was an ancient maxim of the Church. The early fathers say expressly that the Church offers pardon only for offences committed against her. The forgiveness of all sin she refers to God himself. "Omnis autem," says Cyprian (Ep. 55), "remissimus Deo omnipotenti, in cujus potentate sunt omnia reservata." Such are the concurrend sentiments of most of the early writers on this subject. It was reserved for a later age to consider the important distinction between the terms, and to place the former, open and public, to the Church, the latter, in the process of forgiving sin. The readmission of penitents into the Church was the subject of frequent controversy with the early fathers and ancient religious sects. Some contended that those who had once been excluded from the Church for their crimes ought never again to be received to her fellowship and communion. But the Church generally was disposed to exercise a more charitable and forgiving spirit. During the severe persecutions which the Christians suffered in the early ages of the Gospel, many, through fear of tortures and death, apostatized from the faith. It was not uncommon to see the Christians, on the scaffold, praying that these persons were desirous of returning to communion with the Church; but they were not readmitted to communion until they had made a public confession of their offence. In this manner confession began to be a part of ecclesiastical discipline; and being thus, in the first instance, applied to a crime of a public nature, it was afterwards extended to private sin. See Confession. Besides the shame of public confession, the offending party was compelled to submit to public reproof, to acts of penance, to exclusion from the sacrament of the Lord's Supper, and to temporary suspension of all the privileges of a Christian. See Penitents.

During the 4th and 5th centuries numerous councils were held for regulating the nature and duration of ecclesiastical censures, and for settling the degree of discretion with which such censures were to be exercised, with the purpose of relaxing and shortening them, according to the circumstances of the case. As public confession was soon found to be attended with many inconveniences, offenders were permitted to confess their sins privately, either to the bishops themselves or to priests deputed by them to hear such confessions. When the punishment, which was still public, though the sin remained secret, was finished, the penitent was formally received into the Church by prayer and imposition of hands. In the 5th century public penance was submitted to with difficulty and reluctance; and it was thought expedient to provide for public penance in certain cases. To this end, voluntary opposition was made to this at first, but the laxer custom prevailed. About the end of the 8th century penance began to be commuted: in the room of the ancient severities, prayers, masses, and alms were substituted; and in process of time the clergy of the Romish Church gained such an ascendancy over the minds of the people as to persuade them that it was their duty to confess all their sins, however private or heinous, to the priests, who had power to prescribe the conditions of absolution. The nature and origin of private penance is a subject of controversy between Roman Catholics and Protestants: the former contending that it had existed from the first, and that it held the same place in the ages of public penance for secret sins which the public penance did for public offences. At all events, from the date of the cessation of the public discipline, it has existed universally in the Roman Church. (See below.) According to Protestants, penance has no countenance whatever from Scripture, and is contrary to some of the most essential principles of the Christian religion; particularly to the doctrine of justification by faith in Jesus Christ alone, on the ground of his complete or "finished" work; penance being, in fact, founded on a doctrine of at least supplementary atonement by the works or sufferings of man—the sinner himself. The outward and accidental humiliations, sorrows, and repentance common under the Jewish dispensation, are regarded as very consistent with the character of that dispensation, in which so many symbols were employed. It is held that the self-inflicted austere mortification of the flesh of the Jewish and earliest Christian times, had for their sole purpose the mortification of unholy lusts and sinful passions in the people of God; or the expression of sorrow for sin, so that others beholding might be warned of its evil and restrained from it; all which is perfectly consistent with the principle of the necessity of a law, within the bounds of moderation and discretion. But penance in any other view, as a personal exercise, is utterly rejected. Arguments founded on the meaning of the two Greek words μετάνοϊα and μεταμομορφος, both translated in our English version repent, are much urged by this party; but the authority for the derivation of these words is not generally admitted. Moreover, such being represented as equivalent to the English do penance; but this is condemned by Protestants as inconsistent with the very use of the words in the New Testament itself. That penance began, as a practice, very early in the Christian Church, is not only admitted by Protestants, but it is alleged in proof of the very early growth of those corruptions which finally developed themselves in the doctrines and practices of the Roman Catholic Church, and of which Protestants also hold that there are plain intimations in the New Testament, though always ethical, but showing the development of their germs to have already begun during the age of the apostles.

In the Romish Church penance is affirmed to be "truly and properly a sacrament, instituted by Christ our Lord, for the benefit of the faithful, to reconcile them to God as often as they shall fall into sin by their own baptism" (Council of Trent, sess. 14, can. i). To receive this sacrament three things are necessary: first, sorrow for sins committed, along with a purpose to commit them no more; secondly, an entire confession of all the sins committed; thirdly, the performance of the penance enjoined by the confessor. By penance, as ordinarily employed, at least in Protestant literature, is meant not the entire sacrament, but the satisfaction or the doing of the penance imposed by the priest after confession. According to Roman theology, by the atonement of Christ, the guilt of the sinner is removed, but the external punishment of sin is remitted. Where the penitent has intense contrition the temporal punishment is also remitted. But ordinarily the temporal penalties remain to be suffered either in this life or in purgatory. "When St. Peter Stretts," says Whitby, "he contended that the entire punishment is always remitted by God, together with the fault, and therefore that penitents need no other satisfaction than faith, whereby they apprehend Christ who has made satisfaction for them, let him be assured. "Penance, accordingly, is imposed
PENANCE

upon the sinner, not only to atone for the punishment due, but also to cure the bad effects left by sin. If penance be not performed in this life, the penalties remain to be suffered in purgatory (q.v.), unless they are remitted by indulgence (q.v.). Besides fasting, alms, abstinence, and works of mercy are the general conditions of penance in the Roman Church; there are others of a more particular kind, such as the repeating of a certain number of Ave Marias, paternosters, and credos, the wearing of hair shirts, self-flagellation, etc. The acts of the penitent are to be stated, as it were (quasi novitatur), as the general conditions of penance, but the words of absolution (Ibid. sess. 14, cap. 5). The following is the manner in which public penance is inflicted in the Roman Church, according to Gratian (Decret. pars i, Dist. l, c. 64, p. 290, Paris, 1012):

"On the first day of Lent the penitents present themselves before the bishop, clad in sackcloth, with naked feet, and eyes cast down on the ground. This was to be done in the presence of the principal clergy of the diocese, by whom the penitents were introduced into the church, where the bishop was sitting, and the rest of the clergy repeated the seven penitential psalms. Then, rising from prayers, they threw ashes upon the penitents, and covered their heads with sackcloth, declaring to them, with mournful sighs, that as Adam was ejected from Paradise, so they were turned out of the way of salvation. The bishop then commanded the officers to turn them out of the church doors: and all the clergy followed after, repeating the curse pronounced upon Adam: "In the sweat of thy face shalt thou eat bread" (Gen. iii. 19). A similar penance was inflicted upon them the Thursday before the sacrament was administered, which was the Friday following. All this was done to the end that the penitents, observing from the Bishop's chair the Church, who had committed them to sin, should not lightly esteem of penance."

In the Roman Catholic so-called Douai version of the Scriptures the term penance is generally substituted for repentance. Thus, e.g. "Except ye repent," etc., is rendered "Except ye do penance;" and in Matt. i, 2 we have not "Repent," but "Do penance, for the kingdom of heaven is at hand;" and again in Mark i, 4: "John was in the desert baptizing and preaching the baptism of penance for the remission of sins." See REPENDANCE.

Dens, in his System of Divinity, divides penances into three classes: vindictive, medicinal or curative, and preservative. All satisfactory works are regarded as included under the three kinds—prayer, fasting, and alms. "The following," says this Roman divine, "can be enjoined under the head of prayer once, or oftener, either for many days or weeks, namely: 1. To say five paternosters and five Ave Marias, in memory of the five wounds of Christ, the body, hands, and feet, with benediction or unction, stretched arms, or before a crucifix. 2. To recite the rosary, or Litanies of the blessed Virgin Mary, or of the saints, etc. 3. To read the psalm Misereors, or the seven penitential psalms. 4. To hear mass, or prayers, or preaching. 5. To read a chapter in Thomas A Kempis. 6. To visit shrines, to pray before the tabernacle. 7. At stated hours, in the morning, evening, during the day, or as often as they hear the sound of the clock, to renew orally or in the heart ejaculatory prayers, acts of contrition or charity, such as 'I love thee, O Lord, above all things.' 8. To keep all my sins no more: 'O Jesus, crucified for me, have mercy on me,' etc. 8. At an appointed day to confess again, or at any rate, to return to the confessor. To fasting may be referred whatever pertains to the mortification of the body, so that a perfect or partial fast can be enjoined, which are the general conditions of penance: holy day, or oftener. (2) Let him fast only to the middle of the day. (3) Let him not drink before noon, or in the afternoon, unless at dinner or supper, though he may be thirsty; let him abstain from wine and from certain things that may be considered unwholesome. Let him eat little or in the late afternoon, and eat evening only half the quantity. (5) Let him rise earlier from bed; let him kneel frequently and for a long period; let him suffer cold, observe silence for a certain time, and abstain from sports and recreations, etc. To alms is referred whatever may be expected for the benefit of our neighbor. (1) To give money, clothes, food, etc. (2) To furnish personal assistance, to wait on the sick, to pray for the conversion of sinners, etc., and other works of mercy, whether corporal or spiritual."

As we have just seen, the Church of Rome affirms "penance" to be a "sacrament," instituted by Christ himself, and secret "confession" to be one of its constituent parts, instituted by the divine law; and she anathematizes those who contradict her: the Church of England denies "penance" to be a sacrament of the Gospel, affirms it to have "grown of the corrupt following of the apostles," and "not to have" the "proper nature" of a sacrament, as "not having any visible sign or ceremony ordained by God," and of course denies the sacrament affecting the body of the only. The Church of Rome pronounces that, by the divine law, "all persons" must confess their sins to the priest: the Church of England limits her provisions for confession to "sick persons." The Church of Rome pronounces that all persons are "bound" to confess; the Church of England directs that the sick "be moved" to make confession. The Church of Rome insists upon a confession of "all sins whatsoever: the Church of England recommends a "special confession of sins," if the sick person "feel his conscience troubled with any weighty matter." The Church of Rome denies the receiving of a reconciliation of God as often as they fall into sin after baptism, and imposes confession once a year; the Church of England advises it on a peculiar occasion. The purpose of the Church of England in so advising it evidently is the special relief of a troubled conscience; whereas the Church of Rome pronounces it to be "necessary to forgiveness of sin and to salvation:" and deponents with an anathema "any one who shall say that confession is only useful for the instruction and consolation of the penitent." Penance, then, according to the ecclesiastical law of England, is a punishment affecting the body of the only. As he is obliged to give a public satisfaction to the Church for the scandal he has given by his example. Instead of the ancient discipline practiced against offenders, the United Church of England and Ireland at present content herself with an official called a confession, or denouncing of God's anger and judgments against sinners, which is annually read on Ash-Wednesday after the morning service. In case of incest or of incontinency, the offending party is usually enjoined to do a public penance in the cathedral or parish church, or in some convenient place; the white shirt, bare head, and white sheet, and to make an open confession of his crime in a prescribed form of words. This penance is augmented or moderated according to the quality of the fault and the discretion of the judge. In smaller faults and scandals a public satisfaction or penance, as the judge of the ecclesiastical court shall decree, is to be made before the minister, churchwardens, or some of the parishioners, respecting being had to the quality and circumstances of the offence; as in the case of defamation or laying violent hands on a minister, or the like. As the Church of England still has an ecclesiastical discipline the public satisfaction or penance is ordained by the local authority, and in cases of civil or ecclesiastical jurisdiction it may be converted to the use of the public (Burn, Eccles. Law, iii, 77, 80. See also Collier, Eccles. Hist. bk. iv). In the discipline of all the other Protestant churches penance is now unknown. The nearest approach to the Roman Catholic penalty of the soul is the "satisfaction" of the Church of England, but this is very limited. In the late 17th century, and more particularly in the Church of Scotland during that and the succeeding century, when it was common to make satisfaction publicly on the Stool of Repent-
anci" (q.v.). As far back even as 1576 we find in the
records of the General Assembly this enactment:

"The kirk ordaines sic persons as are convicted of in-
cent or adulterie, and has not sinberously conmitit the ad-
ditions as perticular, to the kirk for vertif the silly clath-
communication for their offences, shall make public re-
penence in sackcloth, at their owne Kirk, bareheaded 
and barefooted, three sundry days of penitence, and, af-
fter the said third day to be receivit in the soliciue of the 
minister and Spiers, and there to be receivit under the 
clothes, as said in. Give they be excommunicat for their 
ofences, they shall stand bareheaded at the kirk door, 
every day, three times, from yeas before, and barefooted, 
from yeas before, and barefooted, six preaching days, 
at sixe preaching days, and to remaine in the publick 
place where they had receivit his sentence, and the by-
thee of the sermons, and depart before the latter prayer.

The others that are not excommunicat shall be placit in 
the publick place where they may be knewne from the 
rest of the people, bareheaded, the tyme of the sermons, 
the minister remembering them in his prayer in the tyme 
after preaching; all the said persons to bring their minis-
ters' testimonials to the next assembly of their behav-
or in the meanety, according to the act made made 
upon be the kirk in the 4d session, halden July 7, 1565.

No superintendit nor commissioner, with advyce of 
yny particular kirke of their jurisdictione, may dispense 
with the extermalitie of sackcloth preservyt in the act 
of generall discipline for any pecuniell soude ad pia 
tempesta.

These laws were impartially executed: peers and peer-
es, as the earl and countesse of Argyle, earl and count-
es of Arran—Arran being at the time prime minister— 
were laid under publice censure. Felons were subjected 
to such discipline, and then executed.

It does not seem to have occurred to the Reformers 
or their more immediate successors in the Protestant 
churches that their system of discipline, with its pub-
lc rebukes and enforced humiliations of various kinds 
—as the wearing of a sackcloth robe, and sitting on a 
particular seat in church—was liable to be interpreted 
in a manner most prejudicial to that of the expression of 
sorrow for sin; but the belief is now very general 
among the most zealous adherents of their doctrinal 
opinions that in all this they adopted practices incon-
gruous with their creed, and in harmony rather 
with that of the Church of Rome. Nor do they seem 
to have perceived that Church discipline (q.v.), in its 
proper sense, as relating to ecclesiastical rights and 
privileges, is wholly distinct from the imposition of 
penalties by churches or Church courts. Penitential 
impunishments, imposed by ecclesiastical authority, are 
not included in the scope of Church discipline, because 
Church discipline is most strict than where the utmost laxity prevails. The 
commutation of penalties deemed shameful, for a fine 
to the poor of the parish, was an abuse once prevalent in 
Scotland, but never sanctioned by the higher eccle-
siastical authorities.

p. 55); and especially Die unsererlands der abendlän-
dischen Kirche, by Dr. W. H. Wasserschleben (Halle, 
1851, 8vo., 720 pp.). After a historical introduction, 
showing a most thorough survey of the whole subject 
in its original sources, all the penitentials and canons 
relating to penance in the British, Irish, Anglo-Saxon, 
French, Italian, and Spanish churches are given in length. 
It is a repertory, in fact, of penitential law—not in ab-
stracts, but in a reprint of the original documents it-
selves.

Penates were certain inferior deities among the 
Romans, who presided over houses and the domestic af-
fairs of families, and were called Penates because they 
were generally placed in the innermost and most secret 
parts of the house, "in petentissim adium partes, quod," 
as Cicero says, "petitus insidit." The place where 
they stood was afterwards called penetralia, and they 
themselves received the name of Penetares. It was in 
the penetralia that the gods of the family were placed 
and therefore Jupiter, and some of the superior 
gods, are often invoked as patrons of domestic affairs. 
According to some, the Penates were divided into 
four classes; the first comprehended all the celestial, 
the second the sea gods, the third the gods of hell, and 
the last all serpents and reptiles. They had received divine honors 
after death. The Penates were originally the maus 
es of the dead, but when superstition had taught man-
kind to pay uncomman reverence to the statues and 
images of their deceased friends, their attention was 
soon exchanged for regular worship, and they were ad-
mitted by their votarics to share immortality and power 
over the world, with Jupiter or Minerva. The statues of 
the Penates were generally made of wax, ivory, sliver, 
or earth, according to the affluence of the worshipper, 
and the only offerings they received were wine, incense, 
fruits, and sometimes the sacrifice of lambs, sheep, goats, 
etc. In the early ages of Rome human sacrifices were 
offered to them; but Brutus, who expelled the Tarquins, 
abolished this unnatural custom. When offerings were 
made to them, their statues were crowned with gar-
lands, and the most ancient festival was held the mouth of 
that was set apart for their worship, their festivals were 
celebrated during the Saturnalia. Some have 
confounded the Lares and the Penates, but they were 
different.

Pendant (Lat. pendens, hanging) is a term common 
in architecture to designate (1) a hanging ornament which 
was much used in the Gothic style, particularly in 
late perpendicular work, on ceilings, roofs, etc. On 
more elaborate spandrils are frequently made very large, and 
are generally enriched with 

mouldings and carvings. Good specimens are to be seen in Henry VII's Chap-
el, Westminster; the Divin-
ity School, Oxford; St. Law-
rence, Evesham, etc. In open 
timber roofs pendants are 
frequently placed under the 
ends of the hammer-beams, and 
in other parts where the con-
struction will allow of them. About the period of the 
expiration of Gothic architecture, and for some time 
before, pendants were often used on plaster 
ceilings, occasionally of con-
siderable size, though usually 
small. (2) This name was 
also formerly used for the 
spandrel very frequently 
found in Gothic roofs under the ends of the tie-beams, 
which are sustained at the bottom by corbels or other supports projecting from the walls. In this position it 
is usually called a Pendant-post.

Pendentive is an architec-
tural term used to designate 
the portion of a groined ceiling supported by one pillar or im-
post, and bounded by the apex of the longitudinal and trans-
verse vaults; in Gothic ceilings of 
this kind the ribs of the vaults 
touch on the impost of each penden-
tive, where they become united. It also denotes the portion of a 
domical vault which descends
into the corner of an angular building when a ceiling of this description is placed over a straight-sided area; pendentives of this kind are common in Byzantine architecture, but not in Gothic.

Pendlebury, Henry, a Nonconformist divine, was born near the beginning of the 17th century. He was a minister at Harlow, Lancashire, in 1631, and was ejected for nonconformity in 1662. He died in 1695. His works are, a

Tracts on the Punic War.

Penelope, a river-god among the ancient Thessalians, said to be the son of Oceanus and Tethys.

Penobscot, F., an engraver, probably an Italian, by whom there are some spirited etchings of devout subjects after Italian masters and from his own designs, marked with his name, among which are the Holy Family, with St. Catharine and an angel in the air, after Parmigiano, and the Marriage of St. Catharine, from his own design. There is a fine expression in his heads, but he was negligent and incorrect in designing the extremities.

Penetralia, a surname applied to the different Roman divinities who occupied the penetralia or inner parts of a house. These deities were Jupiter, Vesta, and the Penates.

Penfield, Thomas, an American Christian philanthropist, was born at Savannah, Georgia. He died in 1834. His benefactions laid the foundation of the Mercer Institute, Green County, Georgia. Another monument of his charity is the Penfield Mariner's church, in Savannah, erected at a cost of eight thousand dollars. He also left a large property to other Christian charities, such as education, foreign and domestic missions, etc.

Peniel (Heb. Peniel, פֶּנֶּיאֵל, face of God; Sam. פֶּנֶּיאֶל; Sept. פֶּנֶּיאֶלָה; Vulg. Phanuel, and so also the Peshito), the name which Jacob gave to the place in which he had wrestled with God: "He called the name of the place 'Face of El', for I have seen Elohim face to face (Ex. xxxii. 30)." With that singular correspondence between the two parts of this narrative which has already been noticed under Mahanaim, there is apparently an allusion to the bestowal of the name in xxxiii. 10, where Jacob says to Esau, "I have seen thy face as one sees the face of Elohim." In xxxii. 31, and in the other passages in which the name occurs, its form is changed to Peniel (פֶּנֶּיֶל, Peniel, apparently of the same signification). On this change the lexicographers throw no light. It is perhaps not impossible that Peniel was the original form of the name, and that the slight change to Peniel was made by Jacob or by the historian to suit his allusion to the circumstance under which the patriarch first saw it. The Samaritan Pentateuch has Peniel in all. The prominent of the Ras-el-Shukah, on the coast of Syria above Beirut, was formerly called Theopropos, probably a translation of Peniel, or its Phoenician equivalent. The story of this vision was evidently some spot on the north bank of the Jabbok, between that torrent and Succoth (comp. xxxii, 22 with xxxiii, 17). This is in exact agreement with the terms of its next occurrence. It does not appear that there was any town or village upon the spot at the time of this wondrous event; but it was probably then marked by some rude cairn or stone to serve as a record of the divine presence.

We hear no more of it for five hundred years. After the defeat of the Midianites in the valley of Jezreel, Gideon pursued them to their home in the eastern district. On reaching the fords of the Jordan at Succoth, he asked the people of that city to supply food to his fainting followers; they refused, "and he went up thence to Peniel, and spake unto them likewise" (Judg. viii, 8). He passed on, and encamped in the valley of the Jordan through the glen of the Jabbek, which falls into the Jordan a few miles below Succoth. This would bring him direct to the site of Peniel, on which a city appears to have been built in the interval. It was natural, and in accordance with Eastern custom, that a holy place such as that of the God who had yielded the Midianites should be chosen for the site of the town. In the time of Gideon there was a tower (תֹּלֶד) at Peniel, which Gideon destroyed on his return from the conquest of the Midianites. It would seem too that the city was then completely depopulated (ver. 17). It may have remained a ruin till the days of Jeroboam, of whom we read that after taking up his abode in Shechem, he "went out from Shechem, and built Peniel" (1 Kings xii, 25). This was done, no doubt, on account of its commanding the fords of Succoth and the road from the east of the Jordan to his capital city of Shechem, and also, perhaps, as being an ancient sanctuary. We hear no more of Peniel in Scripture. It appears merely repeated (Jud. i, 20; 2, 20). There is no allusion to it (Jud. iv, 4), as do Eusebius and Jerome (Onomast., s. v. Fanuel). They do not appear to have known the exact site; and, indeed, Jerome represents the Penuel of Jacob, Gideon, and Jeroboam as distinct places.

Penington, Isaac, a distinguished and zealous preacher of the Society of Friends, was born in 1617. He was the son of Sir Isaac Penington, lord mayor of London; was married in 1648 to Mary Springett, widow of Sir William Springett, and mother of the wife of William Penn. Except when travelling in the discharge of his religious engagements, he resided on his estate, the Grange, at Chalfont, Buckinghamshire. From 1661 to 1670 he suffered imprisonment for conscience sake no less than six times. As this victim of persecution was a man of a remarkably meek and quiet spirit, though courageous in matters of religious principle, it is not unlikely that his republican parentage had some share in stimulating the unseasling vigilance of the civil authorities. It is an interesting series of facts that Thomas Ellwood was domestic Latin tutor to Isaac Penington's children; that it was through the good offices of Penington and Dr. Paris that the amiable tutor obtained the excellent post of reader in Theology at the University of Cambridge; and that it was to Ellwood’s suggestion that the world owes the inception of Paradise Regained. Penington died in 1672 at Goodnestone Court, Kent, and was buried at Jordans, in the county of Bucks, where his remains repose by those of William Penn. Of his numerous writings, which amount to more than eighty (principally expositions of his theological dogmas), a collection was published: The Works of the Long Mournful and Sorely Distressed Isaac Penington, etc. (1681, fol.). Among his productions are, Light or Darkness, Displaying or Hiding itself (London, 1650, 4to);—A Word for the Common Weal (1650, 4to);—The Fundamental Right, Safety, and Liberty of the People, briefly Asserted (1651, 4to)—Divine Essays (1654, 4to)—The Root of Popery Struck at (1660, 4to);—The Holy Truth and People Defended (1674, 4to)—His Testimony Concerning the Establishment of Civil and Liberty of the People (1681, 4to). See Allibone, Dict. of Brit. and Amer. Auth., ii, 1549; Thomas, Biog. Dict. s. v.; Webb, The Penns and Peningtons of the 17th Century (London, 1867).

Penington, John, eldest son of Isaac Penington, was born in Bucks County, England, in 1655. He died at Goodnestone Court, Kent, in 1710. He has been described as the author of The History of the Father's theological views, in whose behalf he published two tracts. Complaint (1681):—Exceptions
and e Xii of the Vulgate. These Psalms have been set apart from a very early period, and are referred to as such on page 353. It is in a letter to Pope Innocent III that they are recited in Lent. They have a special place in the Roman Breviary, and more than one of the popes attached an indulgence to the recital of them. The most deeply penitent, and the most frequent in use, both public and private, is the 51st Psalm, or the Miitere (50th in the Vulgate.)

Penitentiary is a word which has been variously applied. (1.) In the early Christian Church it designated certain presbyters or priests, appointed in every church for the government of the congregation; not in prejudice to the public discipline, nor with the power of granting absolution before any penance was performed, but in order to facilitate public discipline, by acquainting the people what sins were to be expiated by public penance, and to appoint private penance for such private crimes as were not proper to be publicly censured (Bingham, Orig. Eccles. bk. xviii. ch. iii.) The office of general confessor, or penitentiary priest, in a diocese, mentioned by Sozomen and Socrates, was abrogated in the East by Nectarius of Constantinople in the reign of the emperor Theodosius. It subsists, however, to this day among the three great patriarchal churches; and the names of those who are of various rank and dignity. Thus there are, 1. The cardinal grand penitentiary, who presides over the tribunal of the penitentiaries at Rome; and 2. Penitentiary priests, established for the hearing of confessions, and for the trial of cases, in each of the patriarchal churches; those of the Vatican, the Lateran, and of Santa Maria Maggiore. 3. Penitentiary priests, established in the cathedral churches for the purpose of absolving cases reserved to the bishops of the several dioceses. The Council of Trent (sess. 24, c. 8) decreed that every bishop should establish in his cathedral church a penitentiary, who must be either a master, a doctor, or a licentiate in theology or in the canon law, and of the age of forty years.

(II.) The term is applied among Protestants to such houses as have been established for the reception and reformation of females who have been seduced from the path of virtue. Of penitentiaries, in this sense, there are 38 in Great Britain and Ireland, capable of receiving 2657 inmates, besides numerous small private "Homes." The single condition of admission to most of the institutions is, that the inmates are to turn to a virtuous life. The inmates remain in the strictest seclusion for periods varying from a few months to two years, the average time being about a year; they then return to their friends, or to situations provided for them; and it is considered to be a noble work, not only without showing that she is provided with the means of honest subsistence. During their seclusion they are employed in needlework, washing, and housework. The ages at which they are received vary from fourteen to forty. In the metropolis there are 19 institutions, accommodating 1155 women; in other towns of England, 84 institutions, accommodating 1116; and in the chief towns of Scotland and Ireland, 10 institutions, with accommodation for 386. One third of the provincial and one half of the metropolitan establishments have been created in the last ten years. The oldest institution in existence is the Edinburgh Convalescent Hospital, opened in 1758; the next, that of Dublin, 1767; Edinburgh follows in 1797; and none of the others date earlier than the present century. The results of these penitentiaries, as far as they can be ascertained, are excellent. During the twenty years, 1815-1835, the number of inmates received was 8895, and 5671, or 64 per cent, have passed through the London Magdalen. This most important and useful institution is supported by voluntary contributions, patronized by royalty, and conducted on truly Christian principles, by means of which numbers of miserable outcasts have not only been recovered to the duties of moral conduct, but have given satisfactory evidence of genuine conversion to God.

(III.) In the United States the name, having been adopted by the Quakers of Pennsylvania in 1786, when they caused the legislature of that state to abolish the punishments of death, mutilation, and the whip, and to substitute solitary confinement as a reformatory process, is applied to all those prisons which are constructed on reformatory principles, whether the convicts be men or women. The happiest results have flowed from the efforts of the Prison Discipline Society directed to this point. See Prison Reform.

Penitents (I) is a name for those members of the Church who, having offended the laws of God or the ecclesiastical canons, seek reconciliation. Penance (q. v.), in the primitive Church, as Coleman, from Augusti, remarks, was a voluntary act of those who were subject to it. The Church not only would not enforce it, but refused even to urge or invite any to submit to the penitential discipline. It was to be sought as a favor, not inflicted as a penalty. The offending party had, however, no authority or permission to prescribe his own duties as a penitent. When once he had resolved to seek the forgiveness and reconciliation of the Church, it was exclusively the prerogative of that body to prescribe the conditions on which this was to be effected. No one could even be received as a candidate for the public penance for persons who were not in the Church, or not before the bishop or presiding elder. The period of penitential probation differed in different times and places, but in general was graduated according to the enormity of the sin, some going so far in their rigor [see Novatians] as completely to separate such from the church until they could carry it even beyond the grave. In the earlier ages much depended upon the spirit of each particular Church or country; but about the 4th century the public penitential discipline assumed a settled form, which, especially as established in the Greek Church, is so curious that it deserves to be briefly described. Sinners of the classes already referred to had their names enrolled, and were (in some churches, after having made a preliminary confession to a priest appointed for the purpose) admitted, with a blessing and other ceremonial, by the bishop to the rank of penitents. This enrollment appears to have commonly taken place on the first day of Lent. The penitents so enrolled were divided into four distinct classes, called by the Greeks Ἰδρισταί, ἱδριστοφόροι, ἱδριστοτὺποι, and συντόποι; and by the Latins, quattuor ordinibus, cinctus, remissorium, superintendens, and collator. That is, the mourners or weepers, hearers, kneelers, and co-standers. The duties required of penitents consisted essentially in the following particulars: 1. Penitents of the first three classes were required to kneel in worship, while in their other occupations. Hereafter they were required to make known their penitential sorrow by an open and public confession of their sin. This confession was to be made, not before the bishop or the priesthood, but in the presence of the whole Church, with sighs and tears and lamentations. These expressions of grief and confession were to renew every day, so long as they remained in the first or lowest class of penitents, entertaining at the same time in their behalf the prayers and intercessions of the faithful. Some idea of the nature of these demonstrations of penitence may be formed from a recital of the contained in the works of Cyprian. Almost all the canons lay much stress upon the sighs and tears accompanying these effusions. 3. Throughout the whole term of penance all expressions of joy were to be restrained, and all ornaments of dress to be laid aside. The penitents were required, literally, to beg the bread that was then necessary, and to wear coarse clothes. Nor were these acts of humiliation restricted to Ash-Wednesday merely, when especially they were required. 4. The men were obliged to cut short their hair, and to shave their beards, in token of sorrow. The women were to appear with dishevelled hair, and wearing a peculiar kind of veil. 5. During the whole term of penance, bathing, feasting, and sensual gratifications,
allowable at other times, were prohibited. In the spirit
of these regulations, marriage was also forbidden. 6. But
the most eminent act of penance was the exomologesi-

cosis, or confession of sins, which was a public ac-
nowledgment of offences, and a declared resolution of
never relapsing into the like (Bingham, Origines Eccles.

lk. xviii, ch. i-xiii). 7. Besides these restrictions and
rules of a negative character, there were certain posi-
tive requirements with which the penitents were ex-
pected to comply. They were obliged to be present,
and to perform their part, at every religious assembly,
whether public or private, a regulation which neither
believers nor non-believers were required to observe.
They were expected to abound in deeds of charity and
benevolence, and particularly in almsgiving to the poor.
Especially were they to perform the duties of the para-
bolani (q.v.) in giving attendance upon the sick, and
in taking care of them. These offices of kindness they
were expected particularly to bestow upon such as were
affected with contagious diseases. It was also their
duty to assist at the burial of the dead. The regula-
tions last mentioned are supposed to have been peculiar
to the Church of Africa. These duties and regulations
collected together are sometimes included in the general
term ἔσχολογις, confession. By this was under-
stood not only words, but works, both, in connection,
being the appropriate means of manifesting sorrow for
sin and the purpose of amendment. The festeis, or
mourners, were rather candidates for penance than pen-
titents strictly so. Their station was in the church
porch, where, according to Tertullian (De Penit., c. ix),
they lay prostrate, imploring the prayers of the faithful
as they went in, and desiring to be admitted to the pub-
lic penance of the church. The audientes, or hearers,
were those who, being admitted to penance, had the
privilege of entering into the church, in the narthex,
or lowest part of which they were allowed to stay, and
hear the Scriptures read and the sermon preached, but
they were obliged to depart before any of the common
prayers began. In this station they were to continue
to, one, two, or three years, according to the magnitude
of their offence. The subradi, or kneelers, were per-
mitted to remain in the church after the hearers had been
dismissed, and join in certain prayers which were spe-
cially offered up for them while they were kneeling;
and to receive the bishop's benediction. Their station
was within the nave or body of the church, near to the
ambo, or reading-desk. The consistentes, or co-stand-
ers, had the liberty, after the other penitents were dis-
missed, to stand with the faithful at the altar, and join
in the common prayers, and see the oblations offered;
but they were not allowed to make their own oblations,
nor to partake of the Lord's Supper with the other com-
municants. At length, when they had passed through
these several degrees of penance, they were admitted to
the Eucharist, and were then said to attain to perfe-
tion, the participation of the Eucharist being deemed
the highest state, or consummation and perfection, of a
Christian.

When a penitent desired to be admitted to do pub-
lic penance, and his petition was accepted, the first
step was to grant him penance by imposition of hands;
at which time he was obliged to appear in sackcloth,
and with ashes upon his head. Some think that this
was always done precisely on Ash Wednesday, the
first day of Lent, which was thence called diecinerum,
or the day of sprinkling ashes. But of this practice
there is no certainty. The time to be spent in each of
these graduations was first distinctly regulated according
to times and circumstances, but was afterwards regulated
by elaborate laws, called penitential canons. Still it
was in the power of the bishop to abridge or to prolong
it; a power the exercise of which is connected with
the historical origin of the practice of penance (q.v.).
The penitent, in ordinary cases, could only be restored
to communion by the bishop who had excluded him,
and this only at the expiration of the appointed time,
unless the bishop himself had shortened it; but in case
of dangerous illness he might be restored, with the con-
dition, however, that if he recovered from the illness
the whole course of penance should be completed. The
reconciliation of penitents took place commonly in Holy
Week, or Passion Week; hence also called Hædomas
Indulgentias, or Indulgence Week. It was publicly per-
formed by the bishop in the church, with prayer and
imposition of hands. It was followed by the adminis-
tration of communion. Of the four grades of penitents,
the first two hardly appear in the Western Church. It
is a subject of controversy whether, and how far, this
discipline was extended to other than public sinners;
but it seems certain that individuals, not publicly known
as sinners, voluntarily enrolled themselves among the
penitents. If any of the clergy were guilty of a crime
to which public penance was annexed, they were first
deposed from the rank of the clergy, and then subjected
to the ordeal, like the laity themselves. This public
discipline continued in force with greater or less exact-
ness in the 5th, 6th, and 7th centuries, gradually, how-
ever, being replaced by semi-public, and ultimately by
private penance. In the 11th and 12th centuries the
public penance had entirely disappeared. For litera-
ture, see the art. Penance, to which add Augusti,
Denkwürdigkeiten der Christl. Archäologie.

Penitents (II). There are in the Roman Catholic
Church several orders or fraternities (as they are called)
of penitents, of both sexes. These are secular societies,
who have their rules, statutes, and churches, and make
public processions under their particular crosses or ban-
ners. Of these it is said there are more than a hun-
dred, the most considerable of which are as follows:

1. The White Penitents, of whom there are several
different bodies at Rome, the most ancient having been
constituted in 1254 by gonfalon, in the church of San
Major: in imitation of which four others were estab-
lished in the church of Ara Coeli: the first under the
title of the Nativity of Christ, the second under the in-
vocation of the Holy Virgin, the third under the protec-
tion of the Holy Innocents, the fourth under the pat-
ronage of St. Helena. The brethren of this fraternity
every year give portions to a certain number of young
girls as a marriage dowry. The habit of these peni-
tents is a kind of white sackcloth, and on the shoulder

White Penitent.

in a circle, in the middle of which is a red and white cross.

2. Black Penitents, the most considerable of which are the Capuchin and della Grazie, instituted in 1522 by some Florentines, in order to attend criminals during their imprisonment and at the time of their death. On the day of execution they walk in procession before them, singing the seven penitential psalms and the litanies; and after they are dead they take them down from the gibbet and bury them. These penitents wear black sackcloth, and hence they are sometimes called Friers of the Stock. There are others whose business it is to bury such persons as are found dead in the streets; these wear a death's head on one side of their habit.

3. There are also blue, gray, red, green, and violet penitents in France, most of them being for little else besides the different colors of their habits.

4. Penitents or converts of the name of Jesus are a congregation of religious at Seville, in Spain, consisting of women who have led a licentious life. This monastery, founded in 1556, is divided into three quarters: one for professed religious, another for novices, and a third for those who are under correction. When these last give signs of a real repentance, they are removed into the quarter of the novices, where, if they do not behave themselves well, they are removed to their correction of holy orders and are made to observe the rule of St. Augustine.

5. Penitents of Orvieto are an order of nuns instituted by Antonio Simoncelli, a gentleman of Orvieto, in Italy. The monastery he built was at first designed for the reception of poor girls abandoned by their parents, and in danger of losing their virtue. In 1689 it was changed into a monastery, for the reception of such as, having abandoned themselves to impurity, were willing to reform and consecrate themselves to God by solemn vows. Their rule is that of the Carmelites.

6. The Order of Penitents of St. Magdalene was established about the year 1727, by one Bernard, a citizen of Marseilles, who devoted himself to the work of converting the courtesans of that city. Bernard was succeeded by several others, who, forming a kind of society, were at length erected into a religious order by pope Nicholas III, under the rule of St. Augustine. Gesney says they also made a rule for nuns, order of the penitents, or women whom they converted, giving them the same rules and observances which they themselves kept.

See Hist. du Clergé seculier et régulier, i, 381 sq.; ii, 386; iii, 135, 249. See MAGDALEN, RELIGIOUS ORDER OF.

Penknife (תּוֹסָפָה, tosaph, Jer. xxxvi, 29). The translation of this phrase by "penknife," is substantially correct, but a more literal rendering, "the scriver's knife," would have been preferable; this was used to sharpen the point of the writing-rod. See KNIFE; WRITING.

Penn, Abram, M.D., a minister of the Methodist Episcopal Church, was born in the county of Patrick, Va., in the year 1803. In early life he studied medicine, but while he was absent at Philadelphia, attending lectures, his wife died, which was the cause of his awakening. He at once began to seek Christ, gave up the study of medicine, and returned home. Two years after he offered himself to the Virginia Conference, and was received on trial in 1825. He rose rapidly as a minister, and from his reception until broken down by disease he labored in the ministry, and a uniformity and depth of piety seldom manifested. He was eminently successful as a preacher, and enjoyed a popularity almost unbounded. His talents were not of the highest order, yet he possessed a clear, vigorous, and comprehensive mind, well stored with valuable information. With a graceful diction, rich imagination, and great zeal and earnestness of manner, he took a high position among the ministers of the Church. He was a devoted son of Methodism, an unflinching advocate of her doctrines and rights, of her purity and discipline. The leading feature of his character was a dauntless, straightforward honesty that needed no disguise for itself, and was impatient of dissimulation and disguise in other men. Yet there was in Dr. Penn a fountain of geniality that made his society peculiarly agreeable, and secured him the ardent attachment of many warm and ardent friends. He suffered much in the later years of his life with a most distressing affection of the heart. Many times it brought him to the very gates of death, but he would rally again, and go on in the path of duty and toil. At length disease gained the mastery, and peacefully, as one who had resigned his soul into the hands of his Creator. A life pious, devoted, and useful was crowned by a death calm, peaceful, triumphant. See BENNETT, Methodism in Virginia (Richmond, 1871, 12mo), p. 731 sq.

Penn, Granville, youngest son of the Hon. Thomas Penn (son of the founder of Pennsylvania) by lady Juliana of the Illsins, fourth daughter of Thomas, first earl of Pomfret, was born in 1720. He was for some time an assistant chief clerk in the War Department, for which he received a pension of $550, and succeeded to the family estates upon the death of his brother, John Penn, LL.D. Granville Penn has conferred an inestimable service on the Church by his numerous and valuable contributions (extending over a period of about thirty years) to theological literature. He died in 1844. We quote of his works: Critical Remarks on Isaiah vii, 18 (Lond. 1799, 4to); Remarks on the Eastern Origin, and in the Arts of Cultivated Life (1799, 4to); Three Copies of his Greek Version of the Inscription on the Stone from Egypt (Rosetta, etc.) (1802, 8vo); Observations in Illustration of Virgil's Fourth Eclogue (1810, 8vo); A Christian's Survey of all the Principal Events and Periods of the World (2d ed. 1812, 8vo); The Bioscope, or the Dial of Life Explained (1814, sm. 8vo); The Prophecy of Ezekiel concerning Egypt, etc. (1814, 8vo); Original Lives and Translations (1815, 8vo); Institutions of Christian Perfection of Martyria, translated from the Greek (1816, sm. 8vo; 2d ed. 1828, 12mo); An Examination of the Primary Aims of the Church of England and of the United States (1826, 8vo); The Life and Correspondence of William Penn, Knight, etc., 1644-1670 (1833, 2 vols. 8vo); The Book of the New Covenant of our Lord and Saviour Jesus Christ; being a Critical Revision of the Text and Translation of the English Version of the New Testament, with the aid of most ancient Manuscripts unknown to the Age in which that Version was put forth by Authority (1836, 8vo); Annotations to the Book of the New Covenant, etc. (1837, 8vo); Supplemental Annotations to the Book of the New Covenant, with a Brief Exposure of the Traversies of the Theological Relicvent for July, 1837, Lond. 1837; Allibone, Dict. of Brit. and Amer. Auth., ii, 1550.

Penn, James, was a theologian who flourished in the 18th century, first as under grammar-master of Christ Church Hospital, and afterwards as vicar of Clavering-cum-Langlely, Essex. He published several works on theology, but there is not much valuable interpretation of the Scriptures, and far too large a portion of his zeal, of that spirit and earnestness of spirit of his authors. His works include: Various Tracts (Lond. 1756, 8vo), theological; Various Sermons (1758, 8vo); Vouchers and Tracts (1777, 8vo). He also published a number of occasional sermons, etc. See Orme, Brit. Bib., Allibone, Dict. of Brit. and Amer. Auth., ii, 1551.
Penn, John, an English divine, was born in 1748. He flourished as vicar of Houghton, Norfolk, and subsequently of Beccles, where he died in 1814. He published *Sermons on Various Subjects* (1792, 2 vols. 8vo).

Penn, William, conspicuous as a leader of a Christian sect, philanthropist, founder and legislator of a colony which has expanded into the second state of the American Union, was born in London, England, Oct. 14, 1644. He was the son of Sir William Penn, a gentleman of Welsh descent, who, first as a captain, then as an admiral in the British navy, by sea and land, weighed a considerable interest in the capture of Jamaica, greatly contributed towards the English maritime ascendancy over the Dutch, and stood in high favor with court and country. His mother, Margaret, was the daughter of John Jasper, a Rotterdam merchant, an amiable, sensible woman. Young William was started to a careful education befitting his rank at the school of Chigwell, Essex, and, duly prepared, in his fifteenth year entered the college of Christ's Church, Oxford. He is described as from his earliest youth remarkable for an amiable disposition, docility, and a sincere and deep-seated purity of thought, along with a harmonious development of the physical, intellectual, and moral. He advanced rapidly in his studies, and cultivated the acquaintance of those classmates who were most distinguished for learning and good conduct; among their number was John Locke (q. v.), a close friend of William's. He engaged also and delighted in athletic exercises—sports of the leisure hours—such as fencing, shooting, boating. On the whole, he bade fair to make a career to distinction such as his ambitious father had in view, and most auspicious circumstances made easy to realize. This prospect, however, was suddenly changed in an unexpected manner, and the youth thrown into a train of thoughts much at variance with the usual pursuits of honor and glory. With other students, he attended a meeting of the society then lately formed by the agitation of George Fox (q. v.). The speaker on this occasion was Thomas Lee, who had formerly belonged to the university. His discourse made a deep impression on Penn, reviving certain religious ideas which, as he confessed, had seriously occupied his mind when he was only twelve years old. Some of his classmates were equally affected. In consequence they ceased to attend the worship of the Established (Episcopal) Church, as running into ritualism and formality, and held conventicles of their own, where they exhorted and prayed and discussed theological topics. Reprimanded and fined for "nonconformity," they never persisted in their proceedings; they went even farther. With a band of like-minded men they were enjoined to wear again the surplice, which had been abolished since the Reformation, they (the conventicles) not only refused compliance with the royal order, but fell upon those who appeared in the hateful popish garment. Hence the severest punishment which the college authorities could inflict was pronounced against the refractory pupils. Among those thus expelled from the college was Penn. The feelings of the admiral can easily be imagined. William's reception at home was not the most cordial. Highly incensed at the views and actions of his son, on various occasions rebuked, he first tried remonstrances, then threats, at last even bodily chastisement, to induce a change of sentiment and conduct; but in vain. He concluded by sternly interdicting the paternal roof. Young William, although strongly attached to his father, who was hot-headed and hasty, but kindly at heart, bore it gaily, yet remained firm in his purpose and faith. After a while, by the interference of lady Penn, the admiral relented so far as to allow William to return home, and finally sent the youth travelling (1662) to France and Italy. During this period, it is said, William read and studied in the metropolis. To remove him out of danger, he was despatched to Ireland, where in the county of Cork the admiral owned large estates. With letters to the vice-roy, the duke of Ormond, who was an intimate friend of the admiral, William was a welcome guest at the gay vice-regal court. During this visit he had a special opportunity of ingratiating himself, and still more rising in estimation. When at Carrick-Fergus a mutiny broke out among the troops. Young Penn volunteered his services, and advancing general religious toleration, soon assisted in reducing them to obedience, and by his coolness and courage displayed in the affair earned general praise. Elated by this success, he resolved to choose the profession of arms as his way to fame and fortune; and so enraptured was he with that idea that he had a mind to enter into the military, engaged also in military adventures for which he ever sat. Unexpectedly and strangely, the admiral, even disregarding the duke's (Ormond's) congratulations about his son's bravery, etc., disapproved of this step, and ordered him to superintend the management of his Irish possessions. Reluctantly but promptly he obeyed. While so engaged business called him to the city of Cork. There he met again the Quaker preacher who had made so strong an impression on him in Oxford. His old convictions revived. He attended Lee's meetings, and finally professed publicly adherence to his doctrines. Ere long (1667) he had to share also their lot of persecution. He was, with eighteen others of the sect convened for nonconformity worship, arrested and imprisoned. A letter which he immediately addressed to the earl of Orrery, lord president of Munster, showing the injustice of the proceedings, and advocating general religious toleration, was soon after published and disapproved the admiral's own release. This was probably the first time he touched the keynote of his life, which subsequently resounded frequently and in many variations in his words and actions. Great was the chagrin of the party when the news of this new conversion reached them, and they found a friend and advocate in William. The admiral was immediately called home. Could it be true? A fine young gentleman of twenty-three, polished and courtly in address, distinguished for sprightly wit and profound erudition, admired for martial courage, with honors and wealth ready to fall to him almost at the asking, consorting with the despised people nicknamed Quakers—self-styled Friends—followers of a ranting, enthusiastic cobbler! It was even so. Young Penn, looking more to the merits of the underlying truth than to external appearances, modestly avowed his principles; and, as he continued in his course, he found himself in everything that did not conflict with his duty to God, he declared he could not abandon his religion, his duty to his heavenly Father being paramount to all other considerations. The admiral, so used to command, descended to resort to force. In a postscript, argument, persuasion, entreaty; yea, he even proposed a compromise—to overlook the rest of his opinions provided he would agree to uncover his head before his majesty the king, the duke of York, and himself, acknowledging them as his superiors. Yet even this trite and conventional argument was refuted by hishaving implored by prayer God's help and illumination. A second banishment from home ensued, throwing him to the hospitality of friends and the clandestine supplies
of money from a tender-hearted mother, since he, with all his accomplishments, had no certain profession to fall back upon for support. But in spite of all the adverse surrounding circumstances, and the sad feelings of a father for his beloved son, he went on with his work in the holy cause he had embraced by deed, word, and writing. We may here observe it was principally Penn, in connection with Robert Barclay, George Keith, and Samuel Fisher, who tempered the rude and irregular utterances of George Fox, and reduced them to a system of doctrine and discipline, the main features of which are still preserved as the rules of the Society of the Friends. The first essay published by Penn, under the title Truth Exalted, was addressed to laymen and clergymen, to the king and the people, exhorting all to extend their labors and care to the account of a succeeding publication, The Sandy Foundation Shaken, he had to undergo an imprisonment in the Tower (1668-69). It was declared heretical, as, among other things, it attempted to refute "that the Godhead existed in three separate persons." During this incarceration, when it was reported to him that the Bishop of London had threatened, "Penn must either recant or die in it," he said, "Then the prison shall be my grave before I will budge a jot: my conscience I owe to no mortal man: and in this expected martyrdom became one of his most touching and plaintive verses: No Cross, no Crown; followed shortly after by another benediction with her Open Face, in which he acknowledged Christ's divinity. This latter pamphlet gave somewhat better satisfaction to the clergy, and the intercession of the duke of York with the king effected, after nearly nine months' confinement, his liberation. But in August, 1669, he was again arrested for preaching in the open street before the Friends' meeting-house, which was shut, and kept closed against them by a guard of soldiers. On the occasion of this trial before mayor of London, recorder, and aldermen, he made a most manly defence, using solid arguments, to the astonishment of the audience. The principle of popular liberty, and the desire of the English people so greatly involved in this case, and won from the jury an honest verdict of acquittal. The magistrate turned now in anger against the jury, and fined the members, and imprisoned those till the fine should be paid. An appeal, however, pronounced this absurd sentence, which would render the jurors only tools of the judge, illegal. Penn and Mead were fined for contempt of court, because they had kept their heads covered. The admiralty settled this matter, although his son protested. About this time a reconciliation took place between the crown and the Friends. Shortly after this event, he began the great work of late fast declining, and he learned to see earthly things, however splendid, in a more sober light. William, too, had gained greatly in his esteem by the firm and able stand he had made in the last trial. Without being a Simon, he could easily foresee the destiny of the paths, the persecutions and dangers, which such a character would have to encounter, and with paternal solicitude he made to the king and to the duke of York the dying request, that which they might extend to his son their protection. The promise was graciously given, and in after-years truly complied with on their side, and duly and gratefully appreciated by him on whom it was conferred. He remained at his father's bedside, watching him with tender assiduity until he breathed his last, and had even the gratification to hear from the lips of the dying man, "Let nothing in this world temt you to wrong your conscience," etc., a confirmation of what William had contended for. Admiral Penn died Sept. 16, 1670, and left William property yielding an annual revenue of £1000 ($7500), and a claim of £16,000 ($8000) on the government, due for services and money advanced to the crown. Shortly after this event, he was committed by the lieutenant of the Tower rather arbitrarily to the loathsome prison of Newgate for addressing a meeting on the street on religious subjects, and refusing to take the oath of the Oxford Act, which, according to his view, applied only to persons in orders addressing unlawful assemblies. He employed during this term of six months his pen busily in support of his principles and in defence of his society. Among the treatises issued from this dungeon stands pre-eminent for ability and power: "On the True Cause of Liberty of Conscience once more briefly Debated and Defended by the Authority of Reason, Scripture, and Antiquity." After the expiration of his imprisonment he visited the Continent on a religious mission, and traveled through Holland and some parts of Germany. After his return to England (1672) he married the daughter of Sir William Springett, of Darling, Sussex, and then connected with the Quakers by her mother, who had become the wife of Isaac Penington (q. v.). His domestic relations and the attention required for the management of his extensive private affairs did not abate his zeal in behalf of what he deemed true religion. He engaged either in controversies or in exposing the hardships to which his society was subjected by oppressive and unequal laws. He also wrote during this period a treatise On Oaths, and another on the Necessity of Religious Toleration, in which he ventured to maintain that the civil affairs of all governments may be peaceably transacted under the different liberties or trims of religion. "So far from a government being weakened or endangered by a variety of religious sentiments," he writes, "it is, on the contrary, strengthened by them, provided that all are equally free and equal; for it prevents combinations against the government." In 1677 he undertook with Fox and Barclay another journey to Holland and Germany, to make converts no less than to smooth the way of the persecuted. In the former country he preached with great acceptance: but in the latter empire, although the countess-palatine Elizabeth, granddaughter of James I, favored his intentions, he found less appreciation, perhaps because less understood or less needed, the Peace of Westphalia, ending the Thirty-years War, having at least partially settled the civil and religious questions. He called upon him to defend his cause before a committee of the Commons, Parliament inclining to severer measures against people who differed so much in their habits, and demanded liberty of faith and conscience for all, even Roman Catholics. For the last ten years continually harassed, he now conceived a plan by which he might escape further trials and troubles, and realize his ideal of Christianity, viz., by founding a commonwealth according to his own model in the transatlantic territories of Great Britain. By his transcendent abilities, his efforts, not only to propagate truth and establish principles of the heavens and earth, but also to advance the liberties of the human race, he had become, without seeking the position, his head and leader, and was consulted also in other not strictly religious matters. Thus it is that he was appealed to in difficulties and disputes that had arisen between two Friends, Edward Blylling and John Fenwick, so-called proprietors of lands in New Jersey. William Penn as referee carefully examined the matter, and made his award. Fenwick refused to comply. Finally, however, by Penn's good offices the dispute was adjusted. Blylling, who afterwards became embarrassed, wished to transfer his interest in the territory to his creditors, but in order to make the property more available entitled Penn to act as assignee. Penn became thereby (1675) instrumental in the settlement of New Jersey, with a title to the legislature, and all its rights. He engaged in colonizing West New Jersey, and subsequently as a purchaser also of the eastern part of that province, he acquired a knowledge of the adjoining region. This promised to be a place of refuge and security, where the dissenting Friends might have other liberty to exercise their religious liberty. He applied to king Charles II, the friend and patron of his father, and, "after many writings, watchings, solicitings, and disputes in council," obtained the grant of a tract of land in payment of the governmental debt above mentioned. The patent bears the date of
March 4, 1681, and comprised lands on the Delaware River, including also settlements previously made by Sweden and Holland with 2000 inhabitants, to whom a royal proclamation was issued April 2, 1681. The new province, against his own wish, for he had called it New Wales or Sylvania, was named by the king, as he pleased to pretend, in memory of admiral Penn, Pennsylvania. Penn himself says of this grant: "It is a clear and just thing; and my God, that has given it me through many difficulties, still I believe, bless it as it used to be.

I shall have a tender care to the government that it will be well laid at first." He forthwith (July 11, 1681) published an account of his acquisition, and invited purchasers at the rate of forty shillings a hundred acres, subject to a quit-rent of one shilling per annum. The object of the grant was to establish an asylum for the Quakers, who were still persecuted, to form a people whose morals would correspond with the purity of the faith they professed, and to demonstrate that the use of arms was unnecessary for the protection of society. The propagation of his religious views, however, was a secondary consideration; his form of government he was anxious to submit to the test of reality and experience in general. Soon after preliminary arrangements had been made, three ships, with numerous emigrants of his own persuasion from England and France, were dispatched—the Rotterdam, and John and Sarah—to sail from London, the Factor from Bristol.

The expedition was under the control of colonel William Markham, Penn's relative, as his deputy, joined with others as commissioners authorized to confer with the aborigines on the purchase of land (for he considered the royal patent invalid) and to conclude a treaty of amity. He instructed his agents to bear themselves with candor, justice, and humanity, and addressed to the Indians a letter of the same sentiments, sent presents to the chiefs, and merchandise to pay for the land bargains; for the following year he himself, leaving his wife and children in England, crossed the ocean, to settle the affairs of the new colony. On Dec. 14, 1682, he held a grand council with the sachems and their people, assembled in great numbers, trusting himself, with his European train, unarmed among the wild sons of the forest. The savages, at a sign from their head sachem, throwing bows and arrows to the ground, seated themselves in a semicircle around their chiefs. The locality chosen was then called Shackamaxon; it bears now the name of Kennington, a suburb of the present Philadelphia; a gigantic elm, with its wide-spreading branches, shaded the meeting of their gathering (the tree was blown over in 1810, when it was, by its annual growth-rings, ascertained to have been two hundred and eighty-three years old, consequently one hundred and fifty-five at the time). The place is now marked by a marble monument. We have no space here to detail the tenets of the principal party interested [see Fox; Friends; Quakers], but we cannot withhold an account of this transaction as a memorable manifestation of their Christianlike policy and practice, which, if followed consistently, would have saved millions of lives and créer, and crowned Christendom with the renown of true missionaries of the Gospel of Peace. Penn addressed them by interpreter substantially as follows: "The Great Spirit who rules the heavens and the earth, the Father of all men, bore witness to the sincerity of his wishes to dwell with them in peace and friendship, and to serve them with all his power. Himself and followers had met them unarmed, because their religion forbade the use of hostil weapons against their fellow-creatures. They came not to injure others—that was offensive to the Great Spirit; but to do good, in which he was willing to aid them. In the interests of truth and benevolence, they ought to disdain deception, and to regulate their conduct by candor, fraternity, and love."

Unrolling the parchment, he explained the articles of the treaty and the terms of purchase. "By these," he continued, "they were protected in their lawful pursuits even in the lands they had sold. Their right to improve their plantations, and means to secure subsistence, would be in all respects similar to those of the English. Should unfortunately disputes arise between the two peoples, they should be resolved by a board of arbitrators composed of equal numbers of Indians and Englishmen." From the merchandise before him he then paid for the land to their satisfaction, and made them besides many presents. The sum which he spent for the lands was computed at £3000 ($80,000). Laying the roll of parchment upon the ground, he bade them observe it as a sign "that the land should be thenceforth common to both peoples." "He would not," he added, "like the people of Maryland, call them his children or his brethren: for then when two brothers and two sisters could be divided, and brethren could disagree. Nor would he compare their friendship to a chain, which the rain might rust. But they would consider them as one flesh and blood with the Christians, and the same as if one body was divided in two parts." Taking up the parchment, he presented it to the chief sachem, and desired that it might be carefully preserved for three generations, that their children might know what had passed, as if he remained to repeat it." The Indians in return made long and stately speeches, the gist and end of which was that they were ready to be heathens, and John and Sarah Penn and his children as long as the sun and moon would endure. This transaction is one of the brightest pages in American history, and has been honorably noticed even by the sarcastic Voltaire in these words: "This was the only treaty between these people (the natives) and the Christians which was not reduced to an oath, and which was never broken." For the space of more than seventy years, as long as the Quakers retained supremacy in the government of Pennsylvania, the peace and amity then solemnly promised never was violated, nor the blood of a single Quaker shed by the Indians. It is significant that the place thus sanctified, near the junction of the Delaware and Schuylkill Rivers, and selected for the capital of his province, has become the largest inland city of the continent, the cradle of the American republic, and the centre of the late Centennial celebration.

A few months after Penn bought the site from the Swedes, who had already erected a church there, and designed a map, according to which it was regularly laid out.

In the political construction of the new country, as proprietor empowered to enact laws with the consent of his council, in all matters of taxation, of which he was the sole investor, he found his hands free to act in the manner which ranks him with Moses, Lycurgus, and Solon, without incurring their faults. His laws, although not exempt from error, are surely in advance of all similar works of his age, even Locke's plan of government adopted by lord Baltimore not excepted. His code is dated April 25, 1682, and was drawn up before he embarked. His friend, Algermon Sidney, was consulted in framing it. Of the twenty-four chapters of this document we will mention only a few of the more striking features:

1. "Almighty God being only Lord of conscience, Father of Spirits, and the Bearer of all, as well as the object of all knowledge, faith, and worship, who can only enlighten the mind and convince the understanding of people, is the only proper object for the government of all men, and therefore be it enacted, that no person now or hereafter living in the province, who shall confess one Almighty God, he will be good and rule the soul of mankind who professes himself or herself obliged in conscience to live under civil government, and shall consider civil government in any wise be more prejudiced for his or her conscientious persuasion or practice; nor shall he or she at any time be molested or disturbed in person or property, or the free exercise of his or her religion, worship, place, or ministry contrary to his or her mind, but shall freely and fully enjoy his or her liberty in that respect, and the benefit of religion or belief regarding any person shall abscond or dier any other for his or her different persuasion or practice in religion, such shall be held as a disturber of the peace, and be punished accordingly."

2. Yet only professed Christians were admitted to office.
and of them such only as paid taxes: the purity of elec-
tion was guarded by penalties against bribery, other cor-
rupion and frauds nowadays so frequently resorted to by politicians, and so unknown to men in the remote days. Be-
sides these he made very wise enactments.
2. The Repeal of the Homogeny Act. The parliament in in force in England, was abolished; all members of a family should enjoy an equal share of inheritance.
3. The Act against beggars or poor, to learn a useful trade or occupation, the poor to live on it, the rich to have a re-
turn, if they should become poor.
4. Extends the jurisdiction of the courts of common law, en-
penalties to have a tendency rather to improve than to punish the offender. The king may arrest anybody on suspicion of of-
fences which were at that time capitally punished in Eng-
lond some milder penalty. Only murder and treason were punishable by death.

In March, 1688, he held in the infant settlement the second assembly, and, waiving some of his propri-
etary privileges, introduced the frame of government, so that almost in all but the name Pennsylvania was rendered a representative democracy; and to his dying day he declared that if the people needed anything more to make them happy he would readily grant it. Says a modern writer: "In the early constitutions of Pennsylvania it is to be found the distinct announcement of every great principle, the germ, if not the develop-
ment, of every valuable improvement in government or legislation which has been introduced into the political systems of more modern epochs." After having settled the main points of community and government (five counties in the year, with Lloyd as president during his absence), he returned in August, 1684, to England on account of his domestic affairs, and the prospect that, by his influence on king Charles II, he could give better protection to the increas-
ing sect of the Quakers. In 1686 Charles II was suc-
cceeded on the throne by his brother, the duke of York, as James II. In accordance with the pledge given to the 
amiral on his death-bed, the new king bestowed on the son the same friendship which he had on the deceased. Penn, therefore, failed not to attend the royal court, and tried to use as herculean means as his dignity and influence permitted to guard the interests of his sectists at Whitehall were now restored, and the most invidious and ridiculous slanders were put in circulation. He was accused of being a Catholic, a disguised Jesuit, corresponding with the pope and traf-
jecking with pardons to convicted criminals. All the actions which in the eyes of zealots might give color to these criminations may be easily explained by the radical principles of equal rights and toleration to all de-
nominations openly avowed by Penn, and by the prompt-
gings of broad humanity to redress or alleviate grievances of any kind so natural to his character. The facts are that in every case his influence on the monarch, in 1686 a proclamation was issued which, with a number of other Dissenters, set fourteen hundred imprisoned Quakers at liberty; and in 1687 another declaration for liberty of conscience to all, unrestricted by any test and penalties. When, under a liberal construction of this 
Nonconformity Act, the king filled offices with Catholics, and committed himself to other reactionary measures, the Whig party prevailed in Parliament (1688), and de-
carried James, who left England, to have forfeited the crown, and installed William of Orange and Mary as rulers of the land. Isaac Jogues, who was the victim of high-treason, was laid on Penn: the charge that, out of attachment to the fallen royalty, he was accomplice to a plot calculated to overthrow the newly chosen regime and restore the self-exiled James to the throne. The indictment rests mainly on the statement of the head-
quarters of the church in Brooklyn, who, without the crime and condemned to death, naming among others also Penn as implicated, tried to postpone or avert his own execu-
tion. Fuller, the principal witness against him, was by Parliament afterwards branded as an impostor. The im-
proving but not conclusive evidence of the accused, the common-sense, the apostle of peace and good-will, who had forbidden the use of carnal weapons, an exemplar of frankness, enjoying under the Reform more toleration than ever, should invite a hostile (French) invasion and

VII.—29
vania, and the province administered by royal govern-
ers until 1694, when he was reinstituted as proprietor. In
1696 he married a second time, taking for his wife Han-
nah Callowhill. In 1699 he embarked with his family
for his territories, with the intent of permanently resid-
ing there. He remained only two years. The English
ministry had presented to the House of Lords a bill to
subject all the proprietary governments to the perfect
control and authority of the crown. Penn's friends
succeeded in postponing its discussion. His return and
presence prevented it from being passed. The remaining
period of his life he spent in England, employing
tongue and pen in the service of civil and religious
liberty; maintaining an active correspondence with his
representatives and agents in his American province,
for which he had an anxious care. The succession of
queen Anne, the Protestant daughter of the Catholicizing James
II, procured for him a certain favor and patronage at
court, but he rarely availed himself of this advantage.
The losses and great expenses incurred during the last
years caused him financial embarrassments—a heavy
burden and a source of chagrin, as the provincial assem-
blies, to which he applied for relief, ungratefully refused
to come to his aid. He was obliged to contract a mort-
gage of £60,000 on his transatlantic territories. In 1712
he himself proposed to the English government to sell
his right and title to them; but before the business was
closed, overcome by last moments and cares of three con-
secutive apoplexy, the last of which deprived him
almost entirely of memory; but his cheerful and
benovent disposition and the amenity of his conversa-
tion were apparent to the last. He died at his coun-
try-seat of Rushcombe, Buckinghamshire, July 20, 1718.
His remains were buried near the Friends' meeting-
house at Jordans. The plain recital of his doings is his
best eulogy.

Besides the treaties already named, Penn wrote and
published the following, which are all controversial: A
Seasonable Consideration against Papery or Path rec-
used from Imposture (1671):—The Spirit of Truth Vin-
dicated (1672):—Quakerism a New Nickname for Old
Christianity (1673):—England's Present Interest Consid-
ered (1674). His collected writings, with a biography,
were published in 1792 at London, and in 1793 in 4 vols.
See Marsillar, Vie de Guillaume Penn, Paris, 1791; Clark-
son, Memoirs of the Private and Public Life of William
Penn (London, 1813, 2 vols.; new ed., 1849, with a
preface by W. E. Forster, which deserves particular attention as
containing a refutation of some of the calumnies started
against him); Hefele, History of the Church of William
Penn, a Historic Biography from New Sources (2d ed.
London, 1833); Paget, Inquiry into the Evidence of the
Charges brought by Lord Macauard against William
Penn (Edinb., 1858); Janney, Life of Penn (Philadelphia,
1852). See also Banke, Englishische Geschichten, vol. v;

Penn, Francois-Horace della, an Italian missionary,
was born in 1806 at Macerata, States of the Church,
province of Macerata. He took charge of the Capuchines
while young, he was in 1719 appointed chief of a mis-
ion destined to evangelize Thibet, and went to Lassa
with twelve of his brethren. After several years of
apostolic labors, Della Penna, seeing his mission reduced
to only three monks, returned to Rome in 1736 to ask for
new reinforcements, and upon his recital the Congrega-
tion of the Propaganda associated with him nine other
Capuchins, with whom he departed in 1738, loaded with
presents, and bearing two pontifical briefs for the king
of Thibet and the grand khan. They arrived at Shang-
pu in 1741, and conducted their mission laboriously; and it
was upon the instruction furnished by Della Penna that the
Congregation of the Propaganda published in Italian
Relation of the Commencement of the Present State of the
Kingdom of Thibet and its Neighbors (Rome, 1742, 4to).
It is amongst the most important of the recital of the
conversations that Della Penna pretends to have made;
what he relates in this respect must be accepted only
as an inventory. He died July 20, 1747, in Patan,
Nepaul. We owe to this missionary, who had studied
Thibetan under the director at Laas, the several trans-
script fragments, by which father Giorgi has profited
in the publication of his Alphabetum Tibetansum (1742,
4to). It is also from the designs of Della Penna that the
Thibetan characters of the Propaganda have been
engraved. See Lettres écrites et curieux des Mis-
stranges; Recherches Tartares, i, 844.

Penn, Lorenzo, an Italian organist, was born at Bologna
in 1613. He entered the Order of Carmel-
ites at Mantua, taught theology, and became chapel-
master of the church of his order at Parma. His
reputation as an organist and teacher afterwards ap-
erred to Milan, where he died Oct. 20, 1696. He is
famous for his Messes and his Paumes concertiss, which have
had several editions, we have of his works, Li primi labor
musicali (Bologna, 1656—79, 3 pts. 4to), a treatise
reprinted five times, and containing some good things;
and Dizionario del canto fermo (Modern, 1694, 4to). See
Orland, Scrittori Bolognesi; Fétis, Biog. univ. des
Musiciens.

Pencacchi, Pietro Maria, a painter of Trevigi,
who, according to Zanetti, flourished at Venice about
1520. He painted some works for the churches at Ven-
ice and Murano, which I have in works more in color than
design.

Pennafiel, Council of (Concilium Pennafielense),
was held April 3, 1302, by Gonsalvo of Toledo and
his suffragans. Fifteen articles were published, tend-
ing to repress those abuses which are noticed in the
councils of this age, viz. inconstancy among the
clergy, usury, etc. Among other things, it was en-
sued that it is unlawful for a bishop to order to every church
"De dice Regina" should be sung after compline. By canons
8, that the priests should make with their own hands the bread to be consecrated at the Eucharist,
or cause it to be made by other ecclesiastics in their
own presence. By canons 7, that tithes should be paid upon all lawful property, thereby to recognize the
universal sovereignty of God. See Labbé, Concilia,
xxi, 2444.

Pennafort, Raymond de, a celebrated ecclesias-
tical character of the 13th century, was born at Barce-
los, and was educated at the university of his native
place from 1204 to 1211. He then went to Bologna, and
there taught for some time. Ere he had left home he had
been vicar-general of his native place. On his re-
turn he entered the Dominican Order, then but recently
founded. By request of his superiors he wrote Sum-
mum canonum pontificum. In 1230 pope Gregory IX called
him to Rome, and made him his chaplain and confessor.
His holiness also intrusted him with a collection of
the papal decisions not given by Gratian, and they were
published under the title Decretalium Gregorii IX com-
pletior. In 1235 he was elevated to the archbishopric
of Salerno, when he refused the honor, and retired to
his convent. In 1238 he was, however, obliged to ac-
tep the honor of a general of his order. But though
he accepted the office, he finally resigned it, and de-
voted himself to the conversion of Moors and Jews,
and to his studies. He died Jan. 6, 1257. Popo Clemen
VIII enrolled him among the saints, and he is commemorated Jan. 20. See Butler, Lives of the Saints, Jan. 20, vol. i.

Penney, Joseph, D.D., a Presbyterian divine, was born in Ireland in 1790. He graduated at the university in Dublin, emigrated to the United States, and in April, 1822, was settled as pastor over the First Presbyterian Church, N. Y. He was appointed to Northampton, Mass., and subsequently became president of Hamilton College, N. Y. But he soon again exchanged the rostrum for the pulpit, and became pastor of the Church at Nyack, N. Y. In 1839 he removed to Grand Rapids, Mich., and afterwards preached at Portland, Me., and afterwards at South Natick, Mass. He lived laborious and useful; he was greatly beloved wherever he was located. He was the author of a work on Education, and published a number of fugitive theological articles in periodicals. See Wilson, Presb. Hist. Am., 1861, p. 105; Allibone, Dict. of Brit. and Amer. Authors, vol. II, s. v. (J. L. S.)

Penney, Nicholas, a French engraver of the last century, has left some places treating of devout subjects from his own designs, executed with the graver in a very neat style, but without much effect, among which is one of the Virgin appearing to St. Bartholomew. They are marked "N. Penney fecit." 

Penni, Giovanni Francesco, an eminent Italian painter, was born at Florence in 1448, and received the name of Il Fattore, or the Steward, from his having been intrusted with the management of the domestic affairs of Raffaele. He was, however, also one of his principal assistants, and probably bore the surname II Fattore because he was also Raffaele's apprentice. He was first employed in the decoration of the Loggie of the Vatican, where he executed the histories of Abraham and Isaac in such an admirable manner that Raffaele made him one of his heirs. Dr. Waagen is of opinion that Penni executed many parts of the cartoons at Hampton Court, especially those of the Death of Ananias, St. Paul and Barnabas at Lystra, and St. Paul Preaching at Athens. Of Penni's own works no frescos and very few oil-paintings remain. His characteristics are said to have been facility of invention, graceful execution, and singular felicity in landscape. After the death of Raffaele, Penni went to Naples, where he died in 1528. Kugler and Passavant attribute to Penni the celebrated Madonna del Passeggio in the Bridgewater collection, usually believed to be Raffaele's.

Penni, Luca, another Italian artist and brother of the above named, was born at Florence about the year 1500. Orlando says that Luca also studied in the school of Raffaele. According to Vasari, Luca united himself to Pierino del Vaga, and worked with him in the churches at Luca, Genoa, and other cities; he afterwards accompanied Rosso into France, and ultimately passed into England, where he was employed for some time by Henry VIII. On his return to Italy he is said to have quitted painting for engraving. There are quite a number of prints attributed to him, mostly after the works of Rosso and Primaticcio. Among them are the following: Sussam, and the Elders; Abraham sacrificing Isaac, after Primaticcio; The Marriage of St. Catharine, ditto.

Pennington, J. W. C., D.D., a Presbyterian minister (colored), was born in 1800. He was born a slave, but escaped from his condition of servitude at the age of twenty-one years, and found his way to New York, where he was assisted in his studies for the ministry by the Presbyterian Church, under the care of Dr. Cox. He was subsequently settled at Hartford, and later over the Shiloh Presbyterian Church, New York. He received the degree of D.D. from the University of Heidelberg, Germany. For two or three years previous to his death he labored with great zeal and success among the freedmen in Florida. He died at Jacksonville Oct. 22, 1870.

Pennington, Montagu, an English divine of some celebrity, was born about 1763, and was educated at Trinity College, Oxford, where he took his M.A. in 1784. He was elected a Fellow of New College, Oxford, and perpetual curate of St. George's Chapel, Deal. He was also a magistrate for Kent and the Cinque Ports. He died April 15, 1849. He published Redemption, or a View of the Rise and Progress of Christianity (1811); and, besides several minor literary labors, prepared a Pari wont of the life and works of his aunt, Mrs. Elizabeth Montagu, and published it with a collection of her poems, essays, etc. (London, 1807, 4to; 1809, 2 vols. 8vo). See Allibone, Dict. of Brit. and Amer. Authors, s. v.

Pennington, Thomas, a brother of the preceeding, also an English clergyman, was born about 1770, and was educated under his very learned aunt. After taking holy orders, bishop Porcher, who was the friend of Mrs. Carter, presented Thomas Pennington with the rectory of Thorley, Herts. He became also chaplain to Lord Ellenborough. He died about 1850. His publications are of little interest now.

Penzone, Rocco, a distinguished Lombard architect, flourished at Genoa in the 16th century. Milizia does not mention his instructor, but he warmly commends Penzone's abilities, as evinced in the enlargement of the government palace at Genoa, particularly in the arrangement of a grand portico, flanked by two courts, which, although differing in size, satisfy the eye by their perfect symmetry. These courts are surrounded by two orders of galleries, the first supported by Doric and the second by Ionic columns. Among the other works of Penzone is a part of the church of St. Sacramento, which he completed after the designs of Galeazzo Alessi.

Penny, In the A. V., in several passages of the New Test., "penny," either alone or in the compound "pennyworth," occurs as the rendering of the Greek δηναριον, a transfer of the name of the Roman denarius (Matt. xxviii, 29; xx, 2, 5, 13; xxii, 19; Mark vii, 8; xii, 15; xiv, 5; Luke xii, 41; x, 35; xx, 24; John vi, 7; xii, 5; Rev. vi, 6). It took its name from its being first equal to ten "asses," a number afterwards increased to sixteen. The earliest specimens are of about the commencement of the 2d century B.C. From this time it was the standard silver coin of the republic. It continued to hold the same position under the empire until long after the close of the New-Testament canon. In the time of Augustus eighty-four denarii were struck from the pound of silver, which would make the standard weight about 60 grains. This Nero reduced by striking ninety-six from the pound, which would give a standard weight of about 52 grains, results confirmed by the coins of the periods, which are, however, not exactly true to the standard. The drachm of the Attic talent, which from the reign of Alexander until the Roman domination was the most important Greek standard, had, by gradual reduction, become equal to the denarius of Augustus, so that the two coins came to be regarded as identical. Under the same emperor the Roman coin superseded the Greek, and many of the few cities which yet struck silver money took for it the form and general character of the denarius. See also Drachma. The δηναριον of the tribute (Matt. xxi, 24) was probably in the time of our Saviour not a current coin, like the στατеры mentioned in the same passage (ver. 27).
PENNY WEDDINGS

See Money. From the parlour of the laborers in the vineyard it would seem that a denarius was then the ordinary pay for a day's labor (Matt. xx. 2, 4, 7, 9, 10, 12). The term denarius aureus (Plin. xxxiv. 17; xxxvii. 8) is probably a corrupt designation for the aureus (nummus); in the New Test. the denarius proper is always intended. See Smith, Dict. of Class. Antiq. s. v. Denarius. The earlier silver denarii were struck by the authority of distinguished families, and bear portraits designed illustrative of Roman history; these are called consular denarii. After the time of Julius Caesar they present us with a series almost unbroken of the emperors, together with many of their wives, sons, daughters, and occasionally of their fathers, sisters, and brothers also. The consular denarius bore on one side a head of Rome, and X or a star, to denote the value in asses, and a chariot with either two or four horses; but afterwards the reverse bore the figures of Castor and Pollux, and sometimes a Victory in a chariot of two or four horses. At a later date the busts of different deities were given on the obverse; and these were finally superseded by the heads of the Caesars.

Denarius of Tiberius.Obv.: Ti Caesar Divi AVG F AVGVSTVS, Head of Tiberius, laureate, to right, (Cass. 19, 10, 91). Rev.: PONTIF MAXIM. Seated female figure to the right.

The reverses varied, and some of them are very curious. The name continued to be applied to a silver piece as late as the time of the earlier Byzantines. The states that arose from the ruins of the Roman empire imitated the coinage of the imperial mints, and in general called their principal silver coin the denarius, whence the French name denier and the Italian denaro. The chief Anglo-Saxon coin, and for a long period the only one, corresponded to the denarius of the Continent. It continued to be current under the Normans, Plantagenets, and Tudors, though latterly little used. It is called penny, denarius, or denier, which explains the employment of the first word in the A. V. See Arnold, De denario Petri (A. 1769); Dorschceus, Denarius Verpertiuna (Rost. 1857). See Denarius.

Penny Weddings (or Penny Bridals) is the name of a peculiar festive marriage ceremonial which was common in Scotland until the middle of the 17th century. At these penny weddings the invited guests made contributions in money (seldom more than one shilling each), to pay the general expenses, and leave over a small sum, which would assist the newly married pair in furnishing their dwelling. This practice, now disused, as leading to "profane minstrelsy and profanecious dancing," was denounced by an Act of the General Assembly of the Kirk in 1645, as well as by numerous acts of presbyteries and kirk-sessions about the same period. The act reads as follows:

"The synod, considering that some persons do invite to these penny weddings excessive numbers, among whom there frequently falls out drunkenness and uncivil and disorderly behavior, doth hereby upon the date of the 12th of Feb. 1645, ordain all such persons to be excluded from these and all other such habits, and to be strictly account the obedience of every session to their orders thereupon, and to their violation of parishes within their bounds; which act is ratified March 8, 1650. By the 12th sess. assembly, 1706, presbyteries are to apply to magistrates for exacting of laws relating to these manners, and the commission, upon application from them, are to apply to the government for obliging the judges who refuse to execute their office in that matter. By the 14th act Parl. 3 Car. II. It is ordained that at marriages, betrothals, and other matrimonial occasions, and families and friends, and the family wherein they live, there shall not be present above four friends on either side. If there shall be any greater number of persons penny weddings within a town, or two mile thereof, that the master of the house shall be fined in the sum of 600 mers."
Pennssio, i.e. the enjoyment or use of a part of the fruits of a benefice without service, was formerly a very common occurrence in the Church of Rome, and is even now occasionally enjoyed in the Church of England. See Struensee. At present the rights in the Church the penso is enjoyed only to priests de emeriti. Titulus pensionis is the name of the secured income to a priest without regard as to its source.

Pensio, Joseph, also called de la Vega, a Jewish merchant of Spain, is noted for his literary labors as poet, moral philosopher, and orator. He was born about 1650 at Espejo, in Cordova; and lived afterwards at Li- vorno, Amsterdam, and Antwerp, at which last place he probably died. He belongs to the last Spanish Jews who cultivated Spanish poetry in a foreign land. He wrote, Trepidationes, "the Prisoners of Hope," an allegorical drama (Amsterdam. 1673). — ὑποτροπία τοῦ Ἰησοῦ, "Orchard of Lilies." In both these dramas Pensio shows the absurdity of Satan in deluding man from the worship of God, and the many snares he lays in his way to entrap him. With powerful and forcible arguments he frustrates all Satan's diabolic devices, and righteousness obtains at last the sway over him: — La Rosa, Panegyrico suo, a panegyric poem in praise of the Mosse law (ibid. 1688): — The Life of Adam, in Spanish (ibid. 1683): — Sermon funebre, a funeral oration in Spanish on the death of his mother, printed together with another oration on the death of his father (ibid. 1683): — Discurso Académico moral y moral para tornado, etc. (ibid. 1688): — Discursos académicos, morales, retóricos, y sacros que recito en la florada Academia de los Floridos, etc. (ibid. 1868). Pentacle of Solomon, a five-angled figure, composed of two triangles interlaced; the legendary seal or sigil of Solomon, carved on an emerald, by which he ruled the gins or demons, representing the five fingers of the hand of Omnipotence. David's shield had six angles.

Pentateuch, the collective title commonly given to the first five books of the O. T. In the present article we treat this important section of Scripture as a whole, in the light of modern criticism and discussion, reserving its component books for their separate heads. See also.

I. The Name.—The above is the Greek name given to the books commonly called the Five Books of Moses (ἡ πεντατέους Σαμωαλος; Pentateuchus sc. libera: the fivefold book; from ἔπατος, which, meaning originally "vessel, instrument," etc., came in Alexandria Greek to mean "book"). In the time of the Ezra- Nehemiah Teacher, the "book of the Law by the hand of Moses" (Ezra vi. 7, 6.) or "the book of the Law of Moses" (Ezra vii. 6.) or "the book of the Law of Moses" (Neh. viii. 1); or simply "the book of Moses" (Ezra vi, 18; Neh. xiii, 1; 2 Chron. xxv, 4; xxxiv, 12). This was beyond all reasonable doubt our existing Pentateuch. The book which was discovered in the Temple in the reign of Josiah, and which is entitled (2 Chron. xxxiv. 14) "the book of the Law of Jehovah by the hand of Moses," was sub-
PENTATEUCH

1: (Scheps Breithaupt). In the Jewish canon the Pentateuch is kept somewhat distinct from the other sacred books of the Old Testament, because, considered with reference to its contents, it is the book of books of the ancient covenant. It is the basis of the religion of the Old Testament, and of the whole theological life. See On the Tabernacle.

For the several names and contents of the five books we refer to the articles on each book, where questions affecting their integrity and genuineness separately are also discussed.

III. Unity of the Pentateuch.—1. This is evinced in its general scope and contents: With a view to this point, we need only briefly observe here that this work, beginning with the record of creation and the history of the primitive world, passes on to deal more especially with the early history of the Jewish family. It gives at length the personal history of the three great fathers of the family; it then describes how the family grew into a nation in Egypt, tells us of its oppression and deliverance, of its forty years' wandering in the wilderness, of the giving of the law, with all its enactments both civil and religious, of the construction of the tabernacle, of the appointment of the priests and the richt and duties of the priesthood, as well as of many important events which befell them before their entrance into the Land of Canaan, and finally concludes with Moses's last discourses and his death. The unity of the work in its existing form is now generally recognized. It is not merely the fusion of so many unconnected books together at different times, but bears evident traces of design and purpose in its composition. Even those who discover different authors in the earlier books, and who deny that Deuteronomy was written by Moses, are still of opinion that the work in its present form is a connected whole, and was at least reduced to its present shape by a single reviser or editor (see Ewald, Geschichte, i, 175; Stihielm, Kritische Untera, p. 1).

The question has also been raised whether the book of Joshua does not, properly speaking, constitute an integral portion of this work. To this question Ewald (Geschichte, i, 175), Knobel (Geniza, Vorbem. § 1. 2), Lengerke (Kenax, Lxxiii), and Stihielm (Kritische Untera, p. 91) give a reply in the affirmative. They seem to have been led to do so, partly because they imagine that the two documents, the Elohist and the Jehovistic, which characterize the earlier books of the Pentateuch, may still be traced, like two streams, the waters of which never wholly mingle though they flow in the same channel, running on through the book of Joshua; and partly because the same work which contains the history of the land (Genesis) contains also—the fulfilment of the promise. But such grounds are far too arbitrary and uncertain to support the hypothesis which rests upon them. All that seems probable is that the book of Joshua received a final revisal at the hands of a man, some earlier prophet, at the same time with the books of the law. The fact that the Samaritans, who it is well known did not possess the other books of Scripture, have besides the Pentateuch a book of Joshua (see Chronicon Samaritanum, etc., ed. Juyoull, Lugd. Bat. 1848), indicates no doubt an early association of the one with the other, but is no proof that they originally constituted one work, but rather the contrary. Otherwise the Samaritans would naturally have adopted the canonical order of Joshua. We may therefore regard the five books of Moses as one separate and complete work.

2. More particularly, the order which pervades the book manifests its unity, although this is not, indeed, tedious form or monotonous.

(1.) Chiefly its chronological order, the simplest of all, and must be the expected to be predominant in a book which is in a large measure historical. This characteristic is obvious in respect to the position of the two books of Genesis and Deuteronomy at the beginning and the end; the former serving as an introduction, and the latter as a recapitulation. In like manner the story of the family of Abraham expands, when we come to Exodus, into that of the people of Israel: first, enslaved Israel attains to redemption, and next redeemed Israel is consecrated to the service of its God—covenanted with, filled with the Spirit of God, delivered in a kingdom, and instructed to set up his tabernacle in the midst of them. The book of Leviticus contains scarcely any history, and is occupied with the rules for the service of God in this tabernacle: it is the code for the spiritual life of Israel as the congregation of the Lord—covenanted and consecrated by God once, and in a form substantially complete. The fourth book, that of Numbers, resumes the thread of the history, and conducts the redeemed and consecrated and organized host from Mount Sinai through the wilderness to the Land of Promise; including further legislation, of which they stood in need if they were to take a suitable place among the kingdoms of the world.

(2.) Yet obviously this book is not a dry series of annals, in which the chronological order is alone observable; still less is it the mere leaves of a journal in which nothing but dates and events are recorded. The dates are given in a town at the dates of the several occurrences, and left unchanged in all time coming. Whatever may have been written down in the form of a journal at the first (of which we have possibly an instance in Numb. xxxiii), would be revised, extended, abbreviated, and changed in the course of the long, long passage of time. The finished history. Therefore we find a systematic order, according to the internal or logical connection of the parts, even in the purely narrative portions. Thus Gen. xxxviii furnishes the account of transactions in the family of Judah which cannot but have stretched over a long course of time, of years apparently, including the greater part of the time that Joseph was alone in Egypt, and which very probably extended back to a date considerably earlier than that at which his captivity began; the entire series of events, however, being recorded in this one chapter, with a twofold advantage—that of being itself more distinctly set before us, and that of not interrupting the thread of Joseph's history in Egypt. Sometimes indeed we may be unable to determine whether the order in which events are narrated is the order of time or that of logical sequence; an uncertainty which meets us in other portions of sacred history, as well as outside of the Bible. But it is not surprising that this logical order predominates in the legislation; though even here the chronological order is by no means uncommon, because the laws sprang, to a considerable degree, from the circumstances of the case, and the laws were placed from time to time. This peculiarity has given rise to repetitions, enlargements, rearrangements, and even in a limited degree to modifications, of earlier enactments, of which we have an instructive example in the varied order in which the parts of the tabernacle and its furniture are mentioned, first in the directions given to Moses in the mount, and, secondly, in the narrative of its actual construction.

(3.) A third principle of arrangement is the rhetorical, of which the instances are fewest. Indeed it is very much confined to Deuteronomy, in which Moses appears as the great prophet of Israel. It was a corollary from the plan of these discourses that Moses should present the topics in the form likeliest to tell upon the audience to whom he was giving a parting address; that he should group incidents and laws according to certain principles, for the purpose of effective teaching, that he should pass over some subjects in entire silence, should touch upon others lightly, and on another class still should enlarge at some length; and that he should often present them under peculiar aspects, in forms from which those in whom they had been seen have not seen them if we had known them only from the earlier books. Yet such variety, subordinate in its amount, and existing for a special purpose, is in reality an addi-
tional proof of the unity of the Pentateuch, and of the comprehensiveness of the plan on which it has been written.

IV. Authority and Date of Composition.—This is pre-
eminently the subject which calls for discussion here, as it has been largely disputed. The reply we give is the old and common one, namely, by Moses, during the wilderness journey, as we have been led him to believe. We shall see it was based upon the very opposite view, and against it.

—At different times suspicions have been entertained of the Pentateuch, and it has not the Pentateuch of the earliest age, and that the work must have undergone various modifications and additions before it assumed its present shape.

So early as the 2d century we find the author of the Clementine Commentaries calling in question the authenticity of the Mosaic writings. According to him the Law was only given orally by Moses to the seventy elders, and not consented to writing till after his death; it subsequently underwent many changes, was corrupted more and more by the false prophets, and was especially filled with erroneous anthropomorphical conceptions, which were founded by Schismatics and the gnostics. The characters of the patriarchs (Rom. ii, 39, 40; iii, 4, 47; Neander. Gesch. Syst. p. 380). A statement of this kind, unsupported, and coming from a heretical, and therefore suspicious source, may seem of little moment; it is, however so entirely in keeping with the tendency to cast off the received traditions respecting the books of Scripture; while at the same time it is evident that this was done cautiously, because such an opinion respecting the Pentateuch was said to be for the advanced Christian only, and not for the simple and unlearned.

Jerome, there can be little doubt, had seen some difficulty in supposing the Pentateuch to be altogether, in its present form, the work of Moses: for he observes (contra Helez.): “Sive Mosec diceris vocem autore Pentateuchi, sive Easam ejusdem instauratoris operem,” with reference apparently to the Jewish tradition on the subject. Aben-Ezra (+1167), in his Comment, on Deut., 1, 1, threw out some doubts as to the Mosaic authorship of certain passages, such as Gen. xvi, 6; Deut. iii, 10, 11; xxxi, 5, which he either explained as later interpolations, as the result of a desire on the part of Moses to establish his power to unravel. But for centuries the Pentateuch was generally received in the Church without question as written by Moses. In the year 1561, however, we find Hobbes writing: “Videtur Pentateuchus potius de Mose quam a Mose scriptus” (Leviathan, c. 28). Spinoza, in his Theodicy, c. 8, 3, published in 1679) set himself boldly to controvert the received authority of the Pentateuch. He alleged against it (1) later names of places, as Gen. xiv, 14 comp. with Judges xvii, 29; (2) the continuation of the history beyond the days of Moses, Exod. xvi, 35 comp. with Jos. v, 12; (3) the statement in Gen. xxxvi, 31, “before there reigned any king over the children of Israel.” Spinoza maintained that Moses issued his commands to the elders, that by them they were written down and communicated to the people, and that later they were collected and assigned to suitable passages in Moses’ life. He considered that the Pentateuch was indebted to Ezra for the form in which it now appears. Other writers began to think that the book of Genesis was composed of written documents earlier than the time of Moses. So Sirtrinae apud Homer. Socin. i, 2, Le Clerc (De Script. Pentateuchi, § 11), and R. Simon (Hist. critique du V. T. lib. i, c. 7, Rotterdam, 1685). According to the last of these writers, Genesis was composed of earlier documents, the laws of the Pentateuch were the work of Moses, and the greater portion of the history was written by the public scribes who are mentioned in the book. Le Clerc supposed that the priest, according to 2 Kings xxi, 27, was sent to instruct the Samaritan colonists, who were the author of the Pentateuch.

It was not till the middle of the last century, however, that the question as to the authorship of the Pentateuch was handled with anything like a bold criticism. The first attempt was made by a layman, whose studies we might have supposed would scarcely have led him to such an investigation; but his name, though now lost, there appeared at Brussels a work entitled Conjectures sur les memoires originaux, dont il paroit que Moyse s’est servi pour composer le livre de Genese. It was written in his 69th year by Astruc, doctor and professor in the Royal College at Paris, and court physician to Louis XIV. His criticism was that the book of Genesis, and as far as the 6th chapter of Exodus, traces were to be found of two original documents, each characterized by a distinct use of the names of God; the one by the name Elohim, and the other by the name Jehovah. Besides these two principal documents, he supposed Moses to have made use of ten others in the composition of the earlier part of his work. Astruc was followed by several German writers on the path which he had traced, by Jerusalem, in his Letters on the Mosaic Writings and Philosophy; Deuteronomy, Disquisitions, Deuteronomy, Moses res in libro Geneseos descripsit didicerit; and with considerable learning and critical acumen by Igen (Urkunden des Jerusalemischen Tempelarchivs, 1st Theil, Halte, 1798) and Eichhorn (Einzug in d. A. T.). But the criticism, which was at first so radical, was found to be too conservative and too rational for some critics. Vater, in his Commentarius pentateuch. (1810), and A. T. Hartmann, in his Linguis., Einl. in d. Stud. der Bücher des A. Tei. (1818), maintained that the Pentateuch consisted merely of a number of fragments loosely strung together without order or connection. The former supposed a collection of laws, made in the times of David and Solomon, to have been the foundation of the whole: that this was the book discovered in the reign of Josiah, and that its fragments were afterwards incorporated in Deuteronomy. All the rest, consisting of fragments of history and of laws written in different periods up to this time, were, according to him, collected and shaped into their present form between the times of Josiah and the Babylonian exile. Hartmann also brings down the date of the existing Pentateuch as late as the 4th century B.C. But such an hypothesis is not the only one which has been suggested. Both of these have now been superseded by the “supplementary hypothesis,” which has been adopted with various modifications by De Wette, Bleek, Stähelin, Tuch, Lengerke, Hupfeld, Knobel, Bunsen, Kurtz, Delitzsch, Schultz, Vaihinger, and others. They are all alike in this, they regard the two documents as the existing Pentateuch, and regard the one as the historic, and the other as the hypothetical. They suppose the narrative of the Elohist, the more ancient writer, to have been the foundation of the work, and that the Jehovistic, or later writer, making use of this document, added to and commented upon it, sometimes transcribing portions of it intact, and sometimes incorporating the substance of it into his own work.

Yet though thus agreeing in the main, they differ widely in the application of the theory. Thus, for instance, De Wette distinguishes between the Elohist and the Jehovistic in the first four books, and attributes Deuteronomy to a different writer altogether (Einl. die A. T. § 150 sq.). So also Lengerke, though with some differences of detail in the portions he assigns to the two editors. The last places the Elohist in the time of Solomon, and the Jehovistic editor in that of Hezekiah; whereas De Wette puts the first under Saul, and the Elohist in the time of the Judges. Hupfeld (Die Quellen der Genesis) finds, in Genesis at least, traces of two authors, one anterior to the Elohist, as well as the Jehovah. He is peculiar in regarding the Jehovistic portion as an altogether original
document, written in entire independence, and without the knowledge even of the Elohist record. A later editor or compiler, he thinks, found the two books, and threw them into one. Vaihinger (in Herzog's Encyclopaedie) is also of opinion that portions of three original documents were found in the first four books, to which he adds some fragments of the 32d and 34th chapters of Deuteronomy. The fifth book, according to him, is by a different and much later writer. The pre-Elohist he supposes to have flourished about 1200 B.C., the Elohist some 200 years later, the Jehovahist in the first half of the 3rd century B.C., and the Deuteronomist in the reign of Hezekiah.

Delitzsch agrees with the writers above mentioned in recognising two distinct documents as the basis of the Pentateuch, especially in its earlier portions; but he entirely severs his book from the hypothesis that Deuteronomy is the work of Moses. His theory is this: the kernel or first foundation of the Pentateuch is found in the Book of the Covenant (Exod. xix.-xxiv.), which was written by Moses himself, and afterwards incorporated into the body of the Pentateuch, where it at present stands. The rest of the laws given in the wilderness, till the people reached the plains of Moab, were communicated orally by Moses and taken down by the priests, whose business it was thus to provide for their preservation (Deut. xvii, 11, comp. xxiv, 8; xxxiii, 10; Lev. x, 11, comp. xv, 31). In this respect Deuteronomy does not exist in writing of the earliest legislation, but on the contrary recapitulates it with the greatest freedom, we are not obliged to assume that the proper codification of the law took place during the forty years' wandering in the desert. This was done, however, shortly after the occupation of the land of Canaan.

On that sacred soil was the first definite portion of the history of Israel written; and the writing of the history itself necessitated a full and complete account of the Mosaic legislation. A man, such as Eleazar the son of Aaron, the priest (see Num. xxxvi, 1; xxii, 21), wrote the great work beginning with the first words of Genesis, including in it the Book of the Covenant, and perhaps gave only a short notice of the last discouragements of Moses, because Moses had written them down with his own hand. A second—who may have been Joshua (see especially Deut. xxxii, 44; Josh. xxxii, 26; and comp. on the other hand 1 Sam. x, 20), who was a prophet, and spake as a prophet, or one of the elders on whom Moses's spirit rested (Num. xi, 25), and many of whom survived Joshua (Josh. xxxiv, 31)—completed the work, taking up Moses's book, and making Moses his model, and incorporating it into his own book. Somewhat in this manner arose the Torah (or Pentateuch), each narrator further availing himself when he thought proper of other written documents.

Such is the theory of Delitzsch, which is in many respects worthy of consideration, and which has been adopted in the main by Kurtz (Gesch. d. A. B. i, § 20, and ii, § 99, f), who formerly was opposed to the theory of different documents, and sided rather with Hengstenberg and the critics of the extreme conservative school. Throughout, however, he adheres, and insists to this view that Deuteronomy existed before the other books, and believes that the rest of the Pentateuch was committed to writing before, not after, the occupation of the Holy Land. Finally, Schultz, in his recent work on Deuteronomy, recognises two original documents in the Pentateuch, the one being the historic portions of the first four books, to work of the whole, but contends that the Jehovistic portions in Deuteronomy, except the concluding portion, were written by Moses. Thus he agrees with Delitzsch and Kurtz in admitting two documents, and the Mosaic authorship of Deuteronomy, and with Stähelin in identifying the Deuteronomist with the Jehovist.

One other theory has, however, to be stated before we pass on. The author of it stands quite alone, and it is not likely that he will ever find any disciple bold enough to adopt his theory: even his great admirer Bunsen forsakes him here. But it is due to Ewald's great and deserved reputation as a scholar, and to his uncommon critical sagacity, briefly to state what this theory is. He distinguishes, among the seven third and fourth documents which are more perfect than the others, a group of three, chief of which are the two books of the Book of the Wars of Jehovah. Thus follows a biography of Moses, of which also but small portions have been preserved; and the oldest historical work of the kind is therefore found in the fifth place, the third and fourth documents are much more perfect: these consist of the Book of the Covenant, which was written in the time of Samson, and the Book of Origins, which was written by a priest in the time of Solomon. Then comes, in the fifth place, the third history of the primitive times, or the first prophetic narrator, a subject of the northern kingdom in the days of Elijah and Joel. The sixth document is the work of the fourth historian of the primitive times, or the second prophetic narrator, who lived between 900 and 750. Lastly comes the fifth historian, or third prophetic narrator, who flourished not long after Joel, and who collected and reduced into one corpus the various works of his predecessors. The real purposes of the history, both in its prophetic and its legal aspects, began now to be discerned. Some steps were taken in this direction by the second writer. The unification of the two narratives was effected by the Deuteronomist, who not only in the time of Manasseh, and lived in Egypt. In the time of Jeremiah appeared the poet who wrote the Blessing of Moses, as it is given in Deuteronomy xvi. 1-27, and who later incorporated the originally independent work of the Deuteronomist, and the lesser additions of his two colleagues, with the history as left by the fifth narrator, and thus the whole was finally completed. "Such," says Ewald (and his words, seriously meant, read with delicate irony), "were the strange fortunes which this great work underwent before it reached its present form." (2) Writers in favor of the Mosaic Authorship of the Pentateuch.—On the other side, however, stands an array of names certainly more numerous and more learned for learning, who maintain not only that there is a unity of design in the Pentateuch—which is granted by many of those before mentioned—but who contend that this unity of design can only be explained on the supposition of a single author, and that this author could have written both the Law and the History from Moses to Hengstenberg, Hävernick, Drellcher, Ranke, Welte, and Keil. The first mentioned of these writers has no doubt done admirable service in reconciling and removing very many of the alleged discrepancies and contradictions in the Pentateuch: but his zeal carries him in some instances to attempt a defence, as one very ingenuity of which betrays how unsatisfactory it is; and his effort to explain the use of the divine names, by showing that the writer had a special design in the use of the one or the other, is often in the last degree defective. Stähelin, in his Genuineness of Genesis (1888), fares no better, though his remarks are the more valuable because in many cases they coincide, quite independently, with those of Hengstenberg. Later, however, Drellcher modified his view, and supposed that the several uses of the divine names are connected with a distinctive design, and the writer, according as his object was to show a particular relation of God to the world, whether as Elohim or as Jehovah. Hence he argued that, while different streams flowed through the Pentateuch, they were not altogether independent of each other, and that therefore one of the motives which influenced the writer, and according to the fundamental thought in particular sections: and on this ground, too, he explained the characteristic phraseology which distinguishes such sections.
work (Unterruchungen über den Pentateuch) is a valuable contribution to the exegesis of the Pentateuch. He is especially successful in establishing the inward unity of the work, and in showing how inseparable its several portions, legal, genealogical, and historical, are intertwined together. Kurtz (in his Einheit der Genesis [1846], and in the first edition of his first volume of the Geschichte des Alten Bundes) followed on the same side; but he has since abandoned the attempt to explain the use of the principle of the different meanings which they bear, and has espoused the theory of two distinct documents. Keil, also, though he does not despair of the solution of the problem, confesses (Luther. Zeitschr. [1851-2] p. 253) that "all attempts as yet made, notwithstanding the acumen which has been brought to bear on the question, must be regarded as failures; and that the different divine names in Genesis on the ground of the different meanings which they possess, must be pronounced a failure." Ebrard (Das Alter des Jebocas-Namens) and Tiele (Stud. und Krit. 1832-1) make nearly the same admission. It is not fair, however, to require the advocates of the Mosaic authorship of the Pentateuch to explain positively the reasons which impelled him to the peculiar use of these names. The causes of such a selection are often incoherent, even to the writer himself. A sufficient reason is perhaps given in the Supplement, but the truth of the falsehood of the views of different persons which contained those peculiarities. The want of uniformity observable in the same section in this respect shows that it is due to a twofold influence. It must be borne in mind that this peculiar distinction in the use of the sacred names is mostly confined to the book of Genesis (q.v.).

2. Direct Testimony of the Book to its own Authorship and Date of Composition.—(1.) Of this character is Exod. xvi, 14, "And the Lord said unto Moses, Write this for a memorial in a book, and rehearse it in the ears of Israel; that generation which went up out of the land of Egypt saw not the face of the Lord;" and that the covenant of the Lord is a lasting covenant; and that the covenant of the Lord is a lasting covenant; and that the covenant of the Lord is a lasting covenant. If we look at the book of Deuteronomy, we shall see that the covenant of the Lord is a lasting covenant; and that the covenant of the Lord is a lasting covenant. In the former case we have two witnesses, viz., Moses himself, and the successor of the Pentateuch; in the latter case, which seems to us the more likely, we have the testimony of Moses alone.

It is true, as we see above, the passages do not define the limits of the book, nor prove its absolute identity with the existing copies of the Pentateuch. But other evidences will be found to supply this proof. We have already the fact that a book was written by Moses under the immediate authority of God, and that this book was intended to be of perpetual obligation. Now, supposing that the scriptural testimony of the Mosaic authorship of the Pentateuch had ended here, although we shall see this is not the case, yet, even so, no moral doubt could exist that this design was carried into effect, and that the books thus preserved were substantially identical with those which have come down to us. For at this period the Jewish people suddenly took their place amid the settled nations of the world, and enter upon that grand and mysterious national life which has continued till our own day. It will not be denied by any that this race was distinguished from all others by many peculiar characteristics. Some of their national habits exhibited affinity in various points of detail with the surrounding polytheism amid which they dwelt; but their whole system was sharply separated, alike by the grandeur of its religious monotheism and by its complex social and political organization, as distinct from all other nations. Their code of laws was penetrating enough to affix its indelible peculiarities on the race who lived under them, and to endow it with a force and elevation, a perpetuity of national life, and a world-wide influence, to which no parallel can be found in history.
Such an effect would itself prove the existence of a cause as permanent as itself, for the precise ritual and ceremonial enactments of the system could never have been maintained without an authorized code of directions. When we inquire into the nature of that peculiar polity to which it is to be attributed, we find it in the books of Moses. The Pentateuch contains a system which explains the national life of the Jewish race, and which must have been in every man's possession. As we may now, on the one side, that the Pentateuch was reduced by Moses to a written form, and, on the other side, that the phenomena of national Jewish life can only be explained by the influence of a positive written code, it is impossible not to put the two facts together, and identify the Book of the Law with the code of subsequent times. In other words, the permanence of the effect proves the permanence of the cause. The subsequent history of the Jewish race would have sufficed to prove that the Mosaic code must have existed in a permanent form from that period till the present, even if no positive external proofs of the fact had existed.

From the passages adduced above it is apparent, indeed, that the most numerous and direct testimonies occur in Deuteronomy; and the opinion has had learned advocates that these testimonies are to be restricted to this book. Delitzsch and Winer would therefore be from the pen of Moses, whereas it is alleged that there is no clear evidence as to the authorship of the other four. But he who takes up this position in good faith is likely soon to discover that Deuteronomy presupposes the existence of the other books, which contain the general knowledge of the people, by its incidental references to subjects which are intelligible only when we turn to the fuller accounts given in these books: for example, the dispersion and settlement of the nations by the hand of God; the call of Abraham, that in his seed the families of the earth might be blessed; the patriarchal history generally, and the result of it, the sojourn of the children of Israel in Egypt; the destruction of Sodom and the neighboring cities; the relationship of the Edomites, Moabites, and Ammonites to Israel; the laws in reference to leprosy; the entire rules for the sacrificial services; the constitution of Aaron's family, and of the whole tribe of Levi in a wider sense, to these services, and the method of their support; and the laws on the subject of murder and manslaughter. Besides, the age of generalizations, such as we find in Deuteronomy, must be preceded by the early history, and the latter events must be the more striking, since scarcely any who have intelligently believed that Deuteronomy is the work of Moses, who have not come to feel the necessity of acknowledging him to be (substantially at least) the author of the entire Pentateuch.

(2) Freased by these arguments, some of the sceptical critics have resorted to the conclusion that the book of Deuteronomy itself, in which these striking testimonies are so largely found, is likewise not the production of Moses. It is of importance therefore to consider this question separately.

All allow that the Book of the Covenant in Exodus, perhaps a great part of Leviticus, and some part of Numbers were written by Israel's greatest leader and prophet. But Deuteronomy, it is alleged, is in style and purpose so utterly unlike the genuine writings of Moses that it is quite impossible to believe that he is the author. But how, then, set aside the express testimony of the book itself? How explain the fact that Moses is there said to have written all the words of this law, to have consigned it to the custody of the priests, and to have charged the Levites sedulously to preserve it by the side of the ark? Only by the bold assertion that the fiction was invented by the later writer, who chose to personate the great Lawgiver in order to give the more color of consistency to his work! The author first refers the name of Moses that he may gain the greater consideration under the shadow of his name, and then asserts that he composed, but in a broader and more spiritual manner, and with true prophetic inspiration, the chief portions of the earlier legislation. But such a hypothesis is devoid of all probability. For what writer in later times would have ventured, unless he were equal to Moses, to correct or supplement the Law of Moses? And if he were equal to Moses, why borrow his name (as Ewald supposes the Deuteronomist to have done) in order to lend greater weight and sanction to his book? The truth is, those who make such an hypothesis invariably impugn the value of ancient writings. They forget that what might be allowable in a modern writer of fiction would not have been tolerated in one who claimed to have a divine commission, who came forward as a prophet to rebuke and persuade, and who had the weight to win their obedience, "Thus saith Jehovah," or "Moses wrote all these words?" It has been argued indeed that in thus assuming a feigned character the writer does no more than is done by the author of Ecclesiastes. He in like manner takes the name of Solomon that he may gain a better hearing for his words of wisdom. But the cases are not parallel. The Preacher only pretends to give an old man's view of life, as seen by one who had had a large experience and no common reputation for wisdom. Deuteronomy claims to be a law imposed on the highest authority, and yet the explicit evidence of the story of the struggle, disappointments, and victory of a human heart. The last is an absolute rule of life, to which nothing may be added, and from which nothing may be taken (iv. 2; xxxi. 1).

Again, if Deuteronomy claims to have been written by Moses, there is other evidence which establishes the great antiquity of the book.

(a) It is remarkable for its allusions to Egypt, which are just what would be expected supposing Moses to have been the author. It is a significant fact that at a later period the people of Israel, when in the reign of Manasseh, is obliged to make his supposed author live in Egypt, in order to account plausibly for the acquaintance with Egyptian customs which is discernible in the book. Without insisting upon it that in such passages as iv. 15—18, or vi. 8, and xi. 18—20 (comp. Exod. v. 10), where the command is given to wear the law after the fashion of an amulet, or xxxi. 1—8, where writing on stones covered with plaster is mentioned, are probable references to Egyptian customs, we may point to more certain examples. In xx. 5 there is an allusion to the Egyptian regulations in time of war; in xxxv. 5, to the Egyptian bastinado; in xi. 10, to the Egyptian mode of irrigation. The references which Delitzsch sees in xxxii. 5 to the custom of the Egyptian priests to hold solemn processions in the masks of different deities, and in viii. 9 to Egyptian mourning regulations, are by no means to be gainsaid, amid the curses threatened are the sicknesses of Egypt (xxviii. 60; comp. vii. 15). According to xxviii. 68, Egypt is the type of all the oppressors of Israel: "Remember that thou wast a slave in the land of Egypt," is an expression which is several times made use of as a motive in enforcing the obligations of the book (v. 15; xxvi. 18, 22; see the same appeal in Lev. xix. 34, a passage occurring in the remarkable section Lev. xvi—xx, which has so much affinity with Deuteronomy). Lastly, references to the sojournings in Egypt are numerous: "We were Pharaoh's bondmen in Egypt," etc. (vi. 21—23; see also vii. 8, 18; xi. 3); and these occur even in the laws, as in the law of the king (xvi. 16), which would be very extraordinary if the book had only been written in the time of Manasseh.

(b) The phraseology of the book, and the archaism found in it, stamp it as of the same age with the rest of the Pentateuch. The form Nth, instead of Nth, for the feminine of the pronoun (which occurs in all 193 times in the Pentateuch) is found nowhere outside Deuteronomy. Nowhere do we meet with Nth in this book, though in the rest of the Pentateuch it occurs

PENTATEUCH

PENTATEUCH

906
eleven times. In the same way, like the other books, Deuteronomy has "יְהֹוָה" of a maiden, instead of the feminine "יְהֹוָה", which is only used once (xxii, 19). It has also the third pers. pret. "נָשָׁה", which in prose occurs only in the Pentateuch (Ewald, Lahrbuch, § 142 b). The demonstrative pronoun "הָאָרֶץ" (which, according to Ewald, § 183 a, is characteristic of the Pentateuch) occurs in Deut. iv, 22; vii, 11, and nowhere else out of the books of Moses, except in the late book, 1 Chron., xx, 8, and the Araamic Ezra, v, 15. The use of the "הָאָרֶץ", which is comparatively rare in later writings, is common to Deuteronomy with other books of the Pentateuch and so is the old and rare form of writing "יְהֹוָה", and the termination of the future in "יְהֹוָה". The last, according to König (A.-T. Stud. 2 Heft), is more common in the Pentateuch than in any other book: it occurs fifty-eight times in Deuteronomy. Twice even in the preterite (viii, 3, 16) a termination presents itself: on the peculiarity of which Ewald (§ 190 b, note) remarks, as being the original and fuller form. Other archaisms which are common to the whole five books are: the shortening of the Hiphil, נָשָׁה, i, 83; יְהֹוָה, xxvi, 12, etc.; the use of נָשָׁה = נָשָׁה, "to meet," the construction of the passive with נָשָׁה of the object (for instance, xx, 8); the interchange of the older נָשָׁה (xiv, 4) with the more usual נָשָׁה; the use of נָשָׁה (instead of נָשָׁה), xvi, 16; xx, 13, a form which disappears altogether after the Pentateuch; many ancient words, such as נָשָׁה, נָשָׁה, (Exod, xiiii, 12). Among these are some which occur besides only in the book of Joshua, or else in very late writers, like Ezekiel, who, as is always the case in the decay of a language, studiously imitated the oldest forms; some which are found afterwards only in poetry, as נָשָׁה, נָשָׁה (vii, 13; xxviii, 4, etc.) and נָשָׁה, so common in Deuteronomy. Again, this book has a number of words which have an archaic character. Such are, נָשָׁה (for the later נָשָׁה), נָשָׁה (instead of נָשָׁה); the old Canaanish נָשָׁה, נָשָׁה, "offspring of the flocks," נָשָׁה, which as a name of Israel is borrowed, Isa. xxix, 2; נָשָׁה (i, 41), "to act rashly," נָשָׁה, "to be silent," נָשָׁה (xx, 14), "to give," lit. "to put like a collar on the neck," נָשָׁה, "to have no care," נָשָׁה, "sickness." For the (d) results of the other peculiarity of Deuteronomy. See xxix, 33; xxix, 18; xxviii, 13, 44; i, 31, 44; viii, 5; xxviii, 29, 49. Of similar comparisons there are but few (Delitzsch says but three) in the other books. The results are most surprising when we compare Deuteronomy with the Book of the Covenant (Exod. xix, xxiii) on the one hand, and with Psa. xc (which is said to be Mosaic) on the other. To cite but one example: the images of devouring fire and of the bearing on eagles' wings occur only in the Book of the Covenant and in Deuteronomy. Comp. Exod. xxiv, 17 with Deut. iv, 24; ix, 3; and Exod. xix, 4 with Deut. xxviii, 1. So again, not to mention numberless undesignated coincidences between Psa. xc and the book of Deuteronomy, especially chap. xxxii, we need only here cite the phrase נָשָׁה נָשָׁה (Psa. xc, 17), "work of the hands," as descriptive of human action generally, which runs through the whole of Deut. ii, 7; xiv, 29; xvi, 13; xxiv, 19; xxviii, 12; xx, 9. The same close affinity, both as to matter and style, exists between the section to which we have already referred in Leviticus (chap. xvi, xx, so manifestly different from the rest of that book), the Book of the Covenant (Exod. xix, xxiii), and Deuteronomy.

(d) In addition to all this, and very much more might be said for a whole book, has been gleaned on this field by Schultz in the Introduction to his work on Deuteronomy — in addition to all these peculiarities which are arguments for the Mosaic authorship of the book, we have here, too, the evidence strong and clear from post-Mosaic times and writings. The attempt, by a wrong interpretation of 2 Kings xxiii and 2 Chron. xxxiv, to bring down Deuteronomy as low as the time of Manasseh, falls to the ground at once. A few Assyrian and Babylonian prophets borrow their words and their thoughts from Deuteronomy. Amos shows how intimate his acquaintance was with Deuteronomy by such passages as ii, 9; iv, 11; ix, 7, whose matter and form are both color of and derived from that book. Hosea, who is rather than Amos in those respects to the Deuteronomean book, is full of allusions to the whole law (vi, 7; xii, 4; etc.; xiii, 9, 10), in one passage (vii, 12) using the remarkable expression, "I have written to him the ten thousands things of my law," manifestly includes Deuteronomy (comp. xiii, 8 with Deut. xxix, 22), and in numerous places shows that that book was in his mind. Comp. iv, 18 with Deut. xii, 2; viii, 13 with Deut. xxxvii, 68; xi, 8 with Deut. i, 31; xii, 6 with Deut. vii, 11-14. Isaiah begins his prophecy with the words, "Hear, 0 heavens, and give ear, 0 earth," taken from the mouth of Moses in Deut. ix, 21. In fact, echo of the tones of Deuteronomy are heard throughout the solemn and majes- tic discourse with which his prophecy opens. (See Caspari, Beitrag zur Entst. in d. Buch Jesaja, p. 203-210. The same may be said of Micah. In his protest against the apostasy of the nation from the covenant with Jehovah, he displays the same similarity to the moral and religious foundations of the earth, in like manner as Moses (Deut. xxxii, 1) to the heavens and the earth. The controversy of Jehovah with his people (Mic. vi, 3-5) is a compendium, as it were, of the history of the Pentateuch from Exodus onwards, while the expression נָשָׁה, "slave-house" of Egypt, is taken from Deut. vii, 8; xii, 5. In vi, 8 there is no doubt an allusion to Deut. x, 12, and the threatenings of vi, 13-16 remind us of Deut. xxviii as well as of Lev. xxxvi. Since then, not only Jeremiah and Ezekiel, but Amos and Hosea, Isaiah and Micah, speak in the words of Deuteronomy, as well as in words borrowed from other portions of the Pentateuch, we see at once how untenable is the theory of those who, like Ewald, maintain that Deuteronomy was composed during the reign of Manasseh, or, as Vaihinger does, during that of Hezekiah. (c) But, after all, the book speaks for itself. No imitator could have written in such a strain. We scarcely need the express testimony of the work to its own authorship. But, having it, we find all the internal evidence conspiring to show that it came from Moses. Those midst of great and striking discourses, in which what can be heard and felt even in a translation, came warm from the heart and fresh from the lips of Israel's lawgiver. They are the outpourings of a solici tude which is nothing less than parental. It is the father uttering his dying advice to his children, no less than the prophet commanding and admonishing his people. What book can vie with it either in majesty or in tenderness? What words ever bore more surely the stamp of genuineness? If Deuteronomy be only the production of some timorous reformer, who, conscious of his own weakness, tried to borrow dignity and weight from the name of Moses, then surely all his attempts to draw from internal evidence for the composition of any work are utterly useless. We can never tell whether an author is wearing the mask of another, whether it is he himself who speaks to us. In spite, therefore, of the dog- matic assertion of its critics, we declare unhesitatingly for the Mosaic authorship of Deuteronomy. See Deuteronomy.

3. Testimony of other Witnesses to the Author.—(1) Our Lord and his Apostles.—Their language is such that the hypothesis of the Pentateuch not being the work of Moses must create a very painful feeling in the mind of every true and simple-hearted follower of Christ.
Comp. Matt. xvi, 1-9 and Mark vii, 13, where the fifth commandment and the law which sentenced to death the man who cursed his parents are ascribed indifferently to God and to Moses, and are put in opposition to the commandments of men which had grown up by a current of tradition. In Matt. xxvii, 22 we read of the Sadducees attempting to puzzle our Lord about the resurrection: \"Master, Moses said,\" etc., or as it is in Mark and Luke, \"Moses wrote unto us,\" referring to the law in Deut. xxx, 5-10. Jesus answered them, \"Ye do err, not knowing the Scriptures, nor the power of God.\" But as touching the resurrection of the dead, have ye not read that which was spoken unto you by God, saying,\" etc.; or as in Mark, \"Have ye not read in the book of Moses\" or as in Luke, \"That the dead are raised, even Moses showed\" at the bush, when he calleth the Lord,\" etc.; all three quoting from Exod. iii, 6. Again, in Matt. xix, 4, 5, in answer to the Pharisees who tempted him on the subject of divorce, our Lord said to them, \"Have ye not read, that he which made them in the beginning, made them male and female, and said,\" etc., Gen. i, 27. Upon this Jesus asked him, \"Why did Moses then command to give a writing of divorce, and to put her away?\" referring to Deut. xxiv, 1. He replied, \"Moses, because of the hardness of your hearts, suffered you to put away your wives.\" The language is not less distinct in the passage (Matt. xix, 3-9); so in Acts xviii, 18. The testimony of the risen Saviour to the written law of Moses as distinguished from the other Scriptures, namely, the Prophets and the Psalms (Luke xxiv, 27, 44, 45). Without insisting on others of less distinctness (such as Luke ii, 29, 34; Acts viii, 17; Acts vii, 37, 44; xx, 21; Rom. x, 5, 19; 1 Cor. ix, 1; Heb. viii, 5), we see particular attention to two statements by our Lord. In Luke xvi, 29, 31, \"They have Moses and the prophets, let them hear them.\" \"If they hear Moses and the prophets, let them hear them.\" These statements by Paul make it plain that what he meant by the writings of Moses was the written law as received among the Jews of his day, and not any shorter work, such as critics have imagined to be the genuine work of Moses and the germ which expanded into our present Pentateuch; a hypothesis which is also contradicted by the fact that the quotations of our Lord and his apostles are as freely made from the portions which the critics ascribe with greatest confidence to later writers as from the other portions which they conceive to be more ancient.

In reference to these testimonies we observe, (a) the habitual reply has indeed been that it was not the business of our Lord and his apostles to teach Biblical criticism. But the rejoinder of Witsius is as satisfactory as ever, though the precise matter in debate has somewhat shifted since his time. \"Certainly Christ and his apostles were not teachers of criticism, such as those men demand that they themselves shall be considered, who at the present day claim as their only function the criticism of the whole of Holy Scripture in every branch of knowledge whatever: yet they were teachers of the truth, and they did not permit themselves to be imposed upon by the ignorance of the mass or by the astuteness of the ruling class. They certainly did not come into the world to foster vulgar errors and to protect them by their authority, and to spread them, not among the Jews alone, but also far and wide among the nations who depended exclusively upon them.\" (b) A fairer reply has been that the names \"of Moses\" or the effect of Moses\" implies no more than \"the psalms of David,\" \"David said,\" etc.; and that if the latter class of phrases may be used without affirming the entire psalter to be David\'s own composition, or without decisively attributing to David the particular psalm which is quoted, just so may \"Moses\" be used without inquiring whether it is Moses who is the author of the whole book of Psalms or of only one of them.

(2) The Rest of the Old Testament Scriptures.—These were in existence centuries before these testimonies of Jesus and his apostles, and they contain copious evidence that the Pentateuch was written at the time of Moses, and by himself or under his directions. Beyond all doubt there are numerous most striking references both in the prophets and in the books of Kings to passages which are found in our present Pentateuch. One thing is certain, that the theory of men like Von Bohlen, Witsius, etc., that the whole of the books of the Pentateuch have been written in the times of the latest kings, is utterly absurd. It is established in the most convincing manner that the legal portions of the Pentateuch already existed in writing before the separation of the two kingdoms. Even as regards the historical portions, there are often striking coincidences of expression, which render it more than probable that these also existed in writing. All this has been argued with much learning, the most indefatigable research, and in some instances with great success. We are not prepared to say by what means the original writers will satisfy ourselves by pointing out some of the most striking passages in which the coincidences between the later books and the Pentateuch (omitting Deuteronomy here) appear.

(a) Beginning with the historical books, the references to the law of Moses as a written work of supreme authority in Israel are particularly numerous and distinct in the book of Joshua, as might be expected in the history of the personal friend of Moses, and the close attendant upon him, to whom, by divine direction, Moses instilled the completion of the work of conquering the Promised Land, and settling the people in it, and establishing among them the worship and the laws of God. The evidence is so abundant and indubitable that the only resource of our opponents has been an allegation, without any evidence, that the book of Joshua is comparatively of very recent origin, written perhaps after the Exile, or at least not long before it; an allegation which has been somewhat modified by others, but only to make it more arbitrary and improbable, when they pronounce it to be a sixth book of that history of the original of the Hebrew church as written by the men of the first five books of Moses, with certain ancient elements in it, yet wrought up to its present form only in a very late age, much as they imagine the Pentateuch to have been. The book of Judges has been said to want such clear evidence as
the Pentateuch; if so, the reason must be sought, partly in the greater distance from it in point of time, and still more in the nature of its content, which is a series of the defects of the people and the chastenments which followed in order to lead them to repentance. Yet the entire work is meant to bring the conduct and condition of the people to the test of the law of God, as the known and acknowledged standard of duty; the opening account of the criminal neglect which left so many remnants of Canaanites in the midst of the tribes of Israel is meaningless except on the supposition that the law of Moses and the transactions of Joshua are already known; and some parts of it, such as the histories of Deuteronomy, are those for which the Pentateuch is regarded as a book which rests its authority, both to the facts of the Pentateuch and to its language. Nay, the cases of greatest divergence from the law of Moses which its records are no proof that this law was unknown, or destitute of authority, at the time its author lived, as has been rashly asserted: on the contrary, they carry evidence within themselves that they were sinful; because they were the acts of men whose whole conduct was vile and disorderly, or because it is noticed that they drew down divine judgments on those who were concerned in perpetrating them. The succeeding historical books of Ruth, Samuel, and Kings present similar evidence of the received traditions of Nehemiah: the book of Kings we have references as follows: 1 Kings xx. 22 to Lev. xxvii. 29; xxii. 3 to Lev. xxv. 29, Num. xxxix. 8; xxi. 10 to Numb. xxxv. 30 (comp. Deut. xvii. 6, 7; xix. 15); xxii. 17 to Numb. xxvi. 16, 11; 2 Kings iii. 20 to Exod. xxxvi. 23; iv. 21 to Exod. xxv. 23; iv. 22 to Exod. xxvi. 36; iv. 6, Num. xii. 10; vi. 18 to Gen. xix. 11; vi. 28 to Lev. xxvi. 29; vii. 2, 19 to Gen. vii. 14; viii. 3 to Lev. xii. 46 (comp. Num. v. 3).

(b) Especially remarkable is the testimony arising from the existence of the line of prophets in Israel: men who spoke in the style of the law of Moses, and used its language, and enforced and applied its lessons, without any civil support, often in opposition to the habits of the people and the wishes of the government; not without suffering persecution occasionally, yet without one word being uttered against the authority of the prophetic office and their absolute right to prophesy in the name of Jehovah and in support of his law. In Joel, who prophesied only in the kingdom of Judah; in Amos, who prophesied in both kingdoms; and in Hosea, whose ministry was confined to Israel, we find references which have been regarded as discrediting the claim to the authorship of the Pentateuch. The following comparison of passages may satisfy us on this point: Joel ii. 2 with Exod. x. 14; ii. 3 with Gen. ii. 8, 9 (comp. xiii. 10); ii. 17 with Numb. xiv. 18; ii. 20 with Exod. x. 19; iii. 1 [ii. 28, E.V.] with Gen. vi. 12; iii. 13 with Exod. xxxiv. 6; iv. [iii. 16] with Exod. xxxiv. 7; iv. 2 with Exod. xxiv. 27; vii. 7 with Exod. xxii. 36, Lev. xx. 3; vii. 18 with Exod. xxii. 25, etc.; ii. 9 with Num. xiii. 32; etc.; iii. 7 with Gen. xviii. 17; iv. 4 with Lev. xxiv. 8; and Deut. xxiv. 3, xxvi. 12; v. 12 with Numb. xxxiv. 31 (comp. Exod. xxix. 3, 6; and Amos ii. 7); ix. 17 with Exod. xii. 12; xii. 21, etc., with Numb. xxvii. 35, Lev. xxvi. 86; vi. 1 with Num. i. 17; vi. 6 with Gen. xxxvii. 25 (this is probably the reference: Hengstenberg is wrong); vi. 8 with Lev. xxi. 19; vi. 14 with Numb. xxxvii. 5; viii. 6 with Exod. xx. 3; Lev. xxv. 39; ix. 10 with Exod. xvi. 3-5 (comp. Exod. vii. 18); ix. 16 with Lev. xx. 5-7; ii. 4 with Gen. xxvii. 17, 22; 12; ii. 5 [i. 10] with Gen. xxvii. 17, 22; vi. 2 with Exod. xii. 10; iii. 2 with Exod. xxxii. 32; iv. 8 with Lev. vi. 17, etc., and vii. 1, etc.; iv. 10 with Lev. xxvi. 26; iv. 17 with Exod. xxxii. 9; 10. 6; iv. 19 with Exod. xxx. 33, and it is clear according to Deut. vii. 22, it was either known under the following conditions: Exod. xii. 12-16; xii. 6 [A. V. 5] with Exod. iii. 15; xii. 10 [9] with Lev. xxviii. 36; xiii. ii. [14] with Gen. ix. 5. This fact is the more worthy of consideration, inasmuch as these prophets were to be found actively at work, not merely in the kingdom of Judah, in which the Pentateuch was originally published, but also the kingdom of the ten tribes, in which the true spirit of the theocracy was respectably at a very low ebb. Those of the prophetic writers who have left their writings to us, and whose narratives have furnished references to facts and phrases in the books of Moses, sometimes longer and more direct, sometimes briefer and more incidental, but so various and multiplied that it has been found necessary to frame the hypothesis that the prophetic writings were the originals out of which our present Pentateuch was formed: a supposition in itself sufficiently unnatural, and, if it were admitted, still forcing us back upon the question, What, then, was the foundation of divine authority, as acknowledged by the people of Israel, on which the authority of the prophetic office rested in which the prophets in their teaching appealed?

(c) A strong support is also furnished by two books of Scripture which are of a very different nature from any that have yet been noticed—the books of Psalms and of Proverbs: the one dealing with the devotional feelings, the other with the practical life of the people of Israel, and both often naming the law, and continually referring to it, or tacitly assuming that it was known and revered.

(d) It is unnecessary to speak of the testimony of books written after the return from Babylon, as Ezra, Nehemiah, and the Chronicles. The books of Ezra and Nehemiah have been admitted to be so full and explicit that there is no way of destroying its force, or of even materially diminishing its value, unless by affirming boldly that these are late writings that they are no authorities upon the question of the history given. For the books of Chronicles is often pronounced incorrect and unworthy.

(e) But now, as appears from the examination of all the extant Jewish literature, if the Pentateuch existed as a canonical book; if, moreover, it was a book so well known that its words had become household words among the people; and if the prophets could appeal to it as a recognised and well-known document—how comes it that in the reign of Josiah, one of the latest kings, its existence as a canonical book seems to have been almost forgotten? Yet such was evidently the case. The circumstances, as narrated in 2 Chron. xxxiv. 14, etc., were these: In the eighteenth year of his reign, the king who had already taken active measures for the suppression of idolatry, determined to execute the necessary repairs of the Temple, which had become seriously neglected, and restore the Divine presence there, by the pious generosity of the people. He accordingly directed Hilkiah the high-priest to take charge of the moneys that were contributed for this purpose. During the progress of the work, Hilkiah, who was busy in the Temple, came upon a copy of the book of the Law; which book, he long had neglected and forgotten—and told Shaphan, Amos ii. 3, 4 (comp. xiv. 6). The discovery produced the effect which was very remarkable. The king, to whom Shaphan read the words of the book, was filled with consternation when he learned for the first time how far the nation had departed from the law of Jehovah. He then sent Hilkiah and others to consult the prophetess Huldah, who only confirmed his fears. The consequence was that he held a solemn assembly in the house of the Lord, and "read in their ears all the words of the book of the covenant that was found in the house of the Lord." How are we to explain these surface and alarm in the midst of the solemnity? As it does such utter ignorance of the book of the law, and of the severity of its threatening, except on the supposition that as a written document it had well-nigh perished? This must have been the case, if we accept the history as a true one, and it is as clear that the text as it appears at first sight. It is quite true that in the reign of Jehoshaphat pains had been taken to make the nation at large acquainted with the law. That monarchical not only instituted "teaching priests," but we are told that as they went about the country they had the book of the law with them. But that was 300 years before a period equal to that between the days of Luther and
our own; and in such an interval great changes must have taken place. It is true that in the reign of Ahaz, the prophet Isaiah directed the people, who, in their hopeless infatuation were seeking counsel of ventrilo-
quists and necromancers, to turn to "the law and to the testimony!" and Hezekiah, who succeeded Ahaz, had the Book of the Law read in the temple, and sent for Seraiah the scribe to copy it. But the next monarch was guilty of outrageous wickedness, and filled Jerusalem with idols. How great a desolation might one wicked prince effect, especially during a lengthened reign! To this we must add that at no time, in all probability, were there many copies of the law existing. It is not improbable that the custom, as it still is in the East, to trust largely to the memory for its transmission. Just as at this day in Egypt persons are to be found, even illiterate in other respects, who can repeat the whole Koran by heart, and some may the Jews as able to retain the whole of the five books of Moses, so it probably was then: the law, for the great bulk of the nation, was orally preserved and incalculable. (See Mr. Grove's very interesting paper on Nabila and the Samaritans in Vocation Tourists, 1861. Speaking of the service of the yom kippur in the temple, he says: "The history of the Pentateuch was continued through the night, "without even the feeble lamp which on every other night of the year but this burns in front of the holy books. The two priests and a few of the people know the whole of the Torah by heart" [p. 846].) The ritual was not altogether preserved by this mode of ob-
servance, though much of it doubtless became perverted, and some part of it perhaps obsolete, through the neg-
lect of the priests. Still it is against the perfunctory and lifeless manner of their worship, not against their real neglect, that the burning words of the prophets are directed. The command of Moses, which laid upon the king the obligation of making a copy of the law for himself, bad of course long been disregarded. Here and there, perhaps, only some prophet or righteous man possessed a copy of the sacred book. The bulk of the na-
tion were without it. Nor was there any reason why 
copies should be brought under the notice of the king. We may understand this by a parallel case. How 
easy it would have been in England, before the inven-
tion of printing, for a similar circumstance to have 
happened. How many copies, do we suppose, of the 
Scriptures were made? Such as did exist would be in 
the hands of a few learned men, or more probably in 
the libraries of monasteries. Even after a translation, like 
Wickliffe's, had been made, the people as a whole would 
know nothing whatever of the Bible; and yet they were 
all acquainted with the books, though not necessarily 
 instructed out of the Scriptures, though the volume it-
self could scarcely ever have been seen. Even the mon-
arch, unless he happened to be a man of learning or pi-
ety, would remain in the same ignorance as his subjects. 
Whatever knowledge there was of the Bible and of 
religion would be kept alive chiefly by means of the 
liturgies used in public worship. So it was in Judah. 
The oral transmission of the law and the living testimony 
of the prophets had superseded the written document, 
till at last it had become so scarce as to be almost un-
known. But the hand of God so ordered it that when 
king and people were both zealous for reformation, and 
ripest for the reception of the truth, the written docu-
ment itself was brought to light. 
If this direct verbal testimony had been absent, the entire 
structure of the scriptural books from Joshua to 
Malachi would have necessitated the same conclusion. 
These books never could have been written in their ex-
isting form, unless by men familiarly conversant with the 
Pentateuch. Thence are derived the ultimate prin-
ciples which underlie the whole. They are united to it 
by a manifest difference so complex, intricate, minute, 
as to constitute a study in itself. The grand monothe-
ism which pervades the whole, the overruling Prov-
dence which is everywhere thrown into the foreground, 
the national election of the Jew, and his relation to his 
forefathers in the perpetual covenant sealed between 
God and them, would all be inexplicable without this 
reference to the transactions of the past. Throughout 
the prophetic books especially the tone of thought 
and feeling, the language employed, the illustrations 
used, the very phraseology of the prophet's speech, 
promise, the allusions to the past, and the predictions 
of the future, would be unintelligible to the student if 
the Pentateuch were not in his possession to interpret 
them. This is as true, and perhaps more forcibly evi-
dent in regard to the N. T. and the teaching of our Lord 
and his apostles, as that it is in the language and the lan-
guage of the prophets. The Pentateuch is the thread 
of gold which runs, now latent, now prominent, through-
out the whole body of the Scriptures. Retain it in its 
place, and the whole is united by a consistent purpose 
from end to end; take it away, and all the revela-
tion becomes a mass of inextricable confusion. 
The recognition of this bearing of the authority of the Pen-
tateuch on the authority of the other scriptural books is 
most necessary. For the purpose, however, of succin-
cently stating the positive argument in favor of the au-
scriptural and divine inspiration of the Pentateuch, it is 
sufficient to trace the line of testimony down to the time of Malachi, for here we find that firm 
footing in the acknowledged facts of profane history which 
enables us to close every avenue against the ob-
jectors to the Pentateuch. 
To take the facts of the books subsequent to the Pen-
tateuch, and reduce them to anything like consistency, 
on the supposition that the Pentateuch itself is myth-
ical, framing a connected and credible story out of them, 
is a task which baffles all human ingenuity. The only 
alternative appears to be to make a clean sweep of the 
history altogether; but this is no sooner proposed to 
the mind than both the past and the present lift up 
their protest against it. The past forbids it, because at 
many points the history of the Jews has come into con-
tact with the history of the other great nations of an-
tiquity, and to deny the one would involve the de-
struction of the other likewise; for modern research has 
conclusively proved the harmony of sacred history with 
profane in a very considerable number of instances. The 
Mosaic authorship is expressly affirmed by Heceataes, 
Manetho, Lysimachus, Tacitus, Juvenal, and Longinus. 
In regard to the Pentateuch itself, the Mosaic cosmog-
ony, the scriptural account of the deluge, and the dis-
persion of mankind at Babel receive confirmation from 
Berosus the Chaldean; the etiological list in Genesis 
is strongly corroborated by the Babylonian monuments; 
and one might quote a score of other instances. The 
Manetho the Egyptian. Coming to later times, the 
Jewish conquest of Canaan is confirmed by an ancient 
Phcenican inscription noticed by three old writers: Da-
vid's conquest of Syria by two heathen writers of re-
pute; the history of his relations with Hiram, king of 
Tyre, by Herodotus, Dias, and Menander. Similar 
points of contact occur all down the history, till, in the 
period of the captivity, we emerge from the darkness 
of prehistoric times to the period of authentic history 
(see Rawlinson's Recent Lectures and Ancient Mon-
archies). If the Jewish history be so complex a matter that 
becomes of the profane? and how is it that the ancient 
Babylonian monuments, now yielding their precious 
stores of information to the diligence of modern inqui-
rity, corroborate in so many points the statements of the 
seated books? That the two narratives of the sacred 
and the profane, are so interwoven that the denial of 
the one must involve likewise the denial of the other. 
Say that the past history of the Jew before the times 
of the Ptolemies is a myth altogether, and the history 
of the Egyptian, the Babylonian, and the Assyrian must 
be equally equally according to the Mosaic history to be 
true, and the truth of the history involves the 
divine authority of the Pentateuch which records it. 
But the argument is at least equally strong when we
trace the line of proof upward from the time of the Psal-
enemies, in regard to the existence of the Jewish Scrip-
tures, in the form in which they are now in existence. The
still extant Septuagint proves the existence of the O.-T.
Scriptures in their completed form at this date, and that
they were universally received by the Jewish race as the
authoritative and divinely inspired compositions of the
authors to whom they are ascribed. The Pentateuch,
for instance, was implicitly received as being the
work of Moses, and as supplying the divinely ordained
platform on which the whole superstructure of Jewish
polity and religion had been reared, and as the author-
itative record of it. To cast a doubt on its genuineness
and divinity would be to cast a doubt that none of the
prophecies of the Old Testament, of the New, which
the Samaritans strongly argues that their copy dates
from a very early period. This view is confirmed by the
fact that it is written in the ancient character, which
certainly was not in use after the Exile. The only ob-
jection of any considerable weight to this conclusion
is the fact that it agrees remarkably with the existing
Hebrew Pentateuch, and that, too, in those passages
which are manifestly interpolations and corrections as
late as the time of Ezra. Hence many incline to the
view of Prideaux (Connect, bk. vi, ch. iii) that the Sa-
maritan text was in use before the celebrated
revised copy of Ezra's.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased
by the wide dispersion of the Jewish race, and the mighty
separation which had divided the original people into
two jealous if not hostile nations. If one portion of the
dispersed had been disposed to acquiesce in the fraud,
or, in the depth of their superstitious ignorance, had
been induced to accept a religious romance composed
by some member of the college of the prophets as the
ancient Scriptures of their nation, still it is inconceiv-
able that all the communities of Jews established in
the different cities of the known world could have been
brought to the same conclusion. Or if the exclusive
and mysterious character of the new work, and the
authority of him who was supposed to have written it,
and the attempts of all Jews to prevent the transmission
and avowedness of this imposture, or, lastly, they
must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased

must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

(3) Proof of the early composition of the Pentateuch
exists in the fact that the Samaritans had their own
copies of it, not differing very materially from those
possessed, as in regard to the form of these copies, which
had probably been purposely tampered with and al-
terated; such, for instance, as Exod. xxi, 40; Deut.
xviii.

The Samaritans, it would seem, must have derived their
book of the Law from the ten tribes, whose land they
occupied; on the other hand, it is out of the ques-
tion to suppose that the ten tribes would be willing to
accept religious books from the two, unless these were
already in general circulation and of long-established
authority. Hence the conclusion seems to be irresist-
ible that the Pentateuch which we have at present is
not the original, but a copy of the Pentateuch in a
ferent form before the separation of Israel from Judah;
the only part of the O. T. which was the common her-
itage of both. There is not indeed any historical
notice of a rupture between the Jews and Samaritans
prior to the return from Babylon, except so far as the
schismatic call-worship, and the mongrel character of
the inhabitants introduced by the Assyrian conquerors,
would naturally produce it; and there are traces of a
religious association, more or less close, during the later
period of the Hebrew monarchy; but the notable fact
is that none of these Jewish historians or prophets
whom we are considering say anything about a split
between the Samaritans strongly argues that their copy dates
from a very early period. This view is confirmed by the
fact that it is written in the ancient character, which
certainly was not in use after the Exile. The only ob-
jection of any considerable weight to this conclusion
is the fact that it agrees remarkably with the existing
Hebrew Pentateuch, and that, too, in those passages
which are manifestly interpolations and corrections as
late as the time of Ezra. Hence many incline to the
view of Prideaux (Connect, bk. vi, ch. iii) that the Sa-
maritan text was in use before the celebrated
revised copy of Ezra's.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased
by the wide dispersion of the Jewish race, and the mighty
separation which had divided the original people into
two jealous if not hostile nations. If one portion of the
dispersed had been disposed to acquiesce in the fraud,
or, in the depth of their superstitious ignorance, had
been induced to accept a religious romance composed
by some member of the college of the prophets as the
ancient Scriptures of their nation, still it is inconceiv-
able that all the communities of Jews established in
the different cities of the known world could have been
brought to the same conclusion. Or if the exclusive
and mysterious character of the new work, and the
authority of him who was supposed to have written it,
and the attempts of all Jews to prevent the transmission
and avowedness of this imposture, or, lastly, they
must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased
by the wide dispersion of the Jewish race, and the mighty
separation which had divided the original people into
two jealous if not hostile nations. If one portion of the
dispersed had been disposed to acquiesce in the fraud,
or, in the depth of their superstitious ignorance, had
been induced to accept a religious romance composed
by some member of the college of the prophets as the
ancient Scriptures of their nation, still it is inconceiv-
able that all the communities of Jews established in
the different cities of the known world could have been
brought to the same conclusion. Or if the exclusive
and mysterious character of the new work, and the
authority of him who was supposed to have written it,
and the attempts of all Jews to prevent the transmission
and avowedness of this imposture, or, lastly, they
must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased
by the wide dispersion of the Jewish race, and the mighty
separation which had divided the original people into
two jealous if not hostile nations. If one portion of the
dispersed had been disposed to acquiesce in the fraud,
or, in the depth of their superstitious ignorance, had
been induced to accept a religious romance composed
by some member of the college of the prophets as the
ancient Scriptures of their nation, still it is inconceiv-
able that all the communities of Jews established in
the different cities of the known world could have been
brought to the same conclusion. Or if the exclusive
and mysterious character of the new work, and the
authority of him who was supposed to have written it,
and the attempts of all Jews to prevent the transmission
and avowedness of this imposture, or, lastly, they
must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

The enormous difficulty of even conceiving the possi-
bility of a fraud under such circumstances is increased
by the wide dispersion of the Jewish race, and the mighty
separation which had divided the original people into
two jealous if not hostile nations. If one portion of the
dispersed had been disposed to acquiesce in the fraud,
or, in the depth of their superstitious ignorance, had

ancient Scriptures of their nation, still it is inconceiv-
able that all the communities of Jews established in
the different cities of the known world could have been
brought to the same conclusion. Or if the exclusive
and mysterious character of the new work, and the
authority of him who was supposed to have written it,
and the attempts of all Jews to prevent the transmission
and avowedness of this imposture, or, lastly, they
must ignorantly have received human and imaginary
compositions as veritable and divinely inspired history.

4. Confirmation of the Mosaic Authorship.—Of this
PENTATEUCH 912 PENTATEUCH

confirmatory evidence we offer the following specimens, in addition to the considerations urged above to prove the unity of the entire five books.

(1.) Internal indications occur that the Pentateuch does belong to the age of Moses.—(a) References to matters somewhat earlier than his own time, which we might well have opportunities of knowing, and which might naturally be impressed upon the mind of a writer or compiler (as it has been suggested), are common in the Pentateuch. The Deuteronomic vocabulary (to use the barbarous words descriptive of peculiar notions which have been introduced into this controversy) are reduced to extreme narrow limits by such a competent scholar as Delitzsch, whose peculiar theory leads him to occupy an intermediate or neutral place in these discussions. Thirdly, that a difference is at once plainly discernible between the earlier and the later books, when we compare the writers of the Mosaic generation to that of the books generally reckoned nearest to it in point of age—namely, Joshua and Judges.

(2.) If we deny that Moses was the author of this book, it is impossible to fix with satisfaction on any later age for the date of composition of Deuteronomy. We shall, however, on a slight examination of the various dates proposed.

(a) The inclination is very strong to fix the date of the composition of Deuteronomy, as well as the final arrangement of the other four books, somewhat perhaps in the reign of Hezekiah—the character of whose administration, however, is inconsistent with the admission of religious novelties (eminently in the rule of faith), since he was bent upon removing all the abuses which had crept into the institutions of Moses; or in the reign of his prolific son, Manasseh, although the heathenish party in Judah were at the time so completely defeated and exterminated, when they had been dispossessed by the Philistines, the Edomites, the Moabites, and the Ammonites—notice well fitted, and we believe intended, to encourage Israel in rooting out their enemies the Canaanites with the promised special blessing of God, although the higher criticism has induced its votaries to pronounce them ill-judged interpolations.

(b) The record of particulars respecting the origin of the people that have every token of versimilitude, at once from the simplicity with which they are related, and from the absence of features which characterize the fabulous accounts of early times by the Greeks and others.

(c) The prominence given to many events, and the minuteness and vividness of the descriptions, such as are common in the narratives of eye-witnesses and men personally engaged in the transactions; which may be associated the evidence of intimate (yet not unbridled) acquaintance with both Egypt and the wilderness.

(d) Confirmatory evidence may be found in many of the laws which were applicable to the Israelites only while they were wandering through the wilderness, or while gathered close together in the camp; as indeed "the camp" is very frequently mentioned in the course of these laws, for instance in Lev. xiii, 46; xiv, 8; xvi, 26; xvii, 3; Num. v. 3. So also the commands are a time laid, not upon the priests as a body; but upon Aaron personally, and his sons: and here may be added what has already been said of certain slight modifications of laws in Deuteronomy, which were natural with the progress of events during the forty years; compare also Deut. xiv and Lev. xi. Leviticus alone mentioning the permission to eat the locusts, which would be common in the wilderness, etc.

(e) Add to this the antiquity of words and expressions which are generally conceded to occur throughout the Pentateuch. This is no doubt a kind of argument which must be handled with care and moderation; and it has been employed very frequently, and been pushed to a most extravagant length, by many Continental scholars in support of views which they have really adopted on other grounds. But three things may be asserted very confidently, and they are sufficiently to be appreciated by the mere English reader, although he is not in circumstances to verify them. First, that there are many traces of very early simple language in the Pentateuch, as the habitual use of הcape for he and she. 22 for young man and young woman, without the distinction of gender invariably found in the rest of the Old Testament. Secondly, that the differences of the Elohist and the Jahvistic and
(c.) Yet nor is the earlier age of David and Solomon satisfactory as the assumed date of this composition. If, as some suppose, the book of David, from the suggestion that in the days of these kings it would have been wholly thrown aside by Jeroboam, who must have found inconvenience and positive danger from it; and in casting it away he would have easily and naturally represented himself as a reformer of religion, delivering the people from one of the yoke of servitude which the heathen of Topep had been imposing on them, and restoring to them their primitive civil liberty and religious simplicity, according to the genuine institutions of Moses. Instead of this, it is evident that from the first Jeroboam was condemn ed by the prophets as his pretence, much profiteer, and the priests and the Levites, and generally by multitude of the people, whose hearts were reverent towards the acknowledged and established law of God. The entire law of the kingdom (Deut. xvii), which has been represented as furnishing evidence of late authorship, is on the contrary a witness to a much earlier date of composition. In the days of David and Solomon there would have been no need to forbid the appointment of a foreigner to the throne, since it was established in this family of the tribe of Judah, and this with divine sanctions and promises of perpetuity; while the language in which this law of the kingdom (Deut. xvii) was written, and the gold and silver that would have needed to have been very different to suit that age. The oft-repeated command to extirpate the Canaanites, and not to let them dwell in the midst of Israel (so far from being a production of the writings of Solomon, or in the days of the gold and silver that would have needed to be very different to suit that age) is quite out of the question. In their totally altered circumstances the remains of these nations appear to have become convert to the worship of Jehovah, and in some sense members of the congregation of Israel; and a fearful curse fell upon Saul and his bloody house on account of his zeal in exterminating the Gibeonites.

(d.) If we are thus driven back to a period indefinitely anterior to the time of David, there is no other age than that of Moses himself at which we can rest with reason or satisfaction. There is no one whose name could be suggested as the author, with any degree of probability, during the disturbed period of the judges, in the course of which religion was rather retrograding, and the revivals of it were very far from favoring new legislation. See Judges. Samuel has indeed been named, and there is no reason why he should be insured against contributions and impositions at the crisis in which the Hebrew republic passed into a monarchy; still there is no evidence that he was competent to write the Pentateuch. Besides there are two special objections: his closeness to the age of David and Solomon, than which the book seems much more an instrument of supporting a knavery acknowledged law of God in Israel as the basis on which all his labors rested, and the rule of life and worship to which it was his aim to bring the people back.

(e.) There are not wanting traces which point to the patriarchal age as the time in which the writer of the Pentateuch lived. A writer subsequent to the time at which "the laws of Moses" (rightly or wrongly so called) had taken hold of the national mind, would have been little likely to represent their ancestor Abraham as marrying his sister, half-sister though she might be; and Jacob, instead of being a pillar of the world of the age of the primitive age of the writer is evinced by his entire silence on the subject of temples for the worship of false gods, as well as of any house for Jehovah. It may be doubted, too, whether a later legislator would have spoken of priests in Israel prior to the institution of an independent priesthood. The primitive form of the offering of sacrifice, under the direction of Moses, at the establishment of the covenant in Sinai (Exod. xix, 24; xxiv. 5).

(f.) Moreover, that "law of Moses" was very burdensome to the people in respect to both trouble and expense and no one could have introduced it, thereby in fact accomplishing an unparalleled social revolution, if he had not had the support of overwhelming authority as the present legislator of Jehovah. In such a case, therefore, could that legislation have been altered throughout successive ages by numberless nameless authors such as the critics have discovered.

(g.) The prophetical passages, those of Moses himself, and those of Isaiah, have puzzled the critics when attempting to fix a later date for their composition as early as the establishment of the kingdom. It is evident that from the first Jeroboam was condemned by the prophets as a pretender, much profiteer, and the priests and Levites, and generally by multitude of the people, whose hearts were reverent towards the acknowledged and established law of God. The entire law of the kingdom (Deut. xvii), which has been represented as furnishing evidence of late authorship, is on the contrary a witness to a much earlier date of composition. In the days of David and Solomon there would have been no need to forbid the appointment of a foreigner to the throne, since it was established in this family of the tribe of Judah, and this with divine sanctions and promises of perpetuity; while the language in which the book of the kingdom (Deut. xvii) was written, and the gold and silver that would have needed to have been very different to suit that age are quite out of the question. In their totally altered circumstances the remains of these nations appear to have become convert to the worship of Jehovah, and in some sense members of the congregation of Israel; and a fearful curse fell upon Saul and his bloody house on account of his zeal in exterminating the Gibeonites.

(h.) If we are thus driven back to a period indefinitely anterior to the time of David, there is no other age than that of Moses himself at which we can rest with reason or satisfaction. There is no one whose name could be suggested as the author, with any degree of probability, during the disturbed period of the judges, in the course of which religion was rather retrograding, and the revivals of it were very far from favoring new legislation. See Judges. Samuel has indeed been named, and there is no reason why he should be insured against contributions and impositions at the crisis in which the Hebrew republic passed into a monarchy; still there is no evidence that he was competent to write the Pentateuch. Besides there are two special objections: his closeness to the age of David and Solomon, than which the book seems much more an instrument of supporting a knavery acknowledged law of God in Israel as the basis on which all his labors rested, and the rule of life and worship to which it was his aim to bring the people back.

(i.) There are not wanting traces which point to the patriarchal age as the time in which the writer of the Pentateuch lived. A writer subsequent to the time at which "the laws of Moses" (rightly or wrongly so called) had taken hold of the national mind, would have been little likely to represent their ancestor Abraham as marrying his sister, half-sister though she might be; and Jacob, instead of being a pillar of the world of the age of the primitive age of the writer is evinced by his entire silence on the subject of temples for the worship of false gods, as well as of any house for Jehovah. It may be doubted, too, whether a later legislator would have spoken of priests in Israel prior to the institution of an independent priesthood. The primitive form of the offering of sacrifice, under the direction of Moses, at the establishment of the covenant in Sinai (Exod. xix, 24; xxiv. 5).

(j.) Moreover, that "law of Moses" was very burdensome to the people in respect to both trouble and expense and no one could have introduced it, thereby in fact accomplishing a revolution so unparalleled as to have been achieved by the early legislator, who had the support of overwhelming authority, as the present legislator of Jehovah. In such a case, could that legislation have been altered throughout successive ages by numberless nameless authors, such as the critics have discovered.

(k.) A most tempting subject for any one who wishes to turn upon the critics is the irreconcilable diversity of the hypotheses which they have framed, in spite of every imaginable advantage enjoyed by them—learning, leisure, and even abundance of all belief by the need of evidence for their endless suppositions. We noticed, at an early part of our argument, that there is a fundamental difference among them; much the greater number believing, as we do, that Deuteronomy was composed later than the other four books, while a small minority, comprising some distinguished scholars, invert the relation of the two parts, assigning the higher antiquity to Deuteronomy, and considering the legislation in the preceding books to be developed from it. By both schools "the Deuteronomist" is regarded as a different person from "the Elohist" and "the Jehovist" (or the author of the laws of Moses, and the author of Deuteronomy, according to those critics who make each of these names represent a class rather than an individual), to whom is assigned the composition of almost the whole of the first four books and a small portion of history towards the close of them. It would be impossible to reckon up the variety of opinions as to the number of these imaginary authors and the ages in which they respectively flourished: those who wish to see this practice of making hypotheses in its most extravagant and self-sufficient form may find it in the commencement of Ewald's History of the People of Israel. We wish, however, to remind our readers that these varieties in the hypotheses are not to be overlooked, as if they were mere differences of detail. To us, on the contrary, they appear to be essential or fatal defects in these critical schemes; for when Moses has been denied to be the author, there is nothing on which to depend except critical sagacity; and since this critical sagacity not unfrequently contradicts itself, and is even contradicting the sagacity of some other critic quite as much to be respected as the one we are studying at the time, it furnishes confute for those who maintain that in its interpretations those critics agree, indeed, that their testimony agrees in many points; and this is true, so long as they confine themselves to generalities, because they start from the same false principles, as to miracles, prophecy, etc. They do also agree in a great many particulars; but this is not important when considering how they read one another's productions, compare them, and dovetail their statements together, altering and amending as often as they are charged with error or confusion, by one another or by those who adhere to the old opinion. We do not blame them for this error; but that makes their agreement, so far as it goes, of very little worth as concurrent testimony.

(l.) There are gaps in "the fundamental document" which need to be filled up, and there are references in it to the so-called later or supplementary matter, which need to be there added for it to be in harmony with what other which they pronounce to be the original. The individual proofs of this assumption we cannot here adduce; and indeed, as often as instances are given, some new critic starts up to make a different arrangement of the original and the supplementary, which seems from the objection charged upon the scheme of his predecessor—a process which is not so difficult after all, as nothing more is required than his own unsupported assertion.

It is to be remembered, however, that a person may hold the common opinion that Moses wrote the Pentateuch, and yet along with this may also hold (rightly or wrongly)
that there are elements in it which are not from the hand of Moses, but which have come to be incorporated with it by accidents to which all very ancient books are liable. Thus there are various ways of dealing with near half a dozen difficulties, such as the mention of Dan, or of the district called Havoth-jair "unto this day," or the testimony to the surpassing meekness of Moses, or the general and very strong passages in Deuteronomy. Lecturers: 1. If the mind of any one remains unsatisfied with the explanations offered, he has it in his power to cut the knot which he is not able to unite. He may say that the general and direct evidence, on account of which he believes the author of the book to be overwhelming; and in regard to these few incidental passages which puzzle him, he may incline to consider them glosses or explanations thrown in by some copyst or annotator, whether authorized or not, and he can imagine these removed without any serious alteration in the book, as it retains perfectly to the form in which he conceives it to have come from Moses. That unauthorized copists might make such changes is a notion for which parallels more or less satisfactory can be adduced; yet it might be preferable to think of an editor whose annotations or alterations were authoritative, and such as were purposely done to make the book agree more nearly with the habits of those who follow old Jewish traditions. How far the influence of such an editor might alter the work is a matter for those to settle who embrace this opinion; certainly it ought not to be supposed to extend far, or they run the risk of distorting their favorite author so much as to be the author. On the other hand, of course, those who adhere most strenuously to the old opinion deny that they are committed by their views to the absurdity of believing that Moses wrote the account of his own death and burial. There is a tradition in the Talmud that Joshua wrote the last eight verses of Deuteronomy; although it is now more commonly supposed that the work of Moses ends at ch. xxxi, 23 (or even earlier, at verse 8); Baumgarten says at ch. xxx, 20, and that Joshua, or whoever recorded these closing details, inserted the song and the blessing of Moses, along with the accounts of his final charge, his view of the Promised Land, his death, etc.

5. Objections against the Mosaic Authorship. — These have been numerous and vehemently urged, especially by rationalists, as we might expect from the importance of the subject. On the opposite side, these difficulties doubt the authenticity of the Pentateuch have produced in modern times several works in defence of its genuineness; such as Kaune's Biblische Untersuchungen (1820, 2 vols.); the observations by Josephus; Lipsius; Hitzig; und Untersuchungen über den Pentateuch (2 vols.); Hauptgenberg's Beitrag zur Einleitung (vols. ii and iii); Hauptgenberg's Einleitung in das Alte Testament (vol. i); Dreyherr's Uber die Einheit und Authentizität der Genesis; König's Altestamentliche Studien (No. ii); Sach's Apologetik, etc. From the most recent of these we extract the following, as presenting a condensed view of the argument (see Rawlinson's Historical Evidence, p. 51 sq.). As above stated, the ancient, positive, and uniform tradition of the Jews assigned the authorship of the Pentateuch, with the exception of the last chapter of Deuteronomy, to Moses (see Horne's Intro'd., i, 51–56; Graves, Lectures; Stuart, O. T. Canon, p. 42); and this tradition is prima facie evidence of the fact, such as at least throws the burden of proof upon those who call it in question. It is an admitted rule of all sound criticism that books are to be regarded as proceeding from the writers whose names they bear. It is common to assume that strong passages indeed can be added to the contrary (comp. Gladstone, Homer, i, 3, 4). In the present instance, the reasons which have been urged are weak and puerile in the extreme; they rest in part on misconception of the meaning of passages (e.g. De Wette, Exod. § 147, with regard to "meaning unites the contrary"; which means as well "this side" as "the other side" of Jordan; Dietz, Lex. p. 597); in part upon interpolations into the original text which are sometimes very palpable (e.g. Gen. xxxvi, 31–39; Exod. xvi, 35, 36; and perhaps Deut. iii, 14; comp. Fritzsche, Praxis, p. 135). Mainly, however, they have their source in arbitrary and unproved hypotheses: as that a contemporary writer would not have introduced an account of miracles that were well known (Deut. xxxii, 46–48); that the book is beyond that of the age of Moses (Jobel. § 163); that if Moses had written the book, he would not have spoken of himself in the third person (Hartmann, Forschungen, p. 545; Norton, Genuineness, ii, 444; comp. Spinoza, Tractatus Theol.-Pol., p. 154); that it would be future, and more connected with the character of his own history (De Wette, § 167); and that he would not have applied to himself terms of praise and expressions of honor (Hartmann, l. c.; comp. Spinoza, l. c.). It is enough to observe of these objections that they are such as might equally be urged against the genuineness of Paul's epistles (which is allowed even by Strauss, Leben Jesu, i, 60)—against that of the works of Homer, Chaucer, and indeed of all writers in advance of their age—against Caesar's Commentaries and Xenophon's Expulsion of Cyrus—against the Acts of the Apostles—against the Apocalypse (which is practically admitted by most moderns). The statement of John (Revel. xii, 9), Luke omits all account of his own doings at Philippi; and John applies to himself the most honorable of all titles, "the disciple whom Jesus loved" (xii, 21, xxiv, 26). In fact à priori conceptions as to how an author of a certain time and country would write, what he would or would not say, or how he would express himself, are among the weakest of all presumptions, and must be regarded as outweighed by a very small amount of positive testimony to authorship. Moreover, for an argument of this sort to have any force at all, it is necessary that we should possess, from other sources besides the author who is judged, a tolerably complete knowledge of the age to which he is assigned, and a fair acquaintance with the literature of his period. In the case of Moses, our knowledge of the age is exceedingly limited, while the literature we have depends largely on his age. All that is furnished by the sacred records next in succession—the books of Joshua and Judges with (perhaps) that of Job—and these are far from supporting the notion that such a work as the Pentateuch could not be produced in the time of Moses that they actually presuppose is contrary to all the evidence; it is evidently based upon it. We propose to examine these objections here in detail, as they relate more or less to all the books of the Pentateuch. For other difficulties, see each book in its place.

We mention here one objection of a general character. The history of the art of writing among the Hebrews has often been appealed to in order to disprove the authenticity of the Pentateuch. It is true that in our days no critic of good repute for learning ventures any longer to assert that the art of writing was invented immediately after the creation of the world by the Jews (cf. Volken Israel, p. 64 sq.); but it is questioned whether the Hebrews were acquainted with that art. Such a doubt proceeds from erroneous ideas concerning the condition of this people, and concerning the civilization necessarily imparted to them in Egypt. The reality of this civilization is proved by indubitable testimony. It is said that a work of such extent as the Pentateuch was beyond the means of the primitive modes of writing then existing. But various testimonies, not merely in the Pentateuch itself, but also derived from other sources, from the immediate dawn of human society, sub sequently prove that a knowledge of the art of writing was widely diffused among the Hebrews (comp. Judg. viii, 14).
If there were any knowledge of this art, its application would entirely depend upon the particular circumstances of a given period. Some writers seem to entertain the opinion that the materials for writing were yet, in the days of Moses, too clumsy for the execution of larger works. This opinion is refuted by the fact that the Hebrews became acquainted, just in the Mosaical period, with the use of a writing material such as papyrus, byssus, parchment, etc. (comp. Herodotus, v. 58). There are, indeed, mentioned in the Pentateuch some more solid materials for writing, such as tables of stone (Exod. xxiv. 12; xxxi. 18; xxxiv. 1, etc.); but this does not prove that in those days nothing was written except upon stone. Stone was employed, on account of its durability, for specific purposes. 

The arguments on which the authorship of the Pentateuch is denied to Moses are, it will be perceived, wholly of an internal character (except that, as I have above, and the one drawn from 2 Chron. xxxiv. 14 sq.), they have varied considerably with the taste and the information of those who urged them. There are some which were advanced very confidently a generation ago, but now are scarcely mentioned. But of those which have been submitted in a less positive and less confident and plausible manner, and still continue to be so, we believe the following to be the chief:

(1.) The supernatural character of much of the book—namely, the miracles and prophecies occurring abundantly in the book. This is really an objection to the inspiration of the book, even in many minds which have not been fully aware that it was so; and they have therefore been propping up their opinion with other arguments, that would never have had much of even apparent solidity and strength if they had been destitute of this foundation. But the particular instances are not the subject of discussion in this article, for it concerns the entire Bible. See MIRACLE; PROPHECY.

(2.) The alleged inaccuracies and impossibilities in the history, even apart from the miracles with which it is interspersed. This is a line of argument which has in general been found very difficult to manage; and in connection with which, therefore, there has not been very much attempted by learned and cautious writers. It has, however, recently attained to a temporary prominence and importance by the writings of Bishop Colenso. This particular instance is not the subject of discussion in this article, which really requires much consideration; though the most important may be briefly noticed.

(a.) The vast increase of Jacob's descendants in Egypt, and the difficulty as to the proportion between the whole number of them and that of the first-born. On these and some other matters, see the article NUMBERS.

(b.) The chronological difficulty that the census was not taken till the second month of the second year of the Exodus, while yet the tabernacle is represented as having been finished a month sooner, and the silver used in its construction as having been obtained by a poll-tax of half a shekel on occasion of the census being taken. In this there is nothing very puzzling; for it is evident that before the formal and exact census, in the course of which all the names were written down, there was a preliminary enumeration of the people by a rough approximation was made to their number; and if the payment of the poll-tax did not take place earlier, or was not superseded as unnecessary on account of the superabundance of voluntary offerings, which the people needed to be restrained from bringing; there could be no difficulty in finding those who would advance the money in the certainty of speedy repayment.

(c.) The other chronological difficulty, that such a multitude of events are crowded into the short space between the death of Aaron on the first day of the fifth month of the second year of the Exodus and the death of Moses on the first day of the eleventh month of the same year. A calm examination, however, will show that they are not so crowded as has been supposed. Yet no doubt there was a marvellous concentration of interest and hastening of the course of Providence during those six months of grace and power manifest on behalf of the young faithful generation of Israelites who were to enjoy the blessings of their redemption from the house of bondage and to take possession of the land of promise. It is in connection with this that the writer of the Pentateuch hints that events may be crowded and carried forward with marvellous rapidity when the glory of the latter day is to be ushered in, and when he is to come again (Matt. xxiv. 22).

(4.) The difficulties connected with the extent to which we are to understand the land of promise; the question whether the Levitical institutions were set up and kept up in the wilderness. But the very letter of the law many a time shows that those institutions were not meant to be set up till the people entered the Land of Promise; and at other times the intention is at least doubtful. The difficulties are unexpunged by the time when we take into account the sin of the people in refusing to go forward after the report of the unbelieving spies, and the semi-excommunication or suspension from Church privileges for the rest of the forty years under which in consequence they were laid (comp. Josh. v, 4-9).

(c.) The blank in the narrative for the thirty-eight years during which that unbelieving generation were dying out; so that the suspicion has been expressed that this space of time is fabulous, and that either God's plan was that the Israelites should die out, and the conquest of Canaan, or else that the most of that period was spent, not in the desert properly so called, but on the eastern side of the Jordan, in a protracted struggle with the kingdoms of Sihon and Og. Without giving attention to this fancy, we confine ourselves to the blank of thirty-eight years in the history, which we regard without any of the surprise and suspicion which the critics have exhibited. Had the Pentateuch been an ordinary history, it might have had much to tell of these thirty-eight years, and of the manner in which the Israelites contrived to spend the time and to support themselves; but since it is a theological history, an account of the progress in the kingdom of God and in the manifestation of his way of mercy to his people, a blank occurs, because there was little or nothing to tell during these years of suspended privileges. Such were the periods of silence are not the subject of discussion in this article, to which the critics have referred. Abraham, Isaac, and Jacob, and remarkably in the four hundred and thirty years of the sojourn in Egypt. If we go beyond the Pentateuch, we believe that the same explanation is to be given of the silence in reference to the period after the end of Joshua's administration, the long period of forty years during which the critical period the Lord raised up judges to save his people, the seventy years of captivity in Babylon, the eighty years or thereabouts between Zerubbabel and Ezra, and the four hundred years between the Old Testament Scriptures and the New.

(d.) The assumed difficulties of supporting so large a multitude in the desert, and of their setting out so suddenly and moving so rapidly, the impossibility of their entire mass assembling at the Tabernacle-door (as is incorrectly alleged to be the meaning of numerous passages), and kindred arithmetical objections, we here pass over, as they have been repeatedly and amply refuted, and many of them are noticed elsewhere in this Cyclopediad.
the barbary titles of the Elohist and the Jehovistic documents respectively, by two writers who confined themselves expressly to these narrativé and ten documents of small comparative importance the book of Genesis was strong togethér by Moses. Enormous labor, great stores of learning, and unruffled fancy have altered Asurc'th's tenor and over again, in order to clothe the narratives satisfactorily hypothesis by which to account for the existence of our present Pentateuch; but no fact of essential importance has been added; and no proof has been furnished of the truth of his assumption that the use of these two names of God is due to the existence of two different authors. The only instance that can even appear to be a proof of this assumption is a text, of which, accordingly, abundant use has been made in this controversy (Exod. vi, 2, 3): 'And God spake unto Moses, and said unto him, I am Jehovah: and I appeared unto Abraham, unto Isaac, and unto Jacob, by [the name of] God Almighty: but by my name Jehovah was I not known to them.' The opinion is of some antiquity, though it first obtained prom- inence and currency through the labors of these critics, that according to this statement the very vocable Je- hovah was reserved for the revelation of God to Moses; and the older interpreters who held this opinion supposed further that, whenever the name Jehovah had been used in earlier passages, this was done merely by anticipation—a supposition which may be unnecessary, yet which is by no means very strange or improbable. I will refrain from attempting to show that this was a century by one class of writers that this text comes from the pen of the Elohist, and expresses his belief; and that where the name occurs in earlier passages, these have not been written by him, but by another author, who, by one or the other, or all at once, did not recognise this distinction in the divine names. This explanation, however unsupported by evidence, is at least perfect- ly intelligible, if we adopt the exploded hypothesis of independent historians, each with his own document, and perhaps each ignorant of the document composed by the other; but it raises some curious questions in relation to the final editor who could patch together such incongruous materials, questions all the more troublesome according to the fashionable hypothesis of supplemen ters. Bishop Colenso, indeed, like some others, speaks very candidly of the Jehovist writing as far as the name Jehovah is no less compelled to exert- ing very strongly [his own capital] the contradiction whereby imported into the narrative; of which procedure he gives two parallel instances in the Je- hovistic additions to the Elhistic accounts of the cre- ation. Professor Gaster has argued that the contradiction has not been perceived to this hour by many who have examined the matter as carefully as they could (and while the advantage of having the alleged discovery pointed out to them), and whose capaci- ties for judging are as fair as those of their neigh- bors, and whose conviction it is that no contradiction exists except in the imagination of these critics; whereas, in the case of the habitual use of the name Jeho- vah, in the age of the patriarchs, on the one hand, and, on the other hand, the assertion that this name was kept a secret till that age was over, the man who combined the two, no less than one in ten, but from seeing the flat contradiction which he introduced into it, must have been destitute of reason and common- sense. On other occasions these critics are ready enough to affirm that the later writer (or writers) super- imposed and altered the name Jehovah, in order the better to fit his own story into it; and they allege that his operation has been achieved so neatly that most people have never suspected it, nor can detect it for themselves even after the sagacity of the critics has discovered it and pointed it out. But in this particular instance these critics insist on interpreting a text, which is especially prominent and im- portant as giving the account of the revelation of this name Jehovah from God and its introduction into use among the people, as if it were one of those cases to a multitude of passages which the editor or supple- menter had indulged himself by inserting amid the comparatively brief original details. The truth is given in the common old interpretation of Exod. vi, 2, 5, 6, 7; in the contents, not in the words of the name Jehovah (q. v.), as the independent, unchange- able fuller of his promises to the patriarchs, was re- vealed to Moses at the bush. It is true that these merely natural perfections would fail to inspire right feelings towards God, if they were to be contemplated as in a state of separation; but moral perfections of this form to the two classes of attributes are inseparable in actual reality, and probably were never even conceived of by the Hebrew mind as separable, if we judge from the line of argument in the closing chapters of Job. Cer- tainly Exod. xxxiv, 7 makes an express claim for the inclusion of moral perfection, as well as omnipotence and unchangeableness, in the signification of the name Jehovah—'Jehovah, Jehovah El, merciful and gracious, longsuffering, and abundant in good- ness and truth, keeping mercy for thousands, forgiving transgression for uncovered sin, keeping mercy for in- finity by no means clear [the guilty]; visiting the iniquity of the fathers upon the children, and upon the chil- dren's children, unto the third and to the fourth [gen- eration].' The concluding words of this procla- mation of the name Jehovah, by him to whom it belongs, make the subject of the original declaration given in the a century by one class of writers that this text comes from the pen of the Elohist, and expresses his belief; and that where the name occurs in earlier passages, these have not been written by him, but by another author, who, by one or the other, or all at once, did not recognise this distinction in the divine names. This explanation, however unsupported by evidence, is at least perfect- ly intelligible, if we adopt the exploded hypothesis of independent historians, each with his own document, and perhaps each ignorant of the document composed by the other; but it raises some curious questions in relation to the final editor who could patch together such incongruous materials, questions all the more troublesome according to the fashionable hypothesis of supplemen ters. Bishop Colenso, indeed, like some others, speaks very candidly of the Jehovist writing as far as the name Jehovah is no less compelled to exert- ing very strongly [his own capital] the contradiction whereby imported into the narrative; of which procedure he gives two parallel instances in the Je- hovistic additions to the Elhistic accounts of the cre- ation. Professor Gaster has argued that the contradiction has not been perceived to this hour by many who have examined the matter as carefully as they could (and while the advantage of having the alleged discovery pointed out to them), and whose capaci- ties for judging are as fair as those of their neigh- bors, and whose conviction it is that no contradiction exists except in the imagination of these critics; whereas, in the case of the habitual use of the name Jeho- vah, in the age of the patriarchs, on the one hand, and, on the other hand, the assertion that this name was kept a secret till that age was over, the man who combined the two, no less than one in ten, but from seeing the flat contradiction which he introduced into it, must have been destitute of reason and common- sense. On other occasions these critics are ready enough to affirm that the later writer (or writers) super- imposed and altered the name Jehovah, in order the better to fit his own story into it; and they allege that his operation has been achieved so neatly that most people have never suspected it, nor can detect it for themselves even after the sagacity of the critics has discovered it and pointed it out. But in this particular instance these critics insist on interpreting a text, which is especially prominent and im-
writers in the Pentateuch, on account of the different names for the Divine Being, they will find that they need to account for a great deal more than the use of the two words Jehovah and Elohim. There is also El, which is found crowning, on this text, in the intermediate title; and there is the occasional use of Elohim with a plural verb, as to which Gesenius and others have coarsely suggested that it may be an indication of polytheism left in the syntax of the language, which is the order of words in the absence of the article with Edh in; and there is the use of another divine title, Adonai. He who reads the history of Balsam, and observes the use of the three names Elohim, El, and Jehovah, will find difficulty in believing that these are not intentionally varied by the writer, as indeed it is impossible not to hesitate to ascribe the entire section to the Jehovist. He who notices how Jacob and Israel are used in the closing chapters of Genesis to denote the same individual will probably hesitate to assert that a difference of names for a person, be he man or God, ought to be accounted for by the difference of authorship. This has certainly been affirmed to some extent by Colenso; but his statement will perhaps not meet with more support from those who agree with him in his leading principles than his other statement that Jehovah was invented for the exaltation of Solomon and David. We have already noticed that the interpretation of Exod. vi, 3, to which the critical school are committed, assumes that the name Jehovah was till then unknown; whereas there is varied evidence for its earlier existence. Vaihinger indeed makes the further claim that in that in the original document, "as is confessed by almost all," the name Jehovah is employed by Jacob a few times (Gen. xxviii, 21; xxxii, 10; xlix, 18). See God.

(4.) Yet the admission that the name Jehovah was not unknown to Jacob and Israel is the most frequent impossibility of making the different divine names a proof of diversity of authorship, and of drawing confirmation of this opinion from Exod. vi, 8, are not felt by the critical school at the present day to be so damaging as they would have been felt by their predecessors, or as they will generally be felt by those who take an impartial view of the arguments. For the tendency now is to rest upon an alleged difference of style and thought, which is discovered by comparing the fundamental document with the additions. This line of reasoning necessitates a considerable amount of drudgery, even to understanding its meaning, and estimating its value, however roughly; it is therefore impossible to discuss it within our limits here. We have no hesitation, however, in expressing our opinion that it is excessively wearisome in the process, and so vague in the results that these are likely to be estimated very much in conformity with the previous inclinations of the investigator. One of the so-called critical commentators may present long lists of words peculiar to the different authors; but the imposing array of evidence is collected by a vicious reasoning in a circle. The existence of different authors is inferred from the existence of different sets of words and phrases; but in order to arrive at the grouping of these words and phrases into different sets, the continuous narrative needs to be cut up in the most minute and fantastic manner among different authors. It is a mere assumption, and antecedently improbable in a high degree, that a chapter in Genesis or Exodus is a patchwork of authorship such as modern criticism pronounces it to be; but if we are to believe this on the evidence of the evidence, because the given evidence has been founded upon the position of the different parts, we need something more than the assertions of the critics to make us believe that these parts really are different; for all the time they appear to unintelligent readers to be one consecutive and homogeneous piece of writing. It is impo-
PENTATEUCH

sible for the critics to establish any clear usus loquendi without tearing the book often into shreds, and pronouncing passages, and single verses, and clauses of verses, and individual words to be interpolations or additions which the inspiration of the Holy Spirit not only admitted, but demanded. In fact, if there were no other difficulty, he who has attempted the humble task of following the statements of the critics on the subject must have been often brought to a standstill by their disagreement as to the several writers to whom their respective gifts of inspiration were accorded to ascribe the individual passages. On the other hand, there is abundant evidence of diversity of language in passages which they are pretty well agreed in ascribing to the same author, as well as of remarkable similarity of language in writings which they generally attribute to different authors.

In this argument from style in general, as in the previous one from the use of the divine names in particular, we have no object to gain by pressing our reply to the uttermost, and, as some might think, unduly. We might grant that there are traces of a difference of style, and yet deny that this fact is any evidence whatever of difference of authorship; and we should be supported in our denial by the common experience and opinion of men respecting parallel cases in literature, where the writer is not supposed to be the same. The language of Deuteronomy furnishes by far the best case for the critics, although in it (as above detailed) we see many traces of the author of the rest of the Pentateuch; but there are certain peculiarities which we have no difficulty in attributing to the oratorical character of the book. If anything of the same kind can be established as to certain classes of passages in the first four books, in their genealogical and legislative portions respectively, or in passages involving prophetical announcements, etc., no allegation is simpler or fairer than that the style is intentionally varied and adapted to the change of subject; in fact, many of the words paraded in lists of differences of style are naturally or even unavoidably connected with the subjects treated in only a few places. If there were evidence from some other quarter that these passages proceeded from certain different authors, modern criticism could then make use of the peculiar language with propriety in confirmation of its disintegrating hypotheses; but to do so at present is to indulge in the vicious reasoning in a circle of which we have already spoken, or to fall into another great logical vice, by begging the question, in affirming that if one part of a book is disunited it is disunited with a difference of authorship. In short, we can admit the existence of differences of style and language only within limits so narrow that they appear as nothing in comparison with the exaggerated estimate that is often given of them. In so far as comparatively trifling differences do exist, while we are ready to suggest reasons in the subject-matter (or even in external circumstances, as the use of "Sinaí" or "Horeb") which may often explain them, we feel and acknowledge no incumbent duty to do so. We hold it to be the indefensible right of every author to use his own style and language under the influence of motives which may be inapplicable to his readers; and we hold that this right is exercised by every author in proportion to the strength and freshness of his own individual mind, or of the mind of the age and nation to which he belongs, the variety and compass of the work, with which he is engaged, the wealth of the language which he uses, or the culture he has received, and the demand of the human spirit that occasionally changes shall occur, for new reasons than to give it rest from the monotonous limits of a mechanical uniformity.

Before leaving the consideration of this argument, it may be right to notice how it combines in itself so many great fallacies; for it involves also a mistake as to the point which is to be proved. The critics profess to prove that Moses is not the writer of the Pentateuch; and, on their own showing, the evidence of this fact is that there are in it traces of different authors. But this is nothing to the purpose, unless they also prove that these authors were subsequent to the time of Moses.

Virtually long ago gave expression to the opinion that Moses may probably have made use of written documents prepared by the patriarchs and safely handed down among the Israelites, till he arose to collect and arrange and supplement them; but it is as if from the moment when he was given to the patriarchal Church, we must all the more exalt the strength and value of primeval tradition—tradition upon the very subjects which are handled in the book of Genesis. There is, then, no difficulty whatever in maintaining that the time of Moses himself was not far from the time of the patriarchs; that there was connected with him and laid up in the repositories of the patriarchs. When Moses began to write the Pentateuch, there was already, therefore, a religious and historical phraseology. Grant everything that the critics imagine they have established, and their original document connection may be preserved as something of mere formula or tradition; while the editor or supplementer might be Moses himself: or if there be traces of several hands and several styles, nevertheless, as Astruc himself believed, these may be no more than traces of the different (but not contradictory or untrustworthy) relics of patriarchal tradition, which he was guided to collect into one channel, and send down to posterity in the clear, continuous, consistent stream of the narrative in Genesis. The influence of these varieties of style might tell upon him still as he continued his labors in the composition of the other books. This is as much as a supposition, but it is a supposition vastly more modest and credible than that of the modern disintegrating criticism; and it admits everything that this criticism can even profess to have established by the most microscopic study of the language, and the most merciless vivisection of the subject of its experiments.

(5) An objection to the unity of the authorship has been drawn from the repetitions which occur in the book; for it is said that these are a sure mark of at least two authors, whose accounts have been thrown into one. This has not been established. Even modest agreement as long as the hypothesis was in favor according to which there were two independent and continuous histories, the Elohist and the Jehovistic, afterwards combined: the occurrence of double narratives gives an air of plausibility to this supposition. But as soon as we recollect that this hypothesis has been generally abandoned for another, according to which there is only one original continuous history, subsequently interwoven; the objection loses any prima facie verisimilitude that it ever possessed: for why should an editor labor and disguise the clear narrative which he had thereby, he, by interweaving two narratives which had the look of repetitions, unless the events did really occur a second time? The attempt to assign one of these double accounts to the Elohist and the other to the Jehovah breaks down from time to time by the confession of the critics themselves. Here we introduce a remark in explanation of one or two passages in which a repeated account is given of the same event: this repetition in full, instead of a mere reference which we might prefer to make, is of a piece with the simple and uninvolved style of thought which characterizes the very structure of the narrative, and the form of Western languages would express a complex proposition by a compound sentence, in which the subordinate members are introduced and kept in their true place by means of relative pronouns and conjunctions, the Hebrew uses simple sentences, and unites his statements by his favorite conjunctions.
"and," to which translators assign a great variety of meanings, according to the exigencies of the moment. By this method, however, his gain in simplicity is counterbalanced by a loss of terseness; since he has often to repeat at least one or two words that he has noticed only incidentally and by an allusion. This mode of dealing with sentences is extended to paragraphs, and has given rise to the occurrence of titles prefixed to sections, and of repeated statements, which misled the earlier disintegrating critics into the belief that here they had evidence of fragments which were afterwards brought together with little care or judgment; whereas their successors have thrown aside the hypothesis of fragments, having become more wary by experience. The clearest case of such repetition is the Elohist account of creation (Gen. 1, ii. 3), and the Jehovah account (ch. ii. 4-28). But it is surely plain enough that the second is an incomplete account, implying that the general comprehensive narrative had gone before; and throwing in additional information of a particular kind in reference to the creation of man, the creature for whom the moral government, as briefly stated in the first chapter, but now stated more fully in this introduction to the history of redemption, which throws the account of the creation of other beings more into the background.

Besides, it is an entirely erroneous philosophy which prompts men to find fault with the unity or truthfulness of a history because it contains narratives bearing a resemblance to one another. Such repetitions (if this be the correct designation of these narratives) are recorded in all historical narratives, even where what might have been, indeed otherwise experience would not be the great means of disciplining and training mankind. To take no wider range, instances of such repetition, certainly not less remarkable than anything in the books of Moses, occur in other parts of the Bible, including the life of Moses himself, and were escaped, unless by a universally destructive criticism.

Occasionally the charge is put differently in this way: instead of the allegation that there are two varying reports of one transaction, which have been erroneously understood of two different events, it is alleged that these accounts occur of what is confusingly the same matter, and that these accounts are varying or even contradictory; and the explanation given of these alleged contradictions is that they proceed from two different authors. The instances are obtained sometimes by comparing the accounts of the two famous tabernacles, and sometimes by comparing them with Deuteronomy.

(a.) Those of the former class, contradictions within the compass of the first four books, are of little importance, and demand no lengthened consideration in this condensed statement. Such are the two accounts of creation, to which we have had occasion to refer as illustrating the different aspects of a narrative according as logical connection or the chronological principle of arrangement predominates; the names of Esau's wives. See Aholibamah. A favorite instance is the account in Exod. xxxiii. 7-11 of the tabernacle of the congregation which Moses was to pitch "without the camp, afar off from the camp," whereas the ordinary accounts place the tabernacle inside the camp, at its very centre. But there really is no serious difficulty in the way of accepting the common explanation that this was a preliminary tabernacle, used till the tabernacle was constructed, and placed outside the camp at the time when the people were saved by the special intercession of Moses, when on the point of being destroyed for the sin of the golden calf: an opinion which has been slightly by but hostile critics. It was the entrance of Moses which received this honor at the time when he had declined the Lord's offer to make of him a great nation on the ruin of apostate Israel. Yet the simplest view would be to take ver. 5-11 as one speech of the Lord to Moses, the whole being in the Hebrew in the future or unfinished tense; except that ver. 6 parenthetically relates, in the perfect tense, how the people humbled themselves according to the opening part of the Lord's directions, whereas the rest of these directions may have been omitted after the intercession of Moses was completed.

(b.) Passing to the other class of alleged contradictions, in which the four earlier books are placed on the one side and Deuteronomy on the other, as if it belonged to a later age than the latest of them, and betrayed certain differences of belief and sentiment, it deserves to be noticed that a great deal used to be said of the historical contradictions; whereas the wisest of the destructive critics now concede that nothing can be made of these, especially when the oratorial nature of Deuteronomy is considered, and weight is assigned to the form which narratives would assume in the course whose object was exhortation. The only cases which require consideration are those in which the laws as laid down in Deuteronomy are said to be different from some in the three preceding books. We admit willingly that there may be in the laws of Deuteronomy, as we may in those of the Mosaic code, a certain comparatively narrow limits, and easily enough explained by recollecting that forty years elapsed between the covenanting in Horeb and that in the land of Moab (Deut. xxix. 1 [xxviii. 69 in Hebrew]); the latter also taking into consideration the new circumstances of the people when they entered on their own land.

The chief instance of this is the permission to the people to eat flesh anywhere throughout the land of Canaan, if only they took care to pour out the blood upon the earth (Deut. xii. 15, 16, 20-25); for the previous law upon the subject in Lev. iv. 21 became physically impracticable as soon as the people ceased to live together in the camp. In connection with this, there is the account of the priests' share of the sacrifices (Deut. xvii. 8), which differs from the account in Leviticus and Numbers of the parts of sacrifices which the priests were assigned. But the priests, it is said, "the priests' dues from the people," is in addition to "the offerings of the Lord made by fire," which have already been mentioned at ver. 1; it is a plausible conjecture that these additional dues were assigned to them on purpose to indemnify them for losses sustained by the refusal of the law in Lev., xxi. To this, there seems to be a reference to this particular statute in Deuteronomy in the account of the evil conduct of Eli's sons in 1 Sam. ii. 18-16. There is also another class of cases in which the alleged contradiction is met by the remark that probably none of these laws were ever put into practice, and were at least hypothetically met and removed. A good example of this is the difficulty alleged to exist in Deut. xv. 19, 20, as if it gave to the people at large the right to eat the firstlings of their flocks and herds in holy feasts, whereas the earlier legislation had given these firstlings to the priests (Num. xvii. 15-18); for it is plain that the author of the Deuteronomic law did not contemplate any contradiction of the divine law in this arrangement, to which he had made repeated allusion already (ch. xii. 6, 7; xiv. 22, 23). But, in point of fact, nothing is simpler than to understand the law in Deuteronomy as addressed to the collective Israelites as if they were a single individual, "thou shalt sanctify . . . thou shalt eat," etc., leaving the priests and the rest of the people to adjust their respective duties and privileges by the well-known directions of the law in the later books. Here it is to be remembered that the earlier law naturally suggests that the priests should make a sacred feast of the first-born animals given to them, at which feast none could more reasonably be expected to be guests than the persons to whom these animals were assigned.

The most important allegation of contradiction between the legislation in the middle books and that in Deuteronomy has reference to the three great orders in the theocracy— the prophetic, the priestly, and the kingly. The first and last must be passed over almost
in silence. It is enough to say that the law of the
kingdom in Deut. xvii need not surprise anyone who
observes that the king is represented as the mere vice-
roy, the priest of Aaron, who is true to the ancient
King of Israel, according to Exod. xv, 18; Numb. xxiii, 21;
and who recollects the promises that kings should
spring from the loins of the patriarchs Abraham and
Jacob (Gen. xvii, 14; xxxvi, 11), and along with this
the notice that kings had not yet arisen in Israel al-
though they did exist in Edom (Gen. xxxvi, 31). But
certain passages, already considered in so far as they
refer to the privileges of the priests, are brought into
connection with others in such a way as to suggest
the inference that a vast revolution had taken place in
the position of the priests and Levites at the very
time when the author of Deuteronomy published his
work, in which his object was to prop up the tottering
institutions in which his subject was. The two orders of
priests and Levites had come to be confused, the Levites hav-
ing been all admitted to priestly functions; and the
tithes having been seldom paid, they had sunk into
poverty, and the scheme of this writer was to com-
 pound the matter by securing to them a certain share
in these tithes, which were henceforth to be spent in
religious feast at the Temple, where the Levites should
have a place along with the stranger, the fatherless,
and widow. This presentation is charac-
terized as a mass of unsupported suppositions. That
the Levites might often be poor is probable enough,
but there is no appearance of general starvation, such
as would have been their condition if their chief sup-
port had been this share in the sacred feasts. There
is no need to puzzle ourselves about the tithes which
were spent at these feasts (Deut. xii, 6, 7, 11, 17-19,
and especially xiv, 22-29 and xxvi, 12-15), which plainly
was quite distinct from the other tithes given to the
tribe of Levi as a compensation for having no share in
the territorial allotment of Canaan (Numb. xxviii, 32).
This is rightly expressed in the apocryphal book of Tobit (ch. i, 6, 7), though in the original it is still
more distinct than in our A. V.: "But I alone went
often to Jerusalem at the feasts, as it was ordained to
all the people of Israel by an everlasting decree, hav-
ing the first-fruits and tenth of increase, with that
which was first shorn; and then gave I at the altar
to the priests the children of Aaron. The first tenth
part of all increase I gave to the sons of Aaron, who
ministered at Jerusalem; another tenth part I sold
away, and gave it to the Levites, that it overtopped
Jeru-
alem." This hypothesis of a radical change in the po-
 sition of the priests and Levites, at that late age to
which the composition of Deuteronomy is assigned,
has been supposed to be supported by two expressions —
"the Levites" (Deut. xxv, 10), and "the priests the sons of
Levi" (ch. xxi, 5), as if it established the conclusion that
all the Levites were repre-
sented in this book as performing priestly functions.
But "the priests the Levites" would be a proof of this
only if it meant "the priestly Levites," which it does
not; its only fair interpretation is "the Levitical
priests." Yet it is true that the offices of the Levites
and of the priests did come very close to one another,
the ministry of the altar being the sole exclusive pre-
rogative of the latter. Hence it is no wonder that in
Deuteronomy, which is, comparatively speaking, the
people's book of the law, it is the priestly functions
which are noted rather than the points of difference;
especially since none of the regulations as to sacrifices
are given anywhere in the book. The close connec-
tion of the priests and the rest of the Levites is taken
for granted as something that had once occurred, and not even remodelled before the
work was finished. Just as little do we see difficulty
in attributing to Moses himself the observation
(Numb. xii, 8), "Now the man Moses was very meek,
barely all the men which were the face of the
people of Israel;" and the statement (Deut. xix, 17),
"the Levitical priests" should plead his righteousness and integrity as he often
does; or Paul speak of his not being a whit behind the
very chiefest apostles, and of his laboring more abun-
dantly than all of them; or that John should habili-
amly name himself "the disciple whom Jesus loved,"
or "the beloved disciple." Such language is due to the
fact that the "holy men of old," who "spake as
they were moved by the Holy Ghost," thought so little
that themselves when they were writing, that they were
equally ready to tell the defects of their own
character and the graces bestowed on them by God, while it was thought that such
things had been
made. In this particular case there was such a fitness, as well to show plainly how unreasonable the conduct of the brother and sister of Moses was, as to give point to the statement that Jehovah himself suddenly inter-
fered for his sake, bringing the whole destruction of the first Israelite nation on those who might probably never have spoken in his own vindication.
(c) A phrase has been thought to betray a w_rerecent date than the age of Moses, when something is said to have occurred the results of which continue "unto this day." But this is a phrase which by no means neces-

PENTATEUCH 990 PENTATEUCH
sarily indicates any great length of time; which indicates occasionally a pretty short time, so far as we can infer from the probabilities of the case; and which sometimes must be understood of a short time, as in Josh. vi. 25 (for it is frequent in Joshua as well as in the Pentateuch, and the same inference has been drawn in regard to both these books), "And Joshua saith unto the Canaanites which dwell in the land, and his house, and all that she had; and she dwelleth in Israel even unto this day." In fairness we mention one passage which may occasion serious difficulty to some minds, and we know of no other; it is Deut. iii. 14: "Jair the Kenizzite took all the towns of Garhi and Maachath, and called them after his own name, Bashan-havoth-jair, unto this day." Yet even in this case, referring to an interval of no more than a few months, we ought to recollect how difficult it is to change the name of an entire district; if Jair succeeded in this at first, following for the first six months both his position in the land and his new name for it by way of a memorial of himself, there was less risk of the name being subsequently lost. In general, as well as in reference to this particular case, we ought to take into account the manner it is inferred that this was not written till after the Canaanites had been exterminated. But in truth the Hebrew language is very poorly furnished with tenses. Had this speech been in Latin, and had the future perfect been used—"that the land may not spue you out also, when ye defile it, as it spued out the nations that were before you from which it is inferred that this was not written till after the Canaanites had been exterminated. But in truth the Hebrew language is very poorly furnished with tenses. Had this speech been in Latin, and had the future perfect been used—"that the land may not spue you out also, when ye defile it, as it spued out the nations that were before you"—a translation of it into Hebrew could not have been better expressed than in the present words of the Hebrew Bible. This really future meaning we take to be the meaning of this passage. Yet if the literal past time is insisted on by only one, there are two explanations, either of which is easy enough: either the sentence received its present form of expression as Moses revised his work, after the people of Sihon and Og had been destroyed; or else the very metaphorical language of the future perfect is to teach that the strength of the Canaanites was only apparent, that the land had already vomited them forth, and that they lay upon its surface as a loathsome incumbrance which must now be removed by Israel.

(d.) The quotation from "the book of the wars of the Lord" (Numb. xxii, 14, 15), and others apparently of a similar kind in the same chapter, are thought to be incredible in a contemporary history, though natural enough in a writing of a later age, when such accounts of song might become valuable as the testimony of eye-witnesses. But there is no evidence of the assumption that it was the historian's object to secure corroboration of his statements. While there is no obligation lying on us to assign the reason why these events took place and contignous events were ushered in which continued **unto this day."**

(c.) It is scarcely worth while to dwell upon certain incidental expressions which have been sold to betray the hand of a later writer. Such are, that "the Canaanite was then (18) in the land" (Gen. xii. 6; comp. xxiii. 7); and Joseph's words, "I was stolen away out of the land of the Hebrews" (Gen. xvi. 15). We select one case on account of its seeming greater strength. In Lev. xxviii, 28 the Israelites are warned to avoid the practices by which the land of Canaan had already been polluted, "that the land spue not you out also, when ye defile it, as it spued out the nations that were before you from which it is inferred that this was not written till after the Canaanites had been exterminated. But in truth the Hebrew language is very poorly furnished with tenses. Had this speech been in Latin, and had the future perfect been used—"that the land may not spue you out also, when ye defile it, as it spued out the nations that were before you"—a translation of it into Hebrew could not have been better expressed than in the present words of the Hebrew Bible. This really future meaning we take to be the meaning of this passage. Yet if the literal past time is insisted on by only one, there are two explanations, either of which is easy enough: either the sentence received its present form of expression as Moses revised his work, after the people of Sihon and Og had been destroyed; or else the very metaphorical language of the future perfect is to teach that the strength of the Canaanites was only apparent, that the land had already vomited them forth, and that they lay upon its surface as a loathsome incumbrance which must now be removed by Israel. But in such a case we are to arrange to explain to their satisfaction most of the special difficulties, are still troubled by others of a different class resting on alleged contradictions between the language of the Mosiac books and the facts of science. For instance, the Adamic creation is declared to contradict the conclusions, which inasmuch as the period required for bringing the crust of the earth into its existing condition must have included countless centuries, and not a brief period of six days. In the same way it is first urged that the scriptural narrative involves a universal deluge, and then, meaning being assumed, that such a deluge could not have occurred, even if it had occurred, yet within that little period were compressed transactions more remarkable and important than are often witnessed in whole ages of common history. At such a turning-point in the history of the Church and people of Israel, it does not surprise us that Moses should use the expression that events took place and contignous events were ushered in which continued **unto this day."**

In regard to the theories of the creation and the deluge, it is necessary to distinguish with the utmost possible precision between the language of Scripture and any private interpretations of it. When the question is propounded whether the six days of the Adamic creation were literal days of one revolution of the globe, or were successive periods of time; when it is asked whether the deluge was partial or universal, the particular opinion which each man may form must not be fastened on the scriptural language, as if it were its necessary and only possible interpretation. It must be acknowledged that opinions on either side are equally consistent with a devout acceptance of the inspired Word. Experience teaches the necessity of this caution; for the lessons of geology have compelled us to separate between the creation and the beginning of the world from the Adamic creation; and to allow the existence of untold periods between them. Now that we are accustomed to this, we find
God in the human consciousness is made the standard whereby revelation is measured. For instance, it is argued that the destruction of the Cannaanitish nations by the sword of Israel under express command was a cruel deed, at which the human mind revolted, and which it is impossible to believe that God inspired. Objections of the same kind are urged against the Mosaic law, both against its positive enactments, as in the case of slavery, and against the minute and apparently trivial character of many of its details; and, in support of these allegations, a contrast is drawn between the spirit of the Mosaic code and the spirit of the Gospels and epistles. It will be enough for the present purpose to reply that these objections rest almost entirely, and derive any force they may appear to have, from a misapprehension of the facts of the case, and an erroneous estimate of the Mosaic code on the one side, and of the Christian dispensation upon the other. A candid examination of the whole narrative shows that the destruction of the Cannaanitish nations was purely a judicial act, wherein God was the judge and the people of Israel the authorized and divinely appointed executioners. It will be found that the utmost care was taken to present the whole transaction in this specific aspect, and that this act of judicial severity stood in the sharpest possible contrast to the general tenor of the Mosaic law, which was tolerant, gentle, and singularly beneficent both to body and soul. Looking at the law as a code, we find in it the same law of love which we find in the Gospels; and looking at the Gospel, we find in God the same attribute of punitive justice which stands conspicuous in the law. The argument may be carried further, for the analogy between God's character and dealings in providence and his dealings in grace, as contained in the book of revelation, is close and exact in the highest degree. On this whole question Bp. Butler's immoral Anathema may safely be referred to.

Cf. CANT. COs. 88.

Into the details of these various objections—critical, historical, scientific, and moral—this article will not farther enter, partly from considerations of space, partly because many of them will be found treated in other articles of this Cyclopædia. The student is referred, for their more full treatment, to the almost voluminous literature which the controversy of the last few years has called into existence. With reference to the special form they have assumed in the Critical Examination of the Pentateuch, by Dr. Colenso, bishop of Natal, external information will be found in recent periodicals. The reader will also find their treatment will be found ably handled in the Examination of Dr. Colenso's work, issued by the late lamented Dr. M'Caul. Reference may also be usefully made to Colenso's Defections Examined (London, 1865), by Dr. Benisch, a Jewish doctor. For the numerical calculations, the student should refer to the Eozolus of Israel (London, 1865), by Rev. P. R. Birks, in which they are submitted to a searching examination. For questions of topography, a smaller work, entitled The Pentateuch and the Gospels (London, 1827), by Joseph Forster, the well-known author of Five Years in Dagonia, Murray's Itineraries of Syria, etc., will be found full of valuable information.

V. Literature.—Some of this has been cited above; and much of the remainder is contained in general introductions or commentaries on the whole of the O. T. or on the several books of Moses. We mention here only the critical and exegetical works on the whole Pentateuch separately.

Bishop Colenso's Pentateuch and Josh. Examined (London, 1862, 8vo) was answered by numerous books and reviews (see a list in Low's Publisher's Circular, Jan. 15, 1865). See References.

Pentecost (Πentekostē, chil., ἤμερα), the second of the three great annual festivals on which all the males were required to appear before the Lord in the national sanctuary, the other two being the feasts of Passover and Tabernacles. It fell in due course on the sixth day of Sivan, and its rites, according to the Law, were restricted to a single day. The most important passages relating to it are Exod. xxiii, 15; Lev. xxiii, 15-22; Num. xxvii, 26-31; Deut. xvi, 9-12. The following article treats of its observance from a Scriptural as well as Talmudical point of view. See Pentecost.

1. Name and its Signification.—This festival is called 1. יַנְפְּכָה יְָא, ἤμερα τῶν χάριτων, solemnitas holokomadaorum, the Festival of Weeks (Exod. xxxix, 22; Deut. xvi, 10, 16: 2 Chron. viii, 13), because it was celebrated seven complete weeks, or fifty days, after the Passover (Lev. xxiii, 15, 16). 2. For this reason it is also called in the Jewish writings מָצוֹת, מַעֲרֹת, the feast of the fifty days (comp. Joseph. War, ii, 3, 1), whence ἤμερα τῶν πνευμάτων, τῶν χάριτων (Joseph. Ant. iii, 10, 6; Tob. ii, 1; 2 Macc. xii, 32; Acts ii, 1; xx, 16; 1 Cor. xii, 8), the Latin Pentecoste, and our appellation Pentecost. 3. יַנְפְּכָה, πεντεκοστή, the festival of the harvest (Exod. xxxix, 16), because it concluded the harvest of the later grains. 4. יַנְפְּכָה בְּנֶשֶׁר, יַנְפְּכָה בְּנֵסֵר, dies primitivorum, the “day of first-fruits” (Numb. xxviii, 26), because the first loaves made from the new corn were then offered on the altar (Lev. xxiii, 17), for which reason Philo (Opp. ii, 294) calls it ἡ ἀρχιτάξιαν πνευμάτων. 5. It is also denominated in the post-canonical Jewish writings מָצוֹת יַנְפְּכָה, מַעֲרֹת יַנְפְּכָה, the festival of conclusion (or assembly), i.e. of the Passover, or simply יַנְפְּכָה (comp. πνευματικήν ἡ μένταξιν ἡ Αποστόλας [= ανποστολ, Chaldean ελαθορ, δαμιας δε τωτο πνευματικην, Joseph. Ant. iii, 10, 6; Mishna, Bilharam, i, 3, 7, 10; Rosh Ha-shana, ii, 2; Shigga, ii, 4), because it completed what the Passover commenced; and יַנְפְּכָה יַנְפְּכָה, the time of the giving of our law, because the Jews believe that on this day the revelation of the Decalogue took place.

II. The Time at which this Festival was Celebrated.—The time fixed for the celebration of Pentecost is the fifth day reckoning from “the morrow after the Sabbath” (Deut. xxiii, 15, 16). The precise meaning, however, of the word יַנְפְּכָה in this connection, which determines the date for celebrating this festival, has been matter of dispute from time immemorial. The Bohomurians (בְּנֶשֶׁר) and the Sadducees in the time of the second Temple (Mishna, Menachoth, x, 3), and the Karaites since the 8th century of the Christian era (comp. Jehudah Hedessi, Ekked Ha-Kopher, Alphab. p. 221-224; 236, p. 85 b), took יַנְפְּכָה in its literal and ordinary sense as denoting the seventh day of the week, or the Sabbath of creation), and maintained that the omer was offered on the day following that weekly Sabbath which might happen to fall within the seven days of the Passover, so that Pentecost would always be on the first day of the week. But against this it is urged (a) that Josh. vii, 11, where הַבֹּשֵׁשֶׁר is used for יַנְפְּכָה הַבֹּשֵׁשֶׁר, shows that יַנְפְּכָה in Lev. xxiii, 11 denotes the first day of Passover, which was to be a day of rest. (b) The definite article in יַנְפְּכָה in Lev. xxiii, 11 refers to one of the preceding festival days. (c) The expression הַבֹּשֵׁשֶׁר is also used for the Day of Atonement (Lev. xxiii, 32), and the abstract נֶשֶׁר is applied to the first and eighth days of Tabernacles (ver. 39) and the Feast of Trumpets (xxiii, 24), as well as to week (xxvi, 15; Luke xxiv, 1; Mark xvi, 2, 9; Luke xxiv, 12). (d) According to Lev. xxiii, 15 the seventh week, at the end of which Pentecost is to be celebrated, is to be reckoned from this Sabbath. Now, if this Sabbath were not fixed, but could happen on any one of the seven Passover days, it is impossible for the Pentecost to be reckoned on the fifth or sixth day of the festival, for the Passover would in the course of time be displaced from the fundamental position which it occupies in the order of the annual festivals. (e) The Sabbath idea which underlies all the festivals, and which is scrupulously observed in all of them, shows that the reckoning could not have been left to the fifth or sixth day of the festival, but must have fixedly begun on the 16th of Nisan. Thus, each Sabbath comes after six even periods: 1. the Sabbath of days, after six days; 2. the Sabbath of months, after six months; 3. the Sabbath of years, after six years; 4. the Sabbath of Sabbatic years, after six Sabbatic years; 5. the Sabbath of festivals—the Day of Atonement, after six festivals [see Jubilee, the Year of]; hence the Sabbath of weeks, i.e. Pentecost, must also be at the end of six common weeks after Passover, which could be obtained only by reckoning from the 16th of Nisan, as this alone yields six common weeks; for the first week during which the counting goes on belongs to the feast of Passover, and is not common. (f) The Sept. (ετησια τῆς προσφορῆς, Josephus (το ἐνετορίου τῶν ἀνθρώπων ἡμέρας, Ant. iii, 10, 5, 6), Philo (Opp, ii, 294), Onkelos (אַלְפָּשׁ בָּנֶשֶׁר), and the synagogue have understood it in this way, and most Christian commentators entertain the traditional interpretation also. But, however, Sabbaoth. Still more objectionable is the hypothesis of Hitigiz (Ostera und Jfjxngetia, Heidel, 1887), defended by Hufeld (De primat. et vera festorum ap. Hebraeos ratione, ii, 3 sqq.) and Knobel (Die Bücher Exodos und Levitica, Leipzig, 1867, p. 544), that the sacred or festival year of the Hebrews always began on the Sabbath, so that the 7th (i.e. the first day of Passover), the 14th (i.e. the last day of the festival), and the 21st of Nisan, were always Sabbath days; and that the omer was offered on the 22d day of the month, which was “the morrow after the Sabbath” terminating the festival, and from which the fifty days were reckoned (Hitigiz, Hufeld), or that the omer was offered on the 8th of the month, which was also “the morrow after the Sabbath,” thus preventing it from being post festum (Knobel). It will be seen that this hypothesis, in order to obtain five weeks, one for the 14th and 21st days of the month as the beginning and termination of Passover, is always obliged to make the religious new year begin on a Sabbath day, and hence to assume a stylized form of the Jewish year, which is opposed to the talmudic unit of about 36 days per week. Now this assumption—1. Is utterly at variance with the unsettled state of the Jewish calendar, which was constantly regulated by the appearance of the disk of the new moon [see New Moon, Day.
or run], 2. It rudely disturbs the weekly division, which is based upon the works of creation, and which the Jews regarded with the utmost sanctity; and 3. It is inconceivable that the Mosaic law, which, as we have seen, regarded the Sabbatical division of time as so peculiarly sacred that it made the seventh day holy, in which work the Jews were employed, would adopt a plan for fixing the time for celebrating the Passover whereby the last week of almost every expiring year is to be cut short, and the hebdomadal cycle, as well as the celebration of the Sabbath, interrupted (comp. Kell, On Lesticeus xxiii, 11). It is therefore argued that the Jews, who during the second Temple kept Passover fifty days after the 16th of Nisan, rightly interpreted the injunction contained in Lev. xxiii, 35-22. The fiftieth day, or the feast of Pentecost, according to the Jewish canons, may fall on the 5th, 6th, or 7th of Sivan (יֶנֶשָׁ), the third month of the year from the new moon of May to the new moon of June (Rash Ha-Shana, 6 b; Sabaḥ, 87 b). The fifty days formally included the period of grain-harvest, commencing with the offering of the first sheaf of the barley harvest in the Passover, and ending with that of the first two loaves which were made from the wheat-harvest, at this festival. It was the offering of these two loaves which was the distinguishing rite of the day of Pentecost. See Wave-offering.

111. The manner in which this festival was celebrated.—Not to confound the practices which obtained in the course of time, and which were called forth by the ever-changing circumstances of the Jewish nation, we shall divide the description of the manner in which this festival was and still is celebrated into three sections.

1. The Pentecostal Ordinances.—The Mosaic enactments about the manner in which this festival is to be celebrated are as follows: On the day of Pentecost there is to be no carrying of any kind of work is to be done on this festival (Lev. xxiii, 21; Num. xxvii, 26), all the able-bodied male members of the congregation, who are not legally precluded from it, are to appear in the place of the national sanctuary, as in the Passover and Tabernacles (Exod. xxxiv, 14, 17; xxvii, 23), where a new meat-offering of the flour of the new Palestinian crop (Lev. xxiii, 16; Num. xxvii, 26; Deut. xvi, 10), consisting of two unleavened loaves, made respectively of the tenth of an ephah (= about 3 quarts) of the finest wheat flour (Exod. xxxiv, 18; Lev. xxiii, 17), is to be offered before the Lord as firstlings (תֹּעֲלָה גְּדוֹלָה, Exod. xxxiv, 17), whence this festival derived its name, the day of firstlings (יֶנֶשָׁ, Num. xxvii, 26). In the above prescription, the phrase "Out of your habitations," (Lev. xxiii, 17), has been explained by the Jewish canons, which obtained during the time of the second Temple, as an ellipse for the expression מָצָאִים מִפְּנֵי עֲרָבָיִךְ (Numb. xv, 2), the land of your habitations, i.e. Palestine (Menahoth, 77 b, with Mishna, Menahoth, 1, 1); hence the custom of Josephus (Ant. iii, 10, 10) to bring to Jerusalem the Sept.  עוֹלָה בַּכְּלָא אֵלֶּה, from your habitation, in the singular referring to Palestine; the remark of Rashbi, מָצָאִים מִפְּנֵי עֲרָבָיִךְ לֵי יִשְׂרָאֵל, from where your habitation are, but not from any part outside the land, i.e. of Israel; Rashbam (ad loc.) says, "from your habitation is here used, and as בְּמַדְּנֵי עֲרָבָיִךְ (Deut. iv, 20; xxxv, 3; Lev. iii, 17; vii, 26; xxv, 3, 14, 21; Num. xxxv, 29), the former referring to injunctions which are binding in the land, while the latter are commands to be observed in every place, or wherever the Jews might reside; comp. Rashbam on Lev. xxiii, 16. The rendering of the Vulgate (ex omnius habitationis vestris), therefore, which is followed by Luther ("a usus eorum Wohnungn"), inserting הבנים, is most arbitrary and unjustifiable. Inadmissible, too, is the opinion of Calvin, Osiander, George (Die alten jud. Festes, p. 130, 273), etc., that two loaves were brought out of every house, or at least out of every town, based upon the plural וֹעֲלָהִים, or the view of Vaihinger (in Herzog's Real-Encyklopädie, s. v. Pfingstfest, p. 470) and Kell (Or Exod. xxiii, 17), that the plural וֹעֲלָהִים is used in a singular sense, i.e. out of one of your habitations (comp. Gen. viii, 4; Judg. xii, 7; Neh. vi, 2; Exod. x, 1); and de notes that the two loaves are to be offered from the habitations of the Israelites, and not from those prepared for the sanctuary or from its treasury.

With the two loaves were to be offered as a burnt-offering seven lambs of the first year and without blemish, one young bullock, and two lambs, with the usual meat and drink offerings; while a goat is to be offered as a sin-offering, and two lambs of the first year are to be offered as a thanksgiving or peace offering (Lev. xxvii, 18-20). The peace-offering, consisting of the two lambs with the two firstling loaves, are to be waved before the Lord by the priests. These are to be additions to the two loaves, and must not be confounded with the proper festival sacrifice appointed for Pentecost, which is given in Num. xxviii, 27, and which is to be burnt-offering, consisting of one young bullock, one ram, and seven lambs. That these two passages are not contradictory, as is maintained by Klo bel (Comment. on Lev. xxvii, 15-22), Vaihinger (in Herzog's Real-Encyklopädie, s. v. Pfingstfest, p. 480), and others, but refer to distinct sacrifices, viz. one to accompany the wheat-loaves (בֵּיתוֹ הַנַּחַת), Lev. xxvii, 18), and the other the properly appointed sacrifice for the festival (Num. xxviii, 27), is evident from the context and design of the enactments in the respective passages, as well as from the practice of the Jews in the Temple, where both prescriptions were obeyed. Hence Josephus (Ant. iii, 10, 6), in summing up the number of animal sacrifices on this festival, says that there were fourteen lambs, three young bullocks, and three goats; the number two, instead of three goats, being manifestly a transcriber's error, as Vaihinger himself admits. When Vaihinger characterizes this statement of Josephus as one of the many exegetical and historical errors of the Jewish historians, and maintains that it does not follow from Menahoth, iv, 2, we can only say that—Josephus simply describes what he himself saw in the Temple, and what every ancient Jewish document on the same subject declares; 2. The third section of the very Mishna (Menahoth, iv, 3) which Vaihinger quotes distinctly declares, "The kind of sacrifice prescribed in Numbers [xxviii, 27] was offered in the wilderness, and the kind of sacrifice enjoined in Leviticus [xxviii, 18] was not offered in the wilderness; but when they [i.e. the Israelites] entered the Promised Land and they sacrificed both kinds, 3. And this Gemara on this Mishna (Babylon Menahoth, 45 b), where the reasons are given more largely than in the Mishna why the former kind of sacrifice was not offered in the wilderness; and 3. Maimonides, who also summarizes the ancient canons on these two kinds of sacrifices for Pentecost, shows beyond the shadow of a doubt how these enactments were carried out in the second Temple. He says: "On the fiftieth day, counting from the offering of the omer, is the feast of Pentecost and Azereth (יֶנֶשָׁ). Now on this day additional sacrifices are offered, like the additional ones for new moon [see New Moon, The Feast, p. 180], consisting of two bullocks, and of two lambs, and all of them being burnt-offerings, and of a goat as sin-offering. These are sacrifices ordered in Num. xxviii, 26, 27, 30, and they constitute the addition for the day. Besides this addition, how-
ever, a new meat-offering of two loaves is also brought, and with the loaves are offered one bullock, two rams, and seven lambs, all burnt-offerings; a goat for a sin-offering, and two lambs for a peace-offering. These are the sacrifices ordered in Lev. xxiii, 18. Hence the Levites for this day exceed the accompanying sacrifices by three bullocks, three rams, fourteen lambs (all these twenty animals being a burnt-offering); two goats for a sin-offering, which are eaten; and two lambs for a peace-offering, which are not eaten" (Iad Huz-Czakzi, Hiltchot Temid in U-Moshphah, vii, 1).

For besides the two lambs with the accompanying sacrifices, and the special festival sacrifices which were offered for the whole nation, each individual who came to the sanctuary was expected to bring, on this festival, as on Passover and the feast of Tabernacles, a free-will offering to celebrate this circumstance (Deut. xvi, 10-12), a portion of which was given to the priests and Levites, and the rest was eaten by the respective families, who invited the poor and strangers to share it. It would seem that the character of this festival partook of a more free and hospitable liberality than that of the Passover, which was a distinct and a kind that belongs to the more family gathering. In this respect it resembled the feast of Tabernacles. The Levite, the stranger, the fatherless, and the widow were to be brought within its influence (Deut. xvi, 11, 14). The mention of the gleanings to be left in the fields at harvest for "the poor and the stranger," in connection with Pentecost, may perhaps have a bearing on the liberality which belonged to the festival (Lev. xxiii, 22). At Pentecost (as at the Passover) the people were to be reminded of their bondage in Egypt, and they were especially admonished of their obligation to keep the divine law (Deut. xvi, 12).

2. The Post-exit in Observance of this Festival. — More minute is the information in the non-canonical documents about the preparation of the sacrifices and the observance of this festival in and before the time of Christ. The pilgrims went up to Jerusalem the day previous to the commencement of the festival, when they prepared everything necessary for its solemn observance; and the approach of the holy convocation was proclaimed in the evening by blasts of the trumpets. The altar of the burnt-sacrifice was cleansed in the first night-watch of the preparation-day, and the gates of the Temple, as well as those of the inner court, were opened immediately after midnight for the convenience of the priests, who resided in the city, and for the people, who filled the court before the cock crowed. The sacrifices and offerings duly examined by the priests. When the time of sacrifice arrived, the daily morning sacrifice was first offered, then the festival sacrifices prescribed in Num. xvii, 20, 27, 30, while the Levites were chanting the Great Hallel (q. v.), in which the people joined; whereupon the congregation solemnly and heartily thanked God for the successful harvest, and the loaves of the new corn, with the accompanying sacrifices prescribed in Lev. xxiii, 18, were offered to the Lord. The two loaves for the wave-offering were presented in the manner prescribed. Phallic portions of new wheat were brought into the court of the Temple; they were beaten and trodden like all meat-offerings, and ground into flour, two omers of which were sifted through twelve sieves, and the remainder was re-submitted and eaten by any one. The two omers of flour, or cakes, that were made, were respectively obtained from a sea and a half ... kneaded separately and baked separately. Like all meat-offerings, they were kneaded and prepared outside, but baked inside the Temple, and did not set aside the festival, much less the Sabbath, so that they were baked on the day preceding the festival. Hence, if the preparation-day (נַתַּן יִשְׂרָאֵל) happened to be on a Sabbath, the loaves were baked on Friday (נַתַּן יִשְׂרָאֵל) and eaten on the third day after they were baked, which was the feast day. They were leavened loaves according to the declaration of the Lord; and made as follows: "There was leaven fetched from some other place, put into the omer, the omer filled with flour, which was leavened with the said leaven. The length of each loaf was seven hand-breaths; the breadth, four hand-breaths; and the height, four fingers" (Maimonides, Iad Huz-Czakzi, Hiltchot Temid in U-Moshphah, vii, 8-10, with Mishna, Menachoth, vi, 6, 7; xi, 2; iv, 9).

The two loaves thus prepared were then offered as wave-offerings, with two lambs, constituting the peace-offering, in the following manner: the two lambs were brought into the Temple and waved together by the priest while reciting the priestly blessing. It is written, 'And he shall wave them ... a wave-offering' (Lev. xxiii, 20); but if he waved each one separately, it was also valid, whereupon they were slain and flayed. The priest then took the breast and the shoulder of each one (comp. Lev. vii, 30, 22), laid them down by the side of the two loaves, put both his hands under them, and waved them all together as if they were one, towards the east side—the place of all wave-offering—doing it forwards and backwards, up and down; and it was also valid if he waved each separately. He burned the fat of the lambs, and the remainder of the flesh was eaten by the priests. As to the two loaves, the high-priest took one of them, and the second was divided among all the officiating priests (גֵּרָה בֵּית הַמִּשְׁכָּב), and both of them were eaten up within the same day and half the following night, just as the flesh of the most holy things" (Maimonides, Iad Huz-Czakzi, Hiltchot Temid in U-Moshphah, viii, 11. See Mishna, Menachoth, vi, 6; Joseph. Ant. iii, 10, 6; War, vi, 5, 9). After the prescribed daily sacrifice, the festival and the harvest sacrifice were offered for the whole nation. Each individual brought the free-will offering, which formed the cheerful and hospitable meal of the family, and to which the Levite, the widow, the orphan, the poor, and the stranger were invited. The festival in a minor degree continued for a whole week, during which time those who did not offer on the first day repaired their defects or negligence (Rab Huz-Shas, 4 b). The offering of the first-fruits also began at this time (Mishna, Bikkurim, i, 7, 10); and it was for this reason, as well as for the joyous semi-festival days which followed the day of Holy Convocation, that we find so large a concourse of Jews attending Pentecost (Acts ii; Joseph. Ant. xiv, 13, 14, 5). All sacrifices and offerings were burned; and the services were performed with the same observance between Pentecost and Tabernacles (Bikk. i, 6, 10; comp. Exod. xxiii, 16). See First-fruits.

The connection between the omer and the two loaves of Pentecost appears never to have been lost sight of. The former was called הַשְׂכָּב הָעָלֶים, and the latter הַשְׂכָּב הָעָלֶים (De Sert. 7, 21, v, 29, comp. Orac. iv, 302, ed. Tauch). He elsewhere mentions the festival of Pentecost with the same marked respect. He speaks of a peculiar feast kept by the Therapeutae as הָעָלֶים (De Sert. 2, 21, v, 29, comp. Orac. iv, 302, ed. Tauch). He elsewhere mentions the festival of Pentecost with the same marked respect. He speaks of a peculiar feast kept by the Therapeutae as הָעָלֶים (De Sert. 2, 21, v, 29, comp. Orac. iv, 302, ed. Tauch).
with respectful attention (Buxtorf, Cyn. Jud. xx. p. 440). According to the most generally received interpretation of the word יִדְרְחוּ (lidro) (Luke vi. 1), the period was marked by a regularly designated succession of Sabbaths, similar to the several successes on Sundays in our own calendar. It is assumed that the day of the omer was called יִדְרְחוּ (lidro) (in the Sept., Lev. xxiii. 11, יעוּדְרְחוּ עַלְיֶהְוּ וְאֵּּוְעִּ֥ם). The Sabbath which came next after it was termed יִדְרְחוּ (lidro) (the second, יִדְרְחוּ (lidro)); the third, יִדְרְחוּ (lidro); and so on. This period was first proposed by Scaliger (De Emend. Temp. iii. vi. p. 527), and has been adopted by Frischnest, Petavius, Casaubon, Lightfoot, Godwin, Carpzov, and many others.

3. The Observance of this Festival to the Present Day.—This festival, like all the feasts and fasts ordained or sanctioned in the Old Testament, is annually and sacredly kept by the Jews to the present day on the 4th and 7th of Sivan, i.e., between the second half of May and the first half of June. Thus, although, according to the law, the observance of Pentecost lasted but a single day, the Jews in foreign countries, since the Captivity, have prolonged it to two days. They have treated the feast of Trumpets in the same way. The alteration appears to have been made to meet the possibility of an error in calculating the true day (Lightfoot, loc. cit., p. 5; Selken, De Ann. Circ. c. vii). It is said by Barcennin and Maimonides that, while the Temple was standing, though the religious rites were confined to the day, the festivities and the bringing in of gifts continued through seven days (Notes to Chagiga, ii. 4). As above noted, in connection with the injunction in Lev. xx. 7-11, 15, 16, the Jews regularly count every evening the fifty days from the second day of Passover until Pentecost, and they recite a prayer over it, which is given in the article PASSOVER. As the counting (יהודא) of these fifty days, on the first of which the sickle was brought out for cutting the corn, and on the last of which it was laid up again because the harvest was entirely finished, is not only a connecting link between Passover and Pentecost, but may be regarded as preparatory for the feast of Pentecost, we must notice the events and practices connected therewith. Owing to a fearful plague which broke out on the second day of Passover or the first of Omer, and which, after raging with fury for nearly four hundred years, and Antiparos no less than 24,000 disciples of the celebrated R. Akiba, suddenly ceased on the 18th of Iar, the second month, i.e., the thirty-third of Omer (Babylon Talmud, 62 b; Midrash Bereketh Rabbi, Sefer יֵהוָּעָר, sec. Ixi, p. 134, ed. Steinsf, 1883), it was ordained that, in memory of this calamity, three days are to be kept as a time of mourning, during which no marriage is to take place, no enjoyment and pleasures are to be indulged in, nor even is the beard to be removed (Orach Chajim, Hilchot Pesach, sec. 498); and that the thirty-third of Omer, on which the epidemic disappeared, is to be kept as a holiday, especially among the students, for which reason is called the scholars' feast. The reason which R. Jochanan ben-Nori assigns for regarding this period as a time of mourning—i.e., that the wicked are punished in hell in these days, and that judgment is passed on the produce of the land—is simply a modern catalytic form given to an ancient usage.

The three days preceding the festival, on which, as we shall see hereafter, the Jews commemorate the giving of the law on Sinai, are called (יְהוָּעָר) (יהוָּעָר). The three days of preparation and sanctification, because the Lord commanded Moses to set bounds around the mountain, and that the people should sanctify themselves three days prior to the giving of the law (Exod. xix. 12, 14, 23). On the preparation day

PENTECOST יִדְרְחוּ (lidro) the synagogues and the private houses are adorned with flowers and odoriferous herbs; the male members of the community purify themselves by immersion and confession of sins, put on their festive garments, and resort to the synagogue, where, after the evening prayer (יִדְרְחוּ), the hallowed nature of the festival is proclaimed by the cantor in the blessing pronounced over a cup of wine (יִדְרְחוּ), which is also done by every head of the family at home before the evening repast. After supper both the learned and the illiterate there are either to gather in the synagogue or to congregate in private houses and read all night: (a) The first three and the last three verses of every book in the Hebrew Scriptures, but some portions have to be read entire; (b) the first and last Mishna of every tractate in the Talmud; (c) the beginning and end of the bookJEZIRAH; (d) passages from the Sohar; (e) the 631 commandments into which the Mosaic law is divided (see School); and (f) the Song of Songs. The whole must be recited in thirteen divisions, so that the prayer Kadosh (יִדְרְחוּ) might be said between each division, and the letters of the word יִדְרְחוּ (the unity in the Deity) = 4 + 8 + 1 = 13, be obtained (comp. Mogen Abraham, Orach Chajim, sec. 494). The reason for this watching all night, given by R. Eliezer, is that, the 13 chapters of the Pentecostal service to the morning special prayers are inserted for this day, which set forth the glory of the Lawgiver and Israel, the glory of the Lord in creating the universe, etc., and in which the Decalogue is interwoven, the great Hallil is recited, Exod. xix. 1, xx. 26 is read as the lesson from the law, Num. xviii, 29-31 as Mapirah, and Ezek. i, 1-28, iii, 12, as the lesson from the prophets (see Hibrit-Ta'amah): whereupon the Mourn is offered, and the priests, after having their hands washed by the Levites, pronounce chantingly the benediction (Num. vi. 23-27) on the congregation, who receive it with the hands of the Levites. The benediction appears in the 19th century in the Synagog. On the second evening they again resort to the synagogue, use the ritual for the festivals, in which are also inserted special prayers for this occasion, being chiefly on the greatness of God and the giving of the law and the Decalogue; the sanctification of the festival (יִדְרְחוּ) is again pronounced, both by the prelate in the synagogue and the heads of families at home; and prayers different from those of the first day, also celebrating the giving of the law, are intermingled with the ordinary festival prayers; the Hallil is recited, as well as the book of Ruth; Deut. xviii, 16-xviii, 17, with Num. xxviii, 26-31 is read as the lesson from the law; Habuk. ii, 20-iii, 19, or iii, 1-19, as the lesson from the prophets; the prayer is offered for departed relatives; the Mourn Ritual is recited; the priests pronounce the benediction as on the former day; and the festival concludes after the afternoon service, as soon as the stars appear or darkness sets in. It must be remarked that milk and milk products form an essential part of the meals during this festival, which is of a particularly joyous character, to symbolize "the honey and milk which are under the tongue" of the spouse (Cant. iv, 11), by virtue of the law of the bridgegroom's giver. The love for the festival of the modern Jews regard the fifty days with strange superstition, and, it would seem, are always impatient for them to come to an end. During their continuance they have a dread of sudden death, of the effect of malaria, and of the influence of
PENTECOST 928

evil spirits over children. They relate with gross ex- aggeration the above-mentioned case of a great mor- tality which, during the first twenty-three days of the period, befell the pupils of Akiba, the great Mishnaical doctor of the second century, at Jaffa. They do not ride, or drive, or go on the water, unless they are im- mediately required for some purpose. The fact that Pente- cost is not observed in the country until the first whistle in the evening, lest it should bring ill-luck. They scrupulously put off marriages till Penteceost (Stauben, La Vie Juive en Alance [Paris, 1880], p. 124; Mills, British J. c., p. 207.)

IV. Origin of the Festival.—There is no clear notice in the Scriptures of any historical signifi- cance belonging to Pentecost. Yet, looking simply at the text of the Bible, there can be little doubt that Pen- tecost owes its origin entirely and exclusively to the harvest which terminated at this time. It is to be ex- pected that, in common with other nations of an- tiquity who celebrated the ingathering of the corn by offering to the Deity, among other festive offerings, the fine flour of wheat as Σάλςας αγρός (Eustath. Ad Hliad. ix, 530; Athen. iii, 80; Theocrit. vii, 3), the Jews, as an agricultural people, would thankfully ac-knowledge the goodness of God in giving them the fruits of the earth, by offering to the Bountiful Giver of all good things the first-fruits of their harvest. That this was primarily the origin and import of Pentecost is most unquestionably indicated by its very names, e. g. the festival of (טֵחַלָּתוֹ) the cut-off corn, i. e. end of the harvest (Exod. xxiii, 10), which was instituted on the morrow of the Passover, when the sickle was first brought into the field (Deut. xvi, 9); and so intimate-ly connected are the beginning of the harvest at Pass- over with the termination of it at this festival, that Penteceost was actually denominted, during the time of the second Temple, and is called in the Jewish liter-ature to the present day, טֵחַלָּתוֹ, the conclusion, or, בסאר, the termination of Passover. To the same effect is the name שְׁלָשִׁים, the festival of weeks, which, as Bähr rightly remarks, would be a very strange and enigmatical designation of a festival, sim- ply because of the intervening time between it and a preceding festival, if it did not stand in a fixed and essential relationship to this intervening time, and if in its nature it did not belong thereto, since the weeks themselves have nothing which could be the subject of a religious festival, except the harvest that took place in these weeks (Symbolik, ii, 647). Being the culmination of Passover, and agnar in its char-acter as a thank-offering of the harvest, the festival among the Jews will hardly be questioned; for it will not be supposed that the patriarchs, who in common with other nations were devoted to agriculture, would yet be behind these nations in not celebrating the harvest festival, to acknowledge the goodness of God in giving to them the fruits of the earth, which obtained among the heathen nations to the remotest times. Indeed, the Book of Jubilees, as will be seen in the sequel, actu- ally ascribes a pre-Mosaic existence to it. In incor- porating this festival into the cycle of the canonical feasts, the Sanhedrin, as usual, divested it of all idolatrous rites, consecrated it in an especial man- ner to him who filleth us with the finest of wheat (Psa. cxlviii, 14), by enjoining the Hebrews to impart liber- ally to the needy from that which they have been per- mitted to reap, and to remember that they themselves were the first to reap the harvest in Egypt, and were now in the possession of liberty and of the bounties of Providence (Deut. xvi, 11, 12). The Mosaic code, moreover, constituted it a member of the Hebrew fam- ily of festivals, by putting Pentecost on the sacred basis of seven, which, as we have seen, underlies the whole organism of the feasts.

But though the canonical Scriptures speak of Pen- tecost as simply a harvest festival, yet the non-canoni- cal documents show, beyond the shadow of a doubt, that the Jews, at least as early as the days of Christ, connected with it, and commemorated on the 6th of Si- van, the third month, the giving of the Decalogue. It is made out from Exod. xiii, that the law was deliv- ered on the fiftieth day after the deliverance from Egypt (Selden, De Jur. Nat. et Gent. iii, 31). It has been contended that the feast of Trumpets that the giving of the law was com- memorated (De Sept. c. 22). See TRUMPETS, FEAST OF. There is, however, a tradition of a custom which Schöttgen supposes to be at least as ancient as the apostolic times, that the night before Pentecost was a time especially appropriated for thanking God for the gift of the law (Huc. Hede, ad art. ii, 1). The Talmud declares that "the rabbins proposed that the Deca- logue was given to Israel on the 6th of Sivan" (Suk- buth, 86 b), and this is deduced from Exod. xiii, for, according to tradition, Moses ascended the mountain 20 days after the 6th of Sivan (Exod. xvi, 10), received the answer of the people on the 3d (vers. 7) and ascended the mountain on the 4th (vers. 8); com- manded the people to sanctify themselves three days, which were the 4th, 5th, and 6th (vers. 12, 14, 23); on the third of these days of sanctification, which was the 5th of Sivan, the giving of the Decalogue to them (vers. io, 11, 15, 16). This is the unanimous voice of Jewish tradition. It is given in the Mechilta on Exod. xiii (p. 88-90, ed. Wilna, 1844 [see Midrash]); in the Chaldee paraphrase of Jon- than ben-Uzziel, which renders רֹאשׁ הַיָּהָה הַיָּהָה הַיָּהָה הַיָּהָה הַיָּהָה Hlıad, and it came to pass on the third day, on the sixth of the month, i. e. Sivan; by Rashi (Comment. on Exod. xiii, 1-16); and by Maimonides, who remarks: "Pentecost is the day on which the law was given, and in order to magnify the day, the year is counted from the first festival (i. e. Passover) to it, just as one who is expecting the most faithful of his friends is ac- customed to count the days and hours of his arrival; for this is the reason of counting theomer from the day of our Exod. from Egypt to the day of the giving of the law, which was the ultimate object of the exodus, as it is said, 'I bare you on eagles' wings, and brought you unto myself.' And because this great manifestation did not last more than one day, therefore as the ceremony was extended to the whole of the month of Sivan (Nebuchad., iii, 43). To this effect is R. Jehudah (born circa 1060), in his celebrated work Cumaar, iii, 10; Nachmanides (born about 1155), in his commentary on the Pentateuch (Exod. xiii, 1-25; Lev. xxiii, 17), and all the Jewish commentaries, as well as the ritual for this festival. Even Ausrangeli, who denies that the primary object in the institution of this festival was to celebrate the gift of the law, most emphatically declares that the Decalogue was given on Mount Si- nai on Pentecost, as may be seen from the following quotation, which is taken from a contemporary record of the event: "Thus the Decalogue for the first time was given on the day of Pentecost. Therefore, the festival of Pentecost is not only fit for commemorating the giving of the law, but it is also the festival which is the eternal token of the gift of the law, and the day of Pentecost was celebrated as the day of the gift of the law to the whole people. For just as the feast of Tabernacles was intended to finish the ingathering of the produce, so the festival of weeks was intended to begin the har- vest, as it was the will of the Lord that at the com- memoration of the ingathering of the fruits which are the food of man, the first of which is the wheat, and which began to be cut off on the feast of weeks, a festival should be celebrated to render praise to him who giv- eth food to all flesh; and that another festival should
be celebrated at the end of the ingathering of the fruits. Still, it is probable that the law was given on the 21st day of the feast of weeks, although this festival was not instituted to commemorate it" (Commentary on the Pentateuch, Parshath 4444, p. 211 a, ed. Hanau, 1710).

Those early fathers who were best acquainted with the Jewish tradition testify to the same thing, that the law was given on Pentecost, and that the Jews commemorate the event on this festival. It was therefore on this day, when the apostles, in common with their Jewish brethren, were assembled to commemorate the anniversary of the giving of the law from Sinai, and were engaged in the study of the Torah, and only with the custom of the day, that the Holy Spirit descended upon them, and sent them forth to proclaim "the wonderful works of God," as revealed in the Gospel (Acts ii). Thus, St. Jerome tells us, "Supputemus numerum, et inveniemus quinquagesimam die egressionsis Israel ex Egypto in vertice montis Sinai legem datam. Unde et Pentecostes celebratur solemnitatis, et poetae evangeli sanctamentum in Spiritus Sancti descensione completur" (Epist. ad Fabiolam, xii; in Opp. i, 1674, ed. Par. 1689). Similarly St. Augustine in his sermon etiam, "in eodem die Acceptio Domini, quinguesesimam die celebremus, quo nobis Sanctum Spiritum Paracletum quem promisit materiavit; quod futurum etiam per Judaeorum psachra significatum est, cum quinqueagesimam die post celebremus festum festis" (Serm. liii, May 10). "Qui Deum accepto in monte" (Contra Faustum lib. xxxiii, c. 12). Comp. also De Lyra, Comment. on Lev. xxvii; Bishop Patrick on Ezek. x. xii. It is very curious that the apocryphal Book of Jubilees, which was written in the first century before Christ (see Jubilees, Book vi), should have called this festival the third month, with the third month of Noah's leaving the ark, and that it maintained that it was ordained to be celebrated in this month, to renew annually the covenant which God made with this patriarch to destroy the world again by a flood (ch. vi, 57 sq.). Such an opinion could hardly have been hazarded by a Jew if it had not been believed by many of his co-religionists that this festival had a pre-Mosaic existence. Since the destruction of Jerusalem, and the impossibility of giving prominence to that part of the festival which bears on the Palestinian harvest, the Jews have almost entirely made Pentecost to commemorate the giving of the law, and the only references they make in the ritual to the harvest, which was the primary object of its institution, is in the reading of the book of Ruth, wherein the harvest is described.

It is of the temple of Pentecost that a deep, and organic connection with any other rites, we should have no certain warrant in the Old Testament for regarding it as more than the divinely appointed solemn thanksgiving for the yearly supply of the most useful sort of food. Every reference to its meaning seems to bear immediately upon the connection of the grain harvest. It might have been a gentle festival, having no proper reference to the election of the chosen race. It might have taken a place in the religion of any people who merely felt that it is God who gives rain from heaven and fruitful seasons, and who fills our hearts with food and gladness (Acts xiv, 17). But it was, as we have seen, essentially linked to the Passover — that festival which, above all others, expressed the fact of a race chosen and separated from other nations. It was not an insulated day. It stood out as the culminating point of the Pentecostal season. If the offering of the aper was a supplication for the divine blessing on the harvest which was just commencing, and the offering of the two leaves was a thanksgiving for its completion, each rite was brought into a higher significance in connection with the other, and the festival was integrated into the whole of the Passover. It was thus set forth that He who had delivered his people from Egypt, who had raised VII. 30...
PENTECOSTAL EFFUSION 930 PEOR

21 (Crit. Soc.); Otho, Lex. Rob. s. v. Festa; Buxtorf, Synagoge. Judaeum, c. xxv. See FESTIVITIES.

Pentecostal EFFUSION of the Holy Spirit (as recorded in Acts ii). The commencement of the Christian Church on the day of Pentecost, preceded as it was by our Lord's ascension, attached a peculiar interest to this season, and eventually led to its being set apart for the celebration of the day of Pentecost. It was not, however, established as one of the great festivals until the 4th century. The combination of two events (the Ascension and the descent of the Holy Ghost) in one festival has a parallel in the original Jewish feast, which is held to have included the feast of the Assumption of the Day of Pentecost (Exod. xxiii, 16; Lev. xxiii, 14-21; Num. xxvii, 26). Indeed, this festival in some respects bears a close analogy to the Jewish one; and is evidently little more than a modification of it. The converts of that day, on which the Holy Ghost descended, were the first fruits of the Spirit. Jerome (Ad Fabianum, s. 7) elegantly contrasts this with the giving of the law on Mount Sinai: "Ut taceat fata est quinquagesimo die a Pac- chate; illo, in Sina; haec, in Sion. Ibi terrae motu contremuit mons; hic, domus apostolorum. Ibi, inter flaummata sacrae aurum sub flammis magi mandidit, et fragi tonitruorum personit; hic, cum ignearenn visiones linguae eburneae sonitus pariter de celo, tanquam spiritus vehementissimi adversatus. Ibi, clangor, buccina, legis verae perstrepuit; hic, tuba evangelica apostolorum." This festival became one of the three great festivals (Tertullian, De Baptiz. c. 19; Jerome, in Zach. xiv, 8); and it derives its name of Whit Sunday, not from baptism, but from a corruption of the name Pentecost, through the German Pfingsten.

In the early Christian Church the entire period between Easter and Pentecost was named from the latter (Tertullian, De Idol. c. 14; De Baptiz. c. 19; Can. Ap. c. 37; Can. Ant. c. 30; Cyril. Hieros. Ad Const.). The feast was observed as the festival of the Holy Spirit (Greg. Naz. De Pent. Hom. c. 44) at a very early date, allusion being made to it by Tertullian, as shown above, and by Origen (Contra Cel. ed. Cantab. 1677), viii, p. 592). All public games were interdicted by Theodosius the Younger during the Pentecostal as during the Paschal solemnity (Cod. Theod. xvi, 5, De Specul. During this time the Acts of the Apostles were read, being most suitable for the period during which the risen Lord appeared to his disciples in the body "by many infallible proofs." Fasting was intermitted (Const. Ap. v, 38), and the prayers of the Mass were recited, not for the dead, but for the living (Concil. Nic. can. 20), as symbolizing the jubilant attitude of the Church during her Lord's passage from the grave to the glory. The entire octave was celebrated in early days, and followed by a week of fasting (Const. Ap. v, 38). The feast was restricted to three days by papal decree, A.D. 745.

Doubts have been cast on the common interpretation of Acts ii, 1, according to which the Holy Ghost was given to the apostles on the day of Pentecost. Lightfoot contends that the passage in the Vulgate is not genuine, and that when the day of Pentecost had passed, and considers that this rendering is countenanced by the words of the Vulgate, "cum completerunt dies Pentecostes." He supposes that Pentecost fell that year on the Sabbath, and that it was on the ensuing Lord's day that the Holy Ghost came. His position is strengthened by the fact that it is preserved in Eusebius. In Act. ii, 1. Hitzig, on the other hand (Isternus und Pfingsten, Heidelberg, 1837), would render the words, "As the day of Pentecost was approaching its fulfillment." Neander has replied to the latter, and has maintained the common interpretation (Platinus of the Thirtieth, c. v, 5, Bohn's ed.).

The question on what day of the week this Pentecost fell must of course be determined by the mode in which the doubt is solved regarding the day on which the Last Supper was eaten. See Pascov. If it was the last Paschal supper, on the 14th of Nisan, and the Sabbath during which our Lord lay in the grave was the day of the omer, Pentecost must have followed the Sabbath. But if the supper were eaten on the 13th, and he was crucified on the 14th, the Sunday of the Resurrection must have been the day of the omer, and Pentecost must have occurred on the first day of the week.

For monographs on this subject, see Volbeding, Index Programmatum, p. 72, 120. See Baptism of FIRE.

Pentecostals, a contribution or oblation made by every house or family to the cathedral church at Pentecost, in consideration of a general absolution then pronounced. The Pentecostals are sometimes called Whitsun-farthings.

Pentecostarion, one of the service-books of the Greek Church, containing the office of the Church from Easter-day till the eighth day after Pentecost, which they called the Sunday of All-Saints.

Pentton, Stephen, an English clergyman and educator, was born in the first half of the 17th century, and was educated at Oxford University. In 1675 he became principal of St. Edmund Hall, Oxford; afterwards rector of Glympton. He died near the close of the 17th century. He published Apparatus für die Gesetze, and had two volumes of Apologetics and Speciales (London, 1688, 8vo). See Allibone, Dict. of Brit. and Amer. Auth. vol. ii, s. v.

Pentz (Penz or Penz), George, a celebrated German painter and engraver, was born at Nuremberg about 1560. He was first the pupil of Albrecht Dürer, and afterwards went to Italy, and studied the works of Raffael at Rome, probably after the death of that great master. Pentz died about 1650. Little is known of his works as a painter. A few of them are in the Imperial Gallery at Vienna, and these are greatly admired. His prints are numerous and highly esteemed. His drawing is correct, and there is none of that stiffness and formality which characterize the productions of his contemporaries. While in Italy he engraved, in conjunction with Marc' Antonio, several plates after the works of Raffael. The Bible subjects from his two or three small prints, Job Tempted and Esther before Ahasuerus, two, Judith in the Tent of Holofernes and Judith with her Head; two, the Judgment of Solomon and Solomon's Hollosure; two, Lot and his Daughters, and Susanna and the Elders: four: the History of Joseph (1544); seven of the History of Tobit; three of the History of Lapith; three of the History of Judith; and five of the History of Esther and Jonathas: two, the Conversion of Saul and the Conversion of St. Paul (1545): The Four Evangelists. The seven works of Mercy are circular; twenty-five plates of the life and miracles of Christ are very fine.

Peniel. In the place of this name, see PENIEL.

The name Peniel (Heb. Peniel), from God. Sept. Φασονία) occurs also as the name of two men.

1. First named of two sons of Hur, son of Judah. He was the father of Gedor (1 Chron. iv, 4). B.C. post 1058.

2. Last named of eleven sons of Shashbok, son of Beriah; a man of the tribe of Benjamin who dwelt in the city of Jerusalem (1 Chron. viii, 20). B.C. post 1012.

Pe'or (Heb. Pe'or, 18v2k8, clef, always with the art. when speaking of the mountain, but without it of the idol; Sept. Φοινίκη, the name of a hill and of a heathen deity; perhaps also of a town.

1. A mountain on the plains of Moab, to the top of which Balak sent Balaam that the whole host of Israel and curse them (Num. xxii, 28). It appears to have been one of the ancient high places
of Moab dedicated to the service of Baal (comp. xxii, 41; xxxiii, 13, 27). Its position is described as "looking to the face of Jehoshimon," that is, the wilderness on either side of the river, and is designated in sight of the Aramaiah of Moab, on the east bank of the Jordan, where the Israelites were then encamped, it must have been one of those peaks on the western brow of the plateau which are seen between Heshbon and the banks of the Arnon (comp. Josephus, Ant. iv, 6, 4). Two other incidental notices of the sacred writers tend to fix its position. There can be little doubt that it was connected with the town of Beth-Peor, which is described as "over against" the site of the Israelite camp (Deut. iii, 9; comp. xxxv, 6). See Beth-Peor. Josephus says it was sixty stadia distant from the camp (Ant. iv, 6, 4); Eusebius states that it lay above Luvia (the ancient Beth-arab), six miles distant from it, and opposite Jéricho; and Jerome mentions Mount Phgor as situated between Luvia and Heshbon (Onomast. s. v. Fogor and Araboth Moab). It would seem, therefore, that this mount was one of those peaks on the south side of Wady Heshbon commanding the Jordan valley. A place named Fubbatoil is mentioned in the list of towns south of Es-Salt in the appendix to the first edition of Dr. Robinson's Bib. Res. (vol. iii, Appendix, p. 189), and this is the site of a place, which lay in the land of Edom, within eight miles north-east of Heshbon. Professor Paine, however, recently contends that it is one of the summits of the present Jebel Neba. See POGAH.

2. The matter of Peor (Deut. v, 29) mentioned in Numb. xxv, 18, and xxxi, 16; and the "iniquity of Peor" (Deut. xxi, 2) spoken of by Joshua (xxiii, 17), refer to the Midianitish deity Baal-peor, and not to the mountain. By following the counsel of 34, the Midianites seduced the Israelites to take part in their worship, and the licentious revels by which it appears to have been accompanied; and thus they brought upon them the divine vengeance (Numb. xxxi, 16; xxv, 1 sq.). The temple or shrine of Baal-peor probably stood on the top of the mountain; and the town of Beth-peor may have been situated at its base. Gesenius (Thesaur. p. 1199 a) gives it as his opinion that Baal-peor derived its name from the mountain, not the mountain from him. See Baal-Peor.

3. A Peor, under its Greek garb of Fyejôp appears amongst the names assigned by the Sept. to the list of the allotment to Judah, between Bethlehem and Aittan (Etham). It was known to Eusebius and Jerome, and is mentioned by the latter in his translation of the Onomasticon as Peoura. It probably still exists in the name of Beyjup, eight and a half miles north-east, five miles south-west of Bethlehem, barely a mile to the left of the road from Hebron to Rethal, Palest. p. 618; Robinson, Bib. Res. iii, 275; Tobler, Dritte Wanderung, p. 92.

Pepin is the name of several distinguished members of the Carolingian line of French kings. The first of them in order was Pepin the Old, or "Pepin de Landen," who flourished in the first half of the 8th century. The only one, however, whose history concerns us especially here is the third of the Pepins, whose name was Pepin le Bref, i.e. "Pepin the Short," and who was really the first king of France. He was the younger son of Charles Martel, wb, on the death of his father in 741, received Neustria and Burgundy; Austrasia, Thuringia, and Swabia being the heritage of his elder brother Charles. Aquitaine was nominally a part of Pepin's dominions, though really independent under its own duke, whom Pepin had appointed, and from whom the heir to the throne of Aquitaine was elected by the vassals. The force of governing the country in the name and as the chief minister, or, as he was called, "Mayor of the Palace," of the Merovingian sovereign, which had begun under Pepin of Heristal, was still kept up, though Pepin was eagerly longing for an opportunity to assume the crown, but the opportune moment did not come until 747, when Carloman bade adieu to power, and retired into a convent, leaving his government to his brother. Pepin immediately made use of them. After crushing a rebellion of Saxons and Bavarians, Pepin determined to effectually establish his royal power by dispossessing the Merovingian dynasty of even the semblance of authority, and of originating in person a new royal dynasty. To gain his point he flattered the clergy, the most influential body in France; and as they had been despised by Charles Martel for the behoof of his warriors, a moderate degree of kindness and generosity on the part of Pepin contrasted him so favorably with his father that the clergy at once became his partisans. So did the pope (Zacharius), and the imperial court. Pepin made himself the ally of the powerful Frankish chief against the Lombards, who were then masters of Italy, and to stop the progress of the Saecens, who now spread as far as the south of France. He therefore released the Franks from their oath of allegiance to the Merovingian monarch; which intelligence, when brought to Pepin, at once caused him to complete the dethronement of Childeric by having his long hair shaved off, which was an essential characteristic of royalty with the Merovingian kings, and to confine him in a monastery, where he died a monk, and had his body afterwards translated to the assembly of estates at Soissons, and consecrated by the bishop of Mayence in March, 752. In 754 the pope himself (Stephen II) appeared for Pepin, and gave his sanction to the election and consecration; and, in order to give further support to his authority, consecrated him to his high dignity in the church of St. Denis at Paris. Apparently the action had significance only for Pepin's subjects. It soon proved, however, that these solemn ceremonies had put the crown under great obligations to the Church, or, better, to the pope, whose goods and property the pope came to favor the king, and as a means of securing his temporal sovereignty, the day came when the clergy claimed to have secured political rank in the state by Pepin's coronation at their hands. See INVESTITURE; TEMPORAL POWER OF THE POPES. Pepin accompanied the Guelf of Italy to the head of a large army, to establish firmly, in turn, the papal authority. He waged war against Astolphus, the Lombard king, obliged him to raise the siege of Rome, and not only compelled him to abandon all pretensions to the city, but also to hand over to him several cities which had formerly belonged to the Greeks, and handed them over to the pope. Another expedition was rendered necessary in A.D. 755 by the revolt of Astolphus, who was again subdued by the champion of the Church. He also obtained a signal victory over the Saracens, reunited Aquitaine to his kingdom, and waged successful war against the German princes. Pepin le Bref died in the year 768, and was succeeded by his son Charlemagne. It is admitted by late historians that this change of dynasty was coincident with the elevation of the eastern Franks, whose fréthor energy, guided by the chiefs of the Pepin family, enabled them to push upward to the seat of government, and take the place of their feudal kindred. See the articles FRANCE and LOMBARDI for the necessary literature for a correct understanding of the establishment of the Gallic and Frankish battle- line.

Pepin (or Peppin), Martin, a Flemish painter, was born at Antwerp in 1574, as appears from an inscription on his portrait hereafter mentioned. It is not known under whom he studied at home. After having learned the principles of the art, he was sent to Italy, where he is said to have so distinguished himself by his grandeur of composition, correctness of design, and vigorous tone of coloring, that Rubens himself regarded Pepin with jealousy, and dreaded his return to Antwerp, fearing his reputation would suffer from such rivalry. Pepin, however, did not inter-
for the anointing of the sick and the host were carried by the priests in the pala, hung about the neck.

Peraccini, Giuseppe, called II Mirandolesi, an Italian painter, was born at Mirandola in the year 1672. According to Crespi, he studied under Marc' Antonio Franceschini, whose style he adopted. He executed some works for the churches at Bologna. He must not be confounded with Pietro Paltronieri, called Mirandolesi dello propretie. He died in 1754.

Perock (Izopon, from nipon, beyond), a name given to a portion of the country beyond Jordan, or on the east side of that river, the ancient possession of the two tribes of Reuben and Gad. According to Josephus (War, iii, 8, 8), it was bounded on the west by Jordan, east by Philadelphia, north by Pella, and south by the castle of Machærus. The country was fruitful, abounding with pines, olive-trees, palm-trees, and other plants, which grew in the fields in great abundance; it was well watered with springs and torrents from the mountains. It corresponds in an enlarged sense to the region round about Jordan (ο̣ς παραγεως το̣ κιπωσίσιον, Matt. iii, 5; Luke iii, 8; the earlier 'ερημος of Gregory, xii, 10). See Palæstina. The region connected with Perock, and mentioned in the O. T., is noticed under the articles Gilead and Bashan. It would seem to have been partially visited by our Lord (John x, 14). See Bethabara.

Peperski were the followers of Euphrates of Perse, in Cicilia, who is said to have believed that there are in the Trinity three Fathers, three Sons, and three Holy Ghosts. It has been alleged that in opposition to this class of heretics was framed the clause in the Athanasian creed which says, "So there is one Father, not three Fathers; one Son, not three Sons; one Holy Ghost, not three Holy Ghosts."

Persaga, Bonaventura de, an Italian cardinal, was born near Rome in 1339, and studied at Padua. He entered the Order of St. Augustine while very young, went to study in Paris, and there taught theology. He was a friend of Petrarch, and it was he who pronounced his funeral oration (1374). Three years later he was elected general of his order (1377). When schism entered the Church, Bonaventura declared himself for Urban VI, who rewarded him by giving him a cardinal's hat (1378). His zeal for the court of Rome proved fatal to him: he was killed while passing over the bridge St. Angelo to go to the Vatican, and Francois I gave his body to the dead. But no historian has yet given a proof of this crime, and we are ignorant of the precise date of the year in which it was committed, though it was supposed to be about 1390. The cardinal is none the less a martyr to the faith, and the continuators of the Actes des Dies have admitted him into their vast collection (vol. xi, June 10). He had composed commentaries on the epistles of St. John and St. James, lives of saints, sermons, etc. See Petrarque, Fermam seminum, lib. xi, ep. 25; Scarcundi, A. M. F. Patrum, lib. ii; I. de, Pandolphi, Bibli. Augustiniana; Summner, Fréd. Patr., p. 76; Tiraboschi, Storia della lettera. Ital. v, 139-141.

Perah. See Moab.

Perambulation is the term applied to the English practice of walking round a parish in order to ascertain its boundaries. This perambulation was, and still is, usually performed on Ascension day (q. v.). Dr. Blomefield, in his Perambulations, says that the boundaries of parishes are to be made by the minister, churchwardens, and parishioners, by going round the same once a year, in or about Ascension week. The parishioners may justify going over any man's land in their perambulations according to usage; said, it is recorded by statute in their way. There is a small homily, constituting the fourth part
PERAMBULATION

of the "Homily for Rogation Week," which is appropriated to be read on the above occasion. Perambulation on Rogation Day is a custom known long of and dated towards the bounds of parochial and individual property. It appears to have been derived from a still older custom among the ancient Romans, called Terminalia, and Ambivalia, which were festivals in honor of the god Terminus and the goddess Ceres. On its becoming a Christian custom, it was observed in the parishes, and observed the bounds of the parish and parsonage, and allowing 'drinkings and good cheer' (Grindal's Remains, p. 141, 241, and note; Whitgift's Works, iii, 296, 297; Tindal's Works, iii, 62, 234, Parker Society's edition), which was remarkable, as the Rogation days were appointed fasts. From the different practices observed, a custom received the various names of processions, rogation, perambulating, and gazing the boundaries; and the week in which it was observed was called Rogation week; Cross week, because crosses were borne in the processions; and Cross week. Those vegetables formed the chief portion of diet. At the Reformation, the ceremonies and practices deemed objectionable were abolished, and only 'the useful and harmless part of the custom retained.' Yet its observance was considered so desirable that a homily was prepared for the occasion, and injunctions were issued requiring that for the perambulation of the circuits of parishes the people should once in the year, at the time accustomed, with the rector, vicar, or curate, and the substantial men of the parish, walk about the parish as they were accustomed, and at their return to the church, or their common meeting, eat and drink, in their said common perambulations, was at a certain convenient place to admonish the people to give thanks to God (while holding of his benefits), and for the increase and abundance of his fruits upon the face of the earth, with the saying of grace. At the church also the said minister was required to inculcate these, or such like sentences: 'Curst be he which translacteth the bounds and doles of his neighbor; or such other order of prayers as should be lawfully appointed (Burns, Erle Ecclesiast Law, iii, 91; Grindal, Remains, p. 69). Those engaged in the processions, usually had refreshments provided for them at certain parts of the parish, which, from the extent of the circuit of some parishes, was necessary; yet the cost of such refreshment was not to be defrayed by the parish, nor could such refreshment be claimed as a custom from any other place; hence a halfpenny or halfpence for the trowsers and lands, and even to enter private houses if these stand on the boundary line. In Scotland, where the parochial principle has never been developed as in England, there are church fees and public edifices, and practice. But as between neighboring landowners, a brief of perambulation is the technical remedy for setting right a dispute as to boundaries or marches; and perambulating or 'riding' the bounds of boroughs is a common practice, and continues to perambulate along the old track often occasioned curious incidents. If a canal had been cut through the boundary of a parish, it was deemed necessary that some of the parishioners should pass through the water. Where a river formed part of the boundary line, the procession was crossed along the water, and the party stripped and swam along it, or boys were thrown into it at customary places. If a house had been erected on the boundary line, the procession claimed the right to pass through it. A house in Buckinghamshire, still existing, has an oven passing over the boundary line. It was customary in the perambulations to put a boy into this recess to preserve the integrity of the boundary line. At various parts of the parish boundaries, two or three of the village boys were 'bumped—that is, a certain part of the cost of the boys's administration was paid as a post, or any other hard object which happened to be near the parish boundary. This, it will scarcely be doubted, was an effectual method of recording the boundaries in the memory of these bating-rams, and of those who witnessed this curious mode of registration. The custom of perambulating boundaries continued in some parts of the kingdom to a late period, but the religious portion of it was generally, if not universally, omitted. The custom has, however, of late years been revived in its integrity in many parishes.

Peranda, SANTO, an Italian painter, was born at Venice in 1566. According to Roldolfo, he first studied under the younger Palma, and afterwards with Leonardo Corona, of Murano. In his first performance he followed the prompt and hasty manner of Palma; but he afterwards went to Rome, where, by diligently studying the antique and the works of the great masters, he formed a style of his own, more finished and correct. On his return to Venice he improved his coloring by contemplating the works of Titian, Tintoretto, and Veronese, so that he became as accomplished in coloring as he was before in design. He executed many works for Lord Wroth and Mr. Tylney. He was employed in decorating the ducal palaces at Venice, Mirandola, and Modena with various subjects from history. 'His usual manner,' says Lanzi, 'very much resembles Palma, while in the large histories which he produced at Venice and Mirandola he appears in a more practical character of his own. Yet he was of a more slow and reflective turn, and more studious of art—qualities which, in the decline of age, led him to adopt a very delicate and labored manner. He was not ambitious of equalling his contemporaries in the number of his works, but his aim was to surpass them in correctness; nor did he anywhere succeed better in his object than in his Christ taken down from the Cross, in the church of San Procolo at Venice.' He had several disciples, among whom was Matteo Ponzone. He died at Venice in 1638.

Per Annulum at Baculum were those bishoprics given by handing over the ring and staff.

Pérard-Castel, FRANÇOIS, a French canonist, was born at Vire in 1647. Admitted to the bar in Paris, he entered into a business relating to benefices, under the direction of his uncle, banker to the court of Rome, to whom he soon succeeded. He afterwards became a lawyer to the grand council, and, after a long and laborious application, he died at Paris in 1887. We have of his works, Paraphrase sur le Commentaire.
de Dumoulin ad Regulas Cancellaria (Paris, 1688 or 1685, fol.):—Remarques sur les Différences du droit Canoïnique (de Deemasias) (Ibid. 1700, fol.).—A work which in 1652 says Canoniae are the Diffé-
nizations themselves; the first edition, without notes, is 1688, 4to; the second, 1674, 3 small vols. 4to.—
Nouveau recueil de plusieurs questions notables sur les matières bénéficielles (Ibid. 1899, 2 vols. fol.).—
Traité sommaire de l'Expropriation et de la pratique de la cour de Rome pour l'expédition des signature
s et provisions des bénéfices de France (Ibid. 1717, 2 vols. 12mo), with remarks by Guille, Noyer. Some
authors believe that the latter work is by Castel, uncle of Evrard, and part of it is dedicated to See, Denis

Perèse were a very obscure Gnostic sect, re-
lated to the Ophitic q. v.). They are first named by
Clement of Alexandria, and definitely described, i.e. in
some detail, by Hippolytus (Refut. v., 124). The latter
was followed by Theodoret, but no new information
about them was added by him (Hier. fab. 1, 17). This
sect appears to have been called Peræae, or Pe-
ratii, in the first instance, from the country to which
they belonged, Eucaea, i.e. the land beyond ( gripos)
the continent, as Peria was the district beyond Jor-
dan; and this is the only fact stated about them by
Clement of Alexandria (Strom. vili, 17, ad fin.). But
they afterwards gave another meaning to the name of
that "Transcendentalists" (πραπανομ, because, through
their knowledge of the divine mysteries, they were
qualified to proceed through the gates beyond destruc-
tion." Hippolytus says they originated with Ephra-
mites the Peratic and Celbes the Carystian (the latter
being also called Adames and Acembs the Carystian
both by Hippolytus and Theodoret), but no particulars
are given about any of them.

The Peræae appear to have been a local sect, and
their peculiar γυρινος was a recondite philosophy fon-
ded on theories associated with the constellations of
astronomers, and on serpent-worship. Hippolytus says
that they and their doctrine had been very little known
until he described them, and that the latter were so
inarticulate that it was difficult to give a comprehen-
sive notion of them. But, after stating many details of
their strange system, he goes on to sum it up in the fol-
lowing terms, which make it evident that their system
was based upon the rotation of the generation of the
mystic visions. They held that the universe is Father, Son,
and Matter, each of the three having endless capacities in
itself; intermediate between Matter and the Father sits
the Son—the Logos, the Serpent—always being in mo-
tion towards the unmoving Father and towards mov-
ing Matter. At one time the Son is turned towards the
Father, and receives powers into his own person; at
another time he takes up these powers, and turns
between Matter. Then Matter, devoid of attribute,
and being unfashioned, moulds itself into forms from
the Son, which the Son moulded from the Father. They
believed, further, in a Demiurgus, who works de-
struction and death, and that men could be saved from
his power only through the Son, who is the Serpent.
In addition to this fundamental corruption of Chris-
tianity, the Peræae had also many secret mysteries,
which Hippolytus says could not be mentioned by
him on account of their profanity (Philosoph. v. 7; 13;
x. 6). See Baxmann, in Illgen’s Zeit. f. historische
Theologie, 1883; Taylor, Hippolytus, p. 84; Ueberweg,
Hist. Philos. i. 285.

Péray (or, better, Peyraud), Guillaume, a
French prelate, was born about 1190 in Peyraud, a
village near Larrede, was crowned in the diocese of
Albi, now in the department of Ardeche. Doctor of the Uni-
versity of Paris, Guillaume entered quite young the
Ordo of St. Dominic, and soon acquired a general es-
teen by the purity of his manners, by his doctrines,
and by his talents in the pulpit. Phillip of Savoy, who,
worked among them, said of him, in 1246, archbishop of
Lyons, chose him for suffragan bishop, and Guillaume,
clothed with a title in paribus, performed episcopal duties
in the diocese for more than ten years, which has led into error Landro Alberti, Alamara, and Severo, who have placed among
the bishops of Lyons, G. Péray died at Lyons 1255.

We have of his works, Summa de vitae et virtu-
tibus, of which the last edition (Paris, 1686, 4to) is a
work much praised by Gerson:—Commentarium de Re-
gula Sanci Benedicti (1690, 8vo); printed without
title, 1690, 8vo; or, printed under the title, 1690, 8vo;
Deae, summo de vita et virtutibus, of which the last edi-
tion has been published; the last at Orleans, 1674,
8vo:—a translation, De eruditione Principum, printed for
the first time at Rome, 1570, 8vo. A treatise entit-
te Virtutem virorumque eumdem has been wrongly
attributed to Guillaume Péray; it is a work of Thomas
de Azobil, printed at Jerusalem, 1670, 8vo, Scriptor. ordin.
Prisc. c. 132; Tourou, Hommes illust. de l’ordre de St Dominique; Gallia Christi. vol. v. v.

Pérault, Raimond, a French cardinal, was born
May 28, 1435, at Surgeres (Saintonge). The son of
poor artisans, he was first a school-teacher in his own
village, then at La Rocheboeuf, and, thanks to some
benefactors, he entered as burser the College of
Navarre, in Paris. Received as doctor, and appointed prior
of Saint-Gilles at Surgeres, he went to Rome, and
rendered himself useful to popes Paul II, Sixtus IV, and
Innocent VIII. The latter sent him in 1487 to Germany
to collect the alms designed for the expenses of the
war against the Turks, and, although this nuncioary
had not gained for himself much honor, Raimond was
nevertheless rewarded for his travels and labors by
the bishopric of Gruck, in Garthins. Alexander VI
made him a cardinal in September, 1493, in the re-
commendation of king Charles VIII, and it it was
he who, in the name of this prince, signed at Rome,
Sept. 6, 1494, the act of donation orcession of the
empire of Constantinople, made to France by Andreas
Habacuc Montefiore, of Palaeontonia, sole Emperor of the
Empire. His favorable inclinations towards France, his
native land, appeared particularly on the occasion of
the war of Naples, when he raised his voice to com-
plain of the intrigues and the odious conduct of Alex-
ander VI; and, at the wish of prince Charles, son of
Mohammed II. Cardinal Pérault obtained in 1513 the
bishopric of Saints, where he never resided, and
was appointed by Julius II legate of the patrimony of
St. Peter. The favor which he enjoyed with the
different popes excited jealousies against him; also,
certain authors have treated him very ill; others,
on the contrary, have bestowed the greatest praises
upon his probity and manners. He died at Viterbo,
Sept. 5, 1506. He has left, among others, works enti-
tled De dignitate sucelleralta super omnes reges:—De Actis suis Lubecui et in Domini Epistolae:—different

Pérazim [some Perazim], Mount (Heb. Har
Perazam, נס מון פַּרְאַזְּרִם, mountain of defea) Sept. Περαζήμ δισαλλογία [apparently by mistake for פַּרְאַזְּרִם]; Vulg. Mosa division m), a place mentioned by the
prophet Isaiah, in warning the Israelites of the divine ven-
geance about to come upon the nation, with which
they did not seem sufficiently impressed, referring to
instances of God's wrath exhibited in their past histories. "The Lord shall rise up as in Mount Perazim, and he shall exult as in the valley of Gilbon" (Isa. xxxviii, 21). The commentator almost unanimously takes his reference to be to David's victories at Baal-perazim and Gilbon (gésenius, strachey), or to the former of these on the one hand, and Joshua's slaughter of the Amorites at Gilbon and Beth-horon, on the other (Eichhorn, Rosenmüller, michaels). Hendewerk thinks reference is made to "the breach of Uzazzah (717 1' "Perc. Uzbek) described in 2 Sam. vi, 6-8 (The Deuter-Judaischen Weisung, ad loc.); but that narrative contains no mention of any mount. Ewald supposes the prophet may allude to the slaughter of the Canaanites at Gilbon by Joshua (Die Propheten, ad loc.); though in another place he distinctly states that Mount Perazim is the same place which is called Baal-perazim (Geschichte des Volkes Israel, iii. 187, note 3). Isaiah in this passage doubtless alludes to David's conquest of the Philistines. "And David came to Baal-perazim, and smote them there, and said, the Lord hath broken forth (1' "N) upon mine enemies before me, as the breach of waters (2' "N 1' "N2). Therefore he called the name of that place Baal-perazim (lit. 2 Sam. xix, 30). The play on the word is characteristic. It seems probable, as Ewald states (l. c.), that there was a high-place of Baal upon the top of the mount, and hence the name Baal-perazim. See Baal. This view is confirmed by the fact that in the second clause of the passage Isaiah mentions another instance of divine wrath in the valley of Gilbon, and in 1 Chron. xiv. the historian connects with the victory at Baal-perazim a second victory of David over the Philistines, in which it is said "they smote the host of the Philistines from Gilbon even to Gazer" (ver. 16). The exact locality of Mount Perazim is unknown, but it must have been some of the heights on the borders of the valley of Rephaim (1 Chron. xiv, 9; 2 Sam. v, 18), and consequently not far distant from Jerusalem. In the account of Josephus (Ant. vii, 4, 1), David's victory amounts much larger proportions than in Samuel and Chronicles. The attack is made not by the Philistines only, but by "all Syria and Phoenicia, with many other warlike nations besides." He places the scene of the encounter in the "groves of weeping," as if alluding to the Baca of Ps. lxxix. See Baal-perazim.

Perception. This word refers to our perception of knowledge through the senses, an operation which to the common understanding seems simple enough; but, viewed in its theoretical aspects, it is extremely difficult. Perception, considered as a source of knowledge, refers exclusively to the outer, or the object-world—the world of extensible matter and its properties. The names for the act of knowing one's own mind—the feelings and thoughts of the individual—are self-consciousness and self-introspection. The word "consciousness" is sometimes improperly limited to this signification. Locke used the term "reflection" for the same meaning; but this is ambiguous, and is now disused. All our knowledge is thus said (by Locke) to be derived from two sources—perception and self-consciousness.

Sir William Hamilton (Intel. Poc. essay i, ch. i) notices the following meanings of perception, as applied to different faculties, acts, and objects: 1. Perc phi, in its primary philosophical signification, as in the months of Cicero and Quintilian, is vaguely equivalent to comprehension, notion, cognition in general. 2. An apprehension, a becoming aware of, consciousness. Perception the Cartesians really identified with idea, and allowed them only a logical distinction; the same representation, and regarded it as a representation; and perception, insomuch as we regard it as a consciousness of such representa-

3. Perception is limited to the apprehension of sense alone. This limitation was first formally imposed by Reid, and then further by Kant. A thing restricted meaning, through the authority of Reid, is perception (proper), in contrast to sensation (proper). He defines sensitive perception simply as that act of consciousness whereby we apprehend in our body, (a) objects; (b) sensations, which are not conscious. The organism, it is contingently susceptible; and (c) those general relations of extension under which, as a material organism, it necessarily exists. Of these perceptions, the former, which is thus conversant about a subject-object, is sensation (proper), the latter, which is thus conversant about a perceivable subject, is perception (proper).

Two great disputes connect themselves with perception, both raised into their full prominence in the philosophical world by bishop Berkeley. The first is the origin of our judgments of the distances and real magnitudes of visible bodies. In opposition to the common opinion on this subject, Berkeley maintained that these were learned by experience, and not known by the mere act of vision. The second question relates to the grounds we have for asserting the existence of an external and material world, which, in the view of Berkeley, was not consistent with the other. If perception is a mental act, and knowledge is something contained in a mind, what reason have we for believing in the existence of objects apart from our minds? or what is the mode of existence of the so-called external world? The following sentences show in what manner Berkeley opened up the question: "Neither our thoughts nor passions nor ideas, formed by the imagination, exist without the mind, is what everybody will allow; and it seems no less evident that the various sensations or ideas impressed on the sense, however blended or combined together (i.e. whatever objects they compose), cannot exist otherwise than in a mind perceiving them. I think an intuitive knowledge may be obtained of this by any one that shall attend to what is meant by the term exist when applied to sensible things. The table I write on I say exists—i.e. I see and feel it; and if I were out of my study, I should say it existed, meaning thereby that if I was in my study I might perceive it, or that some other spirit actually does perceive it. There was an odor—i.e. it was smelled; there was a sound—that is to say, it was heard, and it was perceived by sight or touch. This is all I can understand by these and the like expressions. For as to what is said of the absolute existence of unhinging things, without any relation to their being perceived, that seems perfectly unintelligible. Their esse is percip, nor is it possible that any body could have an existence except in minds or thinking things which perceive them." See Berkeley.

This doctrine of Berkeley, amounting, it was said, to a denial of the existence of a material world (which is far from a correct view of it), was followed up by Hume, who on a similarity of ground, denied the existence of mind, and resolved the universe into a mere flow of ideas and impressions without any subject to be impressed, acknowledging, nevertheless, that he felt himself unable, practically, to acquiesce in his own unanswerable arguments. There was obviously some great mistake in a mode of reasoning that brought about a dead-lock of this description; and hence it has been the work of metaphysical philosophy since that time to endeavor to put the perception of the world on an admissible footing. Dr. Reid claimed against Berkeley and Hume by appealing to a common-sense, or unreasoning instinct, as a sufficient foundation for our belief in the existence of a world apart from our own minds. Sir William Hamilton has expounded the same view with greater clearness and precision. He considers that our consciousness tells us at once that in the first place there is both a perceiving subject—self, or the mind—and an external reality, in relation with sense, as the object per-
PERCEVAL 936 PERCY

cired. "Of the existence of both these things," he says, "I am convinced; because I am conscious of knowing each of them, not meditatively in something else, as represented, but immediately in itself, as existing.

Of their mutual dependence I am no less convinced, because each is apprehended equally and at once, in the same indivisible energy, the one not preceding the other, nor the other existing without the other not following or determined; and because each is apprehended out of and in direct contrast to the other" (Works, p. 247).

Much as Hamilton has labored to elucidate this doctrine in all its bearings, it has not been universally accepted as satisfactory. Many believe, and he has regarded as an ultimate fact of our constitution what admits of being still further resolved, and has mistaken an acquisition of the mature mind for a primitive or instinctive revelation. Professor Ferrier, in his Inquiries of Metaphysics, has gone through the question with extraordinary minuteness and elaboration. His main position is the inseparability of the subject and the object in perception (a position also maintained by Hamilton in the above extract), which is not reconcilable with the common assumption as to the independent existence of matter. He reduces the received dogma of the existence of matter per se to a self-contradiction, and builds up a system in strict conformity with the correlation, or necessary connection, of the mind perceiving with the object perceived. Many theories nearer to Berkeley than to Hamilton or to Reid. See Porter, Intellec.; Uberweg, Hist. of Philos.; South. Rev. Oct. 1878, art. viii.; Westw. Rec. Jan. 1878, p. 119.

Perceval, Alfred P., an English divine of some distinction, was born near the opening of this century, and was educated at Oxford, where he became fellow of All-Soul's College. After taking holy orders, he was in 1848 made deacon of East Horning, and finally chaplain to the queen. He died in 1853. He published, Reasons why I am not a Member of the Bible Society (Lond. 1839, 8vo); The Roman Schism Illustrated from the Records of the Catholic Church (Lond. 1839, 8vo); Historical Notice concerning some of the Peculiar Tenets of the Church of Rome (new ed. Lond. 1837, 12mo); Sermon, preached chiefly at the Chapel Royal, St. James's (Lond. 1839, 8vo); An Apology for the Doctrine of Apostolical Succession, with an Appendix on the English Orders (Lond. 1841, 2d ed. sm. 8vo); A Collection of Papers Connected with the Theological Movement of 1838 (Lond. 1842, 8vo); Results of an Ecclesiastical Tour in Holland and Northern Germany (Lond. 1846, 12mo); Plain Lectures on the Epistle to the Ephesians (Lond. 1846).

Perceval, Thomas, an English physician, eminent as a writer on philosophic and general social topics, was born at Warrington, in Lancashire, in 1740. After studying at Edinburgh and Leyden, he settled at Manchester, and there founded a literary and philosophical society, of which he was chosen president. He devoted a considerable portion of his time during the later period of his life to the study of moral philosophy, and he published several popular works on this subject. In his religious tenets he was a strict dissenter from the Church of England, but was very temperate and unobtrusive in his opinions. He died, universally respected by the inhabitants of Manchester, August 30, 1804. Dr. Percival's earlier medical and philosophical papers were collected and published in one volume (Lond. 1767, 8vo). To this two other volumes were afterwards added, one in 1773, and the other in 1778. These essays went through several editions, and acquired for the author considerable reputation. He published several papers on Moral and Literary Dissertations (Warrington, 1874, 8vo); A Father's Instructions, consisting of Moral Tales, Fables, and Reflections, designed to Promote the Love of Virtue (Lond. 1788, 8vo). All his works were collected and published together after his death by his son, in four vols. 8vo (Lond. 1807). To this edition is prefixed a memoir of his life and writings, and a selection from his literary correspondence.

Perclgia, a Turkish visionary, who excited a commotion in Natalia, and was put to death, declaring himself an apostle of God, in 1418.

Percclose, a railing or other enclosure separating a tomb or chapel from the rest of a church.

Percto, Gian-Maria, an Italian missionary, was born at Udine in 1729. A member of the Congregation of the Paulists, he was appointed bishop of Maxula. Charged with the direction of the missions in India, but made numerous travels in Persia. He translated into Burmese several books of the fathers of the Church, and composed a Latin-Burmese dictionary and grammar. We owe to him the translation into Italian of several Jainas, very curious, on the history of India. His manuscripts are deposited in the library of the Propaganda of Rome. Percto died at Avs in 1776. See A. Grifinini, Vie de Percto (Udine, 1782, 4to); Lettres édifiantes et curieuses des missions étrangères, vol. xii.

Percy, Thomas, D.D., a noted English scholar, and a prelate of the Irish Church, was the son of a group of gentlemen in Northumberland, in 1709, and was born, April 13, 1728. He affected to be considered of the noble house of Percy, or it has been affected for him: but his better and surer honor is that he was the maker of his own fortunes, and by his valuable writings and the honorable discharge of his episcopal duties reared for himself a high and permanent reputation. He was educated at Christ Church, Oxford, and early in life obtained the vicarage of East Mauduit, on which he resided, and the rectory of Wilt. In 1769 he became chaplain to the king; in 1776 dean of Carlislie; and in 1782 was elevated to the bishopric of Dromore, in Ireland. Long before this he had begun his literary career by the publication of what purports to be a translation from the Chinese of a novel, together with other matters connected with the poetry and literature of that people. This is a translation by him from a Portuguese manuscript. It was soon followed by another work, entitled Miscellaneous Pieces relating to the Chinese. He next published translations from the Icelantic of five pieces of Runic poetry. These appeared in 1761, 1762, and 1766. In 1764 he published A New English Song, with a Commentary and Notes—an elegant version and useful commentary, in which the Song of Songs is considered chiefly as a celebration of the earthly loves of Solomon: the book has become exceedingly scarce. In 1763 he published a Key to the New Testament, which has been reprinted several times. In the same year, 1765, appeared the work by which he is, however, best known, and which is indeed one of the most elegant and pleasing works in the whole range of English literature, to which he gave the title of Reliques of Ancient English Poetry. It contains some of the best of the old English ballads, many very beautiful lyrical pieces by the poets of the Elizabethan period and the age immediately succeeding, a few extracts from the larger writings of the poets of those periods, and a few lyrical pieces by modern writers. Each piece is well introduced. It has been many times reprinted. From the time of this publication dates the revival of a genuine feeling for true poetry among the English people. To Percy himself it secured the successive promotions which he enjoyed in the Church. In 1770 he printed the Northumberland Household Book, a poem, the subject of which is connected with the history of the Percy family, called The Hermit of Worksworth. In the same year appeared his translation, with notes, of The Northern Antiquities, by M. Mallet. The assistance which he
II. We now pass to the case of individuals: and here we have to distinguish several kinds of destruction or perdition.

1. There is present perdition, or the lost state of the soul until it partakes of a present salvation. The Son of Man came to seek that which was lost (Luke xix. 10). The idea here presented is that of a soul which has fallen into mortal sin, and has become a wreck, but it is capable of regeneration and restoration by the power of Jesus Christ; and the idea is well illustrated by the story of the son who "was lost and is found," and by the parables of the lost sheep and the lost piece of silver.

2. Temporal calamity and death are often included under the term destruction (Prov. iv. 27; xl. 10; Rom. ix. 22; and perhaps 1 Cor. xv. 18). But when we read of the destruction coming on the wicked (Ps. cxli. 20); and that they are "reserved unto the day of destruction" (Job xxxi. 20), we perceive that there must be a third meaning given to the word before us. We read in four passages of "Hades and destruction," as if this involved something beyond death (Job xxxvi. 6; xxviii. 22; Prov. xv. 12; xxvii. 20). We find that some seem to be destroyed "forever" (Ps. iii. 5); we read of him who after death is "cast into the mouth of the lion and body in hell" (Matt. x. 28), and that men may gain the whole world and lose their own souls, and be rejected or cast away. We find that there is a broad road leading to destruction and trod by many, which however may be avoided; they cannot meet with material death, for no man can avoid it. It must therefore be something beyond death, and must be the end of a misdirected existence, and so we read of rite of the end of destruction (Phil. iii. 19), and while some men are ζωοποιοῖται, or in the way to be saved, others are ἀποκαθίσταται, or in the way to be destroyed (1 Cor. i. 18; 2 Cor. ii. 16; iv. 3). The author of this final destruction is God (James iv. 12); whereas the two kinds of perdition previously named seem connected with the power of Satan, who is called Abaddon or Apollyon. Final destruction is the alternative to salvation, and appears to be especially set forth in the New Testament as the lot of those who deliberately reject or recede from the Gospel (Phil. ii. 28; Heb. x. 39; 2 Pet. ii. 12; and it will be awarded in the time of judgment (2 Pet. iii. 5).

III. To find it then as proved that perdition is the final destiny of certain persons, it remains for us to consider the passages which give us hints as to the nature of this terrible judgment. First, is annihilation? The word which looks most like annihilation in the Old Testament is הֵבִיל, "nothingness," and its cognate forms, used by the prophet Ezekiel with reference to Chabath-ammon, Tyre, and other cities (ch. xxxv. 7; xxvi. 21; xxvii. 86; xxviii. 19). Yet even in these extra-canonical cases the exact and philosophical meaning of the word can hardly be pressed. For in truth the nature of destruction will vary according to the nature of the object to be destroyed, and it is not necessarily that utter extinction to which we give the name "annihilation," if indeed there be such a thing. There is a physical destruction, to which the material buildings of great cities were doomed, as Tyre and Jerusalem; but in all such cases there are ruins, or stones, or fragments enough left, to show that the idea intended to be conveyed is that of a wreck rather than of that of non-existence. There is a corporate destruction of nations and of families, yet even from these ruins there have been some that have escaped, and who have been merged into other nations. There is individual destruction—death and something more— and no doubt in these cases the man thus destroyed is in one sense no longer the same person, yet his powers and faculties which he had before his final doom came upon him, yet there may be sufficient remaining to him to enable him still to preserve an identi-
PERDITION

398

PERDITION, SON OF

City and to recognise the justice of his doom. The only passage in the New Testament which at all favors the idea of annihilation or absolute extinction is Rev. xx. 14, where we are told that "death and haves were cast into the lake of fire." Now it might be argued that we cannot suppose that death and haves are "absolutely" terminated, and that therefore "cast into the lake" means extinction in their case, so it is to be understood in the case of the repudiate. But the argument cuts both ways, for as death and haves are here personified, so their end is personified; but as there are absolutely of our, so that will not really be the same as the end of personal human beings who would not come unto Christ that they might have life. Whether annihilation is a conceivable idea in relation to a being in whom God has breathed the breath of life we cannot tell; nor do we know whether it would be a just recompense for the rejection of Christ as Lord and Saviour; but we may rest assured that if it were in accordance with God's character and design it would have been so ordered.

Proceeding with our investigation, we note that perdition is set forth in the New Testament as including the final ruin of the spirit. This may be inferred from 1 Cor. v, 5, where we are told that the spirit may be saved hereafter: at the cost of the destruction of the flesh here, which implies that otherwise the spirit would be unsaved or lost. Again, St. Paul tells us that sinning is the downward of the following from the love of money or erroneous belief (1 Tim. vi, 9), and St. Peter uses the word in reference to the fate of Simon Magus, who was in the bond of iniquity (Acts viii, 20). In two passages which bring the subject before us (1 Thess. v, 3; 2 Thess. i, 9), the primary reference is to the fate of the enemies of Christ who shall be destroyed at his coming—an event which seems to be portrayed in figurative language at the end of Rev. xix. Perhaps we are not warranted in drawing any direct inference as to the fate of all the ungodly from these passages. But in whatever light we regard them, they evidently form part of the great revelation of God's wrath against sin, which we find fully confirmed by the words of our Lord himself. For if we take the one word Gehenna, the scene or abode of perdition (Matt. x, 28), as used by Christ, we gather that it is to be the fate of the angry and revengeful (ch. v, 22), of the carnal (ver. 29, 30), of hypocrites and persecutors (ch. xxiii, 33); and from several of the parables we see that punishments described in almost similar terms are to be inflicted upon faithless and unprofitable servants of Christ's kingdom. Perdition is described as "the second death" in Rev. xxii, 8, and a terrible list is given setting forth the real character of those who shall share it; and this list is almost the same as that which St. Paul set before his Galatian converts more than once, as marking the characteristics of those who are finally excluded from the kingdom of God (Gal. v, 19-21; comp. 1 Cor. vi, 9, 10).

Another idea connected with perdition is that of corruption. The body of the saint is sown in corruption, but the resurrection is "the harvest of righteousness." But it is not so with those who are treasuring up wrath against the day of wrath. Their harvest is corruption—ten times more corruptible than that which takes place at the first death (Gal. vi, 8). St. Peter tells us of some who have turned from the truth that they have become "servants of corruption," and in that state they enter the world to come (2 Pet. ii, 19). If we try to comprehend the nature of final spiritual corruption, we find it impossible to say more than that it implies the utmost degradation and loathsome-women of which the body is capable, and that finally will be wrought out by natural laws in God's spiritual kingdom, as in the case with physical corruption now.

Gathering up into one view a few other solemn statements about the ruin of the unbelieving, which we find in Scripture—and apart from Scripture we know absolutely nothing of the matter, as we know neither the nature nor the results of sin—we see that there are persons who "die in their sins" (John viii, 24), who "have no forgiveness" (Matt. xii, 31), "God's wrath abideth on them" (John iii, 36), they rise to "the resurrection of damnation" (John vi, 29), they "depart from the presence of the Lord" (Matt. viii, 12), and this "furnace of fire" (Matt. xiii, 50). There they reap the fruit of their actions done here, being accursed and utterly degraded. We know nothing about the nature of their sufferings, and we have no right to imagine anything beyond the glowing descriptions of their future misery. All such attempts are based upon the supposition that their physical constitution will be the same then as now. But this is a most unsafe hypothesis. Physical pain now depends on the exquisite sensitiveness of the nervous system, which is devised for man's benefit. Man suffers more than other animals because he has perverted his nature which was constituted for him to enjoy more. The accused will "rise with their bodies," but the constitution of those bodies may be far less sensitive. They are described as "carcasses" in Isa. lxvi, 24, a word (כָּרָשָׁה, karashah) literally means that which is putrefied or exhausted, and so excludes the idea of strong nervous sensibility. They are in "outer darkness"—this seems to shut them out from spiritual and physical light and knowledge. They are "bound hand and foot," which appears to exclude the idea of any physical activity. In fact their punishment should be represented as the extreme of degradation rather than the height of suffering, though it is true that they will suffer in a manner differ the bitterness of remorse, described as "weeping and gnashing of teeth," and that "the smoke of their torment" will be a lasting memorial of God's wrath against man's pride and ingratitude. Though we know so little of perdition, one thing is certain, that not a gleam of hope is given in Scripture to those on whom this awful sentence shall be pronounced. Their condition is represented as one from which there can be no recovery. It is sometimes argued that God's threats are eternally conditional, and that the destiny of no man even in the world to come is hopeless. Attempts have been made to defend this hypothesis by reference to God's temporal threatenings, the accomplishment of which has been modified by the repentance of the persons threatened. But before this idea can be accepted, it must be shown, first, that the persons so lost are even capable of repentance or of any good thought; secondly, that God will set a way of return—another sacrifice for sin—before them; thirdly, that any indications can be found in Scripture that any of them shall be cast into Gehenna shall be restored to favor; and, lastly, those passages must be explained, or explained away, which reveal the perdition of the lost as eternal. See Punishment.

PERDITION, SON OF (υἱὸς τῆς ἀπώλειας). It was common among the Jews to express a man's character by little as well as the "son of" some abstract truth. Thus we read in the New Testament of the sons of the kingdom, the sons of light, the sons of God, the sons of the devil, the sons of this age, the sons of disobedience, the sons of thunder; the children (υἱοί) of wisdom, of the promise, of wrath, of obedience, of God. So the psalmist says, "The son of God shall be restored to favor; and, lastly, those passages must be explained, or explained away, which reveal the perdition of the lost as eternal. See Punishment.

The best commentary on this statement is that afforded by
PERDOIT

St. Peter (Acts i, 20), who refers directly to Psa. lxix as predicting the fate of the betrayer of the Lord. See BEN.

But it may be gathered from 2Thess. ii, 3, that another son of perdition is to be revealed, and he is identified as the Man of Sin, the great opponent of the Christian religion, who shall set himself up in the place of God. He is afterwards called "the lawless one," and his miraculous impostures are described, but he is to be destroyed at Christ's appearing. He appears to be the final incarnation of irreligion, and his character is drawn in the book of Revelation as the great deceiver and tormenter of nations, who, after becoming the instrument of the destruction of the mystic Babylon, joins the universal dervis, History of the Church of France, i, 454 sq., 461 sq.; D'Avigny, Memoires Chron. ii, 444 sq. (J. H. W.)

Peregrino, an ancient Slavonic deity worshiped by mariners and fishermen, who believed that he presided over the sea.

Peres. See Ass.

Père la Chaise. See La Chaise.

Perea. See MILE.

Perea,安东尼奥, an eminent Spanish painter, was born at Valladolid in 1599. He studied under Pedro de las Cuevas, and showed so much ability that he was taken under the protection of Don Francisco de Texas, who sent him to Madrid, where he had an opportunity of studying the works of the great masters in the royal collections. At the age of eighteen he produced a picture of the Immaculate Conception, in which the Virgin appeared on a throne of clouds, supported by angels, executed so admirably that no one could believe it the work of so young an artist. The reputation he acquired by this performance induced the duc de Oviedo, who had the direction of the works going on in the palace of the Retiro, to employ him, and place him among the artists of the highest rank. Perea performed his part to the satisfaction of his patron, and was munificently rewarded. He acquired great reputation, and is said to have executed many works for the churches at Madrid, Toledo, Alcalá, Cuenca, and Valladolid. He also painted much for individuals, and no collection was considered complete without a specimen of Perea. It is also said he was a universal artist—painting history, familiar life, yases, tapestry, musical instruments, and other objects of still life. His pictures were well designed, his drawing correct, and his coloring rich and glowing, in the Venetian style, with an admirable impacto. Few of his works are known to be extant at the present day. There are two in the Royal Gallery at Madrid, one of which represents St. Jerome Meditating on the Last Judgment; one of Christ asleep on the Cross, with flowers and skulls, in the collection of St. Anthony of Padua, in the Estorbery Gallery in Vienna, and three or four in the gallery at Munich. Perea died at Madrid in 1699.

Pérèfixe, Harcourt Beaumont de, a noted French prelate, was born in 1645. After having finished his education, he attracted the notice of Cardinal Richelieu, who became his patron, and obtained the high office of tutor to Louis XIV in 1614. Four years later his services to the court received recognition by his promotion to the bishopric of Rodez. He became a member of the French Academy in 1654, and was appointed archbishop of Paris in 1662. In this exalted position he endeavored to obtain the Jansenists compliance with the formulary of pope Alexander VII. He died in 1670. Pérefixe was a man of great scholarship, and possessed remarkable talents. He was born to rule and to teach. Unfortunately, he was more of a politician than an ecclesiastic, and did everything rather for the sake of his king than to honor his God. He was truly a timeserver. In the Jansenistic controversy he had it in his power to influence the king favorably, but he failed to embrace the opportunity, and was obliged to obey when he might have led. See the art. PAUL.

Peregrini dr Cesena, or Pellegrini da Cesena, an Italian goldsmith, engraver, and worker in niello, flourished in the latter part of the 15th and first part of the 16th centuries. He is one of those artists about whom and whose works there is very little known with certainty; give a description of ten prints by him (Peintre gravure, tom. xii). Duchesne discovered Peregrini's name on some admirable works by him in niello, which he describes (Essai sur les Nielles). Ottley describes ten prints which he supposes to be by an artist, Nagler, from these and various other authorities, gives a description of sixty-four pieces which he attributes to him, among them the following: 1. Abraham leading on ass for his journey to Mt. Moriah; 2. Abraham, Isaac, and two servants on their way to the Mount; 3. Abraham and Isaac on the Mount, the servants sleeping below; 4. Abraham with a knife and a torch, Isaac bearing a bundle of wood; 5. Abraham, about to imolate Isaac, is prevented by an angel: the head of a ram is seen at the right-hand corner; 6. David conquering Goliah: a very fine plate; 7. Joshua with the head of Hosiphur in her left hand; 8. The Holy Virgin with the Infant on a throne, as presented by St. Paul and St. Francis d'Assisi; 9. The Baptism of Christ: in the foreground, to the right and left, are St. Stephen and St. Francis; 10. The Resurrection of Christ; 11. The Annunciation, in two small medallions; 12. John the Baptist with the Cross, on which is a medallion with the Lamb, and the words "Ecce Agnus;" 13. St. Sebastian standing by a Tree, his hands tied above his head; 14. St. Jerome kneeling before a Crucifix, the lion behind him; 15. St. Roch: on the right hand the first person of the Trinity is blessing him; 16. St. Margaret: her head rested on a lion, and an arm of Dragon, holding in one hand a cornucopia, and in the other a cake. Bartch calls this subject Providence.

Peregrino, Bonaventura (originally Serach Yom Tob, or Salomo Nakara), a convert from Judaism, was born about 1648 at Casale, not far from the famous Spanish monastery at Montserrat. He was baptized at Bologna Jan. 18, 1655, on which occasion he took the name under which he was afterwards known. According to the spirit of his age, Peregrino endeavored to demonstrate mysteries of Christianity from the letters of the Old Testament, attending to the rules of the Cabala (q. v.). and wrote in Italian Predisio Giojello sopra il nome di Dio Tetragrammaton, which, however, has never been published. See Wolf, 2nd Heb. i, 300 sq.; iii, 247; Kalkar, Israel u. die Kirche.

Peregrinos. PROTESTANTS, a sycophatic philosopher, who was a native of Parium on the Hellespont, and flourished in the reign of the Antonines. After a youth spent in debauchery and crime, he visited Palestine, where he embraced Christianity, and by dint of hypocrisy attained to some authority in the Church. In order to win his mark of favor to the emperor, he contrived to be imprisoned; but the Roman governor,
PEREIRA

940

PEREIRA

perceiving the object, disappointed Peregrinus by setting him free. He now assumed the cynic garb and returned to his native town, where, to obfuscate the meaning of his former works, he concealed himself among the populace. He again set out on his travels, relying on the Christians for his support; but being discovered profaning the ceremony of the Lord's Supper, he was excommunicated. He then went to Egypt, where in the garb of a mendicant cynic he made himself specially notorious by the open perpetration of the most disgusting obscenity. Thence he proceeded to Rome, and endeavored to attract attention by his ribaldry and abuse, for which he was expelled by the prefectus urbis. His next visit was to Athens, where he again incurred the ire of the Romans. Having exhausted all the methods of making himself conspicuous, he at length resolved to procure himself an immortal name by submitting to voluntary death, in imitation of Hercules. He went to the Olympic games, and in the presence of a vast concourse of spectators raised a funeral pile, and there carried his mad resolution into effect, in the 236th Olympiad, A.D. 165.

The Parians raised a statue to his memory, which was reputed to be oracular (Anaxagoras, quoted by Valerius, Ad Aen. Marcelli.). Lucian, who knew Peregrinus, compared him to the Golden Calf. There is some probability, from his strange self-imitation, has perhaps overcharged the narrative of his life (Lucian, De morte Peregrini, Amm. Marcelli. xxxix, 1; Philostratus, Vit. Sophist. ii, 19; Gellius, Noct. Att. xli, 11; Eusebius, Chronic. Ol. p. 277; Orosius, Hist. Antiq., iv, 43; see Index); Endfield, History of Philosophy, p. 356, 357.

Pereira, Antonio, de Figueiredo, a learned Portuguese literary, was born Feb. 14, 1725, in the borough of Macao. After having completed his studies in the college of the Jesuits at Villa-Vicosa, he refused to remain among them, and, as he had taste for music, he accepted the situation of organist in the monastery of the Holy Cross at Coimbra. Several months later he took the religious habit in the Congregation of the Oratorians of Lisbon (1744), and was afterwards employed to teach grammar (1752), rhetoric (1755), and theology (1761). The publication of his first articles upon the teaching of the Latin and Portuguese languages, written with much clearness, drew upon him passionate attacks on the part of the Jesuits, who were then the elementary instructors. When the differences arose between the court of Rome and Portugal, his great reputation induced the marquis de Pombal to intrust to him the care of opposing the ultramontanes in the doctrinaires, and he wrote a great deal in his Tempus Theologicum, that the bishops have the right to grant all dispensations, and to provide for all the wants of the national Church without the aid of the holy chair. This discussion, which attracted towards Pereira as many praises as invectives, procured for him the employment of a deputy to the tribunal of censure (1768), and of interpreting secretary to the minister of war (1789). Obliged to live in the world, he left the dress of the Oratorians, and aided, with all the activity and penetration with which he was gifted, the prime minister in his plans of reform. About 1774 he became a member of the Royal Academy of Lisbon, which conferred upon him in 1792 the title of dean. "He attainted," says a writer, "great favor, which his talents doubtless merited; yet he was careful to preserve it by the most pious praises lavished either upon the king or his minister." His vast erudition rendered his conversation as agreeable as instructive. In his career his manners have been above reproach; but sensible people, while admiring his talents, could never pardon him for the frivolous nature of his compositions, his answer, animadversions, the same monks who had been his first teachers, and his too great concession to the court. He died at Lisbon Aug. 14, 1797. He composed a very large number of theological theses and writings, dissertations and memoirs on the enumeration of which would occupy too much space. See R. de Figueiredo, Principal do dicionario das liugues Latina e Portugues (Lisb. 1731, 8vo), in Latin and Portuguese:—Novo metodo de grammatica Latina (Lisb. 1725, 1728, 8vo, pt. ii), followed by a Defense (1764), under the name of Francisco Sanches;—Apparito critico para a correugao do Dicionario instutuido:—Pro- cedimentos em Dicionarios de la Lingua Portuguesa e latina para e impura (ibid. 1790, 8vo);—Resumen lusitanoarc umpheros un uso al Jesuitamur expulsionem (ibid. 1761, 4to);—translated into Portuguese by Pereira:—Principi da historia ecclesiastica em forma de dialogo (ibid. 1766, 2 vols. 8vo); the author promised two other volumes which were never printed;—Dialogo da scolaridade, da excelenca, da educaugao, da professao e da ordem dos Jesu- itas (ibid. 1765, fol.); these famous theses, printed in the Collectio thesauri (1768, 1774, 8vo), have been translated into French, Traite du pouvoir des sieges (Par. 1772, 4vo);—Tratado Theologico (ibid. 1766, 1768, 4to), translated into Latin by the author (1769), into French, Italian, German, and Spanish, and followed by an Appendix (1768, 4to).—Vida de Joao Geron (ibid. 1779, 2 vols. 8vo);—Demonstratio Theologica (ibid. 1781, 2 vols. 8vo);—Dedicationum et Aniathica (ibid. 1771).—Testamento Novo e vel e quando em Portugal (ibid. 1778, 1790, 23 vols. 8vo); this translation, accompanied by notes, prefaces, and various readings, was reprinted in 1714 for the third time, 4to size:—Compendio das epistulas, etc. (ibid. 1789, 8vo);—Os egos das vozes de Par- tage (ibid. 1789, 4 vols. 4to). See Summario da Bib. Lusti- tana, vol. i; Figaniero, Bibliographia hist. Portugueza; Le Moniteur univ. anii xii; English Reviews, vii, 106, 118.

Pereira, Bento (1), a learned Spaniard, was born at Valencia in 1555. Admitted into the Society of Jesus in 1555, he finished his studies in Sicily and at Rome, and rendered himself very skilful in science and philosophy, which he taught with honor. He died at Rome March 6, 1616. His principal writings are, Physicorum lib. xx (Rome, 1602, 4to);—Commentarius in Davideum (ibid. 1686, 4to);—Commentarius in Gene- sis (ibid. 1686, 4to);—De magnis et aliu- ratione apostolica (Iugolatia, 1581, 8vo);—Selecta disputations in seruam Scripturam (ibid. 1601-1610, 5 vols. 4to). All these works have frequently been reprinted. See Fabricius, Hist. Bibl. i, 265; Gassier, Litt. Hist, iii, 922 sq.; Simon, Hist. Crit. du Vieux Test. p. 523.

Peremanofuchsins (i.e., Re-Anninators), is the name of a Russian sect which separated from the Russo-Greek Church about the year 1770. They agree in almost every respect with the Starobredets, or "Old Ceremonialists," except that they re-adopt those whom they joined with their holy charism. They also re-ordain those priests or priests who seceded to them from the Established Church. The Peremanofuchsins are really a branch of the Popofuchsins (q. v.).

Perès. See Eagle.

Pre'esh (Heb. כָּרֶשׁ, caram; Sept. Φαράξ), the first name of the two sons of Machir the Manas- site by his wife Maachah (1 Chron. vii, 16). B.C. cir. 1658.

Pereyra, Abraham Israel, a Jewish littérateur.
of some note was of Portuguese origin, but born in
Amsterdam, where he flourished in the middle of the
17th century. He was one of the students of the rab-
binical college of that city, and was highly esteemed
for his literary talents. He wrote in Spanish, *Espacio
de la Vida Entidad del Mundo*, "The Mirror of Worldly
Vanity" (Amsterdam, 1671).— *La Certezza de la
Suegra del Hombre* (Amsterdam, 1666), and also
published a work in twelve sections, treating, 1, on
divine Providence; 2, on the vanity of the world; 3, on
love and fear of God; 4, on virtues and vices; 5, on
recompense and punishment, etc. See Fürst, *Bibl.
Jud. ivii. 77; Lindo, *Hist. de los Jeses en Spain and
Portugal*, p. 869; Gratz, *Gesch. d. Juden*, x, 237; De
Castro, *Biblioteca Española*, i, 659; De Rossi, *Dizionario storico degli autori Ebrei*, p. 259 (Germ.
transl. by Hamburg); Wolf, *Bibl. Hebr. iii, 315 sq.
(B. P.)

**Pereyra, Diego**, a Portuguese painter, was born
about the year 1570. Very little is known concern-
ing his life. He died in the year 1640, in the house
of a nobleman where he spent his last days. Pe-
reyra had a rare talent for painting conflagrations
and infernal scenes. He often painted the *Burning
of Troy* and *Overthrow of Sodom*. In these cases he
excelled in painting pictures of fruit and flowers; also rural scenes illuminated by the radiance of torches or the light-
ning's flash. His landscapes are painted in a spirit-
ed style, ornamented with small figures in excellent
taste.

**Pereyra, Manuel**, a Portuguese sculptor, was
born in 1614. He settled at Madrid, where he attained
great distinction, and is regarded as one of the ablest artists that Portugal has produced. He was com-
missioned to execute a great number of works. His masterpieces is a large statue of the Savior in
the church of the Rosario at Madrid. It is said that in
his old age, having become blind, he made the model
of a statue of *St. John*, and directed its execution.
This statue is one of his finest works. He died in
1667.

**Pérez** (†Chron. xxvii, 5). See Pharez.

**Pérez**, a name common to many Jewish litera-
tors, of whom we mention the following:

1. **Ben-Elia**, also called *Rojo*, also בנו יהו, a pupil of Jacob ben Ephraim, lived at Corbell, and
died about 1300. He wrote many Tosafoth or addita-
tments to the Talmud, viz. to the treatises Beza, Nazir,
Nedarim, Sanhedrin, Macciath, and Mellah, reprinted in the editions of the Talmud. He also wrote addita-
tments to the treatise Baba Kama (בב כמא), which
was published, according to a recession of one of his
pupils, by Abr. Venano (Livrorno, 1819). His Tosafoth
to Zebachim (玎ננ יבצ) is reprinted in Pietrosi's *Mish-
na* (ibid. 1810). See Fürst, *Bibl. Jud. ii., 77; Zunz,
Zur Geschichte u. Literatur, p. 38, 41, 46, 52, 59, 119, 199,
205, 565. (B. P.)

2. **Ben-Isaac Ha-Cohen**, a jurist of high repute,
a great cabalist, and a celebrated physician, was born
about 1241 at Gerona. He wrote a highly esteemed
work, המוסרред את דיפסית הדרwers, "The Dispositions of the Di-

divinity," which treats in fifteen sections of the system
of Cabala. It was first printed at Ferrara in 1558,
and often since; lastly at Zollikow in 1779. See Fürst,
*Bibl. Jud. iii, 77; De Rossi, Dizionario storico degli autori
Ebrei*, p. 260 (Germ. transl. by Hamburg); Lindo,*
Hist. de los Jeses en Spain and Portugal*, p. 81; Zunz,
Zur Geschichte u. Literatur, p. 490. (B. P.)

3. **Josued LeoN Ben-Joseph**, who lived at the be-

ginning of the 18th century, was rabbi at Venice and
Amsterdam. He wrote, *םינוסי דנשלום*, the Deca-
logue, in a poetical Aramaic-Arabic paraphrase, etc.
(Amsterdam, 1757).— *Fundamento soldo*, a compen-
dium of Jewish theology, which treats, in twelve chap-
ters, of the fundamental principles of the Jewish reli-
gion — God, cosmology, faith, legislation, the thirteen
articles of faith, asceticism, ethics, providence, etc.,
it was written in Spanish, and published in 1729.:

**Pérez**, one of the first Portuguese missionaries in
Cochin China, was born about 1605. He joined the
French missionaries, and was charged by the bishop of
Berrynhe to go to Bengarvon and Jonamal to make
conversions. He arrived about 1671, and from those
places wrote letters to the prelate who had sent him,
in which he found interesting observations upon the
country and its inhabitants. He died towards the
end of the 17th century. See *Relaciones de los
autos de fe*. p. 70.

**Pérez, Father André**, a Spanish theologian and
romance writer, a native of the kingdom of Leon, lived
in the early part of the 17th century. He entered the
Dominican Order, and attained to the dignity of super-
ior of the convent of the Dominicans in Madrid. His
Sermons and his *Pie de los Dominicos del Hospital
dermote de San Juan de la Puerta* have been
forgotten, but inquiries are still made, from motives of
curiosity, after his romance of *La Ficara Justina*,
which he published under the pseudonym of Fran-
cois Ubeda, Tolodan (Medina-del-Campo, 1605, 4to).
It is a weak imitation of German de Affring, desti-

tination of invention, and written in an affected style.
It is remarkable only for some licentious incidents,
strange enough for the superior of a convent. The
best edition is that of Maynas y Siscar (Madrid,
1735, 4to). See Echard, *Scriptores ordinis Predica-
toriarum*; Ticknor, *History of Spanish Literature*, iii,
61.

**Pérez, Andres**, a Spanish painter, was born at
Seville in 1600. He painted historical subjects; also
flower-pieces, in which he was more successful. Among
his principal works are three on sacred subjects in the
sanctuary at Our Lady of Seville, signed "Andres Pe-

rez, 1707," and in the sacristy of the Capuchins of
the same city is a picture by him of the *Last Judgment*,
dated 1718. He died in 1727.

**Pérez, Antonio**, a learned Spanish prelate, was
born in 1559 at Saint-Dominica of Silos. He be-

longed to the Benedictine Order, which chose him for
vice-general, and he helped to revive among his
brethren a taste for learning. He occupied succes-
sively the bishoprics of Urgel, Lerida, and Tarragona.
He died at Madrid May 1, 1637. His principal works
are, *Apuntamientos quadragesimales* (Barcelona, 1608,
3 vols. 4to);— *Pentacostari* (Madrid, 1690, fol.);
some passages are so relative to the authority of the pope
caused the work to be too closely suppressed, and it has
become very rare:— Commentarium in regulam S. Be-

nedicti (Lyons, 1624, 2 vols. 4to). See N. Antonio,
*Bibl. Hispana Nova; Hoefer, Nova, Bibl. Generalis*,
xxxix, 880; Wetzer und Wellm, *Kirchen-Lexicon*, xili,
942.

**Pérez, Bartolomeo**, a distinguished Spanish
painter, was born at Madrid in 1634. He studied in
the school of Don Juan de Arellano, and attained great
excellence in flower painting. His pictures of this
kind are composed in a tasteful and delicate style,
with a brilliancy and harmony of color deserving
of high praise. He also succeeded in the figure, fol-

low the style of Don Juan de Carreno. There
were many of his pieces at the Retiro, which were sub-
sequently removed to the Rosario; and one of his best
PEREZ
942
PERFECTION

productions is mentioned, which combines his talents in both branches of the art, representing St. Rose of Lima kneeling before the Virgin and infant Jesus, with two Angles, one of whom is crowning the Statuary, while the other is presenting him with a vase of flowers. Perez was also distinguished for the excellence of his theatrical decorations, and it is said that Queen Maria de Medici dis- missed him to paint a grand ceiling in fresco in his palace at Madrid, but while occupied upon it he un- fortunately fell from the scaffold and was killed, ii. 1639.

Perez, Francisco, or Pinedo, a Spanish paint- er who lived at Seville about 1600. He studied under Murillo, and followed his style of compositions with un- successful success. Among other works, he painted sev- eral pictures for the churches and convents at Seville, which show that he was an able disciple of that great master. Perez was a member of the society of pro- fessors who established the Academy of Fine Arts at Seville.

Perez-Uzzah (Heb. Pe'rets 'Uzza', נֵּ֥רֶץ עַזַּ֖א, 1 Chron. xiii. 11), or Pe'rets-Uzzah (Heb. Pe'rets 'Uzâ'ah, נֵּ֥רֶץ עָזָ֖א, breach of Uzzah, 2 Sam. vi. 8; Sept. דָּשָּׁקָּנָּ֣ה Di0, the name which David conferred on the threshing-floor of Nachon, or Chidon, in com- memoration of the sudden death of Uzzah: "And Da- vid was wroth because Jehovah had broken this breach on Uzzah, and he called the place 'Uzzah's breaking mouth'; and he called the name of the king's daughter with David on such occasions. He employed it to com- memorate his having "broken up" the Philistine force in the valley of Repham (2 Sam. v. 20). See Baal- perazim. He also used it in a subsequent reference to Uzzah's destruction in 1 Chron. xv. 16. It is re- markable that the statement of the continued exist- ence of the name should be found not only in Samuel and Chronicles, but also in Josephus, who says (Ant. vii. 4, 2), as if from his own observation, "the place where he died is even now (την παλιν) called the 'cleav- ing of Uzzah.'" About a mile and a half or two miles from the site of Kirjath-jearim, on the hill immediately above Cheela, the ancient Chesalon, on the road thence towards Jerusalem, is a small village still called Khirbet el-Uzz, or "the ruins of Uzzah." It is given by Prof. Robinson among the names of places west of Jerusalem as Khirbet el-Lawz, or, as it should be written, Khirbet el-Laus. This seems to be Perez-Uzzah. The position, on the road to Jeru- salem, near the site of Obed-edom's house, and not far from the site of Kirjath-jearim, all correspond. David, being then in his prime, is said to proceed forth- wards Jerusalem, "carried it aside into the house of Obed-edom the Gittite." It seems therefore that the house of Obed-edom must have been near or in the immediate neighborhood of Perez-Uzzah. See Osnob- razh.

Perfecti (Perfect) is the name assumed by the stricter Cathari (q. v.) of the 12th and 13th centuries. Rainierius, who had himself been a Catharist, and who speaks of a census of the sect taken by themselves, says that there were only 4000 of these, although the "Credentes," or general body of the Catharists, were innumerable. These "perfecti" Catharists were anal- ogous to the Manichean "elect," professing to live an extremely strict life, in imitation of Christ and his apostles. From among them were taken their bish- ops, "Filius major," "Filius minor," and deacon, some from childhood, living a life of extreme poverty on a rigid fish and vegetable diet. The Perfecti also called themselves Cenobitas and Bovi Homines. See Reiner, Contr. Waldens. in Bibl. Max. xxv. 266, 269.

Perfection (Lat. perfectum, "made out," complete) is applied to that which wants nothing. According to some, it is divided into physical or natural, whereby a thing has all its powers and faculties; moral, or an eminently degree of goodness and piety; and metaphys- ical or transcendent in the possession of all the essen- tial attributes or parts necessary to the integrity of a substance; or, in general, it is that whereby a thing has or is provided with 'everything belonging to its nature. Perfection is relative or absolute. A being possessing only its formal and accidental qualities in the highest degree may be called perfect in a rela- tive sense. But absolute perfection can only be ascribed to the Supreme Being. We have the idea of a Being infinitely perfect—and from this Descartes reasoned that such a Being really exists.

The Perfections of God are those qualities which he has communicated to his rational creatures, and which are in him in an infinitely perfect degree. They have been distinguished as natural and moral—the former belonging to Deity as the great first cause—such as independent and necessary existence—the lat- ter as manifested in the creation and government of the universe—such as goodness, justice, etc. But they are all natural in the sense of being essential. It has been proposed to call the former attributes and the latter perfections. But this distinctive use of the terms has not prevailed; indeed it is not well founded. In God there are nothing but attributes—because in him everything is absolute and involved in the substance and unity of a perfect being. See Attributes.

PERFECTION, CHRISTIAN. The word "perfect," in the moral sense, is usually the translation of the Heb. בָּאָר (Ba-thar) and the Greek παντελόνας, which both essentially mean "compl. te." The term perfection, says Witsius, is not also used in the sense of "being complete". 1. There is a perfection of sincerity, whereby a man serves God without hypocrisy (Job i. 1; Isa. xxxix. 8). 2. There is a perfection of parts, subjective with respect to the whole man (1 Thess. v. 23), and objective with respect to the whole law, when all the duties pre- served by God as observed (Psa. cxx. 129; Luke i. 6). 3. There is a comparative perfection ascribed to those who are advanced in knowledge, faith, and sanctification, in comparison of those who are still infants and untutored (1 John ii. 18; 1 Cor. ii. 6; Phil. iii. 15). 4. There is an evangelical perfection. The righteousness- ness of Christ being imputed to the believer, he is com- plete in him, and accepted of God as perfect through Christ (Col. ii. 10; Eph. v. 27; 2 Cor. vii. 1). 5. There is also a perfection of degrees, by which a person pre- forms all the commands of God, with the full exertion of all his being, without the least defect. This is what the law of God requires, but what the saints cannot attain to in this life, though we willingly allow them all the other kinds above mentioned (Rom. vii. 24; Phil. iii. 12; 1 John i. 8). Witsius (Economia Fidei Divi, lib. iii. cap. 15, § 124). The ancient writers use the singularity of their faith, that "their generation" (Gen. vi. 9; Job i. 1): "they fol- lowed the Lord fully" (Numb. xiv. 24). As the term "perfect" is frequently applied to different individuals in the Scriptures, and the possession of the character so frequently mentioned, there can be no doubt that among those who know the Scriptures and the power of God, that perfection, in the scriptural sense of the term, ought to be an object of more anxious solicitude among Christians than it usually is (Gen. xvii. 1; Luke vi. 40; Heb. vi. 1). We are exhorted to acquire the perfection of Christianity both in theory and prac- tice. We are to be thoroughly instructed and expe- rienced in divine principles; to be adults and not child- ren in Christian knowledge (1 Cor. i. 6; xiv. 20; 2 Cor. xiii. 9; Eph. iv. 15; Phil. iii. 13; Heb. v. 14). With the attainment of the latter is included "the per- fection of Christian life by submission to the reign of the Holy Spirit, which brings the entire man into complete subjection to the divine will (Rom. viii. 12). In this sense the faithful may be said to "stand perfect and complete in all the will of God" (Col. ii. 10; iv.
PERFECTION

12). The Saviour says to his disciples, "Be ye therefore perfect, even as your Father which is in heaven is perfect" (Matt. v, 48). Not that we can ever attain to an equality; but taking him as the only pattern of perfection, we can advance towards a con-
similarity. Just as it is said in the parallel passage, "Be ye therefore merciful, as your Father also is merciful:" if our humanity, at so great a distance from perfect eternity, same manner, though in the same degree it is utterly impossible, as we are but finite creatures, while he is the Infinite and Eternal. As creatures, we cannot reach any state that precludes the possibility of further improvement; but he who has also this property of being perfectly and through eternity, yet that love may become stronger, and that delight increase forever. The perfection of a Christian, con-
sidered in relation to that of his heavenly Father, may be likened to one of those mathematical lines that may draw nearer and nearer to another for all eternity, still remaining as infinite in their mutual approach, and everlasting in their asymptotic relation to one another. Our con-
tinual advancement towards him may be illustrated by the
recurring decimal fraction. Though we add figure after figure, in a continuing and never-ending series, and the result approaches nearer and nearer to a certain value, yet there is no possibility of its ever reaching that value. So the happy and the holy may continue to grow more like God, without the most dis-
tant possibility of attaining his glorious perfections. Not even the Just Righteous of the Old Testament, and throughout eternity remain at an infinite distance from the absolutely perfect object which he thus increas-
ingly resembles (Phil. iii, 12–10). See Bates, Win-
low, pp. 557, et seq.; Burgh, Dignity of Human Nature; Dobuzio, Lectures, lect. 181; Channing, Works; Ir-
ing, Orations and Speeches, Eng. ed., i. 30; Prentiss,
1874. See SANCTIFICATION.

That such perfection is attainable in this life is held by the Franciscans, Jesuits, and Molinists in the Church of Rome, but is denied by the Dominicans and Jansenists. In advocating the doctrine, its Roman Catholic supporters generally rest much on the distinc-
tion between mortal and venial sins. See Sin.

"Christian Perfection" is pre-eminently a doctrine of justification and of sanctification. It is the writ-
tion of justification, but a perfection of sanctification; which John Wesley, in a sermon on Christian perfec-
tion, from the text Heb. vi, 1, "Let us go on to perfe-
cion," earnestly contends for as attainable in this life by be

sayers, by argument and proof, so that he, in his mind, that God had saved them from all sin, till their spirit returned to God." Paul and John he deemed suffi-
cient authorities for the use of an epithet which he knew, however, would be liable to the cavils of criti-
cism. The Christian world had also largely recognized
in the term of the writings of Clements Alexanderinus, Ma-
carius, Kempt, Fénéon, Lucas, and other writers, Pa-
pal and Protestant. Besides incessant allusions to the doctrine in his general writings, Wesley has left an elaborat
eter doctrine is precise and intelligible, though of-
ten distorted into perplexing difficulties by both its ad-
vocates and opponents. As above observed, he taught not absolute, nor angelic, nor Adamic, but "Christian perfec-
tion." Each sphere of being has its own normal limits; God alone has absolute perfection; the angels have a perfection of their own above that of humanity; at the same time, the man, represented by Adam, occupied a peculiar sphere in the divine economy, with its own relations to the di-
vine government, its own "perfection," called by Wesley
Adamic perfection; fallen, but regenerated man, a sphere of medi-
ary economy, and the highest practicable virtue (what-
ev it may be) in that sphere is its "perfection," is
Christian perfection. Admitting such a theory of per-
fection, the most important question has respect to its
practical limit. When can it be said of a Christian man
that he is thus perfect? Wesley taught that perfect
Christians are not free from ignorance, no, nor from
mistake. We are no more to expect any man to be
ed to us by the Servant of the Lord: for the servant is above his Master. Neither in this sense is there any absolute perfection on earth. There is no perfection of degrees, none which does not admit of a continual increase. . . . The propo-
sion which I hold is this: 'Any person may be in a condition to carry forth the work of his soul, which
is blood.' For what? for 'negligences and ignoran-
ces;' for both words and actions (as well as omissions),
which are, in a sense, transgressions of the perfect law.
And I believe no one is clear of these till he lays down
this corruptible body.' Perfection, as defined by Wes-
ley, is not that perfect freedom according to the absolute
moral law: it is perfection according to the special
remedial economy introduced by the Atonement, in which
the heart, being sanctified, fulfils the law by love (Rom.
ix, 8,10), and its involuntary imperfections are provid-
ed for, by that economy, without the imputation of
guilt, as in the case of infancy and all irresponsible
persons. The only question, then, can be, Is it possible
for good men so to love God that all their conduct, inward
and outward, shall be swayed by love? that even their
involuntary defects shall be swayed by it? Is there
such a thing as being inspired to write the "perfect
love" which "casteth out fear?" (1 John iv, 18). Wes-
ley believed that there is; that it is the privilege of all
saints; and that it is to be attained by faith. "I want
you to be all love," he wrote. This is the perfection
I believe and teach; and this perfection of love, contrasted
with a mere human degree, which is high-
strained perfection is not. Indeed, my judgment is that (in this case particularly) to overdo is to undo:
and that to set perfection too high is the most effectual
way of driving it out of the world." "Man," he says,
in his present state, can no more attain Adamic than
angelic perfection. The perfection of which man is
able, while he dwells in a corruptible body, is the com-
paring with that kind command, 'My son, give me thy
heart!' It is loving the Lord his God with all his
heart, and with all his soul, and with all his mind.'" Such is the much misunderstood doctrine of Christian
perfection. Wesley taught that this sanctification is
usually gradual, but may be instantaneous (Stevens,
Gentleman of Methodism, p. 138). See Wesley, Plain
Account of Christian Perfection; Fletcher, Christian
Perfection; Morris, Christian's Manual; Pack, Scriptu-
re Doctrine of Christian Perfection; Foster, Christian
Purity. See METHOSTISM.

PERFECTIONISM. This doctrine is often confound-
ed with two others, from which, however, it is phi-
losophically distinguishable. One of these is the
doctrine of the existence of a deity and of a moral and
ere advocate of which is the theological school at
Oberlin, Ohio. According to this theory, it is impos-
sible that sin and virtue should co-exist in the human heart at the same time; all moral action is single and indivisible; the soul is either wholly consecrated to Christ, or it has none of his spirit. These two states may alternate: the man may be a Christian at one moment and a sinner the next, but he cannot be at any one moment a sinful or imperfect Christian. The attitude of this view is, however, that any one can claim to be a perfect Christian under this theory, because he does not remember any conscious failure, since "even present failure is not always a matter of distinct consciousness, and the past belongs to memory and not to consciousness." See Überlin Theology.

The other view, which is sometimes confounded with perfectionism, is that entitled by its advocates the doctrine of "perfect sanctification," or sometimes the "higher life." This is, in brief, the doctrine that Jesus Christ is a present Saviour from sin; that he is able to keep those that trust in him from falling into any sin whatever; and that if the soul trusted him completely it would be preserved from all deliberate sin, and its unintentional wrongdoing—errors rather than sins—would be not imputed to the sinner but be imputed to Christ. So that some of the advocates of this view claim to have so lived in the presence of Christ as to have been for weeks and months unconscious of any sin; but more generally those who hold this view of the present redemption of all sin are satisfied that it is possible to live so near to him as to be kept by him "without sin," also confess that they occasionally fall to keep up a complete and undeviating trust in Christ, and do, in fact, in some degree, temporarily fall away from that condition in which they maintain it to be their privilege to walk. It should be added that this doctrine of the "higher life" is one of experience rather than philosophy, and it is difficult to afford a clear and concise definition of it that will be free from every objection, or intelligible to those of an unspiritual state of mind. See Perfect Christian.

Perfectionism, a controversial term, applied in an odious sense to those who lay claim to absolute Christian perfection, or maintain its possibility. They may be divided into several classes, as they rest their claims on different grounds. 1. There are the advocates of imputed perfection. These are perfect, not in their own righteousness, but in the imputed righteousness of Christ. The individual who fancies himself in possession of all Christ's righteousness holds usually, not only that he does not, but that he cannot sin. With such the law of sin is in operation. But moral character is not transferable property. It adheres to its possessor, and to him alone, and can never become the character of any other being. See Imputation.

2. The second class are those who claim what they call an evangelical perfection. They do not profess to obey perfectly the divine law, or think that this is at all necessary. The moral law has been superseded by the law of faith. To this theory it is sufficient to reply that the moral law has not been superseded or annulled, but is in full force now throughout the world. Our Saviour came to create and honor the law, not to annul it. See Antinomians.

3. The third class are those who profess to fulfill perfectly the law of God. They admit that the moral law—the great law of love—stands in unaltered force; that it is binding on themselves; and insist that they can and do completely fulfill it. This they claim in such an absolute sense as to imply perfect sinlessness, and to require no further need of penitence and forgiveness. This view is not held by any one sect, nor confined to any one denomination; but is avowed more or less distinctly by persons in different churches, chiefly in the Methodist and the Congregational denominations, though not accepted by the great body of believers in any of them. Such views have occasionally characterized mystical individuals in every age (see Mystics), and are also held, under some modification or other, by several bodies of the Christian Church in this country. See Theol. Rev. i, 554; Meth. Quart. Rev. 1841, p. 307; 1848, p. 293. See Law (Moral).

Perfume (πῶμα, κίτταρον, κατερέθης). The strong and offensive exhalations of animal bodies in a hot climate must be regarded as the original cause of the high value (Prov. xxvii, 9) ascribed to perfumery, and its generally extended use (see Anoint; Oil; and comp. Flut. De Ind. ch. 80), although luxury and self-indulgence had much to do with its extension and refinement. It is still customary in the Orient, as it was of old, to perfume thoroughly not only rooms, clothing, etc. (comp. Cant. iii, 6), but in the houses of chief persons to sprinkle perfumes on the persons of guests, at their arrival or departure (comp. Mannheil, Triv. p. 40 sq.; Harmer, Obs. ii, 88 sq.; Rosenmüller, Morgenland, iv, 157). On anointing the beard, see Beard. Perfumed fans were carried (Curt. viii, 9, 23) before princes; and at their public entry into cities altars of incense were erected on the streets (Herodian, iv, 6, 19; Rosenmüller, Morgenland, iv, 196). Such attestation of honor and means of enjoyment were at an early period transferred also to the gods, in the belief that they inhaled with pleasure the odors offered them (Deut. xxxiii, 10), and this burning of incense is hence very often mentioned as a ceremony of heathen religions (1 Kings xi, 5; 2 Kings ii, 5; Jer. i, 16; vii, 9; xxii, 3 sq.; Hosea ii, 13; xi, 2; Isa. lxv, 3; 2 Chron. xxxv, 14; xxxviii, 3; Ezek. vi, 15; xxxii, 41; 1 Macc. ii, 10. Comp. IIiad, vi, 269 sq.; Virg. Aen. i, 420 sq.; Ovid, Fasti, i, 839 sq.; ii, 573; Aristoph. Vesp. 94 sq.; Lucian, Iap. Trog. 45; Pliny, xxxii, 13). Some deities were worshipped with no other offerings than incense and perfumes (Bähr, Symbolol. i, 478), but their use was also included in the instituted worship of Jehovah (Deut. xxxiii, 10), or were required to be offered as sacred incense to many of their sacrifices, which was burned with them on the altar (Lev. ii, 1 sq.; xvi, 6, 15); and daily, morning and evening, in trimming and lighting their lamps, an especial incense-offering was made upon its own separate altar over against the ark of the covenant (Exod. xxi, 27; xxxiii, 7 sq. Comp. Luke i, 9). No doubt the incense was useful in destroying the damp vapors in the confined space of the sanctuary, as well as the exhalations from the animals burned as sacrifices (Rosenmüller on Exod. xxxiii, 7), but the purpose of the building seems to have been to perpetuate the memory of the seer of the Apocalypse represents the angel in the heavenly sanctuary as burning incense after the type of the earthly. But it does not follow, because incense and prayer were often united (Jer. i, 16; Psax, cxxii, 2; Bähr's other citations are irrelevant), that in the Jewish sanctuary the incense-offering had sensuous prayer (comp. Hofmann, Weissag., i, 144 sq.). Still less can we adopt Bähr's view (Symbolol. i, 462 sq.) that incense is a symbol of God's name. invoked in prayer. Besides the ingredients of this incense enumerated in Exod. xxx, 38, the Talmud adds seven other components, and hence calls the whole the elem odors (יהושע 'יהושע 'יהושע 'יהושע 'יהושע 'יהושע 'יהושע, xi, 4; xxi, 3; and R. Abr. ben-David, Comm. de Miqra ex Ecclesiasticis, p. 197, in Ugolini Thesaur. xi). According to the Talmud, half a pound of this incense was to be burned morning and evening (Gem. Shabath, x, 2. See esp. Lightfoot, Hor. Hebr. p. 715). Exaggerated accounts are given as to the distance from Jerusalem at which the incense could be smelled (Mishna, Tumid, iii, 6). The most important ingredient of the incense was that which the high priest made before the ark of the covenant on the great day of atonement (Lev. xvi, 12 sq.). The management of the daily incense in the second Temple is detailed in the Mishna (Tumid, 5, 6). One priest carried incense in a vessel (גָּמָר, another burning coals
from the altar of burnt-offering in a golden censer (q.v.), and, passing into the holy place, the latter scattered the coals upon the altar of incense, and the former spread the incense upon them (Tunim, i, 2 sq.). These priestly duties, like the others of the office (1 Sam. ii, 28; 2 Chron. xxxvi, 18), were daily distributed by lot (comp. Luke i, 9). But, according to the Mishnah (Tunim, v, 2; Yoma, ii, 4), those priests who had once performed the office were afterwards shut out from the lot, on the ground that, as the Gemara says that this duty enriches with divine blessings (Deut. xxxiii, 10 sq.), this advantage might thus be as widely distributed as possible. (On these later Jewish superstitions, see G. Michaelis, Mekhil. Socr. p. 71 sq.) It is possible that the distinction which this office gave the priest, bringing him into the nearest relation with the Deity of all the duties of the sanctuary, rendered such an arrangement proper. Perhaps also the belief that the special revelations of God would be made first to the priest thus officiating, may have contributed to cause this duty to be equally divided. (Comp. Joseph. Ant. xiii, 10, 8; Luke i, 11, and Wetstein, ad loc.) During the burning of incense in the sanctuary the people stood praying in the court (Luke i, 30), and, after the fulfillment of his office, the priest was washed from the priest his blessing (Reland, Antiq. Sacr. ii, 5, 5). The burning of incense to the honor of Jehovah out of the national sanctuary, on high places, or in cities, was accounted illegal after David’s time (1 Kings iii, 8; xxii, 44; 2 Kings xii, 3; xv, 4; xvi, 4, Comp. 2 Chron. xxxii, 12, 1 Macr. i, 56). In the holocausts of the ten tribes of Israel, arranged by Jeroboam, the burning of incense found a place (1 Kings xiii, 1; 2 Kings xvii, 11). See Carpzov, Appar. p. 275 sq.; Braun, Selecta Sacr. p. 225 sq.; Schlichter, De suffulta sacr. Hebr. (Hal. 1754). See Incense.

In secular life also, as above observed, the free use of perfumes was peculiarly grateful to the Orientals (Prov. xxvii, 9), whose olfactory nerves are more than usually sensitive to the offensive smells encumbered by the heat of their climate (Burckhardt, Travels, ii, 85). The Hebrews manufactured their perfumes chiefly from spices imported from Arabia, though to a certain extent also from aromatic plants growing in their own country. See Spices. The modes in which they applied them were various: occasionally a bunch of the plant itself was worn about the person as a nosegay, or enclosed in a bag (Cant. i, 15); or the plant was reduced to a powder and used in the way of fumigation (Cant. iii, 6); or aromatic qualities were extracted by some process of boiling, and were then mixed with oil, so as to be applied to the person in the way of ointment (John xii, 3); or, lastly, the scent was carried about in smelling-bottles (חָסֵד, הָעָסָד, houses of the soul) suspended from the girdle (Isa. iii, 20). Perfumes entered largely into the Temple service, in the two forms of incense and ointment (Exod. xxx, 22-28). Nor were they less used in private life: not only were they applied to the person, but to garments (Isa. xlv, 8; Cant. iv, 11), and to articles of furniture, such as beds (Prov. vii, 17). On the arrival of a guest the same preparations were probably paid more attention to in modern times; the rooms were fumigated; the person of the guest was sprinkled with rose-water; and then the incense was applied to his face and beard (Dan. ii, 46; Luke, Mod. Age ii, 14). When a royal personage went abroad in his litter, attendants threw up “pillars of smoke” about his path (Cant. iii, 6). Nor is it improbable that other practices, such as scenting the breath by chewing frankincense (Lam. i, 24), and the skin by washing in rose-water (Burckhardt, i, 52), were also adopted in early times. The use of perfumes was omitted in times of mourning, whence the allusion in Isa. iii, 24, “Instead of sweet smell there shall be stink.” The preparation of perfumes in the form either of ointment or incense was a recognised profession (בְּשָׁמֶשׁ, A.V. apothecary) among the Jews (Exod. xxx, 38, 39; Ecles. x, 1). See Ointment.

PERGA (Περγα), an ancient and important city of Pamphylia, in Asia Minor, situated on the river Cestrus, at a distance of sixty stadia from its mouth (Strab. xiv, 967; Cíc. Ter. i, 20; Plin. v, 26; Mela, i, 14; Ptol. v, 5, § 7). It was celebrated in antiquity for the worship of Artemis (Diana), whose temple stood on a hill outside the town, and in whose honor annual festivals were celebrated (Callim. Hymn. in Dion. 187; Scylax, p. 89; Dion. Per. 854). The goddess and the temple are represented on the coins of Perga.

Alexander the Great occupied Perga with a part of his army after quitting Phaselis, between which two towns the road is described as long and difficult (Arrian, Anab. i, 26; comp. Polyb. v, 72; xxii, 25; Livy, xxxviii, 87). The Cestrus was navigable to Perga,

Alexander the Great occupied Perga with a part of his army after quitting Phaselis, between which two towns the road is described as long and difficult (Arrian, Anab. i, 26; comp. Polyb. v, 72; xxii, 25; Livy, xxxviii, 87). The Cestrus was navigable to Perga,
and St. Paul landed here on his voyage from Paphos (Acts xiii, 13). He visited the city a second time on his return from the interior of Pamphylia, and preach-
ed the Gospel there (Acts xiv, 25). Perga was origi-
nally the capital of Pamphylia; but when that prov-
ing was divided into two sides became the chief town of the first, and Perga of the second. It was not an insignificant one; the ecclesiastical notices, and in Hierocles (p. 679), Perga appears as the metropolis of Pamphylia (Ste-
phen of Byzant. s. v.; Echtes, Dokiol. v. 3, p. 12).
There are still extensive remains of Perga at a spot called by the Turks Ecme Kaleli (Leake, Asia Mi-
nor, p. 132; Fellows, Asia Minor, p. 190; Texier, Asia Mineure, pl. 19; Conybeare and Howson, St. Paul, i, 160). See PAMPHYLIA.

Pergamos, properly Pergamon (Περγαμός), or Prægamon (Iustin. xii, 4, 13, usually in Universalit. Writers), a town of the Great Mycia, the capital of a kingdom of the same name, and afterwards of the Roman province of Asia Propria. It was an ancient city, in a most beautiful district of Teuthrainia, in Asia Minor, north of the river Caicus. Near the point where the city was located, two other rivers, the Selinus and Ceitus, emptied themselves into the Caicus; the Selinus flowed through the city itself, while the Cetius washed its walls (Strab. xiii, 619; Plin. v. 38; Pausan. vi, 16, § 1; Livy, xxxvii, 15). Its distance from the sea was only about fifty stadia, but twenty miles with the sea was effected by the navigable river Caicus. The name was originally given to a remarkable hill, present-
ing a conical appearance when viewed from the plain. The local legends attached a sacred character to this place. Upon it the Catiri were said to have been witnesses of the birth of Zeus, and the whole of the land belonging to the city of the same name which afterwards grew up around the original Pergamos ap-
tained to these deities. The city itself, which is first mentioned by Xenophon (Anab. vii, 8, § 8), was origi-
nally a fortress of considerable natural strength, being situated on the summit of the hill, round the foot of which there were at that time no houses. Subse-
quently, however, a city arose at the foot of the hill, and the latter then became the Acropolis. We have no further information as to the foundation of the origi-
 nal town on the hill, but the Pergamenes believed themselves to be the descendants of Arcadians who had migrated to Asia under the leadership of the He-
raclid Telephus (Pausan. i, 4, § 5). They derived the name of their town from Pergamus, a son of Pyrrha, who was believed to have arrived there with his moth-
er, according to the Homeric tradition, in the course of the Trojan war. Among the early gods of the city was a statue of Aius, the ruler of Teuthrainia, to have established himself there (Pausan. i, 11, § 2). Another tradition stated that Asclepius, with a colony from Ephedaurus, p. preceded to Pergamos. At all events, the place seems to have been inhabited by many Greeks at the time when Xenophon visited it. Still, however, Pergamos remained a place of not much importance until the time of Lysimachus, one of the generals of Alexander the Great. The sacred character of the locality, combi-
ined with its natural strength, seems to have made it, like many other minor towns, a natural temple for chiefs who desired to accumulate a large amount of specie. Hence this Lysimachus chose Pergamos as a place of security for the reception and preservation of his treasures, which amounted to 9000 talents. The care and superintendence of this treasure was intrusted to Philetaros of Tium, a eunuch from his infancy, and a person in whom Lysimachus placed the greatest con-
fidence. For a time Philetaros answered the expecta-
tions of Lysimachus, but having been ill-treated by Ar-
sinoe, the wife of his master, he with his allegiance, and the property of the temple, independent. B.C. 289, Lysi-
 machus was prevented by domestic calamities from pun-
ishing the offender, Philetaros remained in undisturbed possession of the town and treasures for twenty years, contriving by dexterous management to maintain peace with his neighbors. He transmitted his principality to a nephew of the name of Eumenes, who increased the territory he had inherited, and even gained a vic-
tory over Antiochus, the son of Seleucus, in the neigh-
borhood of Sardis. After a reign of twenty-two years, from B.C. 263 to 241, he was succeeded by his cousin Attalus I. In the following year Attalus II, who assumed the title of king, and distinguished himself by his great talents and sound policy (Strabo, xiii, 623, 624; Polyb. xvii, 24; Livy, xxxvi, 21). He espoused the interests of Rome against Philip of Macedonia, and in conjunction with the Rhodes rendered impor-
tant service to the Romans. It was mainly this Attalus that amassed the wealth for which his name be-
came proverbial. He died at an advanced age, in B.C. 197, and was succeeded by his son Eumenes II, from B.C. 197 to 180. He continued his father's friendship for the Romans, and assisted them against Antiochus the Great and Perseus of Macedonia. After the defeat of Anti-
ochus, the Romans rewarded his services by giving him all the countries in Asia Minor west of Mount Taurus. Pergamos, the territory of which had hitherto not ex-
tended beyond the gulfs of Elma and Adramyttium, now became a large and powerful kingdom (Strabo, l.c.; Livy, xxxvii, 39). Eumenes II was nearly killed at Delphi by assassins said to have been hired by Perseus; yet at a later period he favored the cause of the Mace-
donian king, and thereby incurred the ill-will of the Romans. He was succeeded by his son Attalus II for its embellishment and extension. He was a liberal patron of the arts and sciences; he decorated the temple of Zeus Nicephorus, which had been built by Attalus outside the city, with walks and plantations, and erected himself many other public buildings; but the greatest monument of his liberality was the great library which he founded, and which yielded only to that of Alexandria in extent and value (Strabo, l.c.; Athen. i, 8). He was succeeded by his son Attalus II; but the government was carried on by his last king's brother, Attalus, surnamed Philadelphus, from B.C. 159 to 138. During this period the Pergamians again assisted the Romans against the pseudo-Philip. Attalus also defeated Digidilus, king of the Thracian Ceni, and overthrew Prusias of Bithynia. On his death, his ward and nephew, Attalus III, surnamed Philometor, undertook the reins of government, from B.C. 158 to 133, and on his death bequeathed his king-
 dom to the Romans. Soon after Aristocles, a natural son of Eumenes II, revolted, and claimed the kingdom of Pergamos for himself; but in B.C. 130 he was van-
cquished by the Romans. After this the city of Per-
gamos became a Roman province under the name of Asia (Strabo, xiv, 616). The city of Pergamos, how-
ever, continued to flourish and prosper under the Ro-
man dominion, so that Pliny (l.c.) could still call it "longe clarissimum Asian Pergamum." It remained the centre of jurisdiction for the district, and of commerce, as all the main roads of Western Asia converged there. Pergamos was one of the seven churches mentioned in the book of Revelation (ii, 12). Under the Byzantine em-
peror the city again passed under the sway of the city, de-
clined; but it still exists under the name of Bergama, and presents to the visitor numerous ruins and exten-
 sive remains of its ancient magnificence. It lies on the north bank of the Caicus, at the base and on the declivity of two high and steep mountains, on one of which now stands a dilapidated castle. Facing the south-eastern of the Acropolis, of beaten granite, is at least one hundred feet deep, and engraved into the rock; above it a course of large substructions form a spacious area, upon which once rose a temple unri-
valliavie in a site of site; behind view the vast plain of the Egean Sea. The ruins of the temple show that it was built in the noblest style. Besides this, there are ruins of an ancient temple of Eileidapous, which, like the Nicephorion, was outside the city (Tacit. Am. iii, 69; Pausan. iii, 12, § 2; of a
royal palace, which was surrounded by a wall, and connected with the Caicus by an aqueduct; of a pryanum, a theatre, a gymnasium, a stadium, an amphitheatre, and other public buildings. All these remain att the unusual splendor of the ancient city, and all travellers speak with admiration of their stupendous greatness. The numerous coins which we possess of Pergamos attest that Olympian games were celebrated there; a vase found there represents a torchrace on horseback; and Pliny (x, 25) relates that public cock-fights took place there every year. Pergamos was celebrated for the manufacture of ointments (Athen. xvi, 699), pottery (Pliny, xxxv, 46), and parchment, which derives its name (charta Pergamena) from the city. The library of Pergamos, which is said to have consisted of no less than 200,000 volumes, remained at Pergamos after the kingdom of the Attali had lost its independence, until Antony removed it to Egypt, and presented it to queen Cleopatra (Pliny, Hist. Nat. iii, 2; Plutarch, Anton.). The valuable tapestries, called in Latin ornam, from having adorned the hall of king Attalus, were also wrought in this town. Even now it is a place of considerable importance, containing a population estimated at 14,000, of whom about 3000 are Greeks, 500 Armenians, and the rest Turks (Macfarlane's 1890). The writer just cited says, "The approach to this ancient and decayed city was as impressive as well might be. After crossing the Caicus, I saw, looking over three vast tumuli, or sepulchral barrows, similar to those of the plains of Troy, the present Turki-h city, with its tall minarets and taller cypresses, situated on the lower declivities and at the foot of the Acropolis, whose bold gray brow was crowned by the rugged walls of a barbarous castle, the usurper of the site of a magnificent Greek temple." The town consists for the most part of small and mean wooden houses, among which appear the remains of early Christian churches, showing "like large fortresses amid vast barracks of wood." None of these church have any scriptural or apocalyptic interest connected with them, having been erected "several centuries after the ministry of the apostles, and when Christianity was not a humile and despised creed, but the adopted religion of an immense empire." The pagan temples have fared worse than these Christian churches. "The fane of Jupiter and Diana, of Asclepius and Venus, are prostrate in the dust; and where they have not been cast up into the dust, or to pound into mortar, the Corinthian and Ionic columns, the splendid capitals, the cornices and pediments, all in the highest ornament, are thrown into unseightly heaps."

As above noted, in Pergamos was one of the seven churches of Asia, to which the Apocalypse is addressed. This church is commended for its fidelity and firmness in the midst of persecutions, and in a city so eminently addicted to idolatry. "I know," it is said, "thy works, and where thou didst dwell, even where Satan's seat is" (Rev. ii, 18). Now there was at Pergamos a celebrated and much frequented temple of Asclepius, who probably there, as in other places, was worshiped in the form of a living serpent, fed in the temple, and considered as its divinity. Hence Asclepius was called the god of Pergamos, and on the coins struck by the town Asclepius often appears with a rod encircled by a serpent (Berger, Theusm. i, 492). As the sacred writer mentions the great dragon and the old serpent (Rev. xii, 9), there is reason to conclude that when he says in the above passage that the Church of Pergamos dwelt "where Satan's seat is," he alludes to the worship of the serpent as there practiced. The great wealth which accrued to Eumenes II from his large accession of territory he employed in laying out a magnificent residential city, and adorning it with temples and other public buildings. His passion, and that of his successor, for literature and the fine arts, led them to form a library which rivalled that of Alexandria; and the impulse given to the art of preparing sheepskins for the purpose of transcription, to gratify the taste of the royal dietties, has left its record in the name parchment. Eumenes's successor, Attalus II, is said to have bid six hundred thousand sesterces for a picture by the painter Aristides, at the sale of the plunder of Corinth; and by so doing to have attracted the attention of the Roman general Mummnius to it, who sent it off at once to Rome, where no foreign artist's work had then been seen. For another picture by the same artist he paid one hundred talents. But the great glory of the city was the so-called Niecephorium, a grove of extreme beauty, laid out as a thank-offering for a victory over Antiochus, in which was an assemblage of temples, probably of all the deities, Zeus, Athena, Apollo, Asclepius, Dionysus, and Aphrodite. The temple of the last was of a most elaborate character. Its facade was perhaps inlaid after the manner of pietra dura work; for Philip V of Macedonias, who was repulsed in an attempt to surprise Pergamos during the reign of Attalus II, vented his spite in cutting down the trees of the
grove, and not only destroying the Aphrodismus, but injuring the stones in such a way as to prevent their being used again. At the conclusion of peace it was made a special stipulation that this damage should be made good. The immense wealth which was directly or indirectly derived from the legacy of his dominions by Attalus III to the Romans contributed perhaps even more to the wealth of Carthage than the mines of North to the demoralization of Roman statesmen. The sumptuousness of the Attalic princes had raised Pergamum to the rank of the first city in Asia as regards splendor, and Pliny speaks of it as without a rival in the province. Its prominence, however, was not that of a commercial town, like Kos or the proudest cities of Carthage, but of a capital of extraordinary pecular features. It was a sort of union of a pagan cathedral city, a university town, and a royal residence, embellished during a succession of years by kings who all had a passion for expenditure and ample means of gratifying it. Two smaller streams, which flowed from the north, embracing the town between them, and then fell into the Caucus, afforded ample means of storing water, without which, in those latitudes, ornamental cultivation (or indeed cultivation of any kind) is out of the question. The larger of these streams, the Cercopagum, becomes a vast torrent having a fall of more than 150 feet between the hills to the north of Pergamum and its junction with the Caucus, and it brings down a very considerable body of water. Both the Nicopolis, which has been spoken of above, and the Grove of Æsculapius, which is described later in this cycle, was in reality an essential part of every relation of life in pagan times. The more lax, however, might regard such a proceeding as a purely formal act of civil obedience, and reconcile themselves to it as Naaman did to "bowing himself in the gate of the house of Elisha" when he was allowed to go in peace. Rome, as the king of kings, would reign. It is perhaps worth noticing, with reference to this point, that a Pergamene inscription published by Bock mentions by two names (Neostratus, who is also called Trypho) an individual who served the office of gymnasiarch. Of these two names, the latter, a foreign one, is likely to have been borne by him among some special body to which he belonged, and the former to have been adopted when, by accepting the position of an official, he merged himself in the general Greek population.

Coin of Pergamum.

Pergamos, Council of, was held at that place in 152 (?) against the Colaborians.

Pergolese, giovanni battista, was an eminent musician of the Neapolitan school. Evidence regarding the date and place of his birth is conflicting; probably the correct account is that of the Marchese di Villarosa, his latest biographer, who states that he was born at Jesi, near Ascoli, on the 8th of May 1710. In 1717 he was admitted into the Conservatorio dei Poveri di Gesù Cristo at Naples, where he studied the violin under Domenico di Matteis, and musical composition under Gaetano Greco and Durante. Under the conviction that melody and taste were sacrificed to learning by most of the masters of his day, he abandoned the style of Scurlatti and Greco for that of Vinci and Hasse. His first great work was the oratorio of San Guglielm- d'Aquitania, composed in 1752. In that and
the following year appeared his operas of La Serre Padrona, Il Prigionier Superbo, and Lo Farto Innamorato; in 1734, Adriano in Siria; in 1735, Il Flaminio and L’Olimpiade. In 1734 he received the appointment of maestro di cappella of the church of Loretto. In consequence of delicate health he removed to Pos- zzuoli, where he spent the last years of his life and the last two years of his life. He died there of consumption in 1736. Besides the above-mentioned works, Pergolesi composed a number of pieces for the Church, which were better appreciated during his lifetime than his secular compositions also a violoncino, and thirty trios for violin, violoncello, and harpsichord. His works are all characterized by sweetness and freedom of style. See Hoefer, Nouv. Biog. Générale, s. v.

Pergolesi. See PERGOLESE.

Pergubrius, an ancient Slavonic deity who was believed to preside over the fruits. An annual festival was celebrated in his honor on the 22nd of March.

Peri (Fairly), according to the mythical lore of the East, a being begotten by fallen spirits, which spend its life in all imaginable delights, is immortal, but is forever excluded from the joys of Paradise. It takes an intermediate place between angels and demons, and is either male or female. So far from there being only one species of these, as is supposed by some, there are three, or the wives of the Devis, the Peris live, on the contrary, in constant warfare with these Devis. Otherwise they are of the most innocuous character to mankind, and, exactly as the fairies, with whom our own popular mythology has made us familiar, are, when females, of surpassing beauty. One of the finest compliments to be paid to a Persian lady is to speak of her as Perizadeh (born of a Peri; Greek, Perizaita). They belong to the great family of genii, or jin: a belief in whom is enjoined in the Koran, and for whose conversion, as well as for that of a man, Moham med was sent (comp. Koran, ch. iv, lxxvi, and lxxvii).

Perlama, a cross of gold that hung from the neck, and was a distinctive ornament of a bishop’s dress. See Bishop.

Perlamata. See THYLAETERY.

Peribon. See PALLIUM.

Peribolon (περίβολον), the outer enclosure of ancient Christian churches, being the utmost bounds allowed for a refuge or sanctuary. See ASYLUM.

Peribolos. See PERIBOLON.

Pericopes, the lessons or divisions of Scripture reading, as said, during the style of the Jewish parashoth. It is doubtful when the custom originated, but the necessity of it pleads for its antiquity.

Perida (Neb. vii, 57). See PERUDA.

Périer, Marguerite, a French inmate of PortRoyal, noted for a pretended miraculous cure upon her person, which has been the subject of much controversy in the Church, was the daughter of M. Périer, magistrate at Clermont, and niece of Blaise andJacqueline Pascal. She was born about 1645. When about eight years old she was afflicted with fistula ischrymalis in the left eye, and the disease was of so virulent a character that when she had attained the age of eleven years the lessen of the nose and palate had become carious, Meli cious treatment proved, and availing; and as the child grew worse it was decided, as a last resource, to apply the cautery, though with little hope of success. She was at this time a pupil in the convent of Port-Royal at Paris. The sisterhood just then received from a priest named La Poterie a reliquary containing what claimed to be a portion of the crown of thorns which pierced the head of the Redeemer. This was carried in procession to the altar of the convent chapel on March 24, 1656, be-
ing Friday of the third week in Lent. The nuns, in turn, kissed the sacred relic; and when the pensionnaires approached for the same purpose, their governess, sister Flavia, desired Mademoiselle Périer to commend herself to God, and apply the reliquary to the diseased eye. She did so, and is claimed to have been conscious of a complete and instantaneous cure. The occurrence was mentioned in the convent next day, but was not generally known till a week afterwards. When the surgeon, M. Dalencé, called to see his patient, such was the change in her appearance that it was only after a moment’s and careful examination that he was convinced of her identity and of the reality of the cure, which he declared unaccountable on any other than supernatural grounds. The news spreading through the city, the queen despatched her own surgeon to Port-Royal to verify the facts. He and other medical witnesses attested the genuineness of the cure, and pronounced it beyond the operation of natural causes. Their testimony was confirmed by the ecclesiastical authorities; and the grand vicars published a formal recognition of the truth of the miracle. Solemn thanksgivings were offered in the church at Port-Royal, and the holy thorn was presented to the convent, where it was exposed every Friday for the veneration of the faithful. This miracle was considered important from the bearing which it had on the Jansenistic controversy then agitating the Romish Church. It made a strong impression of God’s favor to and his direct interference in behalf of the persecuted Jansenists (q. v.). Demoiseille Marguerite Périer died in 1733. Of course Protestants refuse to give credence to the cure as of miraculous order, and would account for it on psychological principles as the best interpretation of the case. See MiracIes, ECCLESIASTICAL.

Pérignon, Pierre, a French Benedictine, was born about 1640 at Sainte-Menehould. He belonged to the congregation of Sainte-Vannes. In his capacity of procurator of the abbey of Hautvilliers, he was charged with the care of the vineyards. Gifted with an extreme delicacy of taste, he could distinguish, without ever mistaking, between the grapes coming from the different growths of Champagne. He rendered a great service to this province by showing how to combine the different kinds to give to its wine that delicacy and strength which have since gained it such a great reputation. But, far from keeping for himself or for his convent the secret of its manufacture, he was eager to divulge it in his Mémoires sur la manière de choisir les plants de vigne convenables au sol, sur la façon de les planter, de les arroser et de les récolter, pour en faire la cuvéelet de gouverner les vins. The author was a learned man and of austere manners. He died Sept. 14, 1715, at Hautvilliers, near Épernay. See Histoire de la Congr. de Sainte-Vannes.

Period, a term used in chronology in the same sense as Cycle (q. v.), to denote an interval of time after which the astronomical phenomena to which it refers recur in the same order. It is also employed to signify a cycle of cycles. Various periods have been invented by astronomers, but we can only notice a few of the most important. See EPOCH.

1. The Chaldeans invented the Chaldean Period, or Period of Eclipse, from observing that after a certain number of revolutions of the moon around the earth, her eclipses recur in the same order and of the same magnitude. This period consists of 232 lunations, or 6788 days, and corresponds almost exactly to a complete revolution of the moon around the sun.

2. The Egyptians made use of the Dog-star, Sirius, or Sothic Period, as it is variously called, to compare their civil year of 365 days with the true or Julian year of 365 1/4 days. The period consequently consisted
of 1460 Julian years, corresponding to 1461 Egyptian years, after the lapse of which the dates in both reckonings coincided. By comparing the solar and lunar years, Meton, an Athenian, invented (B.C. 432) a lunar period of 6940 days, called from him the Metonic Cycle, also known as the Metonic Era. About a century and a half afterward the cycle of Meton was discovered to be an insufficient approximation to the truth, and as he had made the solar year too long by about 1/48th of a day, at the end of 4 Metonic cycles the solar reckoning was in advance of the lunar by about 1 day 6 hours. To remedy this, a new cycle and epoch, called the Bythnian Cycle, was invented by Calippus, and consisted of 4 Metonic cycles less by 1 day, or 27,759 days. But as this period still gave a difference of 6 hours between the solar and lunar reckonings, it was improved by Hipparchus, who invented the cycle called the Alexandrian Cycle, consisting of 58 years, or 19,200 days, and was divided into 5 intercalary days, called by the ancients Vespasian, a form of the name of the emperor and the governor of Egypt, who, it is supposed, gave the name to this intercalation. The cycle of 58 years was in use at Rome till the 9th year of the empire, when it was reformed by Julius Caesar, *B.C. 45.*

2. The Helical or Solar Cycle, after which the same day of the month falls upon the same day of the week, consists of 28 Julian years. If the year had regularly consisted of 585 days, that is, one day more than an exact number of weeks, it is evident that at the end of seven years the days of the month and the days of the week would correspond again. This introduction of an intercalary day into every fourth year causes this coincidence to recur at irregular periods of 6, 11, 6, and 5 years successively. However, by choosing a period such as will preserve the leap-years in the same relative position to the other years, and at the same time consist of an exact number of weeks (both of which objects are effected by using the number 28, which is the least common multiple of 4 and 7), we insure the regular recurrence of the coincidence between the days of the week and of the month. The solar cycle is supposed to have been invented about the time of the Council of Nice (A.D. 325), but it is arranged so that the first year of the first cycle corresponds to B.C. 1. In calculating the position of any year in the solar cycle, care must be taken to allow for the omission of the intercalary day at the beginning of the tenth century, and its insertion in the first year of every fourth century.

3. The Julian Period is a cycle of cycles, and consists of 7980 (= 28 x 9 x 15) years, after the lapse of which the solar cycle, lunar cycle, and the Indiction (q. v.) cycle once more correspond. About a century afterward its commencement has been arranged so that it will expire at the same time as the other three periods from which it has been derived. The year 4718 B.C. is taken as the first year of the first period, consequently A.D. 1 was the 4714th.

**Periodontia**, a name given to itinerating or visiting presbyters decreed by the Council of Laodicea, A.D. 367, to supersede the Choreges (q. v.) in the country villages.

**Périon, Joachim,** a French historian, was born about 1499 at Cormery (Tourney). In 1517 he took the religious habit of the Benedictines in the abbey of Cormery; came to Paris in 1527, and was there received as doctor of theology in 1542. He sometimes gave himself the honor of being interpreter to the king. He possessed the talents for it, if he did not do the work; for he made the study of ancient languages the occupation of his whole life. He professed a superstitious admiration for Cicero, and he regarded Aristotle as the oracle of the school; he also delivered a great number of disputations, and wrote three harangues full of invectives. Périon died at Cormery in 1559; or, according to Dom Liron, in 1561. We have of his works, De fabuburis, litorum, theatrorum antiquis consuetudinibus (Paris, 1540, 4to);—Topycorum theologiae...
Peristia, a name for the victims sacrificed in a lustration among the ancient heathens.

Peristarch, the officiating priest in a lustration or purification among the ancient Greeks, when they wished to purify the place where a public assembly was held. He received this name because he went before the lustral victims as they were carried around the place three times, the number of the places. See Lustration.

Peristyle (παράστυλον) is the name applied to a court, square, or cloister, in Greek and Roman buildings, with a colonnade around it; also the colonnade itself surrounding such a space. In medieval Latin it is called the Quadraparticus, and was the usual arrangement in Italy in front of the churches as well as in front of the houses. The nearest approach to it in England is the Cloister (q.v.).

Peritoe. See Farissol.

Perisonius (the Latinized form of Voorbroekt), James, a learned Dutch scholar, was born at Dam, in Holland, in 1651. He studied at Davenport, and afterwards at Utrecht, under the learned Grevius, and was successively master of the Latin school at Delft, and professor of eloquence and history at Franeker. In 1693 he was appointed professor of eloquence, history, and Greek at Leyden, where he died in 1715. He was a man of extensive erudition, great application, and sound judgment. He edited several of the classics, and greatly enriched the classical lore of his age. He was a very active correspondent, and a popular writer. In Huicon (Leyden, 1711, 2 vols. 8vo), a work in which he treated of the Egyptian chronology and antiquities. Of course more recent researches have wholly superseded his writings in this line, but his industry should not be ignored. Other works of his worthy of notice here are the treatise De morte Juda et verbo Dei in xxi, etc. (1702): De origine, significacione, et usu vocabuli Prelorie et Pretorio, veroce sensu loci ad Phil. i, 13 (1687). See Hoefer, Nouv. Biogr. Générale, s. v.

Perizite (Heb. Perizzi, "full), always in the singular, and with the article: Sept. פִּתְנִצֵּי, Ezra פִּתְנִצֵּי, a Canaanitish tribe, already known in the time of Abraham, inhabiting a mountainous region (Gen. xxi. 7; comp. xv. 20), which they eventually yielded to Ephraim and Judah (Josh. xii. 3; xvii. 15; Judg. i, 4, 5). They were kindred to the Canaanites strictly so called (Exod. xxiii. 23; Judg. i, 45): sometimes Canaanites and Perizites are put for all the other tribes of Canaan (Gen. xiii. 7; xxxiv. 20); while in other places the names are interchanged with several of the other tribes of the same stock (Gen. xv. 20; Exod. iii. 8, 17; Deut. vii. 1, etc.). They are not named in the catalogue of Gen. vi. as that their origin, like that of other small tribes, such as the Avites, and the similarly named Gerizites, is left in obscurity. They are continually mentioned in the formula so frequently occurring to express the Promised Land (Gen. xv. 20; Exod. iii. 8, 17; xxiii. 23; xxxii. 2; xxxiv. 11; Deut. vii. 1; xxvii. 17; Josh. iii. 10; iv. 1; xxiv. 11; Judg. iii. 5; Ezra ix. 1; Neh. ix. 8). They appear, however, with somewhat greater distinctness on several occasions. On Abram's first entrance into the land it is said to have been occupied by "the Canaanite and the Perizite" (Gen. xiii. 7). As the separation of Abram and Lot, there recorded, took place at Bethel, we may infer that the Perizites were then in that vicinity. Jacob also, after the massacre of the Shechemites, uses the phrase, the Land of the Perizites, complaining that his sons had made him to stink among the inhabitants of the land, among the Canaanite and the Perizite" (xxxiv. 30). This seems to locate the Perizites near Shechem. So also in the detailed records of the conquest given in the opening of the book of Judges (evidently from a distinct source from those in Joshua), Judah and Simeon are said to have found their territory occupied by "the Canaanite and the Perizite" (Judg. i, 4, 5), with Bezek (a place not yet discovered, but apparently not far from Jerusalem, and hence probably on the south-western boundary of Ephraim) as their stronghold, and Adoni-bezek their most noted chief. Thus too a late tradition, preserved in 2 Esdr. i. 21, mentions only "the Canaanites, the Philistines, and the Perizzites," as the heathen inhabitants of the land. The notice just cited from the book of Judges locates them in the southern part of the Holy Land. Another independent and equally remarkable fragment of the history of the conquest seems to speak of them as occupying, with the Rephaim, or giants, the "fifth country" in the western flanks of Mount Carmel (Josh. xvii. 15-18). Here again the Canaanites only are named with them. As a tribe of mountaineers, they are enumerated in company with the Amorites, Hittites, and Jebusites in Josh. xi. 3, xii. 9, and they are catalogued among the remnants of the old population whom Solomon reduced to bondage, both in vv. 1 Kings ix. 20 and Chron. viii. 7. Not only had they not been exterminated, but they were intermarried with the Israelites (Judg. iii. 5, 6; Ezra i. 1). By Josephus the Perizzites do not appear to be mentioned.

The sigilication of the name is not by any means clear. It possibly meant rutsica, dwellers in open, un-walled villages, which are denoted by a similar word (רְצִיסַה) Ezek. xxxviii. 11; Esth. ix. 19). So also Copher hap-peruzsi, A. V. "country villages" (1 Sam. vi. 19); Are y hap-peruzsi, "unwalled towns" (Deut. iii. 5). In both these passages the Sept. understands the Periz-

zites (παρεμψιτοι), and makes a difference between them. In Jos. xvi. 10 it adds the Perizites to the Canaanites as inhabitants of Gezer. Ewald (Geschichte, i, 317) infers to believe that they were the same people with the Hittites. But against this there is the fact that both they and the Hittites appear in the same lists; and that they were thus classed in several forms both in the records of the conquest, as above. Redex has examined the whole of these names with some care (in his Attitamen. Namen der Israeliten-Staaten, Hamburg, 1846), and his conclusion (p. 108) is that, while the Chereth were villages of tribes engaged in the care of cattle, the Peruzzoth were inhabited by peasants engaged in agriculture, like the Fellath of the Arabs. This view, however, although acquiesced in by Gesenius, Theurer, p. 1120; Hempsteden, Beiträge, p. 186; Keil, on Josh. iii. 19; and Kalisch, on Gen. xxiii, appears to be opposed to the evidence of the Canaanite and the Philistine, who make them as a distinct branch of the Canaanites (see Redel, Pala- lest, p. 139; Kurtz, in Rudolphi's Zeitschr. 1845, i. 53; Jour. Soc. Lit. Oct. 1853, p. 166). See CANAANITE.

Perjury is the wilful taking of an oath in order to tell or to confirm anything known to be false. This is evidently a very heinous crime, as it is treating the Almighty with irreverence; denying, or at least disregarding his omniscience; profaning his name, and violating truth. By the Mosaic law, perjury was strictly prohibited as a most heinous sin against God; to whom the punishment of it is left, and who in Exod. xx. 7 expressly promises that he will inflict it, without ordaining the infliction of any punishment save that of a temporal magistrate; except only in the case of a man falsely charging another with the same punishment which would have been inflicted on the accused party if he had been found guilty; but this not, indeed, as the punishment of perjury against God, but of false testi-

mony. Perjury, therefore (εἰρήνη, "false swearing"), was prohibited by the Hebrews in a religious point of view (Exod. xx. 7; Lev. xiv. 12; comp. Matt. vii. 33; Zech. viii. 17), but in the law only two sorts of perjury are noticed: 1, false testimony in judicial pro-

cess; and 2, false testimony in civil or civil cases, the assurance of which that one has not received or found a piece of property in question (Lev. v. 1; vi. 2 sqq.; Prov. xxix. 24). A sin-offering is provided for both (comp. Pauth. Ruh. v. 8, 21), and in the latter case satisfaction for the injury.
with increase (comp. Hebenstreit, De sacrificio a per-
jury offerendo, Lips. 1739). Among the ancient Ro-
mans, also, the punishment of perjury was left with the
gods (Cic. Leg. ii, 9), and no official public notice was
taken of the perjured man, save by the censor (Gell. vii, 12, comp. C. 27.8.2; Reit, Geschicht, ii, 89.3). By
that notice, the Talmud not only
notices the subject at greater length, but ordains more
severe penalties for perjury: scourging and full repara-
tion when any serious injury has been done (Mishna, 
Makor, sec. gen. ii, 77.5; Talmud, B. B., viii, 3). It is determined
in special cases, the value of the sin-offering to be pre-
cluded (Sheb. iv, 2; v, 1; comp. further Zechu
and Steinsler, De jurur. sec. discipl. Hebr. p. 57 sq.) See
OATH.

PERJURY in Christian law is the crime committed
by one who, when affirming anything by oath, makes
statements which he knows to be false. This is, from
the Biblical standpoint, a double crime, including both
falsehood and profanity; and in a social point of
view it is one of the gravest offences against human
law. It has always been esteemed a very detesta-
ble thing, and those who have been proved guilty of
it have been looked upon as the scum of society. In
order to make the giving of the false evidence fa-
able to punishment under the civil law, it must have
been not only false to the knowledge of the witness,
but the matter must have been material to the issue
raised. If the falsehood occurred as to some trifling
or insignificant point, no issue is connected, no matter;
it is necessary, in proving the crime, that at least two
persons should be able to testify to the falsehood of
the matter, so that there might be a majority of oaths
on the matter—there being then two oaths to one. But
this rule is satisfied though both witnesses do not tes-
tify to one point. The perjury must also have taken
place before some court or tribunal which had power
to administer the oath. See OATH. Though in some
courts affirmations are allowed instead of oaths, yet
the punishment for false affirmation is made precisely
the same as for false swearing. The punishment for per-
jury was, before the Conquest, sometimes death or
cutting out the tongue; but latterly it was confined to
fine and imprisonment, and at present the latter is
the only punishment, with the addition of hard labor.
The crime of subornation of perjury, i.e. persuading
or procuring a person to give false evidence, is also
punishable as a distinct offence.

Perkins, Justin, D.D., a celebrated American
missionary, labored among the Nestorians of Persia,
and has not unaptly been called the "Apostle of Per-
sia." He was born at West Springfield, Mass., March
12, 1805. He passed his youth on his father's farm,
and when ready for higher studies went to Amherst
College, where he graduated in 1829. He studied the-
ology at Andover, and after graduation there became
a tutor at Amherst. In the year 1827 that erratic ad-
tventurer, Dr. Joseph Wolf, made a flying visit to the
Nestorians while travelling in Persia. His mention
of the place met the eye of Dr. Anderson, secretary of the
American Board, and he conceived the idea of sending
a mission to that extraordinary people. Justin Per-
kins and wife were selected as the proper persons for
this field, and they set out from Boston Sept. 21, 1833,
Reaching Constantinople Dec. 21, without the knowl-
edge of a word of the language, they were welcomed
by Messrs. Goodell, Dwight, and Schaufler, but re-
cently established there. In the spring of the fol-
lowing year, Perkins and his wife proceeded towards
their final destination. They reached the city of The-
vstanbul, and there Mr. and Mrs. Perkins were
baptized, while Mr. Perkins went on farther to Urümish, where
the mission was at once established, with the assist-
ance of Mrs. Perkins, and Dr. and Mrs. Grant, who
joined them in the fall of 1835. Then followed the
great labors of his life; schools for boys and schools
for girls were established which have grown into no-
ble seminaries of learning. Besides those that may be
called higher seminaries, some seventy primary schools
have been established, 8000 Scripture readers have
been educated in them, and an army trained up to pre-
pare to carry the Gospel to the heathen world. His
greatest work, however, was his translation of the
Scriptures into the Nestorian dialect of the Syrian.
In 1841 the doctor came home to visit his friends, and
to stir up an interest in this missionary enterprise.
He was accompanied by Mar Youhanan, the Nestorian
bishop, and the two awakened a thrilling enthusiasm
wherever they went. Dr. Perkins took back with him
the painted Stoddard (q.v.), and other missionaries,
and from that time faithfully and most successfully
executed his work, until the fall of 1869, when he
came home exhausted, and on the last day of the year
he yielded up his spirit into the hands of his Lord, who
doubted to said him, "Well done, good and faithful
servant." Dr. Perkins published in this country,
Residence of Eight Years in Persia (Andover, 1848;
Svo), reviewed in Christian Examiner, xxxiv, 100;
Christian Review, vili, 188—Missionary Life in Persia
(Boston, 1861). He was also a contributor to the bib-
liotheca Sacra, and to the Journal of the "American
Oriental Society." See Anderson, Oriental Mis-
ions; The Observer, N. Y. Jan. 13, 1870; Drake, Dict.
Amer. Biog. s. v.

Perkins, Nathan (1). D.D., a Congregational
minister, was born May 12, 1748, in Lisbon, Conn.
He graduated at the College of New Jersey in 1770,
and was ordained pastor at West Hartford Oct. 14,
1772, where he labored until his death, Jan. 18, 1838.
He published Four Letters, showing the History and Or-
igin of the Anabaptists (1793).—Ten Discourses on
some of the Important and Interesting Truths, Duties,
and Institutions of the Gospel, and the General Exce-
licity of the Christian Religion; calculated for the People
of God of every Communion, particularly for the Breth-
ren of Peaceful Families, and the Instruction of all in the Things
which concern their Salvation (1795, Svo); and several
occasional sermons. See Sprague, Annals, ii, 1.

Perkins, Nathan (2), son of the preceding, was
born in 1772, and was educated at Yale College, where
he graduated in 1790. He was then minister of the
Second Congregational Church, Amherst, from 1810 to his
death, March, 1842.

Perkins, Thomas, a minister of the Free-will
Baptist Church; was born in Litchfield, Feb. 22, 1738.
His family removed to New Hampton, N. H., when he
was thirteen years of age, and there he ever afterwards lived. At seventeen he was con-
verted, and united with the first Free-will Baptist
Church in New Hampton, then but recently organ-
ized. By the advice both of lay brethren and the
ministry, he held public meetings in 1808, and, after
repeated urgings, consented to receive license. He
was set apart to the work of the ministry, by the impo-
sition of hands, in February, 1816, and immediately
devoted himself to the preaching of the Gospel, and building
up the churches of his denomination, which was then
new; and the Macedonian cry, which he so often heard
at that day, incited him to the utmost activity and
faithfulness in the cause of the Master. He preached,
baptized, attended funerals, and performed other par-
torial duties in some twenty towns in the vicinity of
New Hampton. His own words are, "I have preached
nearly every Sabbath for more than fifty years, and
have travelled thousands of miles on business to which
I had been appointed by the quarterly and yearly
meetings; your conversion in 1834, is for me, as your
father, nothing more than I received half-day wages, besides the use of my horse
and carriage. And yet the Lord has blessed me abund-
antly, both temporally and spiritually, so that I do
not regret any sacrifice I have made for the cause." Though he depended largely upon his own resources
PERKINS

993

PERKINS

for the support of himself and family, he was ever ready to help the various causes of benevolence. He attended nearly every quarterly and annual visit of the Free-will Baptists in New Hampshire for sixty-five years. He was six times chosen a member of the American Free-will Baptist General Conference, and for twelve years was one of the corporators of the Priscilla Perkins School, when he did not himself live alone. He always had more or less probate business on his hands, defending the rights of the widow and orphan. He also represented his town in the legislative of his state eleven consecutive years. Honest in business, far-seeing in judgment, kind and judicious in counsel, his opinion was always respected. His opinion was received as just and safe. It is difficult to describe his sermons, for their completeness allowed of no peculiar characteristics. They were studied, but not written—logical, compact, and vigorous. He may have been called a doctrinal preacher, though he gave no undue prominence to any dogma, and was practical as well. When he rose to speak, his portly form, large head, and open countenance were imposing, and the hearer felt himself in the presence of a man before a word was spoken. Such was his life, what need be said of his death? It was sudden and unexpected—peaceful, resigned, trustfully waiting the will of the Lord. January 18, 1878, the summons came, and the venerable man, the faithful servant of God, was taken to his rest. See Free-will Bapt. Quart. v, 120 sq. (W. H. W.)

Perkins, Col. Thomas Handsay, an American merchant, noted for his philanthropic labors, was born in Boston Dec. 15, 1764. He began his commercial life in partnership with his elder brother James, who was a resident of St. Domingo when the insurrection of the blacks occurred, and was compelled to flee for his life. In 1789 he went as supercargo to Batavia and obtained a charter for engaging in the Oriental trade. The brothers afterwards emigrated in the trade to the north-west coast, Canton, and Calcutta, in which they acquired great wealth. Soon after the death of James, in 1822, Col. Perkins retired from active business. The Perkins family gave over $60,000 to the Boston Athenaeum. He took a prominent part in the erection of the Bunker-hill Monument, and gave his estate in Pearl Street, valued at $40,000, 0, for the use of the Asylum for the Blind. He was also in 1827 the projector of the Quincy Railway, the first in the United States. Subsequently he devoted much attention to forwarding the establishment of the Washington Monument; and was also the largest contributor to the Mercantile Library Association. For many years he represented Boston in both branches of the state legislature. See Drake, Dict. of Amer. Biog. s. v.; Allibone, Dict. of Brit. and Amer. Auth. s. v.

Perkins, William (1), an eminent divine of the Church of England, noted as one of the best exponent of Calvinism, was born at Wansford in Warwickshire, England, in 1558. He was educated in Christ College, Cambridge. In his early life he gave proofs of great genius and philosophic research, but in his habits was exceedingly wild and profligate. After his conversion he was distinguished for his tender sympathy and skill in opening the human heart, so that he became the instrument of salvation to many. At the age of twenty-four he was chosen fellow of Christ College, and obtained high reputation as a tutor. He finally entered into holy orders, and began his ministry by preaching to the prisoners at Cambridge Jail, when, to his efforts he displayed a mind admirably adapted to his station. So far was he from considering his field of effort circumscribed that he improved every opportunity to do good. On one occasion, perceiving a young man who was an counterfeit, he offered to take the child at his own expense, and he, ac-

with thee? art thou afraid of death?" "Ah! no," said the malefactor; "but of a worse thing." "Then come down," said Mr. Perkins, "and thou shalt see that the grace of God can do to strengthen thee." Mr. Perkins then took him by the hand, and, kneeling down with him at the foot of the ladder, so fervently acknowledged sin, its aggravations, and its terrible descent, that the poor criminal was inspired into tears. He then proceeded to set forth the Lord Jesus Christ as the Saviour of every believing penitent, which he was enabled to do with such success that the poor creature continued indeed to shed tears; but they were now tears of love, gratitude, and joy, flowing from a per-
massive sensation in the mind, which blood. He afterwards ascended the ladder with com-
pose, while the spectators lifted up their hands and praised God for such a glorious display of his sovereign grace. About 1865 Perkins was chosen rector of St. Andrew's parish, in Cambridge, and in that capacity he remained until his death in 1869. As a preacher Per-
kins was very greatly admired. While his discourses were suited to the capacity of the common people, the pious scholar could not but appreciate them. They were said to be "all law and all gospel," so well did he unite the one with the other. Being a very strong in the character of Christ, he was an able casuist, and was resorted to by afflicted consciences far and near. Bishop Hall says of Per-
kins that "he excelled in distinct judgment, a rare dexterity in clearing the obscure subtleties of the schools, and an easy explication of perplexed sub-
jects." His commentaries on many of the chris-
tian authors, especially of the early fathers, were translated into Latin, French, Dutch, and Spanish; and their popularity at home is evinced by the number of collective editions of them, each in 3 vols. fol., issued shortly after his death, between 1605 and 1635. We notice, Works complete, according to his own cens-
orchestra (Lond. 3 vols. fol.; i, 1616; ii, 1617; iii, 1618). The last dates which we find are 1626, 1631, and 1635. Opera, Latin (Geneva, 1611). It is not a little remarkable that, in this day of the exhumation of so much buried theology, Perkins's works have not been republished in new editions. See Dods, in the Author of Expositions of the Creed; of The Lord's Prayer; of chap. i-v (completed by Rodolfe Cudworth) of the Epistle to the Galatians; of St. Matthew v-iii; of Ro-

mains i-iii.—Commentary on Hebrews xi:—Cases of Conscience; and many doctrinal, practical, and contro-
versial tracts. Several of his works were translated

Perkins, William (2), a minister of the Meth-
odist Episcopal Church, South, was born in Goochland County, Va., Aug. 2, 1800, and, in his own words, was
"born again" Aug. 30, 1825. He was licensed to preach in 1828, serving the Church in a local relation with great acceptability for twenty-five years. He was ordained deacon, March 3, 1833, at Petersburg, Va., by bishop Hedding; ordained elder, Oct. 6, 1839, at Fayette, Mo., by bishop Morris. At the session of 1855 he entered the Itinerancy as a member of the Mis- sionary District, and continued in this session un- til he ceased at once to work and live, Jan. 31, 1871. He filled various appointments on districts, stations, and circuits until the fall of 1870, when he was super- annuated. "Brother Perkins, as a preacher, was too well known to require panegyric. He was able and faithful—a man of great culture and wide researches, which, however, he never obtruded in his pulpit minis- trations. There he was the simple, earnest 'mes- senger of God,' whose trumpet gave no uncertain sound. He was a gifted and useful minister of the New Testament, delighting and glorying in the cross of Christ. All the time during his last illness he was in a very happy frame of mind, exhorting all his friends to increased faithfulness in the service of God." (Minutes of the Annual Conference of the M. E. Church, South, 1871, p. 606, 607).

Perl, Joseph, a Jewish savant, was born about 1778. He holds a prominent position in Jewish histo- ry as a father of modern science. A school for scholars among the Jews in Austro-Galicia. He gave time and money for the foundation of a higher school for the Jews at Tarnopol, which afterwards became famous, and of which he was the president until his death, Oct. 1, 1839. He not only aimed at a correc- tion of religious books and a revival of the ancient school system, but also fought against the Chasidic obscurantism, which tried to suppress every new movement that aimed at the amelioration of the condition of the Jews. For this purpose he wrote, י"ש רדס תביש, 151 epistles written after the fashion of the Epistulae obscurores virorum (Vienna, 1819). — בָּרָא יְבִיָּה, against the Chasidim and their rabbins (ibid. 1800).—בְּרָא יְבִיָּה, a kind of criticism of his Epistulae, also against the Chasidism (ibid. 1838). See Fürst, Bibl. Jud. iii, 78; Grätz, Geschichte der Juden, xi, 485 sq.; Jost, Geschichte des Judentums und seiner Sekten, iii, 185, 343; Mannheimer, Leichtreede, Vienna, 1840); Rap- papor, in Kerem Chessed, iv, 45-57; v, 168 sq.; Busch, Jahrbuch, 1846, 1847; Zunz, Monatstuge (Engl. transl. by J. B. 1853); in Jewish Messenger, New York, 1874. (B. P.)

Perl, Francesco, a painter of Mantua, supposed by Volta to have studied under Giulio Romano. There were two fine frescoes in the dome of the church of St. Lorenzo in that city attributed to him. Little besides is known of this artist. He flourished about the middle of the 16th century.

Permaneder, Michaelis, D.D., a Roman Catholic divine, was born at Munich in the year 1794. In 1818 he was ordained to holy orders. In the following year he was appointed teacher at the pre-gymnasium; in 1822, professor at the gymnasium. In 1834 he was appointed to fill the chair of canon law and Church history at the lyceum in Freising, which position he held until the year 1847, when he was called to Mu- nich for the same work. He suddenly died at Re- gensburg, Oct. 10, 1862. Of his writings we men- tion, Handbuch des gemeinsinligen katholischen Kir- chenrecht (3d ed. Landshut, 1866; 4th ed. 1865); —Biblia- theca patristica, 2 vols.; vol. i contains a Patrologia generalis, and the second, which is unfinished, the be- ginnings of a Michaelis repertorium, speculativae, or Arti- cherver für das katholische Deutschland, 1862, p. 235, 292; 1865, p. 77. (B. P.)

Pernocoilatians (watching all night) is a term that represents what was long a custom with the more pious Christians, especially before the greater festivals. See Vigi- lants.

Perola, Juan and Francisco, two brothers, Span- ish painters, sculptor, and architects, were natives of Almagro, and flourished about 1600. They visited Italy, studied under Michael Angelo, and finished their artistic education in Spain under Gasparo Becerra. Af- ter leaving that master they gained considerable dis- traction, and were commissioned by the marques de Santa Cruz to erect his palace at Vico. Of their works in sculpture, the Biographie Universelle mentions the busts decorating the above-mentioned palace, and the museoleum of the marquis of Santa Cruz in the church of the Franciscans at Vico. They also painted the grand altar-piece in the same church, and, in concert with Mo- hedano, they painted several frescoes in the sanctuary of Cordova and the convent of Seville.

There was an architect named Esteban Perola, a native of Almagro, and contemporary with the preceding. He designed and probably erected the convent of San Francisco at Seville, commenced in 1623.

Peroni, Giuseppe, an Italian painter, born at Parma about 1700. According to the Abate Affo, he first studied under Felice Torelli at Bologna; next with Donati Credi; and afterwards went to Rome, where he became a pupil of Agostino Masaccio and to Lanzi, he has been much in the style of Carlo Mar- ratti, but his coloring parts largely of the verds and other false coloring of Conca and Giaquinto, who were then very popular at Rome. Such are his pictures of St. Philo, in the church of St. Satiro at Milan, and the Concepcion, in the possession of the Padri dell' Oratorio at Turin. Lanzi says, also, that his best works are his frescoes in the church of St. Antonio Abate at Parma, which rank him among the good painters of his age. There he also painted an altar-piece of the Crucifixion, in competition with Pompeo Battoni. He executed several other works for the churches of his native city; adorned its academy, and wrought much for the collections. He died at Parma in 1776, at an advanced age. Lanzi calls him the Abate Giuseppe Peroni, a title probably conferring some favor upon him.

Perotti, Nicola, an Italian prelate and philologist, was born at Sassoferrato, in Umbria, in 1430. He be- came professor in the University of Bologna, where he was educated. His translation of the first five books of Polybius, the only ones then known, recommended him to the protection of pope Nicolò V. Shortly after his appointment he was appointed apostolic vicar. In 1458 he obtained the archbishopric of Siponto or Manfredonia; but he continued to reside at Rome. The duties of governor of Umbria, to which he was appointed in 1465, and those of governor of Perugia in 1474, did not cause him to neglect literary labors. He died Dec. 13, 1490. Perotti was one of the contrib- utors to the Renaissance. His principal works, very useful in the 15th century and now quite curious, are a Latin Grammar, Rudimenta Grammatica (Rome, 1473, fol.), and a commentary upon Martial, which forms a kind of argumentative Lexicon of the ancient language, Commentarii in librum Corinici, in verbo Commentaria linguue Latinae (Venice, 1488, 1499, 1513, 1526, fol.). We have also a treat- ism from Perotti, De Generibus Mirriorum (ibid. 1487, 4to), and an edition of the Historia Natura of Pliny. The works of Perotti are counted among the most ancient monuments of printing. Some falses from Phedra were published after one of his manu- scripts, and critics have even regarded him as the au- thor of the whole collection which bears the name of this poet: but it is a hypothesis without probability, and favored by none of the mediæval Latin writers who remain of his name. See Paul Joseph, Ricci, Nécro- chéri, Mémoires, vol. ix; Bayle, Dictionnaire; Tirochi- chi, Storia della Letteratura Italiana, vi, 11, 408; Apos-
PEROXINO

Giovanni, a Piedmontese painter who flourished about 1517. According to Della Valle, he was a good artist; and Lanzi says "he was well known for the pictures he left in the church of the Conventuals at Alba."

Perpendicular Style, the name given to the style of Gothic architecture in England which succeeded the Decorated style. It prevailed from about the end of the 14th century to the middle of the 16th century, and was thus contemporary with the Flamboyant style in France. These styles have much in common, but they derive their names from the features peculiar to each. Thus the Flamboyant is distinguished by the flowing lines of its tracery; while the Perpendicular is remarkable for its stiff and rectilinear lines. The lines of the window-tracery are chiefly vertical, and the mullions are frequently crossed by horizontal bars. The mouldings are usually thin and hard. The same feeling pervades the other features of the style; the buttresses, piers, towers, etc., are all drawn up and attenuated, and present in their shallow recesses and masons lines a great contrast to the deep shadows and bold mouldings of the earlier styles. The art of masonry was well understood during the Perpendicular period, and the vaulting was admirably built. Pan-tracery vaulting is peculiar to this style, and is almost invariably covered with panelling, which was also much used, the walls being frequently almost entirely covered with it. The depressed or four-centre arch is another of its peculiar features. This arch, over doorways, has the mouldings generally arranged in a square form over the arch, with spandrels containing shields, quatrefoils, etc. The arches are often two-centred, but as frequently four-centred; at the commencement of the style, of good elevation, but subsequently much flattened; in small openings ogee arches are very often used, and a few rare examples of elliptical arches are to be found. The Roofs of this style are often made ornamental, and have the whole of the framing exposed to view. Many of them are of very high pitch, and have a magnificent effect, the spaces between the timbers being filled with tracery, and the beams arched, moulded, and ornamented in various ways; and sometimes pendants, figures of angels, and other carvings are introduced. These roofs are among the peculiar and beautiful features of the architecture of England. The largest roof of this kind is that of Westminster Hall, erected in the reign of Richard II.

The Perpendicular style may be said to have been introduced about the middle of the 14th century in some parts of England, as at Gloucester and Windsor; but the Decorated and Perpendicular styles overlapped each other for a long period, some districts retaining the older style much longer than others. The following are some of the chief dated examples:

- York Cathedral—Choir, 1375-1403.
- Warwick, St. Mary's—Choir, 1370-1391.
- Lynn, Norfolk—Chapel of St. Nicholas, 1371-1379.
- Selby Abbey, Yorkshire, 1375.
- Winchester Cathedral—West front, 1360-1396.
- Canterbury Cathedral—Nave and western transepts, 1378-1411.
- Oxford—New College, 1380-1386.
- Howden, Yorkshire—Chapter-house and tower, 1389-1407.
- Saltwood Castle, Kent—Oste-house, 1381-1396.
- Gloucester Cathedral—Cloisters, 1380-1418.
- Winchester College, 1387-1393.
- Winchester Cathedral—Nave, 1394-1410.
- Westminster Hall—Roof, 1397-1398.
- Maidstone—College and Church, 1396.

In the 15th century the Perpendicular is the general style of England for churches, houses, castles, barns, cottages, and buildings of every kind. The universities of Oxford and Cambridge owe many of their colleges to this period, and there we find vestiges of the style still lingering when in other places it had been lost.

Perpemt-Stone (Fr. Perpignan), an architectural term, designates a large stone reaching through a wall so as to appear on both sides of it; the same as what is now usually called a bender, lind-stone, or through, except that these are often used in rough-walling, while the term perpemt-stone appears to have been applied to squared stones, or ashlar; benders also do not always reach through a wall. The term is still used in some districts; in Gloucestershire, ashlar thick enough to reach entirely through a wall, and show a fair face on both sides, is called Perpignan ashlar. This name may perhaps also have been sometimes given to a corbel. The term Perpemt-wall would signify a wall built of perpemt ashlar. Also a pier, buttress, or other support projecting from a wall to sustain a beam, roof, etc. In Lincoln Cathedral the dwarf walls separating the chapels in the transepts are also called perpemt-walls, although actually they do not sustain a roof.

Specimen of the Perpendicular Style (from Yelverton, A.D. 1500).

Perpemt-wall, Lincoln Cathedral.
PERPETUA, Sr., a Christian martyr who suffered at Carthage, under the persecution of Severus, at the beginning of the 3d century. She was a lady of high rank, and at the time when she was accused about twenty-two years of age. In her martyrdom she afforded an illustrious example of Christian fortitude. She was, moreover, and she was the favorite child of a pagan father, who imporrtuned her to turn from the Christian faith, and to whom her constancy appeared but absurd obstinacy; every entreaty, every threat was employed; she was held up to the terror of the crowded court, in which certain conviction awaited her; she was scourged and imprisoned; the tenderest feelings of filial and maternal love were appealed to; but in vain. "God's will must be done," was her language, and she remained immovable. Nor was she less firm in the final scene, when in a crowded amphitheatre, together with Felicitas, she was thrown to a mad or wild cow. By this attack she was stunned; but the fatal stroke was left, in the spoliumarium—a place where the wounded were despatched—to an unskillful gladiator, whose trembling hand she herself, with a martyr's courage, guided to her throat. Felicitas suffered with her. One scene from her life represented in modern art is her farewell to her infant child. There are, however, many incidents in her story which would be most interesting subjects for a novel, but which remain unrepresented in the translation. In her picture a cow stands by her side or near her. She is commemorated in the Roman Catholic Church March 7. See Butler, Lives of the Saints; Hagenbach, Kirchengesch. der ersten drei Jahrhunderte, ch. xiii; Alzog, Kirchengesch. i, 129; Fox, Book of Martyrs, p. 23; Böhringer, Kirchengesch. i, 43; Rümart, in the Act. Martyr. and the Act. SS. of the Bollandists; Schaff, Church Hist. vol. i; Jortin, Remarques, i, 532.

Perpetual Curate, a title of the incumbence of a church, chapel, or district, which is within the boundaries of a rectory or vicarage.

Perpetual Cure, a form of ecclesiastical benefice which grew out of the abuse of lay impropriation (q. v.), the improper appointing a clergyman to discharge the spiritual functions of which he himself was not capable. The substituted clergyman, in ordinary cases, is appointed by the bishop, and called a vicar: the improper appoints the clergyman who is called a perpetual cure. The perpetual curate enters on his office without induction or institution, and requires only the bishop's license. Perpetual cure are also created by the erection and endowment of a chapel subject to the principal church of a parish. Such cure, however, are not benefices unless endowed out of the fund called Queen Anne's Bounty. Churches so endowed are, by 2 and 3 Vict. c. 49, recognised as benefices. The district churches which have been erected under several recent acts are made perpetual cures, and their incumbents are corporations.

Perpetual Virginity of Mary the mother of Christ, a state of sanctified virginity held by some branches of the Christian Church. As the being who was conceived in the womb of the blessed Virgin Mary was of divine origin, and as her virginity had been maintained for the purpose of that miraculous conception, it is thought to be unnecessary and inadmissible. Children conceived in sin were afterwards tenants of that sacred tabernacle. The Church fathers were the first to affirm that the mother of Jesus the Christ was not only a virgin at the time he was born but ever afterwards, and this belief was not called in question in the first ages. A denial of the virginity of the Blessed Virgin Mary at the time of her conception had indeed been made by the Corinthians and Eudominus, who, in the 1st and 2d centuries, asserted that Jesus was the son of Joseph and Mary by natural generation; but no doubt of her perpetual virginity is expressed by any who believed that Christ was born of a virgin (Isa. vii, 14; Luke i, 27) until the 4th century. It was then, after Apollonias had denied the Blessed Virgin to be the real mother of the Word Incarnate, that some were led on to the denial of her perpetual virginity. These were called Apollonians and deniers of the virginity of the Blessed Virgin the object of an idolatrous worship, consisting in the offering of little cakes (collybiades), which were afterwards eaten as sacrificial food. Epiphanius, in his battle against heresy, seems to have been drawn between two extremes. He denounced those who denied Christ's mother to be ever virgin, as adversaries of Mary, who deprived her of "honour due;" while he insisted that, according to the essential principles of Christianity, worship was due to the Trinity alone. Jerome wrote a tract against Helvidius, who maintained the view of the Antidiconiamians; and this tract contains the most of the arguments that have been brought by bishop Pearson and other divines in support of the perpetual virginity of the Blessed Virgin. Helvidius denied it on the ground that he brought back the evangelist Matthew, that Joseph "knew her not till she had brought forth her first-born son" (Matt. i, 25); as if it implied that he knew her afterwards, and that a first-born son inferred a second-born. Jerome answered the first objection by citing other instances in which Joseph was not mentioned in the Bible. He delineated a language (Gen. xxxvii, 15; Deut. xxx, 6; 1 Sam. xv. 35; 2 Sam. vi, 23; Matt. xxiii, 20). But none of these passages are in point. Bengel, who treats the matter as an open question, says, "Isc ei, non sequitur ergo post." The word "first-born" on which the Antidiconiamians laid so much stress, does not occur in the Vatican MS., but, if its genuineness be admitted, the difficulty has been met by the supposition that Christ is called the first-born, not with reference to any that succeeded, but for the following reasons: 1. Because there were special rites attending the birth of a first-born son. These were not delayed until a second was born, but performed at once. The law was, "Sanctify unto me all the first-born: whatsoever openeth the womb among the children of Israel, both of man and of beast, it is mine" (Exod. xiii, 2). Joseph and Mary, in obedience to this law, brought our Saviour to Jerusalem "to present him to the Lord: as it is written in the law of the Lord: Every male that openeth the womb shall be called holy to the Lord" (Luke ii, 22, 23). "First-born" is therefore equivalent to "first-born which openeth the womb," which says, "the Scripture notion of priority excluded an antecedent, but infereth not a consequence; it suffereth none to have gone before, but concludes not any to follow after" (Creed, i, 214). See also Hooker, Ecc. Pol. bk. v, ch. xiv, sec. 2; Jerem. contra Hebr. v, 7; Augustine, Hier. viii, 24, 25; Whitby and Bishop Wordsworth, worth, ad loc.). 2. The First-born was one of the titles of Jesus. In its classical sense, πρωτοτόκος (thus accentuated) never means the first-born, but has an active signification in relation to the mother who for that reason is called Ιησοῦς Ἰησοῦς. Hid, xxv, 23. Χριστός, Πρωτότοκος, is the title of Jesus as the Son of God. In the Sept. it is not used, with a different accentuation, πρωτοτόκος, to signify (a) sometimes the first-born, (b) sometimes the privileges which belong to the elder son, and also (c) a title of the Messiah. (c), in the first sense it is used in Gen. iii, 19; xliii, 28; Num. xviii, 15, etc. (d) There are other passages in which it is used metaphorically to express peculiar honor and dignity: "Israel is my son, even my first-born" (Exod. iv, 24); "Ephraim is my first-born" (Jer. xxxi, 8). This is also a Hebrew use which has been rendered by the translator of the A. V. "first-born" in Isa. xiv, 20, where "the first-born of the poor" means "very poor;" and Job xviii, 13, where "the first-born of death means the most terrible form of death. (c) It is used
PERPETUAL VIRGINITY

as a title of the Saviour, without reference to priority of birth, in Psal. lxxxix, 27. In the New Testament our Lord is called πρωτότοκος in παλαίσι αἰωνίοις, "the first-born among many brethren" (Rom. viii, 29, πρωτοτόκιος πάσας ετέσιως, "the first-born of every creature," signifying the dominion which he has received to make him head over all things. Πρωτοτοκιός τόν θεόν (Col. i, 18; Rev. i, 5) means not simply the first who was raised, for that Christ was not, but he who hath power over death, and whose resurrection is an earnest of that of all his people. Hence it is argued that the word πρωτοτόκιος, in Matthew's Gospel, may be nothing more than a synonym of Christ. He was the "first-born" because he was the Second Adam, the Perfect Man, the Restorer and Redeemer of his brethren, the Lord of the Church, and the Heir of all things. The metaphor was borrowed from the dominion which the first-born exercised over his brethren, but when the word is compared with other pass-sages in which it occurs it avails nothing for Helvidius's argument against the perpetual virginity of the Blessed Virgin Mary. But this philological argument is evidently inconclusive as applied to the passage. The word "first-born" is not understood thus generally, nor as a title, but is explicitly limited to the fact of parturition. See FIRST-BORN.

Another argument of the Antidomiamarii was drawn from the mention made of the brethren of our Lord (Matt. xxi, 51; John vii, 50), from which it was inferred that these brethren were the children of our Lord's mother by her marriage with Joseph; but (1) these brethren may have been the children of Joseph by a former wife. There is an old tradition preserved by Epiphanius and followed by Hilarus, Ambrose, Chrysostom, Cyril, Euthymius, Theophylact, Oecumenius, and Nichenoipers that Joseph had four sons and two daughters by a former wife named Escha. (See Eusebius, Eccil. Hist. ii, 1; Pearson, On the Creed, ii, 140.) Jerome was the first to confute this opinion, alleging that it rested only on a statement contained in an apocryphal writing. (2) It was held by Jerome, Augustine, and generally by the later commentators, that the brethren are not strictly the brethren but the cousins of our Lord, in which sense the term is frequently used in Holy Scripture (Gen. xiii, 9; xxix, 12; Lev. xiv, 4). Helvidius here argues that there was a marriage of James and John being not only the brethren of our Lord, but the sons of the Blessed Virgin Mary. Among the women at the cross were Mary Magdalen and Mary the mother of James and Joess. The latter Mary, he thought, being the daughter of the other than the son of the Lord, because she was found early at the sepulchre with Mary Magdalen and Salome, and it was improbable that any one should have greater care for the body of her son than his mother. The answer to this is clearly shown by bishop Pearson: "We read in St John xix, 25, that 'there stood by the cross of Jesus his mother, and his mother's sister, Mary the wife of Cleophas, and Mary Magdalen.' In the rest of the evangelists we find at the same place 'Mary Magdalen and Mary the mother of James and Joses,' and again at the sepulchre, 'Mary Magdalen and the other Mary;' wherefore that other Mary, by the conjunction of these testimonies, appeareth to be Mary the wife of Cleophas and the mother of James and Joses; and consequently James and Joses, the brethren of our Lord, were not the sons of Mary his mother, but of the other Mary, and therefore called his brethren from Scripture of James and John being not only the brethren of our Lord, but the sons of the Blessed Virgin Mary. Among the women at the cross were Mary Magdalen and Mary the mother of James and Joses, and consequently James and Joses, the brethren of our Lord, were not the sons of Mary his mother, but of the other Mary, and four Marys, as follows: (1) Mary the mother of Jesus; (2) Mary the wife of Cleophas or Alpheus, who was the mother of James the bishop and apostle, and of Simon and Thaddæus, and a certain Joseph; (3) Mary Salome, the wife of Zebedee, the mother of John the Evangelist and James (Matt. xxvii, 56, Mark xv, 40; xvi, 1); (4) Mary Magdalen. These four are found in the Gospels. James and Judas and Joseph were the sons of the maternal aunt of Jesus. Mary the mother of James and Joseph, wife of Alpheus, was sister of Mary the Lord's mother: whom John consecrates "of Cleophas" (τιν την Κατρα, xii, 25), either from her father or her family, or from some other cause. Mary is called Salome either from her husband or her residence. Her, too, some call "of Cleophas," because she had had two husbands. See BRETHREN of our Lord.

In the Greek Church the Blessed Virgin has always been called ἀδεῖς πικρησσος. This term was used by St. Athanasius. She was so called at the Council of Chalcedon (A.D. 451), and in the Confession of Faith published by the Archdiocese of Alexandria shortly after at Pisa (in 1409), in order to terminate the long-continued schism of the Church. The Council of Perpignan was attended only by a few French and Spanish ecclesiastics, and they quitted the council when they found Benedict stubbornly refused to assign the perpetual honors. No action was taken by the council worthy of notice. See BENEDICT XIII (a).

Perpignan, COUNCIL of, was convened Nov. 1, 1408, by pope Benedict XIII in the city of Perpignan, in the Eastern Pyrenees, and then belonging to the kingdom of Navarre, whither this rival pope had been obliged to retire from Avignon after the withdrawal of French support. This council was intended to anticipate the action of the council of Constance, which met shortly after at Pisa (in 1409), in order to terminate the long-continued schism of the Church. The Council of Perpignan was attended only by a few French and Spanish ecclesiastics, and they quitted the council when they found Benedict stubbornly refused to assign the perpetual honors. No action was taken by the council worthy of notice. See BENEDICT XIII (a).

Perrache, Michel, a French sculptor, was born at Lyons in 1885. At the age of sixteen he visited Italy for improvement, and also went to Flanders, where he executed a number of sculptures for a church at Ghent, and was crowned with the freedom of the city. In 1717 he returned to France and settled at Lyons, where he practiced the art for many years, and executed a variety of sculptures for the churches and gardens. He died 1750. See Perrache, Nicolas, a French theologian, was born in Paris about 1611. Having been received doctor of the Sorbonne in 1659, he was one of the seventy doctors excluded with Arnauld on the charge of Jansenism, Jan. 81, 1656. Perrauat died at Paris in 1661. He published only, La Morale des Jésuïtes, extraits fidèles eme leurs livres imprimés à l'Exception de mes Superieurs de leur Compagnie (Mons, 1667, 4to, and 1659, 3 vols. 16mo) :—three Letters to Dr. Haslé against signing the Formulary, printed with the responses of the latter in a collection of pieces upon the Formulary, the bulls and constitutions of the popes. See Mortier, Dict. Hist. s. v.; Nicéron, Mém. vol. xxxi, a. v.

Perenot de Graveline, Antoine de, a noted French cardinal, was born at Beauneon, Aug. 20, 1517; studied at the universities of Paris, Padua, and Louvain, and at twenty-three became bishop of Arras. Having exhibited great executive talent in the administration of Trent, he was made councillor of state, and upon the death of his father, Nicolas Perenot, the prime-minister of Charles V, was himself elevated to that position. He
soon acquired much distinction, and became known all over the Continent. After the accession of Philip II, Perrenot continued in the priesthood, but at the same time received recognition for his valuable services to the Church by being made in 1500 archbishop of Malines and primate of Flanders. In 1506 he was called to Rome to assist the conclave in the election of Pope Pius V. In 1570 he was instrumental in effecting a treaty against the Turks, so which benefited Naples that he was named viceroy of that territory. In 1564 he was elected archbishop of Beaufort, and he thenceupon resigned the see of Malines. He died at Madrid Sept. 21, 1586. Cardinal Perrenot was one of the most eminent men of his time. He was marvellously successful in all that he undertook. In the State and in the Church he exhibited the same aptitude and power, and developed his plans to perfection. Besides, he was a good man, and sought not to gratify a selfish ambition, but to labor for his fellows and the religious faith he himself honestly avowed. He was a general favorite among his contemporaries, as is evinced by the many works that were dedicated to him by his many friends and protégés. Cardinal Perrenot was too busy to write many books; but his letters, which have been collected in 38 vols., with memoir, are much valued for the light they throw on the history of Charles V and on the beautiful character of the cardinal himself. See Courchet, Hist. des princes écrivains de la France, t. ii. Brémond, Hist. de la France chrétienne, t. iv. Robertson, Hist. of Charles V; Prescott, Hist. of Phil. II; Schiller, Gesch. d. Niederlande, vol. i., pt. ii., ch. i.

Perrier, François, a French painter, was born at Mâcon, Burgundy, about 1560. His father was a goldsmith, and instructed him in the elements of design, but was unwilling that he should become a painter. Opposed in his wishes, young Perrier left his native place, and, being without means of a livelihood, he became the conductor of a blind mendicant who was traveling to Italy, and in this way succeeded in reaching Rome. On the death of his master, he was employed by a gentleman-dealer to copy several paintings, and some of his copies were shown to Lanfranco, who encouraged him to persevere and admitted him to his school. After several years' residence at Rome, Perrier returned to France and passed some time at Lyons, where he painted the Desolation of St. John, a Holy Family, and other works for the cloister of the Carthusians. Not content with a provincial field for the exercise of his abilities, Perrier went to Paris, and associating himself with Vouet, was employed by him to paint from his design the chapel of the Madeleine in the church of St. Eustache. Meeting with some encouragement, he revisited Italy in 1655, and applied himself to engraving the principal antique statues and bas-reliefs, also a number of plates after the Italian masters. After the death of Simon Vouet he returned to Paris in 1658. In 1679 he was made a member of the Academy of St. Luke. He died at Paris in 1694. His pictures evince great warmth of imagination, but the design is often incorrect, the airs of his heads lack elegance and dignity, and his coloring is too dark. Perrier was a member of the Academy, and died at Paris, according to D'Argenville, in 1658. There are a number of etchings by him, incorrectly and negligently designed, and executed in a slight, hasty style, usually marked Paris, or with his monogram. Among them are the following: A set of one hundred prints from antique statues, published at Rome: a set of fifty taken from the ancient bas-reliefs; ten plates of the Angels in the Farnesina, after Raffaello; two plates of the Assembly of the Gods, and the Marriage of Cupid and Psyche, from the paintings by Raffaello in the Farnesina; the Divinum of St. Jerome, after Agos. Caracci; the Flight into Egypt, after Raffaello; the Nativity, after S. Vouet, and the Portrait of Simon Vouet. Among subjects from his own designs are, the Holy Family, with St. John playing with a Lamb; the Crucifixion (inscribed Franciscus Perrier, Burgundii, pinx. et sculpt.); St. Roch curing the People afflicted with the Plague; the Body of St. Sebastian supported by two Saints. See Spooner, Zieg. Hist. of the Fine Arts, ii, 677.

Perrier, Guillaume, a painter and engraver, nephew and scholar of the preceding, flourished about the middle of the 17th century, and died in 1655. His works are executed in the style of his master, and, with a few principal pictures, are preserved in the sacristy of the Minims at Lyons, where he had taken refuge, having killed his antagonist in a duel. There are a few etchings by him in the style of François Perrier, among which are an emblematic subject, the Pedal del L. Antonio Torres (ibid. 1738, 4to). See Tipaltio, Biogr. degli Italiani illustri, vol. viii.

Perrincheif, Richard, a noted English divine, was born near the opening of the 17th century, and was educated at Cambridge University. He was made prebend of Westminster in 1604, prebend of London in 1607, and archdeacon of Huntingdon in 1670. He died in 1673. He published, Sermon (Lond. 1666, 4to) — Liscourse on Toleration (1667, 4to) — Indulgence not justified, against Dr. John Owen's Peace Offering; and two works of a semi-political character, evincing hatred of the Puritans in waded leaning towards the cause of king Charles I. See Allibone, Dict. of Brit. and Amer. Authors, s. v.

 Perrine, Matthew La Rue, D.D., a Presbyterian minister, was born at Freehold, Monmouth County, N. J., May 4, 1777. He entered the College of New Jersey in 1794, graduated in 1797, and was licensed to preach by the Presbytery of New Brunswick Sept. 18, 1799. In May, 1800, he was appointed a missionary; on June 24 following he was ordained as an evangelist, and on June 15, 1802, he was installed pastor of the Church at what was then called Bottle Hill, but is now Madison, N. J. After some other changes of location he was finally installed pastor of the Spring Street Church, New York City, Oct. 31, 1811, which situation he filled until July 26, 1820, when the connection was dissolved at his request. In 1821 he was elected professor of ecclesiastical history and Church polity in the theological seminary at Auburn, and in 1832 he was chosen to the Female Missionary Society in New York (1817) — and An Abstract of Biblical Geography (Auburn, 1835). See Sprague, Annuals of the Amer. Pulpit, iv, 237 sq.
lies on both sides. His parents, having been educated in the principles of Calvin, retired to Geneva; and settled afterwards in the canton of Berne, where he was born, Nov. 25, 1556. His father, who was a man of learning, instructed him till he was ten years of age, and taught him mathematics and Latin. Young Perron seems afterwards to have built upon the works of his father; for, while his books were tossed about from place to place by civil wars and persecutions, he applied himself entirely to study. He learned Greek and philosophy, beginning the latter study with the logic of Aristotle, thence passing to the orators and poets; and afterwards he turned himself to the study of the Hebrew language, which he attained so perfectly that he read without points, and lectured on it to the ministers. In the reign of Henry III, after the Pacification with the Huguenots, his parents returned to France, and shortly after young Du Perron was (in 1576) introduced to the king, as a prodigy of parts and learning. His controv. sial talents were very great, so that none dared dispute with him, although he made many challenges to those who would have been glad to attack him. At the breaking up of the states he chose to remain, and he was even chosen one of the chamber of a cavalier, in the grand hall of the Augustinians, where he held public conferences upon the sciences. He set himself afterwards to read the "Sum" of St. Thomas Aquinas, and cultivated a strict friendship with Philip Desportes, abbot of Tiron, who put him into his own palace and treated him as if he were a noble; and he left the favor of this prince in the following manner: One day, while the king was at dinner, he made an admirable discourse against atheists; with which the king was well pleased, and commended him much for having preserved the being of God by arguments so solid. But Perron, whose spirit of policy had not yet got the better of his passion for shining or showing his parts, replied, that "if his majesty would vouchsafe him audience, he would prove the contrary by arguments as solid;" which so offended the king that he forbade him to come into his presence. Perron recovered himself, however, from this fall. The reading of St. Thomas had engaged him in the study of the fathers, and made him particularly acquainted with Augustine's writings, so that he devoted himself wholly to divinity, and resolved to abuse Protestantism. Having divined the errors of the Reformed, he collected all the quotations and weak reasonings in Du Plessis-Mornay's "Treatise upon the Church," he instructed himself thoroughly in controverted points, and made his abjur. He now labored for the conversion of others by arguments so solid, the other upon self-knowledge, which he pronounced before that prince. After the murder of Henry III he retired to the house of cardinal de Bourbon, and labored more vigorously than ever in the conversion of the Reformed. He brought a great number of them back to the Church, among whom was Henry Spandanus, afterwards bishop of Pamphylia; as this prelate ac. knowledges, in his dedication to cardinal Du Perron of his "Abridgment of Baronius's Annals." This con. vention was followed by several others; and among them for a shorter time, but very effectually, that of Henry IV, before whom he had held at Nantes a famous dis. pute with four ministers, which resulted in his appoint. ment to the bishopric of Evreux, that he might be ca. pable of sitting in a conference in which the king con. vened. Perron attended this, and the other prelates at St. Denis, and it is supposed to have contrib. uted more than any other person to the conversion of that great prince. After this, Perron was sent with Mr. D'Ossat to Rome, to negotiate Henry's reconciliation to the holy see; which at length he effected, to the satisfaction of the king, but not of his subjects— that part of them at least who were zealous for Galli. can liberties, and thought the dignity of their king compromised upon this occasion (see Jervis, i, 203 sq.). Du Perron stayed the whole year at Rome, and was consecrated to the holy office by cardinal De Joyeuse, archbishop of Rouen, Dec. 27, 1596, and then returned to France; where, by such kind of service as have already been mentioned, he advanced himself to the highest dignities. He wrote and preached and dis. puted against the Reformed; particularly against Du Plessis-Mornay, with whom he had a public conference in 1600, in the presence of the king, at Fontainebleau. (See for an account, Jervis, i, 218 sq.) The king re. solved to make him grand almoner of France, to give him the archbishopric of Sens, and wrote to Clement VIII to obtain for him the dignity of a cardinal, which that pope conferred on him, in 1604, with singular marks of esteem. The indisposition of Clement made the king resolve to send the French cardinals to Rome; where Du Perron was no sooner arrived than he was elected cardinal of Geneva, in the person of a cardinal, that he had a great share in the elections of Leo X and Paul V. He became a most devoted advocate of the ultramontane doctrine and a powerful champion of papal interests. In the many anxious questions which arose Du Perron's decisions always carried great weight. He was sent a third time to Rome, to assist in the election of the pope. He lost the favor of this prince in the following manner: One day, while the king was at dinner, he made an admirable discourse against the Jesuits; with which the king was well pleased, and commended him much for having preserved the being of God by arguments so solid. But Perron, whose spirit of policy had not yet got the better of his passion for shining or showing his parts, replied, that "if his majesty would vouchsafe him audience, he would prove the contrary by arguments as solid;" which so offended the king that he forbade him to come into his presence. Perron recovered himself, however, from this fall. The reading of St. Thomas had engaged him in the study of the fathers, and made him particularly acquainted with Augustine's writings, so that he devoted himself wholly to divinity, and resolved to abuse Protestantism. Having divined the errors of the Reformed, he collected all the quotations and weak reasonings in Du Plessis-Mornay's "Treatise upon the Church," he instructed himself thoroughly in controverted points, and made his abjur. He now labored for the conversion of others by arguments so solid, the other upon self-knowledge, which he pronounced before that prince. After the murder of Henry III he retired to the house of cardinal de Bourbon, and labored more vigorously than ever in the conversion of the Reformed. He brought a great number of them back to the Church, among whom was Henry Spandanus, afterwards bishop of Pamphylia; as this prelate ac. knowledges, in his dedication to cardinal Du Perron of his "Abridgment of Baronius's Annals." This con. vention was followed by several others; and among them for a shorter time, but very effectually, that of Henry IV, before whom he had held at Nantes a famous dis. pute with four ministers, which resulted in his appoint. ment to the bishopric of Evreux, that he might be ca. pable of sitting in a conference in which the king con. vened. Perron attended this, and the other prelates at St. Denis, and it is supposed to have contrib. uted more than any other person to the conversion of that great prince. After this, Perron was sent to

high honor among those of his countrymen who have been accustomed to stand up for Gallican liberties.

The works of Du Perron, the greatest part of which had been printed separately in his lifetime, were collected after his death, and printed at Paris (1620 and 1622) in 5 vols. folio. The first volume contains his greatest work, the "Euvres de l'Empereur," against that of De Plessis-Mornay. The second, his "Reply to the Answer of the King of Great Britain," which originated as follows: James I of England sent to Henry IV of France a book, which he had written himself, concerning differences in religion. Henry put it into the hands of Du Perron's brother, who informed him of its authorship, from what the cardinal had observed to him, that there were many passages in that book in which the king of England seemed to come near the Catholics; and that it might be proper to send some able person, with a view of bringing him entirely over. Henry, taking the advice of his prelates in this affair, caused it to be proposed to the king of England whether or not he would take it in good part to have the cardinal Du Perron sent to him? who returned for answer that he should be well pleased to confer with him, but for reasons of state could not do it. However, a moderate person among the Reformed, who had had several conferences with Du Perron about religion, and who seemed much inclined to a reunion, was prevailed on to take a voyage into England; which was arranged of with the queen regent, to the king, and presented some pieces of poetry to him, which the cardinal had put into his hands. The king received them kindly, and expressed much esteem for the author; who, Cassaubon noticing to Du Perron, he returned a letter of civility and thanks to his Britannic majesty; in which he told him that, "except the sole title of Catholic, he could find nothing wanting in his majesty that was necessary to make a most perfect and accomplished prince." The king replied that, "believing all things which the ancients had unanimously thought necessary to salvation, the title of Catholic could not be denied him." Cassaubon having sent this answer to Du Perron, he made a reply to it in a letter, dated July 15, 1611, in which he sets forth the reasons that obliged him to refuse the name of Catholic to his Britannic majesty. Cassaubon answered in the name of the king to all the articles of his letter; to which the cardinal made a reply, which constitutes the bulk of the second volume of his works. The third contains his miscellaneous pieces; among which are, Acts of the Conference held at Fontainebleau against Du Perron, in the year 1616; moral and religious pieces in prose and verse, orations, dissertations, translations, and letters. A fourth volume of his embassies and negotiations was collected by Cæsar de Ligni, his secretary, and printed at Paris in 1623, folio; but these have not done him much honor, as they do not show that profound reach and insight into things with which he is usually credited. They were also published afterward, under his name, "Perrinomia," which, like most of the ana, is a collection of puns and impertinences. See Jervis, Ch. Hist. of France, i. 263, 216 sq., 219 sq.; Banke, History of the Prose Writers of the 16th and 17th Centuries, vol. i. (see Index in vol. ii.); Gen. Biog. Dict. s. v.; Dupin, Bibliothèque des Auteurs soc. 17th Siècle, s. v.

Perrone, Cardinal. See Perron.

Perrone, Giovanni, a noted Italian Jesuit, one of the ablest of modern Romainist theologians, was born in 1794, in Chieri, Piedmont. After studying in the college of his native city, he finished his theological course in the University of Turin, where he was finally received diaconate. At the age of twenty-five, one year before his ordination, he went to Rome, and entered the Society of Jesus. After one year of novitiate, he was sent to Orvieto to teach dogmatic and moral theology to the students of the society, to whom were added the pupils of the German college. Being ordained priest, he taught in the Roman college, and was appointed, in 1830, rector of the college of Ferrara, from whence he was recalled, in 1838, to resume the teaching of theology in the Roman college. In 1848, at the time of the Roman revolution, he went to England for safety, and only returned to Rome in 1850. During the revolution, he was made rector of all the Roman colleges. Father Perrone, who, with father Passaglia, is counted among the greatest theologians of Italy, thereafter took his seat in the congregation of bishops and regulars, and in the provincial councils, and was charged with the revision of the textbooks of the Eastern church, of the Dutch, and also counselor to the Propaganda, and the Ritual committee, etc. Indeed, Perrone was in scientific and literary relations with the most distinguished savans of Europe. He died at Rome in 1875. His works amount to more than sixty, and have been translated into Latin, French, German, English, and Armenian. The principal, are, Profectiones theologica (Rome, 1835, 9 vol. 8vo). This work has had more than twenty-five editions, and the different treaties of which it is composed have been translated into French and German. An abridged edition of it was made (Rome, 1844, 4 vol. 8vo), and was followed by seventeen others:—Synopsis historiae theologicae cum philosophia comparata (ibid. 1845, 8vo);—De immaculato V. M. Mariae concepto, un dogmatico de ex de a sparsi positi (ibid. 1847, 8vo); several volumes of Exercitii Edi, etc., of which the last eight were translated into Dutch, and entered Considerations sur l' Symbole de Moshe (ibid. 1836, 8vo);—Il Hermesiismo (ibid. 1838, 8vo); translated into French and Latin:—Analyse et Réflexions sur l'Histoire d'Innocent III, by Fréd. Hurter (ibid. 1840, 8vo);—Il Protestantismo (ibid. 1838, 3 vol. 8vo);—translated into French by the Abbé A. C. Pouget (Paris, 1854, 4 vol. 8vo). See F. Ed. Chassy, Notice sur la Vie et les Écris du P. Perrone, at the beginning of the last work quoted.

Perronet, Charles, a Wesleyan preacher in the days of the founder of Methodism, and one of the companions of the Wesleys, was born about 1720 at Shoreham, England, where his father was then vicar. He was educated at Oxford University, and was intended for the ministry in the Church Establishment. But becoming interested in the Wesleyan movement, like his brother Edward and his father, Charles accompanied Charles Wesley in 1747 to Dublin, and travelled for three years over Ireland; but was not admitted to the initiation into the itinerant ministry, and he became a most efficient helper in the Wesleyan cause. When Charles Perronet joined the Conference we have been unable to determine. His name does not appear in the appointments or minutes even as late as 1755, but as many of Wesley's assistants did not join the itinerant ranks, it is possible that Perronet simply lazered as the opportunity opened. In 1755, at the twelfth Conference, e.g., there were present 63 preachers, who are subdivided into three classes; the first is a list of 21 names, beginning with John and Charles Wesley, headed "Our present itinerants are." The second is a list of 12 names, headed "half itinerants;" the third contains 14 names, who are called "our chief local preachers." These half itinerants," says Smith (Life of Wesley, p. 288), "were unquestionably men who gave themselves up to travel under Wesley's direction." Charles Perronet must have belonged to this class. Aug. 12, 1776, we find the death of Charles Perronet recorded, and he is spoken of as an itinerant Methodist preacher of "more than twenty years' faithful service." "Charles Perronet, a man of living wit, and a man of strong, pleasing, and interesting doctrine he always defended—entire sanctification. God, he said shortly before his death, 'has purged me from all my dross: all is done away. I am all love.'" See Armint. Mag. 1871, 529; Stevens, Hist. of Methodism, ii. 390.

Perronet, Edward, was the son of Vincent Per-
PERRONET 991

PERRY

Perronet (q.v.), and for some time the associate of the Wesleys. In Charles Wesley's diary he appears under the affectionate nickname of " Ned," in college Perronet figured as one of the poet's trio beside John and Charles Wesley. In 1746 he travelled with Charles Wesley in the north of England, and was then initiated into the persecutions and other trials of an itinerant preacher's life in early Methodism. Stevens says, " He was at first a very good fellow, and for the most part in good odour; but at times intercepted blows and missiles aimed at Wesley by receiving them himself." In 1748, at the fifth Annual Conference, we find Perronet's name recorded as an itinerant member. Shortly after, however, he ceased to travel with the Wesleys, having taken excepted views and convictions. He was for a while employed by lady Huntingdon, and preached successfully at Norwich, Canterbury, and other places, but from her views of the Church he also differed so widely that he quitted her connection likewise, and became the pastor of a Church of Dissenters at Canterbury. He died in 1792. His last words were, "Glory to God in the height of his divinity; glory to God in the depth of his humanity; glory to God in his all-sufficiency! Into his hands I commit my spirit." He was the author of an anonymous poem called the Anathema, one of the most spirited and nationalistic poems that has ever been written. It was suppressed, after it was in print, by the influence of John Wesley, it thought, though himself in later life said, "For forty years I have been in doubts concerning that question, 'What shall heathen priests and mitred infidels?'" Charles Wesley was shocked at the poem, and declared it to be "lacking in wit and of insufferable dulness, but his feeling as a churchman may have dimmed his sight as a critic." Perronet, however, it must be acknowledged, is severe, even though he considered that in his day there was much to provoke his satirical genius. He wrote also several short poems, chiefly on sacred subjects, and hymns, published by request of his friends, and entitled Occasional Verses, Moral and Sacred, published for the Instruction and Amusement of the Country and Religious (1750). But that which has given him his place in the memory and gratitude of the Christian world is his hymn entitled The Coronation, beginning, "All Hail the power of Jesus' name." This hymn was in some measure the product of the time in which Perronet lived. The hymn is memorable by the wonderful victories gained for the Gospel of Jesus Christ. See Stevens, Hist. of Methodism (see Index in vol. iii); Christopher, Epworth Singers, ed. ix.

Perronet, Vincent, an English divine of the 18th century, noted for the association with the Wesleys, and the service he rendered to Methodism in the days of its first establishment, was born of Swiss-French parentage about 1700. He was educated at Oxford University. After taking holy orders, he was given the parish of Sandwich, Kent, where he remained about nine years, when he was presented to the vicarage of Shoreham. While in this position, two of his sons (Charles and Edward), who were students at Oxford, became intimately associated with the Wesleys, their classmates. Thus the vicar of Shoreham himself received a lively interest in the Oxford movement, and when in 1746 John Wesley saw vicar Perronet, he found in him a true friend, a warm admirer, and a most confidential counsellor. Charles Wesley called him the "archbishop of Methodism." He welcomed the extending evangelical influence in his own church, though his parisheships might chafe them. When Charles Wesley first appeared in his pulpit, they "roared, stamped, blasphemed, rang the bells, and turned the church into a bear-garden." Their hostility was subdued, however, and when John Wesley arrived soon after, he found the church without intermission. Perronet adopted their strongest views of personal religious belief, and wrote several pamphlets in defence of Methodism, and even went so far in his enthusiasm as to give forth his declaration that Methodism is destined by Providence to introduce the approaching millennium." Wesley dedicated to him the Plain Account of the People called Methodists. For nearly forty years the vicarage of Shoreham was a frequent and endeared refuge to both the great leaders, and it was here that the Bishop visited Mr. Wesley in 1747. Vicar Perronet died May 9, 1785. He was a man of saintly piety, and "was entitled on various accounts," says a Calvinistic Methodist authority, "to a conspicuous place among the brightest ornaments of the Christian Church in the last century" (Life and Times of the Countess of Huntingdon, i. 887). He published A Vindication of John Locke from the Charges of giving Encouragement to Scepticism (Lond. 1736, 8vo);--A Second Vindication (1738, 8vo);--Some Enquiries chiefly relating to Spiritual Beings (Lond. 1740, 8vo);--An Affectionate Address to the People called Quakers (ibid. 1747, 8vo), and his defences of Methodism (1740-58). See Jackson, Centenary of Methodism, ch. v; Wesleyan Mag. 1858, p. 484; Stevens, Hist. of Methodism, i, 25 sq.; ii, 259 sq.

Perronet, Charles, a Protestant minister, was born in 1541. He was the son of a counsellor in the Parliament of the region, the Reformed doctrines and retired to Geneva, where he was provided with a place as pastor in 1567. Besides, he ably fulfilled the duties of rector of the academy and professor of theology. What rendered him especially commendable was the courage with which he rebuked religious tolerance. He died in Geneva Oct. 15, 1608. He became suspected by the theologians of the Calvinistic school, who persuaded the council to forbid the printing of the works which he had composed, among others the treatises De la Foi and De extremis in Ecclesia Victoria.

Perronet, John, a preacher of the Society of the Friends, noted as a schismatic, flourished in the 17th century. He was an associate of George Fox for a while, but differing from that good man, Perronet, with a number of followers, branched off into an independent relation. He was an eccentric man, and inaugurated many impractical measures. Thus, e.g., he went to Rome "to convert the pope," and was imprisoned by the Inquisition at Rome. While in confinement he wrote Epistles to the Romans, of which Southey says, "This book is the most frantic I ever saw." See Southey's Life and Correspondence. ch. ix.

Perronet, Paul, Sieur de La Ville, nephew of Charles Perronet, was a writer who flourished in the 16th century. He was educated at Oxford, and published several works which testify to his great piety. Of these we mention, La Gigniromanie, ou Combat de tous les Arts et Sciences (Middletown, 1598, 8vo)--Tabulair sacris (Frankl. 1594, 8vo), extracts from the Old Testament in verse, and Le Traité de Salomon, en Quarains et Sonnets (Rotterdam, 1594, 12mo). According to Bayle, he had worked upon the famous Catholicon d'Espagne. One of his sons was the translator, Nicolas Perrot. See Bayle, Dict. Hist. et Crit., Paix, Vie de Perrot d'Aubusson, in his Dictionnaire, col. Hist. Littr. de Genève: Haag, La France Protestante.

Perry, Benjamin Franklin, a minister of the Methodist Episcopal Church, South, was born of pious parents in Talbot Co., Ga., Feb. 18, 1836. He was early converted, and dedicated himself to the service of God. In 1853 he became a student at Emory College, Va., where he graduated in 1855, taking the first honor of his class, and about that time he was licensed to preach. In 1856 he received his first appointment in the Texas Conference. In 1861 he filled the Austin Station with great credit to himself. At the outbreak of the civil war he determined, after removing his family to

VIL - 31
to Alabama, where they would be better cared for, to enter the Southern army as chaplain. He thus spent the evening of the 19th, and the morning of the 20th, near the headquarters of the Vicksburg siege. Having resigned his chaplaincy, he was appointed, in 1864, a missionary to Johnson's army. In 1865, after the close of the war, he returned to the itinerant runks; was transferred to the Montgomery Conference, and stationed at Loundesboro, the appointee’s preaching was at the time highly looked upon. He was also for two years in charge of the Female College. His health began to decline about June 1, 1868. He refused to rest, though it was manifest that he was overtaxing his strength. About the last of July he was compelled to return to Ohio. He died Sept. 20, 1868. In his last hours he was exultant in Christ’s atonement. See Minutes of the Annual Conf. of the M. E. Churc, South, p. 229, 230.

Perry, Gardner Branan, D.D., a Presbyterian divine, was born in Norton, Mass., Aug. 9, 1783. He received a very careful Academical training, and entered Brown University in the fall of 1800; after two years’ study he left, and entered College, Schenectady, N. Y., where he graduated in 1804. After teaching for one year as principal of Ballston Academy, N. Y., in 1806 he was elected tutor in Union College, where he remained three years. Here he studied theology under Rev. Dr. Nott, and, taking charge of an educational institution in Kingston, N. Y., he resumed teaching, which he continued five years. In the mean time he was licensed, in March, 1812, by Albany Presbytery. In 1814 he was ordained pastor of the Second Congregational Church at Groveland, Mass., where he remained as pastor for forty-five years. Though pastor of a Congregational Church, he was a member of the Presbytery. He was one of the original members of Newburyport Presbytery, preached the sermon at its organization in October, 1826, and was a commissioner from that Presbytery to the General Assembly in 1836. After the dissolution of Newburyport Presbytery he joined Londonderry Presbytery, which he represented in the Assembly in 1849. This relation existed until his death, Dec. 16, 1859. Dr. Perry was a Christian gentleman of the highest refinement and taste. His vast stores of general information rendered him a conversationalist of a high order. He was interested in all public movements, an earnest advocate of the temperance reformation, and ever zealous in the cause of education. He published A History of the Town of Bradford; also a number of sermons. See Wilson, Fresh Hist. Alumni, 1861, p. 105. (J. L. S.)

Perry, James E., D.D., a noted minister of the Methodist Episcopal Church, was born in Ulster Co., N. Y., in 1811. His education commenced at a private school, and he made rapid progress in his studies until he was prepared to enter as a cadet at the Military Academy at West Point. Becoming strongly interested in the cause of Texas independence, he resigned his position in the academy in the third year of his connection with it, and, accepting the appointment of colonel in the service of Texas, proceeded to raise a regiment in New York, and then embarked and reached Texas in time to participate in the battle of San Jacinto, which resulted in the defeat of Santa Anna and the establishment of Texas independence. Upon his return from Texas he settled with his family in Newburgh, N. Y. By invitation of his sister, a member of the Methodist Episcopal Church, he was induced to attend a love-feast, where the strange but consoling truths of experimental religion excited his attention. At an early moment he disclosed his feelings to the Rev. Seymour Landon, then pastor of the Church. The result was his profession of religion, and he united with the Church on probation. Shortly after he felt called of God to the work of the ministry. In 1836 he joined the New York Conference, and was appointed to Burlington and Brutus Circuit, Connecticut. During his ministry, which lasted without interruption from 1838 to the year of his death, he filled many of the first appointments in the New York and New York East Conferences. He was a delegate to the General Conference of 1864. Shortly after the breaking out of the late civil war, Dr. Perry, believing it to be his duty to give his country the benefit of his military experience, accepted the command of the Forty-eighth Regiment of New York Volunteers. He succeeded in raising and building up a body of men, who, under the command of Gen. Tyler, went to the South, and rendered eminent services to the United States army. After the fall of Pulaski he was put in command, and in this fort he died of apoplexy, June 18, 1863. As a preacher Dr. Perry "was calm and impressive. He kept constantly in view the great ends of preaching—the conversion of sinners and the building up of believers in the faith. In debate he was dexterous and cogent. No matter what might be the topic of controversy, he was an able advocate and a formidable opponent. His ability as a logician and his tact as a debater made him naturally a leader upon the floor of Conference. His brethren who adopted his views of Church administration relied uneasily upon his sagacity, and followed his suggestions with confidence. His well-known kindness of disposition subjected him to constant calls to appear as advocate in behalf of parties who were, or were supposed to be, at variance with the Conference. The services rendered by him at such times were purely disinterested. In his attachments Dr. Perry was firm and constant. He grappled his friends to him with 'books of steel.' His character was so positive that he was in danger of being liked or disliked indiscriminately, and with all the force of a strong nature. His ministry was fruitful of good." See Minutes of Conf., 1863, p. 65, 66; Smith, Memoirs of N. Y. and N. Y. East Conf., p. 256-262; Appleton, Annual Cyclop., 1865.

Perry, Joseph, a Congregational minister, was born about 1788, and was educated at Harvard College, class of 1802. He entered the holy ministry, and became minister of East Windsor, Conn., where he died in 1788. He published, Sermon on the Death of W. Walcott (1873):—Sermon on the Death of N. Hooker (1771):—Election Sermon (1775).

Perry, Solomon C., a minister of the Methodist Episcopal Church, was born in what is now called East Attleborough, Mass., May 27, 1867. His parents were members of the Congregational Church, and excelled in the circle of religious connections and moral and moral qualities. His early education was such as a New England rural neighborhood and the times afforded. He passed his youth mostly with his father on the farm. When quite a young man he was awakened to the dangers of an unregenerated state, and, encouraged by an uncles' minister, became a Methodist preacher. To this day he isMethodist meetings. To do this, however, he had to travel seven miles, there being no Methodist church within that distance from his father's house. It was while making this journey on a certain occasion that he was converted. Soon after he felt called of God to preach, and attached himself as a student to the Willingham Academy, then under the care of the late Dr. Fisk. At the termination of his preparatory course he entered, a year in advance, Brown University, under the presidency of Dr. Wayland. After his graduation he taught at Swinburn's Academy, a very，binary，instituition at the time, in the village of White Plains, N. Y. He was licensed as a local preacher. He joined the New York Conference in 1883, and his successive fields of labor were, for the years 1886, 1885, Younger: 1840, Durham and Middlefield; 1841, Stratford and Bridgeport; 1842, Bridgeport; 1843, Bushwick: 1844, 1845, Peekskill: 1846, 1847, New York, Twenty-seven Street; 1848, 1849, Younger and Kingsbridge; 1850, 1851, New York, Fifth and House Street; 1852, Red Hook; 1853, 1854, Sandford; 1855, 1856, Yorkville; 1857, 1858, Trenton; 1859, 1860, Washington, where he was made supernumerary, and in 1861 he was superannuated.
nuated, in which relation he continued until the time of his death, March 6, 1872. - Mr. Ferry was a sound teacher of the church, stimulating, an earnest Christian, and in every sense a safe, conservative man. The transparency and purity of his character were singular and distinctive. In his death the ministry has lost one of its most faithful laborers, the Church has been deprived of a quiet influence, and the association of those who were devoted to her interests, and whose uniform consistency and integrity reflected upon her the greatest credit; and the fragrance of his good name and exemplary life will ever be grateful to our memories and yield us unceasing satisfaction" (N. Y. Christian Advocate, May 29, 1872).

Perse, William, an English divine, flourished in the second half of the 17th century. He was educated at Cambridge University, and was made fellow of his alma mater, the King's College, Cambridge. After taking holy orders he was presented to the living of Malton and the rectory of Hesterton, Yorkshire. He published Sermon on Acts xxii, 5, which he preached to the Eaton scholars (Lond. 1692, 4to).

Persecution is any pain or affliction which a person suffers by reason of his religious opinions or practices. In its variability it is threefold: (1) Mental, when the spirit of a man rises up and malignantly opposes another; (2) Verbal, when men give hard words and deal in uncharitable censures; (3) Actual or open by the hand; such as the dragging of innocent persons before the civil tribunal. In all cases it is a violation of the sacred principle of Conscience, and the "sacred concern" us here only in so far as it has occurred within the Church, or the Church has been the guilty party. The Church of Christ, in her purely, knows nothing of intolerance, and therefore can never be guilty of persecution. Indeed, the unlawfulness of persecution for conscience' sake, under the New-Testament dispensation, must appear plain to every one that possesses the least degree of Christian thought or feeling. "To banish, imprison, plunder, starve, hang, and burn men for religion," says the shrewd Jortin, "is not the Gospel of Christ; it is the Gospel of the devil. Where persecution begins, Christianity ends. Christ never used anything that looked like force or violence except once; and that was to drive bad men out of the Temple, and not to drive them in." Yet would we not overlook that a savage spirit is present in this thought, the antecedent of error, inasmuch as it "earnestly contends for the faith," and therefore abounds in intolerance and hypocrisy, believing that their true source is not faith and charity, but the very opposite of these, Laodicaean lukewarmness and tacit indulgence. Toleration of error on the part of the Church is the consequence of Satan's contention of truth. In this the Church must make God the abettor of error; would either destroy the Church as a society of believers, or contradict the divine order which establishes it as the way of salvation. But the Church as such uses only spiritual weapons—the earnestness of entray, the force of prayer, the terrors of conscience, the powers of the Gospel. Its punishments, too, are entirely spiritual censures, and the different degrees of excommunication. This is shown from the nature of religion in general and the spirit of Christianity in particular; from the constitution of the Church as a spiritual body; from the tenor of Scripture, which explains the expulsion of Luke xiv, 23 as being spiritual compulsion only; from Paul's language to Timothy, as 2 Tim. ii, 24, etc. (see Samuel Clarke's Sermons against Persecution for Religion, Serm. iv, and John Taylor's Liberty of Prophesying, § 41). For these very reasons, however, all temporal penalties inflicted by the Church as a spiritual body must be classed as persecution; for such penalties can be meted out only by a power either usurped or wrongfully given. The Church, being a spiritual society, has no power over the physical body. Its capital punishment is delivery to Satan. It may impose penance; it may enjoin restitution, it may arbitrate, but these sentences it can enforce only by spiritual inducements. Coercive jurisdiction it has never assumed; and if any such jurisdiction be assigned it, it becomes so far a minister of the civil authority which makes the ascription; and so far it leaves its own sphere and becomes a temporal power. Temporal pains and penalties belong only to the temporal power, which was expressly interposed in the sphere of things moral, to deal with the will and conscience. The cause of this is, inasmuch as Almighty God has put man's life into man's keeping, and intrusted him with goods, the society which is to have power over life and goods is not formed without man's concurrence. The Church, on the other hand, was not formed by the temporal power, and therefore cannot be modified at man's pleasure. Man joins it by voluntary submission, without any power of altering its constitution. The Church, therefore, has no power over life and goods; for the power over these which God has once given he will not take away. The consciousness of men in the formation of civil society is properly considered by holding up the ideal of a social contract, a contract perpetually forming and modifying, as the mind of a nation expresses itself in law; and such ordinances of man are ratified by God's providence, which has in every age been the true and proper authority to do that which God can it be modified at man's pleasure. Such compact, then, according to the religious state of those who make it, may be (1) a complete identity of the members of the Church and State; (2) or an established and preferred Church, with a separation in different degrees for other religious bodies (Jeremy Taylor, e.g., advocated toleration for all those who accept the Apostles' Creed); (3) or complete equality of all religious bodies. Any one of these positions the Church of Christ may hold. In any case it ought to retain distinctly its proper position as a society of divine institution in the world, but not of the world. Especially it ought not to usurp in the name of religion the powers and aims of the state law. There cannot be a greater mistake in state-smanship than to confound the temporal and spiritual estates and jurisdictions. The Church as a spiritual body has nothing to do with the state. It continues its own course, neither intruding into the sphere of the state nor refusing to aid the state, but ever rejecting an alliance with the state. See CHURCH AND STATE. It is from dog-stim - in the spiritual power it is that the power of the inculcation of its dogmas, that persecution is sure to spring; awe, really springs. The first community based on freedom of conscience was the Roman Catholic colony of Maryland; yet Roman Catholicism in Maryland was as dogmatic as in Spain. The great basis of persecution is that of sin, and consequently the principle on which the Church must establish is that the temporal penalties spoken of can be inflicted only for overt acts. The compact of society does not profess to touch the mind. It leaves the will and conscience to the divine institution of the Church. Consequently for matters of opinion, for belief privately held, there can be no temporal penalty at all. The temporal penalty is outside the power of the Church; the private belief is outside the supervision of the state. We may therefore define persecution thus: the infliction of temporal penalties by the spirituality as the spirituality, or by the civil power for other than overt acts. Roger Williams has the honor of being the first in modern times who took the right ground in regard to liberty of conscience. It was he who, in 1642, cleared the subject from the subtleties of a thousand years of darkness, and held up to Christian abhorrence in all its forms the "Bloody Tenet" (as he justly called it) of persecution for conscience' sake. John Owen, John Milton, John Locke, and a host of later writers have followed in his steps. "Persecution for conscience' sake," says Dr. Doddridge, "is every way inconsistent; because, 1. It is founded on a ground supported on that which is a right to judge for another in matters of religion. 2. It is evidently opposite to that fundamental principle of
mortality that we should do to others as we could reason-
ably desire they should do to us. 5. It is by no means
calculated or aimed at, and which, when once professed,
to become entangled in the world. 5. The Christian religion must, humanly speaking, be not only
obstructed, but destroyed, should persecuting principles
universally prevail. 6. Persecution is so far from being
required or encouraged by the Gospel, that it is most
directly contrary to many of its precepts, and indeed to
the whole of it." See RELIGIOUS LIBERTY; TOLERA-
TION.

Romanism has alone stood out in the Christian
Church as an interpretation of the Scripture that had
Protestantism entirely as steadfastly discard-
ed. Popes and Church councils have repeatedly de-
clared the extermination of heretics a duty, and pro-
nounced execrable and damnable all opinions to the
contrary; so much so that there is no doctrine what-
soever more absolutely asserted by the Church officially
than this; and the moderate nominal Romanist who
allows himself to dissent from it might just as well
set his individual judgment against that of the Church
upon any other article of its creed. The liberal Pro-
estant must be told that the very central and funda-
mental rule of the Church of Rome is to produce, as its
natural and inevitable consequence, wherever it is dominant, those three great objects of
sacerdotal ambition in the Middle Ages—persecution
of recusants at home, propagation of the faith by force abroad, and the monopoly of the religious over
the civil power. If these objects are but partially attain-
able in our modern world, it is because the principle
itself has lost its power over the minds of men; half
the world is anti-Catholic, and multitudes, who are
Roman Catholics by birth and education, and who,
in their infidelity, are satisfied with the forms of
the religion they have inherited, have never really im-
libed its spirit. The doctrine of the Papacy is this: God
has intrusted the salvation of mankind to the Church—
that is, to the clerical order. This salvation is essen-
tially effected by the administration of the sacraments.
The spiritual dominion exercised by the Church ex-
tends by right over the whole world; every human
creature belongs to it as much as he belongs to the
social society of which he is born a member, without
any limitation by the state, by the church, or any be-
ing established by God. Lastly, by the right of the
Church is to make t's right a fact, by bringing the
entire race to obedience to their spiritual advisers, and
to the habitual use of the sacraments, and by obtaining
from all local civil governments entire freedom of ac-
tion, and partaking as a spiritus gentium—spiritual
logician may admit this theory, and deny its conse-
quences; but no man can embrace it from the heart,
and prize it as the great divine appointment for the
everlasting weal of mankind, without approving its
consequences, and desiring practically to follow them
out. Why scruple to convert barbarians by the
sword? The method has been successful; whole popu-
lations have thus been brought within reach of sacra-
mental grace; and if the hearts of a first generation
are too obturate to profit by it, their descendants will.
Why shudder at the fearful punishment of heretics?
They are rebels, rebels against the highest and holiest
authority: we must cut off the diseased member for
the good of the whole body; we must punish those
that would poison souls. Why be astonished at the
assumption of a priest's superiority over the kings of
the earth? Why not assume it for the sake of God, the
possessor of a higher order of authority, addressing
itself to the deepest powers and susceptibilities of our
nature? The king, as well as the peasant, in all his
conduct comes under the cognizance of the authorized
interpreter of the divine will, as much as the king of
England," wrote Innocent III to Philip Augustus, "they
brother in the faith, complains that thou hast sinned
against him: he has given thee warning; he has taken
as witnesses great lords, in order to re-establish peace;
and he has called, he has accused thee to the Church.
The Church has heard, has sworn, has heard him love,
and not the severity of a judge. She has entreated thee
to conclude a peace, or, at least, a truce; and if thou
wilt not hear the Church, must thou not be to us as a
pagan and a publican? It is impossible to adopt the
conception of the Church and its agency such as the
pope's reasoning, and not admit that his conclusion
is just and scriptural. An expression constantly recur-
ing in Innocent's letters is that of "the liberty of the
Church": in its use he was not always wrong; for the
phrase, in the spiritual power produced reprisals and
usurpations, and in the Church's exclusive right of the
people to count for nothing— is the repressing of heresy.
It is an arm, and no more. Here are two systems in presence of each other. On
the one, man belongs to himself, that he may give him-
self to God; the Church is the society formed by those
who have freely given themselves up to God, to be made
sacred by the Church. The one, the Church, tends to
point thus logically, even when not chronologically,
preceding collective life; the knowledge of God in Je-
sus Christ being the introduction to the Church, and
the ordinances of the latter being means of grace, the
blessing of which depends upon the recipient's moral
state and personal relation to God. On the other sys-
tem, man belongs to the sacerdotal order, and the ser-
vice of the Church are the only introduction to Jesus
Christ: she is the nursing mother of his members, re-
ceiving them into her bosom before they are conscious
of it, and feeding them with ordinances, the blessing
of which is independent of the recipient's moral expe-
riences. It is evident that conceptions so utterly at
variance must make their opposition felt throughout
the whole series of ecclesiastical relations, in the char-
acter of their proselytism, in their manner of dealing
with the non-believer, in their conception of the gen-
etic or the heathen. As has already been said, religious
indifference may make the merely nominal Catholic
tolerant, but the real Romanist must persecute wher-
ever he has the power; he must interpret after the let-
ters, and not in the mind of the Church. A liberal
"logic may admit this theory, and deny its conse-
quences; but no man can embrace it from the heart,
and prize it as the great divine appointment for the
everlasting weal of mankind, without approving its
consequences, and desiring practically to follow them
out. Why scruple to convert barbarians by the
sword? The method has been successful; whole popu-
lations have thus been brought within reach of sacra-
mental grace; and if the hearts of a first generation
are too obturate to profit by it, their descendants will.

people to count for nothing— is the repressing of heresy.
PERSECUTIONS OF CHRISTIANS

PERSECUTIONS OF CHRISTIANS not only being essentially intolerant of those new religions which, like the Christian, were directly aggressive against the established religion of the state, but being particularly hostile to private associations and private assemblies for worship, such as those which every Christian congregation by its very nature possessed; and thus there are very few periods during the first three centuries in which it can be said that Christians enjoyed everywhere a complete immunity from persecution. But the name is given particularly to certain periods when either new enactments were passed against Christianity, or the existing ones were enforced with unusual severity. The notion of ten such periods, all very commonly accepted almost as a historical axiom; and it is not generally known that this precise determination of the number is comparatively recent. In the 4th century no settled theory of the number of persecutions seems to have been adopted. Lactantius reckons up to six; Eusebius does not state what the number was, but his narrative supplies data for nine. Sulpicius Severus, in the 5th century, is the first who expressly states the number as ten; but he only enumerates nine in detail, and in completing the number to ten, he adds the general peroration to which, at the same time, he appears to preclude the end of the world. The fixing of ten as the number seems to have originated in a mystical allusion to the ten horns of the beast in the Apocalypse (xvi. 12). It need hardly be said, however, that this is only a question of words, the diversity of enumerations arising from the different notations attached by the several historians to the designation general. If taken quite strictly to comprise the entire Roman empire, the number must fall below ten; if used more loosely of local persecutions, the number might be very largely increased. The ten persecutions commonly regarded as general see the following:

(1.) The persecution under Nero, A.D. 64, when that emperor, having set fire to the city of Rome, threw the odium of that execrable action on the Christians. First, those were apprehended who openly avowed themselves to be of that sect; then by them were discovered an immense multitude, all of whom were convicted. Their death and torture were aggravated by cruel derision and sport; for they were either covered with the skins of wild beasts, and torn in pieces by devouring dogs, or fastened to crosses, and wrapped up in combustible garments, that, when the daylight failed, they might, like torches, serve to dispel the darkness of the night. For this tragical spectacle Nero lent his own gardens, and exhibited at the same time the public diversions of the circus; sometimes driving a chariot in person, and sometimes watching the deportment of the spectators. "Men and women, burning to ashes, supplied music for his ears. See NEROI PERSECUTIONS."

(2.) The second general persecution was under Domitian. From the death of Nero to the reign of Domitian the Christians remained unpersecuted and nearly increasing; but towards the close of the 1st century they were again involved in all the horrors of persecution. In this persecution many eminent Christians suffered; but the death of Domitian soon delivered them from this calamity. In the year 95 40,000 were supposed to have suffered martyrdom."

(3.) The third began in the third year of Trajan, in the year 100. Many things contributed towards it: as the laws of the empire, the emperor's zeal for his religion and aversion to Christianity, and the prejudices of the pagans, supported by favoritism and contempt, were all directed against the Christians. Under the plausible pretence of their holding illegal meetings and societies, they were severely persecuted by the governors and other officers; in which persecution great numbers fell by the rage of popular tumult, as well as by laws and processes. This persecution continued several years, and varied degrees of severity, in many parts of the empire, and was so much the more afflictive because the Christians generally suffered under the notion of malefactors and...
PERSECUTIONS OF CHRISTIANS

traitors, and under an emperor famed for his singular justice and moderation. The most noted martyr in this persecution was Ignatius of Antioch, although some name also Clement, bishop of Rome. After some time the fury of this persecution was abated, but did not cease during the reign of Trajan. In the eighth year of his successor, Adrian, it broke out with new rage. This is by some called the fourth general persecution, but is more commonly considered as a revival or continuation of the third.

(4.) This persecution took place under Antoninus the philosopher, and happened in different places, with several intermissions and different degrees of severity, it continued the greater part of his reign. Antoninus himself has been much accused as to this persecution. As the character of the virtuous Trajan, however, is suillied by the martyrdom of Ignatius, so the reign of the philosophic Marcus is forever disgraced by the sacrifices of the venerable Polycarp, bishop of Smyrna, the friend and companion of St. John. A few days previous to his death, he is said to have dreamed that his pillow was on fire. When urged by the proconsul to renounce Christ, he replied. Four score and six years have I served him, and he has never done me an injury: can I blaspheme my King and my Saviour? Several miracles are reported to have happened at his death. The flames, as if unwilling to injure his sacred person, are said to have arched around him and it is added, as its length, being despatched with a sword, a dove flew out of the wound, and that from the pile proceeded a most fragrant smell. It is obvious that the arching of the flames might be an accidental effect, which the enthusiastic veneration of his disciples might convert into a miracle; and as to the story of the dove, etc., Eusebius himself apparently did not credit it, since he has omitted it in his narrative of the transaction. Among many other victims of persecution in this philosophic reign we must also record that of the excellent and learned Justin. But Justin, and Lyons and Vienne, in Gaul, and the most shocking scenes were added. Among many nameless sufferers, history has preserved of oblivion Pothinus, the respectable bishop of Lyons, who was then more than ninety years of age; Sanctus, a deacon of Vienne; Attalus, a native of Pergamus; Maturus, and Alexander; some of whom were devoured by wild beasts, and some of them tortured in an iron chair made red hot. Some females also, and particularly Biblias and Blaindina, reflected honor both upon their sex and religion by their constancy and courage.

(5.) A considerable part of the reign of Severus proved injurious to the Christians that no additions were made to the severe edicts already in force against them. For this lenity they were probably indebted to Proculus, a Christian, who, in a very extraordinary manner, cured the emperor of a dangerous distemper by the application of oil. But this degree of peace, precarious as it was, and frequently interrupted by the partial execution of severe laws, was terminated by an edict, A.D. 197, which prohibited every subject of the empire, under severe penalties, from embracing the Jewish or Christian faith. This law was not long in execution, for it speeded the further progress of Christianity; but it incited the magistracy to enforce the laws of former emperors, which were still existing against the Christians; and during seven years they were exposed to a rigorous persecution in Palestine, Egypt, the rest of Africa, Italy, Gaul, and other parts. In this persecution Leonidas, the father of Origen, and Irenaeus, bishop of Lyons, suffered martyrdom. On this occasion Tertullian composed his "Apology." The violence of pagan intolerance was most severely felt in Egypt, particularly at Alexandria, and in what pertaineth to the future progress of the church of Alexandria, it needs not to be mentioned in detail. The consequence of this persecution was, indeed, almost exhausted in inventing a variety of tortures. Some were impaled alive; some had their limbs broken, and in that condition were left to expire. Some were roasted by slow fires; and some suspended by the head downward; and, a fire being placed under them, were suffocated by the smoke. Some had melted lead poured down their throats, and the flesh of some was torn off with shells, and others had splinters of reeds thrust under the nails of their fingers and toes. The few who escaped these cruel tortures had their limbs broken and other features mutilated. It would be endless to enumerate the victims of superstition. The bishops of Nicomedia, of Tyre, of Sidon, of Emesa, several matrons and virgins of the purest character, and an immense number of...
PERSECUTIONS OF CHRISTIANS

plebeians, arrived at immortality through the flames of martyrdom. At last it pleased God that the emperor Constantine, who himself afterwards became a Christian, openly declared for the Christians, and published the first law in favor of them. The death of Maximian, emperor of the East, soon after put a period to all their troubles; and this was the great epoch when Christianity triumphantly got possession of the thrones of princes.

In this dreadful persecution, which lasted ten years, houses filled with Christians were set on fire, and numbers of them were tied together with ropes and thrown into the sea. It is related that 17,000 were slain in the space of one month, and that during the continuance of this persecution, in the province of Egypt alone, no less than 144,000 Christians died by the violence of their persecutors, besides 700,000 that died through the fatigues of banishment or the public works to which they were condemned. The time fixed for the exterminating edicts, as they are called, was the Feast of Terminatilla in the year 302, which historians remark was put to an end to Christianity. So complete was supposed to be the extirpation of the sect, that coins were struck and inscriptions set up recording the fact that the Christian superstition was now utterly exterminated, and the worship of the gods restored by Diocletian, who assumed the name of Jupiter; and Maximian, who took that of Hercules. In the annexed coin, from the collection of the Louvre at Paris, the obverse represents the head of the emperor Diocletian crowned with laurel, and his shoulders covered with a robe, with the legend Diocletianus.

Perpetuus Felix Augustus, "Diocletian, perpetual, happy, august." On the reverse is Jupiter holding in his raised hand a thunderbolt, and trampling a kneeling figure with serpent-like feet, having the legend "Jovis Pudens," "To Jupiter the thunderer." The prostrate figure designates Christianity, and the figure of Jupiter brandishing his thunderbolt is taken probably from Ovid's description, "Quo centumam dejecerat igne Typhoe," he is dashing down the Christians with the same force as he hurled upon the Titans, who had equally but vainly tried to dispossess him of heaven. The figure of this coin is very remarkable, and has a resemblance so strong as to identify it with the Abrasax on the Gnostic gems, with serpent-like feet, supposed to be the God of the Christians. We see him here disannihilated of his weapons, as the being which the Christians were supposed to adore, and this single sect and its impure idol bringing persecution on the whole of the Christian Church. In the exergue is Pecunia Roma, "The money of Rome." A coin of that of Diocletian was struck by his colleague, Maximian, to commemorate an event in which he also had acted a distinguished part. In the following coin the obverse represents the naked bust of the emperor crowned with laurel, having the legend "Maximianus Perpetuus Augustus," "Maximian, perpetual, august." On the reverse is the figure of Jupiter Tonans, in nearly the same attitude, and with the same legend as the former, but having his head covered. In the prostrate figure the serpentine part of the legs is not distinct, and it has on the whole more of a human form. It may be conjectured that Diocletian wished to represent only the depraved and corrupt sectarians of which his figure is the emblem; and that his more atroces colleague, careless of distinction, exhibited the genius of Christianity under any form as equally the object of his persecution. This, the most dreadful of all the heathen persecutions, was happily also the last; and the time shortly arrived when Christianity became the public religion of the Roman empire. Constantine was converted A.D. 312, and, according to ecclesiastical writers, his conversion was effected, like that of St. Paul, by a sensible miracle, while he was performing a journey on a public road. He immediately afterwards adopted the cross as his ensign, and formed on the spot the celebrated labarum or Christian standard, which was ever afterwards substituted for the Roman eagle. This, as Eusebius describes it, was a spear crossed by an arrow, on which was suspended a vellum having inscribed on it the monogram formed by the Greek letters X and P, the initials of the name of Christ. See Labarum. The coin below represents on the obverse the naked bust of the emperor crowned with a laurel wreath, and surrounded with the legend Flavii Valerii Constantini Per-

petuus Felix Augustus, "Flavius Valerius Constantine, perpetual, happy, august." On the reverse is the whole-length figure of the emperor in armor, covered with a helmet, standing on the prow of a galley (a ship was the common emblem of the state among the Romans. See the ode of Horace, O Nave); in his right hand he holds a globe, surmounted by a rayed phœnix, the adopted emblem of his family, to intimate the renovation of the empire; in his left is the labarum, inscribed with the monogram; behind is the angel of victory, directing his course; around is the appropriate legend, Felix Temporum Reportor, "The happy renovation of the times." In the exergue is Pecunia Treverorum, "The money of Treves." For monographs on these pagan persecutions, see Volbeding, Index Programma-

tum, p. 96 sq.
PERSECUTIONS OF CHRISTIANS

II. Christian Persecutions.—The guilt of persecution has, however, been attached to professing Christians. Had men been guided solely by the spirit and the precepts of the Gospel, the conduct of its blessed Author, and the writings and example of his immediate disciples, we might have boldly affirmed that among Christians there could be no tendency to encroach upon freedom of worship and no apprehension of persecution from such sources. The Gospel, in every page of it, inculcates tenderness and mercy; it exhibits the most unwearied indulgence to the frailties and errors of men; and it represents charity as the badge of those who in sincerity profess it. The observation of this general principle (in all ages) he has drawn a picture of mutual forbearance and kindness and toleration, upon which it is scarcely possible to dwell without being raised superior to every contracted sentiment, and glowing with the most diffusive benevolence. In the churches which he planted he had often to counteract the efforts of teachers who had labored to subvert the foundation which he had laid, to misrepresent his motives, and to inculcate doctrines which, through the inspiration that was imparted to him, he discerned to proceed from the most perverted views, and to be inconsistent with the great design of the dispensations of God. Those teachers were conscientiously and conscientiously opposed; he endeavored to show the great importance of those to whom he wrote being on their guard against them; and he evinced the most ardent zeal in resisting their insidious purposes; but he was not insensible to many statements that they should be persecuted, adhering always to the maxim which he had laid down, that the weapons of a Christian warfare are not carnal but spiritual. He does, indeed, sometimes speak of heretics; and he even exhorts that, after excommunication with him, a heretic should be rejected. He was not aware to a member of the Church to which he had once belonged. But that precept of the apostle has no reference to the persecution which it has sometimes been conceived to sanction, and which has generally been directed against men quite sincere in their belief, however erroneous they may be esteemed.

Upon a subject thus enforced by precept and example, it is not to be supposed that the first converts, deriving their notions of Christianity immediately from our Lord or his apostles, could have any opinion differently from that of the present dispensation, from that which has been now established. Accordingly we find that the primitive fathers, although in many respects they erred, unequivocally express themselves in favor of the most ample liberty as to religious sentiment, and highly disapproved of every attempt to contrive for the purposes of many of them writers might be quoted to establish that this was almost the universal sentiment till the age of Constantine. Lactantius in particular has, with great force and beauty, delivered his opinion against persecution: 'There is no need of compulsion and violence, because religion cannot be forced; and men must be made willing, not by stripes, but by arguments. Slaughter and piety are quite opposite to each other; nor can truth consist with violence, or justice with cruelty. They are convinced that nothing is more excellent than religion, and therefore think that it ought to be defended with force; but they are mistaken, both in the nature of religion, and in proper methods to support it; for religion is to be defended, not by murder, but by persuasion; nor by cruelty, but by patience; nor by wickedness, but by faith. If you attempt to defend religion by blood, and torments, and evil, this is not to defend, but to violate and pollute it; for the soul is nothing that should be more free than the choice of religion, in which, if consent be wanting, it becomes entirely void and ineffectual.'

The general conduct of Christians during the first three centuries is such a conformity with the admirable maxims now quoted. Eusebius has recorded that Polycarp, after in vain endeavoring to persuade Ani- cetus, who was bishop of Rome, to embrace his opinion and to come to some point with respect to which they differed, gave him, notwithstanding, the kiss of peace, while Anicetus communicated with the martyrs; and Irenæus mentions that although Polycarp was much offended with the Gnostic heretics, who abounded in his days, he converted numbers of them, not by the application of denunciations and accusations, but by mild arguments and remonstrances which he calmly submitted for their consideration. It must be admitted, however, that even during the second century some traces of persecution are to be found. Victor, one of the early pontiffs, because the bishop of Alexandria feared to risk himself also for the observance of Easter, excommunicated them as guilty of heresy; and he acted in the same manner towards a person who held what he considered as erroneous notions respecting the Trinity. This stretch of authority was, indeed, reproved by the generality of Christians, and remonstrances against it were accordingly presented. There was, however, in this proceeding of Victor too clear a proof that the Church was beginning to deviate from the perfect charity by which it had been adorned, and too sure an indication that the example of one who held so high an office, when it was not adapted to the example of those who, as the passion of our nature, would be extensively followed. But still there was in the excommunication rashly pronounced by the pope merely an exertion of ecclesiastical power, not interfering with the personal security of the persons to whom it was directed; and we may, notwithstanding this slight exception, consider the first three centuries as marked by the candor and the benevolence implied in the charity which judged not, and thinketh no evil.

It was after Christianity had been established as the religion of the Empire, that a body of persons had been conferred on its ministers, that the monstrous evil of persecution acquired gigantic strength, and threw its blasting influence over the religion of the Gospel. The causes of this are apparent. Men exalted in the scale of society were eager to extend the power which had been intrusted to them; and they sought to do so by exacting from the people acquiescence in the peculiar interpretations of tenets and doctrines which they chose to publish as articles of faith. The moment that this was attempted the foundation was laid for the most intolerable of all evils: that Christianity was no longer regarded solely as a matter of conscience, but as interfering with the interest and the dominance of the ruling party. It was therefore proceeded against with all the eagerness which men so unequivocally display when they are conscious that great interest and advantage or aids to their comfort and attempts to be wrenched from them. To other dictates than those of the Word of God the members of the Church now listened; and opinions were viewed, not in reference to that Word, but to the effect which they might produce upon the worldly advancement or prosperity of those by whom they were avowed. From the era, then, of the conversion of Constantine we may date, if not altogether the introduction, at least the decisive influence of persecution.

III. Roman Catholic Persecution. —Numerous were the persecutions of different sects from Constantine's time to the Reformation; but when the famous Council of Trent, which was held for nearly eighteen successive years, for the purpose of establishing popery in greater splendor and preventing the Reformation. The friends of the Reformation were anathematized and excommunicated, and the life of Luther was often in danger, though at length he died on the 18th of February, 1546. From innumerable schemes were suggested to overthrow the Reformed Church, and wars were set on foot for the
PERSECUTIONS OF CHRISTIANS 909

PERSECUTIONS OF CHRISTIANS

same purpose. The Invincible Armada, as it was vainly called, had the same end in view. The Inquisition, which was established in the 12th century for the protection of the Waldenses [see Inquisition], was now more effectually set to work. Terrible persecutions were carried on in various parts of Germany, and even in Bohemia, which continued about thirty years, and the blood of the saints was shed in great abundance. The countries of Poland, Lithuania, and Hungary were in a similar manner deluged with Protestant blood.

1. Holland.—In the Low Countries, for many years, the most amazing cruelties were exercised under the merciless and unrelenting hands of the Spaniards, to very heavy hands; for the heads of the slain were then in subjection. Father Paul observes that these Belgic martyrs were 50,000; but Grotius and others observe that there were 100,000 who suffered by the hand of the executioner. Herein, however, Satan and his agents failed of their purpose; for in the issue a great part of the Netherlands shook off the Spanish yoke, and erected themselves into a separate and independent state, which has ever since been considered as one of the principal Protestant countries.

2. France.—No country, perhaps, has ever exercised such cruelties against the Protestants, there was most violent persecution of them in the year 1572, in the reign of Charles IX. Many of the principal Protestants were invited to Paris, under a solemn oath of safety; upon occasion of a wedding, and the French king’s sister. The queen-dowager of Navarre, however, a zealous Protestant, was poisoned by a pair of gloves before the marriage was solemnized. Coligni, admiral of France, was basely murdered in his own house, and then thrown out of the window to gratify the malice of the duke of Guise: his head was one hundred and fifty feet cut off, and sent to the king and queen-mother; and his body, after a thousand indignities offered to it, was hung by the feet on a gibbet. After this the murderers ravaged the whole city of Paris, and butchered, in three days, above ten thousand lords, gentlemen, presidents, and people of all ranks. A horrible scene of things, says Thuanus, when the very streets and passages resounded with the noise of those that met together for murder and plunder; the groans of those who were dying, and the shrieks of such as were just going to be butchered, were heard for miles; the blood flowed out of the windows; the courts and chambers of the houses were filled with them; the dead bodies of others were dragged through the streets; their blood ran through the channels in such plenty that torrents seemed to flow through the streets, and the streets, an innumerable multitude of men, women with child, maidens, and children were all involved in one common destruction; and the gates and entrances of the king’s palace were all besmeared with their blood. From the city of Paris the massacre spread throughout the whole kingdom. In the city of Meaux they threw above two hundred into jail; and after they had ravished and killed a great number of women, and plundered the houses of the Protestants, they executed their fury on those who had imprisoned; and calling them one by one, they were killed, and their houses expressed, like sheep in a market. In Orleans they murdered above two hundred men, women, and children, and enriched themselves with the spoil. The same cruelties were practiced at Angers, Troyes, Bourges, La Charité, and especially at Lyons, where they inhumanly destroyed above eight hundred Protestants—children hanging on their parents’ necks, and parents embracing their children; putting ropes about the necks of some, dragging them through the streets, and throwing them, mangled, torn, and half dead, into the river. According to Thuanus, above three thousand Protestants were destroyed in this massacre, or, as others affirm, above six thousand. But what aggravates these scenes with still greater wantonness and cruelty was the manner in which the news was received at Rome. When the letters of thelegate were read in the assembly of the cardinals, by which he assured the pope that all was transacted by the express will and command of the king, it was immediately decreed that the pope should march with his cardinals to the church of St. Mark, and in the most solemn manner give thanks to God for so great a triumph over the enemies of the Christian world; and that, on the Monday after, solemn mass should be celebrated in the church of Minerva, at which the pope, Gregory XIII, and cardinals were present; and that a jubilee should be published throughout the whole Christian world, and the cause of it declared to be to return thanks to God for the extirpation of the enemies of the truth and Church in France. In the evening the cannon of St. Angelo were fired to testify the public joy; the whole city was illuminated with bonfires; and no one sign of rejoicing was omitted that was usually made for the greatest victories obtained in favor of the Roman Church. See Bartholomew’s Day.

But all these persecutions were far exceeded in cruelty by those which took place in the time of Louis XIV. It cannot be pleasant to any man’s feelings, who has ever read the conduct of Louis XIV., to reflect on the scenes of horror, cruelty, and devastation; but to show what superstition, bigotry, and fanaticism are capable of producing, and for the purpose of holding up the spirit of persecution to contempt, we shall here give as complete a description as possible. The soldiers and dragons went into the Protestants’ houses, where they marred and defaced their household stuff; broke their looking-glasses and other utensils; threw away corn and wine; sold what they could not destroy; and thus, in four or five days, the Protestants were stripped of above a million of money, and thus reduced to poverty. The worst of all, they cut off their ears, and took off their noses; the heads of some were cut off, and sent to the king and queen-mother; and their bodies, after a thousand indignities offered to them, were hung by the feet on a gibbet. After this the murderers ravaged the whole city of Paris, and butchered, in three days, above ten thousand lords, gentlemen, presidents, and people of all ranks. A horrible scene of things, says Thuanus, when the very streets and passages resounded with the noise of those that met together for murder and plunder; the groans of those who were dying, and the shrieks of such as were just going to be butchered, were heard for miles; the blood flowed out of the windows; the courts and chambers of the houses were filled with them; the dead bodies of others were dragged through the streets; their blood ran through the channels in such plenty that torrents seemed to flow through the streets, and the streets, an innumerable multitude of men, women with child, maidens, and children were all involved in one common destruction; and the gates and entrances of the king’s palace were all besmeared with their blood. burst them. If many, to escape these barbarities; endeavor to save themselves by flight, they pursued them into the fields and woods, where they shot at them like wild beasts, and prohibited them from departing the kingdom (a cruelty never practiced by Nero or Diocletian) upon pain of confiscation of effects, the galleys, the lash, and perpetual imprisonment. With these scenes of desolation and horror the popish clergy feasted their eyes, and made only matter of laughter and sport of them.

3. England has also been the seat of much persecution. Though Wickliffe, the first Reformer, died peacefully in his bed, yet such was the malice and spirit of persecuting Rome that his bones were ordered to be dug up and cast upon a dunghill. The remains of this excellent man were accordingly dug out of the grave, where they had lain undisturbed forty-four years. His bones were burned, and the ashes cast into an adjoining brook. In the reign of Henry VIII, Blinney, Bayman, and many other Reformers, were burned; but when queen Mary came to the throne the most severe persecutions took place. Hooper and Rogers were burned in a slow fire. Saunders was cruelly tormented a long time at the stake before he expired. Taylor was put into a blazing fire set to the illustrious persons, among whom was Ferrar, bishop of St. David's, were sought out, and burned by the infamous Bonner, in a few days. Sixty-seven persons were this year, A.D. 1555, burned, among whom were the famous Protestantas Bradford, Ridley, Latimer, and Philpot. In the following year, 1556, eighty-five persons were burned. Women suffered: and one, in the flames, which burst her womb, being near her time of delivery, a child fell from her into the fire, which being snatched out by some of the observers more humane than the rest, the magistrates ordered the child to be again thrown into the fire and burned. Thus even the unborn child was burned for heresy! O God, what is human nature when left to itself! Alas, dispositions ferocious as infernal then reign and usurp the heart of man! The queen erected a commission court, which was followed by the destruction of near eighty more. Upon the whole, the number of those who suffered death for the reformed religion in this reign was no less than 277 persons; of whom were five bishops, twenty-one clergy, eight gentlemen, eighty-four tradesmen, one hundred husbands, laborers, and servants, and women. Besides these, there were fifty-four more under prosecution, seven of whom were whipped, and sixteen perished in prison.

Nor was the reign of Elizabeth free from this persecuting spirit. If any one refused to consent to the leases, he was dispossessed, he was fined or banished, where many of the most excellent men in the land perished. Two Protestant Anabaptists were burned, and many banished. She also, it is said, put two Brownists to death; and though her whole reign was distinguished for its political prosperity, yet it is evident that she did not understand the rights of conscience; for it is said that more sanguinary laws were made in her reign than in any of her predecessors', and her hands were stained with the blood of both Papists and Puritans. James I succeeded Elizabeth: he published a proclamation commanding all Protasts, to conform strictly, and without any exception, to all the rites and ceremonies of the Church of England. Above five hundred clergymen were immediately silenced or degraded for not complying. Some were excommunicated, and some banished the Dissenters wore destitute, censured, and fined in the Star Chamber. Two persons were burned for heresy, one at Smithfield, and the other at Lichfield. Worn out with endless vexations and unceasing persecutions, many retired into Holland, and from thence to America. It is stated by a judicious historian that, in this bloody reign, 22,000 persons were banished from England by persecution to America. In Charles I's time arose the persecuting Laud, who was the occasion of distress to numbers. Dr. Leighton, for writing a book against the hierarchy, was sentenced to a fine of 100 pounds, imprisonment in the Fleet, and his writings were banned. He was whipped, and then he was placed in the pillory; one of his ears was cut off; one side of his nose slit; he was branded on the cheek with a red-hot iron with the letters S. S.; whipped a second time, and placed in the pillory. A fortnight afterwards, his sores being yet unrepaired, he had the other ear cut off, the other eye cut, his nose slit, and the other cheek branded. He continued in prison till the Long Parliament set him at liberty. About four years afterwards William Pynme, a barrister, for a book he wrote against the sports on the Lord's day, was deprived of his practice at Lincoln's Inn, degraded from his degree at Oxford, set in the pillory, had his ears cut off, imprisoned for life, and fined £5000.

Nor were the Presbyterians, when their government came to be established in England, free from the charge of persecution. In 1646 an ordinance was published subjecting all who preached or wrote against the Presbyterian directory for public worship to a fine not exceeding £50; and imprisonment for a year, for the third offence, for using the Episcopal book of Common Prayer even in a private family. In the following year the Parliament passed a statute to the end of enforcing uniformity in religion, and to extirpate popery, prelacy, heresy, schism, etc., but their petition was rejected; yet in 1648 the Parliament, ruled by them, published an ordinance against heresy, and determined that any person who maintained, published, or defended the following errors should suffer death: These errors were: 1. Denying the being of a God. 2. Denying his omniscience, omnipotence, etc. 3. Denying the Trinity in any way. 4. Denying that Christ had two natures. 5. Denying the resurrection, the atonement, the mediation, redemption, or intercession of our Lord Jesus Christ. 6. Outlawing the act or act of Uniformity passed, by which two thousand clergy were deprived of their benefices. Then followed the Conventicle Act and the Oxford Act, under which, it is said, eight thousand persons were imprisoned and reduced to want, and many to the grave. In this reign, also, the Quakers were much persecuted, and numbers of them imprisoned. Thus we see how England has bled under the hands of bigotry and persecution; nor was toleration enjoyed until William III came to the throne, who showed himself a warm friend to the rights of conscience, and that every English family was suspicious to religious liberty; and as such the magistrates have always befriended toleration, the spirit of persecution has long been curbed.

Ireland has likewise been drenched with the blood of the Protists, forty or fifty thousand of whom were killed during the reign of James I, in which the religious wars of the kingdom in the reign of Charles I. It began Oct. 23, 1641. Having secured the principal gentlemen, and seized their effects, they murdered the common people in cold blood, forcing many thousands to fly from their houses and settlements naked into the woods, and slowly starvation, famine, and cold. They stripped naked, and exposed to shame, and then drove them, like herdswomen, to perish in the mountains: many hundreds were drowned in rivers, some had their throats cut, others were disemboweled. With some of the execrable villains made themselves sport, they could hack the deepest into an Englishman's flesh; wives and young virgins were abused in the presence of their nearest relations; nay, they taught of conscience to stop and kill the children of the English, and dash out their brains against the stonewalls. Thus many thousands were massacred in a few days, without distinction of age, sex, or quality, before they suspected their danger, or had time to provide for their defence.
many years together, was the scene of cruelty and bloodshed, till it was delivered by the monarch at the Revolution. Spain, Italy, and the valley of Piedmont, and other places, have been the scenes of the same persecutions. Popery, we see, had the greatest hand in this mischievous work. It has to answer, also, for the lives of millions of Jews, Mohammedans, and barbarians. When the Moors conquered Spain in the eighth century, they allowed the Christians the free exercise of their religion; but in the fifteenth century, when the Moors were overthrown, and Ferdinand subdued the Moors, the descendants of the above Moors, many thousands were forced to be baptized, or were burned, massacred, or banished, and their children sold for slaves; besides their numberless Jews, who were baptized, or chased away to the infernal courts of the Inquisition. A worse slaughter, if possible, was made among the natives of Spanish America, where fifteen millions are said to have been sacrificed to the genius of popery in about forty years. It has been computed that fifty millions of Protestants have at different times been the victims of the persecutions of the papists, and put to death for their religious opinions. Well, therefore, might the inspired penman say that at mystic Babylon’s destruction it was “found in her the blood of prophets, of saints, and of all that was slain upon the earth” (Rev. xiv. 24).

Persepônâ was the name of the Greek godess who ruled over the infernal regions. By the Romans she was called Proserpina. She was the daughter of Zeus (Jupiter) and Demeter (Ceres). In Attica she was therefore called Kônp, i.e. the Daughter. By Homer she was styled the wife of Hades (Pluto), and the queen of the lower world, and of the realm inhabited by the souls of the dead. Hence she is called Juno Inferna, Averna, and Stygia. She is said to have been the mother of the Erinyes, Eumenides, Erinyes, or Furies. Herodion mentions a story of her having carried off by Pluto, and of the search of Demeter instituted for her daughter all over the earth by torch-light, until at length she found her in the realms below. An arrangement was now made that Persephone should spend a third of the year with Pluto, and two thirds with the gods above. Pluto was generally worshipped along with Demeter, and temples in her honour are found at Corinth, Megara, Sparta, and at Locri, in the South of Italy. In art she is represented as grave and severe, as would become the queen of the lower world.

Persepolis (Περσεπόλης; Persepolis). This city is mentioned only once in the Bible, namely, in 2 Macc. ix. 2, where it is stated as the chief city of the Persian empire. It was the capital and chief city of the Persian empire, and, according to some authors, the whole city, as well as the magnificent palace, suffered in the general conflagration (Diod. Sic. c. 36; Arrian, iii, 18, 11; Pliny, H. N. vii, 26; but according to others it was only the palace (το βασιλικός δωματίος) that was destroyed (Strabo, xv, p. 750; Plutarch, In Alex. 38; Quintus Curtius, v, 7, 5) according to some authors) at the suggestion of the courteous Thais, to revenge the taking of Athens by Xerxes, but this story probably rests on the sole authority of Cieartarchus (Clearch. ap. Athen., p. 570; Diod. xvi, c. 2, 5; 72, 6; Plutarch, In Alex. 38; Quintus Curtius, v, 7, 5) mentions that the palace was built with a great quantity of cedar, which increased the ardor of the flames. It is probable that the temples, which were of stone, escaped. That it could have been entirely destroyed seems hardly credible, for notwithstanding its notorious, king of Asia (Ib., 306), who visited the palace itself (Diod. Sic. xix, 46, 6; but at the same period Peucetas and Eumenes, formerly generals of Alexander, and now antagonists of Antigonus, both visited Persepolis, and the latter is said to have camp there and held it as the seat of government (πρωτεύων τῆς Περσικῆς τοῦ βασιλέως, Diod. Sic. xix, 21, 2; 22, 1). From this it would appear that the city itself was called το βασιλείαν. Moreover, at the time of Antiochus Epiphanes, as recorded above (2 Macc. ix, 2), it seems to have been repaired or restored; and Ptolemy (Geo. vii, 44; viii, 13, 16) mentions it as existing in his time. The extensive ruins now remaining would prove that it must either have been rebuilt or not totally destroyed by Alexander. It does not appear that it was ever again garrisoned, until it was captured by Alexander; for after the time of Antiochus Epiphanes it disappears altogether from history as an inhabited place. Persepolis has been considered by many as identical with Pisapagade (Nebuchad., Lect. on Ant. Hist. i, 115; Ousely, Travels, ii, 16, 16), and in one passage of an ancient author the name Pisapagades is given (Arrian, iii, 18, 11), but the two cities are afterwards distinguished (vii, 1, 1). All other ancient authors, however, carefully distinguish the position of the two cities (Strabo, xv, p. 729; Pliny, vi, 26; Ptol. vi, 4, 3), and it is now ascertained that the ruins of these two cities are more than forty miles apart. Persepolis was situated on the plains of Mardus, near the junction of the two streams, the Araxes (Bendamir) and the Medes (Pulwân), while Farsagard was about forty-nine miles from Persepolis on the plain of Mæsphah, where even now exist the remains of the tomb of Cyrus (Strabo, xvi, p. 729). The ruins of Persepolis, which are very extensive, bear the name of Chekel Minar, or “Forty Pillars,” the remains of the palaces built by Darius, son of Hystaspes, and his son Xerxes. The city seems to have stood at the foot of the rock on which these ruins are placed. Three groups are chiefly distinguishable in the vast ruins existing on the spot. First, the Chehel Minâr (Forty Pillars), with the Mountain of the Tombs (Rachmed), also called Takhht-i Jamshid, or the structure of Jamshid, after some fabulous ancient king, popularly supposed to be the founder of Persepolis. The next in order is Naksh-i-Rustam, to the north-west, with its tombs; and the last, the builclmg called the Haram of Jamshid. The most important is the first group, situated on a vast terrace of cyclopean masonry at the foot of a lofty mountain-range. The extent of this terrace is about 1500 yards from north to south, and 600 from east to west, and it was, according to Diodorus Siculus, once surrounded by a triple wall of 16, 32, and 60 cubits respectively in height, for the threefold purpose of giving strength, inspiring awe, and defence. The whole surface is divided by a broad street, at the lowest towards the south, and the central being 800 feet square, and rising 45 feet above the plain; and the third, the northern, about 550 feet long, and 35 feet high. No traces of structures are to be found on the lowest platform; on the northern, only the so-called “Propylæa” of Xerxes; but the central platform seems to have been
occupied by the foremost structures, which again, however, do not all appear to have stood on the same level. There are distinguished here the so-called “Great Hall of Xerxes” (called Chehel Minār, by way of eminence), the Palace of Xerxes, and the Palace of Darius, towering above the other in successive elevations from the ground. The stone used for the buildings is dark-gray marble, cut into gigantic square blocks, and in many cases exquisitely polished. The ascent from the plain to the great northern platform is formed by two double flights, the steps of which are nearly 22 feet wide, 3% inches high, and 15 inches in the tread, so that several travellers have been able to ascend them on horseback. What are called the Propylae of Xerxes on this platform are two masses of stone-work, which probably formed an entrance-gateway for foot-passengers, paved with gigantic slabs of polished marble. Portals, still standing, bear figures of animals 15 feet high, closely resembling the Assyrian bulls of Nineveh. The building itself, conjectured to have been a hall 82 feet square, is, according to the cuneiform inscriptions, as interpreted by Rawlinson, the work of Xerxes. An expanse of 162 feet divides this platform from the central one, still bearing many of those columns of the Hall of Xerxes from which the ruins have taken their name. The staircase leading up to the Chehel Minār, or Forty Pillars, is, if possible, still more magnificent than the first; and the walls are more superbly decorated with sculptures, representing colossal warriors with spears, gigantic bulls, combatants with wild beasts, processions, and the like; while broken capitals, shafts, pillars, and countless fragments of buildings, with cuneiform inscriptions, cover the whole vast space of this platform, 350 feet from north to south, and 380 from east to west. The Great Hall of Xerxes, perhaps the largest and most magnificent structure the world has ever seen, is computed to have been a rectangle of about 900 x 350 feet, and to have consequently covered 105,000 square feet, or 2½ acres. The pillars were arranged in four divisions, consisting of a centre group six deep every way, and an advanced body of twelve in two ranks, the same number flanking the centre. Fifteen columns are all that now remain of the number. Their form is very beautiful. Their height is 60 feet, the circumference of the shaft 16, the length from the capital to the torso, 44 feet. The shaft is finely fluted in 52 divisions: at its lower extremity begins a lintel, and at the third two incholet in depth, and the latter one foot, from whence devolves the pedestal, shaped like the cup and leaves of the pendent lotus, the capitals having been surmounted by the double semi-bull. Behind the Hall of Xerxes was the so-called Hall of Hundred Columns, to the south of which are indications of another structure, which Ferguson terms the Central Edifice. Next along the west front stood the Palace of Darius, and to the south the Palace of Xerxes, measuring about 86 feet square, similarly decorated, and of similar grand proportions. For a further and more minute description, see Le Brunn, Voy. au Leston, iv, 401; Chardin, ii, 140; Niebuhr, Reise in Arabien, etc., ii, 121; Sir R. K. Porter, Travels, i, 576; Heeren, Asiatic Nations, i, 91; Rich, Residence in Kurdistān, ii, 218-222; Ferguson, Palaces of Nineveh and Persepolis Restored, p. 89; Vaux, Nineveh and Persepolis, p. 800; Uscher, A Journey from London to Persepolis, p. 582, etc. Persepolis is about four miles from Istakhr, the earliest occurrence of which name appears on a coin of the Mohammedan conquerors of Persia, struck at this place A.H. 94 = A.D. 712; and as, according to Mr. Ferguson, “Pasargadae had been the royal residence of the Ahammedids [zaran kav iran khosrov, Strabo, xv, 3, 7], so Persepolis became the new town when Darius removed to Istakhr—the latter having been, in all ages subsequent, the city par excellence” (Ferguson, p. 92; Vaux, Nineveh and Persepolis, p. 597, 401). It is curious that, while Herodotus and other ancient writers mention Susa, Babylon, and Eschatana, no contemporary author mentions Persepolis; and moreover they “mark the portions of the year which the Persian month-archs used to spend at their several residences in such a manner as to leave no portion of the year vacant for Persepolis” (Heeren, Asiatic Nations, i, 92). Athenaeus (Deipnosoph. xii, 518, F), however, says that the Persian kings resided at Persepolis during the autumn of each year; but statements of other writers (Xenoph. Cyrop. viii, 22; Pintarch, De Exil. xii, 10) leave this uncertain. Notwithstanding, it cannot be doubted that it was a royal residence, and, as Strabo (xv, p. 729) states, after Susa, the richest city of the Persians. See Persepolis.

It is, however, to be observed that the expedition of Antonius Ephiphanes to Persia is very differently related in 1 Macc. vi, 1, 2. It is there stated that Antiochus, “having heard say that Elamias, in the country of Persia, was a city (so the τῆς Ελαμίας ἐν τῇ Περσαίᾳ πόλις: so the τῆς Ελαμίας ἐν τῇ Περσαίᾳ πόλις, Cod. Alex.) greatly renowned for riches, silver, and gold, and that there was in it a very rich temple, wherein were burnt the boards and breestaps and chieles, which is Alexander, son of Philip, the Macedonian king, who reigned first among the Grecians, had left there, came and sought to take the city and to spoil it,” but was
PERSEUS

This account is strictly followed by Josephus in the book of Acts, 2:xii, 9:1, where it adds that the temple of Diana against which the expedition was made—a fact also recorded by Polybius (xiii:11), but by Appian (Syria 66) stated to have been the temple of Venus. These statements receive some confirmation from the temple of Diana itself. The name is mentioned as visited by Antonius (2 Mass. 1:13-15). Diana has been identified with both Artemis and Aphrodite, and is evidently the Astarte of Strabo (iv. p. 532), the same as the Persians in the Persians being mentioned as visited by Antonius (2 Mass. 1:13-15). The name is mentioned by all ancient authors, and is referred to in the New Testament (Rom. ii. 16:1; Rawlinson, Herod. i. 684.) See NANA.

It is quite evident that there is an error in the Maccabees and in Josephus, in both of which Elymais is called "a city," for all historians and geographers call it a province (Smith, Dict. of Class. Biog. s. v. Elymais), and it is even so particularized in the Cod. A lces.; and Strabo especially (vii. p. 744), who mentions three temples—of Belus, Minerva, and Diana, called Azara—does not place them in the city of Elymais, but at different places in the country of the Elymaians. It was the temple of Belus that was attacked by Antonius the Great in 187 B.C., when he killed the people who rose in its defence (Strabo, L. c. xvi. 1:18; Dio. S. cxxi. 15: comp. xcviiii. 3; Justin, xxxii. ch. 2), against the opinion of Aurelius Victor (De Viris Iustiss. 54), who says he was slain by his attendants during the carnage. Taking the following facts into consideration: 1. That Persepolis, according to the account of most historians, was utterly destroyed, and all the treasures carried away; 2. That the expedition of Antonius Ephiphanes thereto is only recorded in the 2d Mass.; 3. That Antonius' father had already made an attack on the temple of Elymais, which was perhaps an inducement for the son to do the same; 4. That the expedition to Elymais and to its temple—the deity of which is named—is not only mentioned in the 1st and 2d Mass., but is also recorded by Polybius and Appian—it seems more probable that it was against an Elymaeans temple that Antonius Ephiphanes directed his attack, an opinion that has been already advanced by Grimm (Kurzeir. der. Handb. zur Schule. 2:41) and Rawlinson, Anc. Monarchies. i. 257 sqq.; North Amer. Rev. 1856, p. 7. See ANTIOCHUS EPHEPHANES.

PERSEUS, the name of a Greek character in mythology, was the son of Zeus and Danae, and grandson of Acrisius. Acrisius had been warned by an oracle that he should be killed by the hand of the son of Danae, so he shut her up in a brass tower. Zeus visited Danae in the form of a shower of gold, and became the father of Perseus. Hence he is called augyena. When Acrisius discovered the birth of the boy, he put both him and his mother into a chest and cast it into the sea, but Zeus carried it ashore at Seriphus (and there Perseus was brought up), one of the Cyclades, where Polydeuces reigned, who, wishing to get rid of him to be free in his approaches to Danae, with whom he had become enamoured, sent Perseus, when yet a youth, to bring the head of the Gorgon Medusa, on the pretence that he wanted to present it as a wedding present. Perseus went to the protection of Athena and Hermes, the former of whom gave him a mirror, by which he could see the monster without looking at her (for that would have changed him into stone); the latter, a sickle; while the nymphs provided him with winged sandals, and a helmet of brass or invulnerable cap. After numerous wonderful adventures, he reached the abode of Medusa, who dwelt near Tartessus, on the coast of the ocean, and succeeded in cutting off her head, which he put into a bag and carried off. On his return he visited Ethiopia, where he liberated a married woman, Andromeda, by whom he subsequently had a numerous family, and arrived at Seriphus in time to rescue his mother from the annoyance of the ten ardent addresses of Polydeuces, whom, along with some of his companions, he

changed into stone. After this he went to Argos, from which Acrisius fled to Thebes, but Perseus followed him in disguise, hoping to persuade him to return. While taking part in the games there, he threw the discus in such a way that Acrisius was killed by it, without Perseus' intention. Then Perseus assumed the vacant throne. Perseus was worshiped as a hero in various parts of Greece, and according to Herodotus in Egypt too. In ancient works of art the figure of Perseus much resembles that of Hermes. See Vollmer, Mythologisches Wörterbuch, s. v.; Mrs. Clement, Sources and Legends of Art and Mythol. p. 475, 479.

PERSEUS (Perseus), the name originally of a mythological Greek character, Vulg. Perseus, the eldest (illegitimate or supposititious?) son of Philip V and last king of Macedonia. After his father's death (B.C. 179) he continued the preparations for the renewal of the war with Rome, which was seen to be inevitable. The war, which broke out in B.C. 171, was at first ably sustained by Perseus; but in 168 he was defeated by L. Ameliaus Paullus at Pydna, and shortly afterwards surrendered with his family to his conquerors. He graced the triumph of Paullus, and died in honorable retirement at Alba. The defeat of Perseus put an end to the independence of Macedonia, and extended even to Syria the terror of the Roman name (1 Mass. viii. 5).
PERSEVERANCE

mutability of the decree of election, flowing from the free and unchangeable love of God the Father; upon the efficacy of the merit and intercession of Jesus Christ; the abiding of the Spirit, and of the seed of God within them; and the nature of the covenant of grace—from all which arises also the certainty and infallibility in the perfection of the security, "say the Buck, "are a strong argument to prove this doctrine. (1.) God, as being possessed of infinite love, faithfulness, wisdom, and power, can hardly be supposed to suffer any of his people finally to fall into perdition. This would be a reflection on his attributes, which are all perfect in themselves, as well as in the sum of them; and His love to his people is unchangeable, and therefore they cannot be the objects of it at one time and not at another (John xiii. 1; Zeph. iii. 17; Jer. xxxi. 3). His faithfulness to them and to his promise is not founded upon their merit, but upon his own will and goodness; this, therefore, cannot be violated (Mal. iii. 6; Numb. xxiii. 19). His wisdom foresees every obstacle in the way, and is capable of removing it, and directing them into the right path. It would be a reflection on his wisdom, after choosing a right end, not to choose right means. The same consideration argued that his power is insuperable, and is absolutely and perpetually displayed in their preservation and protection (1 Pet. i. 5). (2.) Another proof of this doctrine is their union to Christ, and what he has done for them. They are connected with him, that they may not suffer the things which befell him (Eph. i. 23), the purchase of his death (Rom. viii. 34; Tit. ii. 14) the objects of his intercession (Rom. v. 10; viii. 34; 1 John ii. 2). Now if there be a possibility of their finally falling, then this choice, this union, his death and intercession, may all be in vain, and render abortive; an idea as derogatory to the divine glory, and as dishonorable to Jesus Christ, as possibly can be. (3.) It is proven also from the work of the Spirit, which is to communicate grace and strength equal to the day (Phil. i. 6; 2 Cor. i. 21, 22). If, indeed, divine grace was dependent on the will of man, by his own power he had brought himself into a state of grace, then it might follow that he might relapse into an opposite state when that power at any time was weakened; but as the perseverance of the saints is not produced by any native principles in themselves, but by the agency of the Holy Spirit, enlightening, confirming, and establishing them, of course they must persevere, or otherwise it would be a reflection on this Divine Agent (Rom. viii. 9; 2 Cor. vii. 11; John iv. 14; xvi. 14). (4.) Lastly, the declarations and promises of Scripture are so various and concurs in favor of perseverance, that (Job xvii. 21; Ps. xciv. 14; cxxv.; Jer. xxxii. 40; John x. 26; xvii. 12; 1 Cor. i. 8, 9; 1 Pet. i. 5; Prov. iv. 18), all of which could not be true, if this doctrine were false."

According to the Arminian theology, on the other hand, the Spirit of God is equally ready and willing to act upon all hearts; its efficacy over some rather than others depends solely upon their own free-will in choosing Christ, and yielding to the influence of the Spirit; hence, if they thereafter choose again to reject Christ, it is not a consequence of any influence of the Holy Spirit, they can do so, in which case they are said to have fallen from grace. This possibility of the final apostasy of the saints, Arminians assert on the authority of Heb. vi. 4, as well as of the many warnings against falling away which the Scriptures contain (Ezek. vii. 20; xviii. 24; Heb. vi. 3, 6; Ps. cxxxii. 3-5), and inasmuch as it is foretold as a future event that some should fall away (Matt. xxiv. 12, 13; John xv. 6; Matt. xxi. 20, 21), and that many have in fact fallen away, as David, Solomon, Peter, Alexander, Hymenaeus, etc. This last point has become of so much importance in the controversy that those who hold to the doctrine of the final perseverance of the saints maintain that they may temporarily fall away into sin, and suffer loss by their inconstancy and backsliding, and also that those cases in which seeming Christians abandon their Christian profession and hope altogether, are explained by the declaration that the conversion in such cases was a spurious one. The Calvinists go even so far as to claim that "the difference between Arminian and Calvinistic doctrine, from a practical point of view, than has sometimes been supposed, since both agree that one may give all the external evidences of having commenced a Christian life, and yet fall away and be finally lost. The real difference between them is that the Arminians hold that in such a case the person who has fallen, though a real believer and a Christian, but lost his religion by turning his back upon Christ; while the Calvinist holds that the appearances were deceitful, and the confessed Christian was never really a "child of God" (Dr. Lyman Abbott); or, as Mr. Edward says of all apostates, "They had no root, no oil in their vessels." To this mode of arguing the question Arminians take decided exception, since the fact that profession and faith do not persevere does not prove that real ones will do so. More properly expressed, the Calvinistic proposition stands thus: "Prove and prove to all men that you can persevere." The exposure of the hypocrisy the Arminian denies to be proof that the real saint cannot apostatize, and though David and Peter were finally restored, it does not prove that either had grace in his heart and could be brought back to him (Eph. v. 26, 27). Nay, "in the case of David, is to assert that a murderer and an adulterer hath eternal life abiding in him; and to assert it in the case of Peter, is to assert that a person may be in a state of grace and yet profanely deny Christ." Besides, this doctrine absolutely places the Christian no higher than Adam stood in his primeval state. See Perfection. Even in his first trial Adam could fall. According to Calvinism, the Christian has reached a point where he can no more be liable to fall from God. It also removes the decision of a question from its proper jurisdiction—the final judgment—and places it at the point of conviction. It teaches that when a person becomes truly converted he is absolutely assured of eternal life, and of course his meatiness for heaven is prospectively settled, and therefore, granting the concept to be genuine, the judgment-day becomes a farce. But the most common objection raised by the Arminians is that the doctrine of final perseverance makes men careless concerning virtue and holiness, and supercedes the use of means and renders exhortation unnecessary. Its advocates, on the contrary, admit that it does not valid against them, the true doctrine of Perseverance of Saints being one of perseverance in holiness, and giving no encouragement to a confidence of final salvation which is not connected with a present and even an increasing holiness," or, as Abbott puts it: "Both Calvinist and Arminian agree in urging all professors of Christianity to exercise diligence in making their calling and election sure, the one that they be not deceived, the other that they lose not what they have gained. The Church of England, without profoundness and austerity and captivating influence of the Holy Ghost, may depart from grace given, and fall into sin; and by the grace of God may rise again." "To our own safety our own seductivity is required," is the sentiment of Hooker, in his sermon on The Certainty and Perpetuity of Faith in the Elect. See Beza, Principles; Whittby and Gill, On the Fire Points; Calvins, Institutes, bk. iii. ch. 28; Williston, Harmony of Divine Truth (art. on Perserv.); Cole, Sovereignty of God, Booth, Reign of Grace; Dodridge, Lectures, lect. 127; Tartini, Op. Theol. pr. loc. 14, p. 156; Witsius, Economia, lib. iii. ch. 18; Toplady, Works, v. 476; Bidgley, Body of Divinity, qn. 79; Wesley, Works, v. 50; Fletcher, Works; Watson, Institutes; Hall, Help to Zion's Travellers; Newton;
Persia

Persia (Heb. Parus', פֶּרֶס), native Fars, thought to be either from the Zeml Par, "pure" or "spleen," or from Barus (בַּרְוָס), "a horse," that animal being abundant there; Sept. Παραζ; Vulg. Perae, the name of one of the interior countries of Ether Asia, varying greatly in its application. In time and circumstances, the following account of it embraces the ancient and the modern information, with a special view to biblical illustration.

Persis. 1. Extent and Physical Features.—The name is used in two or three senses geographically and historically.

1. "Persis" was strictly the name of a tract of no very large dimensions on the Persian Gulf, which is still known as Fars, or Farsistan, a corruption of the ancient appellation. This tract was bounded on the west by Susiana or Elam, on the north by Media, on the south by the Persian Gulf, and on the east by Carmania, the modern Kerman. It was an arid and unproductive region (Herod. i. 122; Arrian, Exp. A. c. xvi. 4; Plato, Leg. iii. p. 695, A); but contained some districts of considerable fertility. The worst part of the country was that towards the south, on the borders of the gulf, which has a climate and soil like Arabia, being sandy and almost without streams, subject to pestilential winds, and in many places covered with particles of salt. Above this miserable region is a tract very far superior to it, consisting of rocky mountains — the continuation of Zagros — among which are found a good many fertile valleys and plains, especially towards the north, in the vicinity of Shiraz. Here is an important stream, the Bendemir, which, flowing through the beautiful valley of Mersadist and by the ruins of Persepolis, is then separated into numerous channels for the purpose of irrigation, and, after fortifying a large tract of country (the district of Kurjan), ed its course in the salt lake of Baktigan. Vine, oranges, and lemons are produced abundantly in this region; and the wine of Shiraz is celebrated throughout Asia. Further north an arid country again succeeds, the lands of the Great Desert, which extends from Kerman to Mazenderan, and from Kashan to Lake Zorrah.

Ptolemy (Geogr. vi. 4) divides Persia into a number of provinces, among which the most important are

Parsatanen on the north, which was sometimes reckoned to Media (Herod. i. 101; Steph. Byz. ad voc Παραζανας), and Mardyanen on the south coast, the country of the Mardi. The chief towns were Parsagad, the ancient, and Persepolis, the later capital. Parsagad was situated on the outskirt of Susiana and Gabae in the mountain country, and Tsach upon the coast. See Strab. xvi. 3, § 1-8; Pliny, H. N. vi. 25, 26; Ptolem. Geogr. vi. 4; Kinnell, Persian Empire, p. 54-80; Malcol. Hist. of Pers. i. 2; Ker Porter, Travels, i. 458, etc.; Rich. Jew., Cyclic History, iv. 33.

2. While the district of Fars is the true original Persia, the name is more commonly applied, both in Scripture and by profane authors, to the entire tract which came by degrees to be included within the limits of the Persian empire. This empire extended at one time from India on the east to Egypt and Thrace upon the west, and included, besides portions of Europe and Africa, the whole of Western Asia between the Black Sea, the Caucasus, the Caspian, and the Jaxartes upon the north, the Arabian desert, the Persian Gulf, and the Indian Ocean upon the south. According to Herodotus (ii. 89), it was divided into twenty governments, or satrapies; but from the inscriptions it would rather appear that the number varied at different times, and when the empire was most flourishing considerably exceeded twenty. In the inscription upon his tomb at Nakhsh-Rustam, Darius mentions no fewer than thirty countries as subject to him besides Persis Proper. These are — Media, Susiana, Parthia, Aria, Bactria, Sogdiana, Chorasmia, Zaraqania, Arachosia, Sagartia, Gandara, India, Scythia, Babylonia, Assyria, Archia, Egypt, Armenia, Cappadocia, Sagpara, Ionia, Europe, Northia, the islands of the Aegean, the country of the Scordes, (European) Ionia, the lands of the Tacabri, the Budians, the Cushites or Elamites, the Mardians, and the Colchians.

The name "Persia" is not found in the older records of the Bible, but after the Babylonian period it occurs frequently (2 Chron. xxxiii. 20, 22; Ezra iv. 5 sq.; vi. 14 sq.; Esth. i. 3; viii. 10; I Macc. i. 1), meaning the great Persian kingdom founded by Cyrus. The only passage in Scripture where Persia designates the tract which has been called above "Persia Proper" is Ezek. xxxviii. 24; 39.

3. Modern Persia or Iran is bounded on the north by the great plain of Khiva, the Caspian Sea, and the Trans-Caucasian provinces of Russia; on the east by Bokhara, Afghanistan, and Beloochistan; on the south by the Strait of Ormuz and the Persian Gulf; and on the west by the Shat-el-Arab and Asiatic Turkey. It contains about 545,000 square miles, and consists for the most part of a great table-land or elevated plain plateau, which in the centre and on the east side is almost a dead level; but on the north, west, and south is covered with a broad belt of mountain-region, but here interposed with tracts of desert and small fertile plains. The mountain-system of Persia has its root in the north-west corner of the kingdom, and is a continuation of the Taurus, Armenian, and Caucasian chains. The Taurus chain enters Persia a little to the north-east of Lake Van and then turns in a south-
PERSIA

easterly direction, ramifying into numerous paras- lel chains, which traverse the west and south of the country, covering it for a width of from 100 to 330 miles. At its south-eastern extremity this chain joins the Jebel-Abad, which runs eastward through the centre of the province of Kerman, and forms the south- ern bound of the plateau. The range is generally of limestone, and, like all other mountains of the same character, presents many caves and grottoes. The province of Azerbaijan, in the north-west, is almost wholly mountainous. On the east side of Azerbaijan, a spur of the Caucasus, separated from it, however, by the valley of the Kur and Araxes, runs southwards at some little distance from and parallel to the shore of the Caspian, at the south-west corner of which it becomes more elevated, and as the majestic range of the Elburz takes an easterly direction, fol- lowing the line of the Caspian coast, at a distance va- rying from 12 to 60 miles. On reaching Astrabad it divides into three great parallel ranges of somewhat inferior elevation, which pursue first an east, and then a south-east direction, joining the Farampiaus in Af- ghanistain. In the Elburz the snows are cou- red with perpetual snow; and the highest peak, Mount Demavend, is more than 20,000 feet above the sea. The Persian mountains are mostly of a primitive character; granite, porphyry, feldspar, and mountain limestone enter largely into their composition; they are generally rich in compartments and inorganic action — Demavend itself being evidently an extinct volcano; and the destructive earthquakes which are still of frequent occurrence in the north and north-west of Persia indicate the presence of subterranean fires. The Elburz are the most rugged, and the Zagros the most mountainous, the Kerman mountains on the south, and Afghanistan on the east, are the boundaries of the Persian plateau, which ranges from 2000 to 5000 feet above sea-level, the lowest portion being the Great Salt Desert, in the north-west of Khorassan, which has 2000 feet of elevation above the sea; while the average elevation of the whole plateau above the sea is about 3700 feet. The lower level, out of which the upland rises, is called the Dughstiat, or " Level Country," and stretches along the coast of the Persian Gulf and the Gulf of Ormuz, south of the Bakhtiari and Kerman ranges, and also along the Caspian Sea, between it and the Elburz. The aspect of the plateau, diversified as it is for the most part with hills and valleys, mountains and plains, is, contrary to what might naturally be expected, dreary and forbidding. The interior mountains are exposed to a hot and arid climate, which is well expressed in the vegetation, the shrubs, and present the appearance of huge masses of gray rock piled one on the other, or starting in abrupt ridges from the level plain. The plains are equally unattractive; and those which are not deserts consist either of gravel which has been washed up from the mountain slopes or accumulated into steep and extensive beds during some former revolution of nature, or of a hard, dry clay. To render such a coun- try fertile requires the presence of abundant water; but, unfortunately for Persia, nature has been remark- ably sparing in this respect. The Caspian Sea, the salt and centre of the country is entirely destitute of riv- ers; the country south of the Kerman mountains is very meagrely supplied, the rivers, such as they are, being almost wholly confined to the western and the Caspian provinces. Almost the whole of Khorassan, the north half of Kerman, the east of Irak-Ajemi, which form the great central plain, and detached portions of all the other provinces, with the exception of those on the Caspian Sea, forming more than three fourths of the surface of Persia, are destitute of water. The surface is dry, and produces a scanty herbage of saline plants; in other parts it is covered with salt marshes, or with a dry, hard, salt crust, sometimes of consider- able thickness, which glitters and flashes in the sun- light, forcing the traveller on these inhospitable wastes to wear a shade to protect his eyes; but by far the greater portion of this region consists of sand, some- times so light and impalpable as to be shifted hither and thither by the slightest breeze. This great cen- tral desert contains a few oases, but none of great ex- tent, and the life of the desert people is the "Dasht Beyad," commonly known as the Great Salt Desert of Khorassan, which lies in the north-west of that province, and is 400 miles in length by 250 miles in breadth. Sone parts of Persia, however, are of ex- ceeding fertility and beauty; the irriatible valleys of some of them 100 miles in length, between the various ranges of the Kerman mountains, abound with the rarest and most valuable vegetable productions; great portions of the provinces of Fars, Khuzaistan, Ardelen, and Azerbaijan have been lavishly endowed by nature with the most luxuriant vegetation; while the Caspian provinces, and the southern slopes of the Elburz, are as beautiful as wood, water, and a fine climate can make them—the mountain-sides being clothed with trees and shrubs, and the plains studed with nature's choicest products. The climate is necessarily very varied. What the Younger Cyrus is reported to have said to Xenophon regarding the climate, "that people perish with cold at the one extremity, while they are suffocated with heat at the other," is literally true. Persia may be considered as divided into three great climatic zones, the lower, in the eastern Dushitan, of the elevated plateau, and of the Caspian provinces. In the Dushitan, the autumnal and winterly winds are excessive, those of summer more tolerable, while in winter and spring the climate is delightful. The cold is not intense, and snow seldom falls on the southern slope of the Kerman range. The rains are not heavy, and occur in winter and spring. The district is extremely healthy. On the plateau, the climate of Fars is temperate, and as we proceed north- wards, the climate improves, attaining its greatest per- fection about Isphahan. Here the winters and sum- mers are equally mild, and the regularity of the seas- ons appears remarkable to a stranger. To the north and north-west of this the winters are severe; and in Kurdistan, the greater part of Azerbaijan, and the region of the Caspian, the climate is quite alpine. The desert region of the centre and east, and the country on its border, suffer most oppressive heat during summer and piercing cold in winter. The Caspian provinces, from their general depression below the sea-level, are exposed to a degree of heat in summer almost as great as in the desert, while the winters are mild. Rains, however, are frequent and heavy, and many tracts of low country are marshy and extremely unhealthy. With the exception of the Caspian provinces, the atmosphere of Persia is remark- able above that of all other countries for its dry- ness and purity, a fact frequently proved by exposing pieces of polished iron to the action of the air, and finding whether or not they rust.

11. Inhabitants.—1. Classification of the Population.— Herodotus tells us that the Persians were divided into seven tribes, ten classes, fifty clans, and a hundred na- tional, and four nomadic. The noble tribes were the Paragandae, who dwelt, probably, in the capital and its immediate neighborhood; the Maraphans, who are perhaps represented by the modern Mafa, a Persian tribe which prides itself on its antiquity; and the Masjpans, who upon nothing more is known. The three tribes engaged in agriculture were called the Pantalians, the Dercusiana, and the Germansians, or (according to the true orthography) the Carma- nians. These last were either the actual inhabitants of the country, or settlers of the same name, who remained in Persia while their fellow-tribesmen occupied the adjoining region. The nomadic tribes are said to have been the Dahi, who appear in Scripture as the "Dehavites" (Ezra iv, 9), the Mardi, mountainreed
famous for their thievish habits (Steph. Byz.), together with the Sagartians and the Derbices or Dropici, colonists from the regions east of the Caspian. The royal race of the Achemenidae was a prætry or clan of the Psaaragdæ (Herod. 1, 126); to which it is probable that most of the noble houses likewise belonged. Little is heard of the Marshprians, and nothing of the Masprians, in history; it is therefore evident that their nobility was very inferior to that of the leading tribe.

The modern population of Persia is naturally divisible into two classes, the settled and the nomad. The settled population are chiefly Tajiks, the descendants of the ancient Persian race, with an intermixture of foreign blood—Turkish, Tartar, Arab, Armenian, or Georgian. To this class belong the agriculturists, merchants, artisans, etc. From having long been a subject race, they have to a large extent lost their natural independence and manliness of character, and acquired, instead, habits of dishonesty, servility, and cunning. The Tajiks are Mohammedans of the Shiite sect, with the exception of the few remaining Parsees (q. v.), or Qizis, who are found in Kerman and Fars, and still retain their purity of race and religious faith. The nomad or pastoral tribes, or eylats (q. v.), are of four distinct races—Turkoman, Kurds, Lûrs, and Arabs. Their organization is very similar to that which formerly subsisted among the Highland chiefs of the Highlands of Persia. The exceptions are nomad, while the latter inhabited a fixed locality. Each tribe is ruled by its hereditary chief (šâhâ), and under him by the heads of the cadet branches (tiwâr) of his family. Of the four races, the Turkoman is by far the most numerous, and forms at the present day the ruling race in Persia. The Kurds are few in number, the greater part of their country and race being under the sway of Turkey. The Arabs are few in number, and at the present day can hardly be distinguished from the Persians, having adopted both their manners and language. The Lûrs are of nearly pure Persian blood. The nomad races, especially the Turkomans, profess the Sunni creed; they are distinguished from the Tajiks by their courage, manliness, and independence of character; but they are inferior to the others, and since their entrances into the country in the 10th century it has continually been distracted by civil wars and revolutions. The whole population of Persia is estimated in round numbers at 10,000,000, of whom 3,000,000 are nomads (200,000 of these being Arabs). Closely according to their religious belief, the 5,000,000 are Shiites; 500,000 are unorthodox Shiites; 1,500,000 are Sunnites; while the remaining 500,000 are made up of Christians of all denominations (including 200,000 Armenians, 100,000 Nestorians), along with Jews, Guebres, etc.

2. Character and Customs.—The government of Persia was despotic, though there seems to have been a council of state, composed perhaps of the seven princes who "see the king's face" (Ezra vii, 14; Esther 1, 14). These, after the time of Cyrus, may have been the six magistrates or "shews" (Cyrus, 6, 20; Darius, 6, 24), as he names them) who conspired with Darius against the pseudo-Smerdis, along with a prince of the royal house. The sovereign often administered judgment promptly and personally, though he was approached with tedious and stately formalities, as if in some sense he was a god. The Persian was economy, justice; he might speak faithfully, as did Artabanus to Xerxes; or they might be as complaisant as when they told the same monarch that, though there was no law permitting him to marry his sister, there was a law allowing him to do as he pleased. The Persian empire was re fused to do the required homage to Xerxes, as in their opinion it amounted to religious worship. In Plutarch (Themist. 27) reference is made to the king, who was to be worshipped "εν τεικνα Σωτηρε," "as the image of God," and Curtius tells us how much Alexander coveted this dedication (viii, 5, 11). The seven princes of the empire seem to have been regarded also as representing the seven amastakpôs, who stand before the throne of Ormuzd. The sculptures at Persepolis tell the same story, and the Visparad directs prayer to be offered "to the ruler of the country" (Spiegel, Erôs, p. 74). The satrapes appointed by Darius are called in Hebrew יִשְׂרָאֵל יִשְׂרָאֵל, in Greek σαρπάρας, in old Persian, as on the inscriptions, khâstatrapâ— the X in the Hebrew form being usually inserted before the Persian xâh. A district or smaller portion of country was put under a γιρμαρ, or prefect (Esth. iii. 12; Ezra viii, 86), the word being allied to the familiar term pachta. This name is applied to the Persian governor west of the Euphrates (Neh. ii. 7, 9; iii. 7); also to the governor of Judaea, as Zerubabel (Hag. i. 1, ii. 2; and Neh. vi. 14; xii. 26). Another term given to a Jewish prefect is "the Tirathanta," applied to Nehemias (Neh. viii, 9; comp. Ezra ii. 68; Neh. vii. 65). The title probably means, as Gesenius says, "your serenity," or, as we have it, "most dread sovereign." The royal scribes kept a regular journal of judicial procedure, and these "chronicles" were deposited in the chief cities. Thus in Ezra we read of the "house of the rolls," in which search was made, by command of Darius, for a copy of the decree of Cyrus concerning the Jews and Jerusalem, and the "roll" was found in the palace at Achmetha (Ezra vi. 1). In Esther occurs also this incident (vi. 1, 2): "On that night could not the king sleep; and he commanded to bring the book of records of the chronicles; and they were read before the king. And it was found written that Mordecai had told of Bigthana and Teresh, two of the king's chamberlains, the keepers of the door, who sought to lay hand on the king Ahasuerus" (see also Esth. x, 2). When the enemies of Daniel were afraid that the king might relent towards a favorite, they pressed upon him this constitutional maxim, "Sign the writing, that it be not changed, according to the law of the Medes and Persians, which altereth not." As the king solemnly admitted the maxim, he was again pressed with it: "Know, O king, that the law of the Medes and Persians is, that no decree or stute which the king establisheth may be changed" (Dan. vi. 15). We are not to infer from such language that a royal decree was in every sense irrevocalle, or beyond the power of modification or repeal. But the words imply that edicts could not be capriciously altered, and that the despot was bound and regulated by past decisions and precedents. The book of Esther shows, moreover, how a decree, though it could not be reversed, might easily be neutralized. The Jews marked out for assassination got warrant to defend themselves, and to become assassins in turn (Esth. viii. ix). The satrapian form of administration necessitated the employment of poets and means of conveyance. A vivid picture of such an organization—scribes, translators, and couriers—is given in Esth. viii. 9, 10. The system is described by Herodotus (viii. 98). "Nothing mortal," he says, "travels so fast." Relays of men and horses were stationed at due distances, and license was
given to the couriers to press men, horses, and ships into their service. This service was called ḍev̄agāpio\[1\] — a Tatar word meaning "work without pay," Rawlinson, however, suggests other derivations. The verb ḍev̄agāpio came to signify to press into service like a Persian ḍev̄agaq; and Persian domination brought the word into Palestine. Compare Matt. v, 41; Mark xv, 21, where the verb is rendered in the first instance "compel thee to go," and in the second is applied to the soldiers forcing Simon to carry Christ's cross. The Persian revenues were raised partly in money and partly in kind. The queen's wardrobe and toilet were provided for by certain districts, and they were named according to the article which they were taxed to furnish—one being called the Queen's Veil and another the Queen's Girdle. The court, according to Celsius, consisted of an immense retinue. The only water which the king drank was that of the Choaspes; the salt on his table was imported from Africa, and the wine from Syria. Athenæus (iv) depicts at length the royal etiquette and extravagance, such as we have it in the first chapter of Esther. The surveillance of the harem was committed to eunuchs, and the seraglio was often the real governing power. The residences of the monarchs of Persia (who called themselves "king of kings"); see Geesn. Jesus, i, 392; comp. Berley, Pers. Antiquit. p. 64, 57, 92) were various. Yasarguda, with its royal tombs, was most ancient. Persepolis rose not very far from it, and became a treasure-city. After the overthrow of the Babylonian kingdom, Cyrus, while preserving a regard for the more ancient cities of the empire, seems to have thought Babylon a more suitable place for the metropolis of Asia; but as it might not be polite, if it were possible, to make a strange place the centre of his kingdom, he founded a new city, Susa, where he was still on Persian ground, and yet not far distant from Babylon. There was also Ecbatana, the Median capital. These several royal abodes seem to have been occupied by the later monarchs, according to the season of the year.

Among the people there were minute distinctions of rank and formal salutations. When two persons of equal station met, they kissed on the lips; if one was of slightly lower rank, the kiss was on the cheek; and where the difference was great, the inferior prostrat-

Ancient Persian King putting his Foot on an Enemy. (From the Sculptures of Behistun.)

ed himself on the ground. They drank wine in large quantities, and often under its influence formally deliberated on public affairs. Polygamy was freely practiced. No one was put to death for a first offence, but fornicity was often shown to captives or rebels. Darius himself says of Phraortes, "I cut off his nose and his ears. He was chained at my door; all the kingdom beheld him; afterwards I crucified him" (Inscription at Behistun, col. iii). The severity of masters towards

slaves was wisely restrained (Herod. i, 133, etc.). The Persian youth were taught three things—εἰπεῖν, καὶ τρέχειν, καὶ λέγειν—"to ride, to shoot, and to speak truth" (Herod. i, 136). The Persians had made no small progress in the fine arts, especially in architecture, as the ruins of Persepolis testify. These stately and imposing ruins stand on a levelled platform, raised above several terraces—the ascent being by a stair, or double flight of steps the grandest in the world, and yet so gradual in its rise that the traveller may ride up on horseback. The stones are of dark gray marble, often exquisitely polished. Colossal bulls guarded the front of the pylons, and the sculptures are not unlike those of Assyria. The space on the upper platform stretches north and south 350 feet, and east and west 350 feet, and is now covered with broken cap-

Persian Hunting Scene, King and Attendants. (Rock Sculpture at Tahkt-i-Bostan.)
PERSIA

The Persians were a people of lively and impressionable minds, brave and impetuous in war, witty, passionate, for Orientals truthful, not without some spirit of gregariousness, and of more intellectual capacity than the generality of Asiaties. Their faults were vanity, impulsiveness, a want of perseverance and solidity, and an almost slavish spirit of servility and servility towards their lords. In the times anterior to Cyrus they were noted for the simplicity of their habits, which offered a strong contrast to the luxuriousness of the Medes; but from the date of the Median over-
From the first entrance of the Persians, as immigrants, into their new territory, they were probably brought into contact with a form of religion very different from their own. Magianism, the religion of the Scythic or Turanian population of Western Asia, had long been dominant over the greater portion of the region. It was, however, not, as some supposed, the only element that the Persians had in view; for the true essence of this religion was worship of the elements—more especially of the sublimest of all, fire. It was an ancient and imposing system, guarded by the venerable hierarchy of the Magi, boasting its fire-altars where from time immemorial the sacred flame had burned without intermission. Along the borders of the Steppe, the Magian priesthood made pretence. The worship of other deities, as Tanata or Anaitis, was a still later addition to the religion, which grew more complicated as time went on, but which always maintained as its leading element the supremacy of fire, the principle wherein it was originally based. See MAGI.

III. History.—In remote antiquity it would appear that the Persians dwelt in the region east of the Caspian, or possibly in a tract still nearer India. The first Pargard of the Vandals seems to describe their wanderings in these countries, and shows the general line of their progress to have been from east to west, down the course of the Oxus, and then, along the southern shores of the Caspian Sea, to Rhages and Media. It is impossible to determine the period of these movements; but there can be no doubt that they were anterior to B.C. 688, at which time the Assyrian kings seem for the first time to have come in contact with Aryan tribes east of Mount Zagros. Probably the Persians accompanied the Medes in their migration from Khorassan, and, after the latter people took possession of the tract extending from the river Kur to Isphahan, proceeded still farther south, and occupied the region between Media and the Persian Gulf. It is uncertain whether they are to be identified with the Barts or Parsis of the Assyrian monuments. If so, we may say that from that time they continued in the latter half of the 7th century B.C. they occupied South-eastern Armenia, but by the end of the 8th century had removed into the country which thenceforth went by their name. The leader of this last migration would seem to have been a certain Achamennus, who was recognised as king of the newly occupied territory, and founded the famous dynasty of the Achemenides, about B.C. 700. Very little is known of the history of Persia between this date and the accession of Cyrus the Great, near a century and a half later. The crown appears to have descended in a right line from Teispes, Cyrus I, and Cambyses II, who was the father of Cyrus the the Conqueror. Teispes must have been a prince of some repute, for his daughter Atossa married Phra- coces, king of the distant Cappadocians (Diod. Sic. ap. Phot. Bibliothec. p. 1159). Later, however, the Persians found themselves unable to resist the growing strength of Media, and became tributary to that power about B.C. 630, or a little earlier. The line of native kings was continued on the throne, and the internal administration was probably untouched; but external independence was altogether lost until the revolt under Cyrus. Of the circumstances under which this revolt took place we have no certain knowledge. The stories told by Herodotus (i, 108-129) and Nicolas of Damascus (Fr. 60) are internally improbable; and they are also at a

little while declared in his favor—while in Sagartia another
pretender, making a similar claim of descent from
Cyaxares, induced the Sagartians to revolt; and in
Margiana, Arachotia, and even Persia Proper, there
were insurrections against the authority of the new
king. His courage and activity, however, seconded by
the valor of his Persian troops (see p. 10). His reign
had lasted seven years and five months.

Gomates the Magian found himself thus, without a
struggle, master of Persia (B.C. 522). His situation,
however, was one of great danger and delicacy. There
is reason to believe that he owed his elevation to his
fellow-pretenders, whose object, in placing him upon
the throne, was to secure the triumph of Magianism
over the dualism of the Persians. It was necessary for
him therefore to accomplish a religious revolution,
which was sure to be distasteful to the Persians, while
at the same time he had to keep up the illusion on
which his claim to the crown was professedly based,
and to prevent any suspicion arising that he was not
Achemenian, the son of Cyrus. To combine these two aims
was difficult; and it would seem that Gomates soon dis-
carded the latter, and entered on a course which must
have had a decisive influence in formulating the character
of his reign. The fate of Gomates was not only not
Achemenian, but no Persian. He de-
stroyed the national temples, substituting for them
the fire-altars, and abolished the religious chants and other
sacred ceremonies of the Oromasdians. He reversed
the policy of Cyrus with respect to the Jews, and forbade
by law all intercourse between them and the Persians
(see Artaxerxes I., iv, 17-22). See ARTAXERXES. He courted the favor of
the subject nations generally by a remission of trib-
ute for three years, and an exemption during the same
space from forced military service (Herod. iii, 67).
Towards the Persians he was haughty and distant, keeping
them as much as possible aloof from his person, and
seldom showing himself beyond the walls of his palace.
Such conduct made him very unpopular with the proud
people which held the first place among his subjects,
and the suspicion that he was a mere pretender having
after some months ripened into certainty, a revolt broke
out, headed by Darius, the son of Hystaspes, a prince
of the blood Royal, which in a short time was crowned
with complete success. Gomates quitted his capital,
and, having thrown himself into a fort in Media, was
besieged, attacked, and slain. Darius then, as the chief
of the conspiracy, and after his father the next heir
to the throne, was at once acknowledged king. The reign
of Gomates lasted seven months.

The first efforts of Darius were directed to the re-
establishment of the Oromasdi religion in all its purity.
He issued a decree for the destruction of the temples
which Cyrus had destroyed, and restored to the people the religious
chants and the worship of which Gomates the Magian
had deprived them" (Beh. Inscri. col. 1, par. 14).
Appealed to in his second year by the Jews, who wished
to resume the construction of their Temple, he not only
allowed them, confirming the decree of Cyrus, but as-
sisted the work by grants from his own revenues,
where-

by the Jews were able to complete the Temple as early
as his sixth year (Ezra vi, 1-15). During the first
part of the reign of Darius the tranquillity of the empire
was disturbed by numerous revolts. The provinces re-
gretted the loss of those exemptions which they had
obtained from the weakness of the Pseudo-Smerdis,
and hoped to shake off the yoke of the new prince before
he could grasp firmly the reins of government. The first
revolt was that of Babylon, where a native, claiming to
be Nebuchadnezzar, the son of Nebuchadnezzar, re-
asserted his claim to the crown; but Darius speedily crushed this revolt and ex-
cuted the pretender. Shortly afterwards a far more
extensive rebellion broke out. A Mede, named Phraortes,
came forward, and, announcing himself to be "Xa-
thrytes, the raja of Cyaxares," assumed the head-
title. Media, Armenia, and Assyria immediately ac-
knowledged him—the Median soldiers at the Persian
court revolted to him—Parthia and Hyrcania after a

Xerxes, the eldest son of Darius by Atossa, daughter of Cyrus, and by Artaxerxes. He also applied himself, like his predecessors, to the extension of the empire; conducted an expedition into European Scythia, from which he returned without disgrace; conquered Thrace, Paeonia, and Macedonia towards the west, and a large
portion of India on the east, besides (apparently) bringing into his kingdom "the land of the Nahak-i-Rustam Inscription." On the whole he must be pronounced, next to Cyrus, the greatest of the Per-
sian monarchs. The latter part of his reign was, how-
ever, clouded by reverses. The disaster of Mardonius at Mount Athos was followed shortly by the defeat of
Danai at the passage of the Euphrates (B.C. 486); and, in order to avenge the blow, Egypt rose in revolt (B.C.
486), massacred its Persian garrison, and declared itself
independent. In the palace at the same time there was
dissension; and when, after a reign of thirty-six years,
Xerxes committed suicide (B.C. 465), leaving his throne to a young prince of strong and unguarded pas-
sions, it was evident that the empire had reached its
highest point of greatness, and was already verging to-
wards its decline.

The great feast held in Shushan, the palace, in the third
year of his reign, and the repudiation of Vashti, fall
into the same period. The defeat of the Medes into the
province of Babylonia (B.C. 499) was a timely reminder to it is probable that he kept open house for the "princes
of the provinces," who would from time to time visit
the court, in order to report the state of their prepara-
tions for the war. The marriage with Esther, in the
seventh year of his reign, falls into the year immedi-
ately following his flight from Greece, when he un-

doubtedly returned to Susa, relinquishing warlike enter-
prises, and henceforth devoting himself to the pleasures
of the seraglio. It is unnecessary to give an account
of the well-known expedition against Greece, which
ended so disastrously for the invaders. Persia was
taught by the defeats of Salamis and Plataea the danger of encountering the Greeks on their side of the
Egean, while she learned at Mycalb the retaliation which she had to expect on her own shores at the hands of her in-
filtrated enemies. For a while some vague idea of an-
other large invasion of the Greek coast, or, at least, the
idea of disarming the Greeks, was entertained in the
heart of some of the Persian court; but discrediting counsels prevailed, and, relinquishing all aggressive designs, Persia, from this point in her
history, stood upon the defensive, and only sought to
maintain her own territories intact, without anywhere
rushing to the assistance of the Danai in their
"defence." But the power of the Persians, with all the
wealth of the empire and the valor of the Persian
soldiers, did not suffice to conquer the Athenians in the
battle of Plataea. The Persians were defeated, the
Persian fleet was lost, and a great number of their ships
and soldiers were captured by the Greeks. The Athenians
had retrieved the power of their ancestors; and, in the
year 480 B.C., had expressed their joy by the dedication
of the great temple of the Parthenon on the Acropolis
of Athens.
and stirred up revolt in her provinces; but at last, in B.C. 440, a peace was concluded between the two powers, who thus continued on terms of amity for half a century.

A conspiracy in the seraglio having carried off Xerxes (B.C. 465), Artaxerxes his son, called by the Greeks Αρταξέρξης, or "the Long-Headed," succeeded him, and reigned seven months, whereupon the conspirator Artabanes occupied the throne. This Artaxerxes, who reigned forty years, is beyond a doubt the king of that name who stood in such a friendly relation towards Ezra (Ezra vii, 11-28) and Nehemiah (Ezra vi, 1-13; Ne. ii, 8). His character, as drawn by Ctesias, is mild but weak; and under his rule the disorders of the empire seem to have increased rapidly. An insurrection in Bactria, headed by his brother Hystaspes, was with difficulty put down in the first year of his reign (B.C. 464), after which a revolt broke out in Egypt, headed by Inarius the Libyan and Amyrtaeus the Egyptian, who, receiving the support of an Athenian fleet, maintained themselves for six years (B.C. 460-455) against the whole power of Persia, but were at last overcome by Megabyzus, son of Syrates, and the Greek fleet was soon afterwards (B.C. 447), on occasion of a difference with the court, himself became a rebel, and entered into a contest with his sovereign, which at once betrayed and increased the weakness of the empire. Artaxerxes is the last of the Persian kings who had any special connexion with the last Persian empires and the tradition found in Scripture. His successors were Xerxes II, Sogdianus, Darius Notus, Artaxerxes Memon, Artaxerxes Ochus, and Darius Codomannus. These monarchs reigned from B.C. 424 to B.C. 580. None were of much capacity; and during their reigns the decline of the empire was accelerated. It was at this time that the Mongols (q. v.) under Genghis-Khan and his grand- son Hulaku-Khan, the latter of whom founded a new dynasty, the Perso-Mongol (1283-1353). This race, becoming affianced, was supplanted by the Cycladins in 1335, but an irruption of Turkomans in 1372 put an end to this dynasty. In the 16th century, which witnessed the conquests of Tamerlane and Babur, the last Persian empires were reduced to insignificance.

PERSIA

Persia became the capital, and Khorasan the favorite province of the early and more energetic rulers of this race, and Persia consequently came to be considered as the centre and nucleus of the caliphate. But the rule of the caliphs soon became merely nominal, and ambitious governors, or other aspiring individuals, established independent principalities in various parts of the empire, and the time was not far distant when the whole decayed, and a new empire, the Ottoman, arose in its stead. But the other provinces of Persia continued to exist, andPersia

PERSIA

The chief were the Taberites (890-972), a Turkish dynasty, in Khorasan; the Sof-farides (Persian, 869-908), in Seistan, Farah, Maran, and Sistan; the Meshkabad, or Shemakhs (Persian, 908-934), in Kavir, and Seistan; the Dilemi (Persian, 953-1056), in Western Persia; and the Ghiznevides, in Eastern Persia. These dynasties supplanted each other, and were finally rooted out by the Seljuks, whose dominion extended from the Hellespont to Afghanistan. A branch of this dynasty, which reigned in Khorasan (now Khi- va), gradually acquired the greater part of Persia, driving out the Ghiznevides and their successors, the Ghurides; but they, along with the numerous petty dynasties which had established themselves in the interior, were subdued and subjugated. This race, becoming affianced, was supplanted by the Cycladins in 1335, but an irruption of Turkomans in 1372 put an end to this dynasty. In the 16th century, which witnessed the conquests of Tamerlane and Babur, the last Persian empires were reduced to insignificance. The
just and equitable: roads, bridges, caravansaries, and other conveniences for trade were constructed at immense expense, and the improvement and ornamentation of the towns were not neglected. Jaspahan more than doubled its population during his reign. His tolerance was remarkable, considering both the opinion of the Koran and the exigencies of the times, for the Armenians and Greeks were settled in the country, well knowing that their peaceable and industrious habits would help to advance the prosperity of his kingdom. His successors, Shah Shukri (1598-1651), and Shah Shoh (1651-1695), were distinguished by similar talents, but the forebears of the two former were sensible and judicious rulers, and advanced the prosperity of their subjects.

During the reign of Sultan Hussein (1694-1722), a weak and bigoted fool, priests and slaves were elevated to the most important and revenue offices, the emperors who rejected the tenets of the Shiites being persecuted. The consequence was a general discontent, of which the Afghans took advantage by declaring their independence, and seizing Candahar (1709). Their able leader, Mir Vais, died in 1716; but his successors were either incapable or too timid to force the invaded Persia (1722), defeated Hussein's armies, and besieged the king in Jaspahan, till the inhabitants were reduced to the extremity of distress. Hussein then abdicated the throne in favor of his conqueror, who, on his accession, immediately devoted his energies to abolishing the corruption and anarchy of the new subjects, in both of which objects he thoroughly succeeded. Becoming insane, he was deposed in 1725 by his brother Asfahr (1725-1729); but the atrocious tyranny of the latter was speedily put an end to by the celebrated Nadir Shah, who first raised himself (1729-1732) and his son Abbas II (1732-1786), the Saffavine race, to the throne, and then, on some frivolous pretext, deposed him, and seized the sceptre (1786-1747). But on his death anarchy again returned; the country was horribly devastated by the rival claimants to the throne: Afghanistan and Beloochistan finally separated from Persia, and the country was split up into a number of small independent states until 1755, when a Kurd, named Kerim Khan (1755-1779), abolished this state of affairs, re-established peace and unity in Western Persia, and by his wisdom, justice, and warlike talents acquired the esteem of his subjects and the respect of neighboring states.

After the usual contests for the succession, accompanied with the usual barbarities and devastations, Kerim was succeeded in 1784 by Ali-Murad, Jasaar, who in 1794 was assassinated, and became independent under Agha-Mohammed, a Turco-
man eunuch of the Kajar race, who repeatedly deposed the royal armies, and ended by depriving Luft-Ali of his crown (1795). The great eunuch-king (as he was frequently called), who founded the present dynasty, on his accession announced his intention of restoring the kingdom as it had been established by Kerim Khan, and accordingly invaded Khorsasan and Georgia, subduing the former country almost without effort. The Georgians besought the aid of Russia; but the Persian monarch, with terrible promptitude, poured his army like a torrent into the country, and devastat-
ed it with fire and sword; his conquest was, however, hardly completed, when he was assassinated, May 14, 1797. His nephew, Futtah-All (1797-1834), after numerous conflicts, fully established his authority, and completely subdued the rebellious Khorsasan and Khorasan, but the great commotions in Western Europe produced for him bitter fruits. He was dragged into a war with Russia soon after his accession, and, by a treaty concluded in 1791, surrendered to that power Derbend and several districts on the Kurr. The Kurr was declared to be a Russian province. War with Russia was recommenced by Persia, at the instigation of France; and, after two years of conflicts disastrous to the Persians, the treaty of Gulistan (Oct. 12, 1812) gave to Russia all the Persian possessions to the north of Armenia, and the right of navigation in the Caspian Sea. In 1826 a third war, equally unfortunate for Persia, was commenced with the same power, and cost Persia the remainder of its possessions in Armenia, Cheza, and a sum of money to pay the expenses of the war. The severity exercised in procuring this sum by taxation so exasperated the people that they rose in insurrection (Oct. 12, 1829), and murdered the Russian ambassador, his wife, and almost all who belonged to or were connected with the Russian government. The most humiliating treaty was the conclusion of a peace for Persia, and the punishment by mutilation of 1500 of the rioters, alone averted war. The death of the crown-prince, Abbas-Mirza, in 1833, seemed to give the final blow to the declining fortunes of Persia, for he was the only man who firmly declared against race prejudice, and kept the state from the state of abasement into which it had fallen. By the assistance of Russia and Britain, Mohammed Shah (1834-1848), the son of Abbas-Mirza, obtained the crown, but the rebellions of his uncle, and the ri-
valry of Russia and Britain (the former being gener-
ally suspect of designing to depose the house of the Shah), the increase of the abasement of the country, and the moralization of the country. Mohammed was com-
pelled to grant (1846) to Russia the privilege of building ships of war at Resht and Astrabad, and to agree to surrender all Russian deserters, and Persia became thus more and more dependent on its crown neighbor. This was not the only result of the treaty on his father's death in 1848; and the new government an-
nounced energetic reforms, reduction of imposta, etc., but limited itself to these fine promises, and on the contrary, augmented the taxes, suffered the roads, bridges, and other public works to go to ruin, squandered the public money, and summarily disposed of all who protested against their acts. In October, 1856, the Persians took Herat, a town for the permanent pos-
session of which they had striven for a long series of years: and having thus violated the terms of a treaty with Britain, war was declared against them, and a British army was landed on the coast of the gulf, which, under generals Outram and Havelock, repeat-
edly defeated the Persians, and compelled them to restore Herat (July, 1857). Since that time treaties of commerce have been concluded with the leading Eu-
ropean powers; and Russia, Great Britain, Turkey, France, and Italy have consents in the chief towns, and, with the exception of Italy, are represented by ministers at the court of Tehran.

IV. Literature.—The sources of information regarding the Persian literature are few. The Jewish, to be elicited chiefly from the books of Ezra, Nehemiah, and Esther, of which something has been said. 2. Grecian writers. Of these, Ctesias availed himself of the Persian annals, but we have only extracts from his work in Pho-
occus. Herodotus appears also to have consulted the na-
tive sources of Persian history. Xenophon presents us with the fullest materials, namely, in his Anabasis, his Hellenica, and especially in his Cyropaedia, which is an imagi-
nationary picture of a perfect prince, according to Ori-
ental conceptions, drawn in the person of Cyrus the elder. Some of the points in which the classical au-
thorities disagree may be found set forth in Eichhorn, Gracc. der A. Welt, i, 82, 83. A representation of the Persian history, according to Oriental authorities, may be found in the Haliiske Allgemeine Weltgeschichte, pt. iv. (See also Becker, Weltgeschichte, 8, 9, 10). The very diligent investigations of Brugsch, De Persia, 1859.

Consult especially Heeren, Ideen, i, 1; his Handbuch der G. d. S. Alterth. i, 102; and H. Brochmer, Um das jodische Folks Tilsitn d. Persischen Periode (Copenhagen, 1845). A full and valuable list of the older works on Persian antiquities is to be found in the Bibliotheca Historica of Meuselius, vol. i, ii, p. 28 sq. See also Malcolm, History of Persia from the Earliest Ages to the Present Times (Lond. 1816, 2 vols. 4to); and
Sir H. Rawlinson's "Memoir on the Cuneiform Inscriptions of Ancient Persia," published in the Journal of the Asiatic Society, vol. x and xi; Polak, Persien, des Land und seine Bewohner (Leips. 1865 sq., 2 vols. 8vo); Friedländer, De veterbus Persarum regionibus (Hal. 1862, 2 vols. 8vo); W. Yarbus, Iran in Persia (London, 1874, 2 vols.); Markham, History of Persia (ibid. 1874). The most complete as well as recent survey of ancient Persia is given in Rawlinson's Ancient Monarchies, vol. iii (new edition, Lond. 1871). See also ELAM; MEDIA.

PERSIAN (Heb. Parasi, "Poru'ah; Sept. Paros; Vulg. Persa), the name of the people who inhabited the country called Persis, and which Persia Prov. i, xiii, and which remains but little changed in the modern "Parsé." It is conjectured to signify "the Tigers." See PERSIA.

PERSIAN CHRISTIANS. That the Gospel was early planted in Persia we have the most unequivocal evidence in the terrible persecution of Christians which began in A.D. 303, and afterwards, in forty years, about 200,000 of the orthodox and 16,000 of the monks were martyred in the cause of Christ, though many of them have been considered as heretics by the Church of Rome, being of the Nestorian and Jacobite communions. In the 7th century they fell under the scourge of Mohammedan tyranny and persecution, whereby many were driven to seek a refuge in India, particularly on the coasts of Travancore, while the great mass of the population apostatized to Mohammed; a circumstance that Mr. Yates very naturally attributes to their not having the Scriptures in their own language till very recently.

In the middle of the last century a version of the Gospels was made by order of Nadir Shah, who, when it was read to him, treated it with contempt and ridicule; but since the commencement of the present century the Rev. H. Martyn has translated the whole New Testament. It was completed in the year in which he died (1812), and has been presented to the king of Persia by the British ambassador, and favorably received. Notwithstanding both persecution and apostasy, the number of Christians in Persia is said to be still very considerable. The Nestorians, George of the Mandeans, the Jacobites, and the Nestorians, Jacobites, and Romish Christians. "The number of these (Persian) Christians amounts to about 10,000. They have an archbishop and three bishops. The former resides at Mosul; one of the bishops at Chosrabad; another at Merean, and the third at Diaribekir. By the Mohammedans they are called Nazarenes, and Syriacs by the Arabs; but among themselves Ebrians, or Beni Israel, which name denotes their relation to the ancient Jewish Christian Church, as does also their present language, being very like the Hebrew. They have no connection whatever with either Greek or Roman churches. They hold the doctrine of the Trinity in Unity; and declare Jesus Christ to be 'the way, the truth, and the life.' and that through him alone they are delivered from the wrath to come, and are made heirs of eternal life. They acknowledge only the two sacraments, but both in the full sense and import of the Protestant Church. They have at Chosrabad a large church, nearly of the size and appearance of the Scottish kirk at Madras, which is a fine building. Through fear of the Mohammedans, who insult and oppress them, they do not hold their usual services but two days in the week, viz. on Saturday and Sunday mornings, and in the evenings between six and eight. There are also daily services at the same hours. The women and men sit on opposite sides of the church." Of the native Moham-
PERSONALITY

Personality. The word person is derived from the Latin "persona," originally a term of the theatre, and signifying the mask worn of old by actors. Hence it signifies a dramatic character, and in Cicero a personage; in Suetonius an individual, as also in law Latin. Tertullian seems to use the word in its original sense, where he says "Persona Dei, Christus Dominus," for he immediately interprets the words by the apostle's expression, "Qui est imago Dei."—i.e. Christ is the eternal manifestation of the Deity (Acts, xvi. 25, 26). Similar is the use of the term "personator" in our translation of the Septuagint: this word means with him relative individuality in contrast with absolute being: "Hunc substantiataliter quidem aióna tóliamos appellant; personaliter vero πρὸ ἀρχῆν καὶ τήν ἀρχήν"—i.e. the first absolutely, the second in antecedent relation with every non-emanation. It is important to ascertain the meaning of ecclesiastical Latin terms in Tertullian, for when he wrote the language of the Church at Rome was Greek; and the Latinity of the Western Church, as well as the barbarisms of its version of Scripture, were imported shortly afterwards from Africa. "Persona" in Latin bore the same relation to "substantia" as πνευστής to οὐσία in Greek theology: but πνευστής in the sense of person was etymologically equivalent for the very different theological idea of "substantia" in Latin; hence arose the confusion that has been noticed under the article HYPOSTASIS. It is therefore still retained in the term "persona" to indicate the meaning of οὐσία; "νέω quidem nomine."—as Augustine, "quou uiis non sunt veteres Latinae auctores, sed jam nostri temporeus usitato, ne dessest etiam linguam nostrae quod Graeci appellant obvatis" (Cfr. Dea, xii. 4). "Persona" was retained as the equivalent for πνευστής.

The meaning of "person" in theology is as Locke has defined it in metaphysics: "A person is a thinking, intelligent being, that has reason and reflection, and can consider itself as itself, the same thinking thing in different times and places." There must be a continuous intelligence and a continuous identity, as well as individuality. The memorable axiom of Descartes, "Cogito, ergo sum," may be applied not only to the reality of thinking substance, but also to the true personality of that intelligent being. "I am a conscious being, therefore in that consciousness I have a personal existence." But "personality," as applied to the divine substance, involves a contradiction that defines in this direction, as Dr. Mansel has observed, the limits of human thought (Limits of Religious Thought, p. 58). We are compelled to apply to the Absolute our most insufficient human terms of finite relation. The idea of personality must always involve limitation; one person is invested with accidents that another has not. Yet God, as the designer and creator of the universe, must have a personal existence; as Paley has expressed it: "The marks of design are too strong to be gotten over; and design must have had a designer; that designer must have been a person. That person is God." But how
is substance thus affected with personality? Analogy in such a matter cannot lead us through the difficulty, for God is one, and such a test is an impossibility for want of any true means of comparison. Yet thus much may be said: So far as it reaches, analogy shows that the personality of the Deity is very possible; for if being of the same kind would not enable us to judge of the results of human civilization, without having the power of tracing out the individual efforts that produce it, they would find themselves in a somewhat similar difficulty. Humanity, they might reason, is certainly an intelligent substance; but substance, it is something vague and undetermined; yet the intelligence that is developing all terrestrial works must be the result of personal design and personal skill; therefore this world-wide humanity must have a definite, personal substance. Adam, in the first instance, was that personal substance. Christ in the end shall recapitulate (remake) all humanity in himself, we know not how. Therefore in some way that is a present mystery, but of certain future solution, God may be Substance that is All-wise and Absolute, and personality may attach to his being, limiting the Unlimited, and defining the Indefinite (ibid., pp. 56-59). In the mean time the idea of personality is mixed up intimately with all man's highest and noblest notions of the Deity (ibid., p. 57, 240), neither is it possible to form the faintest possible conception of a non-personal God. The religious idea revolts against the negation, which, in fact, negates the manifestation. The Deity cannot exist without individual responsibility to a personal God and Father of all would pass away, and a "caput mortuum" of pantheism would be all that would remain—an illusive Maya for the present, a hopeless Nirvanka for the future. Next, with respect to a plurality of persons in the Deity, Hooker excellently defines the properties that determine this phase of the divine nature; and his generalization may serve to impress upon the mind the impossibility of expressing the mutual relations of three hypostases in one substance by any adequate term that human language can supply. That which transcends thought can never find expression by the tongue. The personality of the Father and Holy Spirit is affected by nothing without the divine nature; the personality of the Son has been modified since the incarnation by taking the manhood into God; and a second definition by Locke exactly covers this modification; "Person," he says, "belongs only to intelligent agents, capable of a law and happiness and misery," all of which accidents of personality pertain to Christ, though not to the person of the Son of God as pre-existing eternal in the Word. See Hypostatical Union; Substance.

"We attribute personality," says Abrenz (Cours de Théologi, ii, 272) "to every being which exists, not solely for others, but which is in the relation of unity with itself in existing, or for itself. Thus we refuse personality to a mineral or a stone, because these things exist for others, but not for themselves. An animal, on the contrary, which exists for itself, and stands in relation to itself, possesses a degree of personality. But man exists for himself in all his essential characteristics, and it is not only his intimate self that he is, he is for himself, he has consciousness of it. But God alone exists for himself in a manner infinite and absolute. God is entirely in relation to himself; for there are no beings out of him to whom he could have relation. His whole essence is for himself, and this relation is altogether internal; and it is this intimate and entire relation of God to himself in all his essence which constitutes the divine personality."

It should be observed, however, that personality implies limitation. "Infinite personality," therefore, could not exist in terms. The term "person," as applied to the Godhead, is not used in its ordinary sense, as denoting a separate being, but represents the Latin persona or the Greek hypostasis, which means that which stands under or is the subject of certain attributes or properties. Three persons are not thus three parts of one God, nor are they three Gods; nor yet are Father, Son, and Spirit only three names, but distinct hypostases with characteristic attributes. In modern times, especially in Germany, and through a prevalent philosophical mysticism, opinions are now being broached that the result of the hypothesis is quite opposed to the doctrines of all the orthodox and evangelical confessions. The second article of the Church of England, and the eighth of the Westminster Confession, express the general view. So does the Quakerism of the Liturgy. By the modern theory, Christ teaches a different dogma, thus: Martensen and Ebrard seem to adopt a view very similar to that of Béron in the early ages, who held that the Logos assumed the form of a man, that is, subjected himself to the limitations of humanity. The infite became finite, the eternal, the omnipotent imposed on himself the limitations of time and space; God became man. The statement of Ebrard is, "The eternal Son of God, by a free act of self-limitation, determined to assume the existences-form of a centre of human life, so that he acted as such from the conception onward, and having assumed this form, he fashioned for himself a body," etc. According to this view there are not two natures in Christ, in the established sense of the word nature, but only two forms of existence, a prior and posterior form of one and the same nature. The most common现代 says: spirituality was the condition under which we supposed our human nature to be understood. By this, we are told, is not to be understood that he assumed an individual body and soul, so that he became a man, but that he assumed generic humanity, so that he became the man. By generic humanity is to be understood a life-power, that peculiar law of life, corporeal and incorporeal, which develops itself outwardly as a body and inwardly as a soul. The Son, therefore, became incarnate in humanity, in that objective reality, entity, or substance in which all human lives are one. Thus, too, Olheim, in his comment on John i, 14, says, "It could not be said that the Word was made man, which would imply that the Redeemer was a man by the side of other men, whereas, being the second Adam, he represented the totality of human nature in his exalted condition, the essence of personality." To the same effect he says, in his remarks on Rom. v, 15, "If Christ were a man among other men, it would be impossible to conceive how his suffering and obedience could have an essential influence on mankind: he could then only operate as an example. But he is to be regarded as the second Adam, that is, that Adam who, i.e. as realizing the absolute idea of humanity, and including it potentially in himself spiritually as Adam did corporeally." To this point archdeacon Wilberforce devotes the third chapter of his book on The Incarnation, and represents the whole value of Christ's work as depending upon it. If this be denied, he says, "the doctrines of atonement and sanctification, though confessed in words, become a mere empty phraseology." In fine, Dr. Nevin, in his Mystical Presence, p. 210, says, "The Word became flesh; not as a step lower in the scale of beings, but as an intensification of humanity, in its universal conception. How else could he be the principle of a general life, the origin of a new order of existence for the human world as such? How else could the value of his mediatorial work be made over to us in a real way a true imputation, and not a legal fiction only?" The hypothesis makes the union on these hypotheses, is the assumption on the part of the eternal Son of God, not simply or primarily of a true body and a reasonable soul, as the Church has always held, but of humanity as a generic life, of our fallen humanity of that essence or substance in which all human lives are one. The effect of this union is that humanity is taken into divinity: it is exalted into a true divine life. The life of Christ is one, and it may be designated as divine or as human. On this
PERSONATI

point, more than any other, its advocates are specially
full and earnest. Schleiermacher ignores all essential
difference between God and humanity, holding that
they differ in our conception, and functionally, but
are essentially one. Dorner, also, the historian of
the doctrine concerning Christ's person, avows that the
Church knows him in two distinct and separate
persons, involves endless contradictions, and that no
t true Christology can be framed which does not proceed
on the assumption of the essential unity of God and
man; while Ullmann makes this essential oneness be-
tween the divine and human the fundamental idea of
Christology.

The term person, when applied to Deity, is cer-
tainly used in a sense somewhat different from that in
which we apply it to one another; but when it is con-
sidered that the Greek words άνθρωπος and άνθρω-
πιόν to which it is applied, in the New Testament,
is applied to the Father and Son (Heb. i. 3; 2 Cor. iv.
6), and that the personal pronouns are used by our
Lord (John xiv. 26), it can hardly be condemned as
unsuitatical and improper. There have been warm
debates between the Greek and Latin churches about
this doctrine of the consubstantial and personal
identity, and some of the sticklers for the position of
the word hypothecis signified substance or es-
tence, thought that to assert that there were three
divine hypothesas was to say that there were three
Gods. On the other hand, the Greek Church thought
that the word person did not sufficiently guard against
the Scholastic distinction of the same divine being
sustaining three relations. Thus each part of the
Church was ready to brand the other with heresy, till,
by a free and mutual conference in a synod at Alex-
andria, A.D. 362, they made it appear that it was a more
conception about the grammatical sense of a
word; and then it was allowed by men of moderation
on both sides that either of the two words might be in-
differently used. See Beza, Principles of the Chris-
tian Religion; Owen, On the Spirit; March Medulla,

PERSONATI, an ecclesiastical term, which does not
occur in the 11th century, came into use after the
time of Alexander III, and designates (1) Persons,
canons holding office with precedence in chapter and
chorus after dignitaries, either by institution or custom.
A dignitary was also a person because his person was
honored, and he was a person constituted in dignity.
The "quattor persones" were the four internal dignitaries.
Until recently the dignitaries were called the
parsons at Hereford. (2) Stipendiary clerks or chap-
lains perpetually resident in a cathedral or collegiate
church, like the chantry priests of St. William at
York, and the rectors of the churches at Beverley, holding
offices for life. At Groenlo, Senz, Arles, and Never
they had the responsibility of the ordinary choral ser-
ices.

PERSONATUS. See PERSONATI.

Persuasion, the act of influencing the judgment and
passions by arguments or motives. It is different
from conviction. Conviction affects the understand-
ing only; persuasion the will and practice. It is more
extensively used than conviction, and lastingly affected
on demonstration, natural or supernatural. But all
things of which we may be persuade are not capable
of demonstration. Eloquence is but the art of per-

Pertusati, Francesco, Count, an ascetic Italian author, was born in Milan May 9, 1741. The son of a senator of Milan, he was educated among the Jesuits, for some time wore their habit, and never ceased to be attached to them. He divided his leisure between the education of his children and the direction of works of charity. His devotion to the religious and absolutist party exposed him to persecution; arrested in 1796, on the invasion of the French, and conducted to Nice, he was ordered in 1796, to seek refuge in Venice. He died at Milan May 9, 1823. His works are very numerous, and all translated from the French into Italian. See Beraldin, Memorie di religione (Modena, 1823); Refudios, Cenomi sulla vita e sugli scritti del F. Pertusati (Milan, 1823, 8vo).

Peru, an important maritime republic of South America, bounded on the north by Ecuador, on the west by the Pacific, on the south and south-east by Bolivia, and on the east by Brazil, in lat. 3° 25'–21° 30' S., and in long. 68° 31'–70° W., has an area estimated at upwards of 500,000 square miles, and a population of 2,820,000. The coast-line is about 1090 miles in length. The shores are in general rocky and steep, and, owing to the comparative unfruitfulness of bays and inlets along the coast, the harbors are few and unimportant. Those of Callao (the port of Lima) and Payta afford the most secure anchorage. The country is highly interesting from a historical and antiquarian point of view.

I. Islas. — The islands on the Peruvian coast, although valuable, are extremely few in number and small in extent. In the north are the Lobos (i.e. Seal) Islands, forming a group of three, and so called from the seals which frequent them. On their eastern and more southern points they are rocky, and the western more flat and sandy. The quantity on the whole group is stated at 4,000,000 tons. The Chincha Islands, famous as the source of Peruvian guano, also form a group of three. Each island presents, on the eastern side, a wall of precipitous rock, with rocky pinecones in the centre, and with a general slope towards the western shore. The cavities and inequalities of the surface are filled with guano, and this material covers the western slopes of the islands to within a few feet of the water's edge. There is no vegetation. At the present rate of consumption, the guano will last until the year 1883. The island of San Lorenzo forms the harbor of Callao. The grand physical feature of Peru, and the source of all its mineral wealth, is the great mountain system of the Andes.

II. Surface, Soil, and Climate. — The surface of Peru is divided into three principal regions or belts, viz. the tropical, the mountain, and the southern or Atlantic. The tropical region is divided into two, the Western Cordillera and the sea, and extending along the whole length of the country. This tract, varying in breadth from thirty to sixty miles, slopes to the shore with an uneven surface, marked by arid ridges from the Cordillera, and with a rapid descent. It is for the most part a barren waste of sand, traversed, however, by numerous valleys of astonishing fertility, most of which are watered by streams that have their sources high on the slopes of the Cordillera. Many of the streams are dry during the greater part of the year. The limit of the tropical tract is marked by the See, the western base of the maritime Cordillera and the eastern base of the Andes, or the Eastern Cordillera. These ranges are, in this country, about 100 miles apart on an average, and have been estimated to cover an area of 200,000 square miles. Transverse branches connect the one range with the other, and high plateaus, fertile plains, and deep tropical valleys lie between the lofty outer barriers. The following are the most striking and distinctive physical features of the Sierra, beginning from the south: 1. The plain of Titiaca, partly in Peru and partly in Bolivia, is enclosed between the two main ridges of the Andes, and is said to have an area of 30,000 miles—greater than that of Ireland. In its centre is the great Lake Titiaca, 115 miles long, from 30 to 60 miles broad, from 70 to 180 feet deep, and 400 miles in circumference. 2. The mountain-chain, which girdle the plain of Titicaca towards the north-west, and form what is called the Knot of Cuzco. The Knot comprises six minor mountain-chains, and has an area three times larger than that of Switzerland. Here the valleys enjoy an Indian climate, and are rich in crops of corn, coffee, cotton, indigo, poppy, and tobacco; to the north and south of the Knot extend luxuriant tropical forests, while the numberless mountain-slopes are covered with waving crops of wheat, barley, and other cereals, and with potatoes; and higher up extend pasture-lands, where the vicuña and alpaca feed. 3. The valley of the Apurimac, on the south side of the Andes, 30 miles in average breadth, and extending north-west for about 300 miles. This valley is the most populous region of Peru. 4. From Cuzco proceed two chains towards the north-west; they unite again in the Knot of Pasco. This Knot contains the table-land of Bombon, 12,900 feet above sea-level; as well as other table-lands at a height of 14,000 feet, the highest in the Andes; otherwise, however, the physical features of the country resemble those of the vicinity of Cuzco. 5. The vale of the river Marañon, which is upwards of 300 miles in length, its bed is narrow, deep, and nearer the equator than any other valley of the Sierra, and consequently it is the hottest portion of this region; and its vegetation is thoroughly tropical in character. The conformation of the surface of the Sierra is of the most wonderful description. The soil of the Sierra is of great fertility, wherefore the country is highly productive. c. The Montaña, forming two thirds of the entire area of the country, stretches away for hundreds of leagues eastward from the Andes to the confines of Brazil. On the north it is bounded by the Amazon, on the south by Bolivia. It consists of vast impenetrable forests and alluvial plains, is rich in all the productions of tropical latitudes, is of inexhaustible fertility, and teems with animal and vegetable life. Among the products which are yielded here in spontaneous abundance are the inestimable Peruvian bark, India-rubber, guano, indigo, caapi, coca, sarsaparilla, ipecacuanha, vegetable wax, etc. On the western fringe of the Montaña, where there are still a few settlements, tobacco, sugar, coffee, cotton, and chocolate are cultivated with complete success.

The hydrography of Peru consists of a coast line, which is divided into three principal regions, viz. the tropical, the mountain, and the Atlantic. Numerous rivers flow from the Cordillera into the Atlantic, thus giving rise to the tropical and mountain regions. A map of Peru would be incomplete without a reference to the extensive bay of Lake Titicaca, the Pacific, and the Amazon. All the great rivers of Peru are tributaries of the Amazon.

III. Productions, Exports and Imports, Revenue, etc. — The wealth and resources of Peru consist, not in manufactured fabrics, but entirely in mineral and vegetable, and animal products. As no statistics are taken in the country, it is impossible to give the quantity and value of the productions, and of the exports and imports, even approximately. Of the precious metals, in which Peru abounds,
the production has greatly fallen off; and this country, which once stood in the same relation to Spain that Australia does to Great Britain, now contributes little to the metallic wealth of the world. The immense stores of gold and silver found here by the Spanish invaders represented the accumulation of centuries, and among many people who used the precious metals only for the finery of life. The tale is told that they had gold, silver, copper, lead, bismuth, etc.; and in the Mocha gold is said to exist in abundance in veins and in pools on the margins of rivers. Although so rich in the precious metals, Peru produces comparatively little copper, silver, lead, bismuth, cobalt, etc.; the country is one of the most desolate and unproductive in the world. This is due both to the unscientific and improvident manner in which the mining operations are carried on. It can hardly be said that Peruvian coinage exists, inasmuch as that in circulation is from the mint of Bolivia. In addition to the precious metals and guano, another important article of national wealth is nitrate of soda, which is found in immense quantities in the province of Tarapaca. This substance, which is a powerful fertilizer, is calculated to cover, in this province alone, an area of fifty square leagues, and the quantity has been estimated at sixty thousand million kilos of borax which also is found. The working of this valuable substance, however, is interdicted by government, which has made a monopoly of it, as it has of the guano.

The vegetable productions are of every variety, embracing all the products both of temperate and tropical climates. The country is well suited to the cultivation of the cacao, coffee, sugar-cane, cotton, etc. Fruits of the most delicious flavor are grown in endless variety. Cotton, for which the soil and climate are admirably adapted, is now produced here in quantities increasing every year. The land suited to the cultivation of this plant is of immense extent, and the quality of the cotton grown is excellent. The animals comprise those of Europe, together with the llama and its allied species; but although Peru produces much excellent wool, almost the whole of the woollen fabrics used as clothing by the Indians is imported.

IV. Ancient Civilization and History.—Peru, the original of whose name is unknown, is now passing through its third historical era, and is manifesting its third phase of civilization. The present era may be said to date from 1441 AD, the time of the conquest of the country by the Spaniards in the early part of the 16th century; the middle era embraces the rule of the Incas; and the earliest era, about which exceedingly little is known, is that pre-Incaic period, of unknown duration, during which a number of small and independent tribes, the perishing remnants of the Longanis, dwelt in the country, and had a civilization, a language, and a religion different, and perhaps in some cases even more advanced than those of the Incas who succeeded them, and overran their territories. Whence these pre-Incaic nations came, and to what branch of the human family they belonged, still remain unanswered questions. Their existence, however, is clearly attested by the architectural remains, sculptures, carvings, etc., which they have left behind them. Ruins of edifices constructed both before the advent of the Incas and contemporary with and independent of them, are found everywhere throughout the country. For further information regarding pre-Incaic times and races, see Bollert, Antiquities, Ethnology, etc., of South America (London, 1860), p. 111 sq.; Hutchinson, Two Years in Peru, with Explorations of its Antiquities (ibid. 1874); 2 vols. New York; Benson, Myth of the New World (N. Y. 1877, revised ed.).

Regarding the origin of the Incas, nothing definite can be said. We have no authorities on the subject save the traditions of the Indians, and these, besides being outrageous, fabulous in character, are also conflicting. It appears, however, from all the traditions, that Mauco, the first Inca, first appeared on the shores of Lake Titicaca, with his wife Mama Oello. He announced that he and his wife were children of the Sun, and were sent by the glorious Inti (the Sun) to instruct the simple tribes. He is said to have carried with him a golden wedge, or, as it is sometimes called, a wand. Wherever this wedge, on being struck upon the ground, should sink into the earth, and disappear forever, there it was decreed Manco should build his capital. Marching to the spot so indicated by the shadow of the wedge disappeared. Here he founded the city of Cuzco, became the first Inca (a name said to be derived from the Peruvian word for the Sun), and founded the Peruvian race, properly so called. Manco, or Manco Capac, the first Inca, was the ruler of the Inca empire, which included all the country around the Pacific, and agriculture and the arts, gave them a comparatively pure religion, and a social and national organization; while his wife, Mama Oello, who is also represented as being his sister, taught the women to sew, to spin, and to weave. Thus the Inca was not only ruler of his people, but also the father and the high-priest. The territory held by Manco Capac was small, extending about ninety miles from east to west, and about eighty miles from north to south. After introducing laws among his people, and bringing them to regularly organize their communities, "he ascended to his father, the Sun." The year generally assigned to his death, after a reign of forty years, is 1062. The progress of the Peruvians was at first so slow as to be almost imperceptible. Gradually, however, by their wise and temperate policy, they won over the neighboring Inca tribes, which, in time, gave way before the powerful and fostering government. Little is clearly ascertained regarding the early history of the Peruvian kingdom, and the lists given of its early sovereigns are by no means to be trusted. They invented no alphabet, and therefore could keep no written record of their affairs, so that almost all we know of their early history is derived from the traditions of the people, collected by the early Spaniards. Memoranda were indeed kept by the Peruvians, and, it is said, even full historical records, by means of the quipu, a twisted woolen cord, upon which other smaller cords of different colors were tied. Of these cross threads, the color, the length, the number of knots upon them, and the distance of one from another, all had their significance; but after the invasion of the Spaniards, when the whole Peruvian system of government and civilization underwent dislocation, the records resided in the hands of the Spaniards, who have been lost or was effectually concealed. Thus it is that we have no exact knowledge of the pre-Incaic history farther back than about one century before the coming of the Spaniards. In 1488 Tupac Inca Yupanquil, the son of Huaccay Capac, the first of the Inca dynasty to ascend the throne, and under whom the empire of the Incas attained to its greatest extent and the height of its glory, his sway extended from the equatorial valleys of the Amazon to the temperate plains of Chili, and from the sandy shores of the Pacific to the marshy sources of the Paraguay. Order and civilization accompanied conquest among the Peruvians, and each tribe that was vanquished found itself under a careful paternal government, which proved for it, and fosters it in every way possible.

The empire of the Incas was a pure but mild despotism. The Inca, as the representative of the Sun, was the head of the priesthood, and presided at the
PERU
990
PERU
great religious festivals. He imposed taxes, made laws, and was the source of all dignity and power. He wore a peculiar head-dress, of which the tasselled fringe, with two feathers placed upright in it, was the proper insignia of royalty. Of the nobility, all those descended by the male line from the founder of the monarchy shared, in common with the ruling monarch, the sacred name of Inca, the peculiar ceremonies, privileges, and lived at court; but none of them could enter the presence of the Inca except with bare feet, and bearing a burden on the shoulders, in token of allegiance and homage. They formed, however, the real strength of the empire, being, in a manner, the priests of the gods, the doctors, the judges, and the warriors of state. They were also the depositories of the sacred traditions of the gods.

On the arrival of the Spaniards Peru contained a population of 90,000,000—twelve times greater than it is at the present day. Money was unknown among the Peruvians. They were a nation of workers, but they were not as the members of one family, labor being enforced on all for the benefit of all.

The political policy of the Peruvians had its imperfections and drawbacks, and though capable of unlimited extension, it was not capable of advancement. It was in the last degree conservative, and was of such a nature that the introduction of reform in any vital particular must have overturned the whole constitution. Nevertheless, when the Spaniards arrived, the people were not entirely averse to change, and these were satisfied. Their labor was not more than they could easily perform, and it was pleasantly diversified with frequent holidays and festivals. They lived contentedly and securely under a government strong enough to protect them; and a sufficiency of the necessaries of life was obtained by every individual. Still in the valleys of the Cordilleras and on the plain of Cuzco may be heard numberless songs, in which the Peruvian mourns the happy days of peace, security, and comfort enjoyed by his ancestors. Further, they revered and loved their monarch, and considered it a pleasure to serve him. With subjects of such a temper and inclination, the Incas might direct the entire energies of the nation as they chose; and it is thus that they were able to construct those gigantic public works which would have been wonderful even had they been performed with the assistance of European machinery and appliances.

The Peruvian system of agriculture was brought to its highest perfection only by the prodigious labor of several centuries. Not only was the fertile soil cultivated, but the poorer coasts, unvisited by any rains, and scantly watered by brooks, were rendered productive by means of an artificial system of irrigation, the most stupendous, perhaps, that the world has ever seen. Where the mountains were too steep to admit of cultivation, terraces were cut, soil was accumulated on them, and the level surfaces converted into a species of hanging-gardens. Large flocks of llamas were grazed on the plateaus; while the more hardy vicunas and alpacas roamed the upper heights in freedom, to be driven together, however, at stated periods, to be shorn or killed. The wool yielded by these animals, and the cotton grown in the plains and valleys, were woven into fabrics equally remarkable for fineness of texture and brilliancy of color.

The character of the architecture of the Peruvians has already been referred to. The edifices of Inca times are oblong in shape and cyclopean in construction. The materials used were granite, porphyry, and other varieties of stone; but in the more rainless regions sun-dried bricks were also much used. The walls were most frequently built of stones of irregular size, but cut with such accuracy, and fitting into each other so closely at the sides, that neither knife nor needle can be inserted in the seams. Though the buildings were not, as a rule, more than from twelve to fourteen feet high, they were characterized by simplicity of form and solidly. The Peruvian architects did not indulge in external decoration, but the interior of all the great edifices was extremely rich in ornament. In the royal palaces and temples the most ordinary utensils were of silver and gold; the walls were thickly studded with jewels, and the columns were covered with site imitations of human and other figures, and also of plants, fashioned with perfect accuracy in gold and silver, were always seen in the houses of the great. Hidden among the metallic foliage, or creeping among the roots of the trees, were many brilliant birds of all colors, lizards, etc., made chiefly of precious stones; while in the gardens, interspersed among the natural plants and flowers, were imitations of them, in gold and silver, of such truth and beauty as to rival nature. The temple of the Sun at Cuzco, called Coricancha, or "Place of Gold," was the most magnificent edifice in the empire. On the western wall, and opposite the eastern portal, was a splendid representation of the Sun, the god of the nation. It consisted of a human face in gold, with innumerable golden rays emanating from it in every direction. The beams of the morning and at the first light of day, fell upon this brilliant golden disk, they were reflected from it as from a mirror, and again reflected throughout the whole temple by the numberless plates, cornices, bands, and images of gold, until the temple seemed to glow with a sunshine more intense than that of nature.

The empire of the Incas was, when the Spaniards arrived, far in advance of that of most barbarous nations. They believed in a Great Spirit, the Creator of the universe, who, being a spirit, could not be represented by any image or symbol, nor was made to dwell in a temple with hands. They also believed in the existence of the soul hereafter, and in the resurrection of the body. The after-life they considered to be a condition of ease and tranquillity for the good, and of continual wearisome labor, extending over ages, for the wicked. But while they believed in the Creator of the world, they also believed in other deities, who were of subordinate rank to the Great Spirit. Of these secondary gods the Sun was the chief. They revered the Sun as the source of their royal dynasty, and everywhere throughout the land altars smoked with offerings burned in his worship.

V. Modern History and Characteristics. — About the year 1516, and ten years before the death of Huayna Capac, the first white man had landed on the western shores of South America; but it was not till the year 1532 that Pizarro, at the head of a small band of Spaniards, and with a party of Indians, of whom Atahualpa, his death-bed the great Inca expressed a wish that the kingdom of Quito should pass to Atahualpa, one of his sons by a princess of Quito whom he had received among his concubines, and that all his other territories should fall to his son Huascar, the heir to the crown, and who, according to the custom of the Incas, should have inherited all its dependencies. Between these two princes quarrels, resulting in war, arose; and when Pizarro entered Peru he found the country occupied by two rival factions, a circumstance of which he took full advantage. Atahualpa had completely defeated the forces of his brother, had taken Huascar prisoner, and was now stationed at Caxamalca, on the eastern side of the Andes, whither, with a force of 177 men, of whom 27 were cavalry, the dauntless Spanish leader, in September, 1532, rushed to make his stand. Atahualpa was captured by the Spaniards, and subsequently put to death. Shortly after the execution of the Incas at Caxamalca, the adventurers set out for Cuzco. Their strength had recently been increased by reinforcements, and they now numbered nearly 500 men, of whom about a third were cavalry. They entered the Peruvian capital Nov. 15, 1532, having in the course of their progress towards the city of the Incas had many sharp and sometimes serious encounters with the In-
dians, in all of which, however, their armor, artillery, and cavalry gave them the advantage. At Cusco they obtained a vast amount of gold, the one object for which the conquest of Peru was undertaken. As at Caxamalca, the articles of gold were for the most part melted down into ingots, divided in play in a single night. Their sudden wealth, however, did many of them little good, as it afforded them the means of gambling, and many of them, rich at night, found themselves again penniless adventurers in the morning. One cavalier, having obtained the splendid golden image of the Sun as his share of the loot, divided it in play in a single night. After stripping the palaces and temples of their treasures, Pizarro placed Manco, a son of the great Huayna Capac, on the throne of the Incas. Leaving a garrison in the capital, he then marched westward. He encountered the Incas on his way north, intercepted the road, and, in a tempestuous manner, by the proud Castilian soldiers, effected his escape, and headed a formidable rising of the natives. Gathering round Cuzco in immense numbers, the natives laid siege to the city, and set it on fire. An Indian force also invested Huaza, and another detachment threatened Lima. The siege of Cuzco was maintained for five months, after which time the Peruvians were commanded by their Inca to retire to their farms, and cultivate the soil, that the country might be saved from famine. The advantages, however, were not such as to induce the Incas to make a stand in the course of this siege were his last triumphs. He afterwards retired to the mountains, where he was massacred by a party of Spanishiards. More formidable, however, to Pizarro than any rising of the natives was the quarrel between himself and Almagro, a soldier of generous disposition, but of fiery temper, who, after Pizarro, held the highest rank among the conquerors. The condition of the country was now in every sense deplorable. The natives, astonished not more by the appearance of cavalry than by the flash, the thunder, and the lightning, had succumbed to forces which they had no means of successfully encountering. Meantime the Almagro faction had not died out with the death of its leader, and they still cherished schemes of vengeance against the Pizarros. It was resolved to assassinate the general as he returned from mass on Sunday, June 26, 1541. Hearing of the conspiracy, but attaching little importance to the information, Pizarro nevertheless deemed it prudent not to go to mass that day. His house was assaulted by the conspirators, who, murdering his servants, forced him to assent to their demands. They put him to death by numbers, and killed him. The son of Almagro then proclaimed himself governor, but was soon defeated in battle, and put to death. In 1542 a council was called at Vallabolid, at the instigation of the ecclesiastic Las Casas, who felt shocked and humiliated at the conduct of the conquerors. The result of this council was that a code of laws was framed for Peru, according to one clause of which the Indians who had been enslaved by the Spanishiards were virtually declared free men. It was also enacted that the Indians were not to be forced to labor in unhealthy localities, and that in whatever cases they were desired to work they were to be fairly paid. These and similar clauses enraged the adventurers. Blasco Núñez Vela, sent from Spain to enforce the new laws, rendered himself unpopular, and was seized and thrown into prison. He had come from Spain accompanied by an "audience" of four, who now undertook the government. Gonzalo Pizarro (the last in Peru of the family of that name), who had been elected captain-general in the立即 preceding year, arrived. It was too powerful to withstand, and the audience received him in a friendly manner, and, after the administration of oaths, elected him governor as well as captain-general of the country. The career of this adventurer was cut short by Pedro de la Gasca, who, invested with the powr of the sovereign, arrived from Spain, collected a large army, and pursued Pizarro, who was eventually taken and executed.

A series of petty quarrels, and the tiresome story of the substitution of one ruling functionary for another, make up a great part of the subsequent history. The country became one of the four vice-royalties of Spanish America, and the Spanish authority was fully established and administered by successive viceroys. The province of Quito was separated from Peru in 1718; and in 1788 considerable territories in the south were detached, and formed into the government of Buenos Ayres. At the outbreak of the War of Independence in South America, the Spanish government, besides having much declined in internal strength, was distracted with the dissensions of a regency, and torn by civil war; nevertheless in 1820 the Spanish vice-royalty of Peru had at its head a liberal and capable statesman, and the large towns were completely in the hands of Spanish officials. Peru was the last of the Spanish South American possessions to set up the standard of independency. In August, 1820, a rebel army, under general San Martin, on the liberators of Chili, sailed for Peru, and after a number of successes both on sea and land, in which the patriots were most effectively assisted by English volunteers, the independence of the country was proclaimed, July 28, 1821, and San Martin assumed the protectorate of the young republic. From this date to the year 1850, twenty-one rulers, under various titles, held sway. For the first twenty-four years of its existence as an independent republic the country was distracted and devastated by wars and revolutions. In 1845 Don Ramon Castilla was elected president; and under his firm but lenient and pacific guidance the country enjoyed an unwonted measure of peace, and became regularly organized. Commerce began to be developed, and important public works were undertaken. The term of his presidency ended in 1851, in which year general Rufino José Echenique was elected president. The country was now discontented with his government, and Castilla, after raising an insurrection in the south, again found himself in 1855 at the head of affairs. Slavery, which, although abolished by the charter of independence, still existed, was put an end to by a decree dated October, 1854. In August, 1868, a quarrel had taken place at the estate of Talambo, in the north, between some Basque emigrants and the natives, in which several of the disputants were killed or wounded. Taking advantage of this occurrence, the Spanish government decided to send a large commission to Lima in 1864, who delivered a memorandum to the Peruvian minister, complaining of injuries sustained by the Spaniards, and accompanied by a letter threatening prompt and energetic reprisals should Spain be insulted or her flag disgraced. The "commissioner" left Lima on 29th of November, and, on the 14th of December, and letter were delivered; and on the 14th a Spanish squadron, under admiral Pinzon, who had been joined by the "commissioner," took forcible possession of the Chinchas Islands, the principal source of the revenue of Peru. This complication provided additional troubles, not only in Peru, but in all the ancient Spanish states of South America. In January, 1865, peace was concluded by the payment of sixty million reals to Spain as war indemnity; but the Peruvians re-
belled against this concession of their president, Pescet, and in November he was retired, a provisional government established, and war measures inaugurated against Spain by forcible seizure of the Chinchas Islands. An alliance was agreed upon between Perú and Chili, Ecuador, and Bolivia, and war declared by these allies in January, 1866; but only a month later all hostilities ceased. In 1867 the Peruvians adopted a new and more liberal constitution. Yet frequent revolutionary measures have thus far failed to give perfect quiet to the country. Thus late as 1872 an attempt was made to take the life of the head of the government by a powder-shot.

The government of Perú is republican, and elects its president for a term of six years. He is assisted by a Senate, consisting of two members from each province, and a House of Representatives, of whom there is one member for every 20,000 inhabitants. The ministers, together with senators chosen by the congress, form the cabinet. The country is divided into 11 departments, and two provinces with the constitution of departments; and the departments are subdivided into provinces, the provinces into districts, and the districts into parishes. The army consists of 13,000 men, and the navy of 22 vessels, carrying 88 guns. Of the whole population, 240,000 are whites, 800,000 mestizos, 40,000 Negroes, and 1,826,000 Indians.

The church of Peru is that of the conquerors of the country, the Spaniards—the Roman Catholic, which is besides especially favored and protected by the constitution. Roman Catholic missionaries labored among the early settlers from Spain as well as among the natives, especially among the Antis, but towards the close of the 17th century the Indians turned against the missionaries and destroyed the missions. The republic is divided into the archbishopric of Lima, founded in 1541, and the seven episcopal sees of Chacaymas, Trujillo, Ayaucuzco, Oceguina, Huanaco, and Callao (the last two were founded in 1861). The clergy are numerous, but uneducated and badly supported. The number of convents, once astonishingly large, was reduced in 1863 to 300. Public instruction is principally in the hands of the clergy. The people's schools are in a very inferior condition. Of the higher institutions, the first are the five universities at Lima, Trujillo, Ayaucuzco, Cuzco, and Puno, but they have only a nominal existence. Of more importance are the colegios, or technical schools, of which, in 1869, there were 30 public and 38 private ones. In all, 800 P. S. students, the clergy are educated in seminaries. There are a few Jews and some Protestants, but their number is not definitely known. See Hill, Travels in Peru and Mexico (Lond. 1860); Granddier, Voyage dans l'Amérique du Sud (Paris, 1862); Le Saux, Histoire du Del Perú (ibi. 1862); Tschudi, Reisen in Sudamerika (Leips. 1861); Wappaus, Peru, Bolivia, and Chili (ibi. 1871); Fuentes, Lima, Esquisses historiques, statis- tiques, administratives, commerciales; Hutchinson, Two Years in Peru (Lond. 1874, 2 vols., 8vo); Present, Hist. of the Conquest of Peru; Harper's Monthly, vol. vii.

Perucú, Orazio, an Italian painter of Reggio, was born in 1854. According to Tiraboschi, he was a good artist, executed some works for the churches of his native city, and painted much for the collections. Lanzi says the remains of various pictures by him in private houses, and an altar-pie of the church of S. Giovanni di Reggio; and, judging from his style, he thinks he was a pupil of Leo Orsi. He died in 1874.

Peru’dah (Heb. Perudah, נַעֲדָה, core; Sept. Φαυροῦρ, Ezra II, 55. In Neh. vii, 57 the name is written Peruda, נַעֲדָה, Sept. Φαυρόδις v. ρ. Φαρόδι), one of "Solomon's servants," whose posterity returned from the exile. B.C. ante 536.

Perugia, Giovanni Niccolo da, an Italian painter, was born at Perugia, according to Pascoci, about 1475. He was probably a scholar of Pietro Perugino. Lanzi says, "He was a good colorist, and therefore was willingly received by Pietro to assist him in his works, however inferior to that artist in design and perspective. His works are recognised in the Capella del Cambio near the celebrated Sala of Perugino, where he painted John the Baptist. In the Church of S. Tommaso in his picture of the Nativity, about to touch the wounds of the Saviour, and, with the exception of a sameness of the heads, it possesses much of the character of Perugino." He died in 1544.

Perugia, Mariano da, an Italian painter, who, according to Mariotti, was a reputable artist, and executed some works for the churches at Perugia and Ancona. There are notices of him from 1547 to 1576. That writer commends an altar-piece by him in the church of S. Domenico at Perugia, and another picture by him in the church of S. Agostino at Ancona. He was also called Mariano di Ser Eustilio.

Perugia, Sinibaldino da, an Italian painter, was a native of Perugia. He is highly commended by Baldinucci for his painting of the Assumption, 1547, "which was the first great masterpiece of the 16th century". There are notices of him from the years 1505 to 1528. Lanzi says, "He must be esteemed an excellent painter from his works in his native place, and still more from those in the cathedrals of Perugia. He painted a fine Assumption in the year 1505, and a gonfalon still more beautiful, which would rank him among the first artists of the ancient school."

Perugino, Domenico, an Italian painter, who, according to Baglioni, flourished in the latter part of the 16th and the first part of the 17th centuries. Lanzi says he painted small wood scenes, or landscapes, and that he is scarcely known at Perugia; though it is believed that one of his pictures remains in the church of S. Angelo Magno at Ascoli. His name also occurs at Siena, and he is mentioned by authors as the master of Antiveatto Grammatica.

Perugino, Lello, an old Italian painter, who was a native of Perugia, decorated, in conjunction with Ugolino Orvietano and other artists, the cathedral of Orvieto in 1521.

Perugino, Pietro Vannocci, a celebrated Italian painter, was born of very humble parentage at Citta di Castello in Umbria, about 1446, but as he established himself in the neighboring and more important city of Perugia, he is commonly called II Perugino. It is generally thought that he studied under Andrea Verrocchio at Florence. He executed numerous excellent works in various cities, particularly in Florence, Siena, Pavia, Naples, Bologna, Rome, and Perugia. Sixtus IV employed him in the Cappella Sistina; and his fresco of Christ giving the Keys to Peter is by far the best of those painted on the side-walls of that chapel. Perugino also, along with other contemporary painters, decorated the Vatican; and his works there are the only frescoes that were spared when Raphael was commissioned to substitute his own works for those formerly painted on the walls and ceilings. The fact of his having had Raphael for his pupil has no doubt in any way increased the reputation of Perugino, but it has also in some degree tended to lessen it, as in many of his best productions the work of Raphael is confidently pointed out by connoisseurs, and, indeed, many important pictures at one time acknowledged as Perugino's are now ascribed to his great pupil. His high standing as a painter, however, is established by many admirable works, in which no hand superior
to his own could have operated; and, with the exception, perhaps, of Francia, who in some respects is esteemed his equal, he is now acknowledged as the ablest of the masters of that section of the early Italian school in which religious feeling is expressed with great tenderness and delicacy. Perugino's works are also distinguished by rich and warm coloring. One of his most celebrated paintings, The Bewitching of Christ, is now in the Pitti gallery at Florence. An excellent example of his work may be studied in the collection of the Nation at the Pitti Palace. He was the author of the painting of the Infant Christ in the New York Historical Society. There is a painting of his, The Adoration of the Infant Jesus, and in Yale College there is one on The Baptism of Christ. Perugino's reputation was high, when the introduction of the cinquecento style, by Leonardo and Michael Angelo, tended to throw into the shade the art of the earlier masters. Disputes ran high between the leaders of the old and new styles, and Michael Angelo is said to have spoken contemptuously of Perugino's powers. This, of course, has biased Vasari's opinion in his estimate of the opponent of his idol, but Perugino's reputation is nevertheless great, and his works are much esteemed. Raffaele was about twelve years of age when he was entered as a pupil with Pe- rugino, who was then (1495) engaged on the frescoes in the Sala del Cambio (the Exchange) at Perugia. Pe- rugino, however, a native of Umbria, was a man of very exacting views, and Raffaele, having acquired dis- plement, and found himself in the Pantheon by the side of Raffaele. The greatness of his talent was recognized after his death; and posterity pays its just tribute to his wonderful genius. Among his other works were The Algebra; Sidellus; Sanzio; Announcing to Augustus the Birth of Christ; and several pieces representing Bible history, among which were three events in the history of Jonah. See Hoefer, Nouv. Biog. Générale, xxxiv, 675; Spooner, Biog. Hist. of the Fine Arts, ii, 679.

PERUZZINI

Cav. Giovanni, an Italian painter of Pesaro or Ancona, was born in 1629. Canon Lazzarini asserts that both Domenico and Giovanni Pe- ruzzini were natives of Pesaro, and that they trans- ferred their services to Ancona, their adopted country. Giovanni studied under Simonio da Montefortino, and painted several pictures for the churches at Ancona, Bologna, and other places. He was invited to the court of Turin, where he executed several works both in oil and in fresco, so much to the satisfaction of his protector, that he made him knight of the Or- der of St. Louis. He possessed the art of invention, ready invention, and facility of execution. He formed a style of his own, founded on those of Canta- rini, the Caracci, and Guido. He was vain of his facility, as appears on one of his lunettes of the portico de' Servi at Bologna, on which he inscribed, Opera 24 Hor. Eq. Jo. P. (the work of twenty-four hours by Gio. Pe- ruzzini, knight), which caused many sarcastic remarks from his brother artists. His best works are finished with more care. The principal at Ancona are the Decollation of St. John, at Spedale, and St. Terese, at the Carmelitana at Bologna, The Descent of the Holy Ghost in the church of SS. Vitale and Agricola, and an altar-piece of St. Cecilia in the church dedicated to that saint. Lanzini says, "In his picture of St. Terese are traces of Barocci's manner; that of the Beheading of St. John is extremely beautiful, and there he appears a scholar of Caracci's." He devoted himself to a wandering life, and painted in various churches and theatres, if not with much study, yet with tolerable correctness, a knowledge of perspective, and with a certain facility, grace, and spirit which delight the eye. His palette was uniformly a secondary yellow, the Piceno, even as far as Ascoli, where are a num- ber of his works. There are also some of his works at Rome and Milan. He died at Milan in 1694. See Spooner, Biog. Hist. of the Fine Arts, ii, 681.
PERUZZINI

Domenico, an Italian engraver, was born at Pesaro or Ancona; flourished, according to the dates in the prints attributed to him, from 1640 to 1661. He is supposed to have been the elder brother of Gio. Peruzzini, and, like him, to have studied under Simone Cantarini. Lanzi says that in a MS. at Pesaro it is mentioned that Domenico was a native of that city, and a scholar of Pandolfi. There is much confusion and contradiction about both artists, and still more uncertainty about Domenico. The list of prints given below were formerly attributed to Domenico Flosi; but Bartch repudiates the idea, and proves several cogent reasons for transferring them to Domenico Peruzzini. They are etched in a masterly style, resembling those of Cantarini. It would seem that both brothers were natives of Pesaro, but preferred to be called after Ancona, the place of their adoption. The following are the prints attributed to him by Bartch:

1. The Holy Virgin (half length) with the Infant Jesus (1661); 2. The Virgin seated, with the Infant on her Knees (1661); 3. Christ tempted by the Devil, in the form of an old man (1493); 4. Christ bearing his Cross, with other figures half length; 5. The Holy Family and Saints (1601). The figures in this print are half length. Heineken, in his Dictionnaire des Artistes, attributed this print to Gio. Dom. Cerini, known under the name of Il Cavaliere Perugino. 6. St. Anthony of Padua praying, and the infant Jesus, sitting on a cloud supported by three cherubins. This print has been erroneously attributed to D. Creti. 7. The Assassination, a man in his shirt on a bed assaulted by three soldiers, one of whom thrusts a lance into his body (1640); 8-11. Landscapes; 12. St. Jerome, in doing Penance in the Desert. The letters D. P. F. are on a plant to the right. Bartch, however, considers it doubtful whether it belongs to Domenico Peruzzini, as there is a sensible difference in the style from that of others.

Per Viam, a technical title of certain forms of ecclesiastical election.

1. Per Viam Compromisii (by way of compromise) was an election of a superior by the sworn delegates of a convent, who retired into a secret chamber, and, after invocation of the Holy Ghost, named the person on whom their choice had fallen.

2. Per Viam Sanctus Sancti (by way of the Holy Spirit) was an unanimous election by the whole convent, as if by divine inspiration.

3. Per Viam Scrutini (by way of scrutiny) was when each monk voted singly in the chapter-house, in the presence of the bishop.

Pescia. See Talmud.

Pescari, Giovanni Battista, an Italian painter, flourished at Modena about 1650. Tiraboschi says that he was either a pupil of Guido, or made that master his example. Lanzi says he resembles Guido very closely in his picture of the Madonna in the church of S. Paolo at Modena, and in other works. He afterwards went to Venice, where he died, in the flower of life.

Pescaro, Aaron di, OF ITALY, a celebrated rabbi of the 16th century, undertook and accomplished the herculean task of compiling a sort of concordance to every passage of Scripture quoted or commented upon in the Babylonian Talmud, and called it after his own name, "Laminal Pesaro," "The Offering of Aaron." It was first published at Freiburg and Basel in 1581, in folio. Of such importance did the great Buxtorf consider the work that he published the whole of it as an Appendix to his Parallel Chaldee, in Latin, in Babylonian Lexicon, in 1689, with the following Latin paraphrase of its title-page: "Index locupletissimus omnium locorum in toto Talmudico opere de sacris Biblicis comprehensorum, summo studio et fidelitate collectus" (which, however, is not reprinted in the new edition of Buxtorf's Lexicon by Fischer, Leipsic, 1869-1874). In 1590 an enlarged edition, including references to the Zohar, Baal Akeda, or Isaac Arama's philosophical work, entitled בַּּעַר, יִנְּעָר, and Ikkarim of Joseph Albo, was published at Vienna. Between sixty and seventy years afterwards the then famous rabbi Jacob Sappor- tan, whom subsequent Hebrew writers described as "most distinguished in the law and crowned with hu- manity," a native of Oran, in North Africa— who was successively chief rabbi of the Sephardim congregations at Leghorn, Hamburg, and Amsterdam—supplemented the work of Pesaro by a concordance of the passages of Scripture quoted and treated in the Jerusalem Talmud. This supplement the author called after his own name, הַנְּשָׁמָה, "The Offering of Jacob." The twofold work, as a whole, was first published at Amsterdam in 1633, then at Berlin in 1706. The Rev. Dr. Margoliouth, of London, has recently announced an English translation, with editorial annotations and illustrations, in two volumes, of both Pesaro's and Sapporatan's work. See Furst, Biblioth. jud. iii, 79; De Rossi, Dictionario storico degli autori Ebrei, p. 262 (Germ. transl. by Hamburger); Wolf, Biblioth. hbr. i, 128 sq.; iii, 80 sq. (B. P.)

Pescaro, Jechiel (also called Pisauroens Jechiel), OF FLORENCE, a Jewish convert to Christianit, was born in 1653. Having for some time heard the sermons of the inquisitor Dionysius Costacciaro, he repaired to Rome to renounce Judaism. Pope Gregory XIII, who then held the papal See, was present at the speech Pesaro made before a numerous assembly in 1565, and received him, according to the Pope's permission, "blessed, and he that cometh in the name of the Lord." Soon after Pesaro was baptized by this pontiff, and became a preacher. Some of his sermons which he preached before and against the Jews at Florence were printed in the Italian language in 1585. See Furst, Biblioth. jud. iii, 79; Wolf, Biblioth. hbr. i, 576; Bartolocci, Biblioth. rab. iv, 584; Adams, Hist. of the Jews, ii, 79 (Boston, 1812); Bannage, Histoire des Juifs, p. 726 (Taylor's transl.); Kalkar, Israel u. d. Kirche, p. 71 (Hamb. 1869); Pick, Evangelical Review (Gettysburg, 1876), p. 367. (B. F.)

Pescaro, Niccolò Trometto, or Niccolo da, an Italian painter of the 16th century, and a native of Pesaro, studied under Zuccaro, whose style he first followed closely. He executed some works for the churches at Rome, the principal of which are the Nativitas, in the Basilica; A Pietà, in S. Francesca; the Nativitas and the Circumcision, in S. Maria da Araceli. Lanzi says his best picture is the Last Supper, in the church of the Sacrament at Pesaro. "It is a picture so well conceived and harmonized, and so rich in pictorial effect, that Lazzarini has descended upon it in his lectures as one of the finest works in that city." It is said that Barocci regarded this artist with esteem, and Baglione recommends him for his earlier works. He afterwards fell into a mannered, insipid style, which injured his reputation and fortune. He died at Rome in the pontificate of Paul V, aged seventy years.

Pescia, Mariano da, an Italian painter, was a native of Pescia. His real name was Mariano Grazidei, and was a son of the painter Ridolfo Ghirlandaio (not, as is said, of Domenico G., who died about 1490), whom he assisted in many of his works. He also painted some pictures from his own compositions, of which the principal are an altar-piece in the Capella della Signoria, in the Palazzo Vecchio at Florence, and a picture of the Drapery and the Infant Jesus, with St. Elizabeth and St. John, in the Florentine gallery. It is agreed by all that Pescia died young, but the time of his birth and death is variously stated. Zani says he died in 1529; others that he was born

Pessello, Francesco, an Italian painter of the Florentine school, was born in the year 1580. He studied with Filippo Lippi, and was, with the exception of his style, a fine picture by him of the Epiphany in the duca! gallery. He died in the year 1547.

Pecheth. See Flax.

Peshitto, or rather Peshittoites (Syri., as generally supposed, "simple," "faithful," ac. Version, or the "explained," i.e., translated, Biblia, is usually called the Syriac Version of the Old and the greater part of the New Testament. This version holds among the Syrian Christians the same place as the Vulgate in the Roman and the "Authorised Version" in the English Church. Many are the traditions about its origin. Thus the translation of the Old Testament is supposed to date from the time of Solomon and Hi- ram; or to have been done by Aza the priest; or, again, that it belongs to the time of the apostle Thaddæus (Audeus), and Abgar, the king of Osrhoene, in the 1st century after Christ. To the same period is also supposed the translation of the New Testament, which is ascribed to Achea, a disciple of Thaddæus, the first Edessian bishop and martyr. Recent investigation has not as yet come to any nearer result than to place the latter vaguely in the 2d, and the former in the 3d century, and to make Judas-Christ the author of both. Ephraem Syrus (q. v.), who wrote in the 4th century, certainly speaks of the Peshito as Our Version, and thus early finds it necessary to explain some of its terms, which had become obsolete. Five books of the New Testament (the Apocalypse and four of the Epistle) are wanting in all the MSS., having probably not yet formed part of the canon when the translation was made. The version of the Old Testament was made direct from the Hebrew, and by men imbued with the Palestinian mode of explanation. It is extremely faith- ful, and astonishingly free from any of those paraphrasical tendencies which pervade more or less all the Tar- gums or Arabic versions. Its renderings are mostly very happy, and coincide in many places with those of the Septuagint—a circumstance which has given rise to the supposition that the latter itself had been drawn upon. Its use for the Old Testament is more or less exegetical, for the New Testament more of a critical, nature. Anything like an edition of the Peshito worthy of its name is still as much a desideratum as is a critical edition of the Septuagint or the Targums, and consequently, as such, is as yet not come to anything but very hazy conclusions respecting some very important questions connected with it. The editio princeps of the New Testament dates Vi- enna, 1655; that of the Old Testament is contained in the Paris Polyglot of 1646. See SYRIAC VER- SIONS.

Peene, Jean, a French engraver, was born at Rouen in 1623. It is not known under whom he studied, but he went to Paris, where he acquired distinction by the excellence of his works. His execution is not dexterous nor picturesque, but his outline is correct; and he ren- ders with remarkable fidelity the characteristic features of the different painters whose works he engraved, which makes his prints interesting and valuable to the collec- tor. Dumensnil mentions 166 prints by him, the best of which are those engraved after Niccolo Poussin. He died about 1700. The following are his most esteemed prints: (1) subjects after Poussin—Easter before the Ka- sura; the Adoration of the Shepherds; the Death Christ, with the Virgin and St. John; the Entombing; the Death of Anastasius; the Holy Family; the Vision of St. Paul; the Triumph of Galatea; the Testament of Eudamias, one of his best prints; (2) scenes of St. Genevieve in seven plates of two sheets each. (2) The Holy Family (after Raffa- elle). See Spooner, "Biol. Hist. of the Fine Arts," ii, 682.

Pessimism, the opposite of Optimism (q.v.), is the doctrine that the universe is the worst possible, or the worse condition of all. This is the broadest definition of the doctrine can be stated or held. In a non-limited application it might be defined as the doctrine that human existence, in its conditions and its destiny, is only an evil. See Evil and Origin of Evil. Popularly applied, pessimism might be defined as the doctrine that the evil outweighs the good in the universe at large or in the condition of man.

The term is of recent coinage, and has only become current—in its philosophical or popular meaning—in the last twenty years, chiefly through the influence of Arthur Schopenhauer (q.v.) and Edward W. Bur- mann. The very recent introduction of the term indicates, if it does not prove, that the doctrine itself as a formal theory is of recent origin. It is true that all literatures and all philosophies abound in complaints and meditations and proposed remedies having respect to the evils of human existence, and the apparent defects in the constitution or the workings of the universe. But these theories and complaints and remedies all presuppose that some good reason can be given, or some valuable end suggested, as the explanation or the compensation for the evil which accounted for the pain and moaned. Neither of the ancient philosophies on the doctrines are avowedly and consistently pessimistic except that of Buddhism, which formally teaches that all the present forms of existence are only evil, and that the only good conceivable is in Nirvana. What this may be is not so clear as might be desired; whether the terminations of conscious and sentient existence, or the actual cessation of all forms of active desire and hope, which work conflict or disappointment.

With the exception named, all the older philosophies and theologies are in theory optimistic, seeing as they all resolve the existence of physical evil into some permanent or preponderating good, under the conduct of one supreme Deity or reason, or many subordinate deities, who in some way were supposed to bring greater good out of abounding evil. Even the theory of Lucrètius cannot be said to be pessimistic. The temper in which the great thinkers and the leading philosophers of antiquity regarded the economies of the universe and the ordering of human affairs varies with the greater or less hopefulness of the times in which they wrote, and the clearness and firmness with which they held to faith in divine providence, and the doctrine of good. Yet it is worthy of observation that the universe and the condition of man never seemed darker nor more hopeless, in the judgment of reflecting and sympathizing thinkers, than a little before and after Christianity made its appearance in the world; and the opposing sentiments and the con- flicts which it brought as pre-eminent a religion of contentment, thankfulness, and hope.

But with all the consolation and hope which Christianity afforded to man, it did not put to rest all speculation and misleading in respect to the mystery of evil. Indeed, it is no more than natural to say that Christianity brought special difficulties of its own, which, ac- cording to some interpretations made of its teachings, have seemed to darken the mystery of evil, and to complicate the explanation of its existence. It is no part of our duty to recite the theories of Christian philoso- phy in respect to the existence of physical and moral evil. It is enough that we call attention to the fact that their theories are in form or in fact optimistic. They all find the explanation of evil in some greater and superabounding good, of which this evil in its in- diction or its continuance is the condition or the modification. They all recognise the existence of a wise and benevo- lent Ruler of the universe, who from seeming evil is ever educing good, and whose wisdom and goodness will be amply justified when the reasons of his admin- istration are fully understood. In theory and in fact no theistic theory of the universe can be conceived of as pessimistic.
PESSIMISM 996 PESTALOZZI

With the denial of theism, pessimism is possible, but not necessary. Spinoza seems to be an optimist when he asserts that finite evil and good are only relative conceptions; that what seems to be evil is the necessary manifestation or outwarding of the universal substance. Logically considered, his argument is not valid, for, in order to make it such, it must be assumed or proved that the existence of the universal substance or God is itself a good. The philosophy of Hegel found in the necessary evolution of the absolute a place for every form of evil as a necessary stage in the process by which the idea at last comes to self-consciousness in man, and thus marks the steps of its advancement or evol- ution in the history of each individual, and in the prog- ress of the race. But in order to justify the occurrence of these transient evils, this development of the lower into the higher must be assumed to be good. Pessi- mism is by no means excluded by this theory of Hegel, except by the assumption that an outcome of prepon- derating evil in the universe would be unreasonable, and unreason is evil only, and cannot be actual. But this solution only illustrates a fundamental weakness or limitation of the system itself in its conceptions of good and evil.

Schopenhauer makes the two elements or factors of the universe to be will—i.e. force and thought; i.e. Vorstellung: conceiving, however, of neither nor of both as obtained from or given by God. He claims that he has made the force which is blind when it begins to work to come at the end of its operations to a consciousness of itself and of its work; but the discovery which it makes of both is anything rather than satisfactory. As soon as the blind will becomes the clear knowledge of the un- satisfactory character of its work, it recoils with horror, and strives for self-annihilation. Schopenhauer gives his reasons for holding that all life is only suffering: 1. The constitution of the human individual; 2. The nature of enjoyment; 3. The consequences of possession and destruction; 4. The relation of man to the external world; 5. The aimless operation of history. From these data he concludes that the universe is the worst possible, arguing that if it were a shade worse it could not possibly exist. The only transitory happiness which man can find or should value are the passionless pleasures of science and art. These have as little as possible of the elements of feeling and impulse, and therefore are liable to the least possible alloy.

Hartmann contends that the universe as a whole is uncontrolled by design. Each part is adapted to every other by a law which controls the forces, resulting in a sort of equilibrium, which is the reason for the unsatisfactory results of the universe, with which he contends no reasonable being could possibly be content, and therefore the universe as a whole is neither reasonable nor good. In proof, he cites (1) The law of nervous exhaustion; (2) The principle of relief in pain does not usually outweigh the pain; (3) The most of our pleasures are unobtrusive; the contrary is true of pains; (4) All gratifications are usually brief, while sufferings are enduring. The remedy which Hartmann proposes is to elevate and strengthen the will to a passionless indifference to existence and its evils, and a passionless enjoyment of its blessings. See Stoicism.

The affinity of these philosophical theories with the hypotheses of blind evolutionism and the survival of the fittest, as taught by many modern expounders of natural history, is too obvious to need explanation. The moment we abandon the position that design controls the universe, and that the tendency of its forces and movements authorizes us to believe in the goodness of a personal God, it is impossible to set aside the reason- ing which leads to the hopeless and pessimistic conclu- sions of pessimism. In literature pessimism is nearly allied to nihilism, or that faithless and hopeless view of life's duties and life's activities which is the result of the overstimulated and the overindulged curiosity and tastes that characterize most of our modern life. Indeed, it is in this practical form only that pessimism is likely to be current or dangerous. There are comparatively few men who will be attracted by this doctrine as an abstract theory of the universe. Its assumptions are too remote and doubtful, and the deductions are too at- tended. But there are multitudes in this our own cultivated age who have found life so empty, and the gratification of passion so unsatisfying, and even the pursuit of art and literature so unrewarding, as to be ready to accept the conclusion that the universe is badly ordered, and humans existence is only a vanity and vexation of spirit. Theoretical pessimism is, on the one hand, compatible with the grossest debauchery, the most shameless self-seeking, and the most cruel oppression; and on the other with that indifference for one's personal sufferings, and passionless sympathy for the sorrows of others. No influence can be more unfriendly to individual or national character than the absence of faith in God and man which such a theory implies or engenders. No heroism nor self-sacrifice nor self-culture in its highest forms can flourish in a community of educated men who have persuaded themselves that their life is a burden, that the universe is false to its prom- ises, and that their very nature is necessarily in conflict with the impulses and hopes which impel it to action. Neither art nor literature nor philosophy can escape the blight which pessimism, as a philosophy of the un- satisfactory universe, bears on all that is noble and aspiring in man and his achieve- ments. See Huber, Der Pessimismus (Munich, 1876); Volkelt, Das Unbewusste und der Pessimismus: Studien zur modernen Geistesbewegung (Berlin, 1873); Taubert, Der Pessimismus und seine Geistert; Von Hartmann, In- der pessimistische Monismus trost? Gesammelte phil. Abhandlungen (Berlin, 1872); Pfeiderer, Der Pessimis- mus (Berlin, 1875); Christlieb, Infidelitaet, v. 40; Ueber- weg, Hist. of Philosophy (see Index); Christian Quar. Apr., 1874, p. 284-88; North Am. Rev. July, 1873, and others.

PESSOSA a small black stone which held the place of a statue in the temple of Cybele, the great goddess of the Phrygians. It was probably an aerolite, having been represented as falling from heaven.

Pestalozzi, Johann Heinrich, the father of modern educational ideas, or, as he has been aptly called, "the schoolmaster of the human race," was one of the greatest philanthropists of the world. He was born at Ziefen, 1746, and died in 1801. He was a medical student, practiced for a while, and then took up the study of pediatrics, and, after several years in the clerical or legal ranks, he married, at the age of twenty- three, the daughter of a merchant of Zurich, purchased a small landed property which he named Neuhof, and went to reside upon it and cultivate it. Why this man of scholarly tastes and pious life should so suddenly turn his attention to farming was a mystery to many of his friends. But Pestalozzi himself had a far-reaching pur- pose in this step. The reading of Rousseau's Emile had drawn his attention to the subject of education. He had long noticed the degraded and unhappy condition of the laboring classes, the great mass of the population, and he was seeking—more by motives of Christian be- nevolence and sympathy—to provide means best suited to promote their elevation. He finally became con- vinced that by means of a sound education a remedy might be found for the many evils by which society is infested. He regarded their ignorance as the prin- cipal cause of their misery, and thought that by a prop- er and advantageous use of their political rights they could be raised from the state of stupidity and brutality into which they had sunk, and given devoted hearts and mainlly intellects. He proposed to effect this result not
simply by instruction, but by a judicious blending of industrial, intellectual, and moral training. He doubt-
ably saw that it was not enough to impart instruction to them, but that their moral nature should be particu-
larly cared for, and habits of activity instilled into
them through agricultural and industrial labors. To
his way of thinking, the great drawback on the side of indus-
trial pursuits was the neglect of the control of
both the intellectual and moral life and the development of the mercantile spirit, without
having the moral resources and consolations afforded by
rural occupations. For this reason he preferred to
withdraw to a farm, there to gather about him the
children of the poor, and to foster in the coming men of
work an industrial spirit, and to bestow upon them a
manhood of human dignity. He began in 1775 to carry his views by
practice through turning his farm into a farm-school for
instructing the children of the poorer classes of the vi-
cinity in industrial pursuits, as well as in reading and
writing. He was, however, unsuccessful in his opera-
tions, and at the end of two years his school was
broken up, and he became involved in debt. In order to relieve
himself from his encumbrances, and to procure the means of
subsistence, he produced his popular novel of Lienhard
und Gertrud (Basle, 1781, 4 vols.), in which, under guise of
a novel, he poured out his heart, as it were, for the neglected condition of the peasantry, and how by better
teaching they might be improved both morally and
physically. It was read with general interest, and the
Agricultural Society of Berne awarded him for it a gold
medal, which, however, he chose to burn in his bonfire of
tea at once to sell. It was followed by Christoph und Else
(Zurich, 1782). During 1782-83 he edited a periodical
entitled Das Schweizer-Blatt für das Volk, which was
collected in 2 vols. and published as Nachschriften
über den Gang der Natur in der Entwickelung des Mensch
essungsgekuehlt (Zurich, 1782). He wrote also other
works of less importance. Not until 1790 did Pesta-
lozzi’s opportunity come again to test his theories by
practice. In this year he established, with the assist-
ance of the Swiss Directory, a school for orphan chil-
dren in a convent which had belonged to the Ursuline
nuns at Stans, in the canton of Unterwalden. Stanz
had been sacked by a French army, and the children
were such as were left without protectors to wander
about the country. In the bare and deserted con-
vent he had, without assistance and without books, to
begin about eight children, at the age of from four to
ten years of age. He was thus driven by necessity to set
the elder and better-taught children to teach the younger
and more ignorant; and thus struck out the monitorial or
mutual-instruction system of teaching which, just
about the same time, Lancaster was under somewhat similar circumstances to adopt in his country and
a year or two after the first Pestalozzi’s benevolent labors were sud-
ently interrupted by the Austrians, who converted his or-
phan-house into a military hospital. But the feasibil-
ty of his theory had become so evident that he could
no longer be discouraged or turned back by any obsta-
cle. He promptly removed to Burgdorf, eleven miles
north-east from Berne, and there founded another school
of a somewhat higher grade, and produced his educa-
tional works, Wie Gertrud ihre Kinder lehrt (Berne,
1801): Der Auf der Mutter (ibid, 1803), and some others.
In 1802 the people of the canton of Berne sent him as
their deputy to an educational conference summoned by
Bonaparte, then first consul, at Paris. His establishment
at Burgdorf was prosperous, became celebrated, and was
resorted to from all parts of Europe by persons interest-
ed in education and some drove for instruction, others
for inspection. In 1804 he removed his establishment to
München-Buchsee, near Hofwyl, in order to operate in
conjunction with Fellenberg, who had a similar estab-
lishment at the latter place; but the two educational
reformers disagreed, and in the same year Pestalozzi
removed to Yverdon, the canton of Vaud, who, as the
spirit preponderated over the letter. True, he put
revealed religion as auxiliary to natural religion, and
only instructed his pupils in the latter when the former
had been mastered; but whatever may be thought of
the method, it is certain that the Here, as a believer in the salvation of the world by Christianity.
The humble man shrank from professions; he found that
more and celebrated than the one at Burgdorf,
a still greater number of pupils. But natural dis-
contentedly dissensions arose among the teachers, in w
Pestalozzi himself became implicated, and thus the la-
ter years of his life were imibed. The number of pupils
rapidly diminished, the establishment became a
losing concern, and Pestalozzi was again involved in
debt, while the triumphs of the French régime gave
hope and the development of the mercantile spirit, without
having the moral resources and consolations afforded by
rural occupations. For this reason he preferred to
withdraw to a farm, there to gather about him the chil-
dren of the poor, and to foster in the coming men of
work an industrial spirit, and to bestow upon them a
manhood of human dignity. He began in 1775 to carry his views by
practice through turning his farm into a farm-school for
instructing the children of the poorer classes of the vi-
cinity in industrial pursuits, as well as in reading and
writing. He was, however, unsuccessful in his opera-
tions, and at the end of two years his school was
broken up, and he became involved in debt. In order to relieve
himself from his encumbrances, and to procure the means of

PESTILENCE 998  PESTLE

ight cause his pupils to stumble if they looked to
him for a pattern, and we do not wonder that in the
midst of his trials with the world he is led to cry out,
"I do not think that there are many men naturally fit-
ted to be Christians;" and in shame and confusion con-
fesses that he does not really think himself a Christian,
because he does not find himself endowed with a capac-
ity to arrive at religious excellence by the conquest of
himself. His life will bear the closest scrutiny, and if
ever there has been a striving after perfection, Pestal-
lozzi sought for it in Christianity. In the hour of death
his hope for salvation was in his Saviour. See KRISTI,
Pestalozzi; his Life, Work, and Influence (Cincinnati,
1870); and the article in Kiddle and Schem's Cyclop.
of Education, p. 688-93; also Hagenbach, Ch. Hist. of
the 18th and 19th Centuries, ii, 154 sq.; Hurst, Rational-
tem, p. 188 sq.

PESTILENCE is the invariable rendering in the A.V.
(except in Exod. ix, 9, "murrain," and in Hos. xiii, 14,
"plagues") of the Heb. "נָעַר, debir (Sept. usually Sevo-
ra), which originally seems to mean simply destruction,
but is regularly applied to that common Oriental epi-
demic the plague (q. v.). The same term is also used
in the Hebrew Scriptures for all epidemic or contagious
diseases (Lev. xxvi, 25). The writers everywhere at-
tribute it either to the agency of God himself or of that
legate or angel whom they denominate "נָעַר, malak;
hence the Sept. renders the word "נָעַר, debir, or pesti-
ience, in Ps. xcv, 6, by δαμαίνων μεγάλα, "the
demon of noontidy," and Jonathan also renders the same
word in the Chaldee Targum (Hab. iii, 5) by the Chal-

dee word יבּר, angel or messenger. The prophets
usually connect together sword, pestilence, and famine,
being three of the most grievous inflictions of the Al-
mighty upon a guilty people (2 Sam. xxiv, 19). In the
N. T. the term rendered "pestilence" is λοιμός (Matt.
6). See DISEASE.

Pestle (מי' di, so called either as being rowed or
lifted up), the instrument used for triturating in a mor-
tar (Prov. xxvii, 22). It is supposed, from the above
passage, not that the wheat was pounded to meal in-
stead of being ground, but that it was pounded to be
separated from the husk. The Jews very probably
used wheat in the same manner as rice is now used in
the East, that is, boiled up in pallas variously prepared,
which required that it should, like rice, be previously
disengaged from the husk. See MORTAR.

Ancient Egyptian Pestle and Mortar.
