Offerings have been divided into three kinds: 1. Impetratio, denoting those which are designed to procure some favor or benefit; 2. Eucharistia, those which are expressive of gratitude for bounties or mercies received; 3. Propitiation, those which are meant to atone for sins and propitiate the Deity. Porphyrus also gives three reasons for making offerings to the gods (Apostolicon, ii, 24)—in order to do them honor, to acknowledge a favor, or to procure a supply for human needs. The Hebrews were to show their gratitude to the One whom they considered to be a means of divine worship, and prescribing the minutest details. A leading distinction separates their offerings into unbloody (לְיִדּוֹנִי, minhath, προσφορά, δῶρον) and bloody (לְבַד, zechab, ιερα). Used in its widest sense, the term offering, or oblation, indicates in the Hebrew ritual a very great number of things—as the firstlings of the flock, first-fruits, tithes, incense, the shebread, the wood for burning in the Temple (Neh. x, 34). The objects offered were salt, meal, baked and roasted grain, olive-oil, clean animals, such as oxen, goats, doves, but not fish. The animals were required to be spotless (Lev. xxii, 17; Mal. i, 6); and with the exception of the doves, not under eight days old (Lev. xxii, 27), younger animals being tasteless and inimurious. The smaller beasts, such as sheep, goats, and calves, were commonly one year old (Exod. xxix, 38; Lev. ix, 3; xii, 6; xiv, 10; Num. xv, 7; xxvii, 9 sq.). Oxen were not offered at three years of age (Judg. vi, 25) one is offered which is seven years old. As to sex, an option was sometimes left to the offerer, especially in peace and sin offerings (Lev. iii, 1, 6; xii, 5, 6); at other times males were required, as in burnt sacrifices, for, contrary to classical usage, the male was considered the more perfect. In burnt-offerings and in thank-offerings the kind of animal was left to the choice of the worshipper (Lev. i, 8), but in trespass and sin offerings it was regulated by law (Lev. iv, 5). If the desire of the worshipper was to express his gratitude, he offered a peace or thank offering; if to obtain forgiveness, he offered a trespass or sin offering. Burnt-offerings were of a general kind (Num. xvi, 8; Deut. xii, 6; Jer. xvii, 26). Hectotama or large numbers of cattle were sacrificed on special occasions. In 1 Kings viii, 53, Solomon says he has “burnt sacrifice of a hundred thousand oxen, a hundred and twenty thousand sheep” (see also 2 Chron. xxxii, 32 sq.; xxxiv, 24; xxvii, 7 sq.; 1 comp. Herod. viii, 43; Xenoph. Hellen. iv, 4; Sueton. Calig. 14). Offerings were also either public or private, prescribed or free-will. Sometimes they were presented by an individual, sometimes by a family; once, or at regular and periodic intervals (1 Sam. i, 24; Job i, 5; 2 Macc. iii, 32). Foreigners were permitted to make offerings on the national altar (Numb. xvii, 17; Deut. xvi, 16; 2 Sam. xvi, 18; 1 Kings. iii, 5; Joseph. Aipon, ii, 6). Offerings were made by Jews for heathen princes (1 Macc. vii, 33; Joseph. Ant. xii, 2, 5). In the case of bloody-offerings, the possessor, after he had sanctified himself (1 Sam. xvi, 5), brought the victim, in case of thank-offerings, with its horns gilded and with garlands, etc. (Exod. xiii, 12; Lev. xxiii, 14; Num. vi, 5); to the altar (Lev. iii, 1; xii, 4; xiv, 17), where, laying his hand on the head of the animal (Lev. i, 4; iii, 2; iv, 4), he thus, in a clear and pointed way, devoted it to God. Having so done, he proceeded to slay the victim himself (Lev. iv, 25 sq.); which act might be done at any time, and sometimes was, done by the priests (2 Chron. xxix, 24), and probably by the Levites (Hottinger, De Functionibus Sacerdot. circa victimam, Marib. 1706). The blood was taken, and, according to the kind of offering, sprinkled upon the altar, or brought into the Temple and there shed upon the ark of the covenant and smeared upon the horns of the altar of incense, and then the remainder poured forth at the foot of the altar of burnt-offerings. Having slain the animal, the offerer struck off its head (Lev. i, 6), which, when not burned (Lev. iv, 11), belonged either to the priest (Lev. vii, 8, 2), to the offerer (comp. Mishna, Zebach, xii, 2). The victim was then cut into pieces (Lev. i, 6; viii, 20), which were either all, or only the best and most tasty, set on fire on the altar by the priests or the offerer, or must be burned without the precincts of the holy city. The treatment of doves may be seen in Lev. i, 14 sq.; v, 8 (see Hottinger, De Sacrificiis Avium, Marib. 1706). In burnt-offerings the bones of the victim (Hebr. קָרֹב) were usual either before or after the slaying.

The annual expense of offerings, including those made by individuals as well as the nation, must have been considerable. It may, however, be said that the country produced on all sides in great abundance most of the required objects, and that there were numerous forests whence wood for use in sacrifice was procured.
OFFERING

At later periods of the nation foreign princes, desirous of conciliating the good-will of the Jews, made large contributions both in bull or calves as an offering to the national sanctuary, at the dedication of the Temple, and afterwards for the support of the ceremonial of public worship (Ezra vi, 9; 1 Macc. x, 39; 2 Macc. iii, 8; ix, 16; Joseph. Ant. xii, 3, 8). The place where offerings were exclusively to be presented was the outer court of the national sanctuary, at first the Tabernacle, afterwards the Temple. Every offering made elsewhere was forbidden by penalty of death (Lev. xvii, 4 sqq.; Deut. xii, 5 sqq.; comp. 1 Kings xii, 27). The precise spot is laid down in Lev. i, 3; iii, 2, "At the door of the tabernacle of the congregation before the Lord." According to the Mishna (Zebach, ch. v), offerings were to be slain past the river Jordan; being made and burnt, if they were considered unclean, at any part of the outer court. The object of these regulations was to prevent any sacred idolatrous rites from taking place under the mask of the national ritual; and a common place of worship must have tended considerably to preserve the unity of the people, whose constant disagreements required precautions of a special kind (1 Kings xii, 27). The oneness, however, of the place of sacrifice was not strictly preserved in the troubled period of the Judges, nor indeed till the time of David (1 Kings iii, 2, 8). Offerings were made in various places besides the principal Tabernacle (1 Sam. xvi, 17; Judg. ii, 5). High places, which have long been used by the Canaanites, retained a certain sanctity, and were honored with offerings (Judg. vi. 20; xiii, 19). Even the royal Samuel followed this custom, and burnt David Blood (2 Sam. vi, 10). 1 Kings xii, 3). After Solomon those offerings on high places still continued. In the kingdom of Israel, cut off as its subjects were from the holy city, the national temple was neglected.

Offerings being regarded as an expression of gratitude and piety, and required as a necessary part of ordinary private life, were diligently and abundantly presented, in spite of the impiety and contempt for religious observance that prevailed. The priests, through the influence of the High-Priest, continued to perform their priestly functions, and to hold their estates among the calamities of the period of exile (Hos. iii, 4). Under the load and the multiplicity of these outward oblations, however, the Hebrews forgot the substance, lost sight of the symbol, and the thing signified in the sign; and, failing in those devotional sentiments and that practical obedience which offerings were intended to prefigure and cultivate, sank into the practice of mere dead works. Thereupon the prophets began to utter their admonitory lessons, to which the world is indebted for so many graphic descriptions of the real nature of religion and the only true worship of Almighty God (Isa. ix, 21; i, 7; 1x, 7; Zech. xiv, 21; Jer. xv, 2; Ezek. xxii, 18); and departed from the national worship, as well as from all the Canaanite deities, among the calamities of the period of exile (Hos. iii, 4). Under the load and the multiplicity of these outward oblations, however, the Hebrews forgot the substance, lost sight of the symbol, and the thing signified in the sign; and, failing in those devotional sentiments and that practical obedience which offerings were intended to prefigure and cultivate, sank into the practice of mere dead works. Thereupon the prophets began to utter their admonitory lessons, to which the world is indebted for so many graphic descriptions of the real nature of religion and the only true worship of Almighty God (Isa. x, 11; Jer. vii, 20; vii, 21 sqq.; Hos. vi, 6; Amos v, 22; Mic. vi, 6 sqq.; comp. Psa. xli, 6; li, 17 sqq.; Prov. xxv, 3). Thus the failures of one Church prepared the way for the higher privileges of another, and the law proved a schoolmaster to bring us to Christ (Matt. v, 23; Gal. iii, 24). Even before the advent of our Lord Jesus and reflecting men, like the Essenes, discovered the lamentable abuses of the national ritual, and were led to abstain altogether from the customary forms of a sacrifice. The Gospels, therefore, are in both the Gospels and the Acts of the Apostles grace is mine, and the cattle upon a thousand hills. If I were hungry I would not tell thee; for the world is mine, and the fulness thereof. Will I eat the flesh of bulls, or drink the blood of goats? Offer unto God thanksgiving. Indeed, the conception and composition of such a noble piece show what great progress the best-cultivated minds had made from the rudimentary notions of primitive times, and may serve themselves to prove that with all the abuses which had ensued, the Mosaic ritual and institutions were admirably fitted to carry forward the education of the mind of the people. Thus was the Hebrew nation, and through them the world, led on so as to be in some measure prepared for receiving the Gospel of the Lord Jesus, in which all outward offerings are done away, the one great offering being made, and that offering the altar, if they are members of the Church are required to offer themselves, body, soul, and spirit, a holy offering to the Lord (Heb. x; Rom. xii). "By him therefore let us offer the sacrifice of praise to God continually, that is the fruit of our lips, giving thanks to his name. But to do good and to communicate forget not; for with such sacrifices God is well pleased" (Heb. xii, 15, 16; Matt. ix, 18; xii, 7; Rom. xv. 6; Phil. ii, 17; 2 Tim. iv, 6). See ORATION.

Lightfoot's work, De Ministerio Temporis, is especially to be recommended on this subject. See also Oratium, De Orato Sacris; Psalterii, De Interpretatione Psalterii, Verfas, i, 80 sqq.; Rosenmüller, Exeuct. I ad Lat. The Jewish doctrines on offerings may be found in the treatises Zebachim, Manachoth, and Temurah, a selection from which, as well as from the Rabbinis, is given in that part of the Mishna, De-or. Lev. 10adin. The omission of the Seder, in the ordinary order, of Ulpian, Theor. tom. x. For a general view of the subject, see SACRIFICE; and for its different kinds, see BURNT-OFFERING; CONSECRATION-OFFERING; DAILY-OFFERING; DRINK-OFFERING; HEAVE-OFFERING; JESTERS; MEAT-OFFERING; OBOLATION; PROPITIATORY-OFFERING; PURIFICATION-OFFERING; SIN-OFFERING; WAVE-OFFERING.

OFFERING denotes whatever is sacrificed or consumed in the worship of God. In the Christian community there appears to have existed, from the earliest times, a practice of making voluntary offerings for purposes not directly connected with public worship. See OBOLATION; OFFERTORY.

Offering-days, namely, Christmas, Easter, Whit-Sunday, and the feast for the dedication of the Church, or, as Beleth says, All-saints', when the alms were allotted for the priests' stipend and the purchase of the paschal. By Henry VIII.'s injunction, 1558, the four fast days and the seven days before Christmas, Easter, Nativity of John the Baptist, and Michaelmas, when money-offerings at the altar were given for the support of the clergy. In the last century, the king, attended by the Knights of the Garter and heralds in their tabards, offered, at Christmas, Easter, Whit-Sunday, and All-saints', a bezant in his private chapel; on six other days gold; and on Circumcision and Epiphany gold, frankincense, and myrrh, in three purbes.

Offertorium. See OFFERTORY.

Offerory (Lat. offertorium, from orfer, I offer) is the name given to that portion of the Roman Liturgy with which the eucharistic service, strictly so called, commences. In the Roman Liturgy it consists of one or two verses from some book of Scripture, generally from the Old Testament, but sometimes from the Epistles. In the Ambrosian Liturgy it consists of a prayer, similar in form to the collect or secret of the mass; and in the Galician it is followed by the appropriate reading up of the bread and wine, accompanied by certain ceremonies and forms of prayer.

This offering of the bread and wine in the public service became, from a very early period of the Christian Church, the occasion of a voluntary offering on the part of the faithful; originally it was a matter of the bread and wine designed for the eucharistic celebra-
OFFERTORY 314 OFFICE OF THE CHURCH

tion and for the communion of the priest and the congregation, sometimes even including the absent members, and also for the comfort, or consolation of the sick, which accompanied it. That portion of the offerings which remained in excess of what was requisite for these purposes was applied to the relief of the poor and to the support of the clergy. These offerings were ordinarily made by the faithful in person, and were laid upon the altar; and the Ambrosian rite still preserves this usage in a ceremonial which may be witnessed in the cathedral of Milan. By degrees, other gifts were superadded to those of bread and wine—as of corn, oil, wax, honey, eggs, butter, fruits, lambs, fowl, and other animals; and eventually of equivalents in money or other objects of value. The last-named class of offerings, however, was not so commonly made upon the altar and during the public liturgy as in the form of free gifts presented on the occasion of other ministerial services, as of baptism, marriages, funerals, etc.; and from this has arisen the practice in the Roman Catholic Church of the mass-offering, or honorarium, which is given to a priest with the understanding that he shall offer the mass for the intention (whence the honorarium itself is often called an "intention") of the offerent. In some places, however, and among them in some parts of Ireland, offerings "in kind" are still in use, not indeed in the form of the ancient offertory, but in the shape of contributions of corn, hay, etc., at stated seasons, for the use of the parochial clergy. At weddings also, and in some places at funerals, offerings in money are made by the relatives and friends of the newly married or of the deceased (Chambers).

The offertory in the mass (1) commences with the Dominus vobiscum, after the Creed, ending with the Preface. It contains the oblation of the bread and wine by the celebrant, the censing of the oblation, altar, and attendants, the washing of the fingers, the subsequent prayers, the invitation to pray, and the secret prayer. Originally it was usual for the faithful to bring to church the provisions which they contributed to the support of the clergy and the necessaries for the holy communion and church use. The offering was made at this time. The deacon selected what was required for the altar, and the residue was taken to the bishop's house for distribution to the clergy at his discretion. The candles given at ordinations and the bread and wine at the consecration of a bishop are remnants of the ancient practice. Walfrid Strabo says that it was lawful to offer new wheat-ears, grapes, oil for lamps, and incense at the time of celebration. The name is also given (2) to the anthem sung after the Gospel or Creed, during which the people formerly offered their alms and oblations. Such was the custom in Africa (c. 400) in St. Augustine's time. Hugo de St. Victor and Honorius of Autun attribute the introduc-
PERSONS that God designed his Church to be an autono-

mous exponent of the sense of Scripture; that while the
precedence, indeed, is to be given to Scripture, in point of
dignity, as the foundation on which human interpre-
tations are to be built, the superstructure reared by the
Church is to be regarded as no less firm than the foun-
dation on which it is fairly built; that supposing any of
us fully to believe a day, is a thing of the greatest difficu-
ty, and is regulated by a complicated system of rubrics (q. v.).
Treatises De Divina Officla (on divine offices) appeared in
the Middle Ages from the pens of some able writers of
those times, particularly Amalarius, John Scottus, Walli-
ner, and various others. The term of Divine Office is
applied to the Introit (q. v.) and Psalms (q. v.). (J. H.W.)

OFFICE, Holy, Congregation of the. In the ar-

icle Inquisition (q. v.) it has been explained that that
tribunal is sometimes called by the name Holy Office.
This title, however, properly belongs to the "Congre-
gation" at Rome, to which the direction of the Roman
tribunal of the Inquisition is subject. The Congrega-
tion was established by Paul III in 1542, and its organi-
zation was completed by Sixtus V. It consists of
twelve cardinals, a commissary, a number of "theolog-
gians" and canonists who are styled "consultors," and
of another class of officials styled "qualified," whose
office it is to examine, on each case, the exertions of the
cardinals. In the most solemn sessions of the Holy
Office the pope himself presides in person. The
action of the Holy Office, in addition to the questions of
heresy and crimes against faith, also extends to ecclesias-
tical offences, especially in connection with the admin-
istration of the sacraments.

OFFICE, Ministerial, i. e. of the Christian Minis-
try. The ministers whom Christ and his apostles, and
their successors, appointed, are completely distinct from
priests, such as those of the Jews and of the pagans, in
office, as well as in name. Among the former it was not so much the family of Aaron as the whole tribe of
Levi that seems to have been set apart for the purpose of
performing the law; and, indeed, even persons of any
tribe might teach publicly in the synagogue on the
Sabbath-day, whereas an intrusion into the priest's of-

cice would have been vehemently resented. As for pa-
gan priests, their business was rather to concern itself
than to explain the mysteries of their religion; to keep
the people in darkness, rather than to enlighten them.
Of the office of Christian ministers, on the contrary, one
principal point is that it belongs to them (not exclu-
dively indeed, but principally and especially) to give
religious instruction and adoration; while another, and
that a peculiar and exclusive office, is to administer
the sacraments of baptism and the Lord's supper. But
this administration does not at all assimilate the Chris-
tian priesthood to the pagan or Jewish; the former of
those rites being an admission into the visible Church,
and therefore very suitably vouchsafed at the hands of
those whose especial business it is to instruct and exam-

much; and probably it ought always to be so understood. It is no valid objection to this that Potiphar had a wife, for amalgamates are not all strangers to the sexual passion, and sometimes live in matrimony (Eccles. xx. 4; Mishna, Johatham, viii. 4; Juvenal, Sat. 1. 22; Terence, Eun. iv. 3, 23; Chardin, Voyages, iii. 357). See Eunuch. 2. נְשָׁר, part. of נָשַׁר, to cut, to grave, properly a wrister (Sept. γραμματικός), and, from the use of writing in judicial administration, a magistrate or prefect. It is used of the officers who were set over the Israelites in Egypt (Exod. v. 6-19) of the officers who were appointed along with the elders to administer the public affairs of the Israelites (Num. xi. 16; Deut. xx. 5, 8, 9; xxxii. 10, xxxii. 28; Josh. i. 10; ii. 2; viii. 32, etc.); of magistrates in the cities and towns of Palestine (Deut. xvi. 18; Sept. γραμματέως ἄρχωντις; 1 Chron. xxiii. 4; xxiv. 26; 2 Chron. xix. 11; Prov. vi. 7 [A. V. "censor"], etc.); and apparently also of a military chief (2 Chron. xxxvi. 11 [A. V. "ruler"]). See below. 3. צְבִירָה, part. Niph. of צָבָר, to set or place, a prefect or director (1 Kings iv. 5, 7, v. 30 [A. V. 16]; ix. 23, etc.); and נַפְשָׂע, netiš (1 Kings iv. 19, 21). See Governor. 4. בָּשׂ, rob (Esth. 3. 8; Dan. i. 8 [A. V. "master"]; Sept. εἰρήνη). See Capt. 5. מַפְטִיל, pekudāh, properly office, but used collectively for a body of officers (Isa. lx. 17; Sept. ἱστορίας; also 2 Chron. xxiv. 11 [A. V. "office"]; Sept. πρωταράς). 6. נַפַּעַר, those who did the business, marg. A. V.; Sept. γραμματεῖς (Eph. iii. 3). See Municipalities, Egypt. In the N. T. the words translated "officer" are both employed of legal functionaries. They are: 1. ἐπισκόπος, a word of general significance, denoting one who renders service of any kind; it is used, with this rendering, of a functionary whose duty is to apprehend offenders, or of legal persons from those who had incurred them (Matt. v. 25 [for which Luke uses πρεσβυτής, xii. 58]; John vii. 32, 46; xviii. 3, 12; Acts v. 29); a messenger or bailiff, like the Roman viarius or factor. Josephus uses the word εὐπρεπὴς of an officer two of whom, being Levites, were attached to each magistracy (Ant. iv. 8, 14); but it is probable that these were rather clerks or assessors of the court than servants of the class above described. The Mishna also mentions the crier and other officers, but whether these answered to the officers of Josephus and the Talmud cannot be determined. Selden, from Maimonides, mentions the high estimation in which such officials were held (Synods. iv. 4, vi. 1; Selden, De Synods. ii. 13, 11). 2. The πρεσβύτης was properly the exactor of the penalty assigned by the judge, and so the word is correctly used by Luke (xii. 58). There were at Athens officers bearing this name, whose business it was to register and collect fines imposed by courts of justice; and "deliver to the officer" means, give in the name of the debtor to the officer of the court (Demosthenes [or Dinarchus] c. Theocr. p. 1218, Reiske; Smith, Dict. of Antiq. "Practores," "Hypereutes," Jul. Poll. viii. 114; Demosth. c. Aret. p. 778; Esch. v. Timarch. p. 5; Grotius, on Luke xii. 58). See Punishment.

The most usual and specific of the above Hebrew words is shoterim (שַׁחְטֵרִים), which is best explained as the participle of an old verb, šakaret (שָׁכַר), that still appears in the Arabic, meaning to engrave, to mark upon anything; hence to write; and from the common use of scribes in the East, and especially in Egypt (see Wilkinson, Anc. Egypt. ii. 176 sq., Harper's ed.), in all matters of agency, superintendence, and public business, the word naturally passes into the more general meaning of agent or officer (comp. Hengstenberg, Pentat. i. 449 sq.). In English and other Western languages, words of kindred signification originally have acquired the same latitude of meaning. Comp. Clerk; Writing. These scribes or officers first appear in Egypt as Hebrews appointed to superintend the task of their brethren, and made responsible for its full completion (Exod. v. 6, 14, 15, 19). Those only were adapted to this task who, by their skill in writing, were competent to keep lists and tables of persons and their work. Their duties are well illustrated by many groups on the extant Egyptian papyri; and in connection with the government of Egypt, and with its various occupations and employments (see Wilkinson, Anc. Egypt. ii. 282 sq.). The elders of

Ancient Egyptians brought before the Officers of Registration.

Fig. 1, the civil functionary; 5, the subaltern presenting the certificate; 3, the individual arranged; 4, 6, others deprecating sentences.
of the term. Scribes must, of course, have enrolled the army; but it remains uncertain whether these enlisting officers were permanently connected with the army.

**Officers of the Church.** Those who are appointed as ministers of the Church, and who therefore exist for its sake, are the Church officers. The Church officers are accustomed to think and speak of the spiritual community as if it consisted only of its officers. Hence the error which confounds the Church with the ministry, and which is partly kept up, perhaps, by men's neglecting to notice one peculiarity belonging to Church kinship: viz., its first establishment; viz., that it did then consist of ministers only, though it was by no means designed so to continue. All the disciples who constituted the infant Church were those destined to be employed in various offices therein; so that an inattentive reader is liable to confound together what our Lord said to them as ministers, and what as members; as rulers of a Church, and as the Church itself. See Bishop; Church; Deacon; Elder.

**Offices, the forms of prayer used in Romish and Episcopal churches.** Before the Reformation the offices of the Church consisted in missals, breviaries, psalteries, gratifications, and pontificals. See under respective titles, and also the article OFFICE, THE DIVINE.

**Offices of Christ.** See Christ, OFFICES OF. Official is the title given to an episcopal ecclesiastic who is intrusted with the trial of offences in a diocese. The official originated in the 12th century, as if to check the power of the archdeacon. The official of an archdeacon stands to him as a chancellor to a bishop. But there was a practice in very early times in the Church which gave rise to such appointment. The bishops, as far back as the days of St. Gregory and St. Basil, employed assistants; and pope Damasus sent the priest Simplicius to assist St. Ambrose. The Council of Lateran contended itself with suggesting the employment of "fitting men" to assist bishops; and it appears that at first the titles of vicar-general and official were tenable together, as now in Italy, for the administration by one person both of voluntary and contentious jurisdiction. A bishop, when absent from his diocese, or when ill or incapable, was obliged to appoint a vicar. He was sometimes called a "missus dominicus." The principal officials and vicar-general in temporals and spirituals hold the consistory court as the bishop's representatives as if he sat in person. The official has a territory or district, and has also, in the broadest sense, a commission, for hearing causes in a whole diocese, but without the power of inquiry, correction, or punishment of offences; he can only deprive of a benefice, or give admission to it by special commission. A vicar-general holds all these powers except collation to a benefice. A commissary-general is a special deputy. An official's powers terminate with the death of him by whose appointment he acts; and he may also be recalled. An appeal lies from his sentence, not to the bishop, but to him to whom an appeal would be made from the bishop himself. The official's principal resides in the chief place, and is an ordinary; others are deputies, "officials foranei" (i.e. living out of it), and from them appeal lies to the bishop. The official principal is the assistant of the bishop in matters of a civil or criminal nature, to aid him in points of law and to defend the rights of the Church. These officers were not at first deputed and assigned to any certain place, but supplied the office of the bishops at large in hearing ecclesiastical causes which were of a contentious jurisdiction. They were called "judices," or "officials foranei," viz. "officials astricti cuidum formae" (ascribed to a given form). To them the cognizance of causes is generally committed; by such a means has ecclesiastical jurisdiction throughout all the diocese, but not the power of inquisition, nor the correction of crimes, nor can they remove persons from the benefices or collate to benefices without a special commission. The archdeacon's official exercising jurisdiction in certain parts of a diocese for cognizance and hearing of causes transferred, in virtue of the office itself, by some general commission made to him for that purpose, and he may visit in the right of the archdeacon when the latter himself is hindered.

**Officium Divinum.** See Office, THE DIVINE.

O'Flahy, MAURICE, an Irish Roman Catholic prelate, studied at the University of Oxford, and joined the Franciscans. He afterwards studied philosophy and theology at Padua, where he graduated, and later taught. In 1480 he was corrector for the renowned printers Octavus Schott and Locatelle, of Venice, a position which learned men at that time did not look upon as beneath their dignity. In 1500 he was bishop of Tuam in 1506, but O'Flahy preferred to remain in Venice, where he devoted himself to scholastic philosophy and to literature. In 1512 he took part in the first two sessions of the Council of Lateran. Finally, in 1518, he made up his mind to go to Ireland, but died on landing at Galway, May 25.

**Og (Heb. id. 21, probably a shortened form of מִּגְז, i. e. מִגְז, "cúis," or "cúis," long-necked [but from a statement of Manetho that Ḥyqm (in the word Ḥyqm is the Rephaite name for King], it has been inferred that Og (22) is but an attempt to represent the same in Hebrew letters (see *Jour. Soc. Lit. Jan. 1821, p. 863); some, but without any probability, would connect the name with the Greek Ογός, (Ewald, Gesch. i, 306; ii, 369); Sept. "D'ye; Joseph. "Dyece, Ant. iv, 5, 8), an Amorimish king of the Israelites under Moses and Joshua. Ogaben (Ex. xix, 23; Deut. i, 4; iii, 9; xxvii, 9; Josh. ii, 10), immediately after the conquest of Sihon, who is represented by Josephus as his friend and ally (Joseph. Ant. iv, 5, 3). His many walled cities were taken (Deut. iii, 4–10), and his kingdom assigned, with its capital Ashtaroth, to the trangibric tribes, especially the half-tribee of Manasseh (Deut. iii, 11–13; Josh. xi, 12–13, 13). See Bashan. In form he was a giant, so that his bedstead was preserved as a memorial of his huge stature (Deut. iii, 11; Josh. xii, 12). See Giant. How it got in "Rabbith of the children of Ammon" we are not told; perhaps the Ammonites had taken it in some victory over Og. The verse itself has the air of a later edition (Dathan), although it is of course possible that the Hebrews may have heard of so curious a relic as this long before they conquered the city where it was treasured. The list was first given as a king of the reign of David (2 Sam. xi, 26); but it does not therefore follow that, Deut. iii, 11 was not written till that time (Havernick, *ad loc*). Some have supposed that this was one of the common flat beds [see Bed] sometimes used on the housetops of Eastern
cities, but made of iron instead of palm-branches, which
would not have supported the giant's weight. It has
been frequently described as a 'basilisk'—a rendering of
which they, however, hardly admit. The Arabs still regard
basilisk as iron, because it is a stone 'ferril coloris atque
duritatis' (Pliny, xxxvi, 11), and 'contains a large per-
centage of iron.' See Iron. It is most abundant in the
sandstone, and is probably the same as the English
name Argo (the stony) given to a part of Og's king-
dom. This receptacle was 9 cubits long and 4 cubits
broad. It does not of course follow that Og was 155 feet
high. Maimonides (More Nebuchim, ii, 48) sensibly re-
marks that a bed (supposing 'a bed' to be intended) is
usually one third longer than the sleeper; and Sir J.
Chardin, as well as other travellers, have observed the
ancient tendency to make mummies and tombs far larger
than the natural size of men, in order to leave an im-
pression of wonder.' The giant stature of Og, and the
power and bravery of his people, excited a dread
which God himself alleviated by his encouragement to
Moses before the battle; and the impression of this vic-
tory lingered long in the national memory (Psa. cxix, 11;
cxxvi, 20). He was one of the last representatives of
the giant-race of Ephraim. According to Eastern tradi-
tions, he is said to have been killed by DELUGE beside the
ark (Sale, Korah, ch. v. p. 86). He was supposed to be the
largest of the sons of Anak, and a descendant of Ad.
He is said to have lived no less than 3000 years, and to
have refused the warnings of Jehro (Shoaib), who was
sent as a prophet to him and his people (D'Herbelot, s. v.
Falahsin, Anak). Solothi wrote a long book about him
and his race, chiefly taken from Rabbinic tradi-
See, too, the Journal Asiatique for 1841, and Chronique
de Tabari, trad. du Persan par Dubenso, 1, 48, f. Other
legends are found in the Bible, and in Mohammedan
writers: as that one of his bones long
served for a bridge over a river; that he roasted at the
sun a fish freshly caught, etc. An apocryphal book of
king Og, which probably contains these and other tra-
ditions, was condemned by pope Gelasius (Decret. vi, 18;

Ogden, Benjamin, a pioneer preacher of the
Methodist Episcopal Church, was born in New Jersey in
1764. In youth he served in the Revolutionary war,
and had great influence over his fellow-soldiers. He
afterward entered upon the study of medicine, but
soon gave it up, and devoted himself to public
work, for Indian tribes, to engage in missionary labors, and
for many years thereafter he penetrated the valley of the
Mississippi in laborious toil, and in spite of many hard-
ships gave the Gospel-f tidings to the much-neglected
Indians. He was greatly comforted and cheered in his
work by the kindly assistance rendered him by Thomas
Stevenson and his wife, those stoutly pioneer workers in
the Southern Methodist field, who organized the first
Methodist Church in Kentucky. In 1788 Ogden located
on account of poor health. He died in 1854. He was
a man of talent, and was deeply imbued with the spirit
of his vocation as a primitive Methodist preacher. See
Stevens, Hist. of the M. E. Church, ii, 360; Redford,
Hist. of Methodism in Kentucky, ii, 388; McFerrin, Hist.
of Methodism in Tennessee, i, 86, 40, 44, 45.

Ogden, John W., a Presbyterian minister, was
born near Barstow, Ky., Dec. 24, 1798. His educa-
tion was obtained under the immediate superintendence
of his father. During the war of 1812 with Great Brit-
ian he was in the army under General Jackson. On
leaving the army he was licensed to preach, and he was
ordained in 1817 as an evangelist. In 1844 he changed
his Church relation by joining the Presbytery of Nash-
villa, and the next year was made a missionary
under a commission from the Board of Domestic Missions.
He continued to labor thus, preaching from
place to place, until called to his rest, April 5, 1858. Mr.
Ogden was a man of large frame and vigorous constitu-
tion, who served his laborers faithfully and zealously.
(J. L. S.)

Ogden, Samuel, D.D., an English divine of note,
was born at Manchester in 1716, and was educated at the
free school there. In 1733 he was admitted to
King's College, Cambridge; and removed to St. John's in
1740, where he took the degree of B.A., and in 1739 was elected fellow. He was ordained deacon at Chester in 1740. In 1741 he took his degree of M.A., and shortly after was ordained to the ministry by the bishop of Lincoln. In 1744 he was elected master of the free school at Halifax, in Yorkshire. In 1753 he resigned the position, and went to reside at Cambridge. The chancellor of the uni-
versity, the duke of Newcastle, who was present at the
exercise Ogden performed for the degree of D.D.,
was so much satisfied with it that he soon after pre-
vented him with the vicariate of Danesham, in Wilt-
shire, which was tenable with his fellowship. In 1764
he was appointed Woodwardian professor at Cambridge
University, and in June, 1756, was presented also with
the rectory of Lawford, in Essex, and in the follow-
ing month with that of Stansfield. During the lat-
ter part of his life Dr. Ogden labored under much ill-
health. About a year before he died he was seized with
a paralytic fit as he was stepping into his coach,
and was judged to be in immediate and extreme
danger. The cheerfulness with which he sustained this
stroke, and the indifference with which he gave the necessary
orders in the event of his dissolution, that seemed
to be then so near, was such as could only be ascribed
to a mind properly resigned to the dispensation of Provi-
dence, and full of the hopes of future happiness. His
death occurred March 24, 1778. He published a
number of Sermons (1768-1777), and after his death,
two additional volumes of sermons, treating of Pray-
er, the Christian Faith, the Ten Commandments, etc.,
were brought out, together with a life of the Doc-
tor, under the editorship of bishop Halifax (1780, 2
vols. cr. 8vo; 5th ed. 1814, 4to). Beckwith says
that these sermons are " terse and forcible, but deficient
in evangelical statement " (Christian Students' Assist-
ant, s. v.).

Ogden, Thomas Spencer, a Presbyterian min-
ister and missionary, was the son of the Rev. Benjamin
Ogden, and was born in Pennington, N. J., in 1828. He
studied for the Univerity in Kentucky, then passed through the
theological course of Princeton. On Aug. 18, 1857, he was ordained in New Brunswick, N. J., as a missionary to Africa; sailed Oct. 6, 1857, for Corisco Island, where he arrived Jan. 14, 1858. He entered upon his work with arbor, but fell ill of fever in June, 1859, and again in March, 1860. Recovering, he re-
sumed his labors, entered on a translation of Luke, and
taught school. Besides his regular duties. He fell at his
post, May 12, 1861. See Wilson, Preb. Hist. Almanac,
1862, p. 114.

Ogden, Usal, D.D., an American divine, was born
at Newark (his authority has it Newton, Sussex Co.),
N. J., about 1744. He studied to become a minister of the
Protestant Episcopal Church, and, having gone to
England, received both deacon's and priest's orders from
the bishop of London, Sept. 21, 1773. Having returned
to this country, he labored as a missionary chiefly in
Sussex County, N. J., but in 1788 finally became rector of
Trinity Parish in Newark. From 1799 to 1805 Dr.
Ogden's relations to the Protestant Episcopal Church
were of a somewhat equivocal character, and a contro-
yversy ensued which resulted in his joining the Presby-
terian body. After this he had no stated character, but
lived the remainder of his life upon the proceeds of his
missionary labors, and on the profits of his two
ministries. He died Nov. 4, 1822. Among his publi-
ations we notice, Letter to the Uncorrected (1768) —
Quirked Ogee (from the Arch of Constantine, Rome).

Ogee Moldings.

Ogel, Pieter John, a Reformed (Dutch) minister of considerable distinction, was born and educated at one of the universities in Holland. After a brief pastorate in his native land, he emigrated to this country in 1856, and settled immediately in the colony of Hol-landers located in Michigan pastoral the Reformed Church at Grand Haven (1856). Thence he removed in 1860 to another flourishing colony of his countrymen at Pella, Iowas, where, after three years of successful service, he was elected to the professorship of sacred literature in Hope College, at Holland, Michigan. He also gave instruction in the theological school in the har-mony of the Gospels, the introduction to the Scriptures, and in pastoral theology. He threw his whole force into his academic duties, and also secured much money from the self-denying Hollanders for the endowment of the institution. He likewise edited a periodical, published in the Dutch language, called De Hoop. He was a cultivated, able, and devoted man, a superior preacher, a thorough and beloved professor, and a conspicuous leader of the ecclesiastical and educational movements of the important colony which was founded by the Rev. Dr. Albertus C. Van Raalte. His early death in No- vember, 1869, was a public calamity. His personal character was amiable and attractive, his pietistic shone clearly through his daily life, and his memory will long be cherished among the founders and builders of the State and the Church in the West. (W. J. R. T.)

Oggione (or Uggione), Marco da, a noted Italian painter, and a distinguished scholar. He was born at Milan about 1490, was born probably about 1470 as his name imports, Oggione, in the Milanese. He painted in oil and in fresco, and is on the whole one of the best of the Milanese painters. His frescoes of the church Della Pace at Milan, which are much praised by Lanzi, are now in the Brera at Milan; they were removed from the wall by Barezzi. Oggiones is, how- ever, now chiefly known for his copy of the Last Sup- per of Leonardo da Vinci, now in the Academy of Arts in London. This copy of the picture, which was painted after the original about 1540 for the refectory of the Certosa di Pa- via; and as it was copied when the original was in a perfect state, the present almost total decay of the latter renders it very valuable. The opinions regarding its merits are various. Oggione made two large copies, both, it is said, from a small copy, made by himself for the purpose—that in oil, in the Royal Academy, and one in fresco for the refectory of the convent of Castel- lazzo, which was copied by the Cav. Giuseppe Bossi, though Bossis picture was taken chiefly from a copy in the Ambrosian Library made by Andrea Bianchi, called Vespignano, in 1612, when the original was already much decayed. There is an older copy at Ponte Capiasche, made in 1565, and attributed to Pietro Luini. Bossis copy was made in 1607 for Eugeine Beauharnais, vicerey of Italy, to be worked in mosaic; the cartoon is now at Munich, and the mosaic is at the Capriana. Both Bossis work, made partly from one copy, partly from another, from studying other works of Da Vinci, and from the artists own feeling of Da Vincis style, is essentially a restora- tion or translation, and not a copy: it may have no re- semblance to the original beyond size and composition; and to the true lover of art can have little value compared with the old unassuming copy of Oggione. Marco da Oggione died in 1580.

Ogilby, John David, D.D., an Episcopal minister in America, was born in Dublin Dec. 30, 1810. He graduated in 1829 at Columbia College, New York, where he evinced distinguished talents, and became the first recipient of the Grammar School. He was engaged in teaching, and contributed as a writer to the advance- ment of classical learning. In 1832 he was professor of languages in Rutgers College. He was ordained in 1838 to the ministry. In 1841 he held the chair of Vates in the General Theological Semi- nary, New York, and adorned his lectures by the brilli- ancy of his genius and the extent of his knowledge. He made three voyages to Europe for his health, and died in Paris Feb. 2, 1851, in the hope of a glorious resurrection. He published many works on the classical languages, particularly Greek, and especially the New Testament. The following are noteworthy of his theological productions: Argument against the Validity of Lay Baptism (1842): —Lectures on the Catholic Church in England and Ameri- ca (1844): besides several Addresses and Sermons, See Sprague, Annals of the Amer. Pulpit, v. 760.

Ogilvie, John (1), D.D., an early Episcopal min-ister in America, was born in New York in 1722, and passed A.B. in Yale College in 1748. Soon after he went on a mission to the Mohawks, and to the Episco- pal Church at Albany; and for more than ten years prosecuted his efforts in behalf of the Indians. On the breaking out of the war with France he became chap- lain to the Royal American Regiment, and in 1764 was appointed assistant minister to Trinity Church, New York. He died Nov. 28, 1774. See Sprague, Annals of the Amer. Pulpit, v. 134.

Ogilvie (or Ogilby), John (2), D.D., F.R.S., a noted Scotch divine and writer, was born in 1733. He studied at the University of Aberdeen. He became pastor of Millar in 1758, and remained at that office until his death, which occurred in 1814. He wrote, Poems on several Subjects (1762, 4to): —Providence, a poem (1764, 4to): —Sermons (1767, 8vo): —Paradise, a poem (1769, 4to): —Philosophical and Critical Observations on Composition (1774, 2 vols, 8vo): —Romance of the Rose (1777, 4to): —An Inquiry into the Causes of Infidelity and Scripture (1783, 8vo): —Thyology of Plato, compared with the Principles of Oriental and Grecian Philosophers.
OGLESBY

Oglesby, Joseph, a pioneer preacher of the Methodist Episcopal Church, who flourished near the opening of this century, was appointed a missionary in Illinois in 1804. He was the first Methodist who ever preached in that part of the country. He travelled over the vast territory, as it was at that time, to the extreme settlements, and was always greeted with pleasure by the pioneer settlers. See Stevens, Hist. of the M. E. Church, iv, 358.

Ogoa, a name applied to Zeus by the Carians at Mysia, in whose temple a sea-wave was occasionally seen. The Athenians alleged the same thing in regard to their own citadel.

O'Gorman, James, D.D., a prelate of the Roman Catholic Church in America, of whose early history we are uninformed, flourished in recent times as vicar-apostolical of Nebraska, the territories of Montana and Wyoming, and part of Dakota, to which he was appointed May 8, 1859, having been previously consecrated bishop of Raphanea, a nominal see. He died in Cincinnati July 5, 1874. His loss was very generally felt by the Roman Catholics in the United States, by whom he was highly esteemed.

O'had (Heb. id. דַּוָּאָה, poser, Sept. 'הָאָדָא v. r. 'הָאָדָא'), the third named of the six sons of Simeon, and head of a family in Israel (Gen. xlii, 10; Exod. vi, 15). B.C. cir. 1870. His name is omitted from the lists in 1 Chron. iv, 24, N. a. m. xxvi, 14, though in the former passage the Syriac has Okar.

Ohaloth. See Talmud.

O'heil (Heb. id. דַּוָּאָה), a tent, as very often; Sept. 'הָאָדָא v. r. 'הָאָדָא'), the fifth named of the seven children of Zerubbabel, of the tribe of Judah and house of David (1 Chron. iii, 20). B.C. post 600. See Strong's Harmony and Exposition, p. 17.

Omhacht. Landklin, an eminent German sculptor, was born at Dunningen, near Rottweil, in Wurttemberg, in 1760. He studied under J. P. Melchior, and during his earlier years executed a good bust of Lavater, and several sculptures for the Kreuzkirche at Rottweil. In 1782 this professor of improvement, and Omhacht remained two years in that city, studying and copying the antique and the works of the great masters. On returning to Germany he soon gained reputation, and was employed on several important monumental works. His abilities were highly esteemed by the celebrated sculptor David, who is reported to have said that Omhacht was the Correggio of sculpture, and that his works could not be sufficiently admired. He executed four monuments in the church of St. Thomas, of which that of Prof. Oberlin is greatly admired. Omhacht was an intimate friend of Klopstock, and executed several busts of that celebrated poet. Among his classical sculptures are the statues of Hebe, Flora, Venus, Psyche, and the Judgment of Paris. The latter work is at Nymphenburg. Omhacht practiced the art at Strasburg for many years, and died there in 1824.

Oconomos (Greek, ὄκονομος) was the name in the early Church of persons appointed by the bishop and archdeacon to assist in managing the possessions of the Church. This became in the Middle Ages an office of great influence, and was in a good degree independent of the bishop. The office was originally created to check the inattractive cupidity of the bishops, and to restrain their independent control of the revenues of the Church. But they soon found means to defeat this salutary expedient by taking the appointment of such officers into their own hands, and thus securing the men who were in their interests. See Coleman, Ap. Christianity, p. 188. See Oconomos.

Oiconomos, Constantius, a learned Greek priest and writer of note, was born in Thessaly in 1770. He taught Greek at Smyrna for ten years, and afterwards preached at St. Petersburg and at Athens. He died in 1842. He wrote on matters of language, and De la Version des Septante (1843–50, 4 vols.).

Oikoi Basilieoi (οἱκοὶ βασιλείων, royal houses), a term applied in the early Church to the houses allotted to the bishops and clergy for their residences, corresponding, therefore, in a large measure to our parsonage (q. v.). The οἱκοὶ βασιλείων were always adjacent to the churches.

Oil, liquid fat, but chiefly vegetable, was far more extensively used among the ancient Hebrews for a variety of purposes than in Occidental and Northern climates. In the following account we follow largely the ancient information with modern illustrations. See BUTERS; FAT; OIL.

Oil. The following are the words so rendered in the A.V.:

1. Usually דַּוָּא, she'men, prop. pressed juice (Sept. דָּוָּא, Vulg. oleum), from דַּוָּא, to become fat (Gen. Thea. p. 1487); sometimes joined with מַדָּא (דָּוָּא מַדָּא, oleum de oleatis), distinguishing olive-juice from oil produced from other sources. Also sometimes in A.V. "ointment" (Celsius, Hierob. ii, 279).

2. Yetzah, יָטָשָׁה, (nurag, דָּוָּא, oleum), from יָטָשָׁה, to smite, p. 1190; clear olive-oil (Num. xxvii, 12; Lev. ix, 14; xi, 17; xiv, 28; xxii, 4; xxvi, 51; 2 Kings xviii, 32; 2 Chron. xxxii, 5; xxxiv, 38; Neh. xii, 11; xii, 37, 39; xiii, 6; 1 Jer. xxxi, 12; Hos. ii, 22, 31; Joel ii, 3, 10, 19, 24; Hag. i, 11; Zech. iv, 14).

3. Chalid, יָטָשָׁה, mashackh (דָּוָּא, oleum), on unguent (Gen. Exod. vi, 13; 2 Kings vii, 22).

Manufacture.—Of the different substances, animal and vegetable, which were known to the ancients as yielding oil, the olive-berry is one of the most frequent mention is made in the Scriptures. The numerous olive-plantations in Palestine made olive-oil one of the chief, and one of the most lucrative products of the country: it supplied an article of extensive and profitable traffic with the Tyrians (Ezek. xxxvii, 17; comp. 1 Kings v, 11); and presents of the finer sorts of olive-oil were deemed suitable for kings. There is, in fact, no other kind of oil distinctly mentioned in Scripture: and the best, middling, and inferior oils appear to have been merely different qualities of olive-oil. It is well known that both the quality and the value of oil diferen according to the time of gathering the fruit, and the amount of pressure used in the course of preparation. These processes, which do not essentially differ from the modern, are described minutely by the Roman writers on agriculture, and with their descriptions the few notices occurring both in Scripture and the Rabbinnical writings which throw light on the ancient Oriental method nearly correspond. Of these descriptions the following may be taken as an abstract: The best oil is made from fruit gathered before November or December, when it has begun to change color, but before it has become black. The berry in the more advanced state yields more oil, but of inferior quality. Oil was also made from unripe fruit by a special process as early as September or October, while the harder sorts of fruit were sometimes delayed till February or March (Virg. Georg. ii, 519, Palladianis, R. r. xii, 4; Columella, R. r. xii, 47, 50; Cato, R. r. p. 65; Pliny, N. h. xvi, 1–8; Varro, R. r. i, 65; Hor. 2 Sat. ii, 46). See OIL.

Of the substances which yield oil, besides the olive-tree, myrrh is the only one specially mentioned in Scripture. Oil of myrrh is the juice which exudes from the tree Balsamodendron Myrrha, but olive-oil
was an ingredient in many compounds which passed under the general name of oil (Eshth. il, 12; comp. Celsus, n. a. iii, 10, 18, 19; Flinny, xii, 26; xiii, 12; xv, 7; Wilkinson, Orig. i, 35; Balfour, Plants of Bible, p. 52). See MYRTH.

1. Harvesting the Oil-crop.—Great care is necessary in gathering the olive not to injure either the fruit itself or the boughs of the tree, and with this view it was either gathered with a hand, or shaken off carefully with a light reed or stick. The "boughing" of Deut. xxv, 29 ("σηκούν") probably corresponds to the "shaking" (ἐκσηκων) of Isa. xvii, 6; xxiv, 13, i.e. a subsequent beating for the use of the poor (see Mishna, Shebith, iv, 2; Peak, vii, 8). After gathering and careful cleansing, the fruit was either carried at once to the press, which is recommended as the best course, or, if necessary, laid on tables with holly oil, and left in the first juice (αμαρουνα) to flow into other recepctacles beneath, care being taken not to heap the fruit too much and so prevent the free escape of the juice, which is injurious to the oil, though itself useful in other ways (Colum. u. xii, 50; Aug. Cir. Deli, i, 6, 2). If while the berries were yet green, instead of being thrown into the press, they were often beaten or squeezed, they yielded the best kind of oil. It was called opacuminum, or the oil of unripe olives.

2. Pressing.—In order, however, to make oil in general, the fruit must be either bruised with a press loaded with wood or stones, ground in a mill, or trodden with the feet. Special buildings used for grape-pressing were used also for the purpose of olive-pressing, and contained both the press and the receptacle for the pressed juice. Of these processes, the one least expeditious was the last (treasing), which perhaps answers to the "canalis et sola" mentioned by Columella, and was probably the one usually adopted by the poor. The "beaten" oil of Exod. xxvii, 20; Lev. xxiv, 2; Exod. xxix, 40, and Numb. xxviii, 5, probably was made by bruising in a mortar. There were presses of a peculiar kind prepared for olive oil made out of wood, one end of which the name Gethemane, or "oil-press," Matt. xxi, 36; John xviii, 1), in which the oil was trodden out by the feet (Mic. vi, 15). See GETHEMANE. The first expression of the oil was better than the second, and the second than the third. Ripe olives yielded the least valuable kind of oil, but the quantity was more abundant. The oil was extracted with the machine for pressing, are mentioned in the Mishna. Oilmills are often made of stone, and turned by hand. Others consist of cylinders enclosing a beam, which is turned by a camel or other animal. An Egyptian olive-press is of a peculiar design, the whole idea was, to use as much force as was exerted on the fruit is given by means of weights of wood and stone placed in a sort of box above. Beside this, the above-sited Scripture references, the following passages mention either the places, the processes, or the machines used in olive-pressing (Joel ii, 24; iii, 18; Is. liii, 5; Lam. i, 15; Hag. ii, 16; comp. the Talmud, Menach. viii, 4; Shebith, iv, 9; vii, 6; Terum. x, 7; Shabb. i, 9; Baba Bathra, iv, 5; Vitruvius, x, 1; Cato, R. & P. p. 307; Celsius, Hierob. ii, 346, 350; Niebuhr, Vog. 122, pl. vii: Arundel, Asia Minor, ii, 196; Wallis, The Oriental Press.

3. Keeping.—Both olives and oil were preserved in jars carefully cleansed; and oil was drawn out for use in horns or other small vessels. See CRESSE. These vessels for keeping oil were stored in cellars or storehouses; special mention of such repositories is made in the instructions of Josephus. We know of one oilpress for the store of the Jewish kings (2 Kings xx, 13; comp. 2 Chron. xxviii, 28). VII—11

Oil of Tekoa was reckoned the best (Mamch. viii, 8). Trade in oil was carried on with the Tyrians, by whom it was probably made, and with Egypt, which imported such oil for more than half of the whole of the Prophets. 

Oil to the amount of 20,000 baths (2 Chron. ii, 10; Joseph. Ant. vii, 2, 9), or 20 measures (oera, 1 Kings v, 11), was among the supplies furnished by Solomon to Hiram. Direct trade in oil was carried on with Egypt, which supplied Palestine (1 Kings v, 11; 2 Chron. ii, 10, 15; Egypt iii, 7; Isa. xxx, 6; livi, 9; Ezek. xxvii, 17; Hos. xxi, i; comp. Jerome, Com. in Omn. i, 12; Joseph. Ant. viii, 2, 9. War, ii, 21; Strabo, xvii, p. 809; Flinny, xv, 4, 13; Wilkinson, Anc. Eg. ii, 28, sm. ed.; Hasselquist, Trans. p. 53, 117). See OIL-COMBUSTIBLES.

III. USE.—Beside the consumption of olives themselves as food, common to all olive-producing countries (Horne, 1 Od. xxxi, 15; Martial, xiii, 86; Arrius, Tran. p. 209; Teramoth, i, 9, ii, 6), the principal uses of olive-oil may be thus stated: 1. As food.—The use of oil is general throughout Western Asia at the present time, as it was in primitive ages. Oil was much used instead of butter and animal fat at meals and in various preparations of food (comp. Ezek. xvi, 13). See FOOM. In such uses of oil, when fresh and pure, is the best. The Orientals think so, and Europeans soon acquire the same preference. The Hebrews must have reckoned oil one of the prime necessities of life (Siriach, xxxix, 31; comp. Jer. xxxix, 12; xili, 8; Luke vii, 6 sq.), and it is often mentioned in connection with honey (Ezek. xvi, 19, 19; xxx, 7), and its abundance is spoken of as a sign of prosperity (comp. Joel iv, 19). Dried wheat, boiled with either butter or oil, but more commonly the former, is a common dish for all classes in Syria. Hasselquist speaks of bread baked in oil as being particularly sustaining; and Faber, in his Pigrimage, mentions eggs cooked in oil as Saracen and Arabian dishes (comp. Jerome, Vit. S. Hilari, ch. xi, vol. ii, p. 32; Ibn-Batuta, Tran. p. 60, ed. Lee; Volney, Tran. i, 362, 406; Russell, Aleppo, i, 80, 119; Harmer, Obs. i, 471, 474; Shaw, Tran. p. 252; Bertrand de la Broquière, Early Tran. p. 382; Burchahnt, Tran. in Arab. i, 54; Notes on Bed, i, 50; Arrius, L. c.; Chardin, Vog. iv, 84; Niebuhr, Vog. ii, 302; Hasselquist, Tran. p. 182; Faber, Eclogatorum, i, 197; ii, 755, 415). It was probably on account of the common use of oil in food that the "meat-offerings" prescribed by the Law were offered in oil, and the "bread of election" was so frequently made with oil (Lev. ii, 14, 15; 26, 31; Numb. vii, 19 sq.; Deut. xii, 17; xxxii, 13; 1 Kings xvii, 12, 15; 1 Chron. xii, 40; Ezra, xvi, 19). This was certainly not for the purpose of aiding the burning of the sacrifices; nor is it likely that any symbolism was intended. The use of oil was a sign of prosperity, and the rite of sprinkling with oil, as a libation, does not occur in the Law, but seems to be alluded to in Micah vi, 7. See OILING.

2. Cosmetic.—As is the case generally in hot climates, oil was used by the Jews for anointing the body, e.g. after the bath, and giving to skin and hair a smooth and comely appearance, e.g. before an entertainment. Whether for luxury or ceremonial, the head and beard were the parts usually anointed (Deut. xxviii, 40; 2 Sam. xiv, 2; Psa. xxiii, 5; xiii, 11; cirv. 15; Luke vii, 46); and this use of oil, which was especially frequent at baptism, became so frequent among the Jews as to become a name common among the Israelites (Prov. xxxi, 17; comp. Catull. vi, 8; Curt. ix, 7, 20). To be deprived of the use of oil was thus a serious privation, assuming voluntarily in the time of mourning or of calamity (Ruth iii, 8; 2 Sam. xix, 20; David, xxv, 16, 17; 1 Kings xx, 1; 2 Chron. xxviii, 29). At Egyptian entertainments it was usual for a servant to anoint each of his guests as he took his seat. Strabo mentions the Egyptian use of castor-oil for this purpose (xxviii, 824). The Greek and Roman usage will be found mentioned in the following passages: Homer, Il. x, 577; xvii, 598; xxvii, 281; Od. iv, 10, vi, 96; vi, 364; Horace, 3 Od. xii, 6; 1 Sot. vi, 123; 2 Sot. i, 221.
The offering of “beaten oil” with flour, which accompanied the daily sacrifice (Exod. xxix, 40).

iii. The leper’s purification offering (Lev. xiv, 10–18, 21, 24, 28), where it is to be observed that the quantity of oil (1 log = .883 of a pint) was invariable, while the other objects varied in quantity according to the means of the person offering. The cleansed leper was also to be anointed with oil on various parts of his body (Lev. xiv, 15–18).

iv. The Nazarite, on completion of his vow, was to offer unleavened bread anointed with oil, and cakes of fine bread mingled with oil (Numb. vi, 15).

v. After the erection of the Tabernacle, the offerings of the “princes” included flour mingled with oil (Numb. vii, 6).

vi. At the consecration of the Levites, fine flour mingled with oil was offered (Numb. vii, 8).

vii. Meat-offerings in general were mingled or anointed with oil (Lev. vii, 10, 12).

On the other hand, certain offerings were to be devoted of oil; the sin-offering (Lev. vi, 11) and the offering of jealousy (Numb. vi, 15).

The principle on which both the presence and the absence of oil were prescribed is, clearly, that as oil is inferred to have exerted an external influence, as well as spiritually, on the person to whom it was applied, it was used as a medium of transmission of the divine will. Moreover, as oil may be taken to symbolize the spirit of the holy and the sanctification of the people. The oil was thus used in all the religious services of the Jewish people, and it was also used for medical purposes. The priests and Levites were anointed with oil, and the oil was used for anointing the young children of Israel (Exod. xix, 27). The priestly garments were also anointed with oil (Exod. xxix, 33). In the Mishnah various limitations are laid down; but they are of little importance except as illustrating the processes to which the olive-bery was subjected in the production of oil, and the degrees of estimation in which their results were held.

b. Kings, priests, and prophets were anointed with oil or ointment. See ANOINT.

7. As so important a necessity of life, the Jew was required (a) to include oil among his first-fruit offerings (Exek. xxii, 29; xxiii, 16; Numb. xviii, 12; Deut. xviii, 4; 2 Chron. xxxi, 5; 2 Chron. xxxiv, 3). In the Mishnah various limitations are laid down; but they are of little importance except as illustrating the processes to which the olive-bery was subjected in the production of oil, and the degrees of estimation in which their results were held.

b. Tithes of oil were also required (Deut. xxi, 17; 2 Chron. xxx, 6; Neh. x, 37, 39; xiii, 12; Ezek. xlv, 14).

b. Shields, if covered with hide, were anointed with oil or grease previous to use. Shields of metal were perhaps rubbed over in like manner to polish them. See TITHE.

b. Oil was used in the anointing of the young children of Israel (Exod. xix, 27). The priestly garments were also anointed with oil (Exod. xxix, 33). In the Mishnah various limitations are laid down; but they are of little importance except as illustrating the processes to which the olive-bery was subjected in the production of oil, and the degrees of estimation in which their results were held.

7. As so important a necessity of life, the Jew was required (a) to include oil among his first-fruit offerings (Exek. xxii, 29; xxiii, 16; Numb. xviii, 12; Deut. xviii, 4; 2 Chron. xxxi, 5; 2 Chron. xxxiv, 3). In the Mishnah various limitations are laid down; but they are of little importance except as illustrating the processes to which the olive-bery was subjected in the production of oil, and the degrees of estimation in which their results were held.

b. Tithes of oil were also required (Deut. xxi, 17; 2 Chron. xxx, 6; Neh. x, 37, 39; xiii, 12; Ezek. xlv, 14).

b. Shields, if covered with hide, were anointed with oil or grease previous to use. Shields of metal were perhaps rubbed over in like manner to polish them. See TITHE.

Oil-press. No specific name for this occurs in the Bible, except in the name Getsemane (q. v.); but the machine must have been of common use among the Hebrews, and remains of them are still of frequent occurrence in Palestine (see Thomson, Land and Book, i, 307). The upright posts stand in pairs about two feet apart, having a deep groove in the inner faces, running from top to bottom. On the top of the olive "cheeses," forced down by a beam, as a lever, acting against the huge stone on the top of the columns. There is also traceable the stone trough into which the oil ran, and close by are immense basins in which the olives were ground to a pulp by a stone wheel that was rolled over them. Other basins, smaller and more concave, may have served for treading out the olives with the feet (Mic. vi, 15), a process now never employed in Palestine. See MILL. The modern machine for oil-making are thus described by Thomson (Land and Book, 1, 289): 'The māṣeḵrakh is worked by hand, and is only used for the olives which fall first in autumn, before the rains of winter raise the brooks which drive the māṣeḵrakh. The olives for the māṣeḵrakh are ground to a pulp in circular stone basins by rolling a large stone wheel over them. The mass is then put into small baskets of straw-work, which are placed one upon another, between two upright posts, and pressed by a screw which moves in the beam or entablature from above, like the screw in the standing-press of a bookbinder, or else by a beam-lever. After this first pressing the pulp is taken out of the baskets, put into large copper pans, and, being sprinkled with water, is heated over a fire, and again pressed as before. This finishes the process, and the oil is put away in jars to use, or in cisterns, to be kept for future market. The māṣeḵrakh is driven like an ordinary mill, except that the apparatus for beating up the olives is an upright cylinder, with iron cross-bars at the lower end. This cylinder turns rapidly in a hollow tube of stone-work, into which the olives are thrown from above, and beaten to a pulp by the revolving cross-bars. The interior of the tube is kept hot, so that the mass is taken out below sufficiently heated to cause the oil to run freely. The same baskets are used as in the māṣeḵrakh, but the press is a beam-lever, with heavy weights at the end. This process is repeated a second time, as in the māṣeḵrakh, and then the refuse is thrown away.' He adds, 'Beam-presses are also employed in the māṣeḵrakh, for the matter of screws is quite modern. No process is employed for clarifying the oil, except to let it gradually settle on the lees in the cisterns or large jars in which it is kept. Certain villages are celebrated all over the country for producing oil particularly clear and sweet, and it commands a high price for table use;' Beriah, for example, above Nabi Yūnus, also Deir Mīmās in the Meḥ Aḥ, and at

Remains of ancient Oil Mills and Presses.
Treh on Carmel; but the process is there very different. The olives are first mashed as in the mūṣāf, and then stirred rapidly in a large kettle of hot water. The oil is then separated, and rises to the top, when it is skimmed off without pressing. The refuse is then thrown into vats of cold water, and an inferior oil is gathered from the surface, which is only fit for making soap. See OIL.

Oil-tree (יוֹלָה יָרְבָּן; Sept. ἔλαιον ἀργυροῦ, ἠδρανήν ἐλαῖον, from līmūn līmi pulcherrīmī; A. V. "oil-tree" in Isa. xli. 20, but in 1 Kings xi. 23, "olive-tree," and in Neh. xiii. 15, "pine-branches"). From the passage in Nehemiah, where it is mentioned as distinct from the אֲדַרֶ֣ד or "olive-tree," writers have sought to identify it with the Elaeagnus angustifolia, Linn., sometimes called "the wild olive-tree," or "narrow-leaved oleaster," on the supposition that this is the zuckum-tree of the Arabs. But Dr. Hooker has shown that the properties and characteristics of the elaeagnus do not accord with what travellers have related of the famed zuckum-tree of Palestine, and that the latter is the Balanites Aegyptiacus, a well-known and abundant shrub or small tree in the plain of Jordan. It is found all the way from the peninsula of India and the Ganges to Syria, Abyssinia, and the Niger. The zuckum-oil is held in high repute by the Arabs for its medicinal properties. It is said to be very valuable against wounds and contusions. Comp. Maundrell (Journ. p. 86) and Robinson (Bib. Res. i. 500). See also BALSAM. Celsius (Hierob. i. 809) understood by the Hebrew words any "fat or resonant tree;" but the passage in Nehemiah clearly points to some specific tree.

Several other trees have been added, as the different kinds of pine, including the cedar of Lebanon, the cypress, the citrus, the balsam-tree; but there is no special proof in favor of any of these. In the passage in Isaiah the tree in question is mentioned in distinction from the pine; but it is possible that the latter word does not correctly represent the פֶּתַע. Dr. Post, in

Stone-Pine Trees near Beirut.

the Amer. ed. of Smith's Dict. of the Bible, objects to the zuckum-tree that it is too small to furnish wood for carved figures, as required by the passage in Kings, or to be classed with the other magnificent trees mentioned in the passage in Isaiah; and that it is only found in the plain of the Jordan, whereas the tree in question is spoken of in the passage in Nehemiah as growing on the mountains. He therefore proposes the "stone-pine" of Palestine, or Pinus pinea, called mīrkhā of the Arabs, as fulfilling the required conditions. Dr. Thomson, however, who describes this latter tree, expressly says, "It is not found on the mountains of Palestine, because that peculiar sandy formation [required for its growth] is not found there" (Land and Book, ii. 265). See PINE.

Oinomania. See EXONOMIA.

Ointment. See CONJONCTION.

Ointment is the representative in the Bible of the following words in the original: 1. פֶּתַע, she'men (so rendered in 2 Kings xx, 13; Psa. cxiii, 2; Prov. xxvii, 16; Eccles. vii, 1; Is. 8, 1; Cant. 3, 14, 10; Isa. 1, 6; xxxix, 2; Ivvi, 9; Amos vi, 6; "anointing," Isa. x, 27), probably oil (as elsewhere rendered, except "olive") in 1 Kings vii, 2; 31, 32, 38, "pine" in Neh. viii, 15; "fatness" in Psa. cix, 24; "fat things" in Isa. xxxv, 6; "fat" in Is. xxviii, 1, 4; "fruitful" in Isa. v, 1). 2. מִשׁכָּד, mishchād (in Exod. xxx, 25), properly anointing (as elsewhere rendered). 3. Usually and distinctively some form of the root פֶּתַע, denoting perfumes; either the simpler noun פֶּתַע, rōkhak (Exod. xxx, 25), an odorous compound ("confection," Exod. xxx, 85); or the concrete פֶּתַע, mīrkhā'ath (1 Chron. ix, 80; "con-
OINTMENT

pound," Exod. xxx, 25; "prepared by the apothecaries' art"; Conn. xvi, 14; "nokchuka" ("pot of ointment"); Job xii, 31; "well" spiced, Ezek. xxiv, 10; plural, "sweet flowers", Cant. vi, 13, which probably signify the vessel in which perfumery was prepared. Cog- nate is פִּנְחָל, something rubbed in ("things for purifying"); Esth. ii, 12. 3. In the Apocrypha and N.T. παποῦμεν, πολύρρηθον (invariably rendered "ointments"). In the following sketch we follow the ancient information with modern additions. See this.

The ointments and oils used by the Israelites were rarely simple, but were composed of various ingredients (Job xii, 22; comp. Pliny, Hist. Nat. xiii, 8). Olive-oil, the valued product of Palestine (Deut. xxvii, 8; Mic. vii, 18), was combined with sundry aromatics, chiefly foreign (1 Kings x, 10; Ezek. xxvii, 22), particularly spices, myrrh, and nard [see these words]. Such ointments were for the most part costly (Amos vi, 6), and formed a much-coveted luxury. The ingredients, and often the prepared oils and resins in a state fit for use, were obtained chiefly in traffic from the Phen- nicans, who imported them in small alabaster boxes, in which the delicious aroma was best preserved. A de- scription of the more costly unguitas is given by Pliny (Hist. Nat. xiii, 2). The preparation of these required peculiar skill, and therefore formed a particular profession. The מְדַמָּה, rokechim, of Exod. xxx, 25, 29; Neh. iii, 7; (Deut. xxxii, 12) "ointments" of Pliny, a (about 5 quarts, or 330- courtey occasionally was not no other as a maker of perfumers. The work was sometimes carried on by women "confection- aries" (1 Sam. viii, 13). So strong were the better kinds of ointments, and so perfectly were the different component substances amalgamated, that they have been known to retain their scent several hundred years.

The alabaster vases in the museum at Alnwick Castle contains some of the ancient Egyptian ointment, between two and three thousand years old, and yet its odor remains (Wilkinson, Anc. Egyptiania, ii, 514). See AlABASTR. The practice of producing an agreeable odor by fumigation, or burning incense, as well as that of anointing the person with odoriferous oils and ointments, and of sprinkling the dress with fragrant waters, originated in, and is confined to, warm climates. In such climates per- spiration is profuse, and much care is needful to prevent the effects of it from being offensive. It is in this necessity we may find the reason for the use of perfumes, particularly at weddings and feasts, and on visits to persons of rank; and in fact on most of the occasions which bring people together with the intention of being agree- able. See OUTFIT.

The following are the uses of ointments referred to in the Scriptures.

1. Cosmetic.—The Greek and Roman practice of anoint- ing the head and clothes on festive occasions prevailed also among the Egyptians, and appears to have had place among the Jews (Ruth iii, 3; Eccl. vii, i, ix, 8; Prov. xxvii, 9, 16; Cant. i, 3; iv, 10; Amos vi, 6; Ps. xiv, 7; Isa. liii, 7; Matt. xxvi, 7; Luke vii, 40; Rev. xviii, 13; Yoma, viii, i; Shabb. ix, 4; Plato, Symp. i, 6; p. 159; see authorities in Hofmann, Lec. s. v. Unguendi riotus). Oil of myrrh, for like purposes, is mentioned in Esth. ii, 12. Strabo says that the inhabitants of Mesopotamia use oil of sesame, and the Egyptians castor-oil (κηθία), both for burning, and the younger classes for anoint- ing the body. Chardin and other travellers confirm this, and regret the Persians, and show that they made little use of castor-oil, but used it sparingly among them oil of sesame and castor-oil. Chardin also describes the Indian and Persian custom of presenting perfumes to guests at banquets (Strabo, xvi, 746; xvii, 924; Chardin, Voy. iv, 45, 84, 86; Marco Polo, Trav. (Eng. Transl.), ii, 455). Indian paintings represent servants anointing guests on their arrival at their entertainers' house, and alabaster vases exist which retain the traces of the ointment which they formerly contained. Athenæus speaks of the extravagance of Antiochus Epiphanes in the use of ointments for guests, as well as of ointments of various kinds (Wilkinson, Anc. Eg., i, 78, pl. 89; i, 157; Athe- næus, x, 53; xv, 41). See Anoint.

2. Funeral.—Ointments as well as oil were used to anoint dead bodies and the clothes in which they were wrapped. Our Lord thus spoke of his own body being wrapped by anticipation (Matt. xxvi, 12; Mark iv, 3, 8; Luke xxiii, 56; John xii, 37, 7; xix, 40; see also Plu- tarch, Consol. p. 611; viii, 415, ed. Reiske). See Burial.

3. Medical.—An important use was made of oil in ancient medical treatment (Celsus, De Med. iii, 19; v, 27; Pliny, xxiv, 10; xix, 8, 9). The prophet Isaiah alludes to this in a figure of speech; and our Lord, in his cure of a blind man, adopted as the outward sign one which represented the usual method of cure. The men- tion of oil of gilland as a collyrium point to the same method (Isa. i, 6; John ix, i; Jer. viii, 22; xivii, 11; ii, 7; Rev. iii, 18; Tob. vi, 8; xi, 3, 13; Tertull. De Idololatr. 11). See Medicine.

4. Ritual.—Besides the oil used in many ceremonial observances, a special ointment for anointing the body was used in consecration (Exod. xxx, 30; xxxi, 2; xxxix, 7; xxvii, 29; xi, 9, 15). It was first compounded by Bezaelel, and its ingredients and proportions are precisely specified: viz.: pure myrrh and casia 500 shekels (250 ounces) each; sweet cinnamon and sweet calamus 250 shekels (125 ounces) each; these of olive-oil 1500 pounds (about 5 quarts, or 330-96 cubic inches). These were to be compounded according to the art of the apothecary into an oil of holy ointment (Exod. xxx, 25). It was to be used for anointing—1, the Tabernacle itself; 2, the table and its vessels; 3, the candlestick and its furniture; 4, the altar of incense; 5, the altar of burnt-offering and its vessels; 6, the laver and its foot; 7, Aaron and his sons. Strict prohibition was issued against using this unguent for any secular purpose, or on the person of a foreigner, and against imitating it in any way whatsoever (Exod. xxx, 32, 33). The composition was thus preserved as a secret, but was publicly declared to be such by a public warning to make any like it. Maimonides says that doubtless the cause of this prohibition was that there might be no such perfume found elsewhere, and consequently that a greater attachment might be induced to the sanctuary; and also to prevent the great evils which might arise from men esteeming themselves more excellent than others, if allowed to anoint themselves with a similar oil (More Nebobias, ch. xx). The reasons for attaching such distinction to objects consecrated by their holy ap- propriations are too obvious to need much elucidation. These ingredients, exclusive of the oil, must have amounted in weight to about 47 lbs. 8 oz. Now olive- oil weighs at the rate of 10 lbs. to the gallon. The weight therefore of the oil in the mixture would be 12 lbs. 8 oz. English. A question arises, in what form were the other ingredients, and what degree of solidity did the whole attain? Myrrh, "pure" (dādrō), free-flowing (Gesen. Thes. p. 356), would seem to imply the juice which flows from the tree at the first inception, perhaps the "odorata sudantia ligno balsamae" (Georg. ii, 118), which Pliny says is called "stacte," and is the best (xii, 20), myrrh in its purest state (by Celsius, p. 146; and Knobel on Exodus, l. c.). This juice, which at its first flow is soft and oily, becomes harder on exposure to the air. According to Maimonides, Moses (not Bezaelel), having reduced the solid ingredients to powder, steeped them in water till all the aromatic qualities were evaporated. They were then thrown into the oil, and boiled the whole till the water was evaporated. The residuum thus obtained was preserved in a vessel for use (Otho, Lex. Robb. s. v. Oleum). This account is perhaps favored by the expression "powders of the merchant," in reference to genuine "myrrh," dead bodies and the like. De Trévoux, p. 724. Another theory supposes all the ingredients to have been in the form of oil or ointment, and the measurement by weight of all except the oil seems to imply that they
were in some solid form, but whether in an unctuous state or in that of powder cannot be ascertained. A process of making ointment, consisting, in part at least, in boiling, is alluded to in Job xii, 31. The charge of preserving the anointing oil, as well as the oil for the lights, was given to the high priest. It is not quite clear what ointment was made in the first instance seems to imply that it was intended to last a long time. The Rabbinitical writers say that it lasted 900 years, i.e. till the captivity, because it was said, "Ye shall not make any like it" (Exod. xxx, 29); but it seems clear from 1 Chron. ix, 90 that the ointment was renewed from time to time (Chevi-uth, 1, 1). The prodigious quantity of this holy ointment made on the occasion which the text describes, being no less than 750 ounces of solids compounded with five quarts of oil, may give some idea of the profuse use of perfumes among the Hebrews. The ointment with which Aaron was anointed is said to have flowed down over his garments (Exod. xxix, 21; Psa. cxxviii, 22; "skirts," in the latter passage, is literally "mouth," i.e. the opening of the robe at the neck; Exod. xxxvii, 32). This circumstance may give some interest to the following allusions to Aaron, his son, Eleazar, and Ithamar, in Psalms cxix, 1-9, and Lamentations iv, 8, 9 (Lange's). After remarking how prodigal the eastern females are of perfumes, he gives this instance:

"I remember that, at the solemnization of the nuptials of one of my acquaintance, they brought forth the oil of David, which they poured over her head in a bowl, and then sat down and ate a large quantity of oil."

See OINTMENT.

Kings, and also in several prophetic works, were, as well as priests, anointed with oil or ointment; but Scripture only mentions the fact as actually taking place in the case of Saul, David, Solomon, Jeob, and Josiah. The Rabbis say that Saul, Jeho, and Josiah were only anointed with common oil, while for David and Solomon the holy oil was used (1 Sam. x, 1; xv, 1, 13; 1 Kings i, 39; 2 Kings ix, 1, 3, 6; xii, 12; Godwyn, "Moses and Aaron," i, 4; Carpzov, "Apparatus," p. 66, 57; Moffatt, "Easton's Bible Dictionary," under "Anointing," in "The Interpreter," 1834). It is evident that the sacred oil was used in the case of Solomon, and probably in the cases of Saul and David. In the case of Saul (1 Sam. x, 1) the article is used, "the oil;" as it is also in the case of Jeho (2 Kings ix, 1); and it seems unlikely that the anointing of Jeob, as well as of the high-priest, should have been defective in this respect. See CONSECRATION.

In the Christian Church the ancient usage of anointing the bodies of the dead was long retained, as is noticed by the other writers quoted. At the consecration of Suicr, s.v. Σαιων. The ceremony of chrism or anointing was also added to baptism. See authorities quoted by Suicr, l.c., and under Βαπτισμα and Χρωμα. See CHRIHM; UNCTION.

Oiot, a great god among the Indians of California.

Oisel, Philip, a German Protestant minister, was born at Danzig in 1671. He was an excellent Hebrew scholar, and published several theological works. He died at Frankfurt-on-the-Oder in 1734.

O'Kelly, James, one of the most noted of American Methodist pioneer preachers, and the father of the first schism among them, was born about 1757. He was converted while yet a youth, shortly after joined the Methodists, and was licensed as a local preacher. He began his ministry in an old colonial church in the southern part of Virginia about the middle of the Revolutionary war. One writer, noticing this early work of O'Kelly's, says: "The people flocked to hear him, and great was the work of God under his powerful exhortations and example. In 1777 he is said to have travelled over 600 miles a month in travelling connection, and he soon took a prominent position among the Methodist preachers of Virginia. He was a warm-hearted Christian and a zealous preacher— he would rise at midnight and pour out his soul in prayer, crying, "Give me children, or I die." He was ordained elder at a meeting of the Church in 1784. For several years afterwards he filled high stations in the Church—acting as elder at the head of the South Virginia District: there he was useful, and had much influence. One of O'Kelly's contemporaries describes him as "an able defender of the Methodist doctrine and faith, and hard against negro slavery in private and from the press and pulpit." He was a member of the first council that met in 1789. In 1790 he addressed a letter to Mr. Asbury, with whom he had been acquainted since 1780, complaining of his power, and bidding him halt in his episcopal career for one year, lest he should have to use his influence against him. As this appeal was ignored, Mr. O'Kelly moved in the Connexion, and completely depopulated that part of the Connexion surrounded by scenes of the bishop he should have the privilege of appealing to the Conference, which should consider and finally determine the matter." This resolution was lost. Thereupon O'Kelly, and a few who thought like him, withdrew from the Conference. Efforts were at once made to conciliate them: a committee was appointed to wait on O'Kelly and his party, and if possible induce them to resume their seats, but the effort utterly failed. Even Dr. Coke's personal appeal was powerless. The General Conference held November 9th, 1806, the 26th of that month, Asbury was present at the Virginia Conference. The question was raised whether O'Kelly and his adherents of the ministry were to be continued in the Conference. Mr. Asbury at once pleaded for their retention, and even proposed that the Conference pay Mr. O'Kelly £40. For a while this money was accordingly paid, but O'Kelly, finding that the Conference was not disposed to take much notice of his schemes, refused any longer to receive this pay, and thus broke the last link that bound him to Methodism. O'Kelly now sought to impress his views on the Methodists of Virginia, but was opposed by Messrs. Cole, and M'Kendree, the latter, although at first inclined towards O'Kelly, having now become fully satisfied that the exceptions to Asbury's administration were utterly groundless. They met O'Kelly in public discussion, and saved the Church in Portsmouth from a violent rupture. In the section where he had so long labored he was more successful in his bad work. Some societies were entirely led away by his specious plans; a few travelling and a large number of local preachers followed him, and the O'Kelly schism became a fact in the Church. The schism is named in the registers as the names of James O'Kelly, Rice Haggard, John Allen, and John Robertson were entered as formally withdrawn from the Connection.

O'Kelly and Haggard, assisted by disaffected local preachers, at once began the work of organizing a new and pure Church, free from all such evils as they fancied had corrupted Methodism. Allen settled, and soon after, entering upon the practice of medicine, gave up preaching altogether. Robertson remained local, and after some years he became the head of a subordinate schism in the Church. The Reconciledists was the title chosen for the new Church. The leaders proceeded to hold conferences and other meetings for the purpose of deciding upon some settled plan of operations. They formed many rules, but upon trial
found them extremely defective when compared with those they had abandoned. At length they renounced all rules of Church government, and took the New Testament as their guide. They agreed that all the plans and regulations made at their conferences should be modified, or abolished; and the Church was suggested by the political complexion of the times. Republican principles prevailed in Virginia, and there was something to be gained by a Church bearing the imposing and popular name, "Republican Methodists." One of their first measures was to enact a Discipline of Church discipline. All the preachers were to be on an equal footing. There were to be no grades in the ministry. They endeavored to swell their numbers by promising the laity much larger liberty than they enjoyed in the old Church. The leaders warred zealously, and not without success. In some parishes they carried off entire congregations; in others they wrought ruinous divisions. A few preaching-houses were seized by them, and the rightful owners turned out of doors; from others the Methodists retired in order to avoid strife. The seceders are even accused of having said all manner of evil against the Methodist Church. They certainly ensured the preachers severely. Asbury was the object of their peculiar displeasure. They took special pains to impeach his character in every possible way before the public. The name of bishop they professed to regard with holy horror. They insisted that his bishopric was fictitious, that he was not even a member in Scripture; yet they received the one and rejected the other. "The spirit of division," says Bennett, "prevailed chiefly in the southern counties of the state, and in the border counties of North Carolina. In all this region the influence of O'Kelly very much, and he swarmed with the pretense of his ability in building up his own cause. Although his success in gaining proselytes from the ranks of Methodism was far less than he anticipated, yet the history of this painful schism is full of sad memorials: families were rent asunder, brother was opposed to brother, parent and children were arrayed against each other; individuals became open enemies, and the claims of Christian love were forgotten in the hot disputes about Church government. The means of grace were neglected, piety declined, religion was wounded in the house of her friends, and the enemies of Christ exulted over many who had fallen away from faith." "It was enough," says Jesse Lee, "to make the saints of God weep between the porch and the altar, and that both day and night, to see how the Lord's flock was carried away captive by that diviner craft."

The reasons for O'Kelly's secession are very various. Some writers of his own time and since believe that his ambition craved position beside the noble Asbury, and that when shut out from the episcopal cabinet, he determined to build up a Church of his own, where, though but a simple prebendary, he could yet rule as chief. It is said that an English lawyer, a man of infidel principles, who, strange to say, admired the Methodist Church, and witnessed with many regrets the O'Kelly schism, advised Jesse Lee and many other leading ministers to make O'Kelly a bishop; "for," said he, "it is in making a bishop, and having him throw a heavier weight upon Asbury, he will no longer fear it." The history of O'Kelly's movement shows that the lawyer was nearer right than wrong. Besides this, we learn from certain records that O'Kelly held heterodox views. He denied," said Dr. Lee, "the distinct personality of the Holy Trinity. He was a universalist, and held of distinct persons in the Godhead, the terms Father, Son, and Holy Ghost were only intended to represent three offices in one glorious and eternal Being." It was a favorite expression of his, as we learn from a living contemporary, that the Fates, "Father, Son, Father, Son, Father, Son, Father, Son, Father, Son, Redeemer in time, and Sanctifier for evermore." Of the truth of this charge there is proof in the proceedings of the Greensbrier Conference. He had raised doubt of the personality of the Trinity in the minds of two preachers from his district who were present at the Conference, and they only renounced their heretical opinions when their brethren confronted them with overwhelming scriptural evidence of the truth of this. This was in May, six months before the meeting of the General Conference of 1792. We may well believe that a man so bold as O'Kelly would not hesitate to give expression to his doctrinal views, and there is little doubt that many were led astray from the truth in the large district over which he presided so long. The influence of O'Kelly was used against Asbury with a success that should have satisfied any man, but he had not determined to rule or ruin the Church. The council was O'Kelly's favorite hobby; he kept before the preachers and people the evil great of the council; magnified the power of Asbury as a bishop until many were impressed with the idea that it was not and would not submit to ecclesiastical tyranny was growing up in the Methodist Church. During his travels in Virginia in the summer of 1790 Asbury saw the sad effects of O'Kelly's influence; and when he reached the Leesburg Conference in August of that year he showed a noble disinterestedness as pleasing as it is rare. He says: "To conciliate the minds of our brethren in the South District of Virgin- glia who are restless about the council, I wrote their leader a letter informing him that I would take my seat in the council as another member, and in that point at issue the claims of episcopacy; yes, I would lie down and be trodden upon rather than knowingly injure one soul." Not long after his withdrawal from the Church O'Kelly issued a pamphlet in which he gave his reasons for protesting against the Methodist Episcopal government. This production was chiefly remarkable for its perversion of the plainest historical facts of Methodism, the misrepresentation of its economy, and an unbounded abuse of Asbury. His strictures on the government of the Church, as well as his defamation of Asbury, demanded a reply. Asbury himself collected an ample materia to vindicate his conduct, and submitted the pretended facts and groundless assertions of O'Kelly in a position so variant from truth as to leave the character of their author in more need of an apology than was the mere fact of his ceasing to be a Methodist." O'Kelly came forward in another small pamphlet, entitled A Vindication of an Answer to O'Kelly's pamphlet was a "Vindication of his Apology." The readiness with which O'Kelly's charges were met, and the ability with which they were refuted, gave a decided check to his revolutionary measures. He proceeded, however, with the formal organization of the Republican Methodist Church. He scrupled not to ordain such preachers as consented to receive ordination at his hands, although he denounced Methodist ordination, in the line of which he himself stood, as a "spurious episcopacy." The success of the separatists was soon felt. O'Kelly was far more successful than he supposed. By a careful comparison of the returns from the large circuits in O'Kelly's old district, and where he wielded the greatest influence, we find that from 1792 to 1795, when the schism was at its height, the largest decrease in any one circuit was only a little over two hundred, while in the affairs of the Church at that very field of strife there was a gain of nearly four hundred. It is true that the returns from all the Virginia circuits in 1794 show a decrease of two thousand members; but there were probably other causes for this besides this schismatic movement.

In 1801 O'Kelly changed the name of his party. Renouncing their original title, he issued a pamphlet in which he announced himself and his adherents as The Christian Church. Some of his societies readily as-
O'KELLY

OKEN

sumed the high-sounding name, others hesitated, a few protested, and divisions speedily followed. The more modest among them shrank from an appellation that declared all men heretics except themselves. Divisions and subdivisions became the order of the day. One party called O'Kelly as the Republican Methodist; and yet another, under the lead of William Guirey and others, set up for themselves under the title of "The Independent Christian Baptist Church." These different parties continued to maintain a sickly existence for some years; but the numbers and influence gradually diminished. The decline continued until there could be found no organization worthy to be called a Church, but only fragments of societies scattered over the country, almost equally powerless against the Church they had left, and against the wickedness by which they were surrounded.

It is not difficult to discover the causes that produced the failure of O'Kelly's plans. The most potent was the heresy which his system contained. This was the taint that corrupted the whole scheme. His Unitarian errors allowed no Saviour to be offered to the people; and destitute of this vital and central force, his Church was soulless and its name a mockery. But the motives of the leaders seem to have been devoid of purity, as their system was of saving truth. "If the real cause of this division was known," says Asbury, "I think it is this: that a division that one or two persons only fixed in a district; another wanted money; a third wanted ordination; a fourth wanted liberty to do as he pleased about slaves, and not to be called to account." The fierceness of their attacks on Asbury contributed to their ruin. Their threats, raised to strike him down, pierced their own hearts, and their violent dealings came down on their own heads. Their wrath against him knew no bounds. In one of their ephemeral pamphlets he was called the "Baltimore Bull," and a rude picture of a bull's head graced the title-page. They proclaimed him an enemy to the country, and charged him with laying up money to carry with him to England. Such injustice could not fail to have a speedy and powerful reaction; and as the light shone more brilliantly on the path of Asbury, the darkness grew deeper on that of his traducers. Many, who had been drawn off in a moment of excitement, after calming down and re-examining the points in controversy, returned to the Church. Although Asbury spared no pains to expose O'Kelly's errors and to thwart his plans, yet he kept his heart right towards him, and when occasion offered treated him with Christian kindness. Asbury's friend and last minister was the Rev. Thomas S. Hart, who took place at Winchester. Hearing that his former friend was lying ill, Asbury sent two brethren to say that he would wait on him, if he desired it. They "met in peace, asked of each other's welfare, talked of persons and things indifferently, prayed, and parted in peace. Not a word was said of the troubles of former times." This, as far as we know, was their last interview on earth. O'Kelly lived to an extreme old age, the sad spectator of the failure of his cherished schemes. He saw the man whom he had sought to ruin descend to his throne and ride in triumph over his conquerors in endless numbers as the father of American Methodism. He saw Asbury's place filled and his principles defended by another whom he had fondly marked for a leader in his own ranks. He saw hundreds of his own followers forlorn, and resigning themselves to the standard of Methodism. He saw those who remained scattered and broken into contending factions. But in the face of all these facts the stern old man clung to his cause with a heroism worthy of a better fate, and with faltering voice and failing strength proclaimed his confidence in its ultimate success. In 1805 Asbury, passing through Virginia, writes of O'Kelly as "coming down with great zeal, preaching three hours at a time on government, monarchy, episcopacy, occasionally varying the subject with abuse of the Methodists." Hope did not desert him even "in age and feebleness extreme." We are assured by one of his followers that he "went down to the grave satisfied with the past, and peaceful and trusting with respect to the future." His stormy and eventful life closed Oct. 16, 1828. Dr. Stevens says, "O'Kelly was a man of original temper and with such temperaments, his conscience was weak, easily swayed by his prejudices; weak to yield to them, though strong to defend them." Of the O'Kelly schismatics, Lee, their historian, writing in 1806, says: "They have been divided and subdivided till at present it is hard to find two of them that are of the same opinion. There are now but few of them in that part of Virginia where they were formerly most numerous, and in most places they are declining." See Stevens, Hist. Methodist Episcopat Church, iii, 16-37; Edmond, Hist of Methodism in Virginia, xix, 387; Howard, Memorial of Methodism in Virginia (Richmond, 1871, 12mo), ch. ix.

O'Kelly Methodists. See O'KELLY, JAMES.

Oken, Francois, a learned English theologian, was born in 1718. His adherence to the Moravians prevented his being ordained a minister in the Anglican Church. He died at Bedford May 9, 1794. He wrote, The Nature and Necessity of the New Creature in Christ (1772, 8vo), translated from the German:—The divine Providence, or Engagements (1781), an exposition of the works of this German visionary which had been published in German in 1658, some years after his death:—A Faithful Narrative of God's gracious Dealings with Hiel (1781, 8vo):—Dawnings of the everlasting Gospel Light, glimmering out of a prison Heart (1785, 8vo);—Memoirs of a Reformed Protestant (1775, 8vo). See Hoefer, Nouv. Biog. Générale, xxxviii, 577; Darley, Cyclo. Bibliog., ii, 2292. (J. N. P.)

Oken, Lorenz, a celebrated Swiss naturalist, was born at Offenburg Aug. 2, 1779. He studied medicine and natural history at Göttingen, and held the position of privat-dozent in that university. After some extraneous honorific professorship of medicine in the University of Jena; thence he removed to Zurich, where he held the post of professor of natural history till his death, which occurred in August, 1847. At the time when Oken began to study natural science, the writings of Kant, Fichte, and Schelling had produced a deep impression on the minds of the students of natural history. Schelling, who had studied medicine, had applied the principles of the transcendental philosophy to the facts of the natural world, and had by a process of thought endeavored to give an explanation of the phenomena of nature. It is supposed that Oken had been influenced by the speculations of the transcendental philosophy more or less guided his researches as a naturalist throughout his long life. His first work was published in 1805 and was entitled Elemente der Natur-Philosophie. This was followed in 1805 by a work on Die Geographie. In these books he endeavored to apply a general theory of nature to the facts presented by the forms and the development of animals. In his classification he took for his basis the presence of the senses, making each class of animals to represent an organ of sense. In his work on Generation he first suggested that all animals are built up of vesicles or cells. The formation of seminal matter is described as taking place by the decomposition of the organism into infusoria, and propagation is described as the flight of the organism from his falling house. In 1806 he published his Contributions to Comparative Anatomy and Physiology, and pointed out the origin of the intestines in the umbilical vesicle. In this year he made an excursion to the Harz Mountains, which resulted in an important thought. This may be described in his own language:—"In August, 1806," he says, "I made a journey over the Harz. I slid down through the wood on the south side, and straight before me, lay a most beautiful, blessed skull, together turned round, regarded it intensely: the thing was done. "It is a vertebral column!" struck me as a flash of lightning
he was compelled to leave the country. He died in exile in Brabant. See Petersen, Norge Seereiges og Danmarks Historie; Nordisk Conversationslexikon, s. v. (R. B. A.)

Olaf Haraldsson, the Saint, one of the most revered of the early Norwegian kings, ruled from 1015 to 1030. When his child was born, it was named after him by Olaf Tryggvesson (q. v.), who visited his mother in King'scire. But how little the Norsemen cared about an involuntary baptism is illustrated by the youthful career of this Olaf. When he was only twelve years old his step-father, Sigvord Syr, had to furnish him with ships for venturing expeditions and for gathering plunder in the Baltic and in England and France. In the Christian countries he and his followers were called heathens; and it is related that Olaf finally was rebaptized in Rouen. Certain it is that he became converted, and he wrote in 872 by Harald Fairfayish firmly uniting the several provinces of Norway into one kingdom. By various stratagems king Canute the Great succeeded in alienating the people from Norway Olaf, and in 1028 Canute was actually elected king of Norway, Olaf having fled to Russia. The latter returned with about 3000 Norse and Swedish warriors, whom he had carefully gathered. All of them were Christians. He put on their helmets and shields the sign of the cross, and gave them as his watchword, "Onward, soldiers of Christ, for the cross and the king." A battle was fought at Stiklestad, where he was killed, fell, on Aug. 31, 1030. The date is fixed by an eclipse of the sun occurring during the battle. The body of Olaf was disinterred after its been buried about a year, and it was found that the face was unchanged, and that his hair and nails had grown; it was also said to possess healing qualities. Olaf was canonized as the guardian saint of Norway, and miraculous powers are attributed to him. Although the elevation of Olaf to sainthood at first led to purely political results, it was the means of stamping the country forever with the seal of Christianity. The cathedral of Trondheim, where his ashes were for a long time preserved, was regarded down to the time of the Reformation as the most sacred sanctuary of Norway, and was the chief resort of pilgrims in the North. See Munch, Det norske Folks Historie; ii, 488-819; Keyser, Norges Historie, ii, 484-411; Dano, Geschicht der Dänen; Catto, Early Kings of Norway; Nordisk Conversationslexikon, s. v.; Nænder, Church Hist, iii, 297 sq.; Piper, Evangel. Jahrbuch, 1822, p. 118 sq.; Maier, Die Bekrönung des norwegischen Königs, bekehrung zum Christentum (Munich. 1855-56-3 vol. 5, etc.); Knudsen, der auferstehung von Olaf; Keyser, Den norske Kirkens Historie under Klostervosingen (see Index). (R. B. A.)
Olaus Magnus, a Swedish Roman Catholic divine of note, was brother of John Olaus, archbishop of Upsala, and was an archdeacon in the Swedish Church when the Reformation, supported by Gustavus Vasa, gained the ascendancy in Sweden. In consequence of this change the two brothers, who remained attached to the Roman Catholic faith, left their country and retired to Rome, where Olaus Magnus passed the remainder of his life in the enjoyment of a small pension from the pope.

At Rome he wrote his work, Historia de Gentibus Septentrionalibus, curamque diversarum Statuum, Conditionibus, Moribus, videmque Superstitionibus, Disciplinis, etc. (Rome, 1555, fol., and Basle, 1567). Other editions of this work have been published, which, as well as a French translation in 1616, are all incomplete.

The text is still preserved through the work of the monk Muller, Morgenland, ii, 208 sq.; Descript. de l'Egypte, xviii, 174 sq.), as it did among all ancient nations (Homert, II. xxiii, 788; Isocr. Apol. p. 354, 355; Diog. Laert. i, 3, 2; viii., 19; Herod. ii, 80; Juvenal, Sat. iv, 334; Asl. Gell. ii, 10; Strabo, xi, 569; Justinus, iii, 5, 9; Droysen, ii, 1, 84; see O. Erezweizer, S ratio princeps honorat (Dresden, 1874.), although in Europe, as the power of education has increased, and the circumstances of life have become more complicated, the homer given to age has decreased. (But comp. Ebert, Ueberleit. ii, 1, p. 90 sq.; and Kienzacher, Geschichte des Weltverhaltes, ii, 174 sq.). The most remarkable fact connected with the title of Olaus Magnus is the attempt to rise and give place modestly, whenever an old person approached (Lev. xii, 32; 20. Erian, vi, 61;
HEROD. H. 11. s.r.p.; comp. also Job xxix. 8; Otho, Ex. 13. 34, 35, 36, 37, 38. The remission of the tax and the land was severely rebuked (Deut. xxviii. 90; Lam. v. 12. Wind. ii. 10), and moralists often inculcated peculiar obligations to the old (Prov. xxiii. 22, 28; Sirach iii. 18; vi. 30; viii. 7; xxiii. 15). The Exegetes were especially zealous in their regard for the old (Philo, Opp. ii. 459, 638). The slaves were treated as household servants; the aged men among the Hebrews, as also among the Greeks and Romans (comp. Heindorf, On Horat. Sall. ii. 1, 12); but it appears in the Bible rather as an expression of respect, or as applied to holy men (2 Kings vi. 21, xiii. 14). From the earliest times the Hebrew children were protected and educated free. Poor and outcasts were supported and educated from this district for a considerable number of years. This suppression of the slave trade in the Bight of Biafra is to be ascribed to the beneficent influence of a growing trade, and to the treaties made with the chiefs by the British government. The trade carried on at Old Calabar is chiefly in palm-oil, which is brought from the interior, and is exchanged for British goods. The humanizing influence of legitimate commerce is becoming every year more obvious. Not only has it enlarged the views of the people, and to a certain degree influenced their manners; it has introduced them to the use of portable houses, and to furnish them in many instances with costly articles of European manufacture; but it has taught them that it is for their interest to live at peace with their neighbors.

The mode of government at Old Calabar is, in the case of its most important functions, common consultation and agreement. They meet together in the palace—house, talk over the matter, and no measure can become law that has not a majority of votes. The great difficulty which they feel is to keep in subjection their numerous slaves. This seems to be managed chiefly by the aid of superstition. They have a secret institution, called Egbo, much resembling the Oro of the Yorubas.

RELIGION.—The natives believe in the existence of God and of the devil, in a future state, and in the immortality of the soul; but their ideas on these subjects are dim and confused, and have, by the wickedness of the heart and the malignant teaching of Satan, been framed into a system of superstition—dark, cruel, and sanguinary. They regard one day of the week as a Sabbath; they all practice circumcision; on festival days they sprinkle the blood of the Egbo goats, and they make a sacrifice of a goat to heaven, by which means certain religious observances are kept up by means of a sacrifice, by putting on them the blood of a slain goat mixed with certain ingredients—things which indicate the remains of the patriarchal religion. Their personal worship, so far as it has been ascertained, may be divided into two classes—first, that which is observed with certain religious observances, and that which takes place in the court-yard. The worship within the house consists in adoring a human skull stuck upon the top of a stick, around the handle of which a bunch of feathers is tied. This disgusting object—their domestic idol—is said to exist in every house in Old Calabar, which is considered as a sanctuary and that which takes place in the court-yard. The mode of government at Old Calabar is, in the case of its most important functions, common consultation and agreement. They meet together in the palace—house, talk over the matter, and no measure can become law that has not a majority of votes. The great difficulty which they feel is to keep in subjection their numerous slaves. This seems to be managed chiefly by the aid of superstition. They have a secret institution, called Egbo, much resembling the Oro of the Yorubas.

RELIGION.—The natives believe in the existence of God and of the devil, in a future state, and in the immortality of the soul; but their ideas on these subjects are dim and confused, and have, by the wickedness of the heart and the malignant teaching of Satan, been framed into a system of superstition—dark, cruel, and sanguinary. They regard one day of the week as a Sabbath; they all practice circumcision; on festival days they sprinkle the blood of the Egbo goats, and they make a sacrifice of a goat to heaven, by which means certain religious observances are kept up by means of a sacrifice, by putting on them the blood of a slain goat mixed with certain ingredients—things which indicate the remains of the patriarchal religion. Their personal worship, so far as it has been ascertained, may be divided into two classes—first, that which is observed with certain religious observances, and that which takes place in the court-yard. The worship within the house consists in adoring a human skull stuck upon the top of a stick, around the handle of which a bunch of feathers is tied. This disgusting object—their domestic idol—is said to exist in every house in Old Calabar, which is considered as a sanctuary

Old Calabar. An African kingdom, is situated in the Bight of Biafra, near the 6th deg. of north latitude, and between the 8th and 9th deg. of east longitude, and has a population of nearly 100,000, ruled by a king who resides at Creek Town, the principal place in Old Calabar, and delegates the power of government to his head-man in each town. The population—divided
followed; and, therefore, that the station and happiness of a person depend upon the number of followers and subjects to whom he is devoted, and which is tested after him. The effect of this belief is that in proportion to the dignity of the departed, the rank and power of the survivors, and the warmth of affection which they cherish for the deceased, is the number of victims that are seized and immolated. Acquaintances and relatives test their regard for the deceased and sympathy with the sorrowing relations by destroying a few of their slaves. The agents in this wholesale system of murder are the nearest relatives of the deceased, who evince their affection and their grief by exsanguinating by force, by strangling, and by all means which they adopt to destroy the memory of their fellow-creatures as they can. It is a season of terror. The slaves, from whose ranks the victims are usually taken, flee to the bush for shelter, the doors of the houses are fastened, and every one is afraid to go abroad. When it is borne in mind that the funeral ceremonies continue for four months, and that at the beginning, and especially at the close of this period, when the grand carnival, or make-devil, as they call it, takes place, great exertions are made to obtain victims. It will at once be obvious that this is a practice which spreads the desolations of the most Christian and civilized community. It prevails in the greater part of Western Central Africa, and is drenching the land with blood" (Newcomb).

Missionary Labor.—The work of converting the natives of Old Calabar to Christianity was begun in 1846 by the United Presbyterian Church of Scotland, and has continued under its control. The first mission stations were Creek Town, Duke Town, and Old Town. At the beginning of the mission-work provision was made for the education of the natives, and schools were opened in large numbers, and they were well patronized. The language of the country, which had never been systematized, was given a more permanent form, and soon a Bible in that tongue gave general circulation to the Christian's Gospel. At present there are six stations, and native workers are employed in large numbers in many places besides at these stations. See Grundemann, Missions-Atlas, No. 1; Aiken, Cyclop. of Christian Missions, p. 206, 207; Missionary Yearbook, 1, 109.

Oldcastle, Sir John (Lord Cobham), called "the good," was the first martyr and the first author among the Catholics of England, who was hanged in the 17th century, in the reign of Edward III, and married to the heiress of Lord Cobham, by whom he obtained that title. He gained military distinction in the French wars under Henry IV and V, and was a domestic and a favored attendant of the latter sovereign. Lord Cobham was a member of the 'Catholic Club' and was tried for heresy, and was convicted for his oppugnations of the Church of England, and for his advocacy of the L Litt., The Lives of Latimer, Wickliffe, etc.; Fox, Acts and Monuments; Walshole, Royal and Noble Authors; Milner, Church History, vol. iv, ch. 1; English Church, n. v.; Jones, Religious Biography, n. v.; Milman, History Lat. Chris- family (see Index); British Quarterly, April, 1874. See also LOLLARDS.

Old Catholics, a name adopted in 1870 by those members of the Roman Catholic Church who refused to recognise the validity of the decrees of the Vatican Council (q. v.), especially that concerning the infallibility of the pope, and who, when the bishops, by means of excommunication, tried to enforce submission to the Vatican decrees, organized independent congregations, and gradually advanced, by the election of bishops, to the organization of an independent religious denomination.

1. The bishops of Germany and Austria-Hungary, who, during the proceedings of the Vatican Council, opposed the proclamation of papal infallibility as inopportun, not only expected such a movement, but expressly warned the majority of the council not to provoke it by a measure which was intensely distasteful to a large number in the Church. The opposition of several bishops of the minority to the doctrine of infallibility
had been so determined that they were expected to fa-
vor and join thecession movement. This expecta-
tion was, however, disappointed. After the approba-
tion of the doctrine of infallibility all thebishops, one
after another, submitted, though some—as bishop Hefe,
of Rottenburg, in Germany, and bishop Strossmayer,
of Simin, in Hungary—with unfeigned reluctance. At
length, however, only one of thebishops took the
opposition, the Church, who, even before the convocation of
the council, had fallen out with the pope on questions relating
to the former privileges of the Armenian Church,
remained in opposition to the Vatican Council. In Ger-
many, the centre of the opposition to the Vatican de-
crees, the chancellor, a cardinal, and the pope in
their turn offered up their objections. Only the pope,
had held a meeting at Fulda, and drawn up a joint pas-
toral letter to the Catholics of Germany, in which they
announced their own submission to the Vatican decrees,
and advised all faithful Catholics to follow their example.
This advice was, however, in a signal manner dis-
garded by a large number of Catholic scholars of Ger-
many. Only a few days after July 18, the day when
the Vatican Council formally sanctioned the doctrine of
infallibility, Prof. F. Michels, of the Lyceum of Brauns-
berg, Eastern Prussia, issued a declaration in which he
asserted that he would not be subject to the principle of
infallibility of the Pope, and thus opposed to the
Church. At Munich, forty-four professors of the
university, under the leadership of Döllinger and Fried-
rich, signed a protest against the binding authority of
the Vatican Council and the validity of its resolutions.
Similar protests were numerously signed by professors of
the universities of Bonn, Breslau, Freiberg, and
Giessen. In August the theological leaders of the
movement met in conference at Nuremberg to concert
further action. A joint declaration against the Vatican
decrees was agreed upon and signed, among others,
by Döllinger and Friedrich, of Munich; Michels, of
Braunsberg; Reinkens and Balzner, of Breslau; Knoot,
of Bonn; and Schulte, of Prague—all of whom had thus
far been regarded as among the most prominent schol-
ars of the Catholic Church. The bishops now de-
manded from all the professors of theology an express
declaration that they recognized the canonical char-
acter of the council. A few, like Prof. Hankeb, of
Munich, who was soon after appointed bishop of Spire,
and Prof. Dieringer, of Bonn, yielded to the pressure
brought to bear upon them; but the majority remained
firmly in opposition. The Unity, however, was at first
to take but little interest in the movement.
Only a few isolated protests were published, the most
noted of them being the so-called "protest of the Old
Catholics" of Munich, a name which was subsequently
adopted by the entire party. The leaders appeared to be
already in want of sympathy by the people. The two
most prominent among them, Prof. Döllinger, emphat-
ically dissuaded the organization of independent Old-
Catholic congregations, in order not to make the breach
in the Church incalculable. For some time only two Catho-
lic congregations in all Germany, one in Bavaria and
one in Prussia, assumed an attitude of open opposition;
but in a number of other towns, especially in Bavaria
and on the Rhine, the sympathizers with the movement
kept up a kind of organization by means of "local com-
mittees." A decisive step towards an independent
Church organization was taken by the first Old-Catholic
Congress, held at Munich from Sept. 20 to 24, 1871.
Notwithstanding the continuing opposition of Döllin-
erg, this congress, which was numerously attended by
the Old Catholics of Germany, Switzerland, and Aus-
tria, resolved to provide for the religious wants of the
Old Catholics in territory which was not subject to the
law. This was done under the title of "Old Catholics
Roman Catholics, and insisted on remaining members
of the Catholic Church in spite of the continuous anath-
emas hurled against them by the Pope. The connec-
tion with this Church, which still has an archbishop
and two bishops, was of vital importance to the con-
petition of the Old Catholic community as long as it
intended to claim a doctrinal agreement with the Cath-
olic Church as it existed before 1870; for two of the
Catholic sacraments, Holy Orders and Confirmation, can
never be given by any but the bishops of the Church.
It appeared to be very urgent upon avoiding everything
that might involve an open breach with the Catholic
Church before 1870, and endanger the claim of the Old
Catholics to be regarded by the state governments
as the only true representatives of the Catholic Church,
and the sacraments of the Church proper. The appro-
val of more radical reforms, which was chiefly urged
by Austrians and Swiss, was postponed to a future period,
when the participation of the Catholic people in Church
legislation would be fully regulated by a new Church
constitution. One of the resolutions, however, adopted
by the Congress, declaring that even for the doctrin-
neral decisions of an eccumenical council validity could
only be claimed if they agreed with the original and
traditional faith of the Church as witnessed by the
faith of the people and traditional science, involved a
departure from the official position of the Church in
regard to the infallibility of the Church. At the same time
a hope was expressed for a reunion with the Oriental and
Anglican churches, and the doctrinal differences were
not important enough to be regarded as insurmountable
obstacles to a reunion. In consequence of the resolu-
tions passed by the congress Old Catholic congrega-
tions were organized at Munich, Passau, Cologne, Bonn,
Heidelberg, and a number of other cities. In some
places, as in Munich and in Cologne, the municipal and
state authorities gave to the Old Catholics the simulta-
neous use of one of the church buildings of the Catho-
lic Church, which was regularly followed by the voluntary aban-
donment of such a church by the ultramontane mem-
bers of the congregation, who were exhorted to shun all
communication with the new heretics. When the Catho-
lic army bishop, Namssanowski, declared the soldiers'
church of Cologne, which the military authorities had
allowed the Old Catholics for simultaneous use, to have
been desecrated by the "sacrilegious" mass, the minis-
ter of war suspended him from his office. A regulation
of the legal affairs of Old Catholics by the state gov-
ernment was further proposed. The demand expressed by Prof. Schulte, the presi-
dent of the Old-Catholic Congress of Munich, and one of the foremost lay leaders of the movement, that the
Old Catholic alone be regarded as the legal successors of
the Catholic Church prior to 1870, and that they be
placed in possession of the church buildings of the
Church, could not be complied with, as the number of
avowed Old Catholics was insignificant in compar-
ison with the infallibilists, and as the state governments
were unwilling to interfere in a matter of a strictly ec-
clesiastical character. For the latter reason they equally
refused to consider the claim of the bishops no
longer to regard the Old Catholics as members of
the Catholic Church. Thus no course was left open to
the state authorities but to recognise both parties as
members of the Catholic Church, with equal rights.
This point of view was gradually adopted by the govern-
ments of all the German states. Considerable differ-
ence of opinion showed itself, however, in the execution
of the principle. The Prussian government exempted
the Old Catholics of Wiesbaden from the duty of con-
tributing for the expenses of the Catholic parish; but,
on the other hand, the government of the Grand Duchy
of Silesia, which was governed by the Catholic Church,
Gymnasium of Braunschweig from attending the religious
instruction of the teacher, who had joined the Old Cath-
olics. On the other hand, the Old Catholic children in
Bavarian schools were excused from attending the re-
ligious instruction given by the Church. Thus, at the
beginning of 1872 the number of priests who had
identified themselves with the movement was about
thirty. A new impulse was given to it in the spring of that year by lectures which several leaders, like Döllinger, Reinkens, Michelis, Huber, and Friedrich, delivered in various places. In some parts of Germany, as in the Bavarian patriciate and the grand-duchy of Baden, the Old-Catholic societies perfected their organization by meeting in district conferences. In July, 1873, the archbishops agreed to hold an invitation conference of the Old-Catholic congregations of Germany to administer the sacrament of confirmation to their children, and to this end visited the congregations of Cologne, Munich, Spire, and other towns. Considerable progress in the further organization of the new Church was made at the Old-Catholic Ochtber Congress, which was held in September, 1872, at Cologne, and, like the first, was presided over by Prof. Schulte. The Congress declared that the adherents of papal infallibility had separated from the true Catholic Church, and organized an ultramontane anti-church (Gegenkirkche); that the "New Catholic" bishops had forfeited their rights of jurisdiction over those Catholics who remained faithful to the Old Church, and that the state authorities were in duty bound to protect the Old Catholics in the possession of all their ecclesiastical rights, to recognize their bishops and ordinations, and by their concurrent act to secure to them the duty of contributing to the expenses of the New-Catholic worship, to secure them the simultaneous use of the ecclesiastical edifices, and a share in the Church property; and, finally, to provide them with the accommodation and religious observances which constitute the purpose of foundation for Old-Catholic bishops, priests, and churches. The election of an Old-Catholic bishop by the clergy and delegates of the congregations was taken into consideration, and it was provided that as long as the Old Catholics had no bishops of their own, the bishops of the Old Catholics of Holland, and those of the bishops of the United Armenian Church who occupied a similar position with regard to the papacy as the Old Catholics, should be invited to perform those functions which the usage of the Catholic Church reserves to bishops. All other reforms were postponed to the time when a regular Church synod should meet under the presidency of a bishop; but the Congress applauded a declaration of Prof. Friedrich, of the University of Munich, one of the prominent theological scholars of the Church, that the Old-Catholic Church had already grown beyond the bounds of the ultra views which observed, and that it was no longer exclusively directed against papal infallibility, but against an entire system of errors of one thousand years, which had its climax in this novel doctrine of infallibility. "By the compulsion of the bishops," the speaker remarked, "we are pushed forward and forced to them. They, on the other hand, completely disapproved the arbitrary advances in this direction by individual congregations and priests, like father Hayacinthe, who, without waiting for the abolition of priestly celibacy by the proper Church authorities, had entered the state of marriage. A special interest was shown in the project of a reunion of the large divisions of Christendom, and a special committee was appointed, with Dr. Döllinger as chairman, to enter into negotiations with the Eastern and Anglican churches on this subject. On June 4, 1873, the hierarchic structure of the new Church was completed by the election of Prof. Reinkens, of the University of Breslau, as the first Old-Catholic bishop. The electoral body, which met at Cologne, consisted of all the Old-Catholic priests of the German empire, and delegates of the Old-Catholic congregations and societies. The bishop elect was on August 11 consecrated by bishop Heykamp, of Deventer, of the Old-Catholic Church of Holland, and was recognized as a bishop of the Catholic body by the governments of Prussia, Baden, and Hesse. The government of Bavaria and Hesse were with a committee of jurists, refused to recognize him, although, on the other hand, it also declined to grant the request of the bishop of Augsburg to forbid bishop Reinkens from administering the sacrament of confirmation in Bavaria. The third Old-Catholic Congress, held in September, 1873, at Constance, adopted a synodal constitution of the Church, which, however, was expressly designated as provisional, in order to reserve all the rights of the Old Catholics to the property of the former Old Catholic Church, and the synod, in many respects, resembles that of the Protestant Episcopal Church of the United States. The diocesan, provincial, and general synods consist of priests and lay delegates. At the head of the diocesan synods stands the bishop, who is elected by a vicar-general and a synodal committee (Synodalrat), consisting of four priests and five laymen. The diocesan synod, which meets annually under the presidency of the bishop, consists of all the priests of the diocese and of lay delegates, each delegate representing two hundred congregations. The work of the synod is prepared by the synodal committee; amendments are admitted when signed by at least twelve members; resolutions, petitions, remonstrances, etc., can only be discussed when notice of them has been given at least fourteen days before the opening of the synod. The resolutions are passed by the simple majority of those present. Resolu- tions not passed by a two-thirds majority are suspended at the request of either the minority of the synod or the synodal committee, until their discussion and re-adoption by the next synod. In regard to affairs strictly ecclesiastical, the synod is assisted by religious congregations, organized by autarchy and by the bishops; in all other matters it is represented by the Church Council and the Congregational Assembly. The Church Council, which consists of from six to eighteen members, administers the property of the congregation, represents it in all legal questions, establishes the budget, appoints the secretaire, and makes the necessary preparations for the care of the poor, convokes the Congregational Assembly, and carries on correspondence with other congregations. The Church Council chooses its own president. The Congregational Assembly, in which all the adult male members of the congregation who are in possession of their civic rights take part, ratifies the budget, apportions the taxes, elects the pastor, the Church Council, and the delegates to the synod. The pastor is confirmed by the bishop, in conformity with the existing state laws, and installed in the office. He can only be removed by the synod, and, after a formal proceeding by the synod. Besides the adoption of the Church constitution, the Congres discussed the subject of the reunion of the Christian churches; and, to carry out its views the more efficiently, appointed special committees for negotiations with the Eastern and Anglican churches, in accordance with the new constitution of the Church, the first Old-Catholic Synod met at Bonn in August, 1874. It was attended by thirty priests and fifty-nine lay delegates. The synod adopted the Church constitution which had been agreed upon by the Congress of Constance, passed resolutions on Church reforms in general, and issued a series of declarations on auricular confession, on fasting and abstaining, and on the use of the native tongue in divine service. The synod pointed out a number of desirable reforms which might be car- ried out without any change of members of the Church, on the abolition of abusive practices in connection with indulgences and the veneration of saints, the administration of the sacrament of penance, etc. It appeared to be the unanimous sentiment that all reforms in the Church should proceed from the synod, and that indication of any absolute changes should take abstinence from arbitrary changes. In regard to confession, it was re- solved that the practice of private confession should be retained, but that it should be freed from Romish corruptions, and brought back to the purity of the ancient Church. The synod was opposed, on the one hand, with regard to fasting and abstaining. No action was taken on the abolition of priestly celibacy, which was pro-
posed by several congregations, but it was postponed to a later synod. Two committees were appointed to prepare, the one a draft for a new ritual in the native tongue, the other a catechism and a Biblical history. The synod also elected six synodal examiners, four of whom were priests and two laymen. From a statistical report it appears that in May, 1874, there were in Prussia 31 congregations fully organized and 16 in the course of organization; in Bavaria, 51 congregations; in Baden, 31 congregations and societies. The number of Old-Catholic priests was 41, and that of the students of theology 12. The University of Heidelberg received a majority of the professors of the theological faculty had joined the Old-Catholic movement. The fourth Old-Catholic Congress, which was held in September, 1874, at Freiburg, devoted its attention chiefly to the subject of Church property, demanding that where a formal separation between the adherents of the Vatican Council and the Old Catholics should take place, the latter should receive a proportionate part of the Church property. One of the favorite projects of the Old-Catholic leaders, the holding of a Union Conference between Old Catholic and Anglican authorities, had the purpose of discussing the best means for uniting these large divisions of the Christian Church, was carried out in September, 1874. The first Union Conference of these theologians met at Bonn, under the presidency of President of the German nation, and on the whole there had been no progress. Without Bavaria there were 87 congregations (last year 72), and an increase of 1624 men and 4484 souls. The number of priests has increased since 1873 from 50 to 60.

1. The law of 1873 and the Austrian State which adopted it, are diametrical to the affairs of the Old Catholics, and particularly their claim to a proportionate share of the property of the Catholic Church, was the grand-duchy of Baden. The law, which was sanctioned by the grand-duke in May, recognizes the equal rights of Old Catholics to the property of the Catholic Church, protects Old-Catholic holders of Catholic benefices, provides for the organization of independent Old-Catholic congregations, and secures to them the simultaneous use of ecclesiastical edifices and utensils. Wherever the majority of any Catholic congregation declares in favor of Old Catholicism, it is to remain in possession of the property of the Catholic Church, but must concede to the other party a simultaneous use of the church. A similar law was promulgated in Prussia in July, 1875.

In the Austro-Hungarian monarchy the organization of Old-Catholic congregations was attempted at many places, and in Austria proper the Liberal majority of the Lower House of Parliament favored the recognition of their rights by a special law. But the government refused to recognize them in any way, and the Upper House of Parliament, in 1875, refused to concur in the law. In 1876, the synod met and passed a resolution which the ministers declared, however, on this occasion, that the government would no longer oppose the establishment of Old-Catholic congregations. Accordingly, in February, 1876, delegates of five congregations met at Vienna and drew up a synodal constitution of the Church, similar to that adopted in Germany, and presented it to the government for approval.

In Switzerland the governments of most of the cantons took at once a decided stand in supporting the parish priests who refused to submit to the Vatican Council against their bishops. A central committee was formed to organize the movement throughout Switzerland, and most of the prominent leaders of the Liberal Catholics took an active part in it. The committee drew up a Constitution for the Christian Catholic churches in Switzerland, which was adopted by the one and only synod of the Church, for which the name Christian Catholic (Christkatholisch) was preferred to Old Catholic, was held at Olten on June 14, 1875. It finally adopted the
OLD CATHOLICS

336

OLDENBURG

Church constitution which had been drawn up by the central committee, and made all the necessary arrangements for the appointment of a synodal council, but postponed the election of a bishop. The synodal council was appointed on Aug. 30, 1876. At its first meeting, held on Oct. 15, 1876, the new Old-Catholic laws on civil marriage. The congregations were permitted to make their own selection among the different Church vestments used in the Catholic Church, and to introduce the native tongue into divine service; it also declared the Church constitution to go into effect at the next synod, that is, at a year no longer obligatory. Further legislation on these and other proposed reforms was reserved for the next meeting of the synod. In regard to the election of a bishop, it appeared desirable to obtain previously the consent of the Federal Council of Switzerland, as the new constitution of Switzerland provides that new bishoprics are only to be established with the consent of the federal council. This consent was given in April, 1876, and the election of the first bishop of the Christian-Catholic Church accordingly took place in June, 1876. The progress of the Old-Catholic movement has been slow; the list contains eighty members of the Old-Catholic Church. In March, 1876, the Old Catholics in all Switzerland numbered 54 congregations, and 26 societies not yet organized, with an aggregate population of 72,880 persons.

In Italy the Old-Catholic movement found many sympathizers, and among them some very prominent names, like father Passaglia, a celebrated Jesuit author, and the marchese Guerrini-Gonzage. A committee of agitation was established in Rome, and in 1875 the delegates of a number of congregations met in Naples and Rome, to consolidate the movement.

In all other countries the movement has as yet not gained any firm footing. In Madird an Old-Catholic committee was constituted, and a large number of priests were reported to have joined it; but nothing has been heard of it since the restoration of the Bourbons. In France two distinguished priests, father Hyacinthe and abbé Michaud, took a very active interest in the movement, but no congregations could be formed. England was represented at some of the Old-Catholic congresses of Germany by lord Acton and others; but up to May, 1877, no Old-Catholic church has been formed in England.

The leaders of the Old-Catholic movement express themselves hopeful in regard to the future. Inclusive of the Church of Utrecht, in the Netherlands, with which they entirely agree, they had in June, 1876, six bishops, and a population of about 140,000. But the number of those who, while fully sympathizing with them, have not yet severed their connection with the papal Church, they believe to be immensely larger, and they expect a rapid increase as soon as they obtain from the state governments the same efficient protection which is accorded to them in Baden, Prussia, and some of the Swiss cantons. They have in Germany, Switzerland, and Austria a number of periodicals, the most important of which are the "Deutsche Merkur" (a weekly), in Munich, and the "Theologische Literaturblatt," of Bonn. See Reinke's, "Ueber den Ursprung der jetzigen Kirchenbewegung (Cologne, 1872); Nichol, "Ursprung, Umfang, Hemmnisse und Aussichten der altkatholischen Bewegung (Berlin, 1878); Père Hyacinthe, De la Réforme Catholique (Paris, 1872); Michaud, "Programme de Réforme de l'Église catholique" (Paris, 1872); Pope Pius X, "Le Pontife au dix-neuvième siècle," etc. - T. V. C. K. H. 1873, 1875, 1877. Quinze full extracts and a trustworthy synopsis have been regularly given in the "Meth. Qu. Rec." (1869 to 1876). See also "Amer. Ch. Rev." July, 1873, art. i.; (Lond.) Old Dissenters. See Reformed Presbyterian Church.

Oldenburg, a grand-duchy of Germany, consists of three distinct and widely separated territories, viz., Oldenburg Proper, the principality of Lubeck, and the principality of Birkenfeld, and has a collective area of nearly 2469 square miles, and a population of 341,525 (in 1880). Oldenburg Proper, which contains about one eighth of the entire population of the state, is bounded on the north by the German Ocean, on the east, south, and west by the territory formerly the kingdom of Hanover. The principal rivers of Oldenburg are the Weser, the Jahle, the Haase, the Leda, and other small rivers of the Ems. The grand-duchy of Oldenburg Proper is divided into eight circles. The country is flat, belonging to the great sandy plain of Northern Germany, and consists for the most part of moors, heaths, marsh or fens, and uncultivated sandy tracts; but here and there, on the banks of the rivers, the uniform level is broken by gentle acclivities, covered with wood, or by picturesque lakes surrounded by fruitful pasture-lands. Agriculture and the rearing of cattle constitute the chief sources of wealth. The scarcity of wood for fuel, and the absence of coal, are compensated for by the existence of turf-beds of enormous extent. With the exception of some linen and stocking looms, and a few tobacco-works, there are no manufactories. Oldenburg has principally a coasting-trade, but there are exports of horses, cattle, linen, thread, flax, and rags, which find their way chiefly to England and the Hanseatic League.

The principality of Lubeck, consisting of the secularized territories of the former bishopric of the same name, is surrounded by the Prussian province of Sleswick-Holstein, and is situated on the banks of the rivers Schwartau and Trave. It has 140 square miles to the general area of the grand-duchy, and 34,721 inhabitants to the collective population. It is divided into four administrative districts. It has several large lakes, as those of Plön—noted for its picturesque beauty—Keller, Uklei, and Gros-Eutin; while in regard to climate, soil, and natural products it forms an important part of the general physical characteristics of Holstein.

The principality of Birkenfeld, lying south-west of the Rhine, among the Hunderick Mountains, and between Rhensish Prussia and Lichtenberg, is an outlying territory, situated in lat. 49° 09’ N., and long. 7° 30’ W.; it has 194 square miles, and its population 39,698. The soil of Birkenfeld is not generally productive; but in the lower and more sheltered valleys it yields wheat, flax, and hemp. Wood is abundant. The mineral products, which are of considerable importance, comprise iron, copper, lead, coal, and building-stone; while in addition to the rearing of cattle, sheep, and swine, the polishing of stones, more especially agates, constitutes the principal source of industry. The principality is divided into three governmental districts.
Oldenburg is a constitutional ducal monarchy, hereditary in the male line of the reigning family. The constitution, which is based upon that of 1849, revised in 1852, is common to the three provinces, which are represented in one joint chamber, composed of thirty-three members, chosen by free voters. Each principality has, however, its own parliaments, each of which are likewise elected by votes; while each governmental district within the provinces has its local board of councillors, and its several courts of law, police, finance, etc.; although the highest judicial court of appeal, and the ecclesiastical and ministerial offices, are located at Oldenburg. The prince-bishops of the office of bishop, is guaranteed by the constitution of 1849. The Lutheran is the predominant Church, upwards of 260,000 of the population belonging to that denomination, while about 70,000 persons profess the Roman Catholic religion. There are two gymnasia, one higher provincial college, several secondary, and over 500 elementary schools; but in consequence of the scarcity of villages in the duchy, and the isolated position of many of the houses of the peasantry, schools are not common in the country districts, and the standard of education of the lower classes is, in some districts, scarcely equal to that existing in other parts of Northern Germany.

History.—The territory now included in the grand-duchy of Oldenburg was in ancient times occupied by the Teutonic race of the Chauci, who were subsequently merged, in the South, more generally in the known Frisii, or Frisians; and the land, under the names of Ammergau and Liergau, was for a long period included among the dominions of the dukes of Saxony. In 1180, the counts of Oldenburg and Delmenhorst succeeded in establishing independent states from the territories of Henry the Lion, which fell into a condition of disorganization after his downfall. This family has continued to rule Oldenburg. On the death, in 1667, of count Anthony Gunther, the wisest and best of the Oldenburg rulers, his dominions, in default of nearer heirs, fell to the Danish reigning family, a branch of the house of Oldenburg, and continued for a century to be ruled by princes nominated by the kings of Denmark. In 1773, by a family compact, Christian VII made over his Oldenburg territories to the grand-duke Paul of Russia, who represented the Holstein-Gottorp branch of the Oldenburg family. Paul having renounced the joint countships of Delmenhorst and Oldenburg in favor of his cousin, Frederick Augustus, of the younger or Keil line of the house of Oldenburg, who was prince-bishop of Lübeck, the emperor raised the united Oldenburg territories to the dignity of a grand-duchy. The prince-bishop was descended from duke Peter Friedrich Ludwig, cousin to the prince-bishop, Friedrich Augustus. For a time the duke was a member of Napoleon's Eichenherr Confederation; but French troops having, in spite of this bond of alliance, taken forcible possession of the duchy in 1811, and incorporated it with the French empire, the ejected prince joined the ranks of the allies. In recognition of this adhesion, the Congress of Vienna transferred certain portions of territory, with 5000 Hanoverians and 20,000 inhabitants of the quondam French district of the Saar, to the Oldenburg allegiance, and it was raised to the dignity of a grand-duchy. The revolutionary movement of 1848 was quite as productive of violent and compulsory political changes in this as in other German states; and in 1849, after having existed for upwards of two years, the old constitution was abolished and a new constitution was drawn up, granting a constitution, so far as the essentials of personal liberty and security are concerned. See Geschichte des Grossherzogthums Oldenburg (Oldenburg, 1794, 3 vols.); Runde, Oldenburgische Chronik ( Ibid. 1868).

Oldenburg, CHRISTIAN GEORG ANDERSS, a German Moravian missionary, was born March 8, 1721, at Hildesheim, in Hanover, and was a graduate of the University of Jena. In 1743 he entered the service of the Moravian Church as a teacher, and was subsequently ordained to the ministry, having charge of various churches both in Germany and America. In 1767 he visited the islands of Santa Cruz, St. Thomas, and St. John. In 1768 he went through several cities of North America where the Moravians had settlements. Returning to Europe in 1769, he became successively minister at Marienborn, Newfield, and Eldersford, where he died March 9, 1787. He is distinguished as the author of a voluminous and important work on the Moravian Mission in the Danish West Indies, including a complete account of the geography and of the natural and political history of those islands as they were known about the middle of the last century. It bears the following title: C. G. A. Oldendorps Geschichte der Mission der Evangelischen Brüder auf den Karibischen Inseln, S. Thomas, S. Croix, u. S. Juan (Barby, 1777, 2 vols. 8vo). It was so highly esteemed that it was translated into the Swedish (1786-88, 8vo). (E. de S.)

Oldermann, JOHANN, a noted German student of philosophy and the natural sciences, was born in Saxony in 1686. After laying the foundation of his studies in the school of Osnabrück, he went to Helmstedt, where Mr. Van der Hardt, his maternal uncle, instructed him in the Oriental languages and the Jewish antiquities, so that he took the degree of M.A. in 1707, became Greek professor in 1717, and was appointed assistant library-keeper to his uncle. He was added in his studies by other learned men; and, by genius and industry, made an extraordinary progress in everything he applied himself to. Astronomy was his favorite study; he passed whole nights in viewing and contemplating the stars. He was hindered by a weak constitution, which, through a sedentary life, sank into a dropey that carried him off in 1728. The titles of several of his dissertations are: De imperfectione sermonis humani: De Phaenoe floreo: De maris Algerio: De Ophtir: De festiva et eorum Europarum: De origine natalitiorum Jesu Christi.

Oldfield, JOSHUA, D.D., a noted English Presbyterian divine, flourished near the opening of the last century. He was probably born in 1656. He took a prominent part in the disputes which arose in his day regarding the Trinitarian question, and was present at the Salter's Conventicle, which had been called February, 1718 or 1719, to bring about, if possible, a harmonious orthodox profession on the basis of the first article of the Church of England, and the answers to the fifth and sixth questions in the Westminster Catechism. Among those who refused to subscribe, Dr. Oldfield was most prominent. He was at that time minister of the Presbyterian Church in Maiden Lane, Globe Alley, close to the spot where the Globe Theatre formerly stood. He was universally conceded to be "a man of great learning and sound judgment, and one of the most eminent of the tutors connected with the Presbyterian body." He died in 1729. He published several of his Sermons (1699-1721), and an essay on the Improvement of Reason (1707, 8vo), from which Paine is believed to have borrowed some ideas for his Age of Reason. See Sketch, History of the Free Churches of England, p. 386-7. (J. J. W.)

Old Flemings. See MEXTONITES.

Oldham, HUGH, an English prelate of great learning, who was born near Manchester in the last century. He became a master of Exeter in 1504. He founded a free school in Manchester, and added to the endowment of Corpus Christi College, Oxford. He died in 1519. See Hook, Eccles. Bioth. viii, 457.

I. History of the Text.—Under this head we shall consider only the successive steps by which the text seems to have reached its present form and condition according to the best light which modern criticism has thrown upon the subject. For the subdivisions into books, for the contents, for the several books (also Pentateuch; Prophets; Hagiography, etc.), and for the hermeneutical principles applied in different ages, see Interpretation. The apparent or real citations from one part of the O. T. in another, and in the N. T., will be discussed under the head of Quotations.

1. Ante-Rabbinal Period.—A history of the text of the O. T. should properly commence from the date of the completion of the Canon; from which time we must assume that no additions to any part of it could be legitimately made, to the whole object of the text was completed and watched over it being thenceforth to preserve that which was already written. Of the care, however, with which the text was transmitted we have to judge, almost entirely, by the phenomena which it and the versions derived from it now present, rather than by the places where it is preserved. That much scrupulous pains would be bestowed by Ezra, the "ready scribe in the law of Moses," and by his companions, on the correct transmission of those Scriptures which passed through their hands is indeed antecedently probable. The best evidence of the preservation, the spuriousness of the sacred books was consequently regarded, is to be found in the jealous accuracy with which the discrepancies of various parallel passages have been preserved, notwithstanding the temptation which must have existed to assimilate them. Such is the case with Psalms xiv and xlii, two recensions of the same hymn, both proceeding from David, where the reasons of the several variations may on examination be traced. Such also is the case with Psalm xvii and 2 Sam. xxii, where the variations between the two copies are more than sixty in number, excluding those which are merely omitted in the one or present of the matres lectionum; and where, therefore, even though the design of all the variations be not perceived, the hypothesis of their having originated through accident would imply a carelessness in transcribing far beyond that which even the rabbinical critics have contemplated. As regards the form in which the sacred writings were preserved, there can be little doubt that the text was ordinarily written on skins, rolled up into volumes, like the modern synagogue rolls (Psa. xi, 7; Jer. xxxvi, 14). The conjecture of Josephus, that a copy sent from Jerusalem as a present to Ptolemy in Egypt was written with letters of gold on skins of admirable thinness, the joints of which could not be detected (Ant. xii, 2, 11)

The original character in which the text was expressed is that still preserved to us, with the exception of four letters, on the Maccabean coins, and having a strong affinity to the Samitarian character, which seems to have been treated by the later Jews as identical with it, being styled by them ביטוי תחלתי. At what date this was exchanged for the present Aramaic or square character, מ"ע תודש, or מ"ע תודש, is still as undetermined as it is at what date the use of the Aramaic language in Palestine superseded that of the Hebrew. The old Jewish tradition, repeated by Origen and Jerome, ascribed the change to Ezra. But the Maccabean coins supply us with a date at which the older character was still in use; and even though we should allow that both may have been simultaneously employed, the one for sacred, the other for more ordinary purposes, we cannot suppose that they existed side by side for any lengthened period. Hassencamp and Gesenius are at variance as to whether such errors of the Septuagint as arise from confusion of letters in the original text are in favor of the Greek interpreters having had the older
or the more modern character before them. It is sufficiently clear that the use of the square writing must have been well established before the time of those authors who attributed the introduction of it to Ezra. Nor could the allusion in Matt., 15 to the yod as the smallest letter have been made except in reference to this way of writing. And without a more accurate investigation of the manner in which this character was formed, or of the precise locality whence it was derived, whatever modification it may have undergone in the hands of the Jewish scribes, it was in the first instance introduced from abroad; and this its name, א, i.e. Assyrian writing, implies, though it may geographically require to be interpreted with some latitude. The suggestion of Kell's, that א could be an appellative, denoting not Assyrian, but firm, writing, is improbable.) On the whole, we may best suppose, with Ewald, that the adoption of the new character was coeval with the rise of the earliest Tar- guns, which would naturally be written in the Aramaic style. It would thus be shortly anterior to the Christian era; and with this date all the evidence would well accord. It may be right, however, to mention that while of late years Kell has striven anew to throw back the introduction of the square writing towards the time of Ezra, Bleek also, though not generally imbued with Kell's system, has since 1848 maintained not only that the use of the square writing for the sacred books owed its origin to Ezra, but also that the later books of the O. T. were never expressed in any other character. See Hebrew Language.

No vowel-points were attached to the text: they were, through all the early period of its history, entirely unknown. Convenience had indeed, at the time when the later books of the O. T. were written, suggested a larger use of the matrices lectoia: it is thus that in those books we find them introduced into many words that had previously been spelled without them: סדר takes the place of סדר, דינה of דינה. An elaborate endeavor has recently been made by Dr. Wall to prove that up to the early part of the 2d century of the Christian era the Hebrew text was free from vowel-letters as well as from vowels. His theory is that they were then inter- polated by the Jews, with a view to altering rather than perpetuating the former pronunciation of the words: their object being, according to him, to pervert thereby the sense of the prophecies, as also to throw discredit on the Septuagint, and thereby weaken or evade the force of arguments drawn from that version in support of Christian doctrines. Improbable as such a theory is, it is yet more astonishing that its author should not have been deterred from prosecuting it by the palpable objections to which he himself observed. Who can believe, with him, that the Samaritans, notwithstanding the mutual hatred existing between them and the Jews, borrowed the interpolation from the Jews, and conspired with them to keep it a secret? or that among other words to which by this interpolation the Jews ventured to impart a new sound, some of the best-known proper names; e.g. Isaiah, Jeremiah? or that it was merely through a blunder that in Gen. i. 24 the substantive דָּטָן in its construct state acquired its final ל, when the same anomaly occurs in no fewer than three passages of the Psalms? Such views and arguments refute themselves; and while the high position occupied by its author commends his book to notice, it can only be regretted that he has not been more careful in his investigation, and ingenuity should have been so misapplied in the vain attempt to give substance to shadow. See Vowel-Points.

There is reason to think that in the text of the O. T., as originally written, the words were generally, though not universally, divided into the Phoenician periods, although the majority proceed continuously, some have a point after each word, except when the words are closely connected. The same point is used in the Samaritan manuscripts; and it is observed by Gesenius (a high authority in respect to the Samaritan Pentateuch) that the Samaritan and Jewish divisions of the words generally coincide. The discrepancy between the Hebrew text and the Septuagint in this respect is sufficiently explained by the circumstance that the Jewish scribes of the second century, who had probably been taught by the Samaritans, were closely connected: it is in the case of such that the discrepancy is almost exclusively found. The practice of separating words by spaces instead of points probably came in with the square writing. In the synagoge-rolls, which are written in conformity with the ancient rules, the words are regularly divided from each other; and indeed the Talmud minutely prescribes the space which should be left (Gesenius, Gesch. der Heb. Sprache, § 45).

Of ancient date, probably, are also the separations between the lesser Parashoth or sections: whether made, in the case of the more important divisions, by the commencement of a new line, or, in the case of the less important, by a blank space within the line. See Parshiah. The use of the letters ד and ר, however, to indicate these divisions is of more recent origin: they are not employed in the synagoge-rolls. These lesser and earlier Parashoth, of which there are in the Pentateuch 699, must not be confounded with the greater and later Parashoth which lessons were read in the synagogues in the Masoroth. The name Parashoth is in the Mishna (Meg. iv. 4) applied to the divisions in the Prophets as well as to those in the Pentateuch; e.g. to Is. iii, 3-5 (to the greater Parashoth here correspond the Haph- taroth). Even the separate psalms are in the Gemara also called Parashoth (Berachoth, fol. 107). Some indication of the antiquity of the divisions be- tween the Parashoth may be found in the circumstance that the Gemara holds them to be as old as Moses (Er. xiv. 12). Of their real age we know but little. Hupfeld has found that they do not always coincide with the capitula of Jerome. That they are, nevertheless, more ancient than his time is shown by the mention of them in the Mishna. In the absence of evidence to the contrary, their want of accordance with the Kasam of the Samaritan Pentateuch, which are 966 in number, seems to indicate that they have no historical origin; and it is possible that they also may date from the period when the O. T. was first transcribed in the square character. Our present chapters, it may be remarked, spring from a Christian source. See Chapter.

Of any logical division, in the written text, of the prose or poetic parts of Psalms or verses, we find in the Talmud no mention; and even in the existing synagoge-rolls such division is generally ignored. While, therefore, we may admit the early currency of such a logical division, we must assume, with Hupfeld, that it was merely a traditional observance. It has indeed, on the other hand, been argued that such enumerations of the verses as the Talmud records could not well have been made unless the written text distinguished them. But to this we may reply by observing that the verses of the numbering of which the Talmud speaks could not have the same character as the modern Masoroth. Of the former there were in the Pentateuch 6888 (as some read, 8888); it now contains but 5845: the middle verse was computed to be Lev. xiii, 33; with our present verses it is Lev. viii. 5. Had the verses been distinguished in the written text at the time that the Talmudic tradition was made, it could only be in the way that was most applicable how they should since have been so much al- tered: whereas, were the logical division merely traditional, tradition would naturally preserve a more accurate knowledge of the places of the various logical breaks than of their relative importance, and thus, without any disturbance of the syntax, the numbers of the omitted verses would be liable to continual increase or diminu- tion, by separation or aggregation. An uncertainty in the versal division is even now indicated by the double
accont and consequent vocalization of the Decalogue. In the poetical books, the Pentateuch mentioned in the Talmud correspond to the poetical lines, not to our modern verses; and it is probable, both from some expressions of Jerome, and from the analogous practice of other nations, that the poetical text was written stichometrically, as so written and copied in later ages. In the poetical pieces in the Pentateuch and historical books; and even, generally, in our oldest manuscripts. Its partial discontinuance may be due, first, to the desire to save space, and, secondly, to the diminution of the necessity for it by the introduction of the accents. See Masorah. 

2. Early Christian Period.—While great freedom in dealing with the sacred text was exercised at Samaria and Alexandria [see SAMARITAN PENTATEUCH; Septuagint Version], there is every reason to believe that in Palestine the text was both carefully preserved and scrupulously respected. The boast of Josephus (c. Apion, i, 8) that through all the ages that had passed none had ventured to add or to take away from, or to transpone aught of the sacred writings, may well represent the spirit in which in his day his own countrymen supposed the sacred text of the translation of Alexandrian and other Greek interpreters, the fragments of whose works remain to us in the Hexapla, we have evidence of the existence of a text differing but little from our own: so also in the Targums of Onkelos and Jonathan. A few commentators, on the other hand, have considered the Hexapla as offering evidence to the same effect in Origen's transcriptions of the Hebrew text. Yet more important are the proofs of the firm establishment of the text, and of its substantial identity with our own, supplied by the translation of Jerome, who was instructed by the Palestinian Jews, and mainly relied upon their authority for acquiescence, not only with the text itself, but also with the traditional unwritten vocalization of it. This brings us to the middle of the Talmudic age. The learning of the schools which had been formed in Jerusalem about the time of our Saviour by Hillel and Shammai was preserved, after the destruction of the city, in the academies of Babli, Siphra, Cesarea, and Tiberias. The great pillar of the Jewish literature of this period was R. Judah the Holy, to whom is ascribed the compilation of the Mishna, the text of the Talmud, and who died about A.D. 220. After his death there grew into repute the Jewish academies of Sura, Nahardea, and Pumbeditta, on the Euphrates. The twofold Gemara, or commentary, was now appended to the Mishna, thus completing the Talmud. The Jerusalem Gemara proceeded from the Jews of Tiberias, probably from the end of the 4th and the 5th century of the Babylonian from the academies on the Euphrates, perhaps by the end of the 5th. That, along with the task of collecting and commenting on their various legal traditions, the Jews of these several academies would occupy themselves with the text of the sacred writings is in every way probable, and is indeed shown by various Talmudic notices. See Masorah.

It is after the Talmudic period that Hupfeld places the introduction into the text of the two large points (in Hebrew נקודות הגדה, Sohph-pasuk) to mark the end of every verse. They are manifestly of older date than the accent box, which is not a separate effect (Study and Critic, 1887, p. 857). Coeval, perhaps, with the use of the Sohph-pasuk is that of the Makkheph, or hyphen, to unite words that are so closely conjoined as to have but one accent between them. It must be older than the accentual marks, the presence or absence of which has been determined by grammatic writers. It indicates the way in which the text was traditionally read, and therefore embodies traditional authority for the conjunction or separation of words. Internal evidence shows this to be the case in such passages as Psal., xiv, 5, נַעֲרָתָא דֶּרֶךְ. But the use of it cannot be relied on, as it often in the poetical books conflicts with the rhythm; e.g. in Psal., xix, 10 (comp. Mason and Bernard's Grammar, ii, 187).

3. Masoretic Period.—Such modifications of the text as these were the precursors of the new method of dealing with it which constitutes the work of the Masoretes. It is evident from the notices of the Talmud that a fixed text of the Hebrew Bible, containing the number and repetition of the verses, the numbering respecting both the integrity of particular passages of the text itself, and also the manner in which it was to be read. The time at length arrived when it became desirable to secure the permanence of all such traditions by committing them to writing. The very process of preparing them would add another number; the traditions of various academies would be superadded the one upon the other; and with these would be gradually incorporated the various critical observations of the collectors themselves, and the results of their comparisons of different manuscripts. The vast heterogeneous mass of traditions and criticisms thus compiled and embodied in writing forms what is known as the Masorah, Masora, i.e. Tradition. A similar name had been applied in the Mishna to the oral tradition before it was committed to writing, where it had been described as the hedge or fence, תּוֹטֶפָרָה, of the law (Pirke Abot, iii, 13).

Buxtorf, in his Tiberias, which is devoted to an account of the Masora, ranges its contents under three heads of observations respecting the verses, words, and letters of the sacred text. With regard to the verses, the Masoretes recorded how many there were in each book, and the middle verse in each; also how many verses began with particular letters, or began and ended with the same word, or contained a particular number of words and letters, or particular words a certain number of times, etc. With regard to the words, they recorded the Kera and Kethib, where different words were to be read from those contained in the text, or where words were to be omitted or supplied. They noted that certain words were to be found so many times in the beginning, middle, or end of a verse, or with a particular construction or meaning. They noted also of particular words, and this especially in cases where mistakes in transcription were likely to arise, whether they were to be written under two forms, i.e. with or without the matres lectionis; also their vocalization and accentuation, and how many times they occurred so vocalized and accented. With regard to the letters, they computed how often each letter of the alphabet occurred in a given word; they noted upon the margins of letters stigmatized with the extraordinary points: they commented also on all the unusual letters, viz., the majuscula, which they variously computed; the minuscules, of which they reckoned thirty-three; the suspensus, four in number; and the inversus, of which, the letter being in each case two, there are eight or nine.

The compilation of the Masora did not meet with universal approval among the Jews, of whom some regretted the consequent cessation of oral traditions. Others condemned the frivolous character of many of its remarks. The formation of the written Masora may have extended from the 6th or 7th to the 10th or 11th century. It is essentially an incomplete work; and the labors of the Jewish doctors of the 14th century, who before the time of the Talmud, the text might have unendingly furnished materials for the enlargement of the older traditions, the preservation of which had been the primary object in view. Nor must it be implicitly relied on. Its computations of the number of letters in the Bible are said to be far from correct; and its observations, as is remarked by Jacob ben-Chayim, do not always agree with those of the Talmud, nor yet with each other; though we have no means of distinguishing between its earlier and its later portions.

The most valuable feature of the Masora is undoubtedly its collection of Kera. The first rudiments of this collection meet us in the Talmud. Of those subsequent-
ly collected, it is probable that many were derived from the collection of MSS., others from the unsupported judgment of the Masoretes themselves. They often rest on plausible but superficial grounds, originating in the desire to substitute an easier for a more difficult reading; and to us it is of little consequence whether it were a transcriber or a Masoretic doctor by whom the substitution was made. It is clear, however, that the Keris in all cases represent the readings which the Masoretes themselves approved as correct; and there would be the less hesitation in sanctioning them could we assume that they were always preserved in documents separate from the text, and that the written text itself remained unchanged. Effect, however, our MSS. often exhibit the text with the Keris readings incorporated. The number of Keris is, according to Elias Levi, who spent twenty years in the study of the Masorah, 848; but the Bomberg Bible contains 1171, the Plautian Bible 738. Two lists of the Keris exhibiting the variations of the printed Bibles with respect to them, the other distributing them into classes—are given in the beginning of Walton's Polyglot, vol. vi. (See Kera). The Masorah furnishes also eighteen instances of what it calls סומך קרש, "Correction of the scribers." The object of this is doubtless, but the review of Bick, that it relates to alterations made in the text by the scribes, because of something they offensive to them, and that therefore the rejected reading is in each case the true reading, is not borne out by the Septuagint, which in all the instances save one (Job vii, 20) confirms the present Masoretic text.

Furthermore, the Masorah contains certain ינשַׂעֵבִים, "Conjectures," which it does not raise to the dignity of Keris, respecting the true reading in difficult passages. Thus at Gen. xix, 23, for לְקָנֵב was conjectured לְקָנָה, because the word לְקָנָה is usually feminine.

The Masorah was originally preserved in distinct books by itself. A plan then arose of transferring it to the margins of the MSS. of the Bible. For this purpose large curtailments were necessary; and various transcribers inserted in their margins only as much as they had room for, or strove to give it an ornamental character by reducing it to fanciful shapes. R. Jacob ben-Chayyim, editor of the Bomberg Bible, complains much of the confusion into which it had fallen; and the scribal error he渲染er in bringing it together is honorably acknowledged by Buxtorf. Further improvements in the arrangement of it were made by Buxtorf himself in his Rabbinical Bible. The Masorah is now distinguished into the Masorah magna and the Masorah minora. In the latter book a very remarkable fact is brought to the reader, including all the Keris and other compendious observations, and usually printed in Hebrew Bibles at the foot of the page. The Masorah magna, when accompanying the Bible, is disposed partly at the side of the text, against the passages to which its several observations refer, partly at the end, where the observations are ranged in alphabetical order: it is thus divided into the Masorah textualis and the Masorah finalis.

The Masorah itself was but one of the fruits of the labors of the Jewish doctors in the Masoretic period. A far more important work was the furnishing of the text with vowel-marks, by which the traditional pronunciation of it was imperishably recorded. That the insertion of the Hebrew vowel-points was post-Talmudic is shown by the absence in the Talmud of all reference to them. Jerome also, in recording the true pronunciation, was dependent on the only copy of the text, which it was read; and occasionally mentions the ambiguity arising from the variety of words represented by the same letters (Hupfeld, Stud, und Krif, 1830, p. 549 sq.).

The system was gradually elaborated, having been moulded in the first instance in imitation of the Aramaic, which was itself the daughter of the Syrian. So Hupfeld. Ewald maintains that the Hebrew system was derived immediately from the Syrian. The history of the Syrian and Arabian vocalization renders it probable that the elaboration of the system commenced not earlier than the 7th or 8th century. The vowel-marks are referred to in the Masorah; and as they are all mentioned by R. Judah Chiyun in the beginning of the 11th century, they must have been perfected before that date. In the absence of authentic rabbinic records of the 11th and 12th centuries we know nothing of their origin. That the system of punctuation with which we are familiar was fashioned in Palestine is shown by its difference from the Assyrian or Persian system displayed in one of the Eastern MSS. collated by Finner at Odessa. Contemporaneous with the written text was the accentuation of the text. The import of the accents was, as Hupfeld has shown, essentially rhetorical (Stud. und Krif, 1837): hence they had from the first both a logical and a musical significance. With respect to the former they were called שׁים, "senses;" with respect to the latter, תונָה, "tones." Like the vowel-marks, they are mentioned in the Masorah, but not in the Talmud.

The controversies of the 16th century respecting the late origin of the vowel-marks and accents are well known. Both are with the Jews the authoritative exponents of the manner in which the text is to be read: "Any interpretation," says Aben-Ezra, "is not in accordance with the arrangement of the accents, thou shalt not hearken unto him;" and in like manner to the brunsting of the accents of the Books of Job, Psalms, and Proverbs the accents are held by some Jewish scholars to be irregularly placed (Mason and Bernard's Grammar, ii, 295; Delitzsch's Com. on the Psalter, vol. ii), the explanation is probably that in those books the rhythm of the poetry has afforded the means of testing the value of the accentuation, and has consequently disclosed its occasional imperfections. Making allowance for these, we must yet on the whole admire the marvellous correctness in the Hebrew Bible of both the vocalization and accentuation. The difficulties which both occasionally present, and which a superficial criticism would, by overruling them, so easily remove, furnish the best evidence that both faithfully embody, not the private judgments of the punctuators, but the traditions which had descended to them from previous generations.

Besides the evidences of various readings contained in the Keris of the Masorah, we have two lists of different readings purporting or presumed to be those adopted by the Palestinian and Babylonian Jews respectively. Both are given in Walton's Polyglot, vol. vi. The first of these was published by R. Jacob ben-Naphtali in the Bomberg Bible edited by him, without any mention of the source whence he had derived it. The different readings are 216 in number: all relate to the consonants, except two, which relate to the Mappik in the ה. They are generally of but little importance: many of the differences are orthographical, many identical with those indicated by Kimhi and Kethibh. The list does not extend to the Pentateuch. It is supposed to be ancient, but post-Talmudic. The other recension is the result of a collation of MSS. made in the 11th century by two Jews, R. Aaron ben-Asher, a Palestinian, and R. Jacob ben-Naphtali, a Babylonian. The differences, 904 in number, relate to the vowels, the accents, the Makkeph, and in one instance (Cant. viii, 6) to the division of one word into two. The list helps to furnish evidence of the date by which the punctuation and accentuation of the text must have been fixed, but is not of the same authority as the Keris, and is not even accorded with those of Ben-Asher.

It is possible that even the separate Jewish academies may in some instances have had their own distinctive standard texts. Traces of minor variations between the standards of the two Babylonian academies, Marar and Nahardea are mentioned by De Rossi (Proleg. § 35).

From the end, however, of the Masoretic period on-
O'LEYAR

Gal to take part in the Council of Trent. After his return he was appointed bishop of St. Thomas, in Acre, but declined, preferring to continue his literary labors.

Theodore wrote, 'De Lutherio ex usu studio theologico et zelo etergo ex theologo jurisconsulti fucto' (Jena, 1711):—Er aratis atheos convincendi methodia' (ibid. 1717), etc.

O'FELLLA (2), a German theologian and philosopher, son of Johann Gottlieb Oeleinck (3) and was born in Leipzig July 23, 1672. After studying at Leipzig, he made in 1689 a journey through England and Holland, and after his return was appointed, in 1709, professor of theology at Leipzig. He died there Nov. 13, 1715.

O'Leary, Arthur, an Irish Roman Catholic divine, was born, near the middle of last century, at Cork, and educated at St. Maloe, where he became a Franciscan. On his return to his native place he distinguished himself by his open adherence to the British interests, and in 1803 he persuaded his brethren to take the oath of allegiance; for which and his subsequent deportations in the cause of loyalty he obtained a pension, and won the esteem of moderate men of all parties. He afterwards settled in London, and officiated as principal minister in the Roman Catholic chapel in Soho Square. He died in 1809. His style persuaded the brethren in Africa to take the oath of allegiance; for which and his subsequent deportations in the cause of loyalty he obtained a pension, and won the esteem of moderate men of all parties. He afterwards settled in London, and officiated as principal minister in the Roman Catholic chapel in Soho Square. He died in 1809.

O'Leary was an acute and spirited writer, and was remarkable for his powers of wit and humor. He engaged in controversy with Wesley also, and though the two divines occupied ground which kept them forever at a distance in theological views, John Wesley yet hesitated not to pay tribute to O'Leary, and called him "an arch and lively writer." See Life of Rev. Arthur O'Leary, by England (1822, 8vo); Chalmers, 'Bibl. Dict. &c.' Lord. Gentleman's Magazine, vol. lix, (J. H. W.)

Oleaster, Gersonimo, a Portuguese Roman Catholic theologian, was born at Lisbon. Some Portuguese writers call him Geronimo de Azambuja, because they regard him as a native of that place. About 1520 he joined the Dominicans, and acquired great reputation for his proficiency in philosophy, theology, Hebrew, Greek, and Latin. In 1545 he went to Italy, and was one of the theologians appointed by Juan III of Portugal.
limited knowledge of his scholars, he could make but poor progress by teaching in Latin; but he began, with more success, in the German language to teach them from the catechism. Although not then an ecclesiastic, but only a layman, he ventured even publicly in his schoolroom to deliver an earnest and especially evangelical sermon from a text of scripture by faith alone, in which he indulged in strictures especially upon the prominence given to saints, and also in reference to the mass and processions. In this he met with the approbation of many in the town; yet there were also numerous and strong oppositions. He was immediately forbidden to preach in his school, but he nevertheless continued to preach in the Jacob's church, with ever increasing attendance upon his discourses; and before long nearly half of the town declared themselves decidedly in favor of the Reformation. Thelector Frederick, of the Palatinate, and the count palatine Wolfgang, of Zweibrücken, sent superintendent Freiberg, of Zweibrücken, to Tours for a short time to sustain Olevianus, and assist in carrying forward the quickly formed young congregation; but very soon the archbishop's troops succeeded in forcing the inhabitants into submission. The Lutheran children, when they were called, were glad to escape punishment, in body and soul, as "seditionis traitores, instigatos of incendiary movements and murder," and to obtain permission to emigrate to the nearest evangelical Palatinate districts, Trèves, or Hamburg. On the Moravian, Calixt was one of the principal movers in reformational interests, among them Olevianus, were sent to prison, from which they were only delivered, after a confinement of ten weeks, through the influence of the neighboring evangelical princes and the city of Strasburg, under the condition of a heavy fine and immediate banishment from the city. Still there were left in Trèves, after the first emigration and banishment, three hundred evangelical Christians. These, however, refusing to recant, were also soon after driven from the town. Not until 1817 (consequently only after a space of 248 years) was an evangelical service held in Trèves. Latterly its population has somewhat increased, though there is little probability that it will ever recover its ancient fame and importance.

Olevianus, of course, did not find it very difficult to occupy his time elsewhere. He was asked for from many quarters, but he preferred the university town of Heidelberg, whither he went as court preacher and professor of philosophy, and where he rendered, in 1550 and in the following years, great services to the Reformed theology. In connection with Ursinus, he prepared the Heidelberg Catechism, and formed the Palatinate Liturgy. Indeed, Olevianus labored with the greatest zeal for the complete organization of the Church in the Palatinate, entertaining well-grounded hopes that it might become a nursery of pure doctrine for the whole of Germany. He turned his attention especially to the calling of competent preachers and teachers, of whom there was yet a pressing need; and scarcely was he a quarter of a year in Heidelberg when he wrote to Calvin, requesting him to send over the Order and Discipline of the Church at Geneva, that he might use it as a model for the Heidelberg Catechism, and adoption, which, in regard to Church government, favored his views. Calvin with great cheerfulness sent him the outlines of the Genevan Church polity, together with many valuable suggestions in regard to it. The Genevan Reformer especially recommended to Olevianus the temperate and prudent introduction of this Church order, because he as well as Beza feared the impetuosity and enthusiasm of this spirited youth. Olevianus, however, did not at once succeed in introducing a fully self-sustaining order of discipline, entirely independent of the civil power. Theologically, he had to be satisfied with constituting synods of ministers, without elders, and arranging matters so that—agreeably to the questions eighty-one to eighty-five of the Heidelberg Catechism, and in accordance with the Palatinate Church, of which he was, without doubt, the principal author—the necessity of ecclesiastical Christian discipline, to be administered by the congregation, or those ordained and authorized for that purpose, was never acknowledged; while as yet, however, no independent presbytery or body of rulers and actually established for the administration of discipline. The power of discipline, for the time being, remained entirely in the hands of the civil authorities, as a kind of politic-moral regulation. In 1567 a circumstance occurred against which he immediately advanced into the favor of Olevianus in regard to Church government. A man of the name of Withers, an Englishman, and a rigid Calvinist, excited a discussion about the necessity of the exercise of Church discipline by the ministry and presbytery, "even against those who have been prevailing during several years over this vital question of the Reformed Church. In this discussion Olevianus took sides against his dear friend, professor Erastus, a learned and pious Swiss physician, who adhered to the Zwinglian doctrine of the union of all conversation, and correspondence with the demands of Olevianus prevailed with the elector; and in 1570, though not without violent protest from the opposing party, the elector instituted presbyters in every congregation, intrusting to them expressly and independently the administration of the Church government and discipline of the members of the elector's household. Moreover, the individual members of the presbytery, who, from their principal vocation, were called censors, were in no case to be elected by single congregations, but were appointed for life by the higher judicatories. Thus were the desires of Olevianus in regard to this important matter realized, and his own career crowned with success. The fruits which this arrangement yielded are thus stated in a funeral sermon by Tossanus: "Every one must acknowledge that there now exists in Heidelberg and in the entire Palatinate order, quietness, and a Christian-like state of things very different from what it was before the introduction of the presbytery. After the death of the elector (1576), and the immediate reinstatement into the Palatinate, by force, of the Lutheran doctrine and customs by his son Ludwig, Olevianus was suspended from his office of pastor and professor, forbidden all conversation with the learned, and prohibited from holding any private assemblies in his own house, and was put under arrest. The great reformer now removed to Berleburg, and in 1584 took up his abode at Herborn. Yet these years, spent away from the centres of theological controversy and discussion, were not in any way unfavorable to him, but rather to the hoary Christian. Most earnestly and zealously was he all these years occupied in the propagation of the Reformed doctrine, especially in Wittgenstein and Nassau, until death put an end to his labors of love, March 15, 1587. As a reformer, the efficiency of Olevianus counted principally in his success in preaching, and in the excellent and well-adapted order and government which he introduced into the Church. His talents and his taste indicated that his vocation was rather in this sphere than in that of author, or even theological preacher. It was his labor of love to accomplish the introduction of the presbyterian form of Church government and discipline into the Palatinate, first applied by Calvin to the Church in Geneva; extending and perfecting the system, however, so as to include the government of the Church by synods and presbyteries. The Olevianian experiment was in giving shape and character to the Reformation; receiving and introducing ideas of government which have not only since been widely adopted by Scotch, English, and Irish Presbyterians, but which have consecutively been adopted by the constitutions of our American civil government. What writings he has left belong principally to preparations for the Heidelberg Catechism (q.v.), and such as were published in its
defence or explanation. Around it, as in the case of Ursinus, his laurels will be perennially green; and, as being one of its authors, he will be longest and most gratefully remembered by the Reformed Church. Oley, Barabas, a learned English divine of considerable note, was born at Thorp, near Wakefield, about the opening of the 17th century. He was educated at Cambridge; was proctor of the university in 1635, and afterwards president of Clare Hall. He was vicar of Great Gransden, in Huntingdonshire, fifty-three years, and a considerable benefactor to the parish, as appears from an inscription in that church. After suffering much by the rebellion, he was in 1660 restored to his fellowship and vicarage; and on Sept. 4 of that year was installed prebendary of Worcester. In 1679 he was promoted to the archdeaconry of Ely. This dignity he afterwards followed, partly resigned, in his great humility not thinking himself sufficient to discharge the duty of it; which corrects a mistake of Mr. Wooll ("Fast. Oxon. vol. ii, col. 850, 1st ed.) that Dr. Taywell succeeded in the archdeaconry on Mr. Oley's decease; for it was on his resignation. Oley died Feb. 20, 1665. He published the works of Dr. Thomas Jackson, and Hervert's "Country Parson.

Olgja, St., a noted saint of the Russian Church, was by birth of very humble descent, but became grand princess of Russia as the wife of the duke Igor of Kiev. This prince, having undertaken an expedition against Constantinople, which proved unsuccessful, was slain on his return to his own dominions, and his widow Olgja thereupon assumed the government in his stead, and for many years governed with much prudence and success. Having resigned the government to her son, Vratislav, about the year 952, she repaired to Constantinople, where she was baptized by the patriarch Theophylactus, and received into the Church, assuming at baptism the name of Helena, in honor of St. Helena, mother of Constan tine. She returned to Russia, and labored with much zeal for the propagation of her new creed; but she failed in her attempt to induce her son, Sviatoslav, to embrace Christianity. Her grandson, Vladimir, who succeeded her, undertook the conquest and destruction of the Greek emperors of Constantinople, Basil and Constantine, was baptized in the year 988; but Olga did not live to enjoy this gratification, having died in 978, or, according to other authorities, as early as 970. As the first Christian grand princess, she was canonized after her death, and she has come to be held in high veneration in the Russian Church. Her festival falls on July 21. The practice of venerating her appears to date from the early period of the Russian Church, before the schism between the Eastern and Western churches. In the Latin Church her name is to be found among the catalogues of the saints. Her importance is her relation to Russian Church history Gibbon ("Decline and Fall of the Roman Empire," v, 435 sq.) has well pointed out. A female, perhaps of the basest origin, who could revive the death and assume the sceptre of her husband Igor, must have been endowed with those active virtues which command the fear and obedience of barbarism. In a moment of foreign and domestic peace she sailed from Kiev for Constantinople, where in the sacrament of baptism she received the venerable name of the empress Helena. After her return to Kiev and Novgorod, she firmly established in her new dominion the practice of lighting the lights in the evangelistic manner; but she continued her labors in the propagation of the Gospel were not attended with success, and both her family and nation adhered with obstinacy or indifference to the religion of their fa-thers. Yet the lessons and examples of the pious Olga had made a deep though secret impression on the minds of her people and society. See Neander, Church History, iii, 528; Gieseler, Church History, ii, 251; Kurtz, "Lehr- buch der Kirchengeschichte," i, 211; Strahl, Gesch. d. Russ. Kirche, p. 51 sq.; Nestor, "Izmail i sein Schlesisches Abbe in Ripol, as well as of St. Michael de Cusan, in the diocese of Elne. In 1019 we find him at the same time abbe of Ripol, of Lusan, and bishop of Ausone, or of Vic, then belonging to the see of Narbo, in Spain. Oliea died in 1047. All agree in praising his conduct as a bishop and as a patron. He was a powerful prelate; learned, discreet, a skilful and vigilant administrator. Several years before his death he abdicated the bishopric of Vic. The Historie Litururique, which counts him among the numbers of the consecrated by the pope. Olibanum. See Frankincense.

Olier, Jean Jacques, a distinguished French Roman Catholic theologian, noted as a Lazarist, was born at Paris Sept. 20, 1638. He studied in his native city, and in the Jesuit college of Lyons, the College of Harcourt, and the Sorbonne. He became successively prior of the Trinity of Clisson, in the diocese of Nantes, abbott of Pêcre, and titular canon of Brionne in 1656; and finally prior of Bazas, in the diocese of Chartres. On his return from a journey to Rome he became intimately acquainted with Vincent de Paul. Ordained priest, March 21, 1633, Olier associated himself with other priests, and they went as missionaries through the provinces of Auvergne and Lézay. While he was travelling through Brittany, his reputation was so great that Louis XIV. at the request of cardinal Richelieu, appointed him conductor of Henry Clause, bishop of Châlons-sur-Marne; but Olier, who contemplated forming a seminary for the education of priests, declined the office. Guided by the advice of Coudren, he founded and established the Academy of Saint Paul, in Paris, in Jan., 1642, in which he was assisted by able clerical teachers. This little community, numbering at first but three members, soon increased to twenty, and many of these associates rose in due time to the highest stations in the Church. But this was not his only labor. The parish of St. Sulpice, in Paris, subject to the abbey of St. Germain des Prés, was then a centre of immorality and licentiousness; Olier was chosen to reform it, and, although he had but little hope of success, he assumed the charge Aug. 10, 1642, still continuing to direct the seminary. Aided by a priest from Vaugirard, he became in his undertaking so successful that the parish became one of the most regular in the city. Dwelling was then a common practice. Olier undertook to form an association of the bravest among the nobles who would bind themselves never to give or accept a challenge, and never to fight as seconds in an encounter. This bold plan succeeded, and, at the head of those who took the vow on the day of Pentecost, 1651, were marshal de Fabert and the marquis of Fénelon, both renowned duellists. This step created great excitement, and was warmly approved by marshals d'Estrees, Schom berg, de Sainte-Praxede, and de Villars. In the mean time the number of priests in his seminary having greatly increased, Olier divided them into two societies—the Congregation of St. Sulpice, who retained charge of the

OLIER

OLIER of Vic, a French prelate, was born in the latter part of the 10th century. His father, who was also called Oliba or Oliva, was count of Cerdagne and Besalú. Abandoning to his older brothers, Bernard and Guifroi, the estates of Besalú and Cerdagne, young Oliba became a monk, and in 1009 was appointed abbot of Ripol, as well as of St. Michel de Cusan, in the diocese of Elne. In 1019 we find him at the same time abbe of Ripol, of Lusan, and bishop of Ausone, or of Vic, then belonging to the see of Narbonne, in Spain. Oliba died in 1047. All agree in praising his conduct as a bishop and an abbé. He was a powerful prelate; learned, discreet, a skilful and vigilant administrator. Several years before his death he abdicated the bishopric of Vic. The Historie Litururique, which counts him among the numbers of the consecrated by the pope. The letters of Oliba, published by Baluze in his "Appendice a" le "Vita" de "Marcu Hispanicus," upon statutes, and a treatise upon the Cyclopedia, which is unpublished. See Gallia Christ. vol. vi, col. 1098; Hist. Lit. de la France, vii, 566.

OLIN

seminary, for which they received a charter in Nov., 1845, and the Community of the Priests of the Parish, who governed the Church affairs; the two divisions, however, continued to form but one body. In 1855 Olier, together with his sons, Joseph, Louis, and Benjamin, left the Abbey of Beuron, and established the St. Sylvester, the Bibliotheca Sacra, and elsewhere, claiming to have been the discoverer of this interesting monument, and especially to have been, so far as he knew and believed, the first to recognise in this fragment of an arch the remains of the bridge spoken of by Josephus. The controversy with Dr. Robinson which ensued, and which appeared in the New York Commercial Advertiser and in the Christian Advocate for 1844-1845, contained an unqualified denial of the charge of plagiarism, sustained in the most important point by the testimony of two missionary corporations, whose time neglect all further words superfluous. The Rev. Cyrus Hamlin wrote from Bebek, near Constantinople: "I read Dr. Robinson's note in the North American of July with profound surprise, being confident that I had heard Mr. Homes affirm that he informed Dr. Robinson of the existence of that arch as a remnant of the bridge spoken of by Josephus. I immediately addressed a note to Mr. Homes, which with the reply I forward to you." Mr. Homes wrote: "In 1837, while residing several months at Jerusalem, I discovered one day with surprise in the obscure part of the city where it is situated the remains of this bridge, and it had never occurred to me before so far as I knew, the notice of any traveller. . . . In the spring of 1838, at the time of a missionary council in Jerusalem, I had the pleasure of meeting Dr. Robinson. We were all anxious to show Dr. Robinson all the most interesting facts relating to the bridge, and his own letters were sent him; and I shall, after reading them, I shall proceed to the Temple to Mount Zion." Mr. Hamlin further writes: "Mr. Homes has shown me the journal of his residence in Syria, and under date of May 1837, among a number of things noted as worthy of special examination is this brief minute, "The bridge discovered by Mr. Robinson from Mount Moriah." The entry was made at the time when he first began to regard the arch as a remnant of that bridge, and that was nearly one year previous to Dr. Robinson's visit to Jerusalem. He afterwards visited it and regarded it as unquestionably in connection with that bridge. When Dr. Robinson arrived in Jerusalem, he brought it to his notice as a remnant of the bridge spoken of by Josephus. An incorrect allusion to this controversy in Allibone's Biographical Dictionary renders a full statement of the facts important.

In 1842 Dr. Olin was elected president of the Wesleyan University, where he continued to fill until his death. This high school became under Dr. Olin's administration the best of the Methodist connection, and at once took its place beside the foremost and oldest of the New England colleges. True it lacked the money which the others had supplied all their wants, but so unerring was Dr. Olin in his efforts to make the Wesleyan University a power in the land that, notwithstanding all the embarrassments surrounding him and all the opposition facing him, he yet gathered about him a faculty inferior to none other in the country. Indeed, while Dr. Olin was a wonderful preacher, combining fluence of thought, overwhelming earnestness of feeling, and physical power of delivery to a degree univalled in his time; and while his intellect was of extraordinary sweep and power; while morally his life was a perfect and a struggle moreover the highest kind; he longed to be like Christ; and while his printed sermons have the grand reach of Chalmers, with the practical directiveness of application which has recently been so much admired in Robertson; it is nevertheless to be
OLIN

OLIVA

insisted upon that it was not as a preacher and philosopher that Dr. Olin should take first rank, but rather as an educator. As the head of a university he was truly in his own place—a veritable king of men; none who came near him failed to acknowledge the supremacy of his great nature; none of his students, whose conceptions of the powers and duties of educators were inflamed by their personal contact with him, failed to be impressed with their duty towards the world into which they launched out from college. In 1848 Dr. Olin married Miss Julia M. Lynch, daughter of Judge Lynch, of New York. Dr. Olin was elected delegate to the General Conference of 1844 and 1852, and delegate from his New York and New England Conferences to the first meeting of the Evangelical Alliance in London, 1846. He was a contributor to the Wesleyan Journal, the Christian Advocate and Journal, and the Methodist Quarterly Review. He died at Middletown, Conn., Aug. 1, 1851. Two volumes of Sermons, Lectures, and Addresses were published at New York in 1852. In 1853 these were followed by his Life and Letters, edited by Mrs. Olin, and enriched by the valuable contributions of his friends.

"Dr. Olin was a man of remarkable organization. His mind was as luxuriant as a garden. His powers were numerous and comprehensive. He was not a mere critic. His intellect was of that imperial rank to which but few of the sons of men can lay claim. At once acute, penetrating, and profound, it lacked none of the elements of true mental greatness. We have known many men more superior in his acquired learning; but for breadth and comprehensiveness he was a match in learning and richness of thought, for fertility and abundance of invention, we have never met his equal. . . . But grand as was Dr. Olin's intellectual being, his moral life was still grander. So overshadowing, indeed, was its majesty, that we can hardly contemplate and portion of his nature apart from it. . . . With such qualities of mind and heart, it is not wonderful that he was pre-eminent as a preacher. In overmastering power in the pulpit, we doubt whether living he had a rival, or dying has left his like among men" (Rev. Dr. McClintock, in Methodist Quarterly, Oct., 1851, p. 632). "He had the celestial fire of sacred oratory. He had great power of insight and logic; but his chief strength lay in the kindling and electric energy of his sympathetic and emotional nature. The great truths which his intellect issued were effective because they were borne on the glowing and irresistible stream of his sensibilities" (New-Englander, xii, 124–151). "His character—moral, social, and intellectual—was throughout of the noblest style. In the first respect he was pre-eminent for the two chief virtues of true religion—charity and humility. . . . The terms of the former were simply and simply. . . . The society acquired under his government proved that they had made a wise choice (see Nicolini, p. 322). Personally Oliva was not a favorite. He kept himself at a great distance from the inferior brethren of the order, and seldom confided to give an audience. He spent a great part of his time in the delightful villa near Albano, where he occupied himself with the cultivation of the rarest exotics. When at Rome he retired to the novitiate of St. Andrea. He never went out on foot. He lived in a most sumptuously and elegantly adorned apartment, enjoying the pleasures of a table furnished with the most select delicacies. He was only studious of enjoying the position he held, and the power he had obtained. Reserving for his particular attention matters of political importance, he left the affairs of the society to the entire management of subordinate officers. . . . His virtue of outward position, and his skill in so failing to attract notice or to strengthen his order. The political importance which the Jesuits acquired then was due almost wholly to Oliva's personal efforts. He maintained a correspondence which extended to almost all the monarchs of Europe, in which he maintained himself a courteous, polite, and deeply engaged in most serious and important affairs. Oliva died in 1861, and was succeeded by Noyelle (q. v.). See Nicolini,

(J. H. W.)

Oliva, Alessandro, a distinguished Italian Roman Catholic prelate, noted also as a prominent member of the monastic order, was born at Sassoferato in 1408, of poor parents. When three years old he fell into the water, and was taken out for dead; but, being carried by his mother into the church of the Holy Virgin, he recovered wonderfully, or, according to the papists, miraculously. He was now dedicated by his parents to the service of the Church, and when yet but a youth was admitted among the Augustinian monks. He studied at Rimini, Bologna, and Perusa, in which last place he was first made professor of philosophy, and afterwards appointed to teach divinity. At length he was chosen provincial, and some time after accepted, not without reluctance, the post of solicitor-general of his order. His office obliged him to go to Rome, where his learning and virtue became greatly admired, notwithstanding that he took all possible methods, out of extreme humility, to keep at a distance from papal notice. The cardinal of Tarentum, the protector of his order, could not prevail upon him to engage in any of the public disputations, where everybody wished to see a man of his great erudition: however, as he was a sublime theologian, and a most eloquent orator, he attracted public attention by whatever he wrote and whenever he preached. He appeared in the pulpits of the principal cities in Italy, as Rome, Naples, Venice, Bologna, Florence, Mantua, and Ferrara; was elected first vicar-general, and then general of his order, in 1450; and at last created cardinal, in 1490, by Pope Pius II. This learned pontiff gave Oliva afterwards the bishopric of Camerino, and made use of his abilities on several occasions. Oliva died shortly after at Tivoli, where the court of Rome then resided, in 1463. He wrote, De Christi ortu Sacrosanctum.—De fide.—De pecto loco in Spiritum Sanctum.—Orations elegantés. (J. H. W.)

Oliva, Fernando Perez de, a noted Spanish morlist, was born in Cordova about 1492. His father, who himself cultivated letters, educated him with much care. At twelve he was studying in the University of Salamanca; whence he went to Alcala, then to Paris, and, after a time, to Rome, under the guidance of the uncle, attached to the court of Leo X. He enjoyed all the advantages that the capital of the Christian world could offer. On the death of his uncle he was proposed to occupy the place thus left vacant; but he preferred to remain in Rome, where he gained so much by his industry that he was raised within three years. Pope Adrian VI, informed of the success of Oliva, endeavored to attract him to Rome. The love of country prevailed with the young Spaniard, who returned to Salamanca, and was one of the founders of the college of the Archbishop in 1528. He taught moral philosophy, and became the rector of the college. Shortly after having attained this elevated position he died, in 1539, though still a young man—a great loss to letters. Oliva had seen with what success Italian writers had, in imitation of the Latins, composed works in prose, and he regretted that in Spain till Larin had still the language for moral and philosophical discussions; he employed the Castilian tongue in a dialogue On the Dignity of Man. He also wrote several didactic discourses On the Faculties of the Mind and their Use, etc., and a discourse which he pronounced in Salamanca as candidate for the chair of moral philosophy. The historian Morales, his nephew, assures us that in all these treatises Oliva designed to give models of the power and resources of the Spanish tongue. His example was promptly followed by writers of merit—Sedeno, Salazar, Luis de la Vega, Paramés; but none so well founded for force and expression as the first part of the dialogue On the Dignity of Man. All the works of Oliva were published for the first time by his nephew, Ambrosio de Morales (Cordova, 1585, 4to); they were reprinted (Madrid, 1787, 2 vols. 12mo). The Inquisition held them until after correction. See Rasoinamento que hiro en Salamanca, in the Works of Oliva; Rezal y Ugart, Bibliotheca de los Escritores que han sido individuos de los seis Colegios Mayores (Madrid, 1805, 4to), p. 258, etc.; Antonino, Noticias de las Bibliotecas (Madrid, 1830); Dicknor, Hist. of Spanish Literature, ii, 8 sq., 66; iii, 401. (J. H. W.)

Olivo (オリーブ), probably from Oil, to be pleasant, said esp. of colors; or, as Gennius supposes, from Oil, to shine, from the gloss of the oil; Gr. ὀλιον, i.e. olive-tree. The Heb. name is essentially found in oil of all the kindled languages—the Arabic, Syriac, Ethiopic, and Coptic; comp. the Spanish aceite, oil.

The olive-tree is one of the chief vegetable products of Palestine, and an important source of that country's wealth and prosperity throughout the Scripture period. It was cultivated in olive-gardens (called in Hebrew Oil, Fruz), usually on high ground, and even on mountains (comp. Gen. viii, 11;_Shaw, Travels, p. 298), preferring a dry and sandy soil (see Virgil, Georg. ii, 160; Eclog. i. 19; Hor. C. i. 39; Theophr. Plant. iv, 8; Pliny, iii, 50). The species are widely distributed in the warmer temperate parts of the globe. The common olive (Oliva Europaea), a native of Syria and other Asiatic countries, and perhaps also of Europe, although probably not native, is of wild state a thorny shrub or small tree, but through cultivation becomes a tree of twenty to forty feet high, destitute of spines. It attains a prodigious age. The cultivated varieties are very numerous, differing in the breadth of the leaves, and in other characters. The general appearance of the trees is that of an apple-orchard, as to the trunk, and the, with as to the stems and leaves. The olive is of slow growth (Virgil, Georg. ii, 3). It never becomes a very large tree, though sometimes two or three stems rise from the same root, and reach from twenty to thirty feet high, with spreading branches (comp. Hos. xiv. 7; Strabo, vi, 769). The leaves are in pairs, lanceolate in shape, of a dull green on the upper, and hoary on the under surface (comp. Psa. lii, 10; cxviii, 8; Jer. xvi. 16; Ovid, Metamorph. viii, 295; Theophr. Plant. iv, 8; Pliny, iii, 50; Dio Cass. li. 17). Hence in countries where the olive is extensively cultivated the scenery is that of a character from this color of the foliage. The flowers, which are white, appear in little tufts between the leaves. The fruit is an elliptical drupé, of a greenish color, when young, gradually becoming purple, and even black, with a hard, stony kernel, and is remarkable from the outer fleshy part being that in which much oil is lodged, and not, as is usual, in the almond of the seed. In Palestine the olive blossoms in June (Anderson, Biblical Light, p. 202). It ripens from August to September. The tree is usually propagated by slips, and it bears very abundantly, with comparatively little care (Pliny, xxvii, 19; comp. Jer. xi, 18). As the growth of the tree, it thrives best in warm and sunny situations. It is of a moderate spread, with a knotty, gnarled trunk, and a smooth ash-colored bark. Its fruit is singularly indicative of tenacious vigor; and this is the force of what is said in Scripture of its "greenness," as emblematic of strength and prosperity. The leaves, too, are not deciduous. Those who see olives for the first time are occasionally disappointed by the dusty color of their foliage; but the force of their leaves, similar with them find an inexpressible charm in the rippling changes of these slender gray-green leaves. Mr. Ruskin's pages in the Stones of Venice (iii, 175-177) are not at all extravagant. The olive-تعرب varieties are particularly distinguished: the long-leaved, which is cultivated in the south of France and in Italy, and the broad-leaved in Spain, which has also much larger fruit than the former
The olive is one of the earliest of the plants specifically mentioned in the Bible, the fig being the first. Thus in Gen. viii, 11 the dove is described as bringing the olive-branch to Noah. How far this early incident may have suggested the later emblematical meanings of the olive we cannot say; but now it is as difficult for us to disconnect the thought of peace from this scene of primitive patriarchal history as from a multitude of allusions in the Greek and Roman poets. Next, we find it the most prominent tree in the earliest allegory. When the trees invited it to reign over them, its sagacious answer sets it before us in its characteristic relations to divine worship and domestic life (Judg. ix, 8, 9). The olive, being an evergreen, was added as an emblem of prosperity (Psa. lli, 8; cxxviii, 8), and it has continued, from the earliest ages, to be an emblem of peace among all civilized nations. Thus among the Greeks the olive was sacred to Pallas Athene (Minerva), who was honored as the bestower of it; it was also the emblem of chastity. A crown of olive-twigs was the highest distinction of a citizen who had merited well of his country, and the highest prize of the victor in the Olympic games. The different passages of Scripture in which the olive is mentioned are elucidated by Celsus (Hierobot. ii, 330). So with the later prophets it is the symbol of beauty, luxuriance, and strength; and hence the symbol of religious privileges (Isa. 11, 6; Jer. xi, 6; comp. Eccles. i, 10). The olive is always enumerated among the valued trees of Palestine; which Moses describes (Deut. vi, 11; viii, 8) as a "land of oil-olive and honey" (so in xxxviii, 40, etc.). Solomon gave to the labourers sent him by Hiram, king of Tyre, 20,000 baths of oil (2 Chron. ii, 10). Besides this, immense quantities must have been required for home consumption, as it was extensively used as an article of diet, for burning in lamps, and for the ritual service. The oil of Palestine was highly prized, and large quantities were exported to Egypt, where the tree has been little cultivated (Ritter, Erdk. xi, 519; see Oil, § 12). The Phoenicians also received much oil from Palestine (Ezek. xxvii, 17; comp. 1 Kings v, 11; Ezra iii, 7). The kings of Israel raised a part of their revenue in oil (2 Chron. xxxii, 28). The best olives grew in the region of Taches (Hisham, vii, 5). It was not usual to eat the olives themselves, either raw, softened in salt water (comp. Burckhardt, Travels, i, 65), or preserved (Dioscor. i, 138). On the method of preserving olives, see Colum. xii, 47. See Oil.

Not only the olive-oil, but the branches of the tree were employed at the Feast of Tabernacles (Neh. viii, 15). See Olive. The wood also was used (1 Kings vi, 23) by Solomon for making the cherubim (vers. 31, 32), and for doors and posts "for the entering of the oracle," the former of which were carved with cherubim and palm-trees and open flowers. The wood of the olive-tree, which is imported chiefly from Leghorn, is like that of the box, but softer, with darker gray-colored veins. The roots have a very pretty knotted and curious character; they are much esteemed on the Continent for making embossed boxes, pressed into engraved design in metallic moulds. Furniture is made of the olive-tree in Italy.

The wind was dreaded by the cultivator of the olive, for the least ruffling of a breeze is apt to cause the flowers to fall:

"Si bene floriunt oleae, nitidissimae annus" (Ovid, Fast. v, 965).

Thus we see the force of the words of Eliphaz the Temanite: "He shall cast off his flower like the olive" (Job xv, 28). It is needless to add that the locust was a formidable enemy of the olive (Amos iv, 9). It happened not unfrequently that hopes were disappointed, and that "the labor of the olive failed" (Hab. iii, 17). See Flower. Of all fruit-bearing trees it is the most prodigal in flowers. It literally bends under the load of them. But then not one in a hundred comes to maturity. The tree casts them off by millions, as if they were of no more value than flakes of snow, which they closely resemble. So will it be with those who put their trust in vanity. Cast off, they melt away, and no one takes the trouble to ask after such empty, useless things—just as our olive seems to throw off in contempt the myriads of flowers that signify nothing, and turns all her fatness to those which will mature into fruit" (Thomson, Land and Book, i, 525). See Blast.

That the olive grows to a great age has long been known. Pliny mentions one which the Athenians of his time considered to be coeval with their city, and
therefore 1600 years old. Near Terni, in the vale of the cascade of Marmora, there is a plantation of very old trees, supposed to consist of the same plants that were growing there in the time of Pliny. Lady Calcott states that at Tericoncio, on the mountain-road between Tivoli and Palestrina, there is an ancient olive-tree of large dimensions, which, unless the documents are purposely falsified, stood as a boundary between two possessions even before the Christian era, and in the 19th century was looked upon as very ancient. The difficulty on this point arises from a fresh tree springing up from the old stump. Chateaubriand says: "Those in the garden of Olivet (or Gethsemane) are at least of the times of the Eastern empire, as is demonstrated by the following circumstance. In Turkey every olive-tree found standing by the Mussulmans when they conquered Asia pays one medina to the treasury, while each of those planted since the conquest is taxed half its produce. The eight olives of which we are speaking are charged only eight medinas." By some, especially by Dr. Martin, it is supposed that these olive-trees may have been in existence even in the time of our Saviour. Dr. Wilde describes the largest of them as being twenty-four feet in girth above the roots, though its topmost branch is not thirty feet from the ground; Bovè, who travelled as a naturalist, asserts that the largest are at least six yards in circumference, and nine or ten yards high; so large, indeed, that he calculates their age at 2000 years. See Gethsemane.

It is more than probable that the olive was introduced from Asia into Europe. The Greeks, indeed, had a tradition that the first branch of it was carried by a dove from Phoenicia to the temple of Jupiter in Epirus where the priests received and planted it; and Pliny states that there were no olive-trees in Italy or Spain before the 173rd year from the foundation of the city of Rome. Though the olive continues to be much cultivated in Syria, it is much more extensively so in the south of Europe, whence the rest of the world is chiefly supplied with olive-oil. See Olive-tree.

No tree is more frequently mentioned by ancient authors, nor was any one more highly honored by ancient nations. By the Greeks it was dedicated to Minerva, and even employed in crowning Jove, Apollo, and Heracles, as well as emperors, philosophers, and orators, and all others whom the people delighted to honor. By the Romans also it was highly honored; and Columella describes it as "the chief of trees." It is not wonderful that almost all the ancient authors, from the time of Homer, so frequently mention it, and that, as Horace says, to win it seemed the sole aim some men had in life (Carth. i. 7). The olive still continues to be one of the most useful and highly cultivated of all the fruits. Knowledge in a list he had made of references to all the notices of plants by the different travellers in Palestine, those of the presence of the olive exceed one hundred and fifty, and are more numerous by far than those to any other tree or plant (De Rer. Nat. Hist. ii. 22). The references to vines, fig-trees, mulberries, and oak ran next in frequency. These depend partly upon the knowledge of plants the several travellers have. Botanists, even from Europe, neglect tropical species with which they are unacquainted. See Tristram, Nat. Hist. of the Bible, p. 387; Thomson, Land and Book, i. 70. See Tree.

OLIVE-BERRY ("μηλία, gargar, so called from its round and rolling form; Isa. xvii. 6, "berry"; Isaiah, Jan. iii. 12, elsewhere "olive," etc.), the drupe or fruit of the olive-tree, known as "olives" par excellence. It is greenish, whitish, violet, or even black, never larger than a pine nut; it is generally oval, sometimes globular, or obovate, or acuminate. The fruit is produced in vast profusion, so that an old olive-tree becomes very valuable to its owner. It is chiefly from the peregrin that olive-oil is obtained, not from the seed, contrary to the general rule of the vegetable kingdom. Olives, gathered before they are quite ripe, are pickled in various ways, being usually first steeped in lime-water, by which they are rendered softer and milder in taste. They are well known as a restorative of the palate, and are also said to promote digestion. Disagreeable as they generally are at first, they are soon greatly relished, and in the south of Europe are even a considerable article of food. Dried olives are there also used, as well as pickled olives. See Olive.

OLIVE-FAT. See Oil-Mill; Press.

OLIVE-OIL (fully ὄλυμα P 20, olive of oil, Dent. viii. 8; briefly ὄλυμα, Exod. xxx. 34, or ὄλυμος, simply 2 Kings xviii. 21; A. V. "oil olive"), the product of the fruit of the olive. It is generally called the "mother of all medicines," answering to butter, cream, and fat for the table, as well as for illumination. Olive-oil is much used as an article of food in the countries in which it is produced, and to a smaller extent in other countries, to which it is exported for medicinal and other uses. A good illustration of the use of olive-oil for food is furnished by 2 Chron. ii. 10, where we are told that Solomon supplied Hiram's men with "twenty thousand baths of oil." Comp. Ezra iii. 7. Too much of this product was supplied for home consumption; hence we find the country sending it as an export to Tyre (Ezek. xxvii. 17) and to Egypt (Hos. xii. 1). This oil was used in coronations: thus it was an emblem of sovereignty (1 Sam. x. 1; xii. 3, 5). It was also mixed with the offerings in sacrifice (Lev. ii. 1, 2, 6, 15). Even in the wilderness very strict directions were given that, in the tabernacle, the Israelites were to have "pure olive oil, beaten without leaven, to cause the lamp to burn always" (Exod. xxvii. 20). For the burning of it in common lamps, see Matt. xxi. 3, 4, 8. The use of it on the hair and skin was customary, and indicative of cheerfulness (Ps. xxvii. 5; Matt. vi. 17). It was also employed medi- cinally in surgical cases (Luke x. 34). See, again, Mark vi. 13; Jas. v. 14, for its use in combination with prayer on behalf of the sick. See Oil.

In the south of France and in Italy, where the olive-culture is conducted most carefully, the fruit is gathered by hand in November, and after pressing, through a mill, which separates the pulp or flesh from the hard stone, the pulp is put into bags of rushes and subjected
the Greek worship of Dionysus. The early Christian church, influenced by the mysteries of Dionysus, adopted his symbols and practices, particularly the ritual of the eucharist, where believers partake of bread and wine, seen as the body and blood of Christ, respectively. This practice is a direct continuation of the Greek Dionysian traditions, emphasizing the sacred nature of the body and its spiritual significance. The Christian Church, like its predecessors, found in the body a physical representation of the divine, a metaphor for the soul and its ultimate redemption. The Eucharist, therefore, is not just a commemoration of Jesus' last supper but an ongoing celebration of the sacrament of the body and blood, a testament to the continuity of religious practices and the spiritual significance of the body throughout history.

OLIVERS

Olive to go to Paris; but there also he defended himself successfully. Finally, in 1290, Nicholas IV gave or- der to general Raymond Gaufredi to proceed against the followers of Olive; it does not, however, appear that the latter was personally prosecuted. He took part in the general chapter held at Paris in 1292, and there gave explanations which all declared satisfactory. He died at Paris on 16th June, 1299. Before his death he declared his attachment to Scripture, and his obe- dience to the decisions of the Church of Rome. He also declared his regret at seeing the Minorite monks seeking to increase their worldly riches, and said that the begging brothers should be satisfied with the nec- essities of life, and never expect or aim to lead as comfortable a life as the canons regular. After his death his enemies still attacked his memory, and it was condemned by John de Mur in 1257; twelve theolo- gians accused him of heresy; his body was dug up and burned; his doctrines were solemnly condemned by the Council of Vienna in 1312, and again by pope John XXII in 1320; and all the historians of the Middle Ages give him the reputation of a heretic. Yet he had only aimed to secure reforms which might have pre- vented, or at least postponed, the breaking up of the Brotherhood. At the close of the 14th century Barthel- emy of Fisa vindicated the opinions of Olive; St. An- tonin praised him, and pope Sixtus IV rehabilitated his memory. His works are over forty in number, consist- ing of commentaries on various parts of the Bible, of the works of the Fathers devoted to monasticism, and concerning the heavenly hierarchy, on the Master of Sentences, of a work on the rule of St. Francis, several contro- versial works, a panegyric of the Virgin Mary, treatises on virtue and vice, the sacraments, usury, the authority of the pope and that of councils, etc. His only printed works known are Expositio de regulis Sancti Fran- cicci (Venice, 1518, fol.):—Quodlibeta (ibid, 1509, fol.). See Hist. Littér. de la France, xxi, 41-55; Wadding, Scrip- torum ord. Minorum; Dict. Historique des Auteurs Eccles. vol. iii; Dom. de Gubernatis, Orbis scholast. vol. 1.

OLIVER OF MALMESBURY, a Benedictine monk of the 11th century, is chiefly memorable as the first Englishman who attempted to travel through the aerial re- gions. He is said to have been well skilled in mechan- ics; but in attempting to fly from a lofty tower, with wings of his own construction fastened to his hands and feet, he fell and broke both his legs.

OLIVER, JOHN, a noted Wesleyan preacher, gener- ally spoken of as one of Wesley's "helpers," was born at Chester, Cheshire, England. His father, who was a mechanist seriously connected to John in association with the Methodists, but the boy was drawn towards them, liking their simplicity and fervor of Christian devotion, and finally became one of their con- verts (about 1730). The severity of the parental strict- ures upon his newly avowed faith deprived the young man of his reason, and for months his recovery to sanity was regarded as doubtful. His mother, a sensible and prudent woman, thought it best for John to attend the worship of the Wesleyans, and with them he soon found the medicine which his disturbed mind craved. "My strength," he says, "came again—my light, my life, my God; I was filled with all joy and peace in be- lieving." He was made a class-leader as soon as his restoration was demonstrated, and in due time Mr. Wes- ley called him into the itinerant ranks, where he met with "ferry trials," but bore them bravely. After many years of indefatigable labor we hear him say, "I bless God that I never was in any circuit where I had not some seals of my mission." In the year 1788 he was discontinued as a preacher, and we hear nothing of him after that. He died in 1798. The fields in which Oli- ver labored were Bath, Bristol, Salisbury, Worces- ter, Chester, Sheffield, Manchester, and Liverpool. In all of these his converts were counted by hundreds, and his name is revolved to this day as of blessed memory. One of the severest trials he encountered while preach- ing was in 1774, when he was arrested in the midst of his sermon for vagrancy, notwithstanding his license to preach, and for some time suffered imprisonment. It was on Chester Circuit, and the excitement for a time ran high among those who believed in Oliver's labors. One of them fell sick during the service, and blood flowed were pre- vented. See Stevens, Hist. of Methodism, ii, 139-142; Southey, Life of Wesley, ch. xvii; Armitage Maga- zine, 1779.

Olivers, Thomas, a noted English hymnologist, and one of Wesley's most eminent ministers, was born of humble parentage at Tregaron, Montgomeryshire, England, in 1726. Left an orphan at five, he was rear- ed on a farm by a relative, who gave him some edu- cation, and with whom he lived until eighteen years of age, when he was bound as an apprentice to a shoe- maker. Having received no religious education save a few forms, he early commenced a career of abandoned wickedness, from which he was at last saved by conver- sion through the preaching of Mr. Whitefield. From that time forth he was a most humble, devoted, and la- borious Christian. After a while he was authorized to preach, and his ministrations were abundantly successful both in conversions and in persecutions. In October, 1766, Mr. Olivers went to London to preach, whence he was removed to London. At the Conference of 1756 he was appointed to Ireland, and the next year again moved to London. During this year he married happily. After filling many of the principal stations in England, he was sent to Scotland in October, 1764, whence he went to Ireland, and preached at Dublin, and then again over to England. After several years spent in the ministry with Mr. Wesley, he was by the latter put in charge of the printing, an important part of which was the Arminian Magazine, which, under Mr. O's editorship, was conducted with ability and objectiveness. In August, 1789, when Mr. Wesley became dissatisfied, and discharged Olivers. He afterwards resided in London, laboring as his age permitted, until his death, March 7, 1799. He was a man of robust mind and great ver- satility of talents; he was an able and convincing preacher, a masterly controversialist, and his writings, both in prose and verse, possess much merit. His noble hymn called Leoni, and beginning "The God of Abrahʹm prate," had reached its thrithric edition before his death, and some others nearly as many. Mr. Frater speaks in high terms of him "as a writer, a logician, a poet, and a composer of sacred music;" and some of his writings will long be cherished in "the praises of Israel." Montgomery says of Oliver's Leoni, "There is not in our language a lyric of more majestic style, more elevated thought, or more glorious imagery; its structure, indeed, is very attractive; but, like a stately pile of architecture, severe and simple in design, it strikes less on the first view than after deliberate examination, when its proportions become more graceful, its dimensions expand, and the mind itself grows greater in contemplating it." It is said that this fine hymn had great influence on the mind of Henry Martyn when contemplating his important missionary career. Olivers was one of the most eloquent defenders of Mr. Wesley and the Wesleyan cause against the attacks of Toplady, Richard and Rowland Hill, and others. Olivers's separately published hymns, tracts, etc., number sixteen, and many of them were of marked ability and usefulness. Christophers, in his Epesber Singers and oth- er Poets of Methodism (N. Y. 1876, 12mo), thus describes Olivers's personal appearance, as furnished by an eye- witness of the great Cornwall out-door service in Sep- tember, 1773: "The other figure standing by Wesley was Olivers. He was a ponderous man, with a face that was a man in the prime of life, with a face that could not be looked at without interest, open, well-formed, and man-
The eye that kindled and flashed as the mighty music of the hymn rose from the enthusiastic multitude was the eye of a thinker, keen, telling of logical wariness and ready skill, and giving out, in harmony with its kindred features, expressions of genius, humor, boldness, ardent temper, and vivid imagination." See Lives of early Methodist Preachers (ed. by Thomas Jackson), i, 195; Stevens, Hist. of Methodism, ii, 41 sq.; iii, 143 sq.; Southey, Life of Wesley, ch. xxx; Christophers, Epworth Singers, ch. xi.

Olives, Mount of. See Olivet.

Olivet, the well-known eminence, or rather ridge, on the east side of Jerusalem, separated from the city by the Jehoshaphat valley; it is intimately and characteristically connected with some of the greatest and most significant events of the history of the O.T., the N.T., and the intervening times, and one of the firmest links by which the two are united; the scene of the flight of David, and the triumphal progress of the Son of David, of the idolatry of Solomon, and the agony and betrayal of Christ. In the following account of it we collect and digest the information from all ancient and modern sources.

1. The name "Mount of Olives" (טֵּרוֹס הָלוֹאָב; Sept. τοῦ ὄρους τῶν ὑλαίων) occurs only once in the O. T. (Zech. xiv, 4), but the hill is clearly alluded to in five other passages. In 2 Sam. xv, 90 we read that David, in fleeing from Jerusalem during Absalom's rebellion, "went up by the ascent of the Olives" (םירוחב תֵּרוֹס הָלוֹאָב), unquestionably the western side of the mountain, up which he had to go "toward the way of the wilderness" (ver. 29). In 1 Kings xi, 7 it is recorded that Solomon built "a high place for Chemos in the hill that is before the house of the Lord, which is on the face of Jerusalem." This is an accurate description of the position of Olivet—facing the Holy City, visible from every part of it. The same hill is called in 2 Kings xxiii, 18 "the Mount of Corruption" (טֵּרוֹס עֵמֶר), doubtless from the idolatrous rites established by Solomon, and practiced there. In Neh. viii, 15 Olivet is called emphatically "the Mount" (הִרְגָּן), etc. Ezekiel mentions it as the mountain which is on the east side (טֵּרוֹס בַּפֹּת), etc. The Mount of Olives' (τοῦ ὄρους τῶν ὑλαίων), which may be regarded as a descriptive appellation—the mount on which the olives grew (Matt. xxxi, 1; xxiv, 4; xxxvi, 30; Mark xi, 1; Luke xix, 37; John viii, 1). But Luke in three passages gives it a distinct proper name—"And it came to pass, when he was come nigh to Bethphage and Bethany, at the mount called Elaium"—(πρὸς τὸ ὄρος τοῦ ἑλαίου· ἑλαίων), not, as in the A. V., "the Mount of Olives." The word is ἑλαίων, the nom. sing., and not ἑλαίων, the gen. pl. of ἑλαία (see Allford, Tischendorf, Lachmann, etc., ad loc.), in which case it would have the article (xiv, 29; comp. ver. 37; xx, 37; xii, 39). In Acts i, 12 Luke again employs it in the gen. sing.—"Then returned they unto Jerusalem from the mount called Olivet" (διὰ ὄρους τοῦ ἑλαίου· ἑλαίων; ["called Elaium"]). In Josephus also we read δυτὶ τοῦ ἑλαίων ὄρος (Ant. vii, 9, 2; comp. xx, 8, 6; War, v, 2, 3), showing that in his time Elaium was the ordinary name given to the mount.

The rabbins called Olivet "The Mount of Anointing" (עֲבֹדַת נְשׁוֹ nav; Mishna, Paro, iii, 6; Reland, Pallast, p. 587); and Jarchi, in his note on 2 Kings xxiii, 18, says this was its usual name; but that the sacred writers changed it to "Mount of Corruption" (טֵּרוֹס עֵמֶר), by a play upon the word, and to denote its defilement by the idolatrous rites of Solomon. The name נְשֹׁ וֹ עֲבֹדַת is closely allied in sense to Olivet—the latter referring to the oil-producing tree, the former to the anointing with its oil (Lightfoot, Opera, ii, 200). The names applied to the mount in the Targums are as follows: דָּבָק רֹאֶה or דָּבָק רֹאֶה (2 Sam. xvi, 20; 2 Kings xxiii, 18; Ezra xii, 28; Zech. xiv, 4), נִנֵּשְׁבּ סְפָך (Cant. viii, 8; and Gen. viii, 11, Pseudo-Jon. only).

At present the hill has two names, Jebel el-Tür, which may be regarded as equivalent to the expression "the Mount" (ירגון) in Neh. viii, 15. This is the

The Mount of Olives. (From a photograph by the editor.) VII.—12
name almost universally given to it by the Mohammedan residents in Jerusalem. The Christians and Jews seem to prefer the Arabic equivalent of the Scriptural name, " Jebel es-Zaitun, " Mount of Olives."  

2. Physical Features.—The Mount of Olives lies on the east side of Jerusalem, and in some respects the view of the west bank of the Jordan. It is separated from the city by the deep and narrow g len of the Kidron. Its appearance as first seen sadly disappoints the Bible student. Properly speaking it is not a hill. It is only one of a multitude of rounded crests that form the summit of the broad mountain-ridge which runs longitudinally through Central Palestine. Zion, Moriah, Scopus, Gibeah, Ramah, and Mizpeh are others like Olives. These bare rocky crowns encircle the Holy City, Olives being the highest and most conspicuous in the immediate vicinity. Approaching the city from the west, along the Joppa road, a low ridge is seen beyond it, barely overtopping the massive castle of David, and the higher buildings on Zion. It droops towards the right, revealing the pale blue mountains of Moab in the distant background; and it runs away to the left until it appears to join other ridges. It has no striking features. It is rounded and regular in form, and almost entirely colorless. You descend from the Golden Gateway, or the Gate of St. Stephen, by a sudden and steep declivity, and no sooner is the bed of the valley reached than you again come to the edge of the road at the foot of the hill, in fact in the very hollow of the valley. So great is the effect of this proximity that, partly from that, and partly from the extreme clearness of the air, a spectator from the western part of Jerusalem imagines Olives to rise immediately from the side of the Haram area (Porter, "Guide," p. 103a; also Stanley, "J. and P. " p. 186). 

The best view of the mount is obtained from the city wall, near the St. Stephen's Gate (as in the preceding cut). There is a rocky platform, some fifty yards wide, runs along the wall, overhanging the dusky and venerable olive-groves which partly fill up the bottom of the Kidron, a hundred feet below. From the bottom of the glen rises the side of Olives, in gray terraced slopes and white limestone crags, to a height of about six hundred feet. Farther south, opposite the Haram, the Kidron contract so as barely to leave room for a torrent bed. Its general course is from north to south; but it winds considerably, so that the roots of the opposite hills—Moriah and Olives—overlap. About three quarters of a mile south of the Haram area, the Kidron turns eastward, and there the ridge of Olives terminates; but that which forms the axis of which the valley beyond sears so far. The lower road to Bethany crosses it in the parallel of the village of Silwan [see Siloam], where there is a considerable depression. The section of the ridge south of that road appears in some aspects as a distinct hill, having a low rounded top, and descending in broken cliffs into the Kidron. This is now called by travellers "The Mount of Corruption." From the Church of the Ascension, which is the central point of Olives, the ridge runs due north for about a mile, then curves to the west around a bend of the Kidron. At the elbow it is crossed by the road from Anathoth; and the part west of this road is most probably the Scopus (q. v.) of Josephus (War, v, 2, 3). 

The eastern limits of Olives are not so easily defined. It forms the brow of the mountain-chain; and from its top there is an uninterrupted though slender view to the Jordan valley—a descent of about 3500 feet in a distance of 14 miles. The eastern declivity of Olives thus shades gradually off into the wilderness of Judaea. There is no dividing-line; and from the east "The Mount" appears as one of the crowns of the mountain-range. We may assume Bethany, however, as the historical, if not the strict physical limit of Olives in this direction; though the slope below the village is quite as great as that above it.

A few measurements and elevations will now most satisfactorily exhibit the position and features of Olives. Its central but not highest point—the Church of the Ascension—is due east of the Great Mosque, the site of the Temple, and it is one fifth of a mile (in an air-line) distant from the line of the temple mount on the crown of Moriah to the Haram wall on its eastern brow is 625 feet; from the wall to the western base of Olives, in the bottom of the Kidron, is 450 feet; from the bottom of the Kidron to the Church of the Ascension, 2000 feet; from the church to the assumed eastern base of "The Mount," in the line from the summit of Bethany, 4300 feet. The relative elevations are as follows: 

<table>
<thead>
<tr>
<th>Height of Olives above Bethany</th>
<th>1543 feet</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bed of the Kidron</td>
<td>520</td>
</tr>
<tr>
<td>Potash</td>
<td>58</td>
</tr>
<tr>
<td>N.W. angle of the city</td>
<td>69</td>
</tr>
</tbody>
</table>

About 550 feet north of the Church of the Ascension is the nearest eminence of the summit, called by monks and travellers "Viri Galliae"; it is only a few feet lower than the church. At a somewhat less distance north-eastward is the culminating point of the Mount of Olives, now occupied as a Mohammedan cemetery. The Mount of Offence is about 3700 feet distant south-westly from the Church of the Ascension, and is nearly 250 feet lower than Olives.

The outline of Olives is uniform. The curves are unbroken. Its western face is regular and composed of disintegrated limestone, interrupted here and there by large rocky crowns, long ledges, and rude terrace walls. There is no grandeur, no picturesque ruggedness, no soft beauty; and the aspect, especially in summer and autumn, is singularly barren. In rainy weather the painful barrenness is in some measure relieved by the coloring—green corn, brilliant wild-flowers, the soft gray tint of the olive leaves, and the dark foliage of the fig. The whole hill-side is rudely cultivated in little terraced strips of wheat and barley, with here and there some straggling vines trailing along the ground or hanging over the ledges and terrace walls. Fig-trees are abundant, but olives are still, as they were in our Lord's days, the prevailing trees. The mount has as good a title now as perhaps it ever had to the name Olives. Olive-trees dot it all over—in some places fairly thick, in others close together, though nowhere so close as to form groves. Most of them are old, gnarled, and stunted; a few are propped up and in the last stage of decay; but scarcely any young, vigorous trees are met with. The base of the hill along the Kidron is more rugged than any other part of the western slope near Jerusalem. Farther south, a cluster of pieces of rock from twenty to thirty feet high, which continue at intervals around the Mount of Corruption. These cliffs are studded with excavated tombs; and in Silwan, and northward, some of them are hewn into chaeto façades and detached monuments. The hill-side is here covered also with the tombs of the modern Jewish cemetery. It is the favorite burial-place of the children of Abraham, and the spot where they believe the final judgment will take place. 

With the exception of Silwan at its western base, Bethany at its southern end, and the tomb of the Virgin on its summit, Olives is almost desert. There are three or four little towers—one habitable, the others in ruins—built originally as watch-towers for the vineyards and orchards. Nearby opposite St. Stephen's Gate, just across the bed of the Kidron, is the garden of Gethsemane, and from it a shallow valley, or descent, winds southwards towards the Church of the Ascension, making a slight curve northward. A short distance south of Gethsemane, and a little farther up the hill, at the spot traditionally known as that where the Lord's Prayer was delivered by the disciples, Jesus stood and blessed upon her two acres of the mount, and built a chapel adjoining her dwelling, which contains the Lord's Prayer in almost all known languages. These structures are the only noticeable features on the western side of the hill. The eastern is much more
rugged. The ledges are higher, the cliffs bolder, and there are several deep ravines.

Two ancient roads, or rather bridle-paths, cross the mount to Bethany. From St. Stephen’s Gate—the only gate in the eastern side of Jerusalem—a road winds down to the Kidron, crosses it by a bridge, and then forks at Gethsemane. One branch keeps to the right, ascends the hill diagonally by an easy slope, winds around its southern shoulder, and descends to Bethany. This was the caravan and chariot road to Jericho in ancient days. The other branch keeps to the left of Gethsemane, right up the hill, following the course of the wady, passes Kefr et-Tür, and descends by steep zigzags to Bethany. Perhaps this path is even more ancient than the other. It is in places hewn in the rock; and here and there are rude steps up shelving ledges.

There are several other paths on Olivet, but they are of no historical importance, and require only to be mentioned as features in its topography. A path branches off from No. 2 at the side of Gethsemane, skirts the upper wall of the garden, ascends to the tombs of the prophets, and then turns to the left, up to the village. Another branches off a little higher up, and ascends the steep hill-side, almost direct to the village. Another, leading from St. Stephen’s Gate, crosses the Kidron obliquely in a north-easterly direction, and passes over the northern shoulder of the mount to the little hamlet of Iaawlyeh. Another path—ancient, though now little used—runs from Kefr et-Tür northward along the summit of the ridge to Seopus, joining the road to Anathoth.

3. Historical Notices.—The first mention of Olivet is in connection with David’s flight from Jerusalem on the rebellion of Absalom. His object was to place the Jordan between himself and Absalom. Leaving the city, “he passed over the valley (בְּתֵב) of Kidron, toward the way of the wilderness” (2 Sam. xv, 20)—the wilderness of Judah lying between Olivet and the Jordan. Having crossed the Kidron, “he ascended by the ascent of the Olivæ” (ver. 30), and came to the summit, “where he worshipped God” (ver. 32). It has been supposed from the latter statement that there was here, on the top, an ancient high place, where David had been accustomed to worship; and that this may have been the source and scene of all subsequent idolatrous rites and Christian traditions. The Hebrew phrase does not warrant any such conclusion. The scope of the passage...
suggests, that on reaching the summit he turned to take a last look at the city, to which he had just sent back the order to burn the trees, but whose height probably still saw it. There, with his face towards the sanctuary, he worshipped God (see Theodoret and Jerome, ad loc.). This is the view of most Jewish commentators, though the Talmudist state that there was an idol shrine on the summit (Lightfoot, Opp. ii, 570). Jer. vii. 30 manifest. He ascended by the ancient path (No. 2) to the top; there he worshipped, with the city in full view. Turning away, he began to descend; and there, "a little past the top" (2 Sam. xvi. 1), he met Ziba. At Bahurim, while David and his men kept the road, Shimei scammed from the slope of the overhanging hill above, even with him, and threw stones at him, and covered him with dust (ver. 13). After passing Bahurim, probably about where Bethany now stands, he continued the descent through the "dry and thirsty land" (Psal. lxxiii), until he arrived "weary" at the bank of the river (Josephus, Ant. vii. 9, 2-5; 2 Sam. xvi. 14; xvi. 21, 22).

The next notice is in the time of Solomon, who built "a high place for Chemosh, the abomination of Moab, in the hill that is before Jerusalem; and for Molech" (1 Kings xi. 7). The hill was Olivet: but the locality of the "high place" is not determined. A later period show that it could not have been upon the summit. "The high places that were before Jerusalem, which were on the right hand of the Mount of Corruption, which Solomon the king of Israel had built ... did the king (Manasseh) defile" (2 Kings xxiii. 13). The stand-point of observation and description, there is the Holy City, which formerly extended much farther south than at present. Solomon's high place was in front of it, within view, and on the right hand of Olivet. This indicates the southern section of the ridge, the tradition of the Mount of Corruption. There was probably some connection between the high place of Molech on the right hand of Olivet and those idol shrines which stood in Tophet, at the entrance of the valley of Hinnom (comp. 2 Kings xxiii. 13, 14; Jer. vii. 31 sq.; Jerome, Comm. ad loc.). The Mount of Corruption is directly opposite Tophet, and the hill-side is filled with ancient tombs, as Jeremiah predicted (xix. 6, 11). The tradition which gives its name to the Mount of Corruption is first mentioned in the 18th century by Brocardus: "Ultra torrentem Cedron, in lateri aquilario Memphitis, est montem quod nostri sanctissima dicuntur a Jerusalem distans, ubi Salomon idolo Moabitorum, nomine Chamas, templum constituit, et ubi tempore Machabaeorum edificatum fuit castrum, cujus indicia adhuc hodie ibi cernuntur" (cap. ix). During the next four hundred years we have only the brief and somewhat Incomplete notices at this spot. The later and Manasseh had no doubt maintained and enlarged the original erection of Solomon. These Josiah demolished. He "defiled" the high places, broke to pieces the smooth and obscene symbols which formed them, cut down the images, and partly the actual groves, of Ashhtaroth, and effectually dispossessed them for worship by filling up the cavities with human bones (2 Kings xxiii. 13, 14).

Ezekiel also mentions Olivet in the wondrous vision of the Lord's departure from Jerusalem. The glory of the Lord first left the sanctuary and stood on the threshold of the house (x, 4); then it removed to a position over the east gate of the Lord's house (ver. 19); then it went up "and stood upon the mountain, which is upon the east side of the city" (xxi, 23), that is, on Olivet. This is doubtless the source of the Rabbinical tradition, which represents the Shekinah as having remained for seven years, and a half on Olivet, calling to the Jews, "Return to me, and I will return to you" (Reland, Palest, p. 337.).

The reference to Olivet in Neh. viii. 15 shows that the mount, and probably the valley at its base, abounded in groves of various "trees"—"groves of trees"—"groves of trees" (Gen. xvi. 11, on the mount, and fetch olive branches, and pine branches, and myrtle branches, and palm branches, and branches of thick trees, to make booths." In the days of our Lord the trees were still very numerous (Mark xi. 8). The olive, pine, myrtle, etc., are all still found, with the exception of olives and figs, no trees are found on Olivet. Caphanatha, Bethpage, Bethany—all names of places on the mount, and all derived from some fruit or vegetation—are probably of late origin, certainly of late modern date.

The only other mention of Olivet in the O. T. is in Zechariah's prophecy of the destruction of Jerusalem, and the preservation of God's people in it. He says of the Messiah, "His feet shall stand in that day upon the Mount of Olives, which is before Jerusalem, on the east" (Zech. xiv. 10).

But it is mainly from its connection with N.-T. history that Olivet has so strong a claim upon the attention and affections of the Christian student. During the periods of our Lord's ministry in Jerusalem the mount appears to have been his home. As poor pilgrims were then, and still are, accustomed to bivouac or encamp in the open fields, so Jesus passed his nights amid the groves of Olivet. He did so partly, perhaps, that he might enjoy privacy; partly to escape the ceaseless and bitter persecution of the Jews; and partly to be near his beloved disciples. It stands at the geographical illustration of his own touching statement, "The foxes have holes, and the birds of the air nests, but the Son of Man hath not where to lay his head" (Matt. viii. 20; John viii. 1; Luke xxix. 28). The Mount of Olives was the scene of four events, among the most remarkable in the history of the description.

1. The Triumphal Entry.—Its scene was the road —doubtless the ancient caravan road—which winds around the southern shoulder of the hill from Bethany to Jerusalem. A short distance from Bethany the road meets a deep ravine, which drops from the top of Olivet on the right, and winds away to the wilderness on the left. From this point the tops of the buildings on Zion are seen, but all the rest of the city is hid. Just opposite this point, too, on the other side of the ravine, are the remains of an ancient village—cisterns,ewn stones, and scarped rocks. The road turns sharply to the right, descends obliquely to the bottom, then turns to the left, ascends and reaches the top of the opposite bank a short distance above the ruins. This again appears to be the spot, "at the Mount of Olives," where Jesus said to the two disciples, "Go into the village which is opposite you (θαν δια αυτοῦ θαύμαντα), and immediately ye shall find an ass tied, and a colt with her; having loosed, bring them to me" (Matt. xxi. 2). These active footmen could cross the ravine direct in a minute or two, while the great procession would take some time to make the ascent, and would take time in the descent. They saw the procession; they knew its cause, and they were thus prepared to give the ass to the disciples the moment they heard, "The Lord hath need of him." The disciples took the ass, led it up to the road, and met Jesus. He blessed, and the procession advanced up the steep eastern slope. It gained the crown of the ridge, where "the descent of the Mount of Olives" begins, and where Jerusalem, in its full extent and beauty, suddenly bursts upon the view; and then the multitude, excited by the noble spectacle, and the fame of him whom they conducted, burst forth in joyful acclamation, " Hosanna! Blessed is he that cometh in the name of the Lord: blessed be the kingdom of our father David!" (Mark xvi. 10). The Pharisees were offended, and said, "Master, rebuke thy disciples. He answered, I tell you, if these should hold their peace, the stones would cry out." (Luke x. 20, 43, 44). The hill-side is here covered with rugged crowns of rock. The procession advanced, descending obliquely. "And when he came near"—to a point nearly opposite the Temple—"he beheld the city, and wept over it," giving utterance to the long-cherished prayer, "O Jerusalem! (Lukes xix. 41, 42). The splendid buildings of the Temple were then in full view, a little below the level of the eye, and not more
OLIVET

than 600 yards distant. Beyond them Zion appeared crowned with Herod's palace, and the lofty towers of the temple prominent in the far distance, in all their beauty and grandeur, and looking onward to future desolation, what wonder that divine compassion manifested itself in tears?

The traditional spot of the lamentation over Jerusalem, however, now marked by a small tower, is on a mound paralleling the present city walls, not the breast of the hill, about 300 yards above Gethsemane. The sacred narrative requires a spot on the road from Bethany at which the city or Temple should suddenly come into view; but this is one which can only be reached by a walk of several hundred yards over the breast of the hill, with the Temple and city full in sight the whole time. It is also pretty evident that the path which now passes the spot is subsequent in date to the fixing of the spot. As already remarked, the natural road lies up the valley between this hill and that to the north, and no one, unless with the special object of a visit to this spot, would take this very inconvenient path. The inappropriateness of this place is obvious (Stanley, Sinai and Palestine, p. 190-198).

(2.) From a commanding point on the western side of Olivet Jesus predicted the Temple's final overthrow. He topographically described the scene to His disciples in some detail, pointing out the temple, its stately courts, and the colossal magnitude of its outer battlements before him, he predicted its final ruin, summing up the words, "This generation shall not pass till all these things be done. Heaven and earth shall pass away; but my words shall not pass away." The whole discourse in Mark xiii was spoken on that spot (comp. Matt. xxiv; Luke xxi).

(3.) After the institution of the Supper, "when they had sung a hymn," our Lord led his disciples "out to the mount of Olives," to a garden, called Gethsemane, that place is not mentioned. Jesus led his disciples out toward Bethany, "as far as to Bethany." In the second record the reader is referred back to the former. The narrative opens abruptly at the spot to which he had led his disciples, as indicated in the Gospel. A fuller account of his last words is given; and after the ascension, the writer adds, "Then returned they unto Jerusalem, from the mount called Olivet, which is from Jerusalem a Sabbath-day's journey." (Luke xxvii, 50-53; Acts i, 9-12.)

Considerable difficulty has been felt in reconciling the topographical notices in these passages; and still more in attempting to bring them into harmony with the traditional scene of the ascension on the summit of Olivet. The difficulties are as follows: (a) In Luke Christ is said to have led his disciples "as far as to Bethany." (b) In John, the scene of the ascension is described as from Olivet, which is a Sabbath-day's journey from Jerusalem. (c) A Sabbath-day's journey was, according to the Talmud, 2000 cubits, about ¾ stadia (Lightfoot, Hor. Heb. in Luc. xxvii, 50). (d) Bethany was fifteen stadia distant from Jerusalem (Geoffren, 160); Lightfoot, one page 9 explains these apparent discrepancies by stating that the ascension took place at Bethany; that the disciples, returned over Olivet; and that the Sabbath-day's journey refers to the distance from the city (Comment, in Act. i, 12). But in a later work lightfoot gives a totally different explanation. He says that by Bethany is meant a district, and not the village; that district included a large section of Olivet; and its border, where the ascension took place, was a Sabbath-day's journey from Jerusalem (Hor. Heb. in Luc. xxvii, 50). Lightfoot's opinion, therefore, is not of much critical value (see, however, Robinson, Bibl. Sacra, i, 178; Williams, Holy City, ii, 440 and 611, 2d ed.).

The presence of the crowd of churches and other edifices implied in the ecclesiastical descriptions must have rendered it extremely difficult for the inhabitants of the middle ages of Christianity, entirely unlike what it was in the time of the Jewish kingdom or of our Lord. Except the high places on the summit, the only buildings then to be seen were probably the walls of the vineyards and gardens, and the towers and presses which were their invariable accomplishment. But though the churches are nearly all demolished, there must be a considerable difference between the aspect of the mountain now and in those days when it received its name from the abundance of its olive-groves. It does not now stand out so prominently in this respect amongst the hills in the neighborhood of Jerusalem. "It is only in the deeper and more secluded slope leading up to the northernmost summit that these venerable trees spread into anything like a forest. The cedars commemorated by the name of the Talmud, in 300, (Lightfoot, ii, 305), are overlaid in the name Bethany, have fared still worse: there is not one of either to be found within many miles. This change is no doubt due to natural causes, variations of climate, etc.; but the check was not improbably given by the ravages committed by the army of Titus, who are stated by Josephus to have stripped the country round Jerusalem for miles and miles of every stick or shrub for the banks constructed during the siege. No olive or cedar, however sacred to Jew or Christian, would at such a time escape the axes of the Roman sappers, and, remembering how under similar circumstances every root and fibre of the smallest shrubs was dug up for fuel by the camp-followers of the army at Sebastopol, it would be wrong to deceive ourselves by the belief that any of the trees now existing are likely to be the same or immediate descendents of those which were standing before the destruction.

Except on such rare occasions as the passage of the caravan of pilgrims to the Jordan, there must also be a great contrast between the silence and loneliness which now pervades the mount and the busy scene which it presented in later Jewish times. Bethpage and Bethany are caves referred to in the sages as places of much resort for business and pleasure. The two large cedars already mentioned had below them shops for the sale of pigeons and other necessaries for worshippers in the Temple, and these appear to have driven an enormous trade (see the citations in Lightfoot, ii, 39, 305). Two religious ceremonies performed there must also have done much to increase the numbers who resorted to the mount. The appearance of the new moon was probably watched for, certainly proclaimed, from the summit—the long torches waving to and fro in the moonless night till answered from the peak of Burn Surtatbeh; and an occasion to which the Jews attached so much weight would be sure to attract a concourse.

The second ceremony referred to was the burning of the Red Heifer. There seems to be some doubt whether this was a separate ceremony (see Frangen, Ephraim Pis- ses, § 12) distinctly says so; but the rabbinic asser that from Moses to the captivity it was performed but once; from the captivity to the destruction eight times (Light-foot, ii, 306). This solemn ceremony was enacted on the central mount, and in a spot so carefully specified that it was not open to much dispute; it was on the east side of the sanctuary, and at such an elevation on the
mount that the officiating priest, as he slew the animal and sprinkled her blood, could see the façade of the sanctuary through the east gate of the Temple. To this spot a viaduct was constructed across the valley on a chain of arches, so as to raise it far above all possible proximity to graves or other defilements (see citations in Lightfoot, ii, 39). The depth of the valley is such at this place (about 350 feet from the line of the south wall of the present Haram area) that this view doubtless was an important factor in its construction. It was probably demolished by the Jews themselves on the approach of Titus, or even earlier, when Pompey led his army by Jericho and over the Mount of Olives. This would account satisfactorily for its not being alluded to by Josephus. During the siege the Jewish defenders built a fortification, called the Tower, on the top of the mount, and the first, and some of the finest, encounters of the siege took place there.

"The last glory of the Mount of Olives," it has been well said, "belongs not to the old dispensation, but to the new. Its vast extent of interest in ancient times sets forth the abundance of those associations which it derives from the closing scenes of the sacred history. Nothing, perhaps, brings before us more strikingly the contrast of Jewish and Christian feeling, the abrupt and inharmonious termination of the Jewish dispensation in the culminating crisis of the Gospel history—than to contrast the blank which Olivet presents to the Jewish pilgrims of the Middle Ages, only dignified by the sacrifice of the 'red heifer,' and the vision, too great for words, which it offers to the Christian traveller of all times, as the most detailed and the most authentic abiding image of Jesus Christ. By one of those strange coincidences, whether accidental or borrowed, which occasionally appear in the Rabbinical writings, it is said in the Misrach (rabbi Janna, in the Midrash Tehillim, quoted by Lightfoot, ii, 39; perhaps a play upon a pious passage in Ezekiel, vii, 25), that the Shekinah, or Presence of God, after having finally retired from Jerusalem, 'dwelt three years and a half on the Mount of Olives, to see whether the Jewish people would or would not repent, calling, 'Return to me, O my sons, and I will return to you.' 'Seek ye the Lord while he may be found, call upon him while he is near'; and then, when all was in vain, returned to its own place. Whether or not this story has a direct allusion to the ministrations of Christ, it is a true expression of his relation respectively to Jerusalem and to Olivet. It is the image of his presence in and for traditions of the since ten times captured city. It is impossible not to find them in the free space of the Mount of Olives" (Stanley, Sin. and Pal., p. 189).

A careful consideration of the passage in Acts 1, 12 shows that it cannot affect in one way or another the direct statement made in Luke regarding the scene of the ascension, because,—(1st) Bethany was upon the Mount of Olives; therefore the expressions, "He led them out as far as to Bethany," and "they returned from the mount called Olivet," indicate the same spot. (2dly) It is not certain whether the "Sabbath-day's journey" is intended to describe the distance of the mount or of the exact scene of the ascension. (3dly) Suppose it did refer to the latter, still it would not necessarily militate against the statement in Luke that Bethany was the place, because the exact length of a Sabbath-day's journey is uncertain—some say 2000 cubits, or nearly one Roman mile; others, 2000 Roman paces, or two miles; and, moreover, the point from which the measurements commence is unknown—some say from the city wall; others from the outer limit of the suburb Bethphage, by the way of the Lightfoot, l. c.; Wieseler: also Barclay, who gives impression of his measurements of the Mount of Olives, (The City of the Great King, p. 50). On the other hand, the statement in Luke is explicit, ")ων τε Βηθανίας. There is nothing here to limit it; and in all other places Bethany means the village (Meyer; Lechler, On Acts; Lange; Alford; EB). The ascension appears to have been witnessed by the disciples alone. It was not in Bethany, nor was it on such a conspicuous place as the summit of Olivet. Dr. Porter, who has carefully examined the whole region, saw one spot, as far from Jerusalem as Bethany and not in the suburbs, but concealed by an intervening cliff; and this he thought, in all probability, was the real scene. The disciples, led by Jesus, would reach it by the path over the top of the Mount of Olives, and they would naturally return to the city by the same route (Handbook, p. 105 sq.). Since the days of Eusebius the summit of Olivet has been the scene of the traditional ascent. As this fact has been questioned (Stanley, S. and P., p. 447), it is well to quote his words: ... Ἑν τοιαῖς ένοιοι μαντείας ἐξέχαιρεν τής άμαρτίας τῶν άνθρώπων τής τρίτης ἁμαρτίας τοῦ ιερού, ἀπό τοῦ οὗ τοιαύτα τε καταστασία τε μεταβάσιμα τε ἐγέρτησεν ἔναπτον σωτηρίου και νικηφόρου τιν νοείας ἀνάβων αντικείμενον (Demonstr. Evangel., vi, 18; comp. Vit. Const., iii, 41). In honor of the event the empress Helena built a church on the spot (Vit. Const., iii, 48). Since that time the tradition has been almost universal. Baronius, amongst others, Curs. A.D. 84; Reland, Palestine, p. 337); but the statement of Luke is fatal to it—"He led them out as far as to Bethany," and Bethany is nearly a mile beyond the summit of the mount. The tradition has still, nevertheless, a number of devoted adherents, whose arguments are worth considering. They find that the disparity of Luke (iv, 43, 440, 609; Eliotte, Life of our Lord, p. 418). The Bordeaux Pilgrim, however, who arrived shortly after the building of the church (A.D. 383), seems not to have known anything of the exact spot. He names the Mount of Olives to the place where he desired to be buried, and to teach his disciples; he means that a basilica of Constantine stood there; ... he carefully points out the Mount of Transfiguration in the neighborhood (?), but is silent on the ascension. From his time to that of Arculf (A.D. 700) we have no information, except the reference of Jerome (A.D. 342-420), that in that long interval of 570 years the basilica of Constantine or Helena had given way to the round church of Modestus (Tobler, p. 92, note), and the tradition had become fairly established. The church was open to the sky "because of the passage of the Lord's body," and on the ground in the center were the marks of his feet in the dust (palatere). The care or spout hallowed by his preaching to his disciples appears to have been moved off to the north of Bethany (Early Trav., p. 6).

The spot is just about 850 yards from the present city wall, and is crossed by a street. The present mosque has taken its place. In the center of an open court beside it is a little domed building covering a rock, on which is the supposed impress of Christ's foot, where he last touched the earth. Formerly, tradition affirms, there were two footmarks, but the Mohammedans stole one of them, and put it in the Magnificent Al-Aksa (Williams, Holy City, ii, 445; Stanley, S. and P., p. 447; Maundrell, under April 7).

4. Holy Places.—With these, as above partially noted, Olivet is thickly studded, where they have been located by the superstitions of former ages, and preserved by tradition. The majority of these sacred spots now command little or no attention. Only two or three of them have even a shadow of claim to be real, while most of them are absurd. Several of them have been fully considered above. They may most conveniently be described in connection with the three, or rather perhaps four, independent summits or eminences into which the entire ridge, especially when seen from below the eastern wall of Jerusalem, divides itself. Proceeding from north to south these occur in the following order: Galilee, or High Place, Mount Zion, Mount Precinct of the priests, subdivide to the last, and almost a part of it; Mount of Olives. In considering these, we shall have an opportunity to complete the above physical description.

(1.) Of these eminences, the central one, distinguished by the minaret and domes of the Church of the Ascen-
Olivet is in every way the most important. The church, and the tiny hamlet of wretched hovels which surround it—the Keif el-Tur—are planted slantwise on the Jordan side of the actual top, but not so far as to hinder their being seen from all parts of the western environs of the mountain, or, in their turn, commanding the view of the deepest recesses of the Kidron valley (Porter, Hand-book, p. 103). The eminence above noted, a little to the north-east of that containing the mosque, and actually visible from it, which is now marked by a protestant cemetery, deserves no special notice in this survey, as it is of no traditional importance, and is hidden from observation in the city.

The central hill, which we are now considering, pursues to contain the sites of some of the most sacred and impressive events of Christian history. During the Middle Ages most of these were protected by an edifice of some sort; and, to judge from the reports of the early travellers, the mount must at one time have been thickly covered with churches and convents. The following is a list of some of the traditions, as far as they can be compiled from Quaresimus, Dubb, Mialin, and other works.

1. Commencing at the western foot, and going gradually up to the peak. (Pleural Incarnation is accorded by the Church of Rome to those who recite the Lord's Prayer and the Ave Maria at the spots marked thus, *)

*Church of the interchange containing also those of Joseph, Joachim, and Anna. Gethsemane: containing
Oratory of the Garden.
*Cavern of Christ's prayer and agony. (A church heretofore called Dominus flevit; or, the Mount of Olives.)
*Spot on which he first said the Lord's Prayer, or wrote it on his garments with his finger (Bosanquet, Early Travels, p. 34). (A splendid church here formerly; Maundeville seems to give this as the spot where the beatitudes were pronounced, Early Travels, p. 177.)

*Spot at which the woman taken in adultery was brought to him (Bernard the Wise, Early Trav., p. 38).

*Tombs of the prophets (Matt. xxvi. 29): containing, according to the Jews, those of Haggai and Zechariah. Cave in which the apostles composed the Creed; called also Church of St. Mark, or of the Twelve Apostles.

*Spot at which Christ disapproved of the judgment to come (Matt. xxii. 12).

*Spot of the prophecy (Matt. xvi. 28): containing, according to the Jews, those of Haggai and Zechariah.

*Spot at which the Virgin was warned of her death by an angel; on the valley between the arsenal and the Viri Galiilei (Maundeville, p. 197, and so Dubb); but Morley, Early Trav. p. 419, places it close to the cave of Pelagia.

*Viri Galiilei, or spot from which the apostles watched the ascension; or at which Christ first appeared to the three Marys after his resurrection (Tobler, p. 76, note). This locality we add here for the sake of convenience in the connection, although it constitutes a separate eminence, as noted below.

2. On the east side, descending from the Church of the Ascension to Bethany. The field in which stood the fruitless fig-tree. Bethphage.

Bethany.

House of Lazarus. (A church there in Jerome's time, and in theDirectory of St. Esprit, etc., "Bethania.")

*Tomb of Lazarus.

*Bosome on which Christ was sitting when Martha came to him.

The Tomb and Chapel of the Virgin, at the western base of Olivet, a few yards north of Gethsemane, is one of the most picturesque buildings around Jerusalem. Its façade is deep down in a sunk court, and admits by a square opening in a flat roof, leading down to a dark, rock-hewn chapel. At its eastern end is a smaller chapel containing the reputed tomb of the Virgin; on the south are shown the tombs of Joachim and Anna her parents; and on the north that of Joseph her husband. The tradition attached to this grotto is com-}

paratively recent. It is not mentioned during the first six centuries (Quaresimus, ii, 244 sq.). John of Damascus is the first who speaks of it (Lib. c.); and it is also mentioned by Theophylact (Early Trav., p. 19), and most travellers and pilgrims after the 8th century (Williams, Holy City, c. 43).

(2.) Next to the central and principal portion of the mount, and separated from it on the southern side by a slight depression, or, rather, less precipitous declivity, up which it is supposed by some to have proceeded when its course is a spout, which appears neither to possess, nor to have possessed, any independent name. It is remarkable only for the fact that it contains the "singular catacomb" known as the "Tombs of the Prophets," probably in allusion to the words of Christ (Matt. xxvi. 29), and therefore left to us by the original text of this cavern hardly anything is known. It is possible (Schults, p. 72) that it is the "rock called Peristeron," named by Josephus (War, v, 12, 2) in describing the course of Titus's great wall of circumvallation, though there is not much to be taken in the view (see Robinson, iii, 254, note). To the earlier pilgrims it does not appear to have been known; at least their descriptions hardly apply to its present size or condition. Stanley (S. and P. p. 483) is inclined to identify it with the cave mentioned by Eusebius as that in which our Lord taught his disciples, and also that in which the XXVI. is originally mentioned by Arculf and Bernard as containing "the four tables" of our Lord (Early Trav., p. 4 and 28). The first is not improbable, but the cave of Arculf and Bernard seems to have been down in the valley not far from the tomb of the Virgin, and on the spot of the bestrayal (Early Trav., p. 29), therefore close to Gethsemane. This catacomb is fully described by Nugent (Lands, Classical and Sacred, ii, 73), Tobler (Olberg, p. 350), and Porter (Hand-book, p. 147).

(3.) The most southern portion of the Mount of Olives—much more distinctly separated from the necropolis of the congeries of summits than they are from each other—is that usually known as the "Mount of Offence," Mons Offensionis, though by the Arabs called Batan el-Hacou, "the bag of the wind." It rises next to the gently sloping spur last mentioned; and in the hollow between the two—a tolerably well-defined although broad ravine—runs the road from Bethany, which was without doubt the road of Christ's entry to Jerusalem.

The title Mount of Offence, or of Scandal, was bestowed on the supposition that it is the "Mount of Corruption," on which Solomon erected the high place for the gods of his foreign wives (2 Kings xxi. 13; 1 Kings xi. 7). This tradition appears to be of a recent date. It is not mentioned in the Jewish travellers Benjamin, hap-Parchi, or Petachia, and the first appearance of the name or the tradition as attached to that locality among Christian writers appears to be in John of Wurtzburg (Tolder, p. 80, note) and Brocardus (Descrip. Ter. S., cap. ix.), both of the 13th century. At that time the northern summit was believed to have been the site of the altar of Chemosh (Brocardus), the southern one that of Molech only (Thietmar, Pergr. xii, 2). The title "Mount of Corruption" (נְגֵרָה יָרַע) seems to be connected etymologically in some way with the name by which the mound is so occasionally rendered in the Targums—נְגֵרַה יָרַע (Jonathan, Cant. viii, 9; Pseudo-Jon. Gen. viii, 11). One is probably a play on the other. Stanley (S. and P. p. 188, note) argues that the Mount of Corruption was the northern hill (Viri Galiilei), because the three sanctuaries were south of it, and therefore on the other three summits.

This southern summit is considerably lower than the centre one, and is also rather less marked, it is so distinctly as almost to constitute a separate hill or eminence in the general range. It is also sterner and more repellent in its form. On the south it is bounded by the Wady en-Nar, the continuation of the Kidron, curving around eastward on its dreary course to Mar Saba and the Dead}
Sea. From this barren ravine the Mount of Offence {330} 360
rears its rugged sides by acclivities barer and steeper than any in the northern portion of the mount, and its top presents a target-like summit; a well-known saying goes, with the cultivation of the other summits, and this not improbably, as in the case of Mount Ebal, suggested the name which it now bears. On the steep ledges of its western face clings the ill-favored village of Silwán, a few dilapidated towers rather than houses, their gray painted walls hardly to be distinguished from the rock to which they adhere, and inhabited by a tribe as mean and repulsive as their habitations.

Crossing to the back or eastern side of this mountain, on a half-isolated promontory or spur which overlooks the road of our Lord's progress from Bethany, are found tanks and foundations, by which are maintained by Dr. Barclay (City, etc., p. 66) to be those of Bethpage (see also Stewart, Tent and Khan, p. 322).

(4.) The only one of the summits remaining to be considered is that on the north of the "Mount of Ascension"—the Karem es-Segov, or Vineyard of the Sportsman; or, as it is called by the modern Latin and Greek Christians, the Viri Galilaei. This is a hill of exactly the same character as the Mount of the Ascension, and so nearly its equal in height that few travelers agree as to which is the more lofty. The summits of these hills are separated by yards apart directly opposite the north-east corner of Jerusalem, and is approached by the path between it and the Mount of Ascension, which strikes at the top into a cross-path leading to el-Istawyeh and Amuta. The Arabic name well reflects the fruitful character of the hill, on which there are several vineyards, besides much cultivation of other kinds. The Christian name is due to the singular tradition that here the two angels addressed the apostles after our Lord's ascension—"Ye men of Galilee!" This idea, which is so incompatible, on account of the circumstance that the tradition of the destruction of Jerusalem is of late existence and inexplicable origin. The first name by which we encounter this hill is simply "Galilea," ἡ Γαλαήα (Pericillas, A.D. cir. 129, in Reland, Palest. cap. 3). Brocardus (A.D. 1290) describes the mountain as the site of Solomon's altar to Chemosh (Descr. cap. ix), but evidently knows of no name for it, and connects it with no Christian event. This name may, as is conjectured (Quaresimus, ii, 319, and Reland, p. 341), have originated in its being the custom of the apostles, or of the Galileans generally, when returning from the Holy Land to their quarters in Jerusalem, to pass through it; or it may be the echo or distortion of an ancient name of the spot, possibly the Gileoth of Josh. xviii, 17—one of the landmarks of the south boundary of Benjamin, which has often puzzled the topographer. But this name is not the first which came at this hill as the actual Galilee of Northern Palestine, the place at which our Lord appointed to meet his disciples after his resurrection (Matt. xxviii, 10), the scene of the miracle of the Cana (Reland, p. 388). This transference, at once so extraordinary and so instructive, arose from the same desire, combined with the same astounding want of the critical faculty, which enabled the pilgrims of the Middle Ages to see without perplexity the scene of the transfiguration (Bourdage Pilgr.,) of the beatitudes (Maunedeville, Early Trav. p. 177), and of the ascension all crowded together on the single summit or the central hill of Olivet. It testified to the same feeling with which has brought together the scene of Jacob's vision at Bethel, of the sacrifice of Isaac on Moriah, and of David's offering in the threshing-floor of Araunah, on one hill; and which to this day has crowded within the walls of the church of Mount of Olives from the most distant times, connected with the death and resurrection of Christ.

In the 8th century the place of the angels was represented by two columns in the Church of the Ascension itself (Willibald, Early Trav. p. 19). So it remained, with remaining difference, at the time of Saewulf's visit (A.D. 1192), but there was then also a chapel in existence—apparently on the northern summit—purporting to stand where Christ made his first appearance after the resurrection, and called "Galilee." So it continues to the present day, two pillars were still shown in the Church of the Ascension (Radzivil, Perigrinis. p. 75, cited by Williams, Holy City, ii, 127, note), but in the 16th century (Tohler, p. 75) the tradition had relinquished its ancient and more appropriate seat, and the cereomony became attached to the northern summit, where Maundrell (A.D. 1697) encountered it (Early Trav. p. 471), and where it even now retains some hold, the name Galilea being occasionally applied to it by the Arabs (see Pococke and Scholz, in Tohler, p. 72). An ancient tower connected with the tradition was still standing during Maundrell's tour "of a Turk having bought the field in which it stood." The summit is now crowned by a confused heap of ruins, encompassed by a vineyard.

5. Literature.—A monograph on the Mount of Olives, exhaustively every source of information, and giving the fullest references will be found in Tophet's Sido- 

aguille and der Oelberg (St. Gallen, 1852). Earlier monographs have been written in Latin by Bibelhau- sen (Lips. 1704); Ortol (Viteb. 1706); Sylling (Hafn. 1697). See also Hamilton, Mount of Olives (Lond. 1865). For traditions relating to Capernaum, Bethlehem, Terrae Sanctae, ii, 277-340; Gudin, Vies de Age, i, 210 sq.; Williams, Holy City, vol. ii; and others. Doubdan's account (Le Voyage dans le Terrae Sainte, Paris, 1657) is excellent, and his plates very correct. The rabbinical traditions are contained in Lightfoot (Opp. ii, 291), Reland (Palest. cap. iv), and other authors. Descriptions are given by Bartlett (Walks, etc., p. 94 sq.; Amsterdam Revised, p. 114 sq.); Robinson (Researches, iii, 405 sq.); Olin, Travelers, i, 127; Barclay (City of the Great King, p. 59 sq.); Stanley (Sin. and Pal. p. 193 sq.) and others. The best topographical delineation is that in the latest edition of the topographical surveys of Jerusalem (Lond. 1865, 3 vols. fol.). See JERUSALEM.

Olivet, PIERRE JOSEPH, abbott of Touiller, a French Roman Catholic theologian and writer, was born at Sa- 

lins April 1, 1682. On leaving college he joined the Jesuits, passing successively some time in the Jesuit colleges of Rheims, Dijon, and Paris. In this manner he became acquainted with a number of distinguished men, such as Maurox, the friend of Lafontaine, father Oudin, president Bouvier, Boileau, Huet, La Monnoye, J. B. Rousseau, etc. They incited him to write, and his first attempt was a French translation of Eusebius, to which he would never succeed in poetry, he gave it up and ap- 
plied himself to Latin prose. He was a great admirer of the ancients, and especially of Cicero, whom he con- sidered as the only master of eloquence. In 1713 he became vice-president of his order for the purpose of writing the history of the society; but frightened at the long time he would be obliged to devote to this uncon- 
Genial employment, Olivet left the society as he was about taking the final vows. They vainly offered him the place of instructor to the prince of Asturias to in- 

duce him to remain. In 1723 Olivet was elected a member of the French Academy. He passed the re- 

mainder of his life at Paris, engaged in various literary works, and in occasional squabbles with his associates in the academy. He died Oct. 8, 1768. The personal character of Olivet appears, notwithstanding the at- 

traction of his talents and virtues than Voltaire, who was introduced by Olivet into the French Academy (see Correspondence des membres de l'Académie Francaise, in his Euvres complettes, vol. xlvii), Several letters of Voltaire to Olivet are extant. Olivet's principal work is an edition of Cicero, which was orig- 

ally published at Paris (1740-1742, 9 vols. 4to). It is of little critical value, though it contains many useful notes, chiefly extracted from preceeding commentaries. Digitized by Google
OLIVETAN

It was reprinted at Geneva (1758, 9 vols. 4to), and very incorrectly at Oxford (1788, 10 vols. 4to). Olivier's translation (Neuchâtel, 1560, 2 vols.) was also published, though, like most of the French translations, they are deficient in accuracy. Of these the principal are, the De Natura Doorum (1721, 1732, etc.)—Tuscú
lanina Questiones (1737, 1747), of which the third and fifth books are the same as their 1757 volume against Calvin, together with the Philosophius of De
moechenses (1727, 1736, etc.). He also edited extracts from Cicero, with a translation into French, under the title of Pensees de Cicéron, which has been frequently reprinted and extensively used in the French schools.

The other principal work of Olivier was his continuation of Pellisson, Histoire de l'Académie Française (1729, 2 vols. 4to; 1730, 2 vols. 12mo). See Eloge de l'Abbé d'Olivet, Nécrologe (1770); D'Allemert, Hist. des Membres de l'Académie Française, vol. vi.; Buchaumont, Mémoires secrets (Oct. 1763); Maires, Eloge histor. et littér. de l'Abbé d'Olivet (1839).

Olivetan, Pierre Robert, a leader in the French Reformation, and one of the first translators of the Bible into French, was born at Noyon towards the end of the 16th century. We are told that it was he who, in advising Calvin, his relative, to examine into the questions then current, was instrumental to the cause of the Reformation. Says Merle d'Aubigné, "Olivetan seems to have been the first who so presented the doctrine of the Gospel as to draw the attention of Calvin" (comp. Mainbour, Histoire du Calvinisme, 16). Olivieretan's translation was the first to spread the new religious doctrines in Geneva, where we find him in 1538. Once, hearing a preacher denounce Luther in the pulpit, Olivetan interrupted the speaker, and undertook to refute him, thus creating a disturbance which nearly cost him his life, and led to his being banished from the territory of Geneva. He retired to Neuchâtel, where he commenced his French translation of the Bible, probably at the suggestion of Farel. Olivetan, who was less thoroughly acquainted with Hebrew than is asserted by his contemporaries, and not very proficient in Greek, made great use of the translation of LeFèvre d'Etaples, just published at Antwerp; but he carefully compared that translation with the original texts, and interpreted some passages in a different manner. His French version appeared under the title of La Bible qui est toute la Sainte Ecriture (Neuchâtel, 1535, 2 vols. fol.). This edition was published at the expense of the Waldensians, from a MS. said to have been written by Bonaventure des Perriens. A second edition, printed at Geneva, was corrected by Calvin, and thus Olivetan's labors became the foundation of the Genevan Bible. Olivetan, obliged to leave Switzerland, went to Italy, and died at Ferrara in 1588. It was rumored that he was poisoned at Rome during a short stay he made in that city. See Richard Simont, Hist. crit. du Vieux Testament, p. 342; Lalluette, Hist. des Traductions Franço. de l'Écriture Sainte, ch. ii.; Senebier, Hist. Litt., de Genève, i. 158; Haag, La France Protestante, a.; Hoefer, Nouv. Biog. Générale, xxxiii., 635; Merle d'Aubigné, Hist. of the Ref., iii. 365 sq.; Brit. Qu. Rev. April, 1865, p. 420.

OLIVETANS. See MONTOLIVETENNES; PROLOMEL

Olivyera, Francisco Xaverio de, a Portuguese nobleman, noted as an ecclesiastical writer, was born in Lisbon in the beginning of the 16th century, and began his studies at the age of forty years he was a slave to the prejudices of poverty; but extensive reading, joined to his observations in Protestant countries, illuminated his mind, and dispelled by degrees the clouds with which superstition had obscured his intellect. When he had determined to change his residence, he quit his patrimonial estates, and, renouncing all honors, sought refuge first in Holland, and afterwards in England, where he spent the remain-
der of his life in retirement. He employed his time in literary labor. He published, Memoires of his Travels:—Familiers Letters to a Countryman on the Earthquake at Lisbon in 1756:—The Chevalier d'Olivyera burned in Effigy as an Heretic, why and wherefore? etc.; and he left besides a great number of MSS., including Olivyerriana, or Memoirs, Historical and Poetical, which, after the overthrow of Lisbon occurred, he distinguished himself by a judicious and effective address to his former fellow-citizens. It was reprinted several times, and a second part added, and the whole translated into English. He died at Hackney Oct. 18, 1783.

Olivyera, Salomon de, ben-David, a distinguished Hebrew poet and grammarian, and chief rabbi of the Portuguese Jews at Amsterdam, was born about 1640. He was a master in Hebrew, and wrote synagogical poetry when very young. He first succeeded Moses Raphael de Aguilar as teacher in the Kather Thora (חֶזֶק תַּחַר), and was elected in 1764 to the dignity of choacham in the institution called Gemeinath Chassidisch, where he delivered expositions on the Pentateuch between 1767 and 1776, and on the technical and poetic books between 1768 and 1682. In 1688 he succeeded Abaob as president of the Rabbinic college, and died in May, 1708. He wrote, דַּבְּרֵי יִשְׂרָאֵל, the Lovely Hind, a moral philosophical work on Hebrew rhetoric (Amsterdam, 1665):—בְּמִידַבְּרֵי, the Door of Lips, a Chaldee grammar, with the title "Grammar daca lengoa Chaldaica" (ibid. 1682):—רְאוֹפֵּשׂ, a methodology and logic of the Talmud (ibid. 1688):—רְאוֹפֵּשׂ, an alphabetical index to the 613 Precepts, etc. (ibid. 1688):—רְאוֹפֵּשׂ, the Green Olive, a Portuguese translation of the words which frequently occur in the Mishna and Gemara, and of the technical and expressive (ibid. 1688):—רְאוֹפֵּשׂ, on Hebrew and Chaldee grammar, to which is appended רְאוֹפֵּשׂ, on the Biblical Aramaisms (ibid. 1682, 1689):—רְאוֹפֵּשׂ, a Hebrew, Chaldaic, and Portuguese lexicon (ibid. 1692):—רְאוֹפֵּשׂ, Chain of Terminations, a lexicon on Hebrew avasson (ibid. 1665):—רְאוֹפֵּשׂ, the Reasons for the Accents, a treatise on Hebrew accents, in which he discourses especially on the poetical accents of Job, Proverbs, and the Psalms, published with the Pentateuch and Haphtarot (ibid. 1665, and often). He also wrote a Calendar, an astronomical work, etc. See Frankel, Monatschrift für Gesch. u. Wissensch. d. Judenwesen (Breunau, 1861), x, 432—436; Steinmecker, Catalogus Librorum in Biblioth. Bobletana, coll. 2379—83; the same, Bibliogr. Handbuch (Berlin, 1859), No. 1471—78; Kitto, Cyclop., a.; Fürst, Bibl. Jud., i. 46, etc.; Wolf, Bibl. Hebr., i., iii., iv., v., 1955; De Rossi, Dizionario storico degli autori Ebrei, p. 251 (Germ. transl. by Hamburger); Lindo, History of the Jews of Spain and Portugal (London, 1848), p. 968; Finn, Sephardim, or the History of the Jews in Spain and Portugal (Ibid., 1841), p. 464; Jose, Gesch. d. Juden in Spanien (ibid. 1841), p. 179; Mayer, Geschichte des Juden in der Niederungslandschaft des Westlichen Ural (Leips., 1859), p. 206, 261, 315; the same, Geschichte der Juden in Portugal (Ibid., 1867), p. 810; the same, Bibliothek Jüdischer Künstlerber (Berlin, 1870), vol. i.; Bei- melf, p. 10. (B. P.)

Olivier, Cardinal, a German theologian and historian, was born in Westphalia about the middle of the 12th century. After studying at Paderborn he became canon of the church of that city, and afterwards diocese of the schools of Cologne. In 1210 he went to the south of France to preach a crusade against the Albigenses. After returning to his native country he preached a crusade against the Saracens in Westphalia, Friesland, Flanders, and Brabant, and in 1214 and 1217 went himself to the Holy Land with the volunteers. In
OLIVIER

1922, having returned to Europe, he was made bishop of Paisierd, and while at Rome, in 1225, he was created cardinal-bishop of Sabina, and intrusted with the pope with a mission to the emperor Frederick. His work lasted after Sabina, 1227. He wrote a letter to Engelbert, archbishop of Cologne, repeatedly as a missus ad Franciae, Gesta, Franciae, Historia regum Taurum Sancet, in Eckart, Corpus historicorum, ii, 1556; Historia Dominicus, in the same, i, 1798. Michaud has given an analysis of these works in his Bibliothèque des Croisades, p. 177; and Petit Radel mentions the most important passages in the Olivi's works. See Schnepf, Annales Paderbornenses; Historiae de France, vol. xviii; Ughelli, Italia Sacra, ii, 167; and Litt. de la France, xvii, 14.

Oliver, Jean, a French Roman Catholic theologian, was born near the opening of the 16th century. He joined the Benedictines in Poitou, and afterwards moved to the abbey of St. Denis, near Paris, where he became great abbot and vicar-general. After he was elected abbot, he surrendered his claims in favor of the cardinal of Bourbon, at the request of Francis I, who gave him in exchange the abbey of St. Me- dard of Soissons. In 1583 he resigned this dignity to become bishop of Angers. He enjoyed a great reputation for learning and piety, and enacted various strict regulations against the laxity of ecclesiastical discipline in his diocese. Some say that he was in favor of the Reformation, and Crepin reports that he permitted the preaching of the Gospel at Angers. He died there April 12, 1540. He wrote well in Latin, as is shown by his own epitaph, that of Louis XII, quoted by Papire Masson, an ode to Salome Macrin, and especially by a poem entitled Pindarica Jani Olivii Andia hierophanta (Paris, 1542, 12mo). This poem, which was published separately when it appeared, was published by Stephen Dolet, and translated by William Michel into French verses (new ed. Rheims, 1608, 8vo). See Scroela de St. Marthe, Ellog. lib. ii; Gallia Christiium, ii, 147; Doubilet, Hist. de l'Abbe de St. Denys; Crepin, L'Etat de l'Eglise; Haag, La France Protestante.

Oliver, Nicolas Theodora, a French Roman Catholic prelate, was born at Paris April 28, 1798. He was educated for the Church: studied underoucher, curate of St. Merry, and entered the seminary of St. Sulpice. Ordained priest in 1822, he was sent as a missionary into the province of Beauce, and on his return was made vicar of St. Denis, and afterwards of St. Etiene de Mont, Paris. He was successively curate of St. Peter at Chaillot, March 25, 1827; of St. Etiene de Mont, Jan. 17, 1828; and of St. Roch, Feb. 7, 1833. Here, in the favorite parish of queen Marie-Amelie, he found an ample field for his activity and his benevolence. Among his numerous discourses, a charity sermon he preached in favor of the orphans whose parents had died by cholera is perhaps the most remarkable: the collection taken up on the occasion surpassed all expectations. He was made bishop of Evreux April 18, 1841, and died in that city Oct. 21, 1854. Besides a number of homilies, sermons, meditations, and pastoral instructions, scattered through various collections, Oliver wrote, Oratio funebre de M. l'Abbe Philippe Jean Louis Dejeardins, Docteur en Sor- bonne et Vice-général de Paris (Paris, 1884, 8vo): Le Catéchisme, ou le Théâtre des Temps Modernes (Paris, 1839, 18mo); Discours des émises affligées, ou lettres de consolation tirées des saintes Péres (Paris, 1840 and 1854, 18mo): Concordances de rapport de la théologie de Bayle with the code civil, in the Traité de la justice et des contrats: —Un sermon entre deux histoires (Paris, 1836, 18mo); Sermons sur des passages divers contemporains, vol. i; L'Évêque d'Evreux: Diz annales de M. Olivier (1841, 8vo); Boul- cion, État actuel du diocèse d'Evreux, or la francise varié sur M. Olivier (1845, 8vo); same, Hist. de Mgr. Olivier, Évêque d'Evreux (1855, 12mo); Fisquet, Francia pontificale.

Oliver, Seraphin, a French prelate of note, was born at Lyons, Aug. 2, 1588. He studied at Tournon, and afterwards at Bologna, where he graduated as doctor in civil and canon law. In 1563 he was professor in the university, and was afterwards called to Rome by pope Pius IV, and entrusted in 1564 auditor de la note for France. He held this office for thirty-six years. Gregory XIII sent him to France in 1573 to congratulate the duke of Anjou (afterwards Henry III) on his election to the throne of Poland; and he was sent on a second mission to the country under Sixtus V in 1589. He took an active part in inducing Clement VIII to grant absolution to Henry IV. When cardinal D'Osasæ reigned, Henry IV nominated Oliver to the bishopric of Rennes in June, 1609; but he never took possession of that see, and was created patriarch of Alexandria Aug. 26, 1609, and cardinal June 9, 1609. He died at Rome March 9, 1609. He wrote, Decisiones rota Romana mille quingenta (Rome, 1614, 2 vols. fol.); Franc, 1615, 1661, 2 vols. fol., with notes and additions. It begins with the funeral sermon of that prelate, preached by Cardinal de Jus, which was also published separately (Rome, 1609, 4to). See Frizon, Gallia purpurata, p. 890; Sainte-Marthe, Gallia Christiium, vol. iii; Amelot de la Houssaye, Lettres du Car- dinal d'Osasæ, ii, 78, 316, 440; De Thou, Hist. univ. i, 181; Allon, Histoire des Cardinaux illustres; France profonde.

Oliveri, Augustin, a Genoese prelate, was born in Genoa in 1758. He entered the Mère-de-Dieu, and taught philosophy at Naples. King Ferdinand I nominated him to the education of his sons (afterwards Francis X). Oliveri followed the Bourbon troops to Sicily, and attached himself to their fortune. He was restored to the charge of their restoration, by the bishop- ric in pruvius of Arethusa. He died at Naples June 10, 1834. We have of his works, Filosofia mo- vise, ossia le doveri dell' uomo (Genoa, 1828, 2 vols. 12mo). See Notizie Romane; L' Ans de la Religion, ann. 1894.

Oliveri, Don Justin, an Italian painter, was born at Turin in 1673. According to Della Valle, he excelled in painting subjects requiring humorous talent for caricature, and in this he has seldom been surpassed. Lanzo says: "In his time the royal collection was enriched at the death of Prince Eugene by the addition of nearly four hundred Flemish pictures; and none practised more successful large-scale works. But, although he chiefly painted in what the Italians style Bambocciato, he was yet perfectly competent to execute works in the higher walks of history, as is proved by his Miracle of the Sacrament, in the sac- ristry of Corpus Domini in his native city." He died in 1755.

Olmstead, James Mcsnon, D.D., an American Presbyterinan divine of note, was born at Stillwater, N. Y., Feb. 17, 1794; was educated at Union College, class of 1819; and studied at the Princeton Theological Seminary, class of 1822; was licensed to preach immediately after graduation, and performed missionary work until 1825, when he was ordained pastor of the churches at Lansdiss and Centre; subsequently became pastor at Middle Tuscawara, Flemington, N. J., and Snow Hill, Md. He died at Philadelphia Oct. 16, 1870. Besides Sermons and Essays, he published Thoughts and Couns- els, ed. by W. H. Bingham (1863)—Our First Mother (1852)—and North and his Times (1855).

Olof Skgkonig (Tribute-king), the first Christian king of Sweden, reigned from 995 until his death, 1022. He was the son of Erik Segersall and Sigrid the Proud. From his father he inherited Denmark, but in 999 he gave it, with the mother's approval, to Svend Forkbeard.
OLONNE 363 OLYMPAS

He fought at the battle of Swolder, where the Norse king Olaf Trygveson fell. For several years after that battle (1088) Norway had to pay a yearly tax to king Olaf, and hence his name Stokkanou. He and his courtiers are believed to have been baptized about the year 1001. He had been instructed in Christianity by Siegfred, an Englishman, who, next after St. Ansgarius, is the most famous apostle of the North. This good man devoted a long life to the work of converting the pagan Swedes, and died at a great age among the people of Smiland, with whom he had begun his labors. But although Olaf became a Christian, and provided for the preaching of the Gospel among his subjects, still the Swedes continued to follow their ancient customs and believed in their old gods. They must, however, be said to have become completely Christianized before 1150. Olaf established a bishopric at Skara, the mother see of the North. He died in 1022, leaving the kingdom to his son and joint ruler Anund. See Petersen, Norges Sverigesegner Dansmark Historie; Muscha, Det Norskes Folka Historie; Otte, Skandinavisk History. (R. B. A.)

OLONNE, JEAN-MARIE D', a French Hebraist, was born at Toulon in the first years of the 18th century, and probably belonged to the ancient family Tullia d'Olonne, which still remains at Carpentras. He was a Carmelite of the province of Avignon. He was the author of the Litterae Hebraice et Chaldaeae, etc. Biblicam (Avignon, 1765, 2 vols. fol.); vol. iii., which was promised, never appeared. This work, without the author's name, has been placed under the auspices of cardinal Dominique Poinson. See Achard, Dic. de la Providence; Barjavel, Dic. Hist. du Vaucluse.

OLOTZAGA, JUAN DE, an eminent Spanish architect, was a native of Biscay, and flourished during the latter part of the 15th century. His instructor is not mentioned, but he attained great excellence in the art. He erected the cathedral at Huesca, in Aragon, on the site of the celebrated mosque Midejila. This work gained him great reputation, and is much admired for its fine proportions. Milizia says: "The principal façade is grand, with fourteen statues larger than life on each side of the entrance, placed on pedestals within niches; above these are forty-eight smaller statues, a foot in height." Under the reign of Ferdinand and Isabella the Grecian style of architecture became prevalent in Spain, and was adopted by Olotzag. Among his principal works in that manner were the great church of Santa Cruz at Zaragoza, commenced in 1480 and completed in 1492; also the Foundling Hospital, and the great church of St. Ildefonso, founded by cardinal Ximenez.

OLHAUSERN, HERMANN, a German Protestant theologian, noted especially as an exegete, was born Aug. 21, 1796, at Oldesloe, in the duchy of Holstein. From 1814 to 1818 he studied theology at Kiel and Berlin; at the former university Twesten, and at the latter Neander and Schleiermacher, lectured in those times. He applied himself particularly to historical theology, and his first work, which was a prize-essay, Melanchthon's Charakteristik aus seinen Briefen dargestellt (Berlin, 1817), taught him to the credit of his youth to minister of public worship. In the year 1818 he became licentiate in theology and "private docent" in the university; in 1821 he was elected extraordinary professor at Königsberg, where he taught till 1834, and where at first he also belonged to the Thomist circle. He was received into the Schleiermacher school in 1827 he was made a regular professor, and in 1834 accepted a call to a theological professorship at Erlangen, hoping that a change of climate would help his health, which had become very much impaired by overwork; but he did not live to anticipate it, and died Sept. 4, 1838, in the prime of life. Besides his prose-essay, he wrote, Historia eccles. veteris monumenta (Ber-

Olympiodorus, a Neo-Platonic philosopher, was a native of Alexandria, and lived probably in the latter part of the 6th century A.D. There are extant by him commentaries on the First Alcibiades, the Phaedo, the Gorgias, and Philebus of Plato. The first-mentioned commentary contains a life of Plato. His commentary on the Gorgias was published by Routh in his edition of the "Gorgias" and "Etymodeamus" (Oxford, 1784); that on the Phaedo by Andreas Mustoxides and Demetrius Schinas in the Variorum edition of Aristotle; that on the Phaedrus by Venetius, and the Philebus by Stallbaum in his edition of the "Philebus" and that on the First Alcibiades by Creutzer, in the 2d and 3d volumes of the Vetus Philosoph. in Theolog. ex Platon. et Foilbus (Frankl. 1820). In estimating Olympiodorus from these publications of his, it would appear that he was an acute and vigorous thinker, and a man of great erudition.

Olympiodorus of Alexandria, a Greek monk, said also to have been a deacon of a church in Alexandria, is believed to have lived in the first part of the 6th century A.D. He was a Peripatetic in philosophy, and wrote commentaries on the Meteorologica of Aristotle, which was printed by Alciat (Venice, 1561, fol.). He is sometimes called the Younger, to distinguish him from the Peripatetic philosopher of the same name who was the master of Proclus, but who is not known to us by any extant work. He also wrote a commentary on the Ecclesiastes, which is printed in the Auctoriar Patr. Duc. ii, 602 sq., and in the Bibl. Max. Patr. xviii, 490. His Notes on Job are included in the Catena of Nicetas on that book (Lond., 1667, fol.); and his Notes on Jeremiah in the Catena Chrestiana.

Olympus (Ολύμπος, i.e. Olimpion), one of the chief cathets of the Greek deity Zeus, so called from Mount Olympus in Thessaly, the abode of the gods (2 Mac. vi, 2). See Jupiter.

Olympus, an Arian theologian of the 4th century, flourished at Constantinople. He is reputed to have been a very decided opponent of the orthodox Christians, and to have profaned the Trinity; but there is no reason for the accusation, as the persons upon whose testimony the accusation is made are not regarded as trustworthy witnesses. See however Jortin, Remarks on Eccles. Hist. ii, 442, 443.

Olioufalki, Andrew, an eminent Polish divine, was born about 1618. In the course of his studies, which were pursued at Kalisch, he applied himself particularly to poetry, which he had not been long possessed of, so peculiarly fitted that, Ovid-like, his ordinary discourse frequently ran into verse. After he had finished his studies in divinity and jurisprudence he travelled through Italy, where he visited the best libraries, and took the doctorate in law at Rome. In the meantime he went to France, and was introduced at Paris to the princess Mary Louisa, who, when about to marry Ladislaus IV, king of Poland, invited Olioufalki to attend her thither. On Olioufalki's arrival the king offered him the secretary's place, but he declined it, for the sake of following his studies. Some time later he was made a canon of the cathedral church at Gnesen, and chancellor to the archbishop. After the death of that prelate he was called to court, and made Latin secretary to his majesty, which place he filled with great reputation, being a complete master of that language. When he took his leave of the land and of Sweden he wrote Vadovios Polomene. He attended at the election of Leopold to the imperial crown of Germany, in quality of ambassador to the king of Poland, and there secured the esteem of the three ecclesiastical electors. He was also sent on other diplomatic missions, was in the confidential service of the high office of prebendary to the crown, and presented to the bishopric of Culm. After the death of Ladislaus he fell into disfavor with the queen, because he had opposed an election which she had of setting aside the prince of France upon the throne of Poland; however, this did not prevent his being made vice-chancellor of the crown. He did all in his power to dissuade Casimir II from renouncing the crown; and, after the resignation of that king, several competitors appeared, one of whom was the occasion published a piece called Censoria, etc. This was answered by another, entitled Censorum Censorum Candidatorum; and the liberty which our vice-chancellor had taken in his Censoria was likely to cost him dear. It was chiefly levelled against another candidate of much more worth, and no more than eight years of age; and the czar was highly incensed, and made loud complaints and menaces unless satisfaction was made for the offence. Upon the election of Michel Koribut to the throne, Olioufalki was despatched to Vienna to negotiate a match between the new-elected king and one of the princesses of Austria; and on his return from that embassy was made grand-chancellor of the crown.

OMAN. He did not approve the peace concluded with the Turks in 1676, and wrote to the grand-vizier in terms of which the grand-seignior complied to the king of Poland. After the death of Koribut, Olioufalki labored earnestly for the election of John Sobieski, who rewarded Olioufalki with the archbishopric of Gnesen and the primacy of the kingdom; and no doubt he might have obtained a cardinal's hat if he had not publicly declared against it. However, he was only long possessed of the primacy before his right thereto was disputed by the bishop of Cracow, who laid claim also to certain prerogatives of the see of Gnesen, and arrogated the right of officiating at the obsequies of the Polish monarchs. Hereupon Olioufalki published a piece in defence of the rights and privileges of his archbishopric. He also some time afterwards published another piece, but without putting his name to it, entitled Singularia Juris Patrumatis R. Popotis, in support of the king of Poland's right of nomination to the abbeyes. In 1678, going by the king's command to Danzig, in order to compose certain disputes between the senate and people of that city, he was seized with a disorder which carried him off in three days. He was particularly distinguished by eloquence and love for his country; and his death was greatly lamented.

Om, a Sanscrit word of asseveration, much used in Buddhist works as an introductory term. It is especially prominent in Lamasism (q. v.).

Omadius, a surname of Dionysius or Bacchus as the flesh-eater, human sacrifices being offered to this deity in the islands of Chios and Tenedos.

Omažrus (Ομαζρος, v. r. Ομαζρος and Μαγρος; Vulg. Abramuus), a corrupt Gregorian form (1 Esdr. ix, 34) for Amram (q. v.), a descendant of Bani (Exra xiii, 34).

Oman, a strip of maritime territory in the most eastern portion of Arabia, extends between Ras el-Jiždi and Ras el-Had, and is bounded on the north-east by the Gulf of Oman, and on the south-west by the deserts of the interior. It has an area of about 80,000 square miles, and a population estimated in 1873 at 1,598,000, mostly Mohammedan. A part of the territory of Oman is known under the name of Muscat. At a distance of twenty to forty miles from the coast a chain of mountains runs parallel to it, which reaches in its highest ridge, called Jebel Ashkar (Great Mount), a height of 6000 feet; the average height is 4000 feet. There are a few not considerable streams, and some rich fertile tracts in this region, but the greater part is a waste of sand, with here and there a small oasis, where, however, the vegetation is most luxuriant. Groves of almond, fig, and walnut trees tower to an enormous height, overshadowing the orange and citron trees, but are themselves overtopped by the
splendid date-palms. The country is rich in mining wealth; lead and gold are found in considerable quanties. See ARABA; PERSIA.

Omar (Heg. Omary, * 'Omar, elegant; Sept. 'Umar), the second named of the seven sons of Eliphaz, son of Esau (Gen. xxxvi. 15; * comp. ver. 11); 1 Chron. 1, 5, who were heads and princes of tribes among the Edomites. B.C. cir. 1900. The name is supposed to survive in that of the tribe of Amir Araba east of the Jordan. Bunyan asserts that Omar was the ancestor of the *Bene 'Ammer in Northern Edom (Bibleenaer, Gen. xxxvi. 11), but the names are somewhat different (*itial, and the Arabic equivalent of Jamie). Omayy, Abu-Hafsa ibn-Al-Khattab, the second caliph of the Moslems, and one of the most noted characters in Mohammedan annals, was born about 581. Of his early history little is known. He was the third cousin of Abdullah, the father of the Prophet, but previous to his conversion was an ardent persecutor of Mohammed and his followers. He even attempted to take Mohammed's life. He was, however, most remarkably converted, and after becoming a real apostle as he had formerly been a persecutor, and rendered valuable aid to the Prophet in all his warlike expeditions. After Mohammed's death he caused Abu-Bekr to be proclaimed caliph, and was himself appointed the second minister. Though of a fiery and enthusiastic temperament, he proved a steady minister. It was at his suggestion that the caliph put down with an iron hand the many DISCS which had arisen among the Arabs after the Prophet's decease, and re- solved to strengthen and consolidate their new-born national spirit, as well as propagate the doctrines of Islam, by engaging them in continual aggressive war. See MOUNTAINIANISM. Omar succeeded Abu-Bekr in the caliphate by the express wish of the first caliph in A.D. 654, and immediately pushed on the war of conquest with increased vigor. He was a most enthusiastic Moslem, and worked at enlarging the faith, and increased the number of organized Moslems. He reorganized the army, and continued to serve under the new general. These two officers prosecuted the conquest of Syria, and took Damascus, its capital, in the month of Reboh, A.H. 14 (August-September, A.D. 636). After the capture of Damascus, the Moslems proceeded to the reduction of Emesa, Hamah, and Kennesin. The emperor Heraclius sent a considerable force to stop the progress of the Arabs, but the Greeks were completely defeated at the bloody battle of Yermuk (Sept. 18th) immediately after the Moslems captured Amru ibn-Al-Aas and Sarjil to besiege Jerusalem. The city was stoutly defended by the garrison; but after a siege of several months the patriarch Sophronius, who commanded in it, agreed to surrender to the Moslems, but refused to treat with any other except the caliph himself. A Moslem messenger having been dispatched to Omar, who was then residing at Medina, he hastened to Jerusalem followed by a scanty suite. Omar's journey from Arabia to Palestine is thus described by the historian Tabari:

He rode a sorrel-colored camel, and was dressed in an old tattered habit of hair-cloth; he carried with him, in two bags, his provisions, consisting of dry fruits, barley, and dried corn, besides a skin for the water. Whenever he halted to make a repast, he permitted those

who accompanied him to partake of it, eating from the same ward; and, as was the custom of most of the Arabs, his hair was not washed for a week. During his journey he administered justice to all his subjects; in several instances he corrected the laxity of morals, and reformed several abuses, especially those connected with the new converts; abolishing also many luxuriant indulgences which prevailed among the Moslems, such as the drinking of wine, the using of burnt flesh, and the eating of the flesh of dogs. Arrived at the camp, he caused several Moslems to be seized and scourged and then thrown into prison, in disobedience to his orders, arrayed themselves in the shikak tunic of the conquered Greeks.

After a short conference with Sophronius, the terms of a capitulation were agreed upon, and the keys of the Holy City were delivered up to Omar. The articles of the capitulation of Jerusalem have been preserved by the Moslems (Mines de l'Orient, vol. ii), and as they were the model upon which the Moslems dictated many others to the subdued cities of Africa and Spain, we transcribe them here:

"The inhabitants shall retain their lives and property; they shall preserve the use of their churches, but they shall build no new ones; they shall neither place crosses upon these which they already have, nor hinder the Moslems from entering them night or day; they shall not ring their bells, but they shall be allowed to toll them; if a Moslem shall not be able to leave Jerusalem in the course of three days, he shall not be forced to do so, but he shall be allowed to ride on horseback, but without either saddle or arsenals, and without carrying with him the distinctive mark of all Christians living under the Moslem rule; they shall not sell wine to the Moslems, and shall remain (faithful to the caliph), and pay regularly the taxes imposed upon them."

Omar made his triumphant entry into Jerusalem towards the middle of the year 16 of the Hegira (A.D. 657). After conversing for a while with Sophronius, and addressing to him some questions on the antiquities of the place, visiting the Church of the Resurrection, and saying his prayers under its portico, he desired to be conveyed to Bethlehem, where he also performed his devotions. Returning again to the city, he caused a magnificent mosque to be erected on the site of Solomon’s Temple, the predecessor of that which still bears his name and remains an object of great veneration to the Mussulmans. The taking of Jerusalem was followed by the reduction of all the principal cities of Palestine, while Khaled and Abu Obeydah made themselves masters of Antioch, Aleppo, and Baalbek. Omar next prepared to invade Persia, and after a few preliminary operations then ruled by a king named Yezebed, against which he had at the beginning of his reign unsuccessfully contended (645). Saad ibn-Abi-Wakas, who was now in trust with the command of the army, penetrated far into Persia, and invested at Kutlug and Kusardi with a powerful army commanded by Rustam, who fell in the battle; took possession of Bahir-Shir, in the western quarter of the city of Madain, the ancient Cesephon; founded the city of Kufah, near the Euphrates (688); crossed the Tigris; and at last took Madain, the capital of Yezebed-gordon’s kingdom. In the mean while Amru ibn-Al-Aas, who commanded the armies of Egypt, completed the conquest of that country by the reduction of Alexandria (640). It was then that the famous library founded by Ptolemy Philadelphus is said to have been destroyed by the conquerors. Upon an application from Amru to the caliph to know his pleasure concerning its contents, an answer was returned commanding its destruction; for, said Omar; “if the books of the Greeks agree with the books of God (Koran), they are superfluous, and need not be preserved; and if they disagree, they are pernicious, and ought to be destroyed.” In consequence of this decision, we are told, and (notwithstanding all Gibbon’s ingenuity to discredit the account) we are inclined to believe, that the manuscripts were delivered up to the four (others say five) thousand public baths in the city, to which they served, as precious fuel for six months.

The conquest of Egypt was followed by that
OMAR 366

OMAR

of part of Africa. Amru pushed his victorious arms as far as the deserts of Tripoli and Barca. Armenia was in the hands of his lieutenants, and the country of Khorsassân (642) by Abnâf ibn-Kays, another of Omar's lieutenants. In the same year was fought the famous battle of Nehavend, which decided the fate of Persia. Fîrzû, who now commanded the armies of I司马d, was killed; and the monarch himself was obliged to seek an asylum at Fahhrâb by Mughîyârîn (641), and the month of November, A.D. 644. He was buried on the following Saturday, close to the Prophet and Abu-Bekr, in a mosque which he had founded at Medina, where his tomb is still visited with great respect by the Musulmans. He had been asked, some time before his death, to name his successor, he refused; and upon the suggestion of one of his courtiers that he should leave the caliphate to his son Abdullah, he remarked, "It is enough that one out of my family has been forced to bear this burden, and account afterwards to his God for the conduct and government of his subjects." Fîrûz, who had hammed the hypothesis of a more virtuous sovereign or a more zealous apostle. It has been said of him that he contributed more efficaciously to the advancement of the Mohammedan religion than the Prophet himself. Khondemir, the celebrated Persian historian, thus recapitulates the praiseworthy acts of this caliph: "He took from the infidels 86,000 cities or castles, destroyed 4000 temples or churches, and founded or endowed 1400 mosques." The Prophet had the greatest esteem for Omar, whose daughter Hassâfah he married. On a certain occasion, when he was heaped with honors, he had occasion to send a second messenger to this world, his choice would undoubtedly have fallen on Omar. The devo tion, humility, and abstinence of this caliph had become proverbial among the Musulmans. He never tasted any other food than barley-bread and dates; water was his only drink; and he was often found asleep under the porch of a mosque or beneath a tree. He complied most strictly with all the precepts of the Koran. Eutychius tells us that during his caliphate he performed nine times the pilgrimage to Mecca. In order better to regulate his public conduct, he was guided by the work of his hands, supporting himself entirely by the sale of leather belts which he manufactured. But the quality for which Omar was most conspicuous was justice, which he is said to have administered with an even hand to infidels as well as believers. The historian Wâkitl says that the staff of Omar was more dreaded than the sword of his successors. In the lifetime of Mohammed, a Moslem, condemned for his iniquitous act of a Jew, having appealed to Omar from the sentence of the Prophet, was immediately cut down with the scimitar for not acquiescing in the judgment of his superior judge. In the same year, the caliph Mohammed gave Omar the surname of Al-farîk which he retained ever afterwards, a word meaning the divider, or the discriminator, thus doubly alluding to his action and the discernment which prompted it. Several attempts were made to procure the death of the reign of Omar. It was in this time that the ara of the Hégira, or flight of Mohammed, by which all Mohammedan nations compute their years, was established, and its beginning fixed on July 16, A.D. 622. He was the first who kept armies under pay; and assigned pensions to officers out of the public revenue; he instituted a sort of police force to watch at night for the security of the citizens; and he promulgated some excellent regulations respecting the duties of masters towards their slaves. He was also the first who assumed the title of Amir el-munymun (commander of the faithful), instead of that of Khalifah-rasûl-lilahi (vicar of the messenger of God), which his predecessor Abu-Bekr had used. Omar's memory is an object of the greatest veneration among Musulmans of the Sunni, or orthodox sect; not so among the Shiites, or partisans of Ali, who look upon the first three caliphs, Abu-Bekr, Omar, and Ali, as usurpers of the caliphate, to the prejudice of Ali, to whom, they pretend, it belonged as the nearest relative of the Prophet. See Abufëda, Annales Moslemici (transl. by Reiske, Hafniæ, 1790), i, 250 sq.; Al-ma'mîn, Hist. Sarac. (ed. Séancq), i, 270 sq.; Ibn-Sîhiibân (MS.) Rauwadat-I-mamchih; Ockley, Hist. of the Saracens, i, 800; Ibn-al-Khattît,

Ombay, or Maloeva (Malaya), an island between the two and the north-west coast of Australia, lies to the north of Timor, from which it is separated by the Strait of Ombay, lat. 8° 8'-8° 28' S., long. 124° 17'-125° 7', and has an area of 961 square miles. The population amounts to over 200,000. The hills of Ombay are volcanic, and the coasts steep and difficult to approach. The inhabitants are dark-skinned, thick lips, flat nose, and woolly hair, appearing to be of mixed Negro and Malay origin. They are armed with the bow, spear, and creese, and live on the produce of the chase, with fish, cocoa-nuts, rice, and honey. A portion of the island formerly belonged to the Portuguese, but since Aug. 6, 1851, it is entirely a Netherlands possession. The Dutch postholder resides at the village of Aler, to which iron wares, cotton goods, etc., are brought from Timor, and exchanged for wax, edible nuts, provisions, and other native products. Ombay has oxen, swine, goats, turkey-cranes, and produce of many kinds. Amber is also found, and the Bogoev of Celebes import European and Indian fabrics, exchanging them for the produce of the island, which they carry to Singapore (Chambers). The Dutch missionary societies are the only Protestant Christians who labor in Ombay, and though their little progress has been more in converting these Malayan Negritos.

Ombiates, priests and soothsayers among the inhabitants of Madagascar (q. v.), who compound charms, which they sell to the people.

Ombrius, a surname of Zeus, as the rain-giver, under which title he was worshipped on Mount Hymettus, in Attica.

Ombwiri, a class of good and gentle spirits who are believed by the natives of Southern Guinea to take part in the government of the world. Almost every man has his own ombowri as a tutelary and guardian spirit, for which he provides a small house near his own. "All the harm that is escaped in this world," as Mr. Wilson informs us, "and all the good received, are the effects of this kindly office of the little spirit, and not Omwiri is also regarded as the author of everything which is marvellous or mysterious. Any remarkable feature in the physical aspect of the country, any notable phenomenon in the heavens, or extraordinary event in the affairs of men, is ascribed to Ombwiri. His favorite places of abode are the summits of high mountains, deep caverns, large rocks, and the base of very large forest trees. While the people attach no malignity to his character, they guard against any unnecessary intercourse with him, and they never pass a place where he is supposed to dwell except in silence. He is the only one of all the spirits recognised by the people that has no priesthood, his intercourse with men being direct and immediate.

O'mega [many Ome'gae, but against the proper rule] (as fully Ω μη, i. e. the great or long o, in distinction from O'mposs, the short o), the last letter of the Greek alphabet, as Alpha is the first. It is used metaphorically to designate the state of anything: "I am Alpha and Omega, the beginning and the ending... the first and the last" (Rev. i, 8, 11; comp. xxii. 6, xxii. 13). This may be compared with Is. xii. 4: xii: 6, "I am the first and I am the last, and beside me there is no God." So Prudentius (Cathemer. hymn. i, 11) explains it: "Alphabet et O cognominatur: Ipe fons et claudans Omium quae sunt, fierunt, quemque post futura sunt." See ALPHABET. The symbol Ω, which contains the first and last letters of the Hebrew alphabet, is, according to Baxter (Lex. Talm. p. 344), "among the Cabalists often put mystically to express God, and is found in the Apocalypse." Schöttgen (Hor. Heb. i, 186), "quotes from Julet Rubeni (fol. 17, 4), "Adam transgressed the whole law from Ν to Τ, that is, from the beginning to the end. It is not necessary to inquire whether in the latter usage the meaning is so full as in the Revelation: that must be determined by separate consideration, but the illustration merely, the name is valuable. Both Greeks and Hebrews employed the letters of the alphabet as numerals. In the early times of the Christian Church the letters Α and Ω were combined with the cross or with the monogram of Christ (Maidland, Church in the Catacomb, p. 166-8). See MONOGRAM OF CHRIST.

Omen (for the deriv. see OMO), or Prodigy (generally said to be from pro and die, but more probably from pro and ago, to lead, hence anything conspicuous or extraordinary), the name given by the Romans to signs by which approaching good or bad fortune was supposed to be indicated. The terms Omen and Prodigy were not, however, exactly synonymous; the former being applied more particularly to signs received by the gods, or more particularly to spoken words; the latter to phenomena and occurrences, such as monstrous births, the appearance of snakes, locusts, etc., the striking of the foot against a stone or the like, the breaking of a shoe-heel, and even the whistle of a bird. If someone was pronounced to be promised on the part of a god, it was to be interpreted according to the promise; but otherwise, the interpretation was extremely arbitrary. It was supposed that evil indicated as approaching might be averted by various means, as by sacrifices, or by the utterance of certain magic formulas; or by an intermixture of felicity of interpretation, as when Caesar, having fallen to the ground on landing in Africa, exclaimed, "I take possession of thee, Africa." Occasionally, it is true, we read of a reckless disregard of omens; as, for example, when P. Claudius, in the First Punic War, caused the sacrifice of chickens, who would not leave their cage, to be cast into the sea, saying, "If they won't eat, they must drink." Still the belief in omens was universal, and in general the greatest care was taken to avoid unfavorable ones. The heads of the sacrificial priests were covered, so that nothing distracting might catch their eyes; silence was enjoined at the commencement of every sacred undertaking, and at the opening of the games. Before every sacrificial procession ran the heralds, calling on the people to "pay respect to it," and admonishing them to cease working till it had passed, that the priests might not hear unfavorable sounds. At the beginning of a sacrifice, the bystanders were addressed in the words Farata Lingua ("Speak no word of evil import"), and the aim of music was sought to drown whatever noises might prove unpromising. See Fallati, Ueber Briggiff und Wesen des Ethn. Omen (Tüb, 1836). Comp. Divination.

The belief in omens has existed in all ages and countries, and traces of it linger even yet in the most civilized communities; in the dread, for instance, that many entertain at sitting down to table in a party of thirteen. Not a little has been learned of the science of omens, et alii, in the Scottish proverb: "Them who follow freis, freis follow:" meaning that a fatalistic belief in impending evil paralyzes the endeavor that might prevent it. Against the belief of omens it is observed that it is contrary to every principle of sound philosophy; but whoever has studied the writings of Paul must be convinced that it is inconsistent with the spirit of genuine Christianity. We cannot proceed to discuss the subject here, but will present the reader with a quotation on the other side of the question. "Though it be true," says Mr. Toplady, "that all omens are not worthy of observation, and though they should never be so regarded as to shock our fortitude or diminish our
confidence in God, still they are not to be constantly despised. Small incidents have sometimes been preluc
dative events; nor is there any superintendence in
these apparent prophecies, though there may be
superintendence in being too indiscriminately or too deeply swayed by them" (Works, iv, 192).
See SUPERSTITION.

O'mer (Heb. 'omer, prop. a sheaf, as in Lev. xxiii, 10, etc., from רעב, to bind or gather; Sept. γομή; Vulg. gomem), a Hebrew dry measure (Exod. xvi, 16, 18, 22, 33, 38), the twelfth of the ephahs according to the rabbis, but three
and a half quarts according to Josephus. See MEAS
UROM.

Omer, St., AUTOMARUS, a French ascetic, was born about 595 at Orral, or Goldenhar, near Constance. He was a wealthy family, but after the death of his mother he induced his father to give all his goods to the poor, and to retire with him into the convent of Luxeuil. There his talents and his zeal attracted the attention of his superior, and by the advice of St. Achaire, bishop of Noyon and Tournay, king Dagobert I appointed Omer bishop of Téréonne in 637. The diocese had been neglected for eighty years; but under his ecclesiastic,
the assistant of Bertin, Memmonin, and Eberlin, all three monks of Luxeuil, succeeded in bringing about a thor
ough reform among the people. Having obtained the gift of the estate of Sithion, on the Aa, from the owner, ADUARDUS, Omer built a church on it, which he dedicated in 648 to St. Martin, and beside it a convent, of which he made Memmonin abbot. After the latter had been made bishop of Noyon and Tournai, Omer appointed in his place Bertin, who afterwards gave the convent the name of St. Omer, and it was soon surrounded by the city bearing the same name (ver. 36); and the bishop died at Tére
onne Sept. 9, 668. He was buried in the church he had built. The Romish Church commemorates him Sept. 9. See Acta Sanctorum, Sept. 9; Mabillon, Annales Ordinis S. Benedettii, ix sec.; Ballet, Vies des Saints, vol. iii; Breveitarm Parissiense; France pontificale; Longueil, Histoire de l'Eglise Galilc, vol. iv.

Omer (St.), ECCLESIASTICAL COUNCIL of (Concilii
um Aquemaranae), was held in June, 1099, by Manasse
s of Rheims and four of his suffragans. The "Trè de Dieu" was established, and at the entreaty of Robert, co-adjutor of the see, five articles of peace were drawn up. See LECHE, Conc. vol. x.

Omiac Church, a sect of Memnonites in America are sometimes so called, after one of their preachers of the 17th century. They are found also in Germany and Switzerland. See MEMNONITES.

Omnius, carionist. See GLORIASIENS; GLOR
SATORS.

Omnipotence, an attribute of God alone, and es
tential to his nature as an infinite, independent, and per
defect Being. Among the distinct declarations of Scrip
ture attributing such power to God are the following:
Gen. xvii, 1; Exod. xxi, 12; Deut. iii, 24; 1 Sam.
vii, 6; Psa. lxii, 11; lxv; cxlvii; Dan. iv, 35; Matt.
vi, 18; xix, 26; Eph. iii, 20; Rev. xix, 6. It is also implied in the epistles (2 Pet. iii, 18; 1 Pet. i, 5, 7; 2 Pet. iii, 20), often applied to him in the O. T. The power of God is especially evinced: 1. In creation (Gen. i, 1; Rom. i, 20); 2. In the preservation of his creatures (Heb. i, 1; Col. i, 16, 17); 3. In the redemption of the world by our Lord Jesus Christ (Luke i, 35, 47; Eph. i, 19); 4. In the conversion of sinners (Psa. xvii, 3; 2 Cor. iv, 7); 5. In the continuity and success of the Gospel in the world (Matt. xxxii, 31, 32); 6. In the preservation of the saints (1 Pet. i, 5, 7); 7. In the resurrection of the dead (1 Cor. xv, 18); 8. In making the righteous happy ever, and in punishing the wicked (Matt. xxv, 34; Phil. iii, 20, 21). This power is only limited by God's own holy nature, which renders it impossible for him to do wrong (Num. xxiii, 19; Heb. vi, 18), and by the laws of possibility which he has himself created in the nature of things; in other words, we cannot ac
cceive of his performing either a metaphysical or a moral contradiction. See Cocker, Thetic Conception of the World (N. Y. 1876, 12mo), p. 356 sq.; Malcom, Theol. Ind. x., v.; Haag, Histoire des Dogmes Chretiens, i, 291; ii, 16 sq., 139 sq., 147. See LAW.

Omnipresence, another attribute of God alone, its ubiquity, or his presence, in every place at the same
time. It may be argued from his infinity (Psa. cxviii); his power, which is everywhere (Heb. i, 3); his providence (Acts xvii, 27, 28), which supplies all. As he is a spirit, he is so omnipresent as not to be mixed with the creature, or divided, part in one place and part in another; nor is he multiplied or extended, but is essentially present everywhere. God is everywhere, but he is not everything. All things have their being in him, but he is distinct from all things; he fills the universe, but is not mingled with it. He is the intel
ligence which guides, and the power which moves; but his personality is preserved, and he is independent of the works of his hands, however vast and noble. See Krauth, The Conservative Reformation, p. 797; Pearson, On the Credes; Wardlaw, Syst. Theol. i, 554; Haag, Hist. des Dogmes Chretiens, ii, 140, 311; Malcom, Theol. Ind. v. See PANTHEISM.

Omnisience, the third essential or natural attrib
ute of God, is that perfection which comprehends all things (Psa. cxviii, 5); 2. Eternal (Isa. lxvi, 10; Acts ii, 28; xv, 18; Ephes. i, 4); 3. Uni
versal, extending to all persons, times, places, and things (Psa. i, 10–13; Heb. iv, 13); 4. Perfect, relating to what is past, present, and to come. He knows all independ
ently, distinctly, infallibly, even what he nowhere died at Tére

oure Sept. 9, 668. He was buried in the church he had built. The Romish Church commemorates him Sept. 9. See Acta Sanctorum, Sept. 9; Mabillon, Annales Ordinis S. Benedettii, ix sec.; Ballet, Vies des Saints, vol. iii; Breveitarm Parissiense; France pontificale; Longueil, Histoire de l'Eglise Galilc, vol. iv.

Omer (St.), ECCLESIASTICAL COUNCIL of (Concilii
um Aquemaranae), was held in June, 1099, by Manasse
s of Rheims and four of his suffragans. The "Trè de Dieu" was established, and at the entreaty of Robert, co-adjutor of the see, five articles of peace were drawn up. See LECHE, Conc. vol. x.

Omiac Church, a sect of Memnonites in America are sometimes so called, after one of their preachers of the 17th century. They are found also in Germany and Switzerland. See MEMNONITES.

Omnius, carionist. See GLORIASIENS; GLOR
SATORS.

Omnipotence, an attribute of God alone, and es
ential to his nature as an infinite, independent, and per
defect Being. Among the distinct declarations of Scrip
ture attributing such power to God are the following:
Gen. xvii, 1; Exod. xxi, 12; Deut. iii, 24; 1 Sam.
vii, 6; Psa. lxii, 11; lxv; cxlvii; Dan. iv, 35; Matt.
vi, 18; xix, 26; Eph. iii, 20; Rev. xix, 6. It is also implied in the epistles (2 Pet. iii, 18; 1 Pet. i, 5, 7; 2 Pet. iii, 20), often applied to him in the O. T. The power of God is especially evinced: 1. In creation (Gen. i, 1; Rom. i, 20); 2. In the preservation of his creatures (Heb. i, 1; Col. i, 16, 17); 3. In the redemption of the world by our Lord Jesus Christ (Luke i, 35, 47; Eph. i, 19); 4. In the conversion of sinners (Psa. xvii, 3; 2 Cor. iv, 7); 5. In the continuity and success of the Gospel in the world (Matt. xxxii, 31, 32); 6. In the preservation of the saints (1 Pet. i, 5, 7); 7. In the resurrection of the dead (1 Cor. xv, 18); 8. In making the righteous happy ever, and in punishing the wicked (Matt. xxv, 34; Phil. iii, 20, 21). This power is only limited by God's own holy nature, which renders it impossible for
OMOPHAGIA

action. If, on the other hand, the suposed occasion be ob extra, then still more palpably must the knowledge be founded on hearsay alone. In short, we cannot predicate of the divine mind any such laws of mental association as those which call up stores of information in human thoughts: these belong only to finite and imperfect beings. Knowledge is not latent in God's consciousness; but natural and precedent assumptions. Even with ourselves positive knowledge or absolute certainty springs only from consciousness; all else is merely belief, probability, reasoning, etc. Memory itself is but the reflex action of consciousness. With God, as there is no need of information or inference, so knowledge must be simple intuition, or what is in human language consciousness of all truth, possible as well as actual, throughout that infinity of time and space which his presence permeates.

2. The other and more important question mooted relates to God's foreknowledge of the future. This, Calvinistic theologians generally affirm, depends upon his predetermination of all things. Of course, a Being of infinite power must know that his will cannot be frustrated, and may therefore predict with certainty whatever he ordains. But this is not real knowledge at all; it is simply the understanding of a capital fact. If God "he in habited eternity," Of course, however, he knows events in their true relation and sequence as to time, and he also knows that they might have been, might now or hereafter be, otherwise, i.e. he contemplates at the same time with the certain the contingent also, and even the imaginary. For mere mortals, within their finite sphere of the past and present, may do this. The essential difference—aside from the enlarged field of view—is, that God looks upon the future just as we do upon the past, but by a peculiar faculty inherent in Deity alone. Any other view reduces God to but a man of larger proportions. See the literature referred to in Malcom, Theol. Index, etc.

Omophagia (αμοφαγία, eating raw flesh), a custom which was so frequently at the celebration of the Dionysia (q. v.) in the island of Chios, the Bacchae celebrated, and the ravers indulged in the raw flesh of the victim which were distributed among them. From this custom Dionysus also received the name of Omiadus (q.v.).

Omophorium (αμοφόριον, borne on the shoulder) a kind of scarf or stole worn by the Eastern bishops. It resembles the Latin pallium, but is broader, and tied around the neck in a knot. See VESTMENTS, SACRED.

Omophaloschilti. See HOSPITALS.

Om'ri (Heb. Omer', עומר, thought by Gesenius and Furst to be עמרי, the former in the sense of taught of Jehovah, the later apportioned of Jehovah: but it is doubtful if the etymology contains the divine name; Sept. in 1 Kings 14:19; elsewhere 'A'mur-na'aph, 'A'mur-ma'u, 'A'mur-ya'aph, 'A'mur-u'aph). The name of four men: 1. The fifth named of nine sons of Becher, son of Benjamin (1 Chron. vii, 8). B.C. cir. 1618.
2. Son of Imri and father of Aminadab, of the tribe of Judah (1 Chron. xii, 4). B.C. post 1618.
3. Son of Michael, and half of the tribe of Issachar (1 Chron. xxviii, 18). B.C. cir. 1017.
4. The commander-in-chief of the armies of Elah, king of Israel (1 Kings xvi, 16), and the seventh king of Israel, who began to reign in B.C. 876, and reigned eleven full or twelve current years, founding the third dynasty. He was engaged in the siege of Gibbethon, a Levitical city in Dan, of which the Philistines had gained possession, when the news came to the camp of the death of Elah and the usurpation of Zimri. On this the army proclaimed their general, Omri, king of Israel. He then lost not a moment, but leaving Gibbethon in the power of the insidels, went and besieged his competitor in Tirzah, carrying on the war so vigorously that Zimri soon discovered his mistake of deserting his palace. But Omri was no sooner delivered of this rival (see Zimri) than another appeared in the person of Tibni, whom a part of the people had raised to the throne, probably from unwillingness to submit to military dictation. This occasioned a civil war which lasted over four years (1 Kings xvi, 21). At length Omri undisputed master of the throne (B.C. 822). His reign lasted seven years more, his general character being "worse than all that had preceded him" (1 Kings xvi, 23).

This is the same Omri mentioned (2 Chron. xxii, 2) as father of Azariah, the mother of Ahaziah, king of Israel. Six of these latter years he spent in Tirzah, although the palace there was destroyed; but at the end of that time, in spite of the proverbial beauty of the site (Cant. vi, 4), he transferred his residence, probably from the proved inability of Tirzah to sustain a capital; the capital was assigned to a city found by its Greek name Samaria, which he bought for two talents of silver from a rich man, otherwise unknown, called Shemer. See SAMARIA. It is situated about six miles from Shechem, the most ancient of Hebrew capitals; and its position, according to Prof. Stanley (S. and W. of Asia, p. 111), between Jordan and sea of Galilee, makes it admirably situated for the protection of Palestine, strength, fertility, and beauty. Bethel, however, continued the religious metropolis of the kingdom, and the cult-worship of Jeroboam was maintained with increased determination and disregard of God's law (1 Kings xvi, 30). He seems to have been a vigorous and unscrupulous ruler, anxious to strengthen his dynasty by intercourse and alliances with foreign states. Thus he made a treaty with Benhadad I, king of Damascus, though on very unfavorable conditions, surrendering to him some frontier cities (1 Kings xx, 34), and among them probably Ramoth-Gilead (1 Kings xxii, 8), and admitting into Samaria a resident Syrian embassy, which is described by the expression 'he made streets in Samaria' for Benhadad. See AHAB. As a part of the same system, he united his son in marriage to the daughter of a principal Arabian family, the Hushimites, which he anticipated would be a means of securing the help of the successors of Israel of Baal-worship, and all its attendant calamities and crimes. This worldly and irreligious policy is denounced by Micah (vi, 16) under the name of the statutes of Omri, which appear to be contrasted with the love of God, "to do that which is right and love mercy, and to walk humbly with thy God." It achieved, however, a temporary success, for Omri left his kingdom in peace to his son Ahab; and his family, unlike the ephemeral dynasties which had preceded him, gave four kings to Israel, and occupied the throne for about half a century, till it was overthrown by the great reaction against Baal-worship under Jehu.

Omri is mentioned in the cuneiform inscriptions (q.v.) as the founder of Beth-Khunri or Samaria (Rawlinson, Hist. Evidence, p. 109). On the chronology of this reign, see OFFERHANS, Special 45; Ussher, Annal. p. 94. See ISRAEL, KINGDOM OF.

On, the name of a man, and also of a city.

1. (Heb. id. גּוֹパソコン, strength, as Job xviii, 7; Sept. Sept.) A son of Pelet, and a chief of the tribe of Reuben, who was one of the accomplices of Korah in the revolt against the authority of Moses and Aaron. B.C. cir. 1637. He is mentioned among the leaders of this conspiracy in the first instance (Numb. xvi, 1), but does not appear in any of the subsequent transactions, and is not by name included in the final punishment. "Possibly he repeated; and indeed there is a Rabbinical tradition to the effect that he was prevailed upon by his wife to
withdraw from his accomplices. Abendana's note is, 'Belth On is not mentioned again, for he was separated, from their company after Moses spake with them. And our rabbins of blessed memory said that his wife saved him.' Josephus (Ant. iv, 2, 2) omits the name of On, but retains that of his father in the form Φαθάνας, thus apparently identifying Pelath with Phalath, the son of Simeon.

2. An important city in Egypt. In the following account we depend largely upon the elucidation which modern researches have afforded.

Name.—This in the Heb. is the same as the above, ג'ן, Gen. xxii, 50, or in the condensed form גִנְס, ib. 45, 50; כִין, 20 (Sept. 'Ησαύδολος; Vulg. Hieropoetus), which is the rendering of Copitc ησαυδολος. Used in Ezek. xxx, 17, it isHaebraized גִנְס, A. V. (q. v.), i.e. wickedness (Sept. and Vulg. as before).

The same city is also mentioned in the Bible as BETH-shemesh, בֵּית-שֵׁם (Jer. xiii, 13), corresponding to the ancient Egyptian sacred name HA-RA, "the abode of the sun;" and perhaps it is likewise spoken of as IR-HA-HERES, ἱρα-χα-ήρες, or ἱρα-χα-ήρα, the second part being, in this case, either the Egyptian sacred name, or else the Hebrew בֵּית, but we prefer to read a "city of destruction." The two names were known to the translator or translators of Exodus in the Sept., where On is explained to be Helopolis ( '"א הירא-הכס; Vulg. Hierapolis; LXX, ἡσαυδολος, i, 11) but the former seems to treat BETH-shemesh as the name of a temple (τος στέλας ἡσαυδολος, τος ἐν Ὠν, xiii, 13, Sept. i, 13). The Copitic version gives Ὠν as the equivalent of the names in the Sept., but whether as an Egyptian word or such a word Haebraized can scarcely be determined. The latter is perhaps more probable, as the letter we represent by A is not commonly changed into the Copitic א, unless indeed one hieroglyphic form of the name should be read ANU, in which case the last vowel might have been transposed, and the first incorporated with it. Brugsch (Geogr. Inschr. i, 254) supposes AN and Ὠν to be the same, as the Egyptian Ὠν often had a sound intermediate between and e."

But this does not admit of the change of the a vowel to the long vowel α, from which it was as distinct as from the other long vowel i, respectively like N and E, and τ and α.

The ancient Egyptian common name is written AN, or AN-γ, and perhaps ANU; but the essential part of the word is AN, and probably no more was pronounced. The name is thus distinguished as the northern, AN-ΜΗΡΗ, and Hermonthis, in Upper Egypt, as the southern, AN-ΒΕΣ (Brugsch, Geogr. Inschr. i, 254, 255, Nos. 1217 a, 1218, 870, 1225). As to the meaning, we can say nothing certain. Cyril, who, as bishop of Alexandria, should be listened to on such a question, says that On signified the sun ('Ὁ ἐκ του ευρισκομενου του θεου, ad Nos. p. 145), and the Copitic Ouaitih (Memphitic), Ouaitih, Ouaitai (Sahidic), "light," has therefore been compared (see La Croze, Lex. p. 71, 189), but the hieroglyphic form is uncertain; "album" which has no connection with A. Scriptures, Notices.—The first mention of this place in the Bible is in the history of Joseph, to whom we read Pharaoh gave "to wife Asenath, the daughter of Poti-pherah, priest of On" (Gen. xii, 45, comp. ver. 50; and xliii, 20). Joseph was possibly governor of Egypt under a king of the fifteenth dynasty, of which Memphis was, at least for a time, the capital. In this case he would doubtless have lived for part of the year at Memphis, and therefore near to Helopolis. The name of Asenath's father was appropriate to a Helopolite, and especially to the king of the fourteenth dynasty (B.C. 2133-2110). In the latter times it must have been subject to the first dynasty so long as their sole rule lasted, which was perhaps for no more than the reigns of Menes (B.C. cir. 2777) and

the Hebrew orthography. According to the Sept. On was one of the cities built for Pharaoh by the oppression, Israelites, for it mentions three "strong cities" instead of the two "treasure cities" of the Heb., adding Ἐν Ούπλω Ραμασάς, ('Ὡς φαραών γυναικάς θεούς ταῖς πόλεσις θηρα, τὴν τε Πενθ., καὶ Ραμσέα, καὶ Ού, ἦ έστιν Ηλεοπόλεις, Εκκόλι, i, 11). If it be intended that these cities were founded by the labor of the people, the mention of On is probably a mistake, although Helopolis may have been ruined and rebuilt; but it is possible that they were merely fortified, probably as places for keeping stores. Helopolis lay at no great distance from the land of Goshen and from Raames, and probably Pithom also.

Isaiah has been supposed to speak of On when he prophecies that one of the five cities in Egypt that should speak the language of Canaan should be called Ir-heres, which may mean the City of the Sun, whether we take heres to be a Hebrew or an Egyptian word; but the reading a city of destruction seems preferable; and we have no evidence that there was any large Jewish settlement at Helopolis, although there may have been at one time from its nearness to the town of Onias (q. v.).—Jeremiah speaks of On under the name BETH-shemesh, "the house of the sun" (comp. "opipolim solidim," Flints. Hist. Nat. vi, 11), where he predicts the destruction of "the city of the sun" (not the pillar [ἡ Ρέηκ, but perhaps statues] of BETH-shemesh, that [is] in the land of Egypt; and the houses of the gods of the Egyptians shall be burned with fire" (xiii, 13). By the word we have rendered "pillars," obelisks are reasonably supposed to be meant, for the number of which before the temple of the sun Helopolis must have been famous; and perhaps by the houses of the gods, the temples of this place are intended, as their being burned would be a proof of the powerlessness of Ra and Atum, both forms of the sun, Shu, the god of light, and Tafnet, a fire-goddess, to save their dwellings from the very element over which they were supposed to rule.—Perhaps it was on account of the many false gods of Helopolis that, in Ezekiel, On is written Aven, by a change in the punctuation, if we can here depend on the Masoretic text, and so made to signify "vanity," and especially the vanity of idolatry. The prophet foretells, "The young men of Aven and of Pi-be-seh shall fall by the sword: and these [cities] shall go into captivity" (xxx, 17). Pi-beshet, or Babastis, is doubtless spoken of with Helopolis as in the same part of Egypt, and so to be involved in a common calamity at the same time when the land and its inhabitants were invaded.

After the age of the prophets we hear no more in Scripture of Helopolis. Local tradition, however, points it out as a place where our Lord and the Virgin came, when Joseph brought them into Egypt, and a very ancient sanctuary is shown as a tree beneath which they rested. The Jewish settlements in this part of Egypt, and especially the town of Onias, which was probably only twelve miles distant from Helopolis in a northerly direction, but a little to the eastward (Modern Egypt and Thebes, i, 297, 298), then flourished, and were nearer to Palestine than the two other towns, like Alexandria, in which there was any large Jewish population, so that there is much probability in this tradition. And perhaps Helopolis itself may have had a Jewish quarter, although we do not know it to have been the Ir-heres of Isaiah.

Mount of the House of History.—The oldest monument of the town is the obelisk, which was set up late in the reign of Setseutes I, head of the 12th dynasty, dating B.C. cir. 2500. According to Manetho, the bull Mnevis was first worshipped here in the reign of Kaichos, second son of the House of History (B.C. cir. 2400). In the latest times it must have been subject to the first dynasty so long as their sole rule lasted, which was perhaps for no more than the reigns of Menes (B.C. cir. 2777) and
Athodis; it doubtless next came under the government of the Memphis, of the 8th (B.C. cir. 2640), 4th, and 6th dynasties; it then passed into the hands of the Dercopes of the 12th dynasty and the Shepherds of the 15th; but whether the former or the latter held it first, or it was contested between them, we cannot as yet determine. During the long period of anarchy that followed the rule of the 12th dynasty, when Lower Egypt was subject to the Shepherd kings, Heliopolis must have been under the government of the strangers. With the accession of the 18th dynasty it was probably recovered by the Egyptians, during the war which Aâmes, or Amonis, head of that line, waged with the Shepherds, and thenceforward held by them, though perhaps more than once occupied by invaders (comp. Chlaas, Papyrus Magique Harrara), before the Assyrians conquered Egypt. Its position near the eastern frontier must have made it always a post of especial importance.

See No-Amox.

The chief object of worship at Heliopolis was the sun, under the forms Ra, the sun simply, whence the sacred name of the place, Hâ-ra, "the abode of the sun," and Atum, the setting sun, or sun of the nether world. Probably its chief temple was dedicated to both. Shu, the son of Atum, and Tafnet, his daughter, were also here worshipped, as well as the bull Mnevis, sacred to Ra, Osiris, and Isis; and the Phoenix, Reius, probably represented by a living bird of the crane kind. (On the mythology, see Brugsch, p. 254 sq.) The temple of the sun, described by Strabo (xvii, p. 806, 806), is now only represented by the single beautiful obelisk, which is of

red granite, 68 feet 2 inches high above the pedestal, and bears a dedication showing that it was sculptured in or after his 30th year (cir. 2050) by Sesertesen I, first king of the 12th dynasty (B.C. cir. 2080-2045). There were probably far more than a usual number of obelisks before the gates of this temple, on the evidence of ancient writers, and the inscriptions of some yet remaining elsewhere, and no doubt the reason was that these monuments were sacred to the sun. From the extent of the mounds it seems to have been always a small town.

An imperfect monumental inscription of the time of Thothmes III mentions the city of On in the following terms: "In his thirty-fifth year the king (Thothmes III) sent forth an army of ten full cohorts against Heth. Then he marched against the city of On, where the unclean race were assembled . . ."—alluding perhaps to the Shepherds, whom Thothmes finally expelled from around which were others one half or one third the size of the first, placed in so thick a mass that they could scarcely be counted, most of them thrown down. This city furnished works of art to Augustus for adorning Rome, and to Constantine for adorning Constantinople. Ritter (Erkundige, 1, 829) says that the sole remaining obelisk bears hieroglyphics which resemble a kind of inscrip- tion of what we have called the Etruscan style. "The figure of the cross which it bears (crux unscio) has attracted the special notice of Christian antiquaries" (Ritter).

Heliopolis was situated on the east side of the Pelusiac branch of the Nile, just below the point of the Delta, and about twenty miles north-east of Memphis. It was before the Roman time the capital of the Heliopolitan Nome, which was included in Lower Egypt (Pliny, Hist. Nat. v. 9; Prolem. iv, 5). Now its site is above the point of the Delta, which is the junction of the

Later Notices. —The traces of this city which are found in classic authors correspond with the little of it that we know from the brief intimations of Holy Writ. According to Herodotus (ii, 59), Heliopolis was one of the four great cities that were rendered famous in Egypt by being the centres of solemn religious festivals, which were attended by splendid processions and homage to the gods. In Heliopolis the observance was held in honor of the sun. The majesty of these sacred visits may be best learned now by a careful study of the temples (in their ruins) in which the rites were performed (Wilkinson, Anc. Egypt.). Heliopolis had its priesthood, a numerous and learned body, celebrated before other Egyptians for their historical and antiquarian lore, and occupying extensive buildings around the temple; it long continued the university of the Egyptians, the chief seat of their sciences (Evel. ii, 8; Wilkinson); the priests dwelt as a holy community in a spacious structure appropriated to their use. In Strabo's time the walls were to be seen in which Eudoxus and Plato had studied under the direction of the priests of Heliopolis.

A detailed description of the temple, with its long avenues, obelisks, etc., may be found in Strabo (xvii; Josephus, c. Antiq. ii, 2), who says that the mural sculpture in it was very similar to the old Etruscan and Grecian works. In the temple a bullock was fed—a symbol of the god Mnevis. The city suffered severely by the Persian invasion. From the time of Shaw and Pococke the place has been described by many travellers. At an early period remains of the famous temple were destroyed. Abdallatif (A.D. 1200) saw many colossal sphinxes, partly prostrate, partly standing. He also saw the gates or propylaeas of the temple covered with inscriptions; he describes two immense obelisks whose summits were covered with massive brass,
Pharrethic, or Dametta branch, and the Bolbitine, or Rosetta, and about ten miles to the north-east of Cairo. The site is now marked by low mounds, enclosing a space about three-quarters of a mile in length by half a mile in breadth, which was once occupied by houses and by the celebrated Temple of the Sun. This area is at present a ploughed field, a garden of herbs; and the solitary obelisk which still rises in the midst of it is the sole remnant of the former splendor of the place. In the days of Edries the Abdalatif the place bore the name of Ain Shenou; and in the neighboring village, Matariyeh, is still shown an ancient well bearing the same name. Near by is the above-mentioned very old sycamore, its trunk strangling and gnarled, under which legendary tradition relates that the holy family once rested (Robinson, Biblical Researches, i. 30).

O'nam (Heb. Onam', עָנָם, strong), the name of two men.
1. (Sept. Όμα in Genesis, Ὀμα in Chron.; v. r. Όμας, Σωῦων), the last named of the five children of Shobal, son of Seir the Horite (Gen. xxxvi. 28; 1 Chron. i. 40). B.C. cir. 1604.
2. (See Oinam, v. r. Όκσα), son of Jerahmeel, of the tribe of Judah, by his wife Atarah, and father of Shammal and Jada (1 Chron. ii. 26, 28). B.C. ante 1658.

O'nam (Heb. Onam', עָנָם, strong; Sept. אֲנָאָב), the second son of Judah by the daughter of Shuh the Canaanite (Gen. xxxviii. 4; Num. xxvi. 19; 1 Chron. iii. 8). Being constrained by the obligations of the ancient Levirate law (q. v.) to espouse Tamar, his elder brother's wife, the tribe took measures to frustrate the intention of this usage, which was to provide heirs for a brother who had died childless (Deut. xxxv. 5-10; Mark xii. 19). This offense, rendered without excuse by the allowance of polygamy, and the seriousness of which can scarcely be appreciated in respect to the ages of the times in which it was committed, was punished by premature death (Gen. xxxviii. 8 sq.). B.C. cir. 1870. His act was evidently different from the vice which has been given his name.

Oncy, a surname of Athen, under which she was worshipped at Once, in Boetia.—Gardner, Faiths of the World, vol. ii. s. v.

Oncasus, a surname of Apollo, from Oncusium, in Arcadia, where he had a temple.—Gardner, Faiths of the World, vol. ii. s. v.

Onderdonk, Benjamin Treadwell, D.D., LL.D., an eminent American divine and bishop of the Protestant Episcopal Church, noted especially because of the severe trials through which he passed, and his consequent deposition from the episcopal office, was born in the city of New York in July, 1791. He was educated at Columbia College, New York, class of 1809, and, after a most critical study of divinity, was ordained priest in 1812, and in the following year was made assistant pastor of Trinity parish, New York. He soon distinguished himself by unusual pulpit talents, and became one of the favorite preachers of the metropolis. In 1826 he was elected professor in the General Theological Seminary of New York, and he held that position until 1830, when he was elevated to the episcopate as successor to the then recently deceased bishop Hobart, of Eastern New York. He was consecrated to this important office Nov. 26, 1830. By his eminent qualifications for the episcopal work he soon acquired general trust, and by his uniting industry gained many warm admirers and friends. In 1834, however, and that very unexpectedly, most serious charges were brought against the purity of his moral character, and in December of that year he was therefore tried by the House of Bishops acting as a court. After a long and searching investigation, the court decided (eighth voting for deposition) that it was not warranted in the evidence from the office and functions of the ministry (Jan. 3, 1845).

Bishop Onderdonk himself never acknowledged that he was guilty of the offences imputed to him, but the careful and prolonged trial that had been afforded him revealed that there had been misconduct which was gross immorality, the testimony depending upon parties whose character was unquestionable in every particular. Largely his improper advances to ladies—and these were the principal charges—were prompted by liquor, for he is known to have been a habitual drinker of intoxicating beverages. It is claimed by his friends that he could never have been guilty of gross immorality in any other than an intoxicated state, and that the accusations, having been brought forward only after he had reformed in his habits, should not have been countenanced by the House of Bishops. The suspension of the bishop his friends zealously continued to labor for the removal of his suspension from the episcopate. After much delay, the General Convention of 1850 passed a canon allowing a provisional bishop to be chosen. The Convention of New York adopted a petition to the General Convention of 1859 in favor of bishop Onderdonk's restoration, and the lower house supported it by a large vote, but the bishops rejected it, and he died, unrestored to his diocese, April 30, 1881. He published, Sermon before and for the Domestic and Foreign Mission Society (N. Y. 1835, 8vo.—Sermon on the Funeral of the Right Rev. John H. Hobart (1830, 8vo). See The Proceedings of the Court convened under the third Canon of 1844 in the City of New York, on Dec. 10, 1844, for the Trial of the Right Rev. B. T. Onderdonk, D.D., Bishop of New York, etc. (N. Y. 1845, 8vo).

Onderdonk, Henry Ustic, M.D., D.D., a brother of the preceding, and also an eminent American divine and bishop of the Protestant Episcopal Church, was born in the city of New York in March, 1789. He attended Columbia College, Class 1806, and then went abroad to study medicine in London and Edinburgh. After his return to this country he practiced in his profession for several years, but finally decided to enter the ministry. He was at that time (1815) editor, with Dr. Valentine Mott, of the N. Y. Medical Journal, but he closely applied himself to the study of divinity, and was soon after ordained deacon. In January, 1816, he went as missionary to Canandaigua, which, under his care, grew into a flourishing parish, and of this he became the rector in 1818. In 1820 he removed to Brooklyn as rector of St. Ann's Church, and there he gained much dignity and literary fame. In 1830 he was elected to the episcopacy, and was consecrated assistant to the bishop of Pennsylvania Oct. 25 of that year. In 1837, on the death of bishop White, Onderdonk was put in full possession of the diocesan power, and he discharged its duties until 1844, when he was compelled, by the dissatisfaction which had arisen among the clergy and laity of his diocese, to resign his episcopal functions. Not only was the resignation accepted by the House of Bishops, but they also brought him to trial for intemperance, and suspended him from the office and functions of the priesthood from and after Oct. 21, 1844. In 1856 bishop Onderdonk was restored to the sacred ministry and to his diocese, but he did not resume the privileges of his office, and died only two years later, Dec. 6, 1858, at Philadelphia. He published, Appeal to the Religious Public, etc., of Consecration (1818)—Episcopal tested by Scripture (N. Y. 1846; first published as an essay in the Protestant Episcopalian, November and December, 1830; second, in pamphlet form anonymously; third, as a tract by the Republican Episcopal Tract Society; and then reviewed by the Rev. Albert Barnes in the Christian Spectator, 1834—this review was reprinted in Barnes' Miscellaneaous Essays and Reviews, 1855, i. 200, 291) Episcopacy Examined and Re-examined (1835)—Essay on Confirmation (Phila. 1835)—Family Devotions from the Christian Writers, of Sermons and Essays in poems, 1830, 2 vols. 8vo). "They show him to be not only a poet..."
Oneida Community. See Socialism.

Onesimus (Ὤνησιμος, profitable) is the name of the servant or slave in whose behalf Paul wrote the Epistle to Philemon (Phil. 10; Col. iv. 9). A.D. 58. He was a native, or certainly an inhabitant, of Colossae, since he was a member of the Church of the Colossians (Col. iv. 9) as δέ ἐστιν ἡ ἰδίως, "one of you." This expression confirms the presumption which his Greek name affords that he was a Gentile, and not a Jew, as some have argued from μαῖτρα ἰμαο in Phil. 16. Slaves were numerous in Phrygia, and the name itself (ὤνησιμος) is a Greek synonym of the Hebrew śābîlāh, a slave. Hence it happened that in writing to the Colossians (iii. 22, iv. 1) Paul had occasion to instruct them concerning the duties of masters and servants to each other. Onesimus was one of this unfortunate class of persons, as is evident from the manifest implication in ἀπεθανοῦντος ὁ δοῦλος in Phil. 16, and from the general tenor of the epistle. There appears to have been no difference of opinion on this point among the ancient commentators, and there is none of any critical weight among the modern. The man escaped from his master and fled to Rome, where in the midst of its vast population he could hope to be concealed, and to baffle the efforts which were so often made in such cases for retaking the fugitive (Walter, Die Geschichte des Röm. Rechts, ii, 63 sq.). It must have been to Rome that he directed his way, and not to Cæsaræa, as some contend; for the latter view stands connected with an indefinable opinion respecting the place whence the letter was written (see Neander, Fjælsumg, i, 506). Whether Onesimus had any other motive for the flight than the natural love of liberty, we have not the means of deciding. There is no reason to suppose that a slave so lately committed some offence, as theft or embezzlement, and feared the punishment of his guilt. This is grounded upon ἡμετέρῳ in Phil. 18, in connection with the context; the meaning, however, is somewhat uncertain (see Notes in Ep. to Phil. by the Amer. Bible Union, p. 60). Commentators at all events go entirely beyond the evidence when they assert (as Conybeare, Life and Epistles of Paul, ii, 467) that he belonged to the dregs of society, that he robbed his master, and confessed the sin to Paul. Though it may be doubted whether Onesimus heard the Gospel for the first time at Rome, it is beyond question that he was led to embrace the Gospel there through the apostle's instrumentalities. The language in ver. 10 of the letter (ἐν ἵνα μὴ ἐκείνοις ᾿οι ἐγνώρισθοι) is explicit on this point. As there were believers in Phrygia when the apostle passed through that region on his third missionary tour (Acts xviii, 28), and as Onesimus belonged to a Christian household (Phil. 2), it is not improbable that he knew something of the Christian doctrine before he went to Rome. How long a time elapsed between his escape and conversion we cannot decide; for παρὰ διπλῆς in the 16th verse, to which the verses have been applied, is purely a temporal expression, and will not justify any inference as to the interval in question. After his conversion the most happy and friendly relations sprung up between the teacher and the disciple. The situation of the apostle as a captive and an indefatigable laborer for the promotion of the Gospel (Acts xxviii., 30, 31) must have made him keenly alive to the sympathies of Christian friendship, and dependent upon others for various services of a personal character, important to his efficiency as a minister of the Word. Onesimus appears to have supplied this twofold want in an eminent degree. We see from the letter that he won entirely the apostle's heart, and made himself so useful to him in various private ways, or evinced such a capacity to be so (for he may have gone back to Philemon upon his release) that Paul wished to have him remain constantly with him. Whether he desired his presence as a personal attendant or as a minister of the Gospel is not certain from ὁ ἄγνωρ Ἰησοῦς in ver. 13 of the epistle. Be this as it may, Paul's attachment to him as a disciple, as a personal friend, and as a helper to him in his bonds, was such that he yielded him up only in obedience to that spirit of self-denial, and that sensitive regard for the feelings or the rights of others, of which his conduct on this occasion displayed so noble an example. Onesimus, according to Col. iv. 9, his servant, Tychicus, left Rome with not only this epistle, but with that to the Colossians (Col. iv. 9). It is believed that Onesimus, anxious to justify the confidence which Paul reposed in him, by appearing speedily before his master, left Tychicus to take the Epistle to the Ephesians, and hastened to Colossae, where he doubtless delivered the less important Epistle, and was suitably implored for him as "a brother beloved" (Canon. Apost. post. 78). There is but little to add to this account, when we pass beyond the limits of the New Testament. The tradit caval notices which have come down to us are too few and too late to amount to much as historical testimony. Some of the later fathers assert that Onesimus was set free, and was subsequently ordained bishop of Berea, in Macedonia (Comit. Apost. vii, 46). The person of the same name mentioned as bishop of Ephesus in the first epistle of Ignatius to the Ephesians (Hele. Patrum Apost. Opp. p. 152) was a different person (Winer, Realw., i, 175). See Onesimus, St. It is related also that Onesimus finally made his way to Rome again, and ended his days there as a martyr during the persecution under Nero. His name is found in the Roman martyrology under date of March 2, 95. We mistake if we consider that the occasion on which Paul interfered was really small. Throughout the Roman empire the number of the enslaved was perhaps seven times the number of the free. It was important not to obscure the fact that a slave who has repented of a sin which he himself committed in the meaning of his own language, that in the new creation there is "neither bond nor free, but Christ is all and in all." There is no violent interference with the prescriptive rights of ownership which Philemon had acquired; Paul gently states that while his natural impulse was to retain Onesimus for the sake of his services (Phil. 13), yet, apart from Philemon's consent, he would forego the comfort which the presence of such a Christian brother was able to impart. Yet the language in which Paul speaks of Onesimus clearly shows that Philemon considered the slave to be his permanent possession without forfeiting his Christian character. Slavery is nowhere expressly condemned in Scripture any more than polygamy; the duty of emancipating slaves is not expressively inculcated any more than the duty of family worship. The influence of vital Christianity implicitly forbids the permanency of slavery, illustrating the ultimate and necessary influence of Christian principle. Amid all the defects and corrections of the Christian Church we can discover proofs of its divine origin in every age.
and in every clime, by its tendency to undo the heavy burdens, to let the oppressed go free, and to break every yoke; the Church has very generally felt that the command, "He who loveth God should love his brother also," strikes at the root of a system which severs the domestic relations of husband and wife, of parent and child, while it blasta the oppressor with the blinding and hardening effects of arbitrary rule and irresponsible power. See PHILOMENON.

Oneissimus, St., an early Christian bishop, who succeeded Caius in the chair at Ephesus, and was the third bishop of that city. He governed that Church in 167. He was a native of Ephesus, and died 177. The Church celebrated him Feb. 16 in the East. See Acta Sanctorum, February and March; Dom Calmet, Dict. de la Bible, s. v.; Baillet, Vie des Saints, vol. i.

Oneispʰorʰus ("Ωνισπόρος, profili-brinğinğ") is a bishop of Ephesus, who came to Rome during the second captivity of Paul in that city (ACT. cix. 64), and having found out the apostle, who was in custody of a soldier, to whose arm his own was chained, was not ashamed of his chain, but attended him frequently, and rendered him all the services in his power. This faithful attachment, at a time of calamity and desertion, was fully appreciated and well remembered by the apostle, who in his Epistle to Timothy carefully records the circumstance. The occasion of his coming to Rome, the time and name under which "the household of Oneispʰorʰus" expresses the most earnest and grateful wishes for his spiritual welfare (2 Tim. i. 16-18, comp. iv. 19). It would appear from this that that Oneispʰorʰus had then quitted Rome (Kitto). It has even been made a question whether this friend of the apostle was still living when the latter to Timo-

ophy was written, because in both instances Paul speaks of "the household" (2 Tim. i. 16, ὁμοὶ ἡμᾶς ὁ κήρυξ τῷ Ὀμπούρῳ τοῦ Εφεσού), and not separately of Oneispʰorʰus himself. If we infer that he was not living, then we have in 2 Tim. i. 19 almost an instance of the apostolic sanction of the practice of praying for the dead. But the probability is that other members of the family also were active Christians; and as Paul wished to remember them at the same time, he grouped them to-

gether under the comprehensive τῶν Ὀμ.* ὄκων (2 Tim. iv. 19), and thus delicately recognized the common merit, as a sort of family distinction. The mention of Stephanas in 1 Cor. xvi. 17 shows that we need not ex-
clude him from the Συμμάχη τῶν ὄκων in 1 Cor. i. 16. It is evident from 2 Tim. i. 18 (ὁσα ἐν Ἐφέσῳ ἑμεῖς ὑμῖν) that Oneispʰorʰus had his home at Ephesus; though if we restrict the salutation near the close of the epistle (iv. 19) to his family, he himself may possibly have been with Paul at Rome when the latter wrote to Timo-

ophy. Nothing authentic is known of him beyond these notices. According to a tradition in Fabricius (Lav Ercang, p. 117), he became bishop of Corinth, in Messenia.

Oni’arēs ("Ὅνιαρης"), a name that appears in 1 Mac. xii. 20 as the author or director of the letter of the Lacedaemonians to Onias; but it is evidently a cor-

ruption for Onias (Ὅνιαρῆς; the latter name re-
peated from the following verse). See Josephus, Ant. xii. 4, 10.

Oni’as ("Ονίας; perh. for Ὀνίας, a ship"). The name of five Jewish pontiffs, mentioned by the Apocrypha and by Josephus. The following account of (two) of the most from those authorities. See HIGVANT.

1. The son and successor of Jaddus, who entered on the office about the time of the death of Alexander the Great, B.C. cix. 380-380; or, according to Eusebius, 300 (Ant. xii. 7, 7). According to Josephus he was father of Simon the Just (Ant. xii. 2, 4; comp. Ec-

clus. 1, 1). See SIMON.

2. The son of Simon the Just (Josephus, Ant. xii. 4, 1). He was a minor at the time of his father's death (B.C. cix. 290), and the high-priesthood was occupied in succession by his uncles Eleazar and Manasseh to his

exclusion. He entered on the office at last (B.C. cix. 240), and his conduct threatened to precipitate the rupture with Egypt which afterwards opened the way for Syrian oppression. Onias, from avarice, it is said—a vice which, to be worth the name, must have some portion in fear of ex-

clusion from power—neglected for several years to re-
mit to Ptolemy Euergetes the customary annual tribute of 20 talents. The king claimed the arrears with threats of violence in case his demands were not satis-
fied. Onias still refused to discharge the debts, more, it appears, from self-will than from any respect for successful resistance. The evil consequences of this obstinacy were, however, averted by the policy of his nephew Joseph, the son of Tobias, who visited Ptolemy, urged the imbecility of Onias, won the favor of the king, and entered into a contract for farming the trib-
ute, which he carried out with success. Onias retained the high-priesthood till his death (B.C. cix. 226), when he was succeeded by his son Simon II (Josephus, Ant. xii. 4).

3. The son of Simon II, who succeeded his father in the high-priesthood. B.C. cir. 198. In the interval which had elapsed since the government of his grand-

father the Jews had transferred their allegiance to the Syrian monarchy (Dan. xi. 14), and for a time enjoyed tranquil prosperity. Internal dissensions furnished an easy pretext for the attempt of the Seleucids to take possession of the temple.

The operator was informed by Simon, governor of the Temple, of the riches contained in the sacred treasury, and he made an attempt to seize them by force. At the prayer of Onias, according to the tradition (2 Mac. iii), the sacrilege was averted; but the high-priest was obliged to appeal to the king himself for support against the machinations of Simon. Not long afterwards Seleucus died (B.C. 175), and Onias found himself supplanted in the favor of Antiochus Epiphanes by his brother Jason, who received the high-priesthood from the king. Ja-

son, in turn, was displaced by his brother Menelaus, who procured the murder of Onias (B.C. cir. 171), in anger at the reproach which he had received from him for his sacrilege (2 Mac. iv. 32-38). But though his righteous zeal was thus furtive, the punish-

ment which Antiochus inflicted on his murderer was a tribute to his "sobri and modest behavior" (2 Mac. iv. 37) after his deposition from his office. See ANDRON-

ICUS.

It was probably during the government of Onias III that the communication between the Spartans and Jews took place (1 Mac. xxi. 18-23; Josephus, Ant. xii. 4, 10). See Simon. One of his contemporaries is seen from the remarkable account of the dream of Judas Maccabeus before his great victory (2 Mac. xv, 12-16).

4. The youngest brother of Onias III, who bore the same name, which he afterwards exchanged for Mene-

laus (Josephus, Ant. xii. 5, 1). See MENELAUS.

5. The son of Onias III, who sought a refuge in Egypt from the sedition and sacrilege which disgraced Jerusalem. The immediate occasion of his flight was the triumph of "the sons of Tobias," gained by the infer-

ference of Antiochus Epiphanes. Another brother, the high-priesthood belonged by right, appears to have supported throughout the alliance with Egypt (Josephus, War, i, 1, 1), and receiving the protection of Ptolemy Philometor, he endeavored to give a unity to the Hellenistic Jews which seemed impossible for the Jews in Palestine. With this object he founded the temple at Leontopolis, which occupies a position in the history of the development of Judaism of which the importance is commonly overlooked; but the discussion of this attempt to consolidate Hellenism belongs to another place. The attempt at the foundation of a state by itself with Jewish history could not be wholly overlooked (Josephus, Ant. xii. 3, 3; War, i, 1, 7; vii, 10, 2; comp. Ewald, Gesch. iv, 405 sqq.; Herzfeld, Gesch. ii, 460 sqq., 537 sqq.).

ONIAS, CITY OF

ONIAS, CITY OR REGION OF, the city in which
stweed the temple builded by Onias, and the region of the Jewish settlements in Egypt. Ptolemy mentions the city as the capital of the Heliopolitan Nome: 'Παλαιοκλίτης νομὸς, καὶ μητροπολίτης Όνιων (iv, 5, § 53); where the reading Παλαιοκλίτης is not admissible, since Heliopolis is often mentioned, and its name is different, and not a name then in use, as is sometimes supposed (§ 54). Josephus speaks of "the region of Onias," Όνιαω χώρα (Ant. xiv, 8, 1; War, i, 9, 4; comp. vii, 10, 2), and mentions a place there situate called "the Camp of the Jews," Γυναίκα στασίσεως (Ant. xiv, 6, 2; War, i, 10, 4). In the spurious letters given by him, there is mention of the foundation of the temple of Onias, it is made to have been at Leontopolis in the Heliopolitan Nome, and called a strong place of Babastis (Ant. xiii, 3, and i, 2); and when speaking of its closing by the Romans, he says that it was in a region in the territory of Memphis, in the territory of Onias, where Onias had founded a castle (lit. watch-post, φρούριον, War, vii, 10, 2-4). Leontopolis was not in the Heliopolitan Nome, but in Ptolemy's time was the capital of the Leontopolit (iv, 5, § 51), and the mention of it is altogether a blunder. There is probably also a confusion as to the city Babastis; unless, indeed, the temple which Onias adopted and restored was one of the Egyptian goddesses of that name.

The site of the city of Onias is to be looked for in some one of those to the northward of Heliopolis which are mentioned by Theocritus (see Theocritus, iv, 92; 116). Sir Gardner Wilkinson thinks that there is little doubt that it is one which stands in the cultivated land near Shibtin, to the northward of Heliopolis, in a direction a little to the east, at a distance of twelve miles. "Its mounds are of very great height," he remarks, "and the distance from Memphis (29 miles) is greater than that given by Josephus; but the inaccuracy is not extreme. Another mound of the same name, standing on the edge of the desert, a short distance to the south of Belbecis, and 24 miles from Heliopolis, would, he thinks, correspond to the location of the Temple of Amenophis (see Modern Egypt and Thebes, i, 297-300). During the years 1842-1849 excavations were made in the mound supposed by Sir Gardner Wilkinson to mark the site of the city of Onias. No result, however, was obtained but the discovery of portions of pavement very much resembling the Assyrian pavements now in the British Museum.

From the account of Josephus, and the name given to one of them, "the Camp of the Jews," these settlements appear to have been of a half military nature. They are not recorded in any of the early lists of cities, even in the time of Ptolemy, and the same is apparently the case with another, that just mentioned, from the circumstances of the history even more than from its name. This name, though recalling the "Camp," and also the city of "the Foreign Venus," of which the age seems to be shown by a tablet of Amenophis II (B.C. 2498-2465), is a city of the opposite direction, in the desert of Ashmuth, or else it may have been a merchant settlement. We may also compare the Coptic name of El-Gizeh, opposite Cairo, Persiai, which has been ingeniously conjectured to record the position of a Persian camp. The easternmost part of Lower Egypt was mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier. Here the first Syrian king Salatis placed an enormous garrison in the stronghold Avariis, the Zoan of the Bible, mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier. Here the first Syrian king Salatis placed an enormous garrison in the stronghold Avariis, the Zoan of the Bible, mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier. Here the first Syrian king Salatis placed an enormous garrison in the stronghold Avariis, the Zoan of the Bible, mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier. Here the first Syrian king Salatis placed an enormous garrison in the stronghold Avariis, the Zoan of the Bible, mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier. Here the first Syrian king Salatis placed an enormous garrison in the stronghold Avariis, the Zoan of the Bible, mentioned, and its different position distinct military settlements, in order to protect the country from the incursions of her enemies beyond that frontier.

"Thus the name of Josephus was on the list of the kings, and the name of the last of the kings, of Aretas, king of Arabia. Antipater gained Aretas for the cause of the captive prince, who was thus enabled to advance, at the head of a Jewish and Arab force, upon Jerusalem. Antistus, only to be trusted, solicited his foreign mercenaries of the Saitic kings of the 29th dynasty were settled; these the greatest body of the Egyptian soldiers had the lands allotted to them, all being established in the Delta (Herod. ii, 164-166).

Probably the Jewish settlements were established for the same purpose, more especially as the hatred of their inhabitants towards the kings of Syria would promise their opposing the strongest resistance in case of an invasion. The history of the Jewish cities of Egypt is a very obscure portion of that of the Hebrew nation. We know very little of the history of the nation, and we have no other history of Zion of the Jansenists, but the history of the history of the nation, and we have no other history of Zion of the Jansenists, but the history of the nation, and we have no other history of Zion of the Jansenists, but the history of the nation, and we have no other history of Zion of the Jansenists, but the history of the nation, and we have no other history of Zion of the Jansenists, but the history of the nation.

Onion ( buttonText in Numb. xi, 5, in the plural form $ הָנָרֹחָה, from the root $ בָּטַל, same as $ בָּטַל, to ped.; Sept. εὐοῦμων; Vulg. ceppe). The Israel-
ites in Taberah, weeping for the flesh of Egypt, said:
"We remember the fish, which we did eat in Egypt
freely; the cucumbers, and the melons, and the leeks,
and the onions (betelain), and the garlic" (Numb. xi, 4,
5). Though the identification of many Biblical plants is
considered uncertain, there can be no doubt that betel
means the common onion, the Allium cepa of botanists.
This is proved by its Aramean name, and its early employ-
ment among the Persians as a source of diet. In Egypt,
that day the onion, distinguished from other species of Allium by
its flat leaves and swelling stalks, is well known as
cultivated in all parts of Europe and in most parts of
Asia. Its native country is not known; but it is prob-
able that some part of the Persian region first produced
it in a wild state, as many species of Allium are found in
the mountainous chain which extends from the Cas-
pian to Cashmere, and likewise in the Himalaya Moun-
tains. It is common in Persia, where it is called piax,
and has long been introduced into India, where it re-
ceives the same name. By the Arabs it is called kosir
or basal, under which name it is described in their
works on Materia Medica, where the description of
εὐοῦμων given by Dioscorides (ii, 181) is adopted.
That the onion has long been cultivated in the south
of Europe and in the north of Asia is evident from the
different kinds enumerated by Theophrastus, which he
states derived their names chiefly from the places where
they were reared. Among these probably some other
species may have been included; but no doubt several
varieties were only of the onion. Pliny (Hist. Nat. xix,
6) also enumerates these and as well as those found in
Italy, and notices the superstition of the Egyptians in
regard to them: "Where, by the way, I cannot overpass
the foolish superstition of the Egyptians, who used to
swear by garlick and onions, calling them to witness in
taking their oaths, as if they were no less than some
gods" (Holmes's transl.). Juvenal (Sat. xv, 9) in like
manner ridicules the Egyptians for their superstitious
veneration of onions, etc.: "O holy nation, that raises
in gardens its inviolable divinities, the leeks and the
onions!" This, however, must be an exaggerated state-
ment, as it is unlikely that the Israelites should have
been allowed to regulate themselves upon what was con-
sidered too sacred or forbidden to their taskmasters.
It is probable, as suggested by Dr. Harris, that the
priests only refrained from what was freely partaken
of by the rest of the people. This may be observed in
the present day among the Brahmas of India. It has also
been supposed that some particular kind of onion may
have been held sacred, from its utility as a medicine, as
the sea-onion, or squill (Scilla maritima), which grows
in abundance on the sea-coast in the neighborhood of
Palestine and is said to have been especially worshipped
the onion. But it is evident that the Israelites in the
desert did not long for that acrid bulb as they did for the
melons and cucumbers (Kitto). It may, moreover, be remarked that the onions of warm,
dry countries grow to a considerable size, and instead of
being acrid and pungent in taste, are comparatively
bland and mild and nutritious articles of diet. This is
conspicuous in the Portuguese onions, which are largely
imported into other countries; but it especially distin-
guishes the onions of Egypt, as travellers have often remarked in the "Ancient and Modern Travels in Egypt," (ib.
169), they being an important part of the food of the
nation (Herod. ii, 125; comp. Wilkinson, i, 168 sq.) and
a leading article of the markets (Sonini, Trans. ii, 321;
comp. Arvieux, Voyages, i, 176; Korte, Res. p. 430). Has-
sequin (Trans. p. 286) says, "Whoever has tasted onions
in Egypt (which are not bad) can be (be) better in any
other part of the universe: here they are sweet; in other
countries they are nauseous and strong. . . . They eat
them roasted, cut into four pieces, with some bits of
roasted meat which the Turks in Egypt call kebab; and
with this dish heightened are so satisfied that they wish
them they might enjoy it in Paradise. They likewise
make a soup of them." The Jews cultivated onions in
Palestine, and the Talmud often mentions them (see Mishna,
Terumoth, ii, 5; x; Maaser, v, 9). Korte (Res. p. 490) remarks that in Asia Minor also the
onions are better than in Europe.

Onkelos, the Proseleute (יגל וגו, son of
Karespam, קאראספמא), is the supposed author of
the celebrated Chaldee paraphrase of the Pentateuch
called Targum Onkelos. We possess no certain infor-
mation as to the time when he lived, but he is generally believed
to have been a contemporary of, or certainly of one of the
apostles. Some assign A.D. 40 as the year of his birth; others make it earlier. He is reputed to have been
the son of Gamaliel the elder (q. v.); but, unless Onkelos
was a contemporary of Christ, he must have been the disciple
of Gamaliel II (q. v.), and not of the grandfather of the
eminent rabbi, generally called in distinction Gamaliel
I, who was the teacher of the apostle Paul (Acts xxiii, 3;
comp. on this point Grätz, Gesch. der Juden, iv, 152).
In the Targum (Sot. 4b, Midr. Vayakhel, p. 99, Targum on
Proverbs, iii, 1) Onkelos is spoken of as the disciple of Gamaliel II. This learned Jew was also the teacher of Aquila,
and there are some students who confound Onkelos with
Aquila, also a Jewish proselyte, who flourished about
the close of the 1st century, and translated the Old Testa-
mament into Greek. But more of this below. Onkelos it
appears clearly was a proselyte. His love for his newly adopted Jewish faith was so intense, we are told by Jewish writers, "that, after dividing his
paternal inheritance with his brothers, he threw his portion into פלשה ישב יבש the Dead Sea (Tosfitha Demai,
vi, 9), and when Gamaliel, his teacher in the new faith,
died, he took it upon himself to provide for his son and
his funeral costly garments and furniture to the amount of
seven Tyrian minas—about twenty-one pounds ster-
ing (Tosfitha Sabbath, ch. viii; Semachoth, ch. viii;
Aboda Sara, 11 a). The Babylonian Talmud says that
he was the nephew of the emperor Titus רומא וגו יבש(Arabic: ابن الصفوان) and that before his conversion to Judaism he successively conjured up from the other world the ghosts of his uncle Titus, Balaam, and Christ, to inquire of which nation is the hap-
piest in the next world. Titus, whom he called up
first, told him that the Jews were the happiest, but
warned him against embracing their faith, because of
the great difficulty in fulfilling all its multitudinous
commendations. Onkelos advised him to persecute them, for
every one who oppresses Israel shall become a chief
(Lament. i, 5). Balaam, whom he brought up next,
also told him that the Jews were the most distinguished
in the other world, and yet admonished him "neither to seek
their peace nor their prosperity all his days for-
ever" (Deut. xxxii, 6); while Christ, whom he called up
last, and who also declared that the Jews were the first
in the next world, counselled him to seek their good
and not their evil, for he who touches them touches
the apple of his eyes (Gittin, 56 a, 57 b). Onkelos's conversion
to Judaism, however, was no easy thing. For as soon as
ONKELOS

It was known that "Onkelos, son of Kalonymos, or Kalonymos, had become a proselyte, the emperor [either Domitian, Trajan, or Hadrian, as Titus was dead] sent a Roman cohort to capture him and bring him before the imperial tribunal; but he converted the soldiers. The emperor then sent another cohort, charging them not to speak to him. As they caught him and were marching him off, he simply remarked [אֲנַשׁ יְהוֹ, אַשְּׁר יָשַׁמֶּשׁ, without its appearing religious or controversial], the ḥēqālyām carries the fire before the nāṭāqām, the nāṭāqām before the nēṣām = duk, the duk before nēṣām = yēqānyān, the yēqānyān before the nēṣām = kōyān, but who carries the fire before the kōyān? The soldiers replied, Nobody. Now, said Onkelos, the Holy One, blessed be he, carries the fire before Israel, as it is written, The Lord went before them by day in a pillar of cloud to lead them in the way, and by night in a pillar of fire (Exod. xiii, 21); and he also converted them. Whereupon the emperor sent a third cohort, charging them very strictly to hold no converse with him whatsoever. As they captured him, and were leading him away, he looked at the Menāza (q. v.), and, putting his hand on it, asked the soldiers what it was. They not being able to say, inquired of him what it was; whereupon he said, It is the custom of this world for a human lord to guard the inside, and the divine power to guard him outside; whereas the Holy One, blessed be he, his servants are inside, and he keeps guard outside, as it is written, The Lord watches thy going out and coming in from this time forth and for evermore (Psa. cxlii, 8); and Onkelos also converted this cohort, whereupon the emperor sent no more" (Aboda Sarnit, x, 1).

The first distinct intimation that Onkelos is the author or compiler of the Chaldean paraphrase which goes by his name is contained in the following passage: "R. Jeremiah, and according to others, R. Chiya bar-Abba, said: The Targum of the Pentateuch was made by Onkelos, the Proselyte, from the mouth of R. Eliezer and R. Joshua" (Megillah, i, 9). We are also informed here that Onkelos's paraphrase embodied the orally transmitted Chaldean version of the text which the people generally had forgotten. Being, therefore, the floating national Targum, as well as the compilation of Onkelos, the paraphrase is alternately quoted as "paraphrase of Onkelos" (כומץ אֶבֶן נַקְלְוָס, our Targum בֵּית אָבֶן נַקְלְוָס Kiddushin, 49 a), the Targum (תָּרְגֻּמִּי), and as the Targum Onkelos (תָּרְגֻּמִּי אֶבֶן נַקְלְוָס). Thus the Targum is distinctively quoted as the paraphrase of Onkelos (כומץ אֶבֶן נַקְלְוָס) in Pirke Rabbi Eliezer (cap. xxxviii, 28, ed. Lemberg, 1886), and Midrash on the principal events recorded in the Pentateuch, which is ascribed to Eliezer b. Hyrcanus, but which is not of a later date than the 9th century [see Mirdash]; by Ibn-Korish, who flourished A.D. 870-900 [see Ibn-Korish]; by Menachem b. Saruk (born about 910, died about 970), who, in his lexicon entitled שָׁרוּעַ אֲדֻמָּה יִשְׂרָאֵל, says that (קְנַמְרָא אֵלְבֵּן נַקְלְוָס) Onkelos explains לֹא לְבָדָה בְּנֵי יָשֶׂר אֲדֻמָּה (Gen. xliii, 29) by שְׁאֵלָה לְבָד (p. 28, s. v. נקְלָלָה, ed. Filipowski, 1854); and by Dunash Ibn-Librat (born about 920, died about 980), in his polemical work against Menachem b. Saruk's Hebrew Lexicon, who cites, with great approbation, Onkelos's rendering of וַיֹּאמֶר לְאִירִי (Gen. xlvi, 16, יָשַׁמֵּשׂ יָשַׁמֶּשׂ יְהוֹ, ed. Filipowski, 1855, p. 57, s. v. נַקְלָלָה; comp. also ibid. p. 61). Those writers alternate the Targum by the name of Onkelos, and simply as the Targum (כומץ), comp. Menachem, p. 144, s. v. נַקְלָלָה; p. 143, s. v. נַקְלִית) and as it is paraphrased (כומץ אֵלְבֵּן נַקְלָלָה, comp. ibid. p. 19, s. v. לֹא לְבָד).
O'no (Heb. און, 37 [Neh. vii. 57, 58],强壮;
Sept. און, but און in Neh. vii. 37, v.r. עון; and אדון v.r. אדות in Chron.), the name of a city of the tribe of Dan, and perhaps originally that of its founder. It does not appear in the book of Joshua, but is first found in 1 Chron. viii, 12, where Shamed or Shamer is said to have built Ono and Lod with their "daughter villages." It was therefore probably annexed by the Benjamites subsequently to their original settlement, like Ajalon, which was added to the tribe of Judah, but is found afterwards in the list of cities of the Benjamites (1 Chron. viii. 13). The tradition of the Tal- mudists is that it was left intact by Joshua, but burned during the war of Gibeah (Judges xx, 48), and that 1 Chron. viii, 12 describes its restoration. (See Targum on this latter passage.) The men of Lod, Hadid, and Ono, to the number of 725 (or Neh. 721), returned from the captivity with Zerubbabel (Ezra ii. 33; Neh. vii. 37; see also 1 Esdr. v. 22). A valley (הַשְּפָר) was attached to the town, and bore its name, "the plain of Ono" (Neh. vi. 2), perhaps identical with the "valley of craftsmen" (Neh. xi, 56); and in any case a part or extension of the vale of Sharon. By Eusebius and Jerome Ono is not named, and the rabbis frequently mention it, but without any indication of its position further than that it was three miles from Lod. (See the citations from the Talmud in Lightfoot [Chor. De- cade on S. Mark, ch. ix. § 8] and Schwarz [Polest. p. 153].) A village called Kefr 'Ana is said to be near the places of the districts of Ramleh and Lydd (Bib. Res. i, 1st ed. App. 120, 121). This village, almost due north of Ludd, is suggested by Van de Velde (Memoir, p. 387) as identical with Ono. Against the identification are the differences in the names—the modern one containing the letter 'Ana—and the distance from Lydda, which, instead of being three millia, is fully five, being more than four English miles, according to Van de Velde's map. These difficulties, however, do not seem insuperable objections. Winer remarks that BeAi Utia is more suitable as a form of original worship, of which there are obscure traces in some ancient authors, chiefly as a slander upon the Jews (Walch, De cultu assin. Schles. 1799). See Ass.

Oncorhynchus, a celebrated religious poet of ancient Greece, lived at Athens in the time of the Prais- tratides. He collected and expounded—according to Herodotus—the prophecies or oracles of Musaeus; but is said to have been banished from the city by Hip- parchus, about B.C. 516, on account of interpolating something of his own in these oracles; he then, we are told, followed the Praisistratides into Persia, and while there was employed by them in a very dishonorable way. They got him to repeat to Xerxes all the ancient sayings that seemed to favor his meditated inva- sion of Greece. Some critics, among whom is Ari- sotle, have inferred a passage in Pausanias that Onocorhynchus is the author of most of the so-called Or- phic hymns. More certain, however, is the view which represents him as the inventor of the great Orphic myth of Dionysus Zagreus, and the founder of Orphic religious societies and theology. Pausanias states that "Onocorhynchus established orges in honor of Di- onysus, and in his poems represented the Titans as the authors of the sufferings of Dionysus." See Müller, Geschichte der Griech. Literatur bis auf das Zeitalter Alexander's (Breslau, 1841); Grote, History of Greece, etc.

Oenourenia, Isaac Ben-Moses, a rabbi who lived in the house of Joseph Nasi at Constantinople about the middle of the 16th century, published ḳατὰ ὅποιαν ἁρμακίον τῆς ζωῆς, Terrible as Dammed Hosts, (with reference
to the Song of Solomon vi, 4), an ethical poem, with an extensive commentary (Constantinople, 1581; Berlin, 1701);—a twofold commentary on Nachshon ben-Za-
(dok’s work, תנשא אש, Reseator Arceorum (Constanti-
nople, 1666)—he edited Don Joseph Naas’s תנשא אש, a treatise written against some erroneous opinions regarding
astrology, but believe in astrology (Bibliotheca, 1577);—and a treatise written against the Christians.

meine Gelehrten-Lexikon, iii, 77. (B. P.)

Onotography (from Greek ón and λογος, i.e. the science of being) is, strictly speaking, a synonyme of metaphysics
(q.v.), but neither the one name nor the other was used by Aristotle. He called the science now designated by
them philosophia prima, and defined it as καίνονταὶ ἐν ὅτι ἐστιν—'Science Estiva quattuor Estiva—that is, the
science of the essence of things: the science of the attributes and conditions of being in general, not of being
as it exists in given circumstances, not as physical, or mathematical, but as being.

The science of ontology is regarded as comprehending
investigations of every real existence, either beyond the
sphere of the present world, or in any other way incapable of being the object of conscious thought or of being
expressed duly from the possession of certain feelings or principles and faculties of the hu-
mans (comp. Butler, Lectures on Ancient Philosophy, vol. ii). Watts thus defines it: "Ontology is a discourse
of being in general, and the various or most universal me-
lodical or mental conditions, as well as of the actual kind
or divisions of it. The word being here includes not only
whatever actually is, but whatever can be" (On
Ontography, ch. ii). The name ontology seems to have
been first made current in philosophy by Wolf. He
divided metaphysics into four parts: Ontology, psychology,
rational cosmology, and theology. It was chiefly
occupied with abstract inquiries into possibility, neces-
sity, and contingency, substance, accident, cause, etc.,
without reference to the laws of our intellect by which we
are constrained to believe in them. Kant denied that we have any knowledge of substance or cause as a
real existing. But there is a science of principles and
causes, of the principles of being and knowing.

In this view of it, ontology corresponds to metaphysics.

Ontology may be treated of in two different methods,
according as its exponent is a believer in r6 óv or in
r6 óv, in one or in many fundamental principles of
things. In the former, all objects whatever are regard-

ed as phenomenal modifications of one and the same
substance, or as self-determined effects of one and the
same cause. The necessary result of this method is to
reduce all metaphysical philosophy to a rational the-
ole, the one substance or cause being identified with
the Absolute or the Deity. According to the latter
method, which professes to treat of different classes of
beings independently, metaphysics will contain three
co-ordinate branches of inquiry—rational cosmology,
logical psychology, and rational theology. The
first aims at a knowledge of the real essence, as
distincted from the phenomena of the material world; the
second discusses the nature and origin, as distinguished
from the faculties and affections; the third aspire to
comprehending the essence of the Indefinite, and is
called the cybernetical, or rational theology. The
first

ontography is to show that, in relation to all these, the attainment of a system of speculative philosophy is impossible

In theology the ontological argument has been freely
employed, especially in the Middle Ages, regarding the
Being of God. St. Augustine used it, so did Boethius;
but it was left for Anselm to develop it fully. They all
three inferred the existence of God from the existence
of the soul. Thus genuine ontological argument seems to
have been first made by Samuel, loc. cit. (Ibid. Lib. ii, c. 3-10) that there are general ideas
which have for every one the same objective validity,
and are not like the perceptions of sense different and
conditioned by the subjective apprehension. Among
these are the mathematical truths, as 8 + 7 = 15; here, as well, believing men look upon them as
permeating all things, and given to all alike, in itself, i.e. wisdom (veritas, sapientia). The absolute
truth, however, which is necessarily demanded by the
human mind, is God himself. Augustine asserts that
man is composed of existence, life, and thinking, and
shows that the last is the most excellent; hence he in-
forms that by which the soul is constituted, and which, and which, therefore, must be superior to thinking itself, is
the sumnum bonum. He finds this sumnum bonum
in those general laws which every thinking person must
acknowledge, and according to which he must form an
opinion of himself. The absolute truth in philosophy is of
these laws or rules is called truth or wisdom (veritas,
sapientia). The absolute is, therefore, equal to truth itself. God is truth. (Comp. Ritter, Christl. Phil. i, 407-411.) Boethius expresses himself still more defi-
nitely (De Consol. Phil. v. Pros. 10): he shows that
empirical observation and the perception of the imper-
fect lead necessarily to the idea of perfection and its
reality in God. (Comp. Schleiermacher, Geschichte der
Philosophie, p. 166.) Of Anselm's argument we can
here give only the heads; the thread of reasoning must
be seen from the connection:

Monol. I. Cunn tam immersaurilla bona sint, quorum tam
tam multa sunt, ut sit unus quod sit unicum esse et et
tutum meum discemiat, esse cernendum esse
numum aliquid, per quod numus sunt bona, quoniam
bona sunt, at sunt bona alia per alius?... III. Deni-
que non solus omnium bona per idem aliquid sunt bona et
et omilia magna per idem aliquid sunt magna, sed quicquid
est, per omnium aliquid videtur esse. Quoniam erga
cuncta que sunt, sunt per omnium: procul dUBlo et
et ipsum numum est per ipsum. Quicquid est est
et erat alius alius, sed unum est per quod omnia
numus est et per ipsum. Quo quid est est per se,
umnum omnium est. Est ergo unum quid aliquid, quia
nullum est quid aliquid et omnia est et et et
numum omnium omnium omnia. Qua quid est aliquid, quia
equivivit, quae erat, est per ipsum et
et ipsum unum et ipsum omnium omnium et
numnum omnium omnium omnium et
numnum omnium et
numnum omnium et
numnum omnium et
numnum omnium.

The mode of argument which is found in Proslog. c. ii is more original (he there proceeds from the reality of the idea):
The fool may say in his heart there is no God (Ps. xiv, 1), but he thereby shows himself a fool, be-
cause he asserts something which is contradictory in
itself. He has the idea of God in him, but denies its
reality. But if God is given in idea, he must also exist
in reality. Otherwise the real God, whose existence
is conceivable, would be superior to the one who exists
only in imagination, and consequently would be supe-
rior to the highest conceivable object, which is absurd;
and hence it follows that the first saved by the aliquid, which nothing can be
conceived to exist really exists (thus idea and reality coincide).

If, therefore, the fool says, There is no God,
he says it indeed, and may, perhaps, even think it.
But there is a difference between thought and thought.

I. The fool is supposed to have the idea of fire and
ning, e.g. that fire is water (a mere sound, an absurdity!),
is very different from the case in which the thought

responds to the word. It is only according to the
former mode of thinking (which destroys the thought
itself) that the fool can say, There is no God, but not according to the latter. See Ueberweg, Hist. of Philos.
regard this spirit as having much influence over the affairs of men.

On'ycha, a modified form of the Greek ὠνίχα, a finger-nail, is used in the A.V. for the Heb. שְׁכֶה, shekhe'lah (prop. a shell, from a root signifying to scale or peel off), which occurs only in Exod. xxx, 34 (Sept. שִׁכָּה; Vulg. unyxx) as one of the ingredients of the sacred perfume. Similarly in Eccles. xxiv, 15, wisdom is compared to the pleasant odor yielded by "galbanum, onyx, and sweet storax." Most versions, Hebrew interpreters and Talmudists, understand the Unguis odoratus, the well-known Constantinopolis "sweet-hood" (Blatta Byzaantina) of the shoemaker. It consists of the shells of several kinds of muscles, which when burned produce a scent similar to that of the castoreum. (See passages of Arabic and other authors in Bochart, Hieroz. iii, 796 sq.) There can be little doubt that the ὠνίχα of Dioscorides (ii, 10) and the unyx of Pliny (xxiii, 10) are identical with the opeurelum of a Strobomus, perhaps S. lentiginosus. There is frequent mention of the onyx in the writings of Arabic authors, and it would appear from them that the opeurelum of several kinds of Strobomus were prized as perfumes. The following is Dioscorides's description of the ὠνίχα: "The onyx is the opeurelum of a shell-fish resembling the parpura, which is found in India in the nard-producing lakes; it is odoriferous, because the shell-fish feed on the nard, and is collected after the heat has dried up the marshes: that is the best kind which comes from the Red Sea, and it is whitish and shining; the Babylonian kind is dark, and smaller than the other; both have a sweet odor when burned, something like castoreum." It is not easy to see what Dioscorides can mean by "nard-producing lakes." The ὠνίχα, "nail," or "claw," seems to point to the opeurelum of the Strobomus, which is of a claw shape and serrated, whereas the Arabs call the mollusc "the devil's claw;" for Unguis odoratus, or Blatta Byza-

---

---

zantina—for under both these terms apparently the devil-claw (Tenfeklaus of the Germans) is alluded to in old English writers on Materia Medica—has by some been supposed no longer to exist. Dr. Lister laments its loss, believing it to have been a good medicine, "from its strong aromatic smell." Dr. Gray, of the British Museum, says that the opeurelum of the different kinds of Strobomus agree with the figures of Blatta Byzantina and Unguis odoratus in the old books; with regard to the odor he writes, "The horrid opeurelum when burned all emit an odor which some may call sweet, according to their fancy." Mr. Daniel Hanbury procured some specimens in Damascus in October (1890), and a friend of his bought some in Alexandria a few months previously. The article appears to be always mixed with the opeurelum of some species of Faus. As regards the perfume ascribed to this substance, it does not appear to deserve the character of the excellent odor which has been attributed to it, though it is not without an aromatic scent. See a figure of the true Blatta Byzantina in Mattheioulus's Comment. in Diocor. (ii, 8), where there is a long discussion on the subject; also a fig. of B. Byzant., and the opeurelum of Faus in Pomet's His-

---

ONYCHA
Onychomancy, a species of divination anciently practiced by the Egyptians and other ancient nations. It consists in observing the natural curling of the nails, to determine the future. This art is rarely practiced now, and is considered by the modern Egyptians as purely superstitious.

Onyx, the universal translation in the English version of the Hebrew word shakham, שָׁקהָמ, which occurs in eleven passages of the O. T. The renderings of the old interpreters are various, and often inconsistent with each other. Ex. xxviii. 33; Lev. xii. 2; Ps. cxx. 6; Jer. i. 9; Ezek. xxiii. 3; Zech. ii. 8; and Ps. lxxxvi. 13. In the Sept. it is rendered סֶפָּרָה, saphara, in Exod. xxviii. 33; Neh. xv. 13; and Jer. xlix. 22; in the Vulg. sapia, in Ezek. xxiii. 13; and in the Syriac, sapareus, during the Persian monarchy. In the New Testament, in Acts viii. 28; Rom. i. 16; and Rev. xiii. 11; it is translated σάφιρυς, saphirios, saphirius; in Ezek. xxiii. 13; and saphir or sapphire. Other words are oryza or oryza. This strange inconsistency could spring only from ignorance and conjecture. Yet the Venetian MS. has always κρυσταλλος, crystall. The Sept. in Job (xxviii. 16), with Symmachus (Gen. ii. 12; Exod. xxviii. 7), Josephus (Ant. iii. 7, 6), and Jerome, (usually) understands the gem which was called by the Greeks οὖξ, oryx, from its resemblance in color to a human nail. This seems to be favored by comparing the similar Arabic root sahham, denoting polish (see Pliny, Hist. Nat. xxxvi. 6, 24; Eridisi, i. 150, ed. Jaubert). The shakham stone is mentioned (Gen. ii. 12) as a product of the land of Havilah. Two of these stones, upon which were engraved the names of the children of Israel, six on either stone, adorned the shoulders of the high-priest’s ephod (Exod. xxxix. 9-12), and were to be worn as “stones of memorial” (see Kalisch on Exod. L C.). A shakham was also the second stone in the fourth row of the sacerdotal breastplate (Exod. xxvii. 20). Shakham stones were collected by David and Saul at Jerusalem (2 Sam. xix. 2). In Job xxviii. 16, it is called the shakham, or sapphire, with the gold of Ophir, with the precious shakham or the sapphire. The shakham is mentioned as one of the treasures of the king of Tyre (Ezek. xxviii. 18). There is nothing in the context of the several passages where the Hebrew term occurs to help us to determine its signification. Bray (De Vest. sac. Heb. p. 727) has endeavored to show that the sardonix was the stone indicated, and his remarks are well worthy of careful perusal. (Ant. iii. 7, 6, and 7; and v. 5, 7) expressively states that the shoulder-stones of the high-priest were formed of two large sardonixes, an onyx being, in his description, the second stone in the fourth row of the breastplate. The sardonix, however, is but that variety of the onyx in which white and reddish stripes alternated. Rosenmüller renders it (Bibl. Alberti, iv. 1): “The onyx is not a transparent stone; but as the color of the flesh appears through the nail (in Greek called onyx) on the human body, so the reddish mass which is below shines delicately through the whitish surface of the stone. There are several varieties of this stone, according to the manner in which thin strata of different colors alternate in it; white and reddish stripes alternating, form the sardonix; white and reddish-gray, the chaledonaya; grayish-white and yellow-brown, the memphitomexs. The onyx most esteemed by the ancients was a white and black strata. When polished, it has a fine lustre; it has only wrought into a gem of great beauty. The different kinds of onyx have, from early antiquity, been used for rings, for seals and cameos, and, accordingly, they are frequently found in collections of antiquities. Bray (Antiqu. iii. 7, 6) remarks that the Arabians call it al-‘ard, and that the Christians call it al-har. Sayyid, he says, is the name given to this stone; such a color, says he, are the Arabic sardonixes, which have a black ground-color. This agrees essentially with Mr. King’s remarks (Antiqua Gens, p. 9): ‘The Arabian species, he says, “were formed of black or blue strata, covered by one of opaque white; over which again was a third of a vermilion color. As to the “onyx” of Ecles. xxiv. 15, see Onycha.’

But the more usual interpretation of the Hebrew word shakham is beryl. This is the rendering given by the Septuagint, the Targums of Onkelos and Jonathan, and the Sept. in two places (Exod. xxviii. 20; xxxix. 18); and it is supported by Bellermann (Urim, p. 64), Winer (Real-Wörterbuch, i. 283, 4th ed.), Rosenmüller (ut supr.), and others. This is the stone called by the Sept. (Gen. ii. 12) λιθος περαγιος, the leek-stone, i.e. the stone of a leek-green color; Latin, porPHYros. (But Schleeman, s. v., makes this word onyx.) According to Pliny (Hist. Nat. xxxvii. 5, 20), the beryl is found in India, and is barely elsewhere. This is the highest value when like the sea in color. See Beryl. For other explanations, see Wahlus, s. v. p. 856; Benfey, Encyclop. des Léons, ii. xvii, 14; Gesenius, Thesaur. p. 1870. See Gem.

Ooms, Jean Baptiste, a Belgian mystical writer, was born at Ghile, in Brabant, near the middle of the 17th century. He studied at Falcon College, Louvain, and became professor of theology at Ghent. He was made archdeacon of that city June 18, 1604, and confessor of the Capuchin nuns. He died at Ghile July 24, 1710. Ooms wrote, Leen van de edele Josiphine Francesca Taffio (Ghent, 1717, 12mo) — Verdervierhage van het Lelen en de Mysterien, van der aardekerlyghe Minet en de Moeder Godes Maria, etc. (ibid. 1708—1706, 12mo) — Godsdienstige Eclesiastyte Theologie van de Dethgenen, etc. (ibid. 1708—1712, 3 vols. 4to). See Sanders, Vandria illustrat. i, 241; Sweert, Necrol. p. 90; Paquot, Mém. pour l’hist. des Pays-Bas, xii, 327—334.

Oonsell, Guillaume van, a Flemish Roman Catholic preacher, was born at Antwerp August 9, 1571. He studied in Spain, and after his return to his native land joined the Dominicans at Ghent in 1590. After being for a while professor of theology at Antwerp, he became successively sub-prior at Maestricht, prior at Ghent and Bruges, and definitor of the province. He had at the same time great success...
Oort, as a preacher. Oulton died at Ghent Sept. 8, 1630.
He wrote: 'Clemis cellarix divinae et humanae sapientiae' (Antw. 1618, 12mo; Ghent, 1677, 12mo)—'Pratum floridissimum concionum de tempore' (Antw. 1617, 4 pts. 12mo)—'Execliionem concionatorium, ex Rozelo aureo Silvestri Prietatis' (ibid. 1619, 12mo)—'Syntaxis instructionis S. Scripturae' (ibid. 1617, 12mo; Paris, 1621, 2 vols. 12mo)—'Officina sacra Bibliae' (Douai, 1624, 12mo)—'Hierophynhs sacra' (Antw. 1627, 12mo). See Echard et Quetif, 'Scriptores ord. Pradicali', i, 551, 667 sq.; ii, 7, 9, 465; 'Exequy, Memoires', vol. x.

Oort, Lambert van, a Flemish painter and architect, was born at Amersfoort about 1520. He acquired considerable reputation as a historical painter, but was more distinguished as an architect. He resided chiefly at Antwerp, where he was received into the academy in 1547. In the museum at Antwerp is a picture of the 'Resurrection of Christ' by him, and in that of Brussels are two representing the 'Adoration of the Shepherds' and the 'Descent from the Cross'.

Oscopy (fr. scopo, an egg, and oconio, to observe), a method of divination by the examination of eggs. See DISSAVINATION.

Oost, Jacob van, the Elder, an eminent Flemish painter, was born at Bruges about 1600. It is not known under whom he first studied, but in 1621 he painted an altar-piece for one of the churches in his native city, which excited the surprise and admiration of contemporary artists. Being ambitious of further improvement, he went to Rome, where he more closely studied the works of the great masters, and made himself master of Caracci the particular objects of his imitation. During his residence in that metropolis Van Oost produced several works of his own composition, so much in the style of the great artist that they astonished the best connoisseurs at Rome, and gained him great reputation. After a residence of five years in Italy, the love of country induced him to return to Bruges, where his talents had excited the most sanguine expectations even before he had gone abroad. Immediately on his arrival home he was loaded with commissions, and during the remainder of his life he continued to exercise his talents with undiminished reputation. He executed an incredible number of works for the churches and public edifices, as well as for the private collections of his country, particularly of Bruges. He also excelled in portraits, and painted a great number of distinguished and famous works are, the 'Nativity', in the church of St. Saviour; the 'Resurrection', in the cathedral—a grand composition; and the 'Descent from the Cross', in the church of the Jesuits at Bruges, which last is considered his masterpiece. Most of his pictures are of large size. He died at Bruges in 1671. Van Oost is justly ranked among the ablest artists of the Flemish school.

His first studies were the works of Rubens and Vandyck, and from them he acquired that freshness and purity of coloring for which his works are distinguished. Following the example of the greatest masters, his compositions are simple and studied, and he avoided crowding them with figures not essential to his subject. In his design, and in the expression of his heads, he seems always to have had in view the great style of Caracci. The backgrounds of his pictures are generally enriched with noble architecture, of which he was equally master. He had a ready invention, and, though he wrought with extraordinary facility of pencil, his works are well finished. See Descamps, 'La vie des peintres Flammands', i, 264, 280, 285; Filkington, 'Diät. of Painters', v. c.; Spooner, 'Biog. Diet. of the Fine Arts', v. c.

Oost, Jacob van, the Younger, son and pupil of the preceding, was born at Bruges in 1637. At twenty years of age his father sent him to Italy to complete his education, and, after having resided there several years, he returned to Flanders an able and accom-

plished designer. He painted some pictures for the churches at Bruges, and then settled permanently at Lille, where he acquired a distinguished reputation, and where are the greater part of his works. His historical pictures, like those of his father, are admirably composed, partaking more of the Roman than the Flemish school. Of his best works are the 'Martrydom of St. Barbara, in the church of St. Stephen; and the Transfiguration, in the church of St. Saviour, at Lille. He was less eminent than his father as a historical painter, but excelled him in portraits, which somehow he was not hesitating to perform with the grace of Vandyck. Jacob van Oost, Jun, died in 1718. See Spooner, 'Biog. Diet. of the Fine Arts', vol. ii, s. v.; and Descamps, referred to in the preceding article.

Opalina, a festival celebrated by the ancient Romans in honor of Ops, the wife of Saturn, on Dec. 19, being the third of the Saturnalia. The voices made on this occasion were offered in a sitting posture, the dove touchmg the ground, because Ops represented the earth.

Open-air preaching. See PRACHING.

Opéra Supererogationis. See SUPEREROGATION, WORKS OF.

Operatio Sacra, i. e. sacred ministerium, is a term which was used in the ancient churches of the West for the 'sacramentum of the Lord's body and blood.' No operations (sacraments) have been derived from the expression ministering the gospel of God (Rom. xv, 16), and is used in the same general and figurative sense.

Operation of the Holy Ghost. See HOLY GHOST: SPIRIT.

Operation of the Mind is that action of the mental faculty which gives us consciousness of possession. We know that we have a stomach, but are not made conscious of its possession until it is impaired, and so with every other physical part. Quite differently do we become aware of the possession of mental or, better, spiritual faculties. It is in their healthy condition that we are most thoroughly conscious of such property. See Mind. "By the operations of the mind," says Dr. Reid ('Intel. Powers, essay i, ch. ii), "we understand every mode of thinking of which we are conscious." In all language the various modes of thinking have always been designated by this term, or one of like import. It is used to establish clearly the distinction of mind from matter. The former is from its very nature a living and active being. Everything we know of it implies life and active energy; and "the reason why all its modes of thinking are called its operations is that in all, or in most of them, it is not merely passive, as when it perceives, but is really and properly active" (Reid). To body we simply ascribe certain properties, but not operations, properly so called: it is extended, divisible, movable, inert; it continues in any state in which it is put; every change of its state is the effect of some force impressed upon it, and is exactly proportional to the force impressed, and in the precise direction of that force. These are the general properties of matter, and these are not operations; on the contrary, they all imply its being a dead, inactive thing, which moves only as it is moved, and acts only by being acted upon. See Krauth's Fleming, 'Vocab. of Philos., s. v.

Opfergeld, Friedrich, a German theologian, was born in Breslau in 1668. After having been pastor at Festenberg and Nauen, he became in 1721 provost of the convent of Notre Dame at Magdeburg. He died in 1740. We have of his works, 'Sonderbare Feste' (Brug. 1696, 12mo)—'Bibliotheca sacra' (Magdeburg, 1728, 8vo)—'Nachricht von den judischen Lehrern und von ihren zur Ezegenes gehörigen Schriften' (Halle, 1738, 8vo). See Moser, 'Lexikon der jetzttedenden Theologen', and its continuation by Neubauer.

O'phel (Heb. always with the article, ha-O'phel,
OPHRIS

Indica, while Winer (*Realta, a. v.), Furst (*Hörer, und Chald. Homëra, a. v.), Knobel (*Völkerkunde der Genesis, p. 900) First (Geogr. of Arabia, i, 161-167), Crawford (*Descriptione Dictionary of the Indian Islands, a. v.), and Kalisch (*Commentary on Genesis, chap. 'The Genealogy of Nations') are in favor of Arabia. The fullest treatise on the question is that of Ritter, who in his *Erde (vol. xiv, published in 1848) discusses the opinions of the discussion (p. 381-431), and adopted the opinion of Lassen (Ind. Alt. i, 539) that Ophir was situated at the mouth of the Indus." Melishah, on the coast of Africa, Angola, Carthage, San Domingo, Mexico, New Guinea, Orphus, an island in the Sea, Orania, a mountainous Greek island, and especially Peru, have had their several advocates; but the opinions likely to be embraced at this day may be enumerated very briefly:

1. Some suppose Ophir to be a general name for lands abounding in gold, used with the vagueness of *Thule in the classics, or *El Dorado in the Middle Ages. In support of this view, it has been observed that, in Arabic, the word Ophir means simply *rich country, or perhaps *dust, i.e. *gold-dust, and may therefore have easily passed into a generic name for the region of valuable ores of precious metals. The geographical views of the best informed, were very vague. But the definiteness of the allusions in the Scripture history to Ophir as a well-known trading-place are quite sufficient to refute this view.

2. Others, on the western coast of Africa, opposite the island of Madagascar. This supposition has found many and able supporters (see Quatremère, *Mém. de l'Acad. des Inscriptions, XV, ii [1849], 849-402; Heeren, *Recherches, ii, 73-74 [Eng. ed.]; Husielius, *De Narge, Salomon, ch. ii, in Ugolini, *Thes. vol. v, 1848, p. 479 sq.; Ritter, *Erde, i, 118 sq.; Weston, in the *Classical Journal, 1821, no. 47), having been first advanced by one friar John von Sanctos, who was a resident of Sofala, in Monomotopa, and found that in vicinity a mountain with ancient ruins on its summit. According to friar John, this mountain still contains "much fine gold," and is called *Pura, which he thinks to be evidently a corruption of Ophir. (See this view confuted by Tycheon, *Anmerk. zu Bruce R. V. p. 327 sq.; and esp. Salt, *Voyage to Abyssinia [London, 1814], p. 92 sq.) But Husielius (as cited above) has argued the question on more grounds, such as the name Africa itself from Ophir, and making no doubt that the inscriptions said to have been found at Sofala, but never read, were a record or kind of log-book of the fleets of Solomon. The name Sofala, again, has been urged in favor of this view; as akin with Ophir; but Sofala in the Portuguese language is a low country, the coast-land (Heb. Shephelah, כפלה; similarly the Chaldean and Arabic), and has nothing to do with Ophir (*כפלה).

3. A much more probable view is that which refers Ophir to Arabia. This has been advanced in a variety of forms, but usually placing the port visited by Solomon's ships near the western extremity of the southern coast, bordering on the Erythraean Sea. In Gen. x, 29, Ophir is mentioned among the sons of Joktan, who peopled various Arabian countries. (See Ophir, 1, above.) Yet Genesius supposes that it is here the name of an Arabian tribe who colonized some foreign land. Again, though gold is not now found in Arabia (Niebuhr, *Description of the Arabs [Copenhagen, 1753], p. 124), yet the ancients ascribe it to the inhabitants in great plenty (Judges viii, 24, 26; 2 Chron i, 1; Kings x, 1, 2; Ps. lxiii, 15). This gold, Dr. Lee thinks, was no other than that of Havilah (Gen. ii, 11), which he supposes to have been situated somewhere between Arabia, and now the coast of Africa, x, 7, xxiv, 18; i Sam iv, 7, 1 Chron. i, 9 (Translation of the Book of Job, etc. [London, 1887], p. 55). But Diodorus Siculus ascribes gold-mines to Arabia (ii, 50). He also testifies to the abundance of "precious stones" in Arabia (ii, 54), especially among the inhabitants of Sabas (iii, 46; comp. Gen. ii, 12; 2 Chron. ix, 1; 1 Kings x, 1, 2). Pliny also speaks of the wealth of Saba in gold (Hist. Nat. vi, 82). Others suppose that, though Ophir was situated in Arabia, there was rather an emporium (see de Beke, *Source of the Nile, p. 64), at which the Hebrews and Tyrians obtained gold, silver, ivory, apes, almugtrees, etc., brought thither from India and Africa by the Arab traders, and even from Ethiopia, to which Herodotus (iii, 114) ascribes gold in great quantities, elephants, bees' teeth, and trees and shrubs of every kind. Apeo, properly speaking, are likewise ascribed to it by Pliny (viii, 19), who speaks also of the confluence of merchandise in Arabia (ut sup.; comp. Strabo, xxvi, 2 Chron. ix, 13; Ezek. xxvi, 21, 22; Dan. iv, 9). He has further maintained that the classical name of the Arab port *Afhar varies much as the Septuagint translation of Ophir. Thus it is called by Arrian *Apbar, by Pliny *Sophar, by Ptolemy *Sophrus, and by Stephanus *Sophirin. (Comp. the Sept. xxvi, 19.) It is a serious objection to this view, however, that land carriage, by caravans, would be easier, that more land carriage, by caravans, would be easier and safer if Ophir were in Arabia (comp. *Encyclopedia Londin. a.e., while the etymological arguments, so often and earnestly pressed as conclusive, could at best only serve to create a presumption, in the absence of evidence. Consideration above mentioned, however, in connection with the strong reasons for placing Ophir in India, weighed so strongly with Bochart (*Phaleg, i, 27) and Michaelis (*Spicilegium, ii, 185) that they suppose two countries of that name, one in Arabia and one in India. This conjecture, however, is unsupported and unnecessary (Genes. *Thee p. 141).

4. On the whole, then, India must be adopted as the most probable region of the Ophir of Solomon. The Sept. translators also appear to have understood it to be India, from rendering the word *Zoopir, *Zoopir, *Zooppir, which is the Egyptian name for that country. Chambers says that in the Coptic vocabularies India bears the name *Sophr (L'Egypte sous les Pharaons [Paris, 1814], i, 98; *Jablonskii Obscuritas [Lug. Bat. 1804], 336, etc.). Josephus also gives to the sons of Joktan the locality from Cophen, an Indian river, and in part of Arabia adjoining it (Ant. i, 6, 4). He also expressly and unhesitatingly affirms that the land to which Solomon sent for gold was "anciently called Ophir, but now the Aurea Chersonesus, which belongs to India" (Ant. vii, 4, 6). The Vulgate renders the words "the gold of Ophir" (Job xxvii, 16) by "tintic Augusti, *Sopus in Copto, *Hesychius defines *Sophr (Zoopir) "a place in India where gems and gold are found." So Suidas (s.n. comp. Eusebius, *Onomasticon, p. 146, ed. Cleric). But the controlling argument for this view is that all the productions referred to in the Bible are supposed to be produced in India, and in India alone. Gold, silver, jewels, sandal-wood, ivory, apes, and peacocks are there all articles of commerce, and are found side by side in no other part of the world; while the last is believed to be an exclusively Indian bird, and the very name by which it is denoted in the Hebrew text (rachaim, *ראכמ, see *Genes. Than. c. v.) is an Indian, not a Hebrew word. See *PEACOCK. Yet the place of the locality must ever remain conjectural. There are several places comprised in the region which was actually known to the ancients, any of which would have supplied the cargo of Solomon's fleet: for instance, the coast of Malabar, where the name togeri is still applied to the peacock; and Malaca, which is known to have been "the golden Chersonesus" of the classic writers, and where gold-mines are still doubtfully operated. See *P. P. Poussin de l'Acad. d'un Philosophie (Oeuvres Completes, 1797, p. 123).

See further, Humboldt, *Cosmos, ii, 132 sq.; *C. Varrer, in *Crit. Sacre, vi, 459; A. G. Wannier, *De regione Ophir (Heil. 1714); Tycheon, *De commerce, *Haberdash, in the *Comment, Gott. xvi, 104 sq.; *Genesius, in the *Haberdash.
OPHITES

Ophites (Gr. ὁ ψιρις, i.e. serpens brethren, from ῥιζω a serpent) is the name of an Egyptian sect of Christians who are regarded as a branch of the Gnostics (q.v.); but while the Ophites shared with the Gnostics the general belief of dualism, the conflict of matter and spirit, the emanations, the Demiurgus, and other notions, the Ophites of the west both had a common parent, and the Christian di- sinary school, the Ophites were distinguished by their peculiar doctrine and worship connected with the ophis, or serpent. Like most other Gnostics, they regarded the Demiurgus, or the Jehovah of the Old Testament, with great abhorrence, but they pursued this notion into a very curious development. Regarding, like the Valentineans, the emancipation of man from the power and control of the Demiurgus, or, as they called him, Jaldaboth, as a most important end, they declared the serpent who tempted Eve, and introduced into the world the knowledge of good and evil—"the first man to man"—was the great benefactor of the human race, and hence they worshipped the serpent. Other views which they held and sought to propagate were equally strange. We may instance their singular attempt to engrat "Opphism" on Christianity; their seeking as it were, to impart to the Christian Eucharist an Ophitic character, by causing the bread designed for the eucharistic sacrifice to be licked by a serpent, which was kept in a case for the purpose, and which the communicants kissed after receiving the Eucharist (Tertullian, *Adr. Het.-phpsisis; Eusebius, Not. Ev.; Eusebius, Sermones. They taught that he who was born of the Virgin was Jesus alone, and that afterwards Christ descended upon Jesus; and in proof of this they pointed to the fact that Jesus wrought no miracle either before his baptism or after his resurrection. They held that Jaldaboth set forth as begetter of six beings, the spirits of the seven planets. By these six beings man was siled in a spiritual body, which was called a spiritual soul, and was a spiritual persona of a spiritual body, down to the dark earth, and banished him into a dark body. Man found himself now placed in a situation where, on the one hand, the seven planetary spirits sought to hold him under their thrall, and to suppress the higher consciousness in his soul; while, on the other hand, the wicked and purely material spirits tried to tempt him into evil and idolatry, which would expose him to the vengeance of the severe Jaldaboth; and man was ever seized to impart new strength to man's kindred nature by fresh supplies of the higher spiritual influence; and from Seth, whom the Gnostics generally regarded as a representative of the contemplative nature, she was able to preserve him from the power of the material, in which the seeds of the spiritual nature were saved from destruction. The doctrines of the Ophites were far from being favorable to the purity of the Christian Church, and they were denounced by Clement of Alexandria and by Augustine as those who would separate them from the Christian Church, and declared that they admitted none to their assemblies who did not subscribe to the Nicene Confession. Origen gives a general account of the Gnostic traditions (in *Contra Cels.*), which appears to have been a sort of tablet on which they depicted their doctrines in all sorts of figures, with words annexed.

The Ophites originated in Egypt, probably from some relation to the Egyptian serpent-worship, and spread thence into Syria and Asia Minor. They continued to exist as a sect after other forms of Gnosticism had died out, the emperor Justinian enacting laws against them (*Cod. i. 1, 18, 19, 21*) so late as A.D. 580. Offshoots of them are found throughout Asia and Africa.

Cyprian mentions the Ophites (*Ep. Ixxii. 4*), and the last chapter but one of Ireneus's first book is supposed to have been written against them and the Sethians (*Adr. Het. s. 30*). Origin calls them "a very obscure sect," and denies that they were Christians, saying that they "have no more light to show than the sickly spirits till he had uttered curses against Jesus" (*Contra. Cels.* iii, 13; vi, 24). He also says they were founded by a man named Euphrates (*ibid.* xi, 29), a name mentioned by Theodoret as belonging to the founder of the heresy of the Perasians, which is the same as that mentioned in the apostolic traditions, or Ophites, given by Hippolytus as regarded as the name of the mystical water of life spoken of in John iv, VI. 13.
10. Hippolytus looks upon the Ophites as the originators of all heresies, and associates them with both Jews and the Gnostics; for he writes of them under the Hebrew form of their name as "the Naaseni," from נאשני (naashan, "a serpent"), "who call themselves Gnostics" (Hippol. Refut. vi, 6). Philastes places them first in his list of heresies before Christ (De Har. i), while Epiphanius (Panar. xxxviii and Hær. De Har. xxvi) says that they were alleged to have been derived from the Nicolaitanes or the Gnostics. The hegelical philosophy of the sect is given by Hippolytus and Epiphanius, as above quoted. The former says that they professed to derive it from James, the brother of our Lord, and to have it written down in a treatise. He also quotes from a "Gospel according to Thomas" which was in use among them, which seems to be the "Gospel according to the Egyptians" mentioned by Epiphanius in his twenty-sixth book among the Gnostic Apocrypha. In addition to these sources of information, there also exists an account given by one of their Diagr. a tablet on which they set forth their doctrines in a hieroglyphical form (Contra. Cel. vi, 33). See, besides the literature on Gnosticism, Presens., Doctrines and Heresies of the Early Christian Church, p. 58; Werner, Geschichte der Schriftkunde, II, 385; Neander, Chist. Hist., vol. ii; id. Genetische Entwicklung des gnost. Systems, p. 231 sq.; id. Gnosis, p. 171 sq.; and his Das Christentum der ersten drei Jahrhunderte, p. 176; Mosheim, Gesch. der Schlangenbrüder (Helmst. 1748, 8vo); Schumann, Lehrduif der Ophiten (Wolfenb. 1758, 4to); Pulzer, Tongliche, p. 409. There is an article on the Ophite System, by Lepsius, in the Zeitsch. für wissensch. Theologie, 1865, vol. iv: 1864, i. See SERPENT-WORSHIPERS.

Oph'ni (Heb. 'ophni', עופני [always with the art. עופני, ha-'Ophni], q. d. the Ophnite), proper. pressure, famine [comp. עופני]; Sept. Ἀφνί, Arist most MSS. omit; Vulg. Ophni, a town in the north-eastern section of the tribe of Benjamin, named only in Josh. xviii. 24, between Chebbar- haamomoni and Gaba (q. v.). Its name may perhaps imply that, like others of the towns of the tribe of Benjamin, it was originally a Semitic town of a non-reshaitile tribe—the Ophniotes—who in that case have left but this one slight trace of their existence" (Smith).

It was probably the Ophthal (Ὀφθάλ, Ophtha), or Bethgaphin of the Talmud (Schwarz, p. 126), and doubtless the Gapha of Josephus (Joseph; Pottery, Ophotha, iv, 16), a place which at the time of Vespasian's invasion was apparently so important as to be second only to Jerusalem (War, iii, 5, 8), as the centre of a district or toparchy (Ant. xiv, 11, 2). It was fifteen Roman miles from Jerusalem on the way to Neapolis (Eusebius, Onomast. a. v. Αφάλης Βορειος). The place still survives in the modern Ophtha or Ophtha, two and a half miles north-west of Bethel (ROLAND, Palestine, p. 816; Wilson, Lands of the Bible, ii, 41). The change from the Aín, with which Ophni begins, to G, is common enough in the Sept. (comp. Gomorrah, Athalah, etc.). It is now a poor village, in a fertile valley between high hills, and contains about 200 Christian inhabitants (Robinson, Biblical Rea. iii, 79). Remains of an old Greek church still exist there, especially a baptistery; and traces may be seen of the Roman road leading through the town from Jerusalem to Antipatris (ib. ii, 138).

Oph'rah (Heb. 'ophrah', עופרה, fawn; Sept. Ἀφόρα, Ἀφρα, ἀφρά, 'Ephra, 'Ophra, v. 'Aphiad, 'Ophre'd; but 1 Chron. iv, 14, Θοφραδ, two names of places in Palestine, and of a man.

1. A town of Benjamin (Josh. xviii. 23), mentioned between hup-Parah and Chephar ha-Ammoni, in the north-east of that tribe's domain (Keil, Joshua, ad loc.). "It appears to be named again (1 Sam. xiii. 17) in deference to the spelling afterwards taken from the Philistines and adopted by the Philistines in their invasion of the Philistine camp at Michmash. One of these bands of ravagers went due west, on the road to Beth- horon; one towards the 'ravin of Zeboim,' that is in all probability one of the cliffs which lead down to the Jordan valley, called Kiriath due east; while the third took the route to Ophrah and the land of Shual—doubtless north, for south they could not go, owing to the position held by Saul and Jonathan" (Smith). Accordingly it is placed by Eusebius and Jerome (Onomast. a. v. Aphiad) five Roman miles east of Bethel. This Ophrah also he depicted the ephod which he made or enriched with the ornaments taken from the Ishmaelitish followers of Zebah and Zalmunnah (viii, 27), and so strong was the attraction of that object that the town must then have been a place of great pilgrimage and resort. We may infer that it lay within the territory of Manasseh, as is called "Ophrah of the Abiezrites" (vii, 24), and it is stated that the angel who appeared to Gideon to summon him to deliver Israel "sat under an oak which was in Ophrah, that pertained unto Joshe the Abiezrite" (vii, 11). Ophrah possibly derived its name from the fact that it was one of the five cities of Manasseh in its Gileaditish portion (1 Chron. v, 24), and who appears to have migrated to the west of Jordan with Abiezer and Shechem (Numb. xxxvi, 30; Josh. xvii. 2)" (Smith). See Antiqu. "The prophet Micah, when foreshadowing the destruction of the land and cities of Israel, says, 'In the house of Ophrah roll thyself in the dust,' or rather, perhaps, we should render, 'In Beth-Ophrah roll thyself in dust' (vii, 1); or, in the house of dust roll thyself in dust (Mic. i, 10, יבשע עפרה; the ר appears to be merely the sign of the genitive; Sept. יס עפרה יבשע; Vulg. in domo Pulceris pulvere vos comperige). The place referred to is possibly identical with Ophrah of Manasseh; and the prophet perhaps intends some allusion to Gideon's deliverance; and that the text that there should be none like him to deliver them in time of oppression" (Kitto). See, however, Beth-leaphrah. The Ophrah of Gideon was probably not far from Shechem (Judg. i, 1, 5). Neither Eusebius nor Jerome appears to have known anything of it (ROLAND, Palestine, p. 313). Van de Velde suggests a site called Aphiad, a mile south of Akrah, about eight miles south-east from Nablus (Memoir, p. 338), and Schwarz (Palest. p. 158) identifies it with 'the village Erafoth, north of Samur,' by which he prob-
OPINION

OPPENHEIMER

ably means Arroéed, west of Tell Dothàn. The former is sufficiently in the required position. For other vague conjectures, see H. Macquisten, 1 Kings, 16, 17, 28: 15.

3 S. in 1 pet. son of Meinothai, of the tribe of Judah (1 Chron. iv. 14). B.C. post 1614. But it is more probable that the word father here means founder; and that Ophrah here also is the name of a village. See above, and Meinothai.

Opinion (from Latin opinor, to think) is a synonym of belief, and, moreover, too well known, but, while the last-named term can be applied to what is objectively and subjectively held as sufficient, and belief is applied to what is subjectively sufficient, opinion is properly applied only to a consciously insufficient judgment, or, as Sir Lewis has it: "The essential idea of opinion seems to be that it is a matter about which doubt can reasonably exist, as to which two persons can without absurdity think differently. . . . Any proposition, the contrary of which can be maintained with probability, is matter of opinion" (Essay on Opinion). According to the last of these definitions, matter of opinion is opposed not to matter of fact, but to matter of certainty. Thus the death of Charles I is a fact—his authorship of Icon Basilike, an opinion. It is also used, however, to denote knowledge acquired by inference, as opposed to that acquired by perception. Thus that the moon gives light is matter of fact; that it is inhabited or uninhabited is matter of opinion. It has been proposed to discard from philosophical use these ambiguous expressions, and to divide knowledge, according to its sources, into matter of perception and matter of inference; and, as a cross division as to our conviction, into matter of certainty and matter of doubt. Subjective sufficiency is termed conviction (for myself); objective determination is termed certainty (for all). See KNOWLEDGE.

Opitz (Opitius), Heinrich, a German Lutheran divine, was born at Altenberg, in Misnia, in 1642, and became professor of the Oriental languages and theology in Kiel, where he died in 1712. We have many Latin works of his on Hebrew antiquities, and he was deservedly regarded one of the most learned men of his age; but what peculiarly marks him is an attempt (a very strange one surely) to show the relationship between the Greek and the Oriental languages, and the connection of the latter with the dialects of that race with those of the other. This chimerical scheme of subjecting the Greek language to the rules of the Hebrew induced him to publish a small work entitled Graecumus faculatis seu rusticulum, methodo novi, edoque cum praebentur, Helvetiae (1673). "(An Consulians wuthus the et of he ofier's) et sua Orientalum quam proline harmonica, adeoque regulis 94 vacuoacte absolutas.

Opitz, Martin (afterwards ennobled as Opitz von Borrefeld), a famous German poet, noted for his literary productions of a moral and religious character, was born Dec. 28, 1597, at Bunzlau, in Silesia. He studied at Frankfort and Heidelberg, and published in 1618 a Latin essay, Aristarchus de contempitu linguae Teutonicae, in which he vindicates the merit of the German language. His most important work, Von der deutschen Poeterei, or the "Book of German Poetry" (1624), passed through nine editions before 1669, and produced a reform in German versification. For nearly three centuries the art of writing in verse had degenerated, until it had been reduced to nothing better than a mere counting of syllables. Opitz insisted on the importance of both metre and rhythm, while he contended for purity in the choice of words, and the use of words as a scholar—especially as a writer of respectable Latin verses—recommended his book to the notice of educated men, and its success made Opitz the founder of a new school—the First Silesian School. After several years in diplomacy he was called to the Danish Court, and gained in 1637 an appointment as historiographer to the king, Vladislaus IV, of Poland. He was closely engaged in historical researches, and was looking forward to the enjoyment of years of literary industry, when his career was cut short. He died Aug. 20, 1659, of the plague, caught from a beggar to whom he had given alms. Opitz was more honored by his contemporaries than almost any other poet ever was. German poetry, which had been neglected and despised, began again to be esteemed and cultivated. The popularity of Opitz, and his relations with the chiefs of the Roman Catholic party, led to the adoption, throughout the whole of Germany, of the form given to the German language by Luther, which had previously obtained general acceptance only in the Protestant states (see Hallam, History of the Literature of Europe). The newGerman poetry is characterized by careful attention to language and metre, and by reflection rather than by brilliant fancy or deep feeling. There are several complete editions of his works (Breslau, 1690, 3 vols.; Amsterdam, 1646, 3 vols.; Frankfort and Leipsic, 1724, 4 vols.); the collection of his works was published by Muller (Leipsic, 1822) and Tiltmann (1869). "Opitz was essentially a clever, industrious literary man of the world, with the art of making himself everywhere agreeable, and was petted and caressed accordingly more than was good for his work. But he had written religious poetry at all in ordinary times; but living as he did when grave thoughts and terrible struggles were in all men's minds, he, too, was influenced by his age, and he wrote a good deal of this kind of writing. The Epitome of the Psalms, for the year, of many of the Psalms, and of the Song of Solomon. Among his sacred poems, however, his hymns are by far the best, and some are really fine." One of his best is, O Licht geboren aus dem Lichte (Winkworth, Singers of Germany, "O Light, who out of Light was born!"). See Koch, Gesch. d. Kirchengesch. iii, 6 and 9; Streihle, Martin Opitz (Leipsic, 1856); Weinhold, Martin Opitz von Borrefeld (Kiel, 1862); Palm, Martin Opitz (1862); Winkworth, Christian Singers of Germany, p. 173 sq.

Oppelt, Godfrey Sebastian, a well-known German Moravian missionary among the Indians of North America, was born March 20, 1723, at Gorylitz, Silesia. In 1759 he began to preach to the converts in Canada, and in 1804 inaugurated an enterprise among the Delaware on the Petawawa, now Huron River, Ohio. Subsequently, from 1810 to 1818, he was the agent of the "Society of the United Brethren for Propagating the Gospel among the Heathen" in India (1808), and lived in the Tuscarawas Valley, Ohio, administering the grant of 12,000 acres of land made by Congress to that association in trust for the Christian Indians. He died at Nazareth, Pa., Aug. 9, 1832. (E. de S.)

Oppenheim (or), David ben-Abraham, a noted German rabbi, was born at Worms in 1664 or 1667. At the age of twenty-two he was called to Breslau, to become the head of the Jewish community there. Four years later, in 1690, he received a call to the Jewish school at Nicolzburg, where he had received his own literary training, and in 1704 he was called as chief rabbi to Prague, where he died, Sept. 12, 1736. Oppenheim is the author of a number of Talmudical works, and published an edition of the Pentateuch, with the commentaries of Samuel ben-Meir (Sifre), Ab. ibn-Esra (Baare), etc., and the Targums, in five vols. (Berlin, 1765), to which he wrote a lengthy preface, and which edition, entitled Seder nevi'm ha-Ashkenazi, has been noticed in the Periologia librorum noveorum, etc., xiv, 99 sq. While his writings will claim the attention of the student in Talmudic lore, Oppenheim's fame mainly depends on his large collection of Hebrew works, which now constitutes the famous Oppenheimer Library at the Bodleian Library at Oxford in England. It was this collection that gave Wolf the
material for his famous Bibliotheca Hebraea (Hamburg, 1715–33, 4 vols. 4to), since he had 7000 volumes, inclusive of 1000 MSS, at his disposal, and it was estimated at £8000, but in 1829 was bought for £9000 by a Hamburg merchant of opulence, who caused a catalogue of this collection to be published by Jsr. Breslau. Katalog der berühmten Bibliotheken, etc. (Hamburg, 1783). Another catalogue had previously been published (Hanover, 1764), and a third was brought out by Eis. Meta ( afflict, Katalog der Davud Oppenheim’schen Bibliothek, etc.) at Hamburg in 1826. This catalogue gives a list of 1147 folios, 1708 quartos, 919 octavos, and 326 duodecimos, in all 4100 articles. A fourth one, entitled Mechanick, or an Index to all books as given in Meta’s catalogue (Leipsic, 1843). See Lebrecht, Die Oppenheimer’schen Bibliotheken in Oxford, in the Magazin für Literatur des Auslandes, 1848, No. 53 sq.; L. L. d. Dr. Or. 1844, c. 247–250, 271–278, 472, 473; Zunn, Zur Geschichte u. Literatur, p. 226 sq.; Hartmann, in the periodical Zeitung, vol. vi. (Berlin, 1829–31); First, Bibl. Jud. iii, 50 sq.; Introduction to the same work, p. xiv sq.; De Rossi, Dizionario storico degli autori Ebrei, s. v. (Germ. transl. by Hamberger); Wolf, Bibl. Hebraica, i, 290 sq. iii, 178 sq.; Graetz, Gesch. d. Juden im Altertum, ii, 380 sq., Gesch. d. a. Seken, iii, 281; Cassel, Leitfaden für jüd. Geschichte u. Literatur (Berlin, 1872), p. 105; Desnau, Gesch. d. Israeliten (Breslau, 1870), p. 450; Zunn, Literaturgeschichte der synagogalen Poësie, p. 445; Lieben, Grabgesch. u. Biographie des D. Oppenheim, in Ṣababa (Prague, 1873).

Oppenheimer, Eberhard Carl Friedrich, of Vienna, a convert to Christianity, an enthusiastic and skilled lexicographer, flourished at Leipsic as tutor of the Hebrew language, and there he probably died after 1750. He wrote, Hagedorn Ebraio-rabinicus, a manual of the Hebrew and Rabinic language (Leipsic, 1731)—Lied aller Lieder, an exposition of the Song of Songs (ibid. 1745 and 1760, but under the title Das Hebräische Salomons, oder der allerheiligsten Lobgesang). See Jöcher, Allgemeine Gelehrten-Lexikon, iii, 1085, and supplement by Rotermund, v, 1148 (Bremen, 1816); Acta histor. ecclesiast. xiv, 777 sq.; Müller, Ḥaṭṭa ḥen, or catalogue of Hebrew works (Amsterdam, 1868), No. 4251. (B. P.)

opportune, St., a French nun, was born in Normandy, in the monastery of Sées, near the opening of the 15th century. Descended from one of the first families of Hieuois (now country of Auge), she entered the monastery of St. Cucufa, which belonged to the abbess of St. Germain of Paris, who was already a widow of the abbess of the abbey of St. Germain of Paris. She was received into the order, and was afterwards transferred to Paris. The remains of the saint were thrown into the immense receptacle of the catacombs in 1797. Her life was written in 1688 by Adelhem, bishop of Sées. It is found in the Bollandists and in Mahillon. See Acta Sanctorum, April 22; Mahillon, Acta Sanctorum Ordinis S. Benedicti, pt. ii, sec. 3, p. 220; Gallia Christiana, vol. xi; Nicolas Gosset, Vie de Sainte Opportune. (B. P.)

Opposants. See Jansenists.

Oppression is the spoiling or taking away of men’s property by constraint, terror, or force, without having any right thereto; working on the ignorance, weakness, or helplessness of the oppressed; the guilt of oppression when they offer violence to the bodies, property, or consciences of others; when they crush or overburden others, as the Egyptians did the Hebrews (Exod. iii, 9). There may be oppression which maligns the character, or studies to vex another, yet does not affect his life: as there is much persecution, for conscience’ sake, which is not fatal, though distressing. God is the avenger of all oppression.

Ops (Lat. plenty), a Roman goddess of fertility, regarded as a daughter of Saturn and Terrâ, the same as Ops, the Illia of the Greeks, who married Saturn, and became mother of Jupiter. She was generally represented by the ancients by the different names of Cybele, Bona Dea, Magna Mater, Thys, Telus, Proserpina, and even of Juno and Minerva; and the worship which was paid to these apparently several deities was offered merely as the protection of the person, mother, wife, or child. Her temple at Ephesus was built by the prophetess in common with Ceres. She was generally represented as a matron, with her right hand opened, as if offering assistance to the Helpless, and holding a leaf in her left hand. Her festivals were called Opop, etc. Her worship was the protector of agriculture. Her abode was the ground, and newly-born children were commended to her care.

Opptus (wished for), a Roman Catholic bishop of Milevia, in Asia Minor, is known by his work, still extant, entitled De schiminate Donatistorum libri ætius adversus Parmenianum. We possess no information as to his personal history; even the ancient Church historians who mention him, like Eusebius (Procopius, 181), Augustine (De Doctrina Christi, lib. ii, cap. 40, num. 61; Contra epist. Parmeniaci, cap. 13, num. 5; De unitate eccles. cap. 19, num. 50; Fulgentius (Ad Monimum, lib. ii, cap. 13), Honorius of Autun (De scriptoribus ecclesiis. cap. 3), speak only of his work. The Roman martyrology mentions him under the date of June 4, with the simple notice, Miliev in Numidia sancti Opptii episcopi docet et sanctitae conscripti. According to Jerome, he wrote his work during the reign of Valentinian I († 375) and Valens († 378). This is derived from Opptus’s statement that the persecution commenced by Diocletian had spread all over Africa for more than sixty years (“ferme ante annos sexaginta et quod excurrit”). Aside from the vagueness of this statement, Jerome’s opinion seems contradicted by the fact that Opptus mentions (ii, 2) Siricius as occupying the see of Rome, whence we would suppose his work to have been written between the years 384 and 398. As a writer of the African Church during the period which elapsed from the death of Cyprian to Augustine, his work is the only important one which we now possess. It was written in answer to a work of the Donatist bishop Parmenianus of Carthage, the same whose letter to the Donatist Tychonius Augustine afterwards opposed in three books. These two works of Parmenianus, now lost, must not be confused. That which was attacked by Augustine disputed the views held by Tychonius concerning the Church; that opposed by Opptus was a polemic against the Roman Catholic Church. According to Jerome, Opptus’s work contained but six books, and as known at present it has seven, yet Dupin (Præf. num. ii) solved this difficulty by showing that the seventh book consists of four independent fragments, the first three of which, at least, have Opptus for their author, and are additions made by him to the first, second, and third books; while the fourth part gives evidence in its style and tendencies of being from another writer, and very badly connected with the other. After the writings of Augustine, the work of Opptus is the most important source we possess for the history of Donatism, for although essentially polemic in its character, and particularly intended as an answer to Parmenianus, it gives a vast amount of interesting historical information. Men are interested in also of value for the history of dogsas, as affording a clear and comprehensive account of the position of the North African Church previous to St. Augustine. The central dogma of Opptus is the
OPTATUS 389 OPTATUS

unity of the Church, so impressively asserted by Cyprian, and considered by him as of paramount importance (iii, 4). He looks upon the see of Rome as its outward manifestation, and entitled as such to the regard and obedience of all. He considers the catholicity of the Church as resulting from its rationality (from an erroneous derivation from errat Ayevus), and from its exquisitely ordered organization ("sancere, sanctissima, sanctissima, sana fusa," ii, i). However, he already went farther than Cyprian in considering the holiness of the Church to consist, not in the individual purity of its members, but in the sacraments ("ergo ecclesia una est, cujus sancti- tates sunt, qui se habet in eo."")—an opinion which we must consider as the most important result of the Donatistic controversy. He even denies the possibility of perfect holiness within the Church; he considers Christ as alone perfect, commanding his disciples to attain to perfection, but not making them perfect (ii, 20). This view stands in close connection with that which he held concerning the relation between free will and grace; even the Christian, though willing only that which is right, yet can put it into practice but to a certain extent; the final accomplishment is not in man, but in God, because he alone is perfect, and alone capable of performing anything ("sed hominum non est datum pericurare, ut post spias, quae debet hominum implere, restet aliqui Deo, ubi deficitum succurrat quia ipsa est perfectio," ii, 20). Such doctrines coming from the North-African Church show how far Augustine had diverged from the views of the Church. The opinions of Optatus on baptism are particularly deserving of notice: since all, even the children of Christian parents, are from their birth animated by an unclean spirit, exorcism must precede baptism, so that the evil spirit depart and make room for the heart to become the temple of God (iv, 6). Baptism is to be looked upon in two principal aspects, the objective and subjective; the first is based in the Trinity, the second in the faith and profession of the person baptized coinciding with the first. The result of this coincidence is the blessing attached to baptism, spiritual regeneration, by virtue of which God becomes the father of man, and the Church his mother ("concurrunt Trinitati fides crecentem et professo—ut dum Trinitas cum fide concorat, qui natus fuerit seculo, renascatur spiritualiter Deo; sic fit hominem pater Deus, sanctifica sui natus""). In the sacrament of baptism is independent of the person baptized, who only acts as an operative (operarius); it depends exclusively on the name of the Godhead ("nomen est, quod sanctifi- can, non opus,") (v, 7), which also is the source whence flows the "sanctification" (sanctus, sanctificat, sanctum fontium inuant, v, 8). Baptism performed in the name and through the power of the Trinity confers grace ("baptisma Christianorum, Trinitate confectum, confert gratiam," v, 1); this baptism is the vital force of virtue ("virtutum vitalis"), the death of sin ("crimi- num more", the immortal birth ("nativitas immor- talis"), the acquisition of the kingdom of heaven ("ce- lestis regni comparatio"), the wreck of all sins ("peccato- rum naufragium," v, 1). Although the expression baptismus confert gratiam may at a first glance be thought to indicate that Optatus inclined to the subsequent Roman Catholic dogma on that subject, we find that he differed widely from it in considering the efficiency of the sacrament to be independent of the disposition of the receiver. Faith (which he considers only as a subjective acquisition in the Trinitarian creed) is for him not merely a condition for the reception of the grace connected with the sacrament, but a necessary, constitutive element of the sacrament itself ("duas enim species video necesse, principal. loc. Trin. possidet, sine qua res ipsa non potest geri, haec sequitur fidelium credentiae," v, 4); he designates it as the merit of believers ("justitiae, meriti," v, 5); he assents to the "sanctification" of baptized, when he says to Parmenianus, "Quod a vobia unctum est, tale servatus, quae suscipimus" (vii, 3). He was the first to hold to the indeleble character of baptism, afterwards established by Augustine. His views concerning the Lord's Supper are also of importance; he considers it as a sacrifice offered for the universal Church (ii, 18), but on the other hand he does not name the body and blood of Christ, but the offering of the community. He calls the altar the place where the gifts of the brotherhood are brought to show the peace of the Church; the place for the prayers of the community and the sacrifice of Christ (i.e., the community representing itself to God in its gifts, and constituting the body of Christ); and when he speaks of the Eucharist itself, he says that the Almighty descends upon the altar, as does the Holy Spirit, at the prayers of the faithful; at the altar many find both the soul and the body, the holy and the immortal. His work Optatus uses especially the allegorical method of interpretation, which, like most of the writers of his time, he even abuses. His style is heavy, and wholly wanting in elegance; and in dialectic talent and inge- nuity he is far behind Augustine. That Optatus was highly considered in the North African Church is shown by what Augustine relates of him (Breviss. colulation, cap. xx, No. 38). On the third day of the Synod of Car- thage, in 411, the Donatistic bishops asserted that bishop Cecilianus of Carthage had been condemned by the emperor or Constantine I, basing themselves on the statement in Optatus's work (j, 28). This passage, however, said only that Cecilianus had, at the investigation of his schis- matic enemies, and for the sake of restoring peace in the Church, been banished by the emperor to Brescia. The edict princes of the six books of Optatus was printed by F. Boccius, i and was edited by J. Quatremère, 1549, fol., under the inspection of Joannes Coelchius, from a MS. belonging to the Hospital of St. Nicholas, near Trèves. The text, which there appears under a very corrupt and mutilated form, was corrected in a multitude of passages by H. Quatremère, first ed. at Paris (1658, 8vo, with the seventh book added in small type), and afterwards from two additional codices (ibid. 1659, 8vo). The second of these impressions remained the standard until the appearance of the elaborate edi- tion by Dupin (ibid. 1700, fol.; Amst. 1701, fol.; Antw. 1702, fol.); the last, in point of arrangement, is supe- rior to all the others. That of Cassasbon (Lond. 1681, 8vo) is of no particular value; that of L'Aubespine, bishop of Orleans (Paris, 1681, fol.), is altogether worthless. Galland, in his Bibl. Patr. v, 462 (Venet. 1769, fol.), has followed the text of Dupin, selected the most important of his critical notes, adopted his distribution of the Monumenta Vetera ad Donatistarum Historiam pertinentia, and brought together much more useful matter in his Prolegomena, cap. xviii, p. xxix. See Jerome, De Viris ill. p. 110; Honor. p. 1; 3; Trithem. p. 76; Augustine, De Doctrinah Christ. i, 40; Lardner, Credi- bility of Gospel History, cap. iv; Funcius, De L. V. veget. OPTIMISM

OPTIMISMS, Opus Operantis (Lat., literally the work of the worker), a well-known theological phrase, intended to signify that the effect of a particular ministration or rite is primarily and directly due, not to the rite itself

balance of good and evil in the existing constitution of things, the preponderance of the former is greater than in any other conceivable creation. The optimism of Leibnitz has been misunderstood and misrepresented by Voltaire and others. But the doctrine which Leibnitz advocated is not that the present state of things is the best of all possible worlds, but that it is the best of all possible worlds, nor even to this world as a whole, but in reference to all worlds, or to the universe as a whole—and not even to the universe in its present state, but in reference to that indefinite progress of which it may contain the germs. The great argument of the optimists is the following: If the present universal order is not the best that is possible, it must be either because God did not know of the (supposed) better universe, or because God was not able to create that better one, or was not willing to create it. Now every one of these hypotheses is irreconcilable with the attributes of God: the first, with his omniscience; the second, with his omnipotence; and the third, with his goodness. See Leibnitz, Theodicea; Baumsteiger, Historia de Mundo Optimo (Corleiteli, 1741); Wollfart, Controversia de Mundo Optimo (Jena, 1748); Creuzer, Leibnizii Doctrina de Mundo Optimo sub Epigraphem de Revocatio (Leipzig, 1725); Castelnuovo, Rev. May, 1872, art. See also PESSIMISM; THEODICY.

Optimists. According to Mr. Stewart (Nat. and Mor. Powers, bk. iii, ch. iii, § 1), under the title of optimists are comprehended those who admit and those who deny the freedom of human actions, and the accordingness or non-accordingness thereto of moral agents. See, however, the articles OPTIMISM; PESSIMISM.

Optimus, Heinrich See OPTIT, Heinrich.

Option (Lat. optare, to elect, choose) is in ecclesiastical language the choice or preference which the archbishop of a province enjoys as a customary prerogative, when one of his suffragan bishops is consecrated by him. An archbishop has even to be a clerk or a canon. In lieu of this it is now usual, however, for the bishop to make over by deed to the archbishop, his executors, administrators, and assigns, the next presentation of such dignity or benefice in the bishop's disposal within that see; so that the archbishop himself may choose, and this is hence called the archbishop's option. If the bishop die or be translated before the archbishop exercises his right, the option is lost, because the new bishop is not bound by the grant of the predecessor; and the archbishop cannot present to any benefice which is vacant at the time of the bishop's death, because the patronage of all such vacant benefices belongs by prerogative to the crown. An option is considered the private patronage of the archbishop; and if the archbishop die, it belongs to his personal representatives, who may present whomsoever they please, unless the archbishop has by his will directed them to present a particular individual, in which case they can be compelled to obey the will.

Opus (work), a term used in ecclesiastical art to designate several species of antique mosaics or similar intermixtures of colors: e.g., Opus Anglicanum ("English mosaic"), embroiery; Opus Alexandrinum ("Alexandrian work"), an invention of the Egyptians, or, as others say, made in the time of Alexander Severus, being a kind of mosaic pavement, made of squares and circles of porphyry, colored stones, and marbles, of brass, silver, and gold; Opus Graecum ("Greek work"), in mosaics; Opus Italice ("Italian worked work"), irregular masses of stone-work; Opus reticulatum ("netted work"), stones arranged diagonally; Opus Teutonicum ("German work"), metal work; Opus vernacularum ("worm-like work"), chequer work, latrine cover.
Opus Operatum

Opus Operatum (Lat. literally the work wrought) is the phrase employed by Roman Catholic theologians to describe the manner of the supposed operation of the sacramental rites in the production of grace (q.v.). It is intended to imply, say the Romanists to Protestant polemics, that the manipulation of the rite (opus) is in itself, through the institution of Christ, an efficient cause of grace, and that, although its operation is not infallible, it requires and presupposes certain dispositions on the part of the recipient, yet these dispositions are but conditions sine qua non, and do not of themselves produce the grace; and hence, when the sacraments are administered to dying persons in a state of apparent insensibility, this is done in the hope and on the presupposition that, if the dying person is unconscious, he nevertheless really disposed to receive the sacrament. The teachings of the Romish Church do not, however, warrant such a wild construction. It is evident from the received writings of the Church of Rome that, even if the dispositions conditioned above be wanting, the sacrament will itself justify the unrepentant sinner. Thomas Aquinas boldly defended the doctrine that the sacraments now have virtue ex opere operato, and not, as in Old Testament times, ex opere operantis. And the Council of Trent (sess. 7, canon vii, viii) says: "If any one shall say that grace, as far as concerns the imparting part, is not produced through said sacraments, always and to all men, even though they lightly receive them, but only sometimes, and to some persons, let him be anathema. If any one shall say that by the said sacraments of the new law grace is not conferred through the act performed, but that faith alone in the divine promise suffices for obtaining grace, let him be anathema." It is but too clearly apparent from these quotations that the efficacious operation of the sacrament does not presuppose as conditions the re-penance and other moral dispositions of the recipient, and that the grace which they give is due, not to these dispositions, but to the sacraments alone. This doctrine, if carried out, would obviously equalize, in a great measure, the benefits received by the worthy and the unworthy who approach the altar, and would justify the administration of baptism to the heathen, etc., not only on consent, but by the application of physical force. In a certain sense it is unquestionably true that all the appointed means of grace have an effect ex opere operato, inasmuch as the act itself, though inefficacious in its own nature, is an institution of God, and consecrated by him as an instrument not to be made void at the caprice of man. Thus the preaching of the Gospel is inevitably a savor of life or of death. The administration of baptism is invariably an admission into the Church. But that the use of an appointed ordinance goes beyond this, and results in all cases in a moral effect on the individual, and in the least degree of higher portions of divine grace or ex necessitate, is contrary to the views of the apostolic and primitive Church, the doctrine of Scripture, and the preservation of man's free agency. See for Protestant views, Elliott, Delamination of Romish Errors, p. 720; Hagenbach, Hist. of Doctrines, ii, 80, 303, 306. On Roman Catholic views, Möhler, Symbolik; and Wetzer u. Welte, Kirchen-Lexikon, s. v.

Oquamira, sacrifices offered by the Mangreleins in the Caucasus, which partake partly of a Jewish, partly of a pagan character. "Their principal sacrifice," as we learn from Picart, "is that at which the priest, after he has pronounced some particular prayers over the ox, or such other animal as is appointed and set apart for this purpose, singeth that portion of the body which he Selepsse places to the skin with a lighted taper; then binds it in procession around the devotee for whose particular service it is to be slaughtered; and at last, having sacrificed it, orders it to be dressed and brought to table. The whole family thereupon stand round about it, each of them taking a wax taper in his hand, and the man for whom the sacrifice is peculiarly intended kneels down before the table, having a candle or wax taper in his hand, while the priest reads some prayers that are suitable to the solemn occasion. When he has done, not only he who kneels, but his relatives, friends, and acquaintances throw frankincense into the fire, which is placed near the victim. The priest then cuts off a piece of the victim, waves it over the head of him at whose request it is offered up, and gives it him to eat; after which the whole company, drawing near to him, wave their wax tapers over his head in like manner, and throw them afterwards into the same fire where they had just before cast their frankincense. Every person that is present at this solemn act of devotion has the liberty to eat as much as he thinks proper, but is enjoined to carry no part of it away; the remainder belongs to the priest, where it is kept until the next sacrifice, which is celebrated in honor of their dead. There is nothing, however, very particular or remarkable in it but the ceremony of sacrificing some bloody victims, upon which they pour oil and wine mingled together. They make their oblations of wine likewise to the saints after divers forms, a particular detail whereof would be tedious and insipid, and of little or no importance. I shall only observe, therefore, that, besides the wine, they offer up a pig and cock to St. Michael; and that the Oquamiri which is devoted to the service of St. George, when their vintage is ripe, consists in consecrating a barrel of wine to him, which contains about twenty-four flagons, though it must not be broached until after Whitsuntide, on the festival of St. Peter, at which time the master of each family carries a small quantity of it to St. George's Church, where he pays his devotions to the saint; after which he returns home, and takes all of his family into his cellar. There they arrange themselves in order around the barrel, the head whereof is plentifully furnished with bread and cheese, a parcel of chibibals, or little onions, by the master of the house, who, before they start in touch, utters the prayer, etc. At last he kills either a hog or a kid, and sprinkles part of the blood all around the vessel. The ceremony concludes with eating and drinking."

Oracle occurs in several places in the Auth. Ver. as the rendering of the Heb. יִצְרָן, debir, ordinarily derived from יִצְרָה, in the sense to say, speak; i.e. the response or place of the voice of God. But the best critics understand it to mean properly a back-chamber, a back or west room, from דְּבַלָּה, to be behind (see Gesenius, Thes., and esp. Furst, Lex. s. v.); hence the inner or most secret rooms of the Temple (1 Kings vi, passim; vii, 49; viii, 6, 8; 2 Chron. iv, 7; iv, 18); or, at least, called "the Holy of Holies" (Heb. יִצְרָאָלָה, 1 Kings vi, 16; 2 Chron. Iv, 22, and often). See Temple. The Sept. in these passages simply adopts the Hebrew word (יוֹצֵרָא, but Jerome, followed by some modern versions, renders oracularum—the word used by the heathen to denote the places where they consulted the gods. In 2 Sam. xvi, 29, the Hebrew word rendered oracle is debir; which usually means word, and is often applied thus to the word or revelation of God (see margin, ad loc.; so Jer. i, 4, 11). In the N. T. only the word oracles is found, in the plural (as the
ORACLE

rendering of the Greek Προφητής, Acts vii, 88), especially the oracles of God (τὰ Προφητεία τοῖς Ἰσραήλ, Rom. iii, 2; comp. Heb. v, 12; 1 Pet. iv, 11), in reference to the divine communications which had been given to the Jews throughout their history. See HOLY OF HOLIES; URIM.

The manner of such utterances among the Hebrews was various. God spake to his people at sundry times through prophet or prophetess—in dreams and visions, as with Joseph and Pharaoh—sometimes by signs and tokens, as with Gideon and Barak—sometimes by the word of prophecy—and sometimes by a miraculous manifestation of some kind. See URIM and THummim. See PROPHET. These last, which had a distinct locality, and were always accessible, were especially the Hebrew oracles. We have an instance in the case of David (1 Sam. xxviii, 9): when he desired to know whether it would be safe for him to take refuge with the men of Keilah, against the persecution of Saul, he inquired of Abiathar the priest. "Bring hither," said he, "the ephod;" and the reply to his inquiry was that it would not be safe, for the men of Keilah would deliver him up to the king. Another similar instance occurs in the same character (1 Sam. xxx, 7, 9), and the language shews that the purpose of Samson was no reason to doubt that it was the mode of "inquiring at the mouth of the Lord" for a considerable period. See DIVINATION; EPHOD; INSPIRATION; REVELATION. The most ancient oracle on record, probably, is that given to Rebekah (Gen. xxv, 19), in which Jacob of Chatten-Kenos, otherwise Canaanites, was the signal instance of the child Samuel (1 Sam. iii). The place was the residence of the ark, the regular station of worship. The manner was by an audible and distinct voice: "The Lord called Samuel;" and the child mistook the voice for that of Eli (and this more than once), "for he did not yet know the word of the Lord." The subject was of high national importance; no less than a public calamity, with the ruin of the first family in the land. Nor could the child have any inducement to deceive Eli; as in that case he would have rather invented something flattering to his venerable superior. This communicative voice, issuing from the interior of the sanctuary, was properly an oracle. See SAMUEL.

Heathen oracles are occasionally referred to in the Scriptures, and one in particular seems to have been very celebrated. This was the oracle of Baalzebul, of which Elisha (2 Kings i, 18) artfully told Ahaziah, (2 Kings i, 2), having fallen through a lattice in his upper chamber, and suffering greatly in consequence, sent to Ekron to inquire of this oracle, and his messenger was stopped by Elijah, who administered to the king of Israel a very bitter reproof for his faithlessness. The same oracles were of very great antiquity, and had been long in use among the nations. See DIVINATION; EPHOD; Urim and THummim; PROPHET; REVELATION. The Oracles of Baalzebul were the Teraphim, that is, of Micah (Judg. xvii, 1, 5); the ephod of Gideon (viii, 27, etc.), and the false gods adored in the kingdom of Samaria, which had their false prophets, and consequentely their oracles. Hosea (iv, 12) reproaches Israel with consulting wooden idols, as does the book of Wisdom (xiii, 16, 17) and the prophet Habakkuk (ii, 19). See IDOLATRY. For the demoniacal responses referred to in Acts xvi, 16, see PYTHONESS.

Among the heathen the term oracle was usually taken to signify an answer, generally conveyed in very dark and ambiguous terms, supposed to be given by demons of old, either by the mouths of their idols or by those of their priests, to the people who consulted them. Oracle is also used for the demon who gave the answer, and the place where it was given. Seneca defines oracles to be communications by the mouths of men of the will of the gods; and Cicero simply calls them deorum oratio, the language of the gods. Among the pagans they were held in high estimation; and they were consulted concerning various transactions, some of the most important of which related to public enterprises and private life. When the heathen made peace or war, enacted laws, reformed states, or changed the constitution, they had in all these cases recourse to the oracle by public authority. Also, in private life, if a man desired to marry, or to go on a journey, or to engage in any business of importance, he repaired to the oracle for counsel. Mankind have always had a propensity to explore futurity; and, conceiving that future events were known to their gods, who possessed the gift of prophecy, they sought information and advice from the oracles, which in their opinion were supernatural and divine communications. Accordingly, every nation in which idolatry has subsisted has also had its oracles, by means of which imposture was practiced on superstition and credulity. See DIVINATION; EPHOD; INSPIRATION; REVELATION. The most ancient oracle on record, probably, is that given to Rebekah (Gen. xxv, 19), in which Jacob of Chatten-Kenos, otherwise Canaanites, was the signal instance of the child Samuel (1 Sam. iii). For the demoniacal responses referred to in Acts xvi, 16, see PYTHONESS.

Among the heathen the term oracle was usually taken to signify an answer, generally conveyed in very dark and ambiguous terms, supposed to be given by demons of old, either by the mouths of their idols or by
their responses, and their double meaning, contributed much to their support. But notwithstanding all these and other precautions, the heathen priests succeeded very imperfectly in maintaining the credit of the oracles. The wiser and more sagacious of the heathen, especially in later times, held them in utter contempt. Those who relied on the oracular pronounce, in the vociferous pretension inspired priestess was, in several instances, even popularly accused of being bribed to prophesy according to the interests of a particular party. Such was the poor success of false prophecy, even with all the aids of art, and a systematic plan of imposture, to preserve it from detection. The ancient and beautiful tradition (see Plutarch, De Oraculis veterum) above referred to, that immediately on our Saviour’s death all the heathen oracles became silent, cannot indeed be supported in the face of many testimonies of ancient writers to responses given after that time (see esp. Plu- tarch, De Pythia. Orac. c. xxiv!); but the legend, in the sense in which it has been passed into modern Christian poetry as emblematic of the triumphs of the cross, is sufficiently justified by their rapid decline in the apostolic age (comp. Strabo, ii. p. 420; Pausan. x. 7, 1). See Man- ger, De Agro Nephot (Tr. ad Bk. 175); Milton, Hamn. on the Nativity; E. B. Browning, The Dead Poem; Schil- les, Gesta Greschlandia. See NICHAMERCH, WITCH- CRAFT.

ORACLES (from the Latin oraculums) is a term of fluctuating and often vague signification, according to the various modes of its employment. In its primary ac- ceptance it means an utterance inspired by a divinity; and the term may have originated from the supposition that the human mouth—os, ora—from which the super- natural declaration proceeded, was merely the mechan- ical and involuntary instrument moved by divine power, as in the case of the Cumean Sibyl, to become the means of communicating the divine will to men—

"Ille infatig.
Os rabidum, fera corda domino, fugitque premendo."

By an easy etymology the term is used to denote the place where such communications are made. By vari- ous metaphorical deflections the name is applied to the deity who inspires and the possessed who proclaims the messages. By a further transition it is given to all pre- dictions or revelations; and hence, in an especial manner, to those communications of the Old and of the New Covenant; to the priests and prophets whose calling it is to promulgate, expound, and enforce these decrees. Hence also its application is extended to those who possess an extraordinary degree of sagacity and wisdom; and, ironically, to those who are ungodly, unlettered, or inferior wise; whereas in those manner appears to indicate the assumption of such pre- tensions. The subordinate meanings are sufficiently illustrated by the dictionaries. It is only the primary and the closely associated secondary meaning that it will be appropriate to consider here—the supernatural communication, and the place where it is habitually de- livered.

1. An oracle, or oraculum, in this primary signifi- cation, corresponds very closely to the Greek ἄγρον ἀναφορασ—<such> term referring to a divine answer given at a definite place by a particular deity, the latter having a more general application, and in- cluding all prophetic utterances by those recognised as possessing the gift of vaticination, though frequently employed in the more restricted sense. It is not essen- tial, however, that the communication should be made directly by the divinity through the mouth of the hu- man instrument. The priest, prophet, seer, or medium may be merely the appointed and singularly gifted in- terpreter of signs or sounds or visions or impressions or symbols or associations. The answers to applicants were sometimes recorded by them, sometimes by writing, sometimes by strange noises, sometimes by tina- ture or sacred vessels, sometimes by dreams which were explained by the inspired ministrants; and at other times by the exposition of the mystic meaning of the first exclamations of the inquirer after awakening from a vaticinatory trance. Nearly all the multipli- nous forms of divination were, in different periods or localities, connected with oracular illumination. All those who resided in the holy places, oracles, etc., might come from the deities as well as dreams from Jove. As the oracles were consulted in regard to all the concerns, interests, and desires of human life, public and private, the answers received from them embraced the same variety of subjects, and were by no means confined to prophecies warnings or directions of future events, but thus the designation of oracle is extended to all divine com- mands, or directions supposed to be divine, and hence also to wise counsels and precepts. But the derivative significations need to be no further regarded than may be necessary for the avoidance of ambiguities. The topics immediately before us require only the notice of com- munications supposed to be of divine origin, by what- ever modes or channels they may be transmitted to man.

If Mr. Austin Cokton had ever completed and published his History of Human Error, it would have been a great and very important division of his work must have been devoted to the consideration of oracular credulity. The oracles of Greece exercised such influence on the Hellenic world, and are so prominent in classic literature, that the mind spontaneously and almost exclusively reverts to the temple of Dodona, the temple of Delphi, the cave of Trophonius, or the oasis of Ammon, when the subject of oracles is introduced. But these are only the most notable and the most noted instances of oracular persuasion. The temper which provokes these delusive satisfactions and the temper which gratifies such delus- ions is found alike in all ages and among all races, though frequently so disguised as to be entirely over- looked. In every pagan age and in every pagan race the superstitious belief in oracular communications is readily discernible. The human heart instinctively craves supernatural guidance; the human mind longs for the supernatural revelation of the issues of actions and of coming events, and eagerly believes in any pres- tence which promises to satisfy its anxiety in either respect. It was the despairing advice of the sceptical Epicurean, after the multipliulous hazards, surprises, disasters, and disappointments of the civil wars, which was given by Horace when he ejaculated,

"Quid sit futurum oras, fuge quernere;"

and a second time, when he exclaimed,

"Tu ne queseris (scire uenas) quem mihi, quem tibi, Finem di dederint."

But in all crude and still believing periods, among all rude and unenlightened populations and classes, whether in the 19th century before or the 19th century after Christ, and in all the intervening centuries, we find the same disposition to seek and to accept supramundane direction and knowledge; and no age is so poor in de- ceivers, themselves often deceived, as to fail in providing ministers for this want.

It is not simply that among savage tribes or classes of imperfect mental and moral discipline prophets con-stitute an important part of the social organization; but that their prophets always pretend and are believed to be in direct communication with uneathly wisdom, and to be specially commissioned to impart—always for a consideration, as Sayle follows Athenaeus—regarding the very purpose of destiny to them who consult them. To the untutored fancy the whole universe swarms with superhuman in- telligences. The strong and hungry faith and the weak intellectual discernment recognise but slight differences between the human and the divine, and see no improb- ability in the constant intercourse between the human deities and the favored spirits of the tribe. If Pindar, in the age when the Theuesum was built, could maintain

VII.—18.
ORACLES

that "men and gods were of one origin, and that both
descended from the same mother," how much deeper
must have been the sentiment of communion between
embodied and disembodied souls in less advanced
populations?
Recent investigations into "primitive culture," or
the condition and belief of the earlier stages of society,
were not, however, without the discovery of analogous
practices which such investigations have occasioned.
throw new though often indirect light upon the mys-	ery of oracles, and enable us to form juster notions of
the phase of popular thought by which they are induced
and accredited.
When the attention was restricted to the oracles
of Greece and the rarer and less notable oracles
of Italy, the explanation of their occurrence and of
their frequent appearance of veracity might oscillate
between the allegation of demoniac, or truly divine in-
spiration, and systematic fraud and imposture.
But when oracles in all variety, from crude mummery
to singular discernment, are discovered among all pagan
nations, and among all semi-pagan classes in Christian
communities, it is necessary to refer their production
and acceptance to the characteristics of the untrained
intellect of man. With the information thus obtained
it is now possible to describe and the changing aspect of
the same enduring delusion.
The office of the prophet, in his character of inter-
preter of the will of the gods, and intermediary between
deities and men, has existed, as already declared, among
all nations; and this function, which was merely
among the Greeks, from the time of the Homeric Calchas
and the precursors of Calchas, but were also an estab-
lished order in the Phoenician cities and among the Celtic
tribes. They still exercise their controlling influence not
only among the North American Indians and the Tartars,
but contemporaneously with the calchas and shamans, their
congeners are common among African tribes and Poly-
nesian Islanders. It is strange also to find in the ac-
counts given of a Kaffre prophet the symptoms of the
access of the divine afflatus which were reported of the
Delphic Pythian, and ascribed by Virgil to the Co-
mans Sibyl. He becomes depressed in mind; prefers solitude
to company, and often has fainting fits; he is
visited by dreams of an extraordinary character; . . . he
becomes more and more possessed, until the perturba-
tions of the spirit manifest themselves openly. In this
stage he uttereth terrible words, leaves home and there with
an astonishing vigor." He tells his family and friends,
"People call me mad; I know they say I am mad; that
is nothing; the spirits are influencing me." This is all
imposture in the poor African? Is it not more hallucina-
tion than imposture? Is it actual demoniacal posses-
sion? Is it the co-operation of such phenomena, the
utterances of the gods which was recognised by phys-
sicians as a specific disease? Are not the like furies
which were attributed to the priestess of Delphi, at least
in their primitive exhibition, due to the same causes?
With the accounts of the African prophet and of the
Sibyl and Pythianess may be advantageously compared
the report of the call of Taeumneh's brother to the pro-
phetic office. "Lo, the poor Indian!" In this case
there was more of artifice and design, more imposture
than self-delusion; but could the experiment have suc-
ceeded with his people and the allied tribes unless there
had originally been innocent hallucination to cherish
the growth of credulity?
The suggestion of a natural exposition, at once phys-
iological and psychological, for the phenomena of oracular
inspiration is not without its parallel with the recognition
of a large infusion of fraud and imposture in the
systematic establishment of oracular agencies. It is
impossible, as has frequently been observed, to distin-
guish by any clear line of demarcation between delusion
and deception. The two temperatures blend insensibly
into one another. What betokens the existence of an
assumption—in a morbid, dreamy conviction—passes by slow
degrees and by multitudinous shades of difference into
hypocritical pretence and mercenary juggling: but
something of the original fantasy remains in the mind
of the impostor, and continues to fill the awe-struck
hearts of the votaries.
2. There has been, and not yet has there ceased to
be, much discussion in regard to the character of the inspi-
ration of the ancient oracles of Greece. Whatever doc-
ument has been published, or the temptations of modern
non-Charian influence may be capable of embracing all the phenomena, and should be
applicable to the explanation of oracles in all their forms
and in all their localities. Three theories have been
propounded and warmly advocated by their respective
authors, but each has been rejected by actual and veracious
inspiration by God, or the angels of God. ii. That of
diabolic intervention. iii. That of the contrivance of
designing men, which will include the common and un-
reflecting allegation of pure chicanery and fraudulent
deception. The first view has been entertained even in
late years, and seems partially sanctioned by some
of the Christian fathers, especially in their respect for
Sibyline inspiration. The second opinion prevailed
generally among the doctors of both the Greek and
Latin churches, and was usually entertained until re-
cent times, having the support of the historian Kollin,
in the book on which the chief authority for the result of
other writers of note. The third explanation is that
which is now prevalent, and was promulgated by Byule,
and supported by Van Dale and Fontenele.
The remarks already made will show that the first
theory is altogether impossible; that the imposture was merely
and that the third is considered an incomplete inter-
pretation of the enigma. It is not denied that imposture
was common; and this was fully recognised by the an-
cients in the height of their belief in oracles. Thucyd-
dides affords his testimony to the fact, and Aristophanes
did not hesitate to make the infame Shampoo in
vogue during the Peloponnesian wars. It was not
among the Jews only that four hundred false prophets
might have been found for one wise one. But all oracles
were not at all times deliberate forgeries. The exist-
ance and the credit of oracle responses, and the emi-
inent influence which they long possessed, were due to
original appetencies and hallucinations of the unim-
formed and undeveloped mind of man. Do not children
still half or wholly believe that their little misdeeds are
reported by the birds, or whispers in the air? The
siences which the most worthy of erring mortals in
the ingoffering reveals at once the origi and the perma-
nence of the belief in oracle communications much
more satisfactorily than either of the first two theories
specified above, or than the third adopted without addi-
tion or limitation. This instinctive credulity furnishes
the substratum upon which is built the superstructure of
credible fraud erecting imposing structures. That the el-
ement of fraud increases in such annunciations with the
increasing intelligence of the community, and with the
decline of unquestioning superstition, is not to be
doubted; and that the ignorant trust of unenlightened
races in the official proclamation of divine counsels is
condemned by formal arrangements for the use or abuse of
such trust, must also be admitted. Yet certainly there
is no consistency in charging to wilful deception all
oracular utterances, while Mesmerism and Millerman
still attract thousands of earnest and honest believers.
A superstitious tendency habitual to the uneducated
mind, and confirmed by associations in regard to spirit-
ual influences incident to that stage, would appear to be
the true explanation of the origin of oracles. A pro-
phetic or priestly class, identical or partially distinct,
by the very transmission of its functions, makes a trade
of what was previously a mental infirmity, a morbid
enthusiasm. The function, sustained by the enduring
popular faith, is converted into an instrument of rule,
of guidance, of police, and of instruction, and is em-
powered with extraordinary attributes of knowledge and
influence to the arrantest imposters, to the meanest
men, for the government and elevation of the community.
As other titles to control, other modes of
regulation, other schemes of popular culture, come into use, and more effectually discharge the like offices, the need and power with the mortal.; the hands that moved the puppets are withdrawn, and the agency long imagined to be divine ceases to act, or is transferred to pretenders, who trifle with the remnants of credulity for the secret power or the petty gains which may thus be achieved. A due estimate is rarely made of the large capacity for such delusion, the delusion’s power, when it is once set in motion, is not the superstition of terror or superstitious hope may incline him to believe.

It will be noticed that a large share in the production of oracles is acceded to design and to deliberate contrivance—let it not be called merely imposture—during the period when the oracle was not the center of the most methodical influence. This was pre-eminently the case during the ascendency of the Delphic shrine. The power exercised over the whole Hellenic world from that mysterious and splendid centre of oracular inspiration was amazing, and was rendered more amazing by the discordant and rebellious attitude of the numerous Greek communities towards each other. Curtius may be guilty of nothing worse than exaggeration in attributing to the Delphic oracle, and to the prominence thus conferred on the Dorian Apollo, the rapid advance- ment in the empire of the power of the oracles in the contemporaneous Greeks. Certainly, consummate wisdom, wondrous sagacity, extensive knowledge, and unparalleled ethical purity were displayed in the Pythian responses. Whoever inspired the Pythian oracle must have been greatly superior to the contemporary population, at least in comparison with their contemporaries in morals. The Homeric Hymn to Apollo, which has all the air of being a Delphic production, startles us as much as does the Prometheus Vinctus by the marked elevation of its sentiments and by its singular admirations of Christian doctrine. Apollo, the son of Jove, the peculiar god of prophecy and lord of the oracle, assumes the office of teacher of his people, and breathes a higher and more vital air into the lungs of his votaries. A long series of changes and transmutations in the character and conduct of oracles is thus admitted and accounted for. They underwent such changes, too, as are consonant with the whole order of human development, and illustrated by the whole progress of society. The changes, however, are by no means confined to the human agencies in the production of oracular intelligence. The oracular divinities themselves were subject to the same laws of mutation. Among all races, the supernal powers, in their primitive character, are invited exclusively for the purpose of portending, preventing, removing, or redressing evils, which they are themselves believed to inflict. Jupiter, Mercury, Mars, and Incurabilis, was the earliest distinct appearance of the Olympian Jove. In the exercise of their functions, the deities united, like country apothecaries in old time, all therapeutic offices in themselves, and prescribed for all ailments of mind, body, and estate. It was only gradually, by the application of the doctrine of the division of labor, that Jupiter devoted sundry of his duties upon Apollo, as sub-sequently Apollo did upon Aesculapius, as he upon his sons Maenad and Podalirius, by whom they were turned over to their supposed descendants, the Asclepiads. The same process of segregation and differentiation, as Herbert Spencer would say, was manifested by the divinities as by their special ministers, the prophets. These, at first and through long generations, protected against witchcraft, adverse spirits, the evil eye, and other obscure afflictions; they averted or relieved pain by incantations; they cured wounds and mended broken bones; they brought rain, like Jupiter Pluvius; they discovered lost cattle and missing goods; they detected thieves; they announced the melissia tempora fandi et opendi; they treasured up or invented the past; they foretold the future; they held confidential intercourse with their patron or maternal god; they became the habitual interpreters of their will, the exponents of their wisdom, and the accredited channels of communication between the gods and men. The last and highest order of oracles was placed upon the Mount Parnassus, at Delphi, by Apollo, who becomes the special deity of plague and physic and music and song and prophecy. In the latest Hellenic ages Apollo is himself eclipsed by the deified mortals Amphionius and Amphiacus. Thus oracle-mongering on a large scale was not confined to the god himself, or to his general practitioner, but declined into the keeping of subordinate persons.

3. Attention will now be directed to this distinct phase of oracular manifestation, and will be concentrated on those celebrated oracles of classical antiquity which alone ordinarily present themselves. All notice of the Sibyls and the Sibylline oracles will be deferred to a separate article, as, notwithstanding their superior interest and importance, they had an entirely distinct origin and character. See Sibyl and Sibylline Orac-les and Hesiod.

The most ancient known oracle of Greece was that of Jupiter at Dodona, where communications were made from hollow oaks, or by the clatter of the sacred kettles suspended in the sacred grove. The answers, accordingly, were not direct, but conjunctural, and were determined by the arbitrary interpretation of the waving of the kettles. The place of Delphi, where Apollo was heard, was but a small hill surrounded by trees. The rustic prophetess of Dodona is mentioned by Homer, once in the authentic text, and once in the Catalogue of the Ships; but in neither place does the oracle seem known to the poet. He does not seem to be acquainted with any oracular locality. With him the indicative is as a rule distinguished from the declarative. Homer, it seems, was inspired by Apollo, is the depositary of the prophetic gift. This is a striking evidence of the great antiquity of the Homeric rhapsodies, for Dodona was certainly much more ancient than Delphi, and Delphi had reached or passed its zenith of eminence when Pindar wrote. The oracle of the Pythian Apollo, in a grove of Parnassus, was the most famous of all the Hellenic seats of prophecy, and threw completely into the shade the Dodonian Grove and the other oracles of Jupiter. The oracle was probably due to migrations and changed relations among the various races. The oracles may be classified with the Dorian conquest of Peloponnese. But the altered mode of transmitting the divine replies evinces a change of intellectual condition and an advance in civility. At Delphi the prophetic medium was a female, called the Pythian, who was thrown into convulsions by voices heard in a glass supposed of value from crevices in the rock. These utterances were professedly taken down by the attendant priest, and delivered to the postulants, originally, and usually in all periods, in the form of hexameter verses, but occasionally in iambics after Athenian supremacy had disseminated Attic fashions and an acquaintance with the Attic dialect. Dodona and Delphi are the most noted of Greek oracles; but they lead a long array of names of greater or lesser renown in both Greece and Italy, as well as in other lands reached by Greek influences or open to Greek interpretation. Nor is there any reason to suppose that even the names of all the oracles of temporary or local celebrity have been preserved. Besides the great oracle of Jupiter at Dodona, there was one in Boeotia, one in Elis, and one of much brief fame in the sandy deserts of Libya—that of Jupiter Ammon, consulted by Lysander and by Archelaus; and by Jupiter Dolichenus at Apamea in Syria, which latter has a much longer list of oracular shrines—at Argos, at Corinth, at Lacede-mon, at Claros, at Branchidae, at Antioch, at Pataras, in Arcadia, in Cilicia, in Troas, at Baiae, and at many other places. Other divinities, both Did Mojores and Did Mi-ores, had their seats of veneration scattered throughout the Hellenic settlements and beyond them. Diana

ORACLE

had oracles at Ephesus, in Cilicia, and in Egypt. Juno
gave comfort at Corinth, at Nysa, and elsewhere. Mi-
nereth at Sardis; the Nymphs received them; visitors-
or at the Corycian Cave; Maecenas welcomed inquirers
in Laconia; Trophonius, at Lebadea; Titus, at Or-
chomenus. Ulysses, Mojes, Aristaeus, Sarpedon, Cal-
chus, Amphiaraurus, Autolycus, and many others, male
and female, had establishments in various quarters. Car-
menta and her sister Capemne had their cells of inspira-
tion on the Capitoline Hill at Rome, and in the neigh-
borhood. Faunus was consulted at Tibur, in Latium;
and near by was the grove of the oracular nymph Alba-
nea—domus Albaeens resonants. Both are commemo-
rated in conjunction by Virgil, and the latter is noted as
a tenth Sibyl by Lactantius, who states that her predic-
tions (ortesc) were deposited in the Capitol by the Roman
Senate. But it would be tedious to extend the list still
further, and impossible to complete it. The number of
oracles which came to be formed and extinguished and dis-
credited. Their multitude furnished a poor compensa-
tion for the loss of authority.

4. From the time of the Peloponnesian War the or-
acles ceased to exert any considerable influence over the
more intelligent Greeks. They were still consulted, and
were treated with external respect. They might be
employed for the furtherance of political and religious
aims, and to operate on the multitude; but there could
be little genuine faith in them when the temples to
which they were attached were unscrupulously plun-
dered for the maintenance of domestic wars. Moreover a
oracle was weighed against oracle; contradictory replies
were expected from rival establishments; and the un-
satisfactory reply of one divinity was set aside for the
more encouraging response of another. This discord in
heaven was turned into ridicule by Aristophanes.

The decay of reputation naturally promoted and at-
tended the decline of oracles. The dimming of re-
spect commenced early, as even before the Persian wars
the Pythons were alleged to have been corrupted by the
Alcmeonidae. But popular superstitions expire slowly,
especially when supported by organized institutions, and
by the police measures of the states in their behalf. The
image-makers and carvers and jewellers and silver-
smiths and priests, who live by the temple, will long
succeed in making the multitude cry out, "Great is Di-
ana of the Ephesians." The Epicureans, in the Macce-
donian and the Roman wars, set at nought the oracles
and jeer at Apollo, the god of poetry, for composing
verses far inferior to those of Homer, whom he was be-
lieved to have inspired. Indeed, the halting metres and
loose composition of the oracles were among the ear-
liest causes of the contempt into which they fell, and
gave as little evidence of inspired agency as do the
stances of modern spiritualists. Still, however, oracular
instructions continued to be vended and vended, and were
received with wondering faith by the multitude, however
suspicious they might be in the estimation of the wise.

It is not easy to determine precisely the period of the
actual cessation of oracles. Such uncertainty is inevi-
table, as they were only gradually extinguished. An
old and popular tradition is that they were silenced at
once by the Advent; and this opinion was employed in
a very serious manner by Milton in his juvenile Hymn
on the Nativity. The same statement is made in the
solemn prose of Isaac Barrow in his eighteenth Sermon
on the Creed: "At the appearance of Jesus and his do-
ctrine, his (Satan's) altars were deserted, his temples fell
down, his oracles were dumb, his arts were supplant-
al, his whoredoms and kindred were extinct." This
story of the cessation seems to have been started by
Eusebius in the 4th century, and perhaps to have been
adopted in a more unrestricted form than was des-
signied by him. It is apparently connected with the
fable of the death of the god and with the myth of
Thammuz, which was commented on by the rabbi
Mainmonides. No weight, however, can be attached to
the representation. The oracles had been decaying for
centuries before the Christian era, as they prolonged
their existence in a more and more languishing condi-
tion for centuries after it. Cicero remarks that the
Delphic shrine was no longer venerated, and declares
that as long as ago as the times of Pyrrhus Apollo had
ceased to make verses (De Div. I. xix. 57; III, irv. 176).
Juvenal (Sat. vi, 555-6) notes the silence of the oracle
of Delphi: "Quoniam Delphic oracula cessant,
Et genus humanum damnat caligo futuri."

But Juvenal's allusion is to the temporary suppression
of the oracle by Nero. It was restored by Hadrian,
and consulted for two hundred years more. Plutarch,
in a special inquiry into the failure of oracles (De Defectu
Oraculorum) does not deny their contemporaneous ex-
istence. He says that the oracles of Beotia were silent.
He would not have particularized Beotia if they had
been extinct everywhere else. Indeed, the emperor
Tiberius, in the year 19, appointed a commission to in-
terpret the oracle at Delphi. Plutarch, in a special in-
quiry, consulted the oracle at Heliosip by the Parthian
expedition, with little faith apparently; but he
could not have consulted it at all if the oracles had
become entirely mute. The story is a curious one, and
exhibits the half-believing incredulity of times when
old faith has withered into feeble superstition. Trajan,
in his visit to Ephesus, consulted the oracles at Eleusis,
Mandora, and Delphi. The oracles of Amphi-
locbus at Mallus, in Cilicia, was then in the highest re-
pute. Its superiority could not have been asserted if
there had been no others with which to compare it;
and yet its solitary existence would dispose the absolute
extinction of oracular communications. Lucian also,
in several of his spicy brochures, mentions oracles still
consulted. Even after Christianity had become the religion
of the empire, the belief in oracles still survived, and
was not allowed to hunger altogether without gratifica-
tion. The evidence is furnished by an incident record-
ed by Sosamen (Hist. Ecles. v. 20). The Caesar Gallus,
when he expelled the Jews in the reign of Constantius,
sent in crushing out the oracle of Apollo at Daphne, near
Antioch, by transporting thither the relics of St. Baby-
las. When Julian the Apostate endeavored to revive
the oracle, he was informed by it that it was silenced by
the gods, because the worship of the dead was aban-
donned. The actual extirpation of oracles and oracular
cells may have greatly contributed to the measures of
Theodosius the Great, which deprived the temples of their
endow-
ments, and withdrew from the Pagan priesthood,
prophecies and unprophecies, their means of subsistence.
Their mouths were closed for ever, not by dead bodies,
but by the want of anything to put into them. See

Oracle (from oris, a stripe), or FAXON, an ornament
of the popes, introduced by pope Innocent III (cir. 1290)
as a substitute for the _amice_, which then began to be
ORANDI DISCIPLINA

397 ORANGE (RIVER) FREE STATE

worn inside the alb. It is of thin silk, striped in four colors, and edged with gold, and was double, the inside part being called a tippet over the alb, and the duplicate being laid on the pope's head until after the chasuble is put on, and then turned over the back, chest, and shoulders.

Orandi Disciplina. See Penance.

Orange, Council of (Concilium Aruscanicum), (1), an ecclesiastical gathering which convened on Nov. 8, 441, at Orange, a city of Provence, France; was presided over by Hilary of Arles, and was attended by seventeen bishops, from three Gaulish provinces, among them Eucherius of Lyons, Irenius of Embrun, Claudius (bishops unknown), and Maximus of Riez. Thirty canons were published, substantially as follows:

"1. Declares that priests may, in the bishop's absence, construe (by administering the holy chrest and the blessing) benedictions, who, being in danger of death, desire to be reconciled.

2. Directs that ministers when about to baptize shall have the chrest ready, with which they shall anoint the neophytes immediately after baptism, according to their permission. He shall anoint the same before and after any one by chance shall not have been anointed with the chrest of baptism. It shall be made known to the bishop, who shall not allow such a grace to be necessary, since, there being but one benediction of the chrest, it is given to the united person at confirmation is sufficient. See Carus.

3. Directs that penitents when dangerously ill shall be received without communion without the imposition of hands: that if they survive they shall remain in a state of penance until, having fully accomplished it, they may receive their last communion after reconciliation by imposition of hands.

4. Prohibits that penance be permitted to those clerks who desire it.

5. Forbids to deliver up criminals who have taken refuge in a church.

6. Excommunicates those who seize upon the slaves of the clergy in the place of their own, who have taken sanctuary in an unsafe church.

7. Excommunicates those who treat persons set free by the clergy as such slaves.

8. Forbids a bishop to ordain any one living in another diocese.

9. Directs that if a bishop shall desire to ordain persons belonging to another church, of irreproachable character, he shall either bring them to live in his own Church, or obtain leave of their own bishop.

10. Directs that where a bishop has built a church within the territory of another bishop with the latter's permission, he shall inform him to consecrate it, and the bishop of the place shall on his part grant to the bishop who built it to consecrate the church and to serve it, such persons as the bishop of the place shall present to him, or of approving his choice if they be already ordained.

11. Forbids bishops to receive persons excommunicated by their own bishop until they are reconciled.

12. Directs that penitents confined in another bishopric in whose power speech shall be reconciled or baptize if they give, or shall have given beforehand, a sign that they wish to consent.

13. Directs that all plows offices (quecumque pietae suae) be performed towards the inexorable persons.

14. Directs that the communion shall be given to baptized emancipates, who do all in their power to become healed, and who follow obediently the counsels of the clergy, because the virtue of the sacrament may strengthen them against the attack of the devil and purify them.

15. Directs that in cases of necessity holy communion may be administered to emancipates.

16. Directs that none who have been openly possessed by an evil spirit and deprived of all their faculties those who become so after ordination.

17. Directs that the chasuble be offered with the 'capes,' and be consecrated with the eucharistic mixture ('capes et calix offerendus est et admettendum eucharisticas consecratioe).

18. Orders that henceforth in all the churches of the province the Gospel should be read to the catechumens.

19. Directs that catechumens be instructed by the bishop, as far as they can be instructed, with the faithfulness, even in family prayers, and directs that they be warned to come separately for the blessing, and to receive the sign of the cross.

20. Enacts that in the case of two bishops only consecrate, none of the other, without the participation of the other bishops of the province, if the bishop was consecrated against his own will shall be put into the place of one of the consecrating bishops, and some one consecrated to fill the place of the latter: but if his consecration was done with his own free consent, he shall be deposed, as well as the two consecrating bishops.

21. Declares that if future married men shall not be ordained civilly by the bishop they shall have no power of blessing.

22. Declares that married deacons who will not live in a state of continence be deprived (comp. Les., Hist. of Sacerdotii, 1750; 79).

23. Excepts from this law those who had been previously ordained, but forbids to confer any higher order upon them.

24. Forbids to elevate a person twice married to any higher degree and that of bishop.

25. Forbids the ordination of deaconsesses in future, and directs that those actually ordained shall receive the benediction together with lay persons.

26. Directs that the widows shall make profession of chastity, and wear the proper dress.

27. Directs that where in a church they have broken their profession of virginity shall be put to penance.

28. Commands the regulation of the council.

29. Directs that when a bishop is unable to discharge his duties, he shall commit the performance of them to another bishop, and not to a mere priest.

In this council, moreover, certain bishops were censured who had broken the canons of the Council of Riez in 439, by refusing to allow the annual provincial councils with the others as ordered. See Labbé, Conc. iii, 1446; Harduin, Concil. i, 1187.

(2) Another Church council was convened on July 3, 526, by Aug. of Arles; and was attended under his presidency by thirteen bishops. Twenty-five articles concerning grace and free-will, and directed against the semi-Pelagian doctrines then prevalent, were drawn up and signed, and subsequently confirmed by pope Boniface.

1. Condemns those who maintain that the sin of Adam has affected only the body of man by rendering it mortal, and has not affected the soul.

2. Condemns those who maintain that the sin of Adam hath injured himself only, or that the death of the body is the only effect of his transgression which has descended to his posterity.

3. Condemns those who teach that grace is given in answer to prayer, and deny that it is through grace that he is brought to pray at all.

4. Condemns those who teach that God waits for our wish before purifying us from sin, and that he does not by his Spirit give us the wish to be purified.

5. Condemns those who maintain that the act of faith, by which we believe in him who justifies, is not the work of grace, but that we are capable of doing so of ourselves.

6. Condemns those who maintain that some come to the grace of baptism by their own free-will, and others by the gift of God, and the mere mention of grace.

The seventeen other canons are, properly speaking, sentences taken out of the works of SS. Augustine and Prosper, recognising the necessity of grace, prayer, and humility. To these were appended the following propositions:

"1. (1) That all baptized persons can, if they will, work out their salvation.

2. (2) That God hath predestinated no one to damnation.

3. (3) That God, by his grace, gives us the first beginning of faith and charity, and that he is the author of our conversion.

See Labbé, Concil. iv, 1668; Harduin, Concil. ii, 1110. See also, on both councils, Döllinger, Lehrb. der Kirchengeschichte, 914 sq.; Hefele, Concilien gesch. ii, 274 sq., 705, 714, 716.

Orange (River) Free State is the name assumed by the republic of Dutch Boers, who, after retiring from Natal when declared a British colony, established themselves in that portion of the country in the interior of South Africa lying between the two great branches of the Orange River, the Ky and the Gariep, known to the colonists as the Vaal and Orange rivers, and situated north of the Cape Colony. It consists of vast undulating plains, sloping gently down from the Maluti Mountains to the Vaal River, dotted over, however, in many places by rocky hills, although the northward hundred of miles are found on a level entirely deserted, as to present scarcely a break on the horizon. The population consists principally of English and Dutch.
settlers, besides a considerable number of native Kaffres (q. v.) and Hottentots (q. v.). In common with all new countries, the want of religious ordinances was for some time severely felt in the Orange Free State, but of late years ministers of the Dutch Reformed Church, Wesleyan missionaries, and Episcopalian clergy have been appointed, and the whole field of labour and the population is gradually being transformed into a Christianized community. See The Missionary World (N. Y. 1875, 12mo), p. 529, No. 1104; Grundemann, Missions-Atlas, No. 1.

ORANGEWEN is the name given by the Irish Roman Catholics to their Protestant countrymen, on account of their faithful adherence to the house of Orange. It has come to be one of the unhappy party designations which for nearly a century has largely helped to create and keep alive religious and political divisions of the worst character throughout the British empire, but especially in Ireland.

Origin.—The Orange organization was provoked by the animosities which subsisted between Protestants and Roman Catholics in Ireland from the Reformation downwards, reaching their full development after the Revolution of 1688, and the whole history of Catholic property by which that event was followed. From that time the Romanists of Ireland may be said legally to have lost all social, political, and religious status in Ireland. Some attempts which were made in the last century to retrieve the other condition excited, especially in the north, the alarm of the Protestant party, who regarded the traditionary "Protestant ascendancy" as endangered. Acts of violence became of frequent occurrence; and, as commonly happens, combinations for aggressive and defensive purposes were formed, not alone by the Protestants, but also by their Catholic antagonists. The members of the Protestant associations appear at first to have been known by the name of "Peep-o'-day Boys," from the time at which their violence were commonly perpetrated; the Catholics who associated together for self-defence being called "Defenders." Collisions between armed bodies of these parties became of frequent occurrence. In 1785 a pitched battle, attended with much bloodshed, was fought in the county of Armagh. The steps taken to repress these disorders were at once insufficient in themselves to prevent open violence, and had the effect of diverting the current into the still more dangerous channel of secret associations. The rude and illiterate mob of Peep-o'-day Boys made way for the rich and influential organization of the Orange Society, and first of all in the same obscure district that had so long been the nursery of the discontented and dangerous section of the county of Armagh, by degrees extended its ramifications into every portion of the British empire, and into every grade of society from the hovel to the very steps of the throne. The name of the Orange association is taken from that of the prince of Orange, William III., and was assumed in honor of that prince, who, in Ireland, has been popularly identified with the establishment of that Protestant ascendancy which it was the object of the Orange association to sustain.

The first "Orange Lodge" was founded in the village of Loughgall, county Armagh, Sept. 21, 1755. The immediate occasion of the crisis was a series of outrages by which Roman Catholics were forcibly ejected from their houses and farms, twelve or fourteen houses being sometimes, according to a disinterested witness, wrecked in a single night; terminating, September, 1755, in an engagement, called, from the place where it occurred, the battle of the Diamond. The association, which began among the ignorant peasantry, soon worked its way upwards. The general dissatisfaction with the English rule, which at that time prevailed in Ireland, and in which the Romanists, as a natural consequence of their oppressed condition, largely participated, tended much to identify in the mind of Protestants the cause of disloyalty with that of popery; and the rebellion of 1798 inseparably combined the religious with the political antipathies. In November of that year the Orange Society had already reached the dignity of a grand lodge, with a grand master, a grand secretary, and a formal establishment in the metropolis; and in the following years the organization extended over every part of Ulster, and had its ramifications in all the centres of Protestantism in the other provinces of Ireland. In 1808 it extended to England. A grand lodge was founded at Manchester, from which warrants were issued for the establishment of the grand lodge of Ulster, transferred to London in 1821. The subject more than once was brought under the notice of Parliament, especially in 1818; and, in consequence, the grand lodge of Ireland was dissolved; but its functions in issuing warrants, etc., were discharged vicariously through the English lodge. The most memorable crisis, however, in the history of the Orange Society was the election of a royal duke (Cumberland) in 1827 as grand master for England; and on the re-establishment of the Irish grand lodge in 1828, an imperial grand master. The "Catholic Relief Act" of the following year stirred up all the old hatreds and all the old relics of Orangeism in Ireland; the Orange association was propagated more vigorously than ever. Emissaries were sent out for the purpose of organizing lodges, not alone in Wales and Scotland, but also in Canada, in the Mediterranean, and in the United States. But other methods of disseminating its zealous propaganda was its introduction into the army. As early as 1824 traces of this are discoverable, and again in 1826. No fewer than thirty-two regiments were proved to have received warrants for holding lodges in Ireland, and the English grand lodge had issued thirty-seven warrants for the same purpose. The organization of this strange association was most complete and most extensive. Subject to the central grand lodge were three classes—county, district, and private lodges—each of which corresponded, and made returns and contributions to its own immediate superior, by whom they were transmitted to the grand lodge. Each lodge had a master, deputy-master, secretary, committee, and chaplain. The only condition of membership was that the party should be Protestant, and eighteen years of age. The election of members was by ballot, and each lodge also annually elected its own officers and committee. The general government of the association was vested in the grand lodge, which consisted of all the great dignitaries, the grand masters of counties, and the members of another body called the grand committees. This lodge met twice each year, in the summer and the winter. May 5th and November 29th. The associations calculated to keep alive the Protestant antipathies of the body. All the dignitaries of the society, as well as its various committees and executive bodies, were subject to annual re-election. In 1836 the association numbered 20 grand lodges, 80 district lodges, 1,500 private lodges, and from 200,000 to 220,000 members. The worst result of the Orange association was the constant incentive which it supplied to party animosities and deeds of violence. In the north of Ireland the party displays and processions were a perpetually menacing sight, and every attack on the party, and the spirit of fraternity which pervaded its members was a standing obstacle to the administration of the law. It was known or believed that an Orange culprit was perfectly safe in the hands of an Orange jury; and all confidence in the law was blasted. In 1834, the office of the three magistrates was destroyed. These facts, as well as an allegation which was publicly made of the existence of a conspiracy to alter the succession to the crown in favor of the duke of Cumberland, led to a protracted parliamentary inquiry in 1836; and the results of this inquiry were extremely favourable to both parties. Legislation was sanctioned soon afterwards by an armed body of Orangemen on occasion of a procession in Ireland, tended so much to discredit the association, and to awaken the public mind
to a sense of the folly and wickedness of such associations, that its respectability has since that time gradually diminished. So great was the popular distrust of the administration of justice in party questions, that for several years the lord chancellor laid down a rule by which no member of the Orange association was admitted to the commission of the peace; and although the association still exists, it is comparatively with very little influence, except among the very lowest classes in the north of Ireland.

Of the colonial offshoots of the Orange association, those of Canada have at all times been the most active and the most flourishing. The Canadian Orangemen, being, for the most part, Irish emigrants, carried with them all the bitterness of the domestic feud with the Roman Catholics. Outrages directed against Catholic churches, convents, and other institutions were of not unfrequent occurrence until recently; and in 1860, on occasion of the visit of the prince of Wales to Canada, an attempt was made to force from his royal highness a recognition of the association, which was only defeated by his own firmness, and by the judicious and moderate counsels of his advisers. See Reports on the Orange Associations of Parliament, 1889, for which the history of the society, down to that year, is for the most part taken.

In the United States the Orangemen are also largely represented. In 1871 they encountered much opposition from the Romanists, and on July 12, when on parade in New York City, a riot ensued, which was fortunately suppressed by military interference, after sixty lives had been sacrificed, mainly Romanists.

Orantes (praying men), a class of catechumens, the same as the Genuflectentes (q. v.).

Orarium, in some of the ancient churches, a scarf or tippet worn by deacons on their left shoulder, and by bishops and presbyters on both shoulders, the use of which was for giving signals for prayers by the bishops and presbyters to the deacons, and by the deacons to the congregation; hence its name. Ambrose, Augustine, and other writers, speak of the orarium only as a handkerchief to wipe the face with; but from the records of the ecclesiastical councils of Braga (A.D. 663) and Toledo it is made clear that it was a distinguishing badge of the clergy, the former ordaining that priests should wear the orarium on both shoulders when they ministered at the altar, and the latter that the deacons were not to wear but one orarium, and that on the left shoulder, wherewith they were to give the signal of prayers to the people. Subdeacons, and all other ordained officials, were, by prescription of the Council of Laodicea (A.D. 386), not privileged to wear this clerical appendage. In modern times the priests of the Western churches wear it scarlet or sable wise from the shoulder to the right side; those of the Greek Church wear it hanging behind and before. See Eadie, Eccles. Cyclop. s. v.; Martigny, Dictionnaire des Antiquités Christiennes, s. v.; Walcott, Sacred Archaeology, s. v. See also Stoles.

Orató, Sermones (i. e. Fray, Brethren), is the technical name of the Romanists applied to the celebrant priest's exhortation at mass when the Church is about to engage in secret prayer for God's acceptance of the sacrifice offered. It precedes the Preface (q. v.), and follows immediately after the celebrant has pronounced this prayer: "Receive, holy Trinity, this oblation, which we offer to thee in commemoration of the suffering, resurrection, and ascension of Jesus Christ our Lord, and to the honor of blessed Mary ever Virgin, and of blessed John the Baptist, and of holy apostles Peter and Paul, and not only of those, but also of all saints; that they may profit them unto honor, but us unto salvation: and that they may deign to intercede for us in heaven, whose memory we celebrate on this day through the whole Christ, our Redeemer."

The celebrant then says the words "Orate, Fratres," with his voice a little elevated; but the remainder ['that my and your sacrifice may be acceptable with

God the Almighty Father] is said immodiately, or in a perfectly under tone. Then the priest turns round to the altar and joins his hands before his breast; and the attendant or bystanders answer, or otherwise the priest himself—"May the Lord receive the sacrifice from thy (or mine) hands, to the praise and glory of his name, to our profit also, and to the advantage of all Christian. The priest, with a loud voice, says "Amen." The secret prayer or prayers which follow are variable, and correspond with the collects for the day or occasion.

At the conclusion of these the priest says in a distinct voice, or sings, "Per omnia saecula saeculorum" (=Through all the ages of ages, i. e. world without end); the choir answers, "Amen;" the priest follows, "Dominus vobiscum" (=The Lord be with you); the response is, "Et cum spiritu tuo (=And with thy spirit); the priest says, "Sursum corda" (=Lift up your hearts); and is answered, "Hosanna ad Dominum" (=We have, unto the Lord); then the priest, "Gracias agamus Domino Deo nostro" (=Let us give thanks to the Lord our God); and the choir, "Dignum et justum est" (=It is proper and right); after which he says or sings the preface. See Barnum, Romanism as it is, p. 484.

Orations, Funeral and Pulpit. See Funeral; Sermon.

Orator, the rendering in the A. V. of one Hebrew and one Greek word.

1. It stands for ἀράμα, a whisper, or "incantation," joined with nebul, "skilful" (ἐγκώσεις), Sept. συντριτος ἀκοιμος; Vulg. and Symm. praedens eloqui mystica; Aquila, συντριτος θεοματος; Theodot. συντριτος καιθοδος), Isa. iii. 3. A. V. "eloquent orator," marg. "skilful of speech." The phrase appears to refer to pretended skill in magic (see Genesis, Thesaur. p. 202, 754; comp. Psal. livii. 5). See Divination.

2. It stands for ὀρατος, the title applied to Tertullian (q. v.), who appeared as the advocate or patronus of the Jewish accusers of the apostle Paul before Felix (Acts xxiv. 1). The Latin language was used, and Roman forms observed in provincial judicial proceedings, as, to cite an obviously parallel case, Norman-French was for so many ages the language of English law proceedings. The trial of Paul at Caesarea was distinctly one of a Roman citizen; and thus it has, probably in the Latin language (see Acts xxv. 9, 10; comp. Val. Max. ii. 2, 2; Cicero, Pro Caelio, c. 50; Brutus, c. 37, 38, 41, where the qualifications of an advocate are described: see Conybeare and Howson, Life and Epistles of St. Paul, i. 81; ii. 345). See Advocate.

Oratorio (from Ital. oratorio, chapel or oratory, after the place where these compositions were first performed) is the term applied to a sacred musical compo-
sion, bearing the same relation to Church music which the opera does to secular music, and, like it, consisting of airs, duets, choruses, etc. It is, in short, a spiritual opera, and holds an intermediate place between religious and secular compositions. The text is generally a condensation of the performance, as Handel's Solomon and Cimbrona's Sacrificio d'Abramo. Sometimes it takes the form of a narrative, as Israel in Egypt; and occasionally it is of a mixed kind, as Haydn's Creation. The Messiah is a collection of passages from our received translation of the Scriptures.

Concerning the origin of the oratorio, Dr. Brown, Sir John Hawkins, and others seem to have misunderstood the père Menestrier, who, in his work Des Représentations en Musique, attributes to the pilgrims, on their return from the Holy Land, not the introduction of what we term oratorios, as those writers supposed, but of the sacred dramas called Mysteries (q. v.). The learned Jesuit is perhaps himself in error on this subject. It is Wharton's opinion that about the 8th century the merchants who frequented the fairs, employing every art to draw numbers together, were accompanied by jugglers, minstrels, and buffoons, who were the source of great amusement to the people. The clergy, thinking that such entertainments tended to irreligion, proscribed them; but their censure and fulminations being disregarded, they took into their own hands the management and arranged the dances—sometimes, as on the occasion alluded to, instead of profane mummeries, presented stories taken from legends, or from the Bible (Hist. of Poetry). Voltaire conjectures that religious dramas came from Constantinople, where, about the 4th century, archbishop Gregory of Nazianzum, one of the fathers of the Church, banished plays from the stage of that city, and intro-
duced stories from the O. and N. T. As the ancient Greek tragedy was originally a religious representation, a transition was made on the same plan, and the chro-
uses were turned into Christian hymns. "This opin-
ion," says Brown, "will be the more probable of the two if we consider the early commercial intercourse between Italy and Constantinople." Admitting this, we need seek no farther for the original source of the sacred musical drama.

As regards the more recent introduction of the orato-
rio, Creecincimi, in his Commentario, tells us that it is attributable to San Filippo Neri (q. v.), who in his chapel (nel suo oratorio), after sermons and other de-
ventions, in order to allure young people to pious of-
lices, and to detain them from earthly pleasures, had hymns composed, one or more of which, after the orate-
delot is rather more circumstantial on this subject. He
says S. Filippo de Neri, a native of Florence, founder in 1540 of the Congregation of the Priests of the Or-
atory in Italy, observing the taste and passion of the Romans for musical entertainments, determined to afford the nobles and people the means of enjoying them on Sundays and festivals in his church, and en-
gaged for this purpose the ablest poets and composers, who produced dialogues in verse on the principal sub-
jects of Scripture, which he caused to be performed by the most beautiful voices in Rome, accompanied by all sorts of instruments. These performances included airs, duets, trios, and recitatives for four voices; the subjects were, Job and his Friends, the Prodigal Son received by his Father, the Angel Gabriel with the Vir-
gin, and The Mystery of the Incarnation. Nothing was spared to render these attractive; the novelty and per-
defection thereof drew a crowd of auditors, who were de-
lighted with the performances, and contributed largely, by admission money, to the expenses incurred. Hence
are derived what we now call oratorios, or sacred repre-
sentations. The Psalms de la Musique (1740, i, 296). Some of these poems were printed under the title of Iod and Spirituali, and among the first authors of them was P. Agostino Manni. One of the most remarkable was en-
titled Rappresentazione di Animma e di Corpo, del Signor Emilio del Cavallari, per recitare cantando. It was the

first attempt in the recitative style, and performed in action on a stage erected in the church of Santa Maria della Vallicella, at Rome, with scenes, dances, etc., as appears from the editor's dedication to cardinal Aldo-
brandini, and the composer's instructions for the per-
formance to be given him by the Duke of Aragon (Hist. of Music, iv, 88) gives some curious extracts, among which are the following: The accompanying instruments, namely, a double lyre, a harpsichord, a large guitar, and two flutes —to be behind the scenes; but the performers are de-
signed to have instruments in their hands, and the appear-
ce of the word is a deliberate indication. The border of the words were printed. Instead of the modern overture, a madrigal, with all the parts doubled, and fully accom-
pained, is recommended. When the curtain rises, two
youths, who recite the prologue, appear. Then Time,
one of the characters, comes on, and has the note with
which he is to begin given him by the instruments be-
hind the scenes. The chorus is to be placed on the
stage, part sitting and part standing; and when they
sing they are to be in motion, with gestures. Il Corpo
(the body), at the words Si che horno in ch'io viso, throws
away his ornaments. The World and Human Life are
to be gavily dressed, and when divested of their trapp-
ings are to appear poor and wretched, and finally as
dead carcases. The performance may conclude with
or without a dance. If without, the last chorus is to
consist of four parts. The choruses are to be
a verse beginning "Chiostrì allissimi" is to be sung, ac-
companied reverently by the dance. During
the ritornels the four principal dancers are to perform a bale-
lot, saltato con capricio (danced with capers), without
singing. They may sometimes use the guiluard step,
sometimes the couruy, and sometimes the courrant.

The name of Oratorios was given, some think, to these performances because they owed their birth to the Priests of the Oratory; we are, however, as already stated, more inclined to derive the term from the place, the oratory, in which it was performed, and the name in which they were first heard. But the word does not
appear to have been in use till about the year 1630, when
Balducci applied it to two of his sacred poems. The
unfortunate Stradella was one of the first of those who distinguished themselves in this excelled kind of composition; his Oratorio di San Giovanni Battista, produced about the year 1670, is analyzed and much praised by Burney (iv, 105). A fine chorus from this, in
five parts, is printed in the fourth volume of "The Fitz-
william Music." The increasing popularity of the sacred oratorios at length induced Handel, Buxtorf, and
Borghi to join in their production. Apostolo Zeno, the imperial poet-laureate, produced seventeen works of this kind, under the title of Azioni Sacre, most of which were set
by Caldara, imperial vice-chaplain to Leopold I, whose reputation as a composer of sacred music stands
deservingly high. The first of them, Stabat, was per-
formed in 1717. Metastasio wrote seven Azioni, of
which Caldara set two; the first, La Passione, in 1730.
This was reset by Jomelli, and is justly reckoned among the best of his works. Sebastian Bach's Passions-Mu-
sick was a species of oratorio, originally performed during the summer, of which a conjectural and
juxtaposed version of the chorals. Its form arose out of the practice prevalent in the Lutheran Church of having the gospels of the day repeated on Good-Friday, and some other fest-
ivals, by different persons, in a recitative and dialogue style. See PASSION.

The oratorio was introduced into England in 1729, when
Handel set Esther—Racine's tragedy abridged and
altered by Mr. Humphreys—for the chapel of the duke of Chandos (Pope's Timon) at Cannons. Previous to this time Handel had produced an oratorio entitled La Resurrezione, which he brought out at the Court when only twenty years of age, but Esther was his first brought out in England. In 1731 it was performed by the chil-
dren of the Chapel-Royal at the house of their master,
Bernard Gates. The next year it was publicly pro-
ORATORIO

duced, as appears from the following advertisement in the Daily Journal: "By his majesty's command, at the King's Theatre in the Haymarket, on Tuesday, May 2, will be performed the sacred story of Esther, an oratorio in English, formerly composed by Mr. Handel, and now revived by him, with several additions, and to be performed by a great number of voices and instruments. N. B.—There will be no rehearsal of the piece, but the house will be fitted up in a decent manner for the audience." The success of this was of the most decided and encouraging kind. The custom of performing oratorios on the Wednesdays and Fridays in Lent is to be discontinued, but up to the time they were, with few intermissions, continued till a very recent period. By Handel himself no oratorio was produced after the appearance of "Esther," until, in his fifty-third year, he became afflicted with blindness. From this his declining period of life date the great oratorios which have made his name immortal. These were performed for the most part in the Old Haymarket Theatre. "Deborah" was first performed in 1738; "Athaliah," in 1734; Israel in Egypt," in 1738; "The Messiah," in 1741; "Samael," in 1742; "Judas Maccabeus," in 1746; "Jestas Maccabeus," in 1747; "Solomon," in 1749; and "Israel in Egypt," in 1751. The two crowning works were "Israel in Egypt," and "The Messiah"—the former ranks highest of all compositions of the oratorio class. "The Messiah"—which, in consequence of its text being taken entirely from Scripture, was called by Handel The Sacred Oratorio—has, by reason of its constant repetition, attained an even more universal popularity; from the time when it was first brought out, down to the present day, it has been performed for the benefit of nearly every important charitable institution in Britain, and also in the U.S., though somewhat less frequently than the same purpose. "Judas Maccabeus," is perhaps best known from the flowing and martial grace of that unrivalled military march, "See the Conquering Hero comes," and "Nebuchadnezzar" is associated in everyone's mind with the most solemn of all funeral marches. The orchestra was but imperfectly developed in Handel's time, and his oratorios had therefore originally but meagre instrumental accompaniments; they have since been generally performed with additional compositions written by Mozart. Handel was succeeded in this musical speculation by his friend, J. C. Smith, who was followed by St. John and the elder Linley. Linley and Dr.Arnold then in conjunction most successfully carried on the oratorios, which were continued by the latter on the retirement of his colleague. An opposition was now started by Ashley, who had been active as a subordi-nary composer and a performer in the chapel of the Duke of Bolton, in 1784. This person soon transformed the performances into secular and often vulgar concerts, though retaining the original name; and from that time the oratorios began to degenerate.

Great masters of oratorios are Haydn, Mendelssohn, Bech, Cimarossy, and Jomelli. Haydn composed three oratorios, The Return of Tobit, The Seven Last Words, and The Creation. The first-named work is full of sweetness and of energy, but it hardly answers to the common conditions of an oratorio; the second is rather a series of symphonies, intended to follow as many short sermons on the sentences uttered by Jesus on the cross, the text being a subsequent addition by the composer's brother, Michael Haydn. The chef-d'oeuvre, The Creation, originated in a visit to London in 1791, when Haydn heard for the first time some of Handel's compositions, though he knew little of his oratorios. Though less grand than the oratorios of this Anglicized-German musical master, The Creation is full of fresh, lovely songs, bright choruses, picturesque recitatives, and exquisite instrumentation. Beethoven's sole oratorio, the 'Easter' of 1787, is a piece de resistance rather than the mixed composition generally designated as oratorio. Sporer's Lust Judgment, produced in 1825, contains some grand music, especially in the choruses. Costa's Eli
deserve mention. But the master of modern oratorios is Mendelssohn. Indeed, his greatest works are in this line of composition, as his St. Paul and Elijah. His great ambition was to reawaken an interest in the oratorio, especially in Great Britain; and since his day oratorios are performed on a large scale at Exeter Hall, London, and at the musical festivals throughout England, with great precision, and the house will be fitted up in a decent manner for the audience." The success of this was of the most decided and encouraging kind. The custom of performing oratorios on the Wednesdays and Fridays in Lent is to be discontinued, but up to the time they were, with few intermissions, continued till a very recent period. By Handel himself no oratorio was produced after the appearance of "Esther," until, in his fifty-third year, he became afflicted with blindness. From this his declining period of life date the great oratorios which have made his name immortal. These were performed for the most part in the Old Haymarket Theatre. "Deborah" was first performed in 1738; "Athaliah," in 1734; Israel in Egypt," in 1738; "The Messiah," in 1741; "Samael," in 1742; "Judas Maccabeus," in 1746; "Jestas Maccabeus," in 1747; "Solomon," in 1749; and "Israel in Egypt," in 1751. The two crowning works were "Israel in Egypt," and "The Messiah"—the former ranks highest of all compositions of the oratorio class. ORATORY

Oratorio. See ORATORY.

Oratory is the Latin name which was ancients given to places of public worship in general, as being houses of prayer [see PROSECRUA]; but in later times, it has been applied to the churches of ecclesia, and has been applied to such smaller or domestic chapels. Oratory is used among the Romanists to denote a closet or little apartment near a bedchamber, furnished with a little altar, crucifix, and other furniture, suited, in their view, to a place for private devotion. It is not correctly applied to such a place of worship as Luke refers to in Acts xxi. an upper chamber, in which the early Christians worshipped for safety, to preserve their secret discipline from the knowledge of the heathen, and in distinction from the pagan exhibition of grave images on the ground-floor of buildings, and also in memory of the place of the Last Supper. The rise of private places of worship, called ecclesiae, outlasted the times of persecution, and were permitted, under certain restrictions, by the councils of Saragossa (A.D. 381) and Gangra. The name oratory is also applied to a chapel in which no mass may be said without permission of the ordinary. There are several kinds: 1, a monk's cell; 2, a private chapel, recognised by the Council of Ayde (506); 3, a chapel in the country without a district; 4, the private portion of a minister reserved for the use of the convent; the choir; a chapter; the chapel of a monastery; the chapel of a religious order; a 7th century a burial chapel, or a chapel in a cemetery, in which mass was said at times, when the bishop sent a priest to celebrate; 6, a chantry chapel in a church. In 1027 Alexis, patriarch of Constantinople, condemned the abuse of oratories, in which persons of power had assumed to have baptism administered and to assemble congregations under a license. The private chapel of the dukes of Burgundy was rebuilt as the cathedral of Autun; the chateau of the Bourbons became that of Moulins. The ancient Cornish oratories are simple parallelegrams, and contain a stone altar and well; they are sometimes raised on artificial mounds. In the Middle Ages oratories became a common appendage to the castles and residences of the nobility, and were of two kinds: the first simply for private and family prayer and other devotions; the second for celebration of divine service. The latter was the place of prayer and the direction of the bishop or the parochial clergy, and many jealousies and disputes grew out of their establishment or direction. The Council of Trent (sess. xxii., De Reformacione) placed them under very stringent regulations, which have been enforced in some of the later papal bulls, especially by Benedict XIV. See W alcott, Sacred Archæology, s. v.; Riddle, Christian Antiquities, p. 703, 721. See CHAPEL.
The Priests of the Oratory in France were established on the model of those in Italy, and owe their rise to Pierre, afterwards cardinal de Berulle, a native of Champagne, who resolved upon this foundation in order to revive the splendor of the ecclesiastical state, which, while it was great, had sunk through the misfortunes of the civil wars, the increase of heresies, and a general corruption of manners. To this end he assembled a community of ecclesiastics in 1611, in the suburb of St. James. They obtained the king's letter patent for their establishment; and in 1613 pope Paul V approved this congregation, through the title of the Oratory of Jesus (see cut). This congregation consisted of two sorts of persons: the one, as it were, incorporated; the other only associates; the former governed the houses of the institute; the latter were only employed in conforming themselves to the life and manners of ecclesiastics. They also differed from the Italian in that the French Oratorians took charge of seminaries of theological teaching. They were decided opponents of the Jesuits; and, as many favored Jansenism, it was charged by Ultramontanes that the French Congregation of the Oratory spread principally the Jansenistic heresy. The truth is, the congregation embraced advocates of Jansenism; but they were only in the minority, and simply brought about an unhappy controversy in the society. The French Oratorians became distinguished for their many eminent scholars, as, for example, Malebranche, the eloquent Massillon, etc. The Revolution of 1789 put an end to this congregation as to other religious bodies; but they were reorganized in 1852 by six priests, under the guidance of Abbe Petetot and in 1864, finally, the new congregation under the title of the Oratory of the Church our Lord and of Mary the Immaculate, was approved by the pope. It has a flourishing establishment at Paris, and has received its chief illustration from fathers Gratry and Perraud. It is known as the Oratory of the Immaculate Conception.

In 1847 the Oratorians were introduced on English soil by the Romish convert, Dr. John Henry Newman. This was the period of his secession from Anglicanism. To give strength to his Romanizing tendencies he looked about for a moderate monastic body, and consequently established a house of the Oratorians (the members of which were for the most part ex-Anglicans like himself), first near, and finally at, Birmingham; soon afterwards a second at London, which has since been transferred to Brompton. The Oratorians have also representatives in the Low Countries, whither they spread from France. In the United States they have as yet founded a congregation. There are houses at Madrid, Constantinople, and in Savoy. See Zeitschrift histor. theol., 1859, p. 142; Perraud, L’Oratoire de France (Paris, 1860); Histoire du clergé, iii, 144 sq.; Mekh. Qu. Rev. 1886, p. 289; Henrich, Monast. Orders, ii, 247-254; Jervis, Hist. of the Church of France, i, 250; Hallam, Literature, iii, 297; Altog, Kirchengesch, ii, 423.

**Orbison, Thomas**, a minister of the Methodist Episcopal Church, was born in Waringstown, county Down, on the 13th of March 1813. His parents were members of the Established Church. When thirteen years of age he was converted, and united with the Wesleyans. At seventeen he was licensed as an exhorter, and was ordained in Dublin June 22, 1844. In 1849 he removed to America. After his arrival here he united and labored in connection with the Methodist Episcopal Church for a year and a half. A vacancy taking place about that time on the Wauwatosa Circuit of the Wisconsin Conference of the Methodist Episcopal Church, he was employed as supply, and at the close of the year joined that conference. His appointments were: Wauwatosa, Kinnelon, Berlin, Plover, Brother- town, Utter's Corners, Footville, Sun Prairie, Weyauwega, Waupaca, and Stevens' Point. In 1863 he located, and lived in Appleton one year. In 1865 he
preached on the Hartford charge, and at the next session of conference was readmitted, and stationed at New Berlin and Oneida Indian Mission. But failing health again obliged his retirement from active duties, and he returned to Appleton. He died in 1873. As a preacher, he was a man of good (or at least good enough for the purity of his character and his good common- sense. See Minutes of Conferences, 1874, p. 140.

Orcagna, or L'Arcagnuolo, is the name by which Andrea di Cione, a celebrated old Florentine artist, is generally known. He was painter, sculptor, and architect; was born at Firenze in 1289, according to Vasari, or, according to another tradition, 1280 or 1290, and probably first instructed in art by his father, Cione, who was a celebrated goldsmith; from him he passed into the school of Andrea Pisano. He painted several works, together with his brother Bernardo, in the churches of Firenze, and also in the Campo Santo a Pisa, where the Triumph of Death and the Last Judgment were by Andrea, and the Hell by Bernardo; the Last Judgment and the Hell are engraved by Lusino in a single plate in his Pictura del Campo Santo di Pisa: Orcagna repeated them in Santa Croce a Firenze; he had painted previously in the Spropio chapel, in Santa Maria Novella, a picture of Hell from Dante's Inferno, in which he introduced the portrait of several of his enemies. As an architect he built the elegant Loggia de' Lanzi in the Piazza Gran- duca at Firenze, which is still in perfect condition—it and its columns are engraved by Lusino in Masaccio's Piazza del Granduca di Firenze, con i suoi Monumenti (Florence, 1830). He built also the church of the mon- astery of Or San Michele, and designed the celebrated tabernacle of the Virgin of that monastery. It is a high Gothic pyramidal altar to the Virgin, free on all sides, is built of white marble, and is richly ornamented with figures and other sculptures. It is engraved in Richa's Notizie delle Chiese di Firenze, after a drawing by Andrea himself. Orcagna generally signed himself painter upon his sculptures, and sculptor upon his pictures. He was also a poet. He died at Firenze, according to Vasari, in 1348, but according to Murr, in 1375. Or- cagna had excellent architectural taste, and has the credit of having been the first in those ages to adopt the semicircular arch in preference to the pointed; but to this merit, if none, he is not entitled, though his ele- gent Loggie de' Lanzi may have contributed greatly towards the subsequent popularity of that form of the arch in Italy: Arnolfo di Lapi, however, and other ear- lier architects, used the semicircular arch. Those, says Lanzi, who are fond of minute detail in minute things, may consult Balbinucci, Bottari, and Mami concerning Andrea di Cione; Rumohr, however, was the first to show his real name, of which Orcagna is a contraction—Lo Arcagnuolo, Lo archagniolo, Archagniolo. In paint- ing, Orcagna did not go beyond Giotto; in sculpture he was a worthy follower of the Pisani. His portrait, pub- lished in Vasari's work, was taken from one of the fig- ures of the apostles in the above-mentioned tabernacle of the Virgin, which is understood to be his own. See Vasari, Vite de' Pittori, etc., and the Note to Schor's German translation of Vasari; Rumohr, Italianische Forschungen.

Orchard is the rendering in the A. V. of גַּן הָגָן, pouâsà, a park or garden planted with trees (Eccles. ii, 5; Cal. iv. 14; "forest," Neh. ii. 8); and of olivetum ("orchard of olives"), an olive-yard (2 Esdr. xvi. 29). See GARDEN; OLEARY.

Orchard, Nicholas, a minister of the Methodist Episcopal Church, was born at Helston, county of Corn- wall, England, Nov. 14, 1806. He was the son of pious parents, and was carefully trained under the influence of the Methodists. In 1840 with a view to the study of the ministry, he entered the University of Cambridge, converted, and joined their society. He came to this country about 1837, and settled in Perth Amboy, New Jersey, where his labors as local preacher, class leader, etc., were highly appreciated. In 1843 he removed to Brooklyn, and was soon employed by the presiding elder as pastor at Flatbush. The following two years he assisted on the Home Mission work in Brooklyn, and then, under the presiding elder, he ably served the societies on Long Island. In 1850 he was received into the New York East Conference, and his successive appointments were as follows: Southold, Farmingdale, Riverhead, Northport, Port Jefferson, Patchogue and Sayville, Orient, Parkville, Orient, and, lastly, Bay Ridge and Unionville. He entered upon his last charge with broken health; and after a short term of labor at this charge was prostrated by paralysis, and died May 27, 1874. "As a preacher and pastor he was in labors abundant, and more than acceptable. In every appointment he was greatly beloved by his people, and men of learning held in high esteem his capabilities as a Bible student and a preacher. His touching appeals to his hearers came from the depth of a heart which longed for their salvation. He felt the sacredness of his calling, loved it, and was successful in it." See Minutes of Conference, 1875, p. 52.

Ordeal, otherwise termed "judgment of God," a pretended mode of appeal to God's judgment, formerly permitted in criminal cases in the most civilized society of Europe. Ordeal is generally traced to the Anglo-Saxon ordel. Speelman derives this word from or, "magnum," and del, "judicium," which implies the determination given by the judge. Lyte and Bosworth derive it from or, "private," "without," and del, "difference," an indifferent or impartial judgment, a judgment without distinction of persons. The German word urtheil, a judgment, is intimately related to it. The earliest trace of any custom resembling the ordeals afterwards so largely used among the northern tribes of Europe may be found in the waters of jealousy, which the Hebrew women, suspected of adultery, were compelled to drink as a test of innocence (Num. v). The alleged intention of it was to vindicate the truth when it could not in any other way be discovered, and to make way for the execution of law. A similar trial for incontinence is in use among the natives of the Gold Coast of Africa. See ADULTERY. Blackstone ('Comm. on the Laws of England,' iv. ch. 27, "Of Trial and Conviction") says: "The several methods of trial and conviction of offenders established by the laws of England were formerly more numerous than at present, through the superstition of our Saxon ancestors, who, like other northern nations, were extremely addicted to divination, a custom which Tacitus (Hist. v. 49) observes to be common among the Germans (De Mor. Germ. x). They therefore invented a considerable number of methods of purgation, or trial, to preserve innocence from the danger of false witnesses, and in consequence of a notion that God would always interpose miraculously to vindicate the guiltless." Throughout Europe in the dark ages the ordeal existed under the sanction of law and of the clergy. The four chief ordeals of the Middle Ages, to which our Saxon ancestors resorted in common with the rest of Europe, were:

1. The spear, which was generally applied to persons of quality and to ecclesiastics, the latter being prohibited from claiming the judicial combat (or duel) in person, and yet wishing to avoid the ordeals by water, which were considered ignoble, and reserved for peasants. If impeached for a single crime, a piece of iron was to weigh one pound; one of precious metal, two pounds. The weight of the iron was increased in proportion. The person accused was to hold the burning ball of iron in his hand, and move with it to a certain distance, or to walk barefoot on red-hot plowshares, placed about a yard from each other. If after this trial his hands and feet were unburned, and he showed no indication of pain, he was discharged: otherwise he was considered guilty. In the Romish Church the accused was brought in after three days of fasting and prayer;
the priest appeared in his canonicals, taking up the iron which lay before the altar, and, repeating the hymn of the three Hebrews, put it into the fire. He then proceeded to some forms of benediction over the fire and iron; after this he sprinkled the iron with holy water, and made the sign of the cross in the name of the Father, who was present, upon which the priest was purified. Ordinarily, the accused was to carry the hot iron over a space of nine feet. After this his hand was to be sealed up, and not inspected till the third night was passed; then, if it was clean, he was deemed innocent; but if it appeared fettered on the mark of the iron, he was to be esteemed guilty. In cases of necessity, the duty of the accused was to make the sign of the cross, and then he was to be immediately visited with divine punishment for the sacrilege by its choking him: it was a variety of the curse.

The trial of the cross (Examen s. Excerptum s. Judicium crucis) consisted in the accused being made to hold up his arms horizontally in the form of a cross. In cases of difficulty, the sign of the cross was made by the judge. If guilty, he was to be deemed to be in the right. The form of trial is thus described by Dr. Mackay in his Memoirs of Extraordinary Populous Delusions: "When a person accused of any crime had declared his innocence upon oath, and appealed to the cross for its judgment in his favor, he was brought into the church before the altar. The priests previously prepared two sticks exactly like one another, upon one of which was carved a figure of the cross. They were both wrapped up, with great care and many ceremonies, in a quantity of fine wool, and laid upon the altar. The judge, or rather the bishop, Edward the Confessor, who, when suspected of a criminal intrigue with Alwyn, bishop of Winchester, is said to have triumphantly vindicated her character by walking unhurt over red-hot ploughshares (Rudborne, Hist. Maj. Winton, lib. iv. ch. 1). In this connection we may state that a person must have great common sense to handle red-hot or even molten iron, if careful; the vapor actually preventing immediate contact for a few moments.

b. Water-ordeal was performed either by plunging the bare arm up to the elbow in boiling water, and escaping unhurt thereby, or by casting the person suspected into a river or pond of cold water, and if he floated therein without any action of swimming, it was deemed an evidence of his guilt, but if he sank he was acquitted. In this trial by water, after the three days' fast and other preliminaries, the accused drank a portion of holy water, the priest pronouncing an imprecation against him in case he was guilty; then the water into which he was to be thrown was exercised in the following manner: "By the name of the Father and of the Son and of the Holy Ghost, and by the Christianity whose name be blessed, by the name of Christ, which thou wert born again, and by all the blessed relics of the saints of God that are preserved in this church, I conjure thee not unto this altar, nor eat of this body of Christ, if thou beest guilty in the things that are written, if thou beest guilty in the things that are written, if thou beest guilty in the things that are written, if thou beest guilty in the things that are written." The oath was repeated, and if there was no further difficulty or trial. After the exorcism the accused was undressed, ordered to kiss the Gospels and the cross, and sprinkled with holy water; and then, all persons present fasting, the accused underwent the trial. At the close of the adjuration holy water was tasted by all present, and the chamber sprinkled with it.

c. The corned, or morsel of execration: this was a piece of bread or cheese, about an ounce in weight, which was consecrated in a peculiar form, in which the Almighty was called upon, and it was prayed that the bread might cause convulsions and paleness, and find no passage, if the man were really guilty, but might turn to health and nourishment if he were innocent. The corned was then given to the suspected person, who received the holy sacrament at the same time: if indeed, as some have suspected, the corned was part of the sacramental bread itself. It is said that Godwin, earl of Kent, in the reign of king Edward the Confessor, on taking his oath that he had not caused the death of the king's brother, appealed to his corned, "per buceliennem de decretis diabaturvi," which stuck in his throat and killed him.

Other kinds of ordeal were practiced in particular circumstances in different parts of Europe. In the ordeal of the bier, a supposed murderer was required to touch the body of the murdered person, and pronounced guilty if the blood flowed from his wounds. The ordeal of the Eucharist (Judicium Eucharistiae, or Purgatio per Eucharistiam) especially was in use among the clergy: the accused party took the sacrament in attenuation of innocence, if he was believed to be guilty, if guilty, he was immediately visited with divine punishment for the sacrilege by its choking him: it was a variety of the curse.
It is probable that the trial by ordeal was not continued in England by any ancient or positively early method. John Court in Sir E. Coke (9 Rep. 92), and after him Blackstone (4 Comw. p. 845), have expressed an opinion that it was finally abolished by an act of Parliament, or rather an order of the king in council, in the 3rd Henry III (1219). "This order is to be found in Hym- mer, 1st, i. 228, by Spelman, in Glanvill, i. 361, and in the "Faci- um Dei," as in Selden, Notes to Etherin. Spelman, however, thinks that it was merely a temporary law, without any general or permanent operation, and that the trial by ordeal continued to a later period. This opinion seems confirmed by a reference in the Coit. Rot. Pat. ii. 265 to an act of 1315, in which a person is cited for an action of "fier et acqua." (The same authority, 265, "judicium aqve frigida et calida") was defended even by Hincmar of Rheims (Opp. ii. 667). In Scotland, in 1180, we find David I enacting, in one of the assemblies of the frank tenantry of the kingdom, which were the germ of parliaments, that no one was to hold an ordinary court of justice, or a court of ordeal, whether of battle, iron, or water, except in presence of the sheriff or one of his sergeants; though if that official failed to attend after being duly summoned, the court might be held in his absence. The first step to- wards the abolition of this form of trial in Saxou and the Continent was the recommendation of compensation by witnesses for compensation by ordeal. The near relatives of an accused party were expected to come forward to swear to his innocence. The num- ber of compurgators varied, according to the impor- tance of the case, from two (the case of anuni- cated woman who refused to come forward, or who failed to ob- tain the necessary number of compurgators. To repel an accusation, it was often held necessary to have double the number of compurgators who supported it, till at length the most numerous body of compurgators carried the day. It is remarkable that "proof by duel," which was abolished in Scandinavia by the introduction of Christianity, maintained its ground in England for cen- turies (Worsam, p. 167). It was also called the wager of battle, and was a natural accomplishment of a state of society which allowed men to take the law into their own hands. The challenger faced the west, the challenged person the east; the defeated party, if he spared his life, was allowed to live as a "recusant;" that is, on retracting the perjury which he had sworn to. The Council of Wales (655) strongly denounced it, under pain of death. In 1798, Spelman, in his "History of the Custom of Ordeal, as it exists in Siam," besides the usual methods of fire and water ordeal, both parties are sometimes exposed to the fury of a tiger set upon them; and if the beast escapes either, that person is accounted innocent; if neither, both are held to be guilty; but if he spares the subject, the other is the more certain (Mod. Univ. Hist. vii. 266). The "Asiatic Researches" (i. 398-404 [Calcutta, 1788, 4to]) contain a memoir on the trials by ordeal among the Hindus, by Ali Ibrahim Khan, chief magistrate of Benares, communicated by Warren Hastings, Esq., in the year 1788, by the countryman of Northern Guiana, who, by water; 4, by two sorts of poison; 5, by Cocha, in which the accused drinks of water in which the images of the sun and other deities have been washed; 6, by chewing rice; 7, by hot oil; 8, by hot iron; 9, by Bharam, in which an image of Dharma, or genius of justice, made of silver, and another of an antago- nist genius, Aitharna, made of clay or iron, or those figures painted respectively on white and black cloth, are thrown into a large jar, from which the accused is instructed to draw at hazard. The trials by ordeal seem to be prevalent throughout Africa too. "When a man," says Dr. Livingstone, "suspects that any of his wives have bewitched him, he sends for the witch-doctor, and all the wives go forth into the field, and remain fasting till that person has made an infusion of the plant called 'goho,' which is given to them in the manner of a beverage, in order to be thrown up to heaven in assestiation of her innocencc. Those who vomit it are considered innocent, while those whom it purges are pronounced guilty, and are put to death by burning. The innocent return to their homes, and are kept there in a state ofEmmaus, saved by the grace of the angels that visit the spirits. The practice of ordeal is common among all the negro nations north of the Zambezi." The women themselves eagerly desire the test on the slightest provocation; each is conscious of her own innocence, and has the fullest faith in the mawiri (the ordeal), cleansing all but the guilty. There are as many varieties of the test as there are of the laws of the different tribes. The Barote pour the medicine down the throat of a cock or dog, and judge of the innocence or guilt of the person accused by the vomiting or purging of the animal. Among the Indians of Northern Guiana this species of ordeal is in use for the detection of witchcraft. It goes by the name of the red-water ordeal, the red-water used for this purpose being a decoction made from the inner bark of a large forest tree of the mimosia family. The mode in which this ordeal is practised is thus de- scribed by Dr. Johnson: "A quantity of this decoction is used in connection with the administration of the or- deal; the people who assemble to see it administered form themselves into a circle, and the pots containing the liquid are placed in the centre of the enclosed space. The accused then comes forward, having the scantiest apparel, but with a cord of palm-leaves bound around his waist, and seats himself in the centre of the circle. After his accusation is announced, he makes a formal acknowledgment of all the evil deeds of his past life, then invokes the name of God three times, and impre- cates his wrath in case he is guilty of the particular crime laid to his charge. He then steps forward and drinks freely of the red-water. If it nauseates and causes him to vomit freely, he suffers no serious injury, and is at once pronounced innocent. If, on the other hand, it causes vertigo, and he loses his self-control, it is regarded as guilt, and the usual processes of indignities and cruelties are practiced upon him. A general howl of indignation rises from the spectators. Children and others are encouraged to hoot at him, pelt him with stones, spit upon him, and in many in- stances to pummel him by the head and back, and the bushes and over rocky places until his body is shamefully lacerated and life becomes extinct. [Text continues]
the capital has a perfectly plain square abacus, and the ovolo is but little if at all curved in section, except at the top, where it is quirked under the abacus; under the ovolo are a few plain fillets and small channels, and a short distance below them a deep narrow channel is cut in the shaft; the flutes of the shaft are continued up to the fillets under the ovolo. In the Roman Doric the shaft is usually seven diameters high, and generally has a base, sometimes the Attic and sometimes that which is peculiar to the order, consisting of a plinth and torus with an astragal above it; the capital has a small moulding round the top of the abacus, and the ovolo is in section a quarter circle, and is not quirked; under the ovolo are two or three small fillets, and below them a collarino or neck. According to the Roman method of working this order, the triglyphs at the angles of buildings must be placed over the centre of the column, and the metopes must be exact squares. Sometimes the mutules are omitted, and a row of dentils is worked under the cornice.

c. The Ionic Order. The most distinguishing feature of this order is the capital, which is ornamented with four spiral projections called volutes; these are arranged,

shaft of the column has twenty flutings, which are separated by a sharp edge, and not by a fillet as in the other orders, and they are less than a semicircle in depth; the moulding below the abacus of the capital is an ovolo; the architrave of the entablature is surmounted with a plain fillet called the tetra; the frieze is ornamented by flat projections, with three channels cut in each, which are called triglyphs; the spaces between these are called metopes; under the triglyphs and below the tetra of the architrave are placed small drops, or guttae; along the top of the frieze runs a broad fillet, called the capital of the triglyphs; the soffit of the cornice has broad and shallow blocks worked on it called mutules, one of which is placed over each metope and each triglyph; on the under surface are several rows of guttae or drops. In these respects the order as worked both by the Greeks and Romans is identical; but in other points there is considerable difference. In the pure Grecian examples the column has no base, and its height rise from about four to six and a half diameters;
of which consist of two scotiae, separated by small fillets and beads, above which is a large and prominent torus. The members of the entablature in good ancient examples are sometimes perfectly plain, and sometimes enriched, especially the bed-mouldings of the cornice, which are frequently cut with a row of dentils. In modern or Italian architecture, the simplicity of the ancient entablature has been considerably departed from, and the cornice is not unfrequently worked with mouldings in addition to dentils.

d. The Corinthian Order is the lightest and most ornamental of the three orders used by the Greeks. "The capital," says Rickman, "is the great distinction of this order; its height is more than a diameter, and consists of an astragal, fillet, and abacus, all of which are measured with the shaft, then a bell and horned abacus. The bell is set round with two rows of leaves, eight in each row, and a third row of leaves supports eight small open volutes, four of which are under the four horns of the abacus, and the other four, which are sometimes interwoven, are under the central recessed part of the abacus, and have over them a flower or other ornament. These volutes spring out of small twisted husks, placed between the leaves of the second row, and are called cauliculae. The abacus consists of an oval, fillet, and cavetto, like the modern Ionic. There are various modes of indenting the leaves, which are called from these variations acanthus, olive, etc. The column, including the base of half a diameter, and the capital, is about ten diameters high. The base which is considered to belong to this order resembles the Attic, with two scotiae between the tori, which are separated by two astragals; the Attic base is frequently used, and other varieties sometimes occur. The entablature of this order is often very highly enriched, the flat surfaces as well as the mouldings being sculptured with a great variety of delicate ornaments. The architrave is generally formed into two or three faces or facies; the frieze in the best examples is flat, and is sometimes united to the upper fillet of the architrave by an abonpophyge; the cornice has both modillions and dentils.

6. The Composite Order is called also Roman Order; it was invented by that people, and composed of the Greek carved upon the Corinthian, is of the same proportion as the Corinthian, and retains the same general character, with the exception of the capital, in which the Ionic volutes and echinus are substituted for the Corinthian caulicula and scolica. It is one of the five orders of classic architecture, when five are admitted; but modern architects allow of only three, considering the Tuscan and the Composite as merely varieties of the Doric and Corinthian. See Parker, Glossary of Architecture, a. v.; Elshe, Diet. of the Fine Arts, a. v. See also ARCHITECTURE.

Ordericus Vitalis, a noted medieval English ecclesiastical historian, was born at Attingham, now Atcham, near Shrewsbury, in 1075. His parents were of Norman descent, and belonged to the nobility. But few particulars are extant regarding the life of Ordericus. From incipital notes in his own writings it appears that he was sent to France in his infancy, and there placed under monastic instruction. His first French home was in the abbey of Ouche, at Lisieux, in Normandy. In 1086 he received the tonsure, and changed his English name of Ordericus for that of Vitalis, using only the latter name himself, but custom has joined the two in writing of him. He devoted himself to study, and did not take priest's orders till 1107. He never quite the convent but three times; he once attended a chapter of the order; once went to England, visiting Worcester and Croyland; and once went to the church of the last two visits being apparently for the purpose of procuring materials for his work, Historia Ecclesiastica. This history, which consists of thirteen volumes, is brought down to 1141, in which year, or the succeeding one, it is most probable that Ordericus Vitalis died. The Ecclesiastical History begins with the birth of Christ, and gives in two books a rapid summary, not always correct, of the succession of the Roman emperors and popes. These two books were an after-thought, and are of no great value. It is with the third book that the interest of the work commences. The early history of the dukedom of Normandy, with the collateral relations of France and Brittany, are given in minute detail. Then follows the narrative of the conquest of England. But by far the most valuable portion of the work is the last half of it, treating of the events of which Ordericus was a contemporary observer. The first edition of the Historia Ecclesiastica was published by Duchene, in his Hist. Norm. Script. Antiq. (Paris, 1619, fol.). It has also been printed by the French Historical Society (1840, 2 vols.), and was translated into French by Duboin (1825-27, 4 vols.). An English translation was prepared and brought out by Forester in Bohn's Antiquarian Library (Lond. 1853-54, 4 vols. 12mo). To the French edition of 1825-27 M. Guizot wrote an introduction, in
ORDERS, HOLY

which he says of the work: "No book contains so much
and such valuable information on the history of the 11th
and 12th centuries; on the political state, both civil and
religious, of society in the west of Europe; and on the
manner of the times, whether feudal, monastic, or popu-
lar." See Piper, Monumental-Theologie, § 114; Wright,
Bray, R. L., and others, Authors n., Vol. II: Lappenberg, Gesch., von
England, ii, 378-383; Cave, Hist. Lit., ii, 220; Oudin,
Comment. de Script. Eccles. ii, 209; and the sketches
prefaced to the different editions of his works.

ORDERS, HOLY, is an expression used to denote the
orders and classes of men who, in the society of the
Christian religion, and to which they are admitted at
the time of their ordination. See ORDINATION. The
following is the prelatical view of the subject: "It is
evident unto all men diligently reading the Holy Scriptu-
res and ancient authors that from the apostles' time there
have been these three orders of ministers in Christ's
Church—bishops, priests, and deacons: which offices
were evermore had in such reverend estimation that
no man might presume to execute any of them except
he were first called, tried, examined, and known to
have the required qualifications. The altar therefore
shall be reserved for the persons of the highest class
also by public prayer, with imposition of hands, were
approved and admitted thereto by lawful author-
ity" (Preface to the English Ordinal). In the ancient
Church the (three) orders of ministry established by
Christ and his apostles universally prevailed. But
afterwards, in the Roman Church, the different
ministrations gradually fell into the hands of the
most of the churches other ecclesiastical persons of
inferior rank, who were allowed to take part in the
institutions of religion. The three belong to the sacred,
or major orders; the others to the petty, or minor or-
ders, the number of which varies in the different
churches, and even at times in the same church. In
the Romish Church there are four such orders, including,
and in addition to the three sacred orders, doorkeeper,
exorcist, reader, and acolyth. All these the Council of
Trent enjoins to be received and believed on pain of
anathema. The priesthood is the principal order, and
is supposed to impress an indelible character on those
who receive it. The origin of the inferior orders is ob-
scure, and they are not mentioned before the days of
Cyprian and of Tertullian; and, indeed, although some
modern Romanists count five (including subdeacon),
and even seven orders, many modern historians say
that the number varied in different periods. The re-
puted Ignatius (Ep. ad Adiastuckii) 12 excludes acoly-
ty, and yet, by adding singers and copiate, swells the list
to six; the constitutions bearing the name of Clement
Romans (ii, 11) count but four—subdeacon, readers,
singers, and doorkeepers. The Apostolic Canons, as
they are called (lix), name only the first three; and,
in a word, the number five is perhaps less selected than
any other by the majority of ancient Church writers,
whether authentic or apocryphal. Their use in
early times was to form a nursery for the regular
clergy, and to assist in the performance of certain
lower and ordinary offices, to which laitym, if authorized by
the bishop, were equally competent. More than one
clergy, indeed, prohibited those who had once em-
barked even in this inferior ministry from returning to
secular employments; nevertheless they were esteemed
sacerdotes by the ancient canons. They did not receive
any ordination at the altar, nor, for the most part, any
imposition of hands. By the fifth canon of the fourth
Council of Carthage, subdeaconas, on their appointment,
were successively enjoined, the first, to serve the hands of the altar;
the bishop, and a ewer and towel from the archdeacon—a
ceremony implying their duties, namely, the prepara-
tion of the sacred utensils for the service of the altar.
But they were not allowed in any way to minister at
the altar, to step within its rails, nor even to place the
holy vessels on their table; ditto duties of the acolytes
were symbolized when the archdeacon presented them
with a taper in a candlestick and an empty pitcher:
they were to light the candles in the church, and to
supply wine for the Eucharist. Concerning the duty
of the exorcists, from the obscurity attaching to the
history of the enigmatics intrusted to their care, it is
difficult to speak with certainty; it is thought that pe-
culiar sanctity and especial reservation must have been
accorded them, who were exercised in this power as a
gift to the adornment of evil spirits. Nevertheless,
some of the occupations of the exorcists, as no-
ticed by the ninthic canon of the fifth Council of
Carthage, belong rather to inferior keepers than to
spiritual guardians of the demoniacs. Thus, although
at Carthage the bishop could not ordain them, if they
were enjoined to pray over their unhappy charges, they
were also to take heed that they were busied in whole-
some exercises, such as sweeping the church pavement,
etc., by which idleness might be banished, and the
temper thereby be deprived of favorable opportunities
for assault. They were also to look after the daily
meals of their patients. The bishop, on their ap-
pointment, presented them with a book containing the forms
of exorcising. The readers, as their name implies, read
the Scriptures publicly, not, however, at the bema of
the altar. The epigram in the Tertullian Historia
eupauricii sunt cum eis qui Verbum Dei non profe-
ntur, Con, Cap. 29, is addressed to them, and the
bishop's words, upon placing in their hands the
Bible, by which he conferred the privilege, sufficiently
denote their separation from the regular clergy: "Ac-
cipe, et estus lector verbi Dei, habitarum, sibi filietar et uti-
lier impleveris officium, partem cum eis qui Verbum Dei
non pronuntier, Con, Cap. 29." In the Romish Church
the bishops delivered the keys of the church;
and they appear to have had about as much claim to the
spiritual gifts conferred by ordination on the regu-
lar ministry as is possessed by the beadle or pew-
openers of a modern church. It is related of them, at different pe-
riods of ecclesiastical history, we read either of the keepers, or
singers, sometimes called usolyoloi, because as pre-
centors they prompted and suggested the musical
parts of the service to the remainder of the congrega-
tion; of copiate (exorathiam, to labor), or jasulli, who looked
after funerals, and seem to have united in one the func-
tions both of a sexton and an undertaker; and of para-
bolani, who undertook the dangerous work (parabolos
Xpovos) of attending the sick.

The Church of England declines admitting orders
as a sacrament, for the reasons stated in her twenty-
fifth article, and of these the most important is the
idea of vesting the secular with sacraments with baptism and the Lord's Supper, for
that they have not any visible sign or ceremony or-
dained of God." The doctrine of the Church of Rome
on the subject of orders is thus given:

"Can we affirm that there is not in the
New Testament a visible and external priesthood, or
that there is not any power of consecrating and offering the
two bodies and blood of the Lord, and of ministering and ret-
aining the same, but only an office and bare ministry of
preaching the Gospel; or that those who do not preach are not
priests at all? How can we fail to recognize that the
priest shall have to preside, that is, the bishop, for he
shall have to preside, there are not in the Catholic Church orders, both greater and lesser,
by which, as by certain steps, advance is made unto the
priesthood: let him be anathema. Canon III. If any
canon, by ordination or consecration, shall ordain a
Ghost is not given; and that the bishops do therefore
and that a character is imparted which is nor
them to be anathema. Canon IV. If any one
shall have to preside, there are not in the Catholic Church orders, both greater and lesser,
by which, as by certain steps, advance is made unto the
priesthood: let him be anathema. Canon III. If any
canon, by ordination or consecration, shall ordain a
Ghost is not given; and that the bishops do therefore
and that a character is imparted which is nor
them to be anathema. Canon IV. If any one
shall have to preside, there are not in the Catholic Church orders, both greater and lesser,
by which, as by certain steps, advance is made unto the
priesthood: let him be anathema. Canon III. If any

In all episcopal churches, including under that gen-
eral description of the Church of England, the Protestant
Episcopal, Methodist Episcopal, and Romanish churches,
three ranks of clergy are recognized: the bishop (q.v.),
the priest or presbytery or pastor (q.v.), and the deacon
(q.v.). In general, bishops are the highest, the archdeacon
of the church—archbishop, primate, metropolitan, etc.—all
belong to the order of bishop; and the lower officials—
ORDERS, RELIGIOUS 410

ORDINAL

ious profession, arose from the necessity under which the monks laid of defending the possessions which they had accumulated, and the supposed duty of recovering Palestine from the Saracens, and retaining possession of it. The most famous orders of this kind were the Hospitalitarians or Knights of St. John of Jerusalem, the Knights Templars, and the Teutonic Order. Many other military orders existed, and not a few continue to exist, particularly in Spain and Portugal. The phraseology of the old military orders is preserved in the orders of knighthood of modern times, into which individuals are admitted in reward for merit of different kinds, military and civil. The three mendicant orders of Franciscans, Dominicans, and Carmelites were instituted in the 13th century. Their principal purpose was to put down the opposition to the Church, which had begun to show itself, and also to reform the Church by example and precept. At a later period the Order of the Jesuits was founded, with the object of increasing the power of the Church and putting down heresy.—Chambers, Cyclop. s. v. Notices of the more important orders, monastic, military, and mendicant, will be found under articles prefixed. See also KNIGHTS; MONASTIC

ORDIBARI, a sect of the Catharists, who held that a Trinity only began to be when Jesus Christ was born—that is, Jesus became Son of God by his reception of the Word; and when this preaching attracted the Holy Ghost began to exist. In their pacts, that of the south of France, their adherents were called "bos homonum," and "contumens," believing that at a later period joined the bos ordo, whence probably the name. See Neander, Church Hist. iii, 366; Kurtz, Manual of Ch. Hist. sec. 138. See also ALBIGENSES; BOGOMILS; CATHARI; ORTLIBENSES.

 Ordinal is the name of the book which contains the forms observed in the Church of England and the Protestant Episcopal Church for the ordination and consecration of bishops, priests, and deacons. It was prepared by a commission appointed in the third year of Edward VI (1550), and was added to the Book of Common Prayer, after approval by Parliament. It was slightly modified in the reign of Elizabeth, and was again revised by the Convention of 1661.

The English ordinal, in its general structure, resembles the ancient services used for a like purpose, but possesses much greater simplicity, and has some features—e. g. the numerous questions addressed to the candidates—peculiar to itself. There are separate services for different offices and orders. The candidates may be divided into five classes: "men of the camp," "men of the city," "men of the cloister," "men of the sequestered," and "men of the pious bands," but these are practically joined in one, and used on the same day. The service for the consecration of bishops is altogether distinct. The ordination takes place at one of the Ember seasons, and during the public service, after morning prayer and a sermon on the subject, and begins with the presentation of the candidates by the archdeacon. The bishop inquires as to their fitness, and commends them to the prayers of the congregation. The litany is then said, with special petitions for the candidates for each order, and the commendation of the community is made in a diocese, and prescribed for them a uniform constitution, recommending at the same time a vow of celibacy. The Basilian rule subsists to the present day in the Eastern Church. Next in order of time was the Benedictine Order, founded by St. Benedict at Nursia, who considered a mild discipline preferable to excessive austerity. The offshoots from the Benedictine Order include some of the most important orders in ecclesiastical history, among others the Carthusians, Cistercians, and Premonstratensia. The Order of Augustinians professed to follow the spirit of St. Augustine; they were the first order who were not entirely composed of laymen, but of ordained priests, or persons destined to the clerical profession. The military orders, of which the members united the military with the religio-

Orders, Religious are conventual communities comprehended under one rule, subject to one superior, and conversant with religious life. Religious orders are reduced to five kinds, viz. monks, canons, knights, mendicants, and regular clerks. They are, however, generally classified simply as monastic, military, and mendicant. White order denotes the order of regular canons of St. Augustine. Black order denotes the order of St. Benedict. Religious military orders are those instituted in defence of the faith, privileged to say mass, prohibited from marriage, etc.

The earliest comprehension of monastic societies under one rule was effected by St. Basil, archbishop of Csesarea in Cappadocia, in the 4th century. The Benedictine Order was established in his diocese, and prescribed for them a uniform constitution, recommending at the same time a vow of celibacy. The Basilian rule subsists to the present day in the Eastern Church. Next in order of time was the Benedictine Order, founded by St. Benedict at Nursia, who considered a mild discipline preferable to excessive austerity. The offshoots from the Benedictine Order include some of the most important orders in ecclesiastical history, among others the Carthusians, Cistercians, and Premonstratensia. The Order of Augustinians professed to follow the spirit of St. Augustine; they were the first order who were not entirely composed of laymen, but of ordained priests, or persons destined to the clerical profession. The military orders, of which the members united the military with the religio-

curate, rector, parson, etc.—all belong to the order of priests or presbyters. The non-episcopal churches, i. e. the Presbyterian, Congregationalists, Baptists, some Lutherans, and others, recognise only one order, the presbyterate, no other officers being considered ministers, although lay elders and deacons are sometimes set apart by the individual church. In the Baptist Church, there are more than three orders—bishops, priests, and deacons. In the primitive Church the word ordo simply denoted the distinction between the clergy and the laity, the former being the ordo ecclesiasticus. See ORDO.
priest in the Church of God," etc. The only other ceremo-
nomy is the presentation of each candidate with the little in token of authority to preach; as the deacons had been before presented with the New Testament in
token of authority to read the Gospel. The service
concluded with the administration of the sacrament of
the Lord's Supper. In the office for the ordering of deac-
ons, the expression is more common, but we cannot find the
words, "Receive the Holy Ghost," etc., or grant author-
ity to forgive or retain sins. The consecration of bish-
ops is performed by an archbishop, or some bishop ap-
pointed in his place, and two or more of his suffragans,
and may be administered on any Sunday or holy day. In the
service for the consecration of bishops the form is this:
"Then the archbishop and bishop present shall lay
their hands upon the head of the elected bishop, kneeling
before them upon his knees, the archbishop saying, "Re-
ceive the Holy Ghost for the office and work of a bishop
in the Church of God, now committed unto thee by the
laying on of our hands, in the name of the Father, and of
the Son, and of the Holy Ghost. Amen. And remember
that thou stir up the grace of God which is given thee by
the imposition of our hands, for God hath not given us
the spirit of fear, but of power and love and sobriety."
See Procter, Commentary on the Book of Common
Prayer: M'Elr innon, Doct. of the Church, p. 164, 167,
303; Hook, Eccles. Diet. s. v.; Chambers, Cyclop. s. v.;
Churton, Defence of the English Ordinal (Lond. 1878,
8vo).
 Ordination, an institution established by lawful
authority. Religious ordinances must be instituted by
the great institutor of religion, or they are not binding:
minor regulations are not properly ordinances. Ordi-
nances once established are not to be varied by human
caprice or mutability.
Human ordinances, established by national laws, may
be varied by other laws, because the inconveniences
arising from them can only be determined by experi-
ence. Yet Christians are bound to submit to these in-
s titutions, but not to interpose laws they do not en-
 hance by divine authority; not only from the considera-
tion that if every individual were to oppose national
institutions no society could subsist, but by the tenor of
Scripture itself. Nevertheless, Christianity does not
interfere with political rights, but leaves individuals,
as well as nations, in full enjoyment of whatever advan-
tages the constitution of a country secures to its subjects.
The course of nature is the ordinance of God; its
laws are but "the ordinances of heaven:" and every
planet obeys that impulse which the divine Governor has
instinctually imparted (Jer. xxv. 36).

ORDINANCES, CHRISTIAN. See Ordinances
of the Gospel.

ORDINANCES OF THE GOSPEL are institutions of
divine authority relating to the worship of God;
such as, 1, baptism (Matt. xxviii, 19); 2, the Lord's
Supper (1 Cor. xii, 24, etc.); 3, public ministry, or preach-
ing and reading the Word (Rom. x, 15; Ephes. iv, 10;
Mark xvi, 15); 4, hearing the Gospel (Mark iv, 24;
Rom. x, 17); 5, public prayer (1 Cor. xiv, 15, 19; Matt.
v, 6; Psa. v, 17, 7); 6, singing of psalms (Col. iii, 16;
Ephes. v, 19); 7, fasting (Ias. i, 9; Matt. ix, 15; Joel ii,
12); 8, solemn thanksgiving (Ps. l, 14; 1 Thess. v, 18).
See these different articles; also MEANS OF GRACE.

Ordinary (Lat. ordinarius) is a word used in com-
mom and canon law to designate one who has regular or
immediate jurisdiction, in opposition to those who are-extraordinarily appointed. In England the bishop is
commonly the ordinary for a diocese, and the archbishop
for a province. Says Coke, in his Second Institute,
386, "This word signifieth a bishop, or he or they that
have ordinary jurisdiction, and is derived ab ordinis;"
and gives this quaint reason, that the name was selected
for the purpose of keeping the individual who bears it in
perpetual remembrance of "the high order and office
that which is not designed to be a matter of mere
constrained uniformity, but rather was to be left open,
within the range of certain great principles, to minor

Ordination, in a common, but limited and technical
sense, is the ceremony by which an individual is set
apart to an order or office of the Christian ministry.
As the laying on of hands is usually a distinctive fea-
ture of that ceremony, many persons have very inade-
quately understood the Ordination, and have equated it
as identical with it; whereas imposition of hands (qu. v.)
has various other uses, and only belongs to the cere-
mony in question as a symbolic act indicative of the
bestowment of spiritual gifts or power.

In a broader, and in fact its only important sense, ordi-
nation signifies the appointment or designation of a
person to a ministerial office, whether with or without
attendant ceremonies. The term ordination is derived
directly from the Latin ordinatio, signifying, with ref-
ence to things or affairs, a setting in order, an estab-
lishment, a foundation, with reference to one of the
aptitude of a peculiar task, as identical with it; whereas imposition of hands (qu. v.) has various other uses, and only belongs to the cer-
emony in question as a symbolic act indicative of the
bestowment of spiritual gifts or power.

variations of detail that might be appropriate to the circumstances of the future. Had any particular form of ordination been essential to the perpetuity of the Church, the validity of the sacraments, or the salvation of men, it seems but reasonable to infer that the Head of the Church himself would have appointed that special form, and have given precepts for its continuance. In truth and in faith, such appointment by the Head of the Church, Jesus, we have to ascertain to what extent the apostles became the instructors of the Church in reference to the subject in question; and, finding in their writings an absence of specific precepts, it is necessary to collate the several examples of ordination which they have recorded and to test them impartially by the light of the Word. When it is narrated (Mark iii, 14) that "he ordained twelve, that they should be with him, and that he might send them forth to preach," the original word employed is ἀπόστειλεν, signifying he made, in the sense of constituted or appointed, on the model of or in imitation of the Lamechian appointment (John xv, 16). "Ye have not chosen me, but I have chosen you, and ordained you, that ye should go and bring forth fruit, and that your fruit may remain," the word rendered ordained is ἀποστέλλω, I have set or appointed you. In Luke x, 1, where it is recorded that he appointed fourteen, he first refers to the seven deacons and separated them two before his face," the Greek word rendered appointed is ἀποστέλλω, literally signifying he pointed out or appointed by designation. In all these cases Christ illustrated the divine authority which he asserted in his preface to the great and final commission given prior to his ascension: "And Jesus came, and spake unto them, saying, All power is given unto me in heaven and in earth. Go ye therefore and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost; teaching them to observe all things whatsoever I have commanded you: lo, I am with you always, even unto the end of the world" (Matt. xxviii, 18-20). "He needed not that any should testify of man, for he knew what was in man" (John ii, 25). Hence, while he remained on earth as the Visible Head of his own Church, he chose and ordained his own ministers, after the manner or in the spirit of that original appointment.

1. The Analogies and Counter-Analogies of Judaism. — The character of the Antediluvian is the subject of this discourse. We find that certain special provisions for the introduction of the civil and sacred officers into the Jewish Church, made by the Lord, are alluded to throughout the Hebrew dispensation, and are found in the light of the Christian dispensation no exterior act of ordination was practiced by Christ. The calling, appointing, and ultimate commissioning of the twelve apostles was his personal act, unattended, so far as the inspired record shows, with any symbol of external or external act. When it is narrated (Mark iii, 14) that "he ordained twelve, that they should be with him, and that he might send them forth to preach," the original word employed is ἀπόστειλεν, signifying he made, in the sense of constituted or appointed, on the model of or in imitation of the Lamechian appointment (John xv, 16). "Ye have not chosen me, but I have chosen you, and ordained you, that ye should go and bring forth fruit, and that your fruit may remain," the word rendered ordained is ἀποστέλλω, I have set or appointed you. In Luke x, 1, where it is recorded that he appointed fourteen, he first refers to the seven deacons and separated them two before his face," the Greek word rendered appointed is ἀποστέλλω, literally signifying he pointed out or appointed by designation. In all these cases Christ illustrated the divine authority which he asserted in his preface to the great and final commission given prior to his ascension: "And Jesus came, and spake unto them, saying, All power is given unto me in heaven and in earth. Go ye therefore and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost; teaching them to observe all things whatsoever I have commanded you: lo, I am with you always, even unto the end of the world" (Matt. xxviii, 18-20). "He needed not that any should testify of man, for he knew what was in man" (John ii, 25). Hence, while he remained on earth as the Visible Head of his own Church, he chose and ordained his own ministers, after the manner or in the spirit of that original appointment.

2. The Appointment of the Jewish prophets was by direct command or inspiration from God, without any ceremonial instance of their sacred office, save the token of the anointing oil upon their persons and their garments (see Exod. xxviii, 40, 41; xxix, 1, 19, 30; Lev. viii, 12, 30; x, 7; xxi, 12). The Levites, as assistants to the priests, were consecrated by the sprinkling of the water of purification, washing their clothes, and the offering of sacrifice (Num. viii, 6-22). The laying on of hands appointed for the Levitical consecration was performed by the people, not as conferring an office or spiritual gifts, but as symbolical of the transmission of their sins to the Levites, who, in turn, transmitted the same by laying their hands upon the heads of the bullocks offered for a sin-offering and a burnt-offering (ver. 10-12).

3. The most direct, if not the only real analogy of the Old-Testament Scriptures to the Christian custom of ordaining the office of the ministry, and the ceremony by which, under the command of God, Moses transferred to Joshua a portion of his responsibilities as a leader and guide to the congregation of Israel (see Num. xxvii, 15-28). In this narrative it may be seen that Moses, prior to his departure from the people whom he had been appointed to lead from Egypt to the land of promise, prayed to the Lord to set a man over the congregation, . . . that the congregation of the Lord be not as sheep which have no shepherd. And the Lord said unto Moses, Take thee Joshua the son of Num, a man in whom is the spirit, and lay thine hand upon him. . . . And Moses did as the Lord commanded him: and he took Joshua, and set him before Eleazar the priest, and before all the congregation; and he laid his hands upon him, and gave him a charge, as the Lord commanded him. And Moses laid his hands upon Joshua. In this transaction, the office or function of the apostolic minister is exemplified by the outward and visible act of the imparting of the Holy Ghost to the chosen apostles, which was remarkable in the bestowal of the extraordinary gift of the Holy Ghost to enable them to discharge their duties as ministers of the Gospel, is evident, not only from a just interpretation of the passages themselves, but specially so from the practical illustration of their meaning, given by the success of the ministry of the apostles without all their subsequent ministry. In pursuance of the Saviour's instructions they proceeded,
not to assume personal or official prerogatives, but to employ the Gospel plan of salvation as the one and only agency for securing the remission of sins. In so doing they faithfully warned the wicked of their certain condemnation and ruin outside of the provisions of the Gospel. This they taught men the necessity of prayer and personal faith in Christ as the indispensable condition of pardon and salvation.

2. In the whole apostolic history not a single intimation is given of the possibility of the absolution of sin by human or priestly power. On the contrary, that idea is entirely foreign to the early Church. Thus St. Peter, speaking of Simon, who, although a baptized believer, committed a heinous sin by thinking "that the gift of God might be purchased with money" or imparted by ceremonial acts. For this Peter charged him, saying, "Repent of this thy wickedness, and pray God if perhaps the thought of thine heart may be forgiven thee." (Acts viii, 13-24).

This transaction, as well as in his address to the Jews at Jerusalem, and in fact throughout his entire ministry, the teachings of the apostle Peter illustrate the scriptural doctrine that God only can remit sin, and the anxiety to secure that end. (Cf. Gal. iii, 21, 25; Acts x, 38; xxvi, 18.) Moreover, in his denunciations of sin and encouragements to righteousness, Peter showed precisely the nature and extent of the apostolic prerogative of the keys, of binding and loosing, which was no more nor less than the right to demand and hold in abeyance the duties due from the Lord to show the men whom he had chosen for that work, and the laying on of hands, to express the co-operative action and benediction of the Church.

5. These principles were illustrated in the *exercise* and *ordination* of the apostles. On this very occasion the apostle Peter felt that the grace of the Holy Ghost to preach to others the same Gospel that had become to them the power of God unto salvation. The function of the Church, therefore, as to ordination was not to create or bestow the gift of the ministry, but simply to recognize and authenticate it when bestowed by the Holy Ghost. Hence, for example, when St. Peter said to the assembled Church, "Why stand ye therefore in holyGhost and to the Gentiles, and that in company with a brother of a lower degree, and at the hands of prophets (preachers) and teachers who were not numbered among the apostles.

8. The Appointment of Matthias to the Apostleship.—The peculiar feature in this transaction (see Acts i, 21-26) was a standing anxiety to secure in whom the Lord had chosen for the vacant place among the commissioned witnesses of his resurrection. Hence the election or nomination by the Church of two candidates, prayer by the apostles, and the casting of lots, to determine which of the two should be numbered with the eleven apostles. In this case, as in those of the Lord's direct appointment, there was no imposition of hands.

4. The Ordination of the Seven Deacons.—This marked event in the history of the Church occurred in immediate sequence of the outpouring of the Holy Ghost at the Pentecost, and from the space allotted to it in the sacred record (Acts vi, 2-6), as well as from the fact that all the apostles were present, it may now be considered as it doubtless was during the whole apostolic period, a model ordination for the subsequent Church, for thereby the Church was strengthened in its demand for men of honest report, full of the Holy Ghost and wisdom; (2) An election or choice by the Church on that basis; (3) Prayer by the apostles; (4) The laying on of hands, presumably by several of the apostles, as representatives of the whole body. In this act the apostles illustrated their idea of the mission and duty of the Church in reference to its future ministers, and established a precedent of perpetual authority. It was a precedent, moreover, in obvious harmony with the precept of our Lord, given in connection with his appointment of the apostles, and therefore, also, with that of the Lord of the harvest, that he would send forth laborers into his harvest. The apostles evidently regarded this as the standing commission and perpetual
the Author of Revelation. He foresaw that the rite of the laying on of hands would be sadly abused; that it would be represented as possessing something like a magic potency; and that it would at length be converted, by a small class of ministers, into an ecclesiastical monopoly. He has therefore supplied us with an antidote against the abuse by permitting us, in this simplicity of rite, to lay our hands upon others, without exacting from them the virtue of the ordination here described? Did it furnish Paul and Barnabas with a title to the ministry? Not at all. God himself had already called them to the work, and they could receive no higher appointment from human hands. Not necessarily in this way. He bestowed the laying on of hands and ordination on men; and it is in this sense that Paul says, 'I put the hands of the elders on thee in thy presence.' And Barnabas and Saul were ordained (Acts 13:3). And, again, he says (Titus 1:5), "To Titus, mine own son after the common faith: Grace, mercy, and peace, from God the Father, and the Lord Jesus Christ our Saviour. For this cause left I thee in Crete, that thou shouldest set in order the things that are wanting, and ordain elders in every city, as I have appointed thee; in case of disorder or want of order, let them be called in, as it was before, and proceed, as he had already done in his letters to Timothy, to state in detail the essential qualifications of ministers, those which he had himself required, and those which he demanded that his successors should require; and by reverence in his own example in both cases (see Acts xx. 2; 2 Cor. viii, 19) he clearly intimates their duty of enlisting the prayers and the godly judgment of the churches in the selection and ordination of ministers of the Word and administrators of the ordinances of God. Such was apostolic ordination, so far as we can know from the inspired writers, and since they have written nothing on the subject further for our learning, we may safely infer that nothing more is essential. A few points involved in the above scriptural examples may be summarily noted: (1) It is always in the sense of appointing his disciples to ministerial service by his own authority, and without employing any exterior ceremony. (2) In the election of Matthias to the place in the apostolate from which Judas fell, it was deemed sufficient to make the prayer of presentation, and to cast two names in the lot; but when Peter had chosen; and in like manner, without any exterior ceremony, "he was numbered with the eleven apostles." (3) The laying on of hands as a ceremonial of ministerial ordination was first practiced by the apostles in the case of the seven deacons, in immediate sequence of the miracle of the Pentecontos. (4) It was subsequently practiced in the ordination of Paul and Barnabas, and the elders of the New-Testament Church. (5) No account is given of any one having been ordained in the office of bishop in distinction from that of elder, still less is there any intimation that bishops were or were to become the only officers in the Church competent to ordain ministerial candidates; whereas elders were frequently, if not always, associated even with apostles in the act of ordination. Such, as to form and ceremony, was ministerial ordination as practiced in the apostolic Church. As to effect, it claimed only to separate, by solemn acts on the part of the Church, holy men, already called of God to the exclusive work of the ministry. No intimation is given that ordinary men were invested with any prerogatives or powers in any form or degree, while, on the other hand, various cautions are given, both in the example
ORDINATION

415

ORDINATION

and precepts of the apostles, against such an idea. That a large body of ministers thus ordained and instructed were at the head of the various Christian churches at the close of the apostolic period is a matter of the clearest inference both from the sacred record and the earliest accounts we have of the post-apostolic period. The following facts may be given as examples of Church history, in which, by persecution from without and divisions and corruptions within, many changes were wrought in the customs and theories of Christians.

1. Introduction of Corrupt Theories and Practices. The greater part of these changes originated in a tendency, itself the result of a decline in spirituality, to incorporate with the ritual of the Church certain ceremonies of Judaism, while corresponding ideas from Greek and Roman paganism were not rigidly excluded. Most startling among these corruptions, and most life of other outflowing errors, was the idea of a Christian priesthood parodied from the Jewish. There not having been one word or act in all the teachings of Christ or his apostles to countenance such an idea, we may well be amazed that before the end of the 5th century, we find these assertions and these practices, as foreshadowed in the name of the apostles for the teaching and guidance of the Church. The subjoined extracts are from the so-called Constitutions of the Holy Apostles (see Cason, Ecclesiastical), a notorious collection of decretals, prescriptions and instructions, though, as seen in the light of modern criticism, obviously spurious, nevertheless were circulated and received both as authentic and authoritative for centuries. Having been put forth at a period when literary criticism was unknown, and having been adroitly harmonized with the drift of corrupt practice then gaining currency among the Greek and Roman churches, neither the literary nor the religious authority of this strange collection of documents was questioned for more than a thousand years. The lowest and the true view to be taken of these documents is that they are descriptives of theories and practices that prevailed when they were written, and from that time forward:

Prevented Authorship. — The apostles and elders to all those who, from among the Gentiles, have believed on the Lord Jesus Christ" (bk. i, 1).

"We who are now assembled in our place, Peter and Andrew, James and John, some of Zebedee, Philip and Barto, by the authority of the confessions of the bishop and presbyters, we, the citizens of Heaven and the members of the Church, have known that at Jerusalem, when the truth was spoken, the Lord and bishop of Jerusalem, and Paul the teacher of truth, and the confession of the Church of the Lord, have ordained us, and have given us the seal of the Holy Spirit. And when he, who was commissioned to write to you this catholic doctrine for the confirmation of you to whom the oversight of the Church universal is committed, said to us, "Establishment of the Hierarchy. — As to those things which have happened among us, ye yourselves are aware. For ye know perfectly that those who are by us named bishops and presbyters and deacons were made by prayer and by the laying on of hands, and that by the difference of the names is indicated the difference of their employments. For not every one of them that is ordained, as the case was in that time and counterfeited priesthood of the calves under Jeroaboam. For if there were no rules or distinction of orders, it would suffice to perform the duties of the office under one title. But according to the Lord the series of things, we distributed the functions of the ministry to the bishops, those of the priesthood to the presbyters, and those of the diaconate to the deacons. Whereas they often interchanged them both to the deacons, that the divine worship might be performed in purity. For it is not lawful for a deacon to offer the sacrifice, or to baptize, or to give the blessing, either small or great. Nor may a presbytery perform ordinations, nor a bishop, unless it be at his own discretion and to have order and are overruled. For such as these do not fight against us in the bishop's, but against the universal bishop, even against the bishop of the Father, as the bishop of Jerusalem, his assistant, the High-priests, priests, and Levites were ordained by Moses. And so it is to be understood that the twelve, and the other thirteen, were ordained; and by the apostles St. James and St. Clement, and others with us (that we may not belittle the power of water and the Spirit), these were ordained. Moreover, by us all in common were ordained presbyters and deacons and sub-deacons and readers" (bk. viii, § 46).

4. Conclusion. — "Ye therefore, at the present day, O bishops, are to your people priests and Levites, ministering to the holy tabernacle, the holy Catholic Church; who stand at the altar of the Lord your God, and offer to him reasonable and unbloody sacrifices, as we do, in great respect. And ye are to the holy prophets, rulers, governors, and kings— those who are mediators between God and his faithful people, who receive and declare the Word, and acquiesce in the will of the Church with the Scriptures. Ye are the voice of God and witnesses of his truth. In this Word, you shall acquiesce with them, to the worship. He is the teacher of piety, and next after God he is your father, whom he hath begotten you again to the adoption and consecration of water and spirit; and he is your ruler and governor; he is your king and potentate; he is the next and last and son of God, who hath a right to be honored by you" (bk. ii, 9, 50).

Let the above strange language be contrasted with the inspired utterances of the apostle Peter himself (see 1 Peter vi, 1-4): "The elders which are among you, I exhort, who am also an elder, and a witness of the sufferings of Christ, and also a partaker of the glory that shall be revealed: Feed the flock of God which is among you, taking the oversight thereof, not by constraint, but willingly; not for filthy lucre, but of a ready mind; neither as being lords over God's heritage, but being ensamples to the flock. And when the chief Shepherd shall appear, ye shall receive a crown of glory that fadeth not away." Concerning Ordinations. — "Wherefore we, the twelve apostles of the Lord, who are now together, give you in charge these our divine constitutions concerning every ecclesiastical assembly which is present with you, according to the chosen vessel, our fellow-apostle, and James the bishop, and the rest of the Presbyter, in the name of the seven deacons. In the first place, therefore, Peter saith that a bishop to be ordained is to be, as we have already all of us appointed, one who is called, not named, to the office, who is anointed by the people. And when he is named and approved, let the people assemble, with the presbytery and bishops that are present, and their deacons, and let them give their consent. And let him who is preferred among the rest of the people, and the presbytery and the people whether this is the person whom they desire for their bishop. If they do not give their consent, let them ask further whether he has a good testimony from all men, etc. And if all the assembly together do, according to truth and not according to prejudice, testify that he is such a one, let them then the third time ask again whether he is truly worthy of this ministry; and if they agree the third time that he is worthy, let them all be demanded their vote: and when they all give it willingly; let him be ordained and consecrated, because being made, let one of the principal bishops, together with two or three, stand near the altar, the rest of the bishops and presbyters praying silently, and the deacons holding the holy Gospels open upon the head of him that is to be ordained, and give God's consent. The form of prayer prescribed is a long one, but contains the following:

"Grant to him (the bishop), O Lord Almighty, through thy Christ, the communion of the Holy Spirit, that he may have power to remit sins according to thy command; to distribute grace, to make the sinner to be a son; to loose every bond according to the power which thou gavest to the apostles: that he may please thee, in meekness and a pure heart, steadfastly, unblamably, unrepentantly, while he offereth to thee a pure and undefiled sacrifice, which by thy Christ hast approved as the mystery of the new covenant. . . ." And when he hath prayed for these things, let the rest of the priests add Amen, and, together with all the people, let them make the prayer, let one of the bishops elevate the sacrifice upon the hands of him that is ordained: and early in the morning let there be an offering for him, among the rest of the bishops, they all giving him the kiss of the Lord" (bk. viii, § 46).

Let a bishop be ordained by two or three bishops. II. "Let a presbyter be ordained by one bishop, as also a deacon and the rest of the clergy" (bk. viii, § 41).

The above are merely specimen extracts from the Apostolic Constitutions, and mention only a few, not a great deal, that in the ancient Church not only were bishops and priests ordained to offer "the unbloody sacrifice" of the mass and to remit sin, but also that the number of officers in the Church admitted to ordination was beginning to be increased. (For the forms of ordination for subdeacons and readers, see above, bk. viii, § 19, 20, 21, 22.) Other parts of the same Constitutions prescribe the preparation by ordained bishops of the
ORDINATION

2. It enumerates seven clerical orders exclusive of seven grades of bishops, of which the pope is supreme in authority. The seven orders are those of priest, deacon, subdeacon, acolyth, exorcist, reader, and porter.

3. It affirms that bishops only are competent to confer ordination.

4. That the effect of ordination is to impress on the recipient an indelible mark or character, so that he who has once been a priest cannot again become a layman.

5. That ordination to the priesthood confers the power of offering sacrifice in the Church for the living and for the dead.

The above positions are sufficiently supported by the following extracts from the Canons and Decrees of the Council of Trent:

On the Sacrament of Orders—"Canon I. If any one shall say that there is not in the New Testament a visible and external priesthood, or that there is not any power of consecrating and offering the true body and blood of the Lord, and of remitting and retaining sin, but only an office and bare ministry of preaching the Gospel, or that those who do not preach are notpriests at all: let him be anathema.

Canon II. If any one shall say that, besides the priesthood, there are not in the Catholic Church other orders, both greater and lesser, by which, as by certain steps, advance is made into the priesthood: let him be anathema.

Canon III. If any one shall say that orders or sacred functions, the ordination of which is appointed by Christ the Lord; or that it is a certain human thing devised by men unskilled in ecclesiastical matters, or that it is a worldly thing, and that human ministers of the Word of God and the sacraments: let him be anathema.

Canon IV. If any one shall say that by sacred ordination, men are made saints: let him be anathema. For therefore vainly say, Receive ye the Holy Ghost; or that a character is not thereby given: or that he who has once been a priest can again become a layman: let him be anathema.

Through the Sacrifice of the Mass—"Canon III. If any one shall say that the sacrifice of the mass is only a sacrifice of praise and thanksgiving; or that it is a bare commemoration: let it be consecrated on the cross, but not a propitiatory sacrifice; or that it avails him only that receives it: let him be anathema. For he who is not to be absolved for the living and the dead for sins, punishments, satisfactions, and other necessities: let him be anathema.

It is true that Roman Catholic theologians have differed not a little in their discussions of some of these topics, as, for instance, in reference to the number of the sacraments and the matter and form of the sacrament of orders; but in the main they have acquiesced in the points stated above, and in the sequences inseparable from them. It may be added that the formula of ordination prescribed by the Council was still used for the Greek Church.

It is this: 'Receive power to offer sacrifice to God, and to celebrate masses as well for the living as for the dead, in the name of the Lord. Amen.'

The principal features of the above-stated theory of ordination were developed before the separation of the Catholic Church from the Greek Church, and with which the rite was administered differed in the two churches only in unimportant particulars, such as that of anointing the ordained person with oil, which the Roman Church practiced and the Greek Church did not.

In the Roman Church, in particular, great stress is laid upon the presentation of the sacred utensils and symbols as a part of the ceremony of ordination. To the priest is presented a chalice and paten (a small plate used to hold the host or consecrated wafer); to the bishop a ring, a crosier, and a pallium (q. v.); and to the churches the keys, the crosier, the pallium, as symbols of their functions and obligations. While, therefore, both churches propagated in its essentially erroneous features a common theory as to ordinations, it was the Romish Church which carried out the greatest extremes of ceremonies, and made the worst uses of the theory in connection with the discipline of the clergy, as well as in the celebration of a system of sacerdotism that embodied blasphemous pretensions, and that was often prostituted to the most wicked and selfish purposes. Examination shows that this very theory of the Roman Church as to orders and sacraments lies at the centre of the system referred to,
ORDINATION is the fountain-head of some of its worst corruptions. Once grant that ordination in direct line and by divinely appointed persons is the essential channel for the descent of God's grace to man, and there is conceded a power as far-reaching and dangerous as it is far removed from scriptural truth. That the Roman see made this claim without disguise, and enforced it by the most extraordinary and unconstitutional measures, is proved by multitudinous facts of history. As a specimen, take the following statement concerning pope Boniface IX: "At first Boniface did not publicly take money for the higher orders, but he took it from the spendthrift trusty agents. At length, after ten years, at once to indulge, palliate, and to establish this abominable, he sub- stituted for the monies of the nobility of the Church the emolu- ments of every bishopric and rich abbey, calculated on a new scale, triple that in which they stood before in the papal books. This was to be paid in advance by the can- didates for promotion, some of whom never got possession of the benefices. That was matter of supreme indifference to Boniface, as he could sell it again. But as these candidates rarely came to the court with money equal to the demand, which was the normal practice, advanced the sum on exorbitant interest. The debt was sometimes sued for in the pope's court. The smaller benefices were sold from the day of the appoint- ment, with shameless and scandalous notoriety. Men were driven to sell their benefices, convinced by every means of searching out the ages of hoary incumbents, and watching their diseases and infirmities. For this service they were rewarded by the greedy prelates at Rome. On their re- port the tariff rose or fell. Benefices were sold over and over again. Graces were granted to the last purchaser, with the same word "Prefatio," which literally means 'full florins. That was superseded by a more authoritative phrase (at fifty florins), a prerogative of precedence. Benefices already granted were sometimes cancelled in favor of a higher bidder: the pope treated the lower offer as an injury to himself and him. In the same year the secretary, Theodoriciùs à Niem, had known the same benefice sold in the course of one week to several successive claimants. The benevolence were so rapidly sold that, if money was not at hand, the pope would receive the price in kind—in wine, sheep, oxen, horses, or grain. The officers were as skil- full at selling them as himself, and his officers, and his twenty expectatives, and receive the full benefits. The argumented popes, however, were the death-bed of all his officers. Their books, robes, furniture, money, es- cheated to the pope. No grace of any kind, even to the poorest, was signed without its florins fee. The pope, even during mass, was seen to be consulting with his secretaries on these worldly affairs. The accumulation of prin- cipality on unworthy men was seen plain even in holy times" (Milman's Latin Christianity, vol. vii, bk. xiii, ch. 10).

It is obvious that such a shameless traffic in clerical ordi- nations and appointments could only have been main- tained in a Church in which and in an age when the people had been taught to believe that their salvation depended on the absolutor of priests fitted for their task by the indelible mark of papal ordination irrespec- tive of their fitness or lack of fitness. Now, these sources of purgatory and indulgence sources of illimitable pecuniary extortions, while it also made the power of the popes terrible in their long struggle with emperors in reference to the right of investiture (q. v.) and temp- oral sovereignty. In those struggles monarchs and nations were reduced to submission by the fulmination of bulls, bans, and interdicts, which, aside from the fund- mental idea of divine grace flowing solely through the channel of papal ordination and authority, would have been as powerless as they are now seen to be ab- sorbed.

V. Protestant Reaction.—The above-stated theory of ordination, attended by corresponding practice, may be said to have had universal and unquestioned prevalence throughout the Christian world from the 6th to the 16th century. Irrespective of its gradual and insidious be- ginnings, the world found itself in 1517 in the presence of the Great (A.D. 595-606), and it reached its present form of administration in the Pontificale Romanum (q. v.) of pope Clement VIII, in 1596. A prominent feature of the great Reformation was a violent and gen- eral opposition on the part of the people to the dogma and system of ordinations of the Roman Catholic Church. Without exception, Pro- estants rejected the five fictitious sacraments of the Ro- man Church, including orders. The Reformed churches only rejected the doctrines but the ceremonies of the Roman Catholic Church in reference and place no essential difference on scriptural precedents as their sole guide in ordination as back on scriptural precedents as their sole guide in ordination to the modes of appointing and ordaining their clergy. A partial exception has to be stated in reference to the Church of England, which retained a portion of the Roman ritual of ordination. This is not, however, to this as well as many other subjects, different inter- pretations of Scripture prevailed, and consequently dif- ferent customs of ordination were established. Most of the Reformed churches, doubtless owing to the great abuses so long associated with the name and character of bishop, have preserved the episcopal order of ordination through the Lutheran Church retained it under the name of su- perintendent. There was great unanimitv in accepting the ordination by elders as appropriate and valid, but in some of the churches two classes of elders were recog- nized—teaching (clerical) and ruling (lay) elders. In some, as in the Church of Scotland, the clerical presby- teries only join in the imposition of hands. Among the Independents and Baptists the power of ordination is considered to inhere in any given congregation of be- lievers. The qualifications of a candidate are first as- sumed to be a personal grace, as far as possible approved by a church, calling him to its ministry, and be accepting, proceeds to confer ordination upon him by prayer and the imposition of hands. The Protestant churches of Germany, Holland, Switzer- land, France, Denmark, Poland, Hungary, Scotland, etc., have only preserved the episcopal ordination as a relic on the derivation of their clerical orders, from the fact that their founders, such as Luther, Calvin, and others, had been episcopally ordained as presbyters. They all unite in considering the call of God expressed through the suffrage of the Church as the requis- ite to true ministerial character, while ordination is simply an appropriate ceremony designed to authen- ticate that call, and to publicly separate ministers to the sacred office. In most of the churches named, as well as in the American Presbyterian, Baptist, and Congre- gational churches, deacons are only lay officers of the Church, and do not receive the imposition of hands. As we have not thought proper to allot space for the formulæ of the Greek and Roman ordinations, so now we deem it unimportant to introduce details as to cere- monies and variations in the administration of ordination among Protestants. Such variations find their prototype in the scriptural ordinations, of which no two recorded were conducted in all respects alike, a fact that plainly indicated the non-essentiality of fixed forms, as well as the Christian liberty of adapting forms to circumstances. With a suitable dispensation, suffrage can be expected to prevail throughout the Protestant world in the view that the validity or propriety of ministerial ordinations does not hinge on any form of ceremony, or any pre- tence of tactual succession, and this unity of sentiment is sustained by a corresponding charity and mutual re- spect. The exceptions referred to, though not stated in the creed of any Protestant Church, has nevertheless existed from the period of the Reformation, and has re- sulted in a voluminous, and not seldom acrimonious controversy, which promises to descend to future genera- tions.

VI. High-Church Controversy on Ordination.—In or- der to comprehend the nature and bearings of this con- troversy, it is necessary to take into view some well- known facts respecting the peculiar constitution of the Church of England. They are indicated in the follow- ing language and approved by J. Macaulay's introduction to his History of England:

"Henry VIII attempted to constitute an Anglican Church differing from the Roman Catholic Church on the point of the supremacy, and on that point alone. His success in this object was extorted from the English Reformers were eager to go as far as their brethren on the Continent. They unwillingly condemned as anti-
ORDINATION

had stubbornly adhered, and which Elizabeth reluctantly abjured. She may feel it strong reproach to be
bitten indifferent which had formed part of the polity or ritual of the synodical Babylonians who died
maestros at Gloucester for his religion, long refused to
wear the episcopal vestments. Bishop Ridley, a martyr of so faithful a character was, after all, driven from
diocese, and ordered the Enchirid to be administered
in the middle of churches, at tables which the papists ir-
reverently used as altars. The primate then
nounced the clerical garb to be a stage-dress, a fool's
cost, a relic of the Ammonites, and profaned the word
which stood about to extirpate such degrading abominations.
Archbishop Grindal long hesitated about accepting a mi-
ator of reformed faith, and at length gave way to the
nary of licentiousness and the licentiousness of
 consecration. Bishop Parkhurst uttered a fervent prayer
that the Church of England would propose to herself the
Church of the Reformed and the Christian community.
Bishop Ponet was of opinion that the word bishop
should be abandoned to papists, and that the chief
officers of the purified Church should be called superin-
tendents. When it is considered that none of these pre-
ouncements be taken as the essence of the Protestant
party, it cannot be doubted that, if the general sense of
that party had been followed, the work of reform would
have been much more effectually accomplished. The
churches took the chief part in settling the conditions of the alliance which produced the Anglican Church was Thomas Cranmer. He was ordered to renounce in words which at that time needed each other's assistance. He was at once a divine and a courier. In his character of divine he was peculiarly fitted, by his education, as well as by his
Swiss or Scottish Reformer. In his character of courier he was destined to be a sufferer, but his courage and his
bishops of Rome, and might be expected now to serve as night guides to the English king and of their
ministers. To this day the constitution, the doc-
trines, and the services of the Church retain the visible marks of Cranmer's influence and promising. Such
occupies a middle position between the churches of Rome and Geneva. The Church of Rome held that episcopacy was of divine institution and that certain ceremonies
of grace of a high order had been transmitted by the
imposition of hands from the apostles. The Church of
England received their commission on the Galilean mount to the bishops who met at Trent. A large body of Protes-
tants on the other hand, regarded papacy as positively un
lawful, and persuaded themselves that they found a very
different form of ecclesiastical government preferred
scribed in Scripture. The founders of the Anglican Church took a middle course. They retained episcopacy, but they did not declare it to be an institution essential to the
welfare of a Christian society, or to the efficacy of the
sacraments. Cranmer, indeed, on one important occa-
sion in the year 1539, used the word ordination, but in his primitive times there was no distinction between bishops and priests, and that the laying on of hands was altogether superstitious.

This formidable array of antitheses by no means exhaus
the list of practical contradictions embodied in the
Church of England. Rejecting the supremacy of the
pope, she accepted, or, rather, had forced upon her,
that of the temporal sovereign, subjecting her to the
most extravagant assumptions of an unscrupulous mon-
arch. Macaulay, on this point, says: "What Henry
and his favorite counsellors meant at one time by
supremacy was certainly nothing less than the whole
power of the keys. The king was to be the pope of
his kingdom, the vicar of God, the exponent of catholic
verity, the channel of sacramental graces. He arro-
gated to himself the right of deciding what was orthodox doctrine and what was heresy, of
drawing up and imposing confessions of faith, and of
giving religious instruction to his people. He pro-
claimed that all jurisdiction, spiritual as well as tem-
poral, was derived from him alone, and that it was in
his power to create or废除 his own people. It was
left to him to take it away. He actually ordered his seal to be put to com-
misions by which bishops were appointed, who were to
exercise their functions as his deputies and during
his pleasure. . . . As he appointed civil officers to keep his
lands and his revenues, and to exercise justice in his
name, so he appointed divines of various kinds to
preach the Gospel and to administer the sacraments.
It was unnecessary that there should be any imposition

of hands. The king—such was the opinion of Cran-
mer—given in the plainest words—might, in virtue of
authority derived from God, make a priest, and the
priest so made need not ordination whatever."

Under Edward VI there was a speedy revolt from
such extreme absurdities, and a form of ordination by
the imposition of hands was incorporated in the ritual.
But the Church of England, as it stood until the
election of her bishop, was rigorously required to represent the best Protestantism of the English Ref-
ornation, while the mass is rejected, yet the idea and
order of a priesthood is retained in a form for ordaining
all ministers of the second grade as priests. Notwith-

standing that the order of priest, as such, was
assignedly distinguished for the prominence it gave to
the scriptural idea of a personal divinity—call an idea
that had been obliterable, if not obliterated, in the rituals
of the Church for a thousand years previously. It
required a solemn declaration on the part of every can-
didate for holy orders of his personal conviction that he
is "moved by the Holy Ghost" to take upon himself this
sacred ministration. Bishop Burnet explains the
action of the British Reformers in this regard in the fol-
lowing language:

"Our Church intended to raise the obligation of the
 duties of the priest, as before, to the persuasion of
must more fully and more strictly than any Church
ever did in any age, at least, as far as my inquiries can
cast. I am sure that ours is, and will be, more
formal sponat and at the altar such as were ordi-

ded deacons and priests. That was, indeed, always
denounced by our Reformers. The Roman or Greek
Pallottine do we find any such solemn vows and
promises, and none made by priests or deacons;
neither do any print of this appear in the constitutions or
the ancient canons of the Church. Bishops were
asked many questions, and their oaths passed as the
first canons of the Fourth Council of Carthage. They
were required to promise their faith and to promise to obey the canons, which is still ob-
served in the Greek Church. The question is more ex-
press in the Roman pontifical, and the first of these de-
corums a promise 'that they will observe the Canons
of the Roman Church, according to the Holy Scriptures,'
which was the foundation upon which our bishops justi-
ied the Reformation, since the first and chief of all their
vows binding them to this, it was to take place of all oth-
er, and if any other parts of those omissions contradicted this, such as their oaths and admissions in the canons
of Rome, they said that these were to be limited by this. . . .
Our Reformers, observing all this, took great care in re-
forming the office of the deacon, and the ordinations, and omissions are both the
charge that is given and the promises that are to be
taken to be very express and solemn, so that both the ords the and the ordained might be rightly instructed in their duty, and struck with the awe and dread that they ought to be
unlawful. It is another important article of our forme,
yet to make the sense of these promises go deeper, they
are to be made at the altar, and in the nature of a
swearing. . . . Our Lord commanded us that when we
say our Saviour's words the form of ordination, must be con-
strued and interpreted by that it is Christian, and that
the bishops are only his masters to pronounce his
mission."

Yet the very ritual which required the candidate for
ordination to solemnly profess that he was "inwardly
moved by the Holy Ghost to take upon him this
office and ministration to serve God," and that he was truly
called "according to the will of our Lord Jesus Christ,"
also required him, in "the Oath of the King's Suprem-
acy," to swear, "I from henceforth will accept, repute,
and take the king's majesty to be the only supreme
head north of the Anglo Saxon kingdom."

To embody in any system a such a series of contradic-
tions and oppugnances was to plant the seeds of inter-
minable strife, and to such a strife has the Church of
England been subjected from the days of the Reforma-
tion downward. Nor has the strife been limited to
words. Her spirit has been with open hand and fierce
and martyrdoms were frequent results. Sometimes one
party was in the ascendancy, sometimes the other, and,
in the course of events the controversy which of our
subject was the centre assumed a variety of phases.
Sometimes the issue was direct, as between popery and
Protestantism, but more often it was indirect, or be-
tween the papacy, Protestant prelacy, and Puritanism.
At length various forms of dissent and independency
ORDINATION 419 ORDITION

began to appear, only to multiply forms of discussion, into nearly all of which questions relating to ordination entered more or less prominently. While separation led forth into distinct organizations perhaps the greatest part of the more pronounced anti-priestarians, there has always remained in the Church of England an influential body of evangelical or Low Churchmen, who, while they accept episcopacy as a scriptural form of Church government, and episcopal ordination as both appro

ric is regarded not as a third order, but as an office to which an eldern having been elected is consecrated by prayer and the imposition of hands by other bishops and presbyters of the bishop to ordain ministers, not singly, but in co-operation with presbyters. In all this the churches in question claim to follow ancient, if not strictly apostolical usage. They also insist with great urgency upon the personal conviction of each candidate for any form of the ministerial office, and the need felt by many that the ground of irregularity and illegality, nevertheless zealously assert the main principle of the Romish theory of succession. Indeed, the bigotry and pretensions of the Anglican High-Churchmen have rarely found a parallel, even in the mindlessness of their claims, both as judged from opposite points by Romanists and other Protestants. The debate between them and their brethren of lower views, as well as with those large branches of the Protestant Church whose orders and ministry they have attempted to denigrate, has never been of less interest to the extension of knowledge in England and other Protestant countries than when, under the conditions of general enlightenment, the subject was debated more as a matter of opinion and ecclesiastical partisanship, in which tastes and associations largely governed individual action.

The 18th century witnessed a new phase of this old controversy, growing out of the rise of Methodism. When John Wesley, as an evangelical clergyman, found himself providentially called to provide for the administration of the Christian ordinances to the religious societies which he had been instrumental in originating, he naturally turned to the episcopal form of Church government. In England, he first applied to the bishop of London for the ordination of some of his lay-preachers. Having been repeatedly refused, he associated with himself other presbyters, and proceeded to ordain deacons, elders, and a superintendent or bishop for America. In justification of this act he pleaded the urgency of the providential necessity, his conviction of the utter baselessness of the theory of uninterrupted lineal succession, and the precedent established by the apostolical Church of Alexandria, in which, as recorded by Jerome, the presbyters elected their whole line of bishops, from the days of Mark the Evangelist and Peter for one hundred and fifty years. From this action of Wesley there not only arose the Wesleyan Methodist churches of Great Britain, Canada, and Australia, in which presbytery ordination is practiced, but also the Methodist Episcopal churches of the United States and Canada. In the last-named churches the episcopal office, apart from any prelatical idea or assumptions, has had a wide field of action, and, in connection with an earnest spirit of evangelical effort, has been attended with a measure of success worthy of apostolic times. In the Methodist Episcopal churches of the United States and Canada, when the Church of England expugnated of the word priest and of every term that might be construed to express the idea of sacerdotalism, or any temporal headship of the Church of Christ. Two clerical orders only are recognised, those of deacon and elder. The bishop-
ORDINATION

less the mediaval theories of ordination, both as to its magical effect, its indelible mark, and its lineal descent from the apostles, however polluted the line through which it has been transmitted, still have their advocates. The American Catholic Church is bound by the Roman canons and decrees of the Council of Trent, while its Anglo-Catholic imitators struggle to maintain similar claims with far less consistency. In their emergency they seek affilia-
nations with the Greek Church and the Old Catholics, without direct acknowledgment from either. Mean-
time the logic of events is working out very important demonstrations, by showing, on the one hand, how little the truth and power of Christianity are dependent on external ceremonies, and, on the other, not only how powerless, but how misleading, ceremonies are as a substitute for divine grace, which is the only power over the sinned ministers of Christ. A survey of the active and progressive agencies of Christianity in the world shows that a very large proportion of them are sustained by churches which reject as baseless the theory that covenanted grace descends solely through a series of ceremonial ordinations. When, indeed, a comparison as to purity of life, zeal in Christian good works, and fruits following is instituted between churches practicing presbyterial ordination and those making high assumptions of ecclesiastical prerogative, based on a line of ordi-
nations that is almost completely lost prior to the first pope of Rome, the former certainly are not found wanting. To the ordinary mind such facts are more convincing than theoretical arguments, whether based on question-
able precedents or on quotations from the fathers; and the more such facts are multiplied the less need there will be of a perpetual reproduction of the arguments so often stated and restated during the last three hundred years. Nevertheless a knowledge of the controversy is more or less a necessity to every candidate for ordina-
tion, not only as a means of satisfying his own mind, but as a means of preparing for any new phase the con-
troversy may assume hereafter.

The most recent phase of High-Church development has won for itself the title of Ritualism (q. v.). Ritualists, as such, are usually identical with high pretended to the importance of successional ordinations, but in their extreme attention to the reproduction of mediaval ceremonies they are not followed by all who accept the theory of tactual succession. The attempts of the ritualistic party of the Church of England to reintroduce Roman Catholic ceremonies into the worship of Protes-
tantism have often been met by certain laws of the realm. In America similar attempts have found but little favor before an eminently practical people, who, so far as they choose Romanism at all, evidently prefer the system without disguises to a feeble imitation.

The most active controversy in reference to the question of ordination prevailing in the United States at the present time is between the high and low churchmen of the Protestant Episcopal Church. The former appear to have been advancing within recent years both in numbers and the assertion of principles of ex-
clusiveness and intolerance. As a result a new organiza-
tion was formed in 1873, entitled the Reformed Epis-
copal Church. That Church, organized under the super-
vision of the late bishop George D. Cummins, claims to represent the Protestant views and practices of the Church of England as understood and vindicated by the Reformers of the period of Edward VI, and prior to the papal reaction under Bloody Mary. While professing and practicing episcopal ordination, it does not deny the validity of other forms following Scripture prece-
dents, and applies to godly men. On the principle of succession, whatever of validity inhered in the orders of the Protestant Episcopal Church was handed down to the Reformed Episcopal Church by episcopal ordina-
tions from the seecling bishop before the attempt to impose their authority by excommunication could be consummated. Thus a somewhat new form of issue pertaining to the question of ordination is opened be-

between representative classes or grades of Episcopalians.

The literature of the subject of ordination and orders is a reflection on that last part with the Roman Catholic and High-Church controversy, being rarely found in direct and separate treatises on either side. While an exhaustive list would require altogether too much space, the classified selection herewith given will be found sufficient for any ordinary extent of information.

1. Historical.—Schaaf, Hist. of the Apostle Church; Killen, Ancient Church; Mosheim, Hist. of the First Three Centuries; The "Apostolic Constitutions"; Bing-
am, Antiquities of the Christian Church; Coleman, Christian Antiquities; Campbell, Lectures on Ecclesi-
astical History; The Bible, the Moral, and the Histrotry.

2. Romanistic.—Bellarmine, De Ordine; Canons and Decrees of the Council of Trent; Catechism of the Council of Trent; Kenrick, On the Primary; id. On An-
glican Ordinations; Wiseman, On High-Church Claims; Milner, End of Controversy.

3. Anti-Romanistic.—Beza, De Ecclesia; Wilt, SYN-
nesi Populans; Cramp, Text-Book of Popery; Elliot, Romanian; Barrow, On the Supremacy; Palmer, Let-
ters to Wiseman on the Errors of Romanism; Hopkins, "End of Controversy" Controversed.

4. Anglo-Prelatical.—Survey of the Pre-
tended Holy Discipline; Hooker, Ecclesiastical Policy; Bishop Hall, Episcopacy by Divine Right; Mason, De-
cence of the Church of England Ministry; Courayer, Validity of Anglican Ordinations; Jeremy Taylor, On Episcopacy; Cave, Ancient Church; Wheelan, On Common Proper; Percival, On Apostolic Succession; Jeremy Collier, Ecclesiastical History of Great Britain; Palmer, On the Church; "The Oxford Tracts"; Words-
worth, Theophilus Anglicorum; Manning, Unity of the Church; Pusey, Eirenikon; Stubbs, Episcopate Succeed-
ning on Episcopacy; Wordsworth, The Christianity.

ORDO

Order, as applied to the clergy, has been the occasion of controversy. Many contend that it is adopted from the Roman language, and used by Tertullian and others in the classic sense, to exhibit the patriarchal rank of the clergy, like the ordo senatorius of the Romans. The fact is, that the word is used to denote the difference between the clergy and the people—the ordo ecclesiasticus and the laity; and in this sense it has been understood since the close of the second century. See Eddle, Christian Antiquities, p. 208, 212.

Ordo Romanus is the name given to every rule of the Romish Church in general, and particularly to the rules concerning worship. Like reguli hierarchici, the rule and its exposition, or statuta (statute, ec. &, &c.), ord or ordinaries (ec. liber), or ordinale and ordinale (ec. liber) (Du Fresne), signifies a collection of rules for worship. In the course of time there appeared many such libelli, which, in so far as they related to the same subject, were compiled together. The exact time when these different libelli appeared is not ascertained, nor that of their compilation. As early as the 5th century there was a distinction between the sacramentarium, containing the prayers for the Eucharist, the antiphonarium (liber), with the liturgical chants, and finally the ordines, constituting the ritual. See F. Probst, Verwaltung d. hochzeitlichen Eucharistie (Tbingen, 1858), p. 8 sq.

Various ordines appeared in the different churches, but none were greater and more universal than the Ordo Romanus, for the present as early as the 5th century used every exaction to have the worship conducted everywhere according to the usages of Rome. The subsequent publishers of rituals often confounded the Roman with other rituals, hence the number of those which were published is very great. In 1580, the Ordo Romanus in his Sacramentarium, preceding his edition of the Antiqui libri ritu-], sancta Romana ecclesiae, in the Museum Italicum, t. ii (Paris, 1724, 4to). The oldest Ordo Romanus is attributed to bishop Gelasius (+ 496) by Mabillon (as above) and Muratori, Liturgia Romana vetus (Venice, 1746), i. 269 sq. Yet from the Exposit. f. Innoecent. I. Ad Decemviri, in 416 (in cap. 11, dist. xi), there appears to have existed an older ordo, which is now lost. The ordo attributed to Gelasius, although it often refers to Leo I., seems to have been written by an unknown author in the time of Felix III., the predecessor of Gelasius (Bahr, D. christlich-romische Theologie, p. 364). This ordo, as well as that published by Mabillon and Muratori as No. 1, was in general use in the 9th century, as is proved by the use made of it by Amalas- untur. These two ordines, together with those pub- lished by Mabillon and by the companion of somewhat later date, treat of the missa pontificale. The ordines 5 to 10 of Mabillon, which are of much later origin, and belong probably, in part at least, to the 11th century, refer to the missa episcopalis, the ordo senatus (in the strictest sense of the word; (in the sense of ordinatio), the forms of ordination for the different degrees.

The Domini, fera sestia Parraseve, in subeto teneto, ad reconciliandum pontificem, ad visitandum infirmum, ad communicandum infirmum, ordo seculardi clericos Romanam fraternelitatem. We now possess but fragments of most of these ordines. It is therefore doubtful whether Bernard of Pavia, who quotes numer- ous passages from the Ordines Romani in his De Extranegavit (which are also given in the collection of decreets of Raymondus a Pennafort, c. ix, De officio archiepiscopi, 23; c. ix, De officio priorei, i, 29; c. ix, De officio custodis, i, 27), obtained or borrowed them from an ancient Ordin Romani or from a later one. At any rate, the Ordines Romani are not to be found in any of the printed ordines.

Among the oldest published Ordines Romani are those of George Cassander (Coloni, 1569, 1561; also in his De officio archiepiscopi, c. ix, De officio prioris, i, 29; c. ix, De officio custodis, i, 27), obtained or borrowed them from an ancient Ordin Romani or from a later one. At any rate, the Ordines Romani are not to be found in any of the printed ordines.

Among the oldest published Ordines Romani are those of George Cassander (Coloni, 1569, 1561; also in his works, Paris, 1616), Melchior Hiltorp (Coloni, 1568), and G. Ferrarius (Romani, 1616; Paris, 1616, 1624, fol.). About 1143 Benedict, a canon and chorister of St. Peter's, com- pilated an ordo entitled Liber pollicitatis ad Oblationem de Castello (the future pope Celesti II, then cardinal of St. Marc). He describes the divine worship for the whole ecclesiastical year, with special reference to the papal see. This ordo, compiled in 1160, the Council of Pavia, in 1160, the clergy made use of a Liber de vita et ordinatione Romani pontificum (Fertz, Monumenta Germ. iv, 126). The Ordo Romanus con- tained also the forms to be used at the coronation of the emperor. On the form used in 1192 see Fertz (p. 187 sq.), Mabillon, and Mattone. This form was adopted in the ordo written in 1192 by cardinal Cencius (Mabillon, No. 12). Since the 13th century the ex- pression Ceremoniale Romani seems to have gradually taken the place of that of Ordo Romanus. Gregorius X (1272) caused a new ordo on the election and the functions of popes to be compiled (Mabillon, No. 13). A subsequent one appeared in the middle of the 14th century (Mabillon, No. 14), which Mabillon attributes to cardinal Gaetaus. One on the ecclesiastical functions of the Roman clergy was compiled by Petrus Amelius, bishop of Sinigaglia (+ 1399); a larger work of the same kind, by Augustinio Ficcolomini, was published at Venice in 1516, with the sanction of Leo X, under the title of Ritual ecclesiasticorum sive sacramentorum ceremonialis libri tres. The Pontificale Romanum of Gelasius III. (1560) was revised in 1580, often read (and revised), and finally took the place of the old Ordines Roman. At present there is an ecclesiastical calendar published each year in ev- ery diocese, which fills the place of an Ordo Romanus, and generally bears the title Ordo officii divini iuxta Romanam Ecclesiam. This Romanus atque decreta sacra ritual congregations. See Hoffmann, Nova scriptorium ac monumentorum collectio, ii, 16 sq. (Leips. 1733, 4to); Rheinwald, Ordo Romanus, in Ezech g., Gruber, Allgeme. Encyklopdie, sec. iii, pt. v; Herzog, Real-Encyklop. x, 689 sq. (J. P. N.)

Ordo Salutis. See Salvation.

Ore. See Gold; Metal.

Oreb (Heb. Oreb, '449' [Judg. vii, 25; Isa. 26, 118], a raven; Sept. &Opji v. w. 'Opsi; Josephus, 'Opsi, Ant. v. 6, 5), the name of a sheik of the Mid- ianites, who, with Zeeb ("the wolf"), invaded Israel, and was killed by Judah and the brethren of Oreb (Num. 31. The title given to them by the name, A. V. "princes") distinguishes them from Zebah and Zalmonn, the other two chieftains, who are called "kings" ('Opsi), and were evidently superior in rank to Oreb and Zeeb. "They were killed, not by Gideon himself, or the people under his immediate conduct, but by the men of Ephraim, who rose at his entrance and took possession of the flying host, and harried them back to the land of Midian. This was the second act of that great tragedy. It is but slightly touched upon in the narrative of Judges,
but the terms in which Isaiah refers to it (x, 26) are such as to make it a truly awful sight. He places it in the same rank with the two most tremendous disasters recorded in the whole of the history of Israel—the destruction of the Egyptians in the Red Sea, and of the army of Sennacherib. Nor is Isaiah alone among the poets of Israel in his reference to this place; for in the term Midianites which points his allusion, their discomfiture and flight are prominent in that of the author of Ps. lxxiii. In imagery both obvious and vivid to every native of the nusiy hills and plains of Palestine, though to us comparatively unintelligible, the Psalmist describes them as driven over the uplands of Gilead like the clouds of chaff blown from the threshing-floor; chased away like the spherical masses of dry weeds which course over the plains of Esdraelon and Philistia—flying with the dreadful hurry and confusion of the flames that rush and leap from tree to tree and hill to hill when the wooded mountains of a tropical country are by chance ignited (Ps. lxxiii, 18, 14). The slaughter was concentrated around the rock at which Oreb fell, and which was long known by his name (Judg. vii, 25; Is. x. 26). This spot appears to have been in the valley of Aijalon whence the heads of the two chiefs were brought to Gideon to encourage him to further pursuit after the fugitive Zebah and Zalmunna. See below.

O'REB, THE ROCK (טֵבָּה הָרוֹקָא) Sept. in Judg. סִיִיָּה הָרָהוַה; in Is. יִסִיָּהוֹ הָרְתָשָׁא; Vulg. Pietra Oreb, and Horeb), the "raven's crag," the spot at which the Midianish chieftain Oreb, with thousands of his countrymen, was slain by the Ephraimites, and which probably acquired its name therefrom. It is mentioned in Judg. vii, 25, and Is. x, 26. Some have inferred that the rock Oreb and the winepress Zeeb were on the east side of the Jordan (Gesenius, Rosenmüller, etc.). Perhaps the place called "Orbo" (וֹרְבָּה), which is mentioned in the Bersabah Babylon (Reland, Polyan. p. 918) is stated to have been in the neighborhood of Bethshean, may have some connection with it. Rabbi Judah (Ber. Rabb. ib.) was of opinion that the word "Orbim" ("ravens") which ministered to Elijah were no ravens, but the people of this Orbo or of the rock Oreb, an idea upon which even St. Jerome himself does not look with entire disfavor (Comm. in Is. xv, 7), and which has met in later times with some supporters. But a more careful examination of the same narrative renders it probable that the locality of Oreb's death was on the east side of the Jordan, and that the Ephraimites, having there intercepted the Midianites, afterwards brought the heads of the foe to Gideon after he had crossed the Jordan (see Keil, Comment. ad loc.). A writer in Fairbairn's Dictionary, a v. Kezies, suggests the "low projecting point opposite the Jericho ford, still bearing the equivalent title of Ezbal-Gharah, "the Raven's Nest" (Robinson, Later Bib. Res. p. 298); but this is rather far south, and needs further examination.

O'reb (Lat. Oreb), the Occidental form (2 Esdr. ii, 33) of the name of Mount Horeb (q. v.).

Oreb. See RAVEN.

Orbites or Horebites. See HUSSITES.

Oregim. See JAAK-OREGIM.

Oregio, Agostino, a learned Italian prelate, was born in 1577 at Santa Sofia, in Tuscany. Sent to Rome to pursue his studies, he ran there the same risk as Joseph, the son of Potiphar, and had, like him, sufficient force of character to overcome his situation. This virtuous act touched the heart of cardinal Bellarmine so vividly that he became quite well affected towards the young pupil, and was induced to place him in a noble college at his private expense. It is said Oregio, who had a good knowledge of Greek by means of seeing and hearing his patron write and dictate in that tongue. After being theological counsellor to pope Urban VIII, he was made cardinal Nov. 18, 1683, and archbishop of Benevento, where he died July 12, 1685. The collection of his works has been published by his nephew (Rome, 1697, fol.), in which are distinguished a dissertation entitled Aristotelis vera de rationali animae immortalitate sententia, written at the request of cardinal Barbe- rini, afterwards Urban VIII. In it Oregio takes pains to defend the truths against the repugnance of modern Protestants. Other noteworthy treatises of his are, De Deo.—De Trinitate.—De Incarnatione.—De Angelis.—De Pec- coris, etc., which, frequently reprinted, have for a long time been used in the Italian Roman Catholic seminaries.

Orémus (Let us pray) is an exclamation used in the early Christian Church to invite the different classes of praying ones to worship. It was usually followed by Ecceuna gens, and at the conclusion of the prayer was heard the exclamation Laveate from the mouth of the deacons. See Siegell, Christliche Aethihermii, iii, 241, 242.

O'ren (Heb. יֵרֶן, as in Is. xlv, 14; Sept. ἀραλὼν, v. r. ἀράλων and ἀράλων), third named of the five sons of Jared, the house of Judah (1 Chron. ii, 25). B.C. about 1658.

Oren. See ASH-THREK.

Orenburg, one of the eastern frontier governments of European Russia, is bounded on the south-east by the River Ural, and extends between the governments of Tobolok on the north-east and Samara on the south-west, covering an area of 78,885 square miles, and containing a population of 1,198,860. This is the government proper; but the so-called Orenburg Country, including the recently organized government of Samara, the lands of the Orenburg and Ural Cossacks, and of Khirghiz tribes, under different names, extends over an area of 539,880 square miles, from the Volga to the Sir-Daria and the Amu-Darya, and has 2,370,375 inhabitants. The products of the soil, the surface, soil, climate, and fauna of this extensive country are of the most various kinds. The country is traversed by numerous navigable rivers, by means of which and by canals it is in communication with the Caspian and Baltic seas and with the Arctic Ocean. The main streams are the Kama, a branch of the Volga, with its affluent the Bieiaia and Tchusssova; the Tobol, a branch of the Obi, and the Ural. Forests abound, except in the south; the soil is fertile, but is not yet much cultivated; and other natural, especially mineral, resources are rich, but in great part undeveloped. The climate is in general healthy. The government is divided into nine districts; the centre of the governor-generalship is at Orenburg, though the chief town is Ofa.

The inhabitants of Orenburg are made up of Russians, Kalmucks, and Bashkirs, Tartar, Khirghiz, and certain Finnish tribes. The trade, mainly in the hands of the Bashkir tribes, is chiefly by Bokhara, Khiva, Tashkent, and the Khirghiz (q. v.)—the exports are gold, silver, and other metals, corn, skins, and manufactured goods; the imports cattle, cotton—the demand for and supply of which have greatly increased since the American revolution—and the other articles of the Asiatic trade. The imports are either disposed of to Russian merchants in the custom-house on the frontier, or are carried by Asiatic traders into Russia, and sold at the great national market of Nijni-Novgorod. See Daniel, Handbuch der Geographie ii, 399, 927; Beck, The Russias of the Soviets (1854); H. Maunsell, The Russian Empire (1856).

Oresame, Nicolas, a learned French prelate, was born at Caen, Normandy, in the 13th century. He was educated at the university in Paris, and was appointed grand master of the College of Navarre in 1556, and was finally made bishop of Lisleux in 1572. He died in 1582. He published several scientific treatises, translated the Ethic and Politica of Aristotle into French, and
ORESTES contributed to theological literature the following work: 1. De Arcti-Christo quoque ministrata ac ejusdem ordvnta, sigina propinquis simul ac remotis IV continebatur, & several Sermones. He has been credited with a French popular version of the Scripture, but there is no ground for such assertion. See Du Pin, Bibliothéque des Aut. Éccl. 14ème Siècle; Moret. Grand Dict. Hist. a. v. 7; Hoefer, Nouv. Biog. Générale, a. v.

ORESTES (Osipetis), a Christian physician of Tyana, in Cappadocia, called also Aresex, suffered martyrdom during the persecution under Diocletian, A.D. 303, 304. An interesting account of his tortures and death is given by Simeon Metaphrastes (ap. Surius, De Probat. Simocr. Hist. vi, 231), where he is named Aresex. See also Merodach. Grorcre. i. 128 (ed. Urbain. 1727). Orestes has been canonized by the Greek and Roman churches, and his memory is celebrated on Nov. 9. See Bzovius, Nomenclator Simoct. Profess. Medicor.

Orfand, Jacinto, a Spanish Dominican, noted as a missionary, was born at Jana in 1578. He early took an interest in religious life, and finally entered the Dominican Order in Barcelona. In 1605 he asked to be sent to the Philippines. In 1607 he went to Japan, and there he labored about fifteen years. He wrote an account of the progress of Christianity in that country, entitled Historia eclesiastica de los sucesos de la Cris-tiandad de Japón (Madrid, 1628, 4to). It was originally prepared to cover only the years 1600-1621, but Colado brought it down to 1622. Orfand was put to death by the Japanese in 1622. See Hoefer, Nouv. Biog. Générale, a. v.; Fernandez, Hist. Eccles. de Nuestros Tiempos, p. 289; Écharit, Scriptor. ord. Predic.; ii, 425.

Organ occurs in the Authorized Version as the rendering of the Hebrew שורב, ζαύρω (Gen. iv, 21; Job xxv, 12), or σαύρω (Job xxx, 31; Psa. cl, 4), which properly means that which is inflated or blown, from σαυρος, to blow; hence, a wind instrument. It was applied to a reed or pipe, either simple or complex, and is so understood by most interpreters (see Dodsbeilach, Hist. Trin. p. 301; Gesenius, Thesaur., p. 988). Thus the Septuagint, in Psa. cl, renders ὑπαραγων, which means properly an instrument for any purpose; but is applied by Plato (Lact. 188 D.), and others to the pipe; and from which comes our word "organ." In Job the Sept. vaguely renders by ψαλλεται; but in the other passages this version renders ψαλλτα, the word from which guitar is corrupted. This cannot be right, for many reasons; indeed, in two of the passages quoted it is named in connection with the cithara or lyre (Heb. נָעִיר) as a different instrument (Gen. iv, 21; Job xxx, 31). "In Gen. iv, 21 it appears to be a general term for all wind-instruments, opposed to kinnor (A. V. 'harp'), which denotes all stringed instruments. In Job xxi, 12 are enumerated the three kinds of musical instruments which are possible, under the general terms of the timbrel, harp, and organ. The שורב is here distinguished from the timbrel and harp, as in Job xxx, 31, compared with Psa. cl, 4. Our translators adopted their rendering, 'organ,' from the Vulgate, which has uniformly organum, that is, the double or multiple pipe. The Chaldee in every case has חֶזָּב, עָבָב, which signifies 'the pipe,' and is its rendering of the Hebrew word so translated in our version of Isa. xxx, 29; Jer. xlvii, 36. Joel Bril, in his second Preface to the Psalms in Mendelsohn's Bible, adopts the opinion of those who identify it with the Panдел pipes, or syrinx, an instrument of undetermined ancient origin, and common in the East. It was a favorite with the shepherds in the time of Homer (II. xviii, 526), and its invention was attributed to various deities: to Pallus Athenae by Findar (Pth, xii, 12-14), to Pan by Pliny (xii, 57; com. Virg. Ecl. i, 26; Tibull. ii, 5, 80), by others to Marsyas or Silenus (Athen. iv, 184).

Organ (ὑπαραγων, an instrument of any kind), οἶχος, is the noblest and most powerful species of musical instruments. It appears, however, that the word organ was applied indiscriminately to almost every kind of musical instrument used in religious worship by the early Church. But after a time the word came to be reserved to a wind instrument consisting of reeds or pipes, which the Greeks and the Romans, and also the Eastern Christians, used in civil and private festivals, and which since the 8th century has been used in religious worship.

The syrinx. (From a Greek sculpture.)

In the last-quoted passage it is said that Hermes first made the syrinx with one reed, while Silenus, or, according to others, two Muses, Seuthes and Rhonakes, invented one with many reeds, and Marsyas fastened them with wax. The reeds were of unequal length, but equal thickness, generally seven in number (Virg. Ecl. ii, 36), but sometimes nine (Theoc. Id. viii). Those in use among the Turks sometimes numbered fourteen or fifteen (Calmet, Dict. in Mus. Inst. Hist., in Ugelini Thes. xxxii, p. 790). Russel describes those he met with in Aleppo. 'The syrinx, or Pan's pipe, is still a pastoral instrument in Syria; it is known also in the city, but very few of the performers can sound it tolerably well. The higher notes are clear and pleasing, but the longer reeds are apt, like the dervis's flute, to make a hissing sound, though blown by a good player. The number of reeds of which the syrinx is composed varies in different instruments from five to twenty-three (Aleppo, i, 135, 2d ed.).' See MUSICAL INSTRUMENTS.

Antique Organs. (In Fig. 1 the air was supplied by a tube; in Fig. 2 it was compressed by the bellows.)

ORGAN (ὑπαραγων, an instrument of any kind), οἶχος, is the noblest and most powerful species of musical instruments. It appears, however, that the word organ was applied indiscriminately to almost every kind of musical instrument used in religious worship by the early Church. But after a time the word came to be reserved to a wind instrument consisting of reeds or pipes, which the Greeks and the Romans, and also the Eastern Christians, used in civil and private festivals, and which since the 8th century has been used in religious worship.
singing against, imparts a vibratory motion to the columns of air in the pipe, the result of which is a musical note, dependent for its pitch on the length of that column. The greater the length of the column, the lower the pitch of the note. When the air in the body of the pipe is doubled in length, by moving the column of the pipe we obtain a note of half the pitch, or lower by an octave. Such is the general principle of all mouth pipes, whether of wood or of metal, subject to considerable diversities of detail. Metal pipes generally have a cylindrical form, and the open end is square or oblong section. A mouth-pipe may be stopped at the upper end by a stop, or key, the effect of which is to lower the pitch an octave, the vibrating column of air being doubled in length, as it has to traverse the pipe twice before it reaches its outlet. Pipes are sometimes half-stopped, having a kind of chimney at the top. The reed-pipe consists of a reed placed inside a metallic or occasionally glass tube, the body of which is a tube of metal, with the front part cut away, and a tongue or spring put in its place. The lower end of the spring is in the upper end attached to the top of the reed; by the admission of air into the pipe the spring is made to vibrate, and by this means the pitch is raised. The double pipe makes this more effectual, the current of the air being divided, one portion entering the mouth of a wax lower C on the manual and pedal of the organ: any pipe producing a tone as in the 23-foot C is called a 23-foot C pipe, whatever its actual length may be. By a 32-foot or 16-foot stop, we mean that which speaks on the lowest C on which it acts, although it may be on a 6-foot or 8-foot pipe.

The "stops" of an organ do not always produce the note properly belonging to the key struck: sometimes they give a note an octave lower, in the pedal-organ, even two octaves lower, and sometimes one of the harmonics higher in pitch than the octave or fifth stops below it. Thus each key corresponds to several pipes of different stops, some of which are never used, while others are used with the greatest frequency. One of the most important stops of a "pedal" is the string. The english stops are called "stopped" to the principal tone, and the notes extend throughout the whole range of the organ, as in the country, in size, and in some respects, to resemble the pipes of the organ. The pipes of the organ are divided into two main departments, one of which is called the "choir," and the other the "swell." The pipes of the choir are those which are placed in the front of the organ, and are divided into two groups, one being the "stop pipe," and the other the "swell pipe." The "stop pipe" is the larger group, consisting of two parts, the upper and lower. The pipes of the upper part are called the "choir pipe," and those of the lower part are called the "swell pipe." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell." The pipes of the choir are divided into two main groups, the "choir" and the "swell."
Grenester, and another on the crozier of William of Wykeham, at Oxford.

Nero greatly admired the water-organ (Sueto. c. 41: "Reliquam diei partem per organa hydraulica novi et ignoti generis cumdecimicti"). In ecclesiastical history the pope Vitalian I figures as the introducer of the organ, and the date assigned for the invention will vary from the fourth to the tenth century probably that is was introduced into Spain. In the West the organ was not common until the 10th century. St. Alhamb, who died A.D. 709, describes one with golden pipes in England; but as late as 757, when Pepin the short received from Constantine Compronyus an organ as a present, it is mentioned as a great wonder. It was placed in the church of St. Corneille, at Complighe, but whether that instrument was then used for ecclesiastical purposes is a matter of controversy. On the other hand, it is well known that Charlemagne was not without one in his palace; and the cathedral of Aix-la-Chapelle. This organ, which is described by Walafrid Strabo, was undoubtedly the same which was sent him from Constantinople by Constantine Michael, and of which the chronicler of St. Gall said (De Carol. H. ii. 10), "Musororum organum prostratis in ecclesiis et in domo Cæsareae."

In the 12th century the organ had found its way to England. It was one of the many gifts which腓尼基us received from Pope Alexander III. The new organ was placed in the Transept and continued resistance against the use of organs. In the Church of Scotland the matter was discussed in connection with the use of an organ by the congregation of St. Andrew's, Glasgow. The case was brought before the Presbytery of Glasgow, and no appeal was made.

On Oct. 7, 1867, the following motion was carried:

"That the presbytery are of opinion that the use of the organ in the public worship of God is contrary to the law of the land, and is against the constitution and practice of the Established Church, and therefore prohibit It in all the churches and chapes within their bounds."

In 1829 the question was brought up in the Relief Synod, as an organ had been introduced into Roxburg Place Chapel, Edinburgh. The deliverance, given by a very large majority, was as follows:

"It being admitted and incontrovertibly true that the Rev. John Johnston had introduced instrumental music into the Church of the Relief Congregation, Roxburg Place, Edinburgh, which innovation the Synod and General Assembly is unable to sanction; the Synod has this day resolved..."

An organ having been erected in the new Clarendon Church, Glasgow, the same question came up in 1856 before the United Presbyterian Synod, with which the Relief Synod had been for some years incorporated. Against the introduction of an organ in 1856, when the following motion was carried against using one for the first time:

"Instrumental music was one of the carnal ordinances
of the Levitical economy." The motion which passed into law was:

"That the synod reaffirm their deliverance of 1868 respecting the use of instrumental music in public worship. The synod has in view the petition of those memorialists, inasmuch as the use of instrumental music in public worship is contrary to the uniform practice of this church, and of the Presbyterian churches in the country, and would seriously disturb the peace of the churches under the inspection of this synod; and at the same time on theenson resolution to employ all judicious measures for the improvement of vocal psalmody; and the synod has found said deliverance to be applicable to the objectives of congregational worship on week-days as well as on the Lord's day."

It is to be observed that in each of these three instances a constitutional principle of Presbyterianism was violated, the organ was introduced, and the innovation made without consulting the brethren, without obtaining the advice or sanction of the presbytery, Presbyterians, Independents, and Methodists now, however, use organs, so that they have ceased to be a denominational characteristic. And why not? The question is one of taste rather than conscience or Scripture. The passage from Eph. v. 19, sung to different tunes by both parties, says nothing for either (see Eadie, Commentary on the place, and the works of Alford, Elliot, Meyer, Hodge). Instrumental music was no Jewish thing in any typical sense, the choristers and performers of David's orchestra were no original or essential element of the Levitical economy. The music of the Temple stood upon a different basis from sacrifice, which has long been formally superseded. The service of song is not once alluded to in the Epistle to the Hebrews as among the things which "decayed and waxed old." Its employment in the Christian Church is therefore no introduction of any point or portion of Jewish ritual, nor any digression into pious ceremonial. Indeed, the employment of an organ to guide the music is properly not ritualistic at all. The leader has his pitch-pipe, and the hundred pipes of the organ only serve to guide and sustain the voice of the people. Nobody wishes to praise God by the mere sound of the organ: its music only helps and supports the melody and worship of the church. It has been abused certainly, but the sensuous luxury of some congregations was no bar to the right and legitimate use of it by others. In fact, the proper employment of an organ might be pleaded for on the same grounds as scientific education in music. Both are simply helpful to the public worship of God. See Cromar, A Vindication of the Organ (Edinb. 1854, 12mo); Campbell, Two Papers on Church Music, read before the Liverpool Eccles. Musical Society" (Liverpool, 1854).

III. Objections against its Use in modern Jewish Worship.—The introduction of the organ in the Jewish religious service, especially in Germany, has excited great and fierce discussion, and a small library could be filled with the works written pro and con. About the year 1818 an organ was introduced into a temple at Hamburg, when twenty-two rabbis, among them Mordecai Benet and Moses Sopher, gave their decision against such innovation in a work entitled הילקיות לארקלוע. On the other hand, Shem Tob Samun, a noted rabbi, supported by rabbis of Jerusalem, J. C. Riccanatzi, of Verona, and others, supported the introduction and issued an opinion in favor of reforms and the introduction of the organ. The first works for and against the reform were in Hebrew. At a later time the reformers and their opponents continued their debate mostly in German, in periodicals and pamphlets. The objections against the introduction of the organ are of the same general character as those of the case and also most of the arguments were used against the Sabbath. A Jew is not allowed to play upon the organ, and everything prohibited to a Jew we are not allowed to have done by a Gentile. (2.) In obedience to the prohibition of the Torah, "In their statutes thou shalt not walk; and as the organ is a specific Christian invention used in churches, we are prohibited from its use. (3.) In obedience to a Talmudical law (Sota, 49; also copied in Orach Chaynim, 560), that, in memory of the destruction of the Temple, Jews should not play any musical instrument but the shofar.

The first of these objections has been refuted by Wiener in his Referate über die der ersten israel. Synode zu Leipzig überreichten Anträge (1871). He argues that "to play music on the Sabbath is not among the thirty-nine kinds of labor enumerated in the Talmud Sabbath, nor even in the case of a non-Jew: from it is deduced that a musical instrument is called an art, and no labor—הצ_filledůsו תו ורואל (Rosh Hashanah, 29, c). Music is not only not prohibited, but even commanded for the holidays by the Torah. The Talmud (Erubin, 120) allows repairing a musical instrument in the Temple, but not in any other place: "It is allowed to fix a broken string (on the Sabbath) in the Temple, but not outside."

From this prohibition, Wiener concludes "that to make music must have been allowed, וספירפ אוהז, otherwise the Talmud would have used the words 'as to make music is prohibited, the more so is repairing,'" and he considers this omission as an evident proof that music was allowed. A prohibition is deduced from the Talmud (Bava, 56, c) by those who are opposed to the use of the organ, whereas this is expressly allowed. The organ playing is differently understood by Maimonides and Joseph the Pharaoh, the latter even allowed the playing of musical instruments. Among the rabbinical authorities we find a great difference of opinion. Thus the Shulhan Aruch, or, rather, Moses Isserles, prohibited playing of musical instruments (Orach Chaynim, 449, 3). Rabbi Nathan allowed manual work (נתוני ענמן ת라면) to be done by a Gentile, if it were necessary for a religious function. Rema (R. Moses Isserles) also stated (Orach Chaynim, 276), "Some allow a Gentile to light lamps on the Sabbath for a religious meal, and in consequence of such permission some even went so far as to allow this for every meal and festivity." And (56, 388), "Some allow a Gentile to play musical instruments on the Sabbath in honor of a wedding, but in our times they are inclined to lighten the precepts (ןפב)." Of Mehr is it related that, at the time he made the nuptials of his son, it was forbidden by the government to make music, and he sent the bridal party to another city in order that they might enjoy music there on the Sabbath (see Rema, 339, and Elijah Rabah).

To the second objection it is replied by those who favor its use in the synagogue that the organ did not cease to be a musical instrument used in the churches until musical instruments were used in the synagogues of Bagdad, as reported by the German traveler Petaichy, of Regensburg. The venerable Alt-Neu synagogue of Prague possessed an organ in the commencement of the 17th century, while for some time previous to this a similar instrument existed in several synagogues in Spain and Corfu, as authentically reported. Certain song and music formed an essential part of the religious service of the Temple, and was highly esteemed by the Jewish sages (see Erubin, ch. ii). The Talmudists declare religious singing a Biblical precept, and דלקות יסירה explains the importance of that command, that singing disperses melancholy, as we see with Saul, and excites the living spirit, as seen with Elisha. Music must therefore be pronounced an ancient institution with the Israelites, and by no means an imitation of the worship of other creeds. The organ also forms no part of any religious statute with other creeds, and the objection דלקות יסירה cannot be raised for that reason. But even if such were the case, it is a question whether the case of the Sabbath is against it in the answer in the Talmud (Sukkah, 39, c). While Ezekiel in one passage reproached the Israelites, "Neither have ye done according to the judgments [if the nations that are round about you] (v. 7), in another passage he says, "And ye have done after the manners
of the nations that are round about you" (xi,12). This apparent contradiction the Talmud recoulses by paraphrasing, "You have conferred with those that are bad, and disregarded those that are good." Rashi, in explaining that passage of the Talmud, remarks, "Good acts are such as that of Elgon, king of Moab, who honored the oracle from beyond the ocean" (Jug. iii, 30), which is recommended for imitation, although a heathen custom. Rabbi Menasim says positively, "The law does not prohibit our imitating idolatrous customs, except foolish acts, but customs founded in reason are admissible" (To Aboda Sura, 50).

Against the third objection, that the Talmud (Sotah, 49; Gitin, 7) prohibits the playing of a musical instrument because of the destruction of the Temple, it is answered that the enjoyment of music was at all times allowed without any objection by the rabbis. Rabbi Shem Jeob Samnon, of Leghorn, in his decisions, published in 1772, relates, "In Modena, a very pious and important city, where many learned and wise Italian and German rabbins lived, among them Padubab, Lipschitz, and Ephraim Cohen—the latter German scholars of great renown—existed a musical society, without any objection from the rabbins. One of the most esteemed and learned rabbins, R. Isaac Cohen, gave permission on this occasion, to a person to open a new and to give his name as a society of that society on the night of Hoshana Rabba."

The whole literature of the Middle Ages, moreover, proves that, wherever song and music were cultivated, the Jews participated and showed great talents, and, according to the assertion of D'Izarras, the Jewish race is particularly fond of music. Even a pious scholar, author of the book of the pious, who lived at a very dark time, asserted that the practice of music is allowed on Chanuka, Purim, and at weddings. The practice of music was also allowed to dispense melancholy in hard times, and to help to the study of the law, which formed the centre of all activity. See Deutsch, Die Orgel in der Synagoge.

See, for a full account of the structure of the organ, Hopkins and Reinhardt, The Organ, its History and Construction (2d ed. London, 1873); Tiquet, Lehrbuch der Orgelbaus kunst (Weimar, 1855, 4 vol. 8vo); and the literature referred to under Music.

ORGAN-CASES are not earlier in date than the 15th century. At St. James's, Liege, is an early example of the beginning of the 16th century; that of Amiens was made 1429 to 1439; one at Old Brulon is 1431; and the other at Clermont l'Herm, is of the early part of the 17th century. In Spain the organ-pipes are arranged in specified compartments, with those of one stop projecting from the principal range. They often have painted wings or shutters.

ORGANDA, ANDREA, a noted Italian painter, was born at Florence in 1529. In his youth he devoted himself to the study of sculpture, and later to architecture. Only in middle life did he take up the brush, but he soon secured a very enviable reputation as an artist in this branch. He died in 1588. Some of Organda's paintings are among the most noted of the 16th century. Most of them are at Pisa. A very remarkable production of his is The Universal Judgment. In it he painted his friends as in heaven, and his enemies as the residents of hell.

Orgis, Engl. Organ (probably from Gr. ἄργος, in the perfect ἁγγεω, saeculifer), or MYSTERIES, are the secret rites or customs connected with the worship of some of the pagan deities; as the secret worship of Ceres, and the festival of Bacchus, which was accompanied with mystical customs and drunken revelry. These festivals are the same as the Bacchanalia, Dionysia, etc., which were celebrated by the ancients to commemorate the triumph of Bacchus. The word orgies is now applied to scenes of drunkenness and debauchery. Oriel or Oriloe (Lat. Oratorium, or little place for prayer, its original meaning) was a portion of an apartment set aside for prayer, and in the mediaeval houses it was not an uncommon practice to arrange the domestic oratory so that the sacristy was the whole height of the building, while there was a small door looking into it for the lord and his guests to attend to the service. This upper part more especially received the name of Orilo. Thus any projecting portion of a room, or even of a building, was called an orilo, such as a penthouse, or such as a closet, bower, or private chamber, an orilo-story, or a gallery; and the term became last of all applied to a projecting window, hence orilo window; also called bow or bay window.

Oriental, Sr., a Roman Catholic prelate, was born at Huecas, near the middle of the 4th century. After the death of his parents, who were wealthy, he gave all his goods to the poor, and lived a time as a hermit in the valley of Lavedan. His reputation caused him, however, to be appointed bishop of Auch about 410. He at once applied himself to uprooting heathenism in his diocese: he destroyed a temple of Apollo at Auch, and erected a church over the ruins. Theodoric I, king of the Goths, and an Arian, sent him as ambassador to the Roman general Aetius, and to his lieutenant Littorius. Orient died soon after his return to Auch. One of the parishes of Auch bears his name. Part of his remains was transferred as relics to Huecas, Sept. 16, 1609. He wrote a Latin poem in elegiac verses, entitled Commonitorium, which is mentioned by Fortunatus of Poitiers. Although not equal to some of the poetry of the early part of the 5th century, it is forcible and fluent, and the language is good. The work is divided into two books. The first was published at Antwerp in 1599 or 1600 (12mo), with notes by the Jesuit Martin Delrio, who had discovered it in a MS. of the abbey of Auch. It was afterwards published by Bauhin in Switzerland in 1604 and 1664 (4to); at Leipsic in 1661 (8vo), with notes by Andrew Betham; and at Cologne in 1638 in the Biblioth. Auct., and afterwards at Paris and Lyons in similar collections. Dom Martène having discovered a MS. of the whole work, some 800 years old, in the convent of St. Martin, at Tours, had it published in the new collection of ancient writers (Rouen, 1700; 4to) in his Thesaurus Anecdotorum (1717, fol., vol. v), together with some small pieces of Orient found in the same MS. The Mémoires de Trévoux, July and September, 1701, contain remarks and corrections by Conquereau. A new edition was published by Schutzeisen (Wittenberg, 1776, 4to), and a supplement, containing variations derived from a MS. in the Oxford library, at Weimar, in 1716. An edition in Latin and French, preceded by a life of the author according to the Bollandists, was published under the title of Commonitorium by Z. Comombet (Lyons, 1839, 8vo). Some writers, deceived by the resemblance of the name, have attributed this work to Orose, bishop of Urgel, known for his correspondence with Sidonius Apollinaris. See Bollandists, Acta Sanct. May 1; La Vie du glorieux Saint Orens, évêque d'Auch, com- posée par des religieux des universités legendes et des plus fiables historiens (Toulouse, 1674; no date); Gallia Christiana, i, 973; Hist. litt. de la France, ii, 251-256.

ORIENTAL LITURGY. See LITURGY.

ORIENTAL PHILOSOPHY is an ancient system seeking to explain the nature and origin of all things by the principle of emanation from an eternal fount of being. See MAGI. Those who professed to believe the Oriental philosophy were divided into three leading sects, which were subdivided into others. Some imagined two eternal principles, from whence all things proceeded; others, one principle, from which all things over flowed as water; and by their perpetual conflict explaining the mixture of good and evil that appears in the universe. See MANICHAEANS; OSIRIZM. Others maintained that the belief which prevailed over matter was not an eternal principle, but a subordinate intelligence; one of those which the Supreme God produced. They supposed that this being was moved by a sudden impulse to reduce to order the rude mass of matter which lay excluded from the mansions of the Deity, and at last to create the human race. A third sect entertained the idea of a triumvirate of beings, in which the Supreme Deity was distinguished both from the material evil principle and from the Creator of this sublunary world. From blending the doctrines of the Oriental philosophy with Christianity, the Gnostic sects, which were so numerous in the first centuries, derived their origin. See Gnosticism. See also Origen, whose work aimed to unite Judaism with Christianity. Many of the pagan philosophers, who were converted to the Christian religion, exerted all their art and ingenuity to accommodate the doctrines of the Gospel to their own schemes of philosophy. In each age of the Church new systems were introduced, till, in process of time, we find the Christian world divided into that variety of heretical sentiment which is exhibited under the various articles in this Cyclopaedia. See PHILOSOPHY.

ORIENTATION. As Christians from an early period turned their faces eastward when praying, so Christian churches, especially in the Western countries, for the most part were placed east and west, in order that the worshippers, as they looked towards the altar, might also look towards the east. The Council of Milan gave approval to this custom, and pope Virgilius even ordered the priests to celebrate towards the east. Thus the Roman church was not only the most ancient, but also the vanishing place, and that quarter where heaven seems to rise. Then, too, the window in the ark is believed to have faced the east. In the primitive Church prayers were made according to the east, according to Justin Martyr, Tertullian, and Origen, Augustine and Basil: (1) in allusion to Ps. cxvii. 7; Zech. xiv. 4, "His feet shall stand in the Mount of Olives, which is before Jerusalem on the east;" (2) as the day-spring (Luke i. 78); (3) as the place of light; and (4) of Paradise (Gen. ii. 8); and (5) of the crucifixion and ascension, Pentecost, and second advent. Not only did churches, therefore, face the east, but the dead were laid with their faces towards the east. The altar represents the Holy of Holies of the Temple; at it the death of Christ is commemorated; and from it the sacred food is administered to the faithful. Leo I (A.D. 443) condemned the custom of the people at Rome who used to stand on the upper steps in the court of St. Peter's and bow to the rising sun, partly out of ignorance, and partly from a lingering paganism. In later times the custom continued of turning the prayers. Other sects, like the Gnostic, introduced the intent of praying to God. To avoid, however, any suspicion of superstition, in the time of Boniface VIII a mosaic of the ship which is one of the symbols of the early Church for Christ [see SCRIPTURES] was erected towards which devotions were to be made. Urban VIII placed it over the outer great door. In some early churches [as those of the Holy Cross at Jerusalem, erected by Constantine, and Tyre, built by Paulinus at the beginning of the 4th century] three great gates faced the east, the central being the loftiest, like a queen between her attendants. The arrangement adopted was that of the Jewish Temple.

Modern investigation has determined that few churches stand exactly east and west, as great variability in this direction is universal. Thus, of three ancient churches in Edinburgh, it was ascertained that one (St. Margaret's Chapel in the Castle) pointed E.S.E.; another (St. Giles's Cathedral), E. by S.45; a third (Trinity College Church, now destroyed), S.15-45. The cause of this variation has not been satisfactorily explained. Some have supposed that the church was turned not to the true east, but to the point at which the sun rose on the morning of the feast of the patron saint. But, unfortunately for this theory, neighboring churches, dedicated in honor of the same saint, have different orientations. Thus, All-Saint's at West Beck- ham, in Norfolk, points due east; while All-Saint's at Thwaite, also in Norfolk, is 8° to the north of east. There are instances, too, in which different parts of the same church have different orientations; that is to say, the chancel and the nave have not been built in exactly the same line. Thus the eastern end of York Minster and in Lichfield Cathedral. Another theory is that orientation "mysteriously represents the bowing of our Saviour's head in death, which Catholic tradition asserts to have been to the right (or west) of the throne of his Father in heaven." It is apparent that the orientation is as often to the south as to the north. Until some better explanation is offered, it may perhaps be safe to hold that orientation has had no graver origin than carelessness, ignorance, or indifference. In several early Roman churches, and in the western races of Germany, the altars face westward, but the celebrant fronts the congregation.

ORIFLAMME (Auri flamma, or fanon, i.e., flame of gold) was a red flag of sentai, carried on a lance shafted with gilt-copper. It was preserved in the abbey of St. Denis, to which it belonged; and was taken by the kings of France, on occasions of great emergency, from the altar of that abbey, and on such occasions it was always consecrated and blessed. Louis VI received the oriflamme A.D. 1119 and 1125, and a writer of that period speaks of this as an ancient custom of the French kings. The consecration of a knight's pennon or gus- manon was a matter of great solemnity, and religious ceremonial by which he was elevated to the rank of knighthood in those ages. The consecration of standards for an army or a regiment is merely a different form of the same general idea. See KNIGHT- HOOD. The oriflamme is said to have been lost at Agincourt, in the Flemish wars, by Philip de Valois. It passed with the county of Vexin, the counts having been the protectors of the Church, and became the standard of France in the time of Philip I. Other accounts state that it was last seen in the battle-field in the time of Charles I; and Fulbert says that in 1535 it was still kept in some line. This is the explanation, but was almost devoured by moths. The oriflamme was charged with a saltire wavy, or with rays issuing from the centre crossways. In later times it became the ensign of the French infantry. The name seems also to have been given to other flags; according to Sir N. H. Nicolas, the oriflamme borne at Agincourt was an oblong red flag, split into five parts. See Walcott, Sacred Archæology, s. v.; Student's History of France, p. 132. See also JOHN OF ANC.

ORIGEN (Ὀριγήνης, from ὁ ἐρατηριός, because he was born in the mountain region, to which his parents had retired to escape persecution), also named ADA- MANTUS, on account of his remarkable learning and iron asceticism, is called by the fathers the doctor of Biblical criticism and exegesis in the Church. But it is not only in this line of literary activity that he has distinguished himself. Origen may well be pronounced one of the ablest
and worthiest of the Church fathers—indeed, one of the greatest moral prodigies of the human race. He is universally regarded as one of the most laborious and learned scholars that has appeared in Christendom, and although his orthodoxy has on some important doctrinal points been called in question, his fame and influence will endure to the end of time, and his memory be revered among all followers of Jesus Christ.

According to the trustworthy computation, at the city of Alexandria, in Egypt, in A.D. 185. His father, Leonidas, who was a Christian, is reputed to have been a man of culture and of piety; and while he sought to imbue the mind of the youth, whose first instructor he was, with the love of learning and piety, an incident occurred which was intended to be conversant with, he yet paid particular attention to sacred knowledge, so that Origen might truly understand the contents of the Scriptures; and before the boy had reached maturity he evinced that his mind had not only been filled with knowledge, but that his bosom glowed with an equal zeal for the practice of the truths he had learned from the sacred pages. In A.D. 292, during the persecution under Severus, which raged through all the churches, but fell with most tremendous devastation on the Church at Alexandria, many of the faithful, being accused of being Christians, and the parts were brought to suffer martyrdom in this conspicuous city. Instead of hiding his own convictions, Origen boldly came forward, and exposed himself to a savage multitude by ministering to these holy men; and when his own father, too, was for his fidelity to the Christian religion imprisoned and likely to suffer martyrdom, Origen was with great difficulty prevented by his mother from sharing his father's fate. Indeed, so firmly were his convictions rooted that he sent exhibition after exhortation to the prison of his parent to return to the world. "Take heed, father, that you do not change your mind for our sake." Leonidas remained firm, and was heaved; and Origen, his mother and younger brothers—six in all—were left destitute of protection, and of property too, as the estate which they owned was confiscated. In this forlorn condition Origen found a noble patron and supporter in a rich lady, who longed to be taught the truths of Christianity. But he did not long depend on her; for in the following year he abandoned her house, and removed to Palestine,-driven thence by the orthodox; though high in repute for his learning, Origen would not consider a fit associate. He supported himself for a while by teaching the Greek language and literature, and by copying MSS. In A.D. 203 bishop Demetrius, afterwards his opponent, placed him in charge of his last five churches as scribe, and took him to Palestine, where he was of assistance even in matters of less importance. In his studies he employed females as copyists, he desired to put away every possible appearance of evil by his own emasculation, basing this unwaranted act upon the words of Christ (Matt. xix, 12), which Origen interpreted in a literal sense at that time, though in a later period of life he expressed himself as favoring the view of Justin. He also in this early period of life sought strict conformity with the doctrine preached by Paul in I Cor. vii, 25, and practiced voluntary poverty, and led a strictly ascetic life. He made it a matter of principle to renounce every earthly thing not indispensably necessary; refused the gifts of his pupils; had but one coat, no shoes, and took no thought of the morrow. He rarely ate flesh, never drank wine; devoted the greater part of the night to prayer and study, and slept on the bare floor. By these means he cultivated the respect of both the learned and the unlearned in an age and country where such a mode of life was held in the highest repute both by Christians and heathen; and thus, in connection with his public and private instruction, he acquired a multitude of converts from all ranks and ages. Among those whom his preaching backed by a life so replete with consistency, reclaimed was one Valentinian heretic, a wealthy person, named Ambrose, who afterwards assisted Origen materially in the publication of his Commentaries on the Scriptures.

It was the style prevalent in every part of western Christendom (about A.D. 211) that Origen visited Rome, in order to acquaint himself with the doctrines, practices, and general character of its truly ancient Church. The Alexandrian and Roman views of the Church were widely different. By the latter, the one Church and body of Christ were conceived of as one indivisible organization, by the former as an invisible. In Rome and Carthage nepotism was dreaded as the worst of evils, and the baptized were looked upon as constituting the Church. In Alexandria the alienation of the minds of the true Church from the chief evil, and the holy, both in heaven and on earth, were viewed as constituting the true Church. Origen's opinions in regard to ecclesiastical organization and discipline were substantially the same as those which are most commonly entertained by evangelical Christians. They were far more spiritual and rational than those held by the Roman Church, and by Cyprian and Augustine. (The chapter in which Redepenning presents a summary of Origen's system of practical Church discipline is a very valuable treatise on the subject for all practical purposes in general; the golden mean between formalism and latitudinarianism is happily chosen; still it appears that Origen admitted a modified supremacy of the Church of Rome.) Origen's stay at Rome was short. Upon his return to Alexandria, by request of bishop Demetrius, he resumed his lessons, and then met with the remarkable and blessed results in his labors above referred to. Troubles likely to lead to serious dissension which broke out in that city in A.D. 215 made it evident that Christian teachers could not effectually prosecute their work, and Origen retired secretly from the city to a place near the sea. As the clergy of that province asked Origen to expound the Scriptures in public, Demetrius wrote to exposit with them, on the ground that such a mission should not be intrusted to one who was not ordained priest. Alexander, bishop of Jerusalem, and Theocritus of Caesarea, wrote to-specifically in conduct of Origen that he had always employed for that purpose such as were best qualified for it by their learning and piety, without inquiring whether they were priests or laymen. Demetrius finally recalled Origen, and afterwards sent him to Greece to oppose some heresies which had arisen in Achaia. On his way thither, in 228, he was ordained a presbyter at Cesarea, in Palestine, by Theocritus. This so displeased Demetrius that he held two councils (A.D. 231 and 232) at Alexandria, by which Origen was forbidden to teach, and excommunicated. He was accused, 1, of having castrated himself; 2, of having been ordained without the consent of his regular bishop; 3, of teaching erroneous doctrines, such as saying that the devil would be saved, and be redeemed from the torments of hell, etc. Origen denied the correctness of these accusations, and withdrew to Cesarea in 231, where he celebrated his first great Eucharist or littic—a feast for the churches of Palestine, Arabia, Phoenicia, and Achaia, which were too well informed regarding Origen, disapproved of this unrighteous sentence, in which envy, hierarchical arrogance, and blind zeal for orthodoxy joined. The Christian Church was ready to renounce, alone concurred, without further
investigation. Jerome states that the proceedings of the councils were not due to any belief in Origen's guilt of heresy, but solely to jealousy of his eloquence and reputation.

While resident in Cæsarea, Origen there opened a new philosophical and theological school, which soon outshone that of Alexandria. The Cæsarean institution was respected by the Church, and each of the most distant places, which were anxious to hear his interpretations of the Scriptures. Among his disciples were several who afterwards rose to great eminence in the Church. With the death of Demetrius all opposition to Origen died out, and thereafter his advice was everywhere eagerly sought for, to some books he gave two additions, and, as to all things, that he might gain all men. Like the great apostle, we find him everywhere true to his purpose and prepared for his work: at Alexandria, in the school and amid its philosophers and multiform population; in Arabia, in Palestine, in Athens; among Christians and Jews, among pagans as well as among friends. It was worse than in vain for opposition to do anything to such a man short of putting him to death. Drag him, half dead, to the heathen temple, and bid him distribute the emblems of heathen rites, and you hear him preaching Jesus Christ to the prince who the enemy has made so very powerful. Let Demetrius and his councils expel and expose him, he does but retire to Cæsarea, where he opens a new school of greater numbers, and 'myriads' throng around him. He is the stamp of a truly great and good man. Sacrificed to the world in his youth, and to his world, there remained nothing in the world to do except to kill him—and even this he courted, instead of dreading. He wished for no excuse to cease from his Christian toils; they were his meat and drink.

Indeed, his whole life was occupied in writing and teaching, and to some he might in the first instance be ranked as a priest; of such, certainly none in ancient times—did more to settle the true text of the sacred writings, and to spread them among the people; yet, whether from a defect in judgment or from a fault in his education, he applied to the Holy Scriptures the most curious and curious mannerisms used in interpreting the heathen mythology. He says himself that 'the source of many evils is the adorning to the carnal or external part of Scripture. Those who do shall not attain to the kingdom of God. Let us, therefore, seek after the spirits and the substantial fruit of the Word, which are hidden and mysterious.' Again, 'the Scriptures are of little use to those who understand them as they are written.' In the 4th century the writings of Origen led to violent controversies in the Church. Epiphanius, in a letter preserved by Jerome, enumerates eight erroneous opinions.

Works.—The extant works of Origen have been very much corrupted, either intentionally or accidentally, by copyists and annotators, etc. The number of his works is stated by Epiphanius and Rufinus to have exceeded 6000, and although this is probably only meant as an exaggerated round number, yet the amount of writings that issued from his always busy brain and hands cannot but have been enormous. Seven secretaries and seven copyists, aided by an uncertain number of young girls, are by Eusebius reported to have been employed for him. The great body of his most important works is lost; but among those that have survived the most important by far is his elaborate attempt to rectify the text of the Septuagint by collating it with the Hebrew original and other Greek versions. On this he spent twenty-eight years, during which he travelled through the East collecting materials. The form in which he first issued the result of his labors was that of the Tetrabiblos, which presented in four columns the texts of the Sept., Aquila, Symmachus, and Theodotion. He next issued the Hexapla, in which the Hebrew text was given, first in Hebrew and then in Greek letters. Of this, he made two Latin versions, a short and a long, and a Greek version, whence the title Octapla; and there was even a seventh Greek version added for some books. The arrangement was in columns, in the following order: Hebrew in its proper characters; Hebrew in Greek characters; Aquila; Symmachus; Sept.; Theodotion; 5th version; 6th; 7th. Unhappily this great work, which extended to nearly fifty volumes, was never transcribed, and so perished. It had been placed in the library at Cæsarea, and was still much used in the times of Jerome. It was probably destroyed by the Saracens in 636 AD. But as much of the work as could be made, and of these some are preserved. They were collected by Montfaucon, entitled Hexaemera.
ORIGEN

In the course of controversies against heretics and non-
Christians to a systematic form was first felt by the
teachers in the school for catechists, and they, in going
to work to meet this necessity, were guided by the bap-
tistical confession and the Regula Fidei. In the writ-
ings of Origen this subject was treated with greater
comprehension, and the treatises disclose no plan followed in
detail; they are only labors preparatory to a system.
Setting out with these materials, Origen laid the foun-
dation of a regular system of Christian dogmas. Yet
his order was not very exact, and the gain of a system-
atic doctrinal form was not without material
loss. The doctrine relating to the premodern exist-
ence of God, being placed first in the regular scholastic
order, concealed those living germs seated in man's re-
ligious feeling or contained in the history of religion,
which is the groundwork for the history of Chris-
tianity, and thus hindered further development of the
historical development of Christian doctrine; and the
doctrine of Soteriology was left comparatively un-
developed. Origen says, “The apostles taught only
what was necessary; many doctrines were not an-
ounced by them with perfect distinctness; they left
the more precise determination and demonstration of
many dogmas to the disciples of science, who were to
build up a scientific system on the basis of the given
articles of faith” (De Princ. Præf., p. 3 sq.). The
principle that a systematic exposition shall begin with
the consideration of that which is naturally first is ex-
pressed in the somewhat similar form: “The study of
Zosimus (Tom. vi) becomes into error and
absurdity; for he applied to the explanation of the
Old Testament the same fanciful method of
allegory by which the Platonists were accustomed to veil
the fabulous history of their gods. This error, so
fascinat-
ing to the heathen world of the East, was rapidly
propagated by numerous disciples, and became the foun-
dation of that doubtful system of theology called phi-
osophical or scholastic.” See ORIGENISTS.

1. Origen’s commentaries covered almost all the books
of the Old and New Testaments, and contained a vast
wealth of profound suggestions, with the most arbit-
raneous allegorical and mystic fancies. They were of three
classes: (a) Short notes on single difficult passages for
beginners; all these are lost. (b) Extended exposi-
tions of whole books, for higher scientific study; of
these we have a number in the original. (c) Horta-
tory or practical applications of Scripture for the con-
gregation (Ομιλίαι), which are important also to the
history of pulpit oratory. But we have them only in
part, as translated by Jerome and Rufinus, with many
unceremonious retrenchments and additions, which per-
plex the student. Every one of Origen’s commentaries
of the Old Testament contains a discussion of
fundamental doctrines. In the second book we set foot
upon the earth as it now is: we see it arising out of the
ante-mundane though not absolutely eternal matter,
in time, in which it is to lead its changing existence until
the restoration and emancipation of the fallen spirits.
Into this world came the Son of God, sent by the God
of the Old Testament, who is no other than the Father
of Jesus Christ; we learn of the incarnation of
the Son, of the Holy Ghost as he goes forth from the
Son to enter into the hearts of men, of the psychical in man
and how it is transformed into the purely spiritual in him, of
the purification and restoration of the psychical man by
judgment and punishment, and of eternal salvation.
In virtue of the inalienable freedom belonging to the spirit, it fights its way upwards in the face of evil pow-
ers of the spiritual world and against temptations from
within, by the aid of Christ Himself and by the gifts of
grace, i.e. by all the gifts and operations of the
Holy Ghost. This freedom, and the process by which
man becomes free, are described in the third book.
The fourth book is distinct from the rest and inde-
pendent of the basis on which the doctrine of the preceding books rests, viz. the revelation made
by the Holy Scriptures” (whereas later dogmatists have
been accustomed to place the doctrine before the other
contents of the system).
Among Origen’s practical works are specially note-worthy his treatise on prayer, with an exposition of the Lord’s Prayer, and exhortation to martyrdom. It was written during the persecution of Maximinus. Besides these works, Origen wrote many letters, "Επιστολαι (Epistles)," of which Eusebius collected over eight hundred. They have been published in various editions, but the Latin are doubtless the work of Julianus Africanus on the authenticity of the history of Sussanna. Delarue has given (i., 1-32), whether complete or fragmentary, all that remains of them. Among the works of Origen is also usually inserted the Philocalia (Φιλοκόλια), a collection of extracts from his writings on various exceptional occasions. The compilation was made, however, by Gregory of Nazianzum and Basil the Great. It is entitled Philocalia, de obscuris S. Scriptura locis, a SS. PP. Basilio Megno et Gregorio theo-logo, ex vario Origenis commentarius excerpta, Ossida nunc primum Graece edita, ex Bibliotheca Regiana, et studio Jo. Tarini, Andegavi, qui et Latinis fecit et notis illustravit (Paris, 1619, 4to).

Doctrines.—Ecclesiastical history, as Fabricius observes, cannot furnish another instance of a man who has been so famous through good report and ill report as Origen. The quarrels and disputes which arose in the Church after his death, on account of his person and writings, seem scarcely credible to any who have not examined the history of those times. The universal Church was split into two parties; and these parties fought as furiously for and against Origen as if the Christian religion had itself been at stake. See ORIGENIAN CONTROVERSY. Huelius has employed the second book of his Origeniana, which consists of above 200 pages in folio, in pointing out and animadverting on such dogmas of this illustrious father as are either quibbling, or lying in their terms, or even in their conception (Liber. Oxon. 1740) has collected within a short compass the principal tenets which rendered him obnoxious; and thence we learn that Origen was accused of maintaining different degrees of dignity among the persons of the Holy Trinity; that as the Son was inferior to the Father, and the Holy Spirit inferior to both, in the same manner as rays emitted from the sun are inferior in dignity to the sun himself; that the death of Christ was advantageous, not to men only, but to angels, which is a doctrine very strange, even to the stars and other insensible things, which are not to be possessed of a rational soul, and therefore to be capable of sin; that all rational natures, whether devils, human souls, or any other, were created by God from eternity, and were originally pure intelligences, but afterwards, according to the various use of their free will, dispersed among the various orders of angels, men, or devils; that angels and other supernatural beings were clothed with subtle and ethereal bodies, which consisted of matter, although in comparison with our grosser bodies they may be called incorporeal and spiritual; that the souls of all rational beings, being putting off one state, begin another, either superior or inferior, according to their respective behavior; and that thus, by a kind of perpetual transmigration, one and the same soul may successively, and even often, pass through all the orders of rational beings; that hence the souls of men were thrust into the prison of bodies for offences committed in some former state, and that when loosed from hence they will become either angels or devils, as they shall have deserved; that, however, neither the punishment of men nor the favor of devils or whatever else is the judgment of God shall be stochastic, but that all shall return to their original state of pure intelligences, to begin the same round again, and so on forever. Says Schaff (Ch. Hist., i, 270): "Origen felt the whole weight of the Christological and Trinitarian question, but obscured it by his foreign speculations, and wasted much time in overthrowing the humanized theories, and the subordination theories, which afterwards came into sharp conflict with each other in the Arian controversy. On the one hand he brings the Son as near as possible to the essence of the Father; not only making him the absolute personal wisdom, truth, essence, substance (σινιποίμα, αὐτοκλήτω, αὐτόκητος, ἀυτοδίκαιος, αὐτοδίκαιος, etc.), but also expressly predating eternity of him, and propounding the Church dogmas of the eternal generation of the Son. This generation he usually represents as proceeding from the will of the Father; in the Son it is present in all his essence: and hence, at least in one passage, in a fragment on the Epistle to the Hebrews, he already applies the term ομοοιότης to the Son, thus declaring him coequal in substance with the Father. This idea of his has been further developed by others from its close connection with his doctrine of an eternal creation. He can no more think of the Father without the Son, than of an almighty God without creation, or of light without radiance (De Principi. iv, 28: 'Sicut lux numquam sine splendore esse potuit, ita nec Filium quidem sine Patre intelligi potest'). Hence he describes this generation not as a single, instantaneous act, but, like creation, ever going on. But on the other hand he distinguishes the essence of the Son from that of the Father; speaks of a difference of substance (ἀνελ-λούη τῆς ομοιότητος ου τοῦ οὐκομισμοίου, which the advocates of his orthodoxy, probably without reason, take as merely opposing the Patristic conception of the ομοοιότης); and makes the Son decidedly inferior to the Father, calling him, with reference to John i., 1, merely Σωτήρ without the article, that is, God in a relative sense (Deus de Deo), also άμετάκλητος Σωτήρ, but the Father God in the absolute sense, άμετάκλητος (Deus per se), or αυτόκλητος, also the fountain and root of the divinity (στατήρ, ἀμέτάκλητος). Hence he also taught that the Son should not be directly addressed in prayer, but the Father through the Son in the Holy Ghost. This must be limited, no doubt, to things and persons of full divinity, but his conception of prayer to the Son and to the Holy Ghost. Yet this subordination of the Son formed a stepping-stone to Arianism, and some disciples of Origen, particularly Dionysius of Alexandria, decidedly approached that heresy."

"In his Pneumatology," says Schaff, "Origen vici-clates still more than in his Christology between orthodox and heterodox views. He ascribes to the Holy Ghost eternal existence, exalts him, as he does the Son, far above all creatures, and considers him the source of all charisms (not as άμετάκλητος τῶν χαρακτημένων, as Neandert and others represent it, but as άμετάκλητος τῶν χαρακτημένων, παράγων, as offering the substance and fulness of the spiritual gifts; therefore as the ἄρχη and Σκηνή of them [In Joh. ii, § 6], especially as the principle of all the illumination and holiness of the Church, according to the Old Covenant and the New. But he places the Spirit in essence, dignity, and efficiency below the Son, as far as he places the Son below the Father; and though he grants in one passage (De Principi. i, 3, 3) that the Bible nowhere calls the Holy Ghost a creature, yet, according to another sentence, he speaks of him himself inclines towards the view, which, however, he does not avow, that the Holy Ghost had a beginning (though, according to his system, not in time but from
eternity), and it is the first and most excellent of all the beings produced by the Logos (In Joh. ii, § 6: Τιμωρησον—this comparative, by the way, should be noticed as possibly saying more than the superlative, and perhaps designed to distinguish the Spirit from all creatures—πίσων ρώσῳ πάντοις Πατρός διε χρηστευόμενος γυμνόν μαθητήν).—The second he rejects, because in Matt. xii, 32 the Spirit is plainly distinguished from the Father and the Son; the third he takes for the true and scriptural view, because everything was made by the Logos (according to John i, § 9). Indeed, according to Matt. xii, 32, the Holy Ghost would seem to stand above the Son; but the sin against the Holy Ghost is more heinous than that against the Son of Man only because he who has received the Holy Ghost stands higher than he who has merely the reason from the Logos (Cf. Luke xii, 13).

These errors, and others connected with and flowing from these, together with that "furor allegoricon" above mentioned, which pushed him on to turn even the whole law and Gospel into allegory, are the foundation of all that enmity which has been conceived against Origin, and of all that has been called heresy; and, although the charge has not been fully loaded. His damnation by Romanists has been often decreed in form; and it has been deemed heretical even to suppose him saved. John Picus, earl of Mirandola, having published at Rome, among his 900 propositions, that it is no sin to believe that the damned, the masters in divinity censured him for it, asserting that his proposition was rash, blasphemous, unfavorable of heresy, and contrary to the determination of the Catholic Church. This is what Picus himself relates in his Apolog. e. vii. Stephen Bint, a Jesuit, published a book at Paris in 1629, concerning the salvation of Origin, in which he took the affirmative side of the question, but not without difficulty and fear. This work is written in the form of a trial; witnesses are introduced and depositions taken, and the cause is fully pleaded pro and con. The witnesses for Origin are Melchior Cano, in the name of Bellarmine, and of all who are against Origin, makes a speech to condemn the condemnation of the accused. After having ex- plicated on Origin's heresies, the cardinal adds: "Must I make use of these and of the most high and holy father of the Church, in order to show that Origin is there? Otherwise men will not believe it. Would it not be enough to have laid before you his crime, his unfortunate fortune, the sentence of his condemnation delivered by the emperors, by the popes, by the saints, by the fifth general council, not to mention others, and almost by the mouth of God himself? Yet, since there is no other method left but descending into hell and showing there that reprobat, that damned Origin, come, gentlemen, I am determined to do it, in order to carry this manifestation of the divine wisdom and evidence originating after his name, down into hell, to see whether he really be there or not, and to decide the question at once." The seventh general council has quoted from the Pratum Spirituale (Baron. Annul, ad ann, 532), and by quoting it has declared it to be of sufficient authority to furnish us with good and solid materials to support the determination of the council with regard to Origin. "Why should not we, after the example of that council, make use of the same book to determine this controversy, which besides is already but too much cleared up and settled; it is only to occupy the mind with great perplexity about the salvation of Origin, after the fervent prayers of a holy old man, saw plainly, as it were, a kind of hell open; and, looking in, observed the heresiarchs, who were all named to him one after another by their own names; and in the midst of them he saw Origin, who was there damned among the others, loaded with horror, flames, and confusion." Protestants have always revered his memory. The orthodox and heterodox have frequently quarreled over his relative position in the Church. It would be difficult for us to determine his relation to the bishops such as large better than it has already been done by Dr. Schaff. We therefore prefer to let this learned Church historian speak: "Origin," says Schaff, "was the greatest scholar of his age, and the most learned and genial of all the ante-Nicene fathers. He possessed a rare beauty of genius, and the brightness and glow of his brilliant talents. His knowledge embraced all departments of the philology, philosophy, and theology of his day. With this he united profound and fertile thought, keen penetration, and glowing imagination. As a true divine, he consecrated all his studies by prayer, and turned them, according to his best convictions, to the service of truth and piety. It is impossible to deny a respectful sympathy to this extraordinary man, who, with all his brilliant talents and a host of enthusiastic friends and admirers, was driven from his country, stripped of his sacred vocation, cast out of the Church, then thrown into a dungeon, loaded with chains, racked by torture, doomed to drag his aged frame and dislocated limbs in pain and poverty, and long after his death to have his memory branded, his name anathematized, and his salvation denied; but who never- theless esteemed himself more than his colleague, his Church, and his sacred gift; and who in the face of all obloquy, and in the face of all men, advanced the cause of sacred learning, to refute and convert heathens and heathens, and to make the Church respected in the eyes of the world. Origin may be called in many respects the Schleiermacher of the Greek Church. He was a guide from the heathen philosophy and the heretical doctrines to the Christian faith. He exerted an immeasurable influence in stimulating the development of the catholic theology and forming the great Nicene fathers, Athanasius, Basil, the two Gregories, Hilary, and Ambrose, who consequently, in spite of all his deviations, set great value on his services. But his best disciples proved infallible to many of his most peculiar views, and adhered far more to the reigning faith of the Church. For—and in this, too, he is like Schleiermacher—he can by no means be called orthodox, either in the Catholic or in the Protestant sense. His leaning to idealism, his predilection for Plato, and his noble effort to reconcile Christianity with reason, and to commend it even to educated heathens and Gnostics, led him into many grand and fascinating errors" (Ch. Hist. i, 504, 505). "Christian science," says Pressensée (Irenaeus vs. Heresies, p. 397, 398, 399), "is the full faith or knowledge, which rises to the direct contemplation of its object, and ascends from the visible Christ, 'known after the flesh,' to the Eternal Word. He falls into the same error as Clement in thinking too lightingly of the foundation of this transcendent knowledge—that historical Gospel which is the very substance of the truth—and in treating the letter of the Scriptures as a seal that needs to be broken. It remains none the less true that speculation is never with him a mere mental feat; that it is rather the aspiration of the entire being and complete man. Thus, for instance, he said, when Origin spoke the philosophical language of his time. He resolutely dealt with the problems which occupied the minds of his contemporaries. In order rightly to estimate and understand him, we must bear constantly in mind that sublime and subtle pantheism which was the primary inspiration and foundation of both Neoplatonism and of Platonism. If his mind frequently for- sakes the solid ground of psychological observation and exact history, to soar into vague regions which are neither heaven nor earth, it is because he is desirous to occupy a sphere as wide as that of his activities. Anxious to excel them in science no less than in faith, he will not abandon to them any vantage ground. Like them, he peoples the infinite void with the creations of his imagination. To the Eons he opposes good
and bad angels; he does not hesitate to invent a sort of mythology, of which the inspiration is Christian, but which in its bold additions to the positive statements of revelation necessarily becomes visionary. Herein is not the strongest fault of his poetry. Panteistic Theism are found in that bold vindication of liberty which is its central and vital principle. It may be said that the vast theological edifice reared by him is, as it were, the temple of liberty. Liberty is its foundation and its top-stone; nay, it is more, is the animating soul of the whole fabric. Fanaticism, Theism had struck the whole world with a death chill. Origen reawakened it with the breath of liberty, restored it to life, and snatched it from the petrifying grasp of fatalism. In the boldness of his thought he denies the existence of anything below the angelic. All that is visible in the material world are free acts. Bodies owe their existence to the motions of the will. If matter gravitates or ascends, it is not by a simple physical law, but is connected with moral action. Liberty is the explanation of all things. The great merit of Origen is his endeavor to trace back to its roots all the diversity of things to one and the same idea. Unhappily his conception of liberty was incomplete, and his error on this fundamental point produced results all the more serious because of the close logical coherence of his system. But such a man might in such an age," says Schaff, "be the herald of a new era in the history of our literature. For he professed his views always with modesty, and from sincere conviction of their agreement with Scripture, and that in a time when the Christian doctrine was as yet very indefinite in many points. For this reason even unpurged Roman divines, such as Tilmont and Möhler, have shown Origen the greatest respect and the most lenient kindness; a fact the more to be commended, since the Romish Church has steadily refused him, as well as Clement of Alexandria and Tertullian, a place among the saints and the fathers in the strictest sense. See Eusebius, Hist. Eccles. bk. vi. 1-6; Hieronym. Ep. 29, 41; Gregory of Thaumaturgus, De oris parangricis in Origenem; Pamphilus, Apologia Orig. Origenian Controversy. So distinguished a man as Origen could not fail to have great influence on the Church, not only while living, but even after his

death. As during his lifetime he had opponents as well as partisans, so two parties continued in the Church a long time afterwards. As late as the 3d century we find bishop Methodius (L. 511) opposing the doctrine of Origen, and this opposition of his is recorded in the form of a type of Origen's doctrine. On the other hand, the learned and pious Pamphilus of Caesarea, in Palestine († 369), in collaboration with his friend Eusebius, wrote in prison an apology for Origen. In this work the writers reveal and oppose the doctrine which they were now the heresy preferred against Origen. It contains six books: the last is the work of Eusebius alone, being written after Pamphilus's martyrdom, and defended by him against the attacks of Marcellus of Ancyra. We now possess only the first book, in the incorrect translation of Rudio, and a few fragments of the second book (published in Delarue's edition of Origen; Gallandi, Bibl. Patr.; and Routh, Relig. sacra).

Origen's name was also drawn into the Arian controversies, and used and abused by both parties for their own ends. The question of the orthodoxy of the great deacon became thus more and more interest, and increased in interest with the increasing zeal for pure doctrine and the growing horror of all heresy. Upon this question three parties arose: free, progressive disciples, blind adherents, and blind opponents. 1. The true, independent followers of Origen drew from his writings much instruction and quickening, without committing themselves to his words, and, advancing with the demands of the time, attained a clearer knowledge of the specific doctrines of Christianity than Origen himself, without thereby losing esteem for his memory and for his influence among the men of that century. 2. The 4th century, Pamphilus, Eusebius of Caesarea, Didymus of Alexandria, and in a wider sense Athanasius, Basil the Great, Gregory of Nazianzum, and Gregory of Nyssa; and among the Latin fathers, Hilary, and at first Jerome, who afterwards joined the opponents, Gregory of Nyssa, and perhaps also Didymus, even adhered to Origen's doctrine of the final salvation of all created intelligences. 3. The blind and slavish followers, incapable of comprehending the free spirit of Origen, clung to the letter, held all his immature and erratic speculations as the words of their master himself, and pressed them to extremes. Such mechanical fidelity to a master is always apostasy from his spirit, which tended towards continual growth in knowledge. To this class belonged the Egyptian monks in the 4th century, in particular Diocles, Ammonius, Eusebius, and Cuthimius, who are known by the name of "the tall brethren" (Ανδραξ μεγαρικαν, on account of their bodily size), and were very learned. 3. The opponents of Origen, some from ignorance, others from narrowness and want of discrimination, shunned his speculations as a source of the most dangerous heresies, and in him condemned at the same time all free theological discussion, without which no progress in knowledge is possible, and without which even the Nicene dogma would never have come into existence. To these belonged a class of Egyptian monks in the Scetic desert, who despised the whole of humanity, who, on the contrary to the mysticism and spirituality of the Origenistic monks of Nitria, urged grossly sensuous views of divine things, so as to receive the name of Anthropomorphicos. The Roman Church, in which Origen was scarcely known, is known by the name of Origenian, because of his general way the strong prejudice against him as an unknown and dangerous writer.

The leader in the crusade against the bones of Origen was the bishop Epiphanius of Salamis (Constantia), in Cyprus († 408), an honest, well-meaning, and by his
contemporary highly respected, but violent, coarse, contracted, and bigoted monastic saint and heresy-hunter. He had inherited from the monks in the deserts of Egypt an ardent hatred of Origen as an arch-heretic; and in his Panarion, or chest of antidotes for eighty heresies, branded Origen as the father of Arianism and many other errors (p. 394). But this was not his main charge. For this, he resorted to the age-old method of vilification for the sake of admir- erous writings of Origen. Not content with this publication, he also endeavored, by journeying and oral discourse, to destroy everywhere the influence of the long-departed teacher of Alexandria, and considered himself as doing (as Jerome put it) the greatest service that he could to this object the aged bishop journeyed in 394 to Pal- estine, where Origen was still held in the highest consid- eration, especially with John, bishop of Jerusalem, and with the learned monks Rufinus and Jerome, the former of whom was at that time in Jerusalem and the latter in Bethleem. Epiphanius delivered a blistering ser- mon in Jerusalem, excited laughter, and vehemently demanded the condemnation of Origen. John and Rufi- nus resisted; but Jerome, who had previously consid- ered Origen the greatest Church teacher after the apostles, and who had been much impressed by his exegetical writings, was not disposed to accept his doctrinal errors. The diocletian, indige- nite for the fame of his own orthodoxy, passed over to the opposition, broke off Church fellowship with John, and involved himself in a most violent literary contest with his former friend Rufinus, which belongs to the chronicle of the church council of 401. In this case, the battle was not determined indeed by the mediation of the patriarch Theophilus in 397, but the dispute broke out afresh. Jerome condemned in Origen particularly his doctrine of pre-existence, of the final conversion of the devils and of demons, and his spiritualistic sublimation of the resurrection of the body. Rufinus, on the other hand, placed the West (398) to meet this opposition, translated sev- eral works of Origen into Latin. He proceeded with great caution, altering occasionally the text, so as not to depart too greatly from the doctrine then prevailing in the Church, and succeeded in satisfying orthodox taste. Origen was accused by Jerome of being the origi- nator of the Arian doctrine concerning the Trinity that it should not be said that the Son could see the Father, or the Spirit the Son; but this charge was certainly most unjust. True, his Christology had in it contradic- tions, but no one has ever thought of placing Christ, the Christ eternity and other divine attributes which logi- cally lead to the orthodox doctrine of the identity of substance; so that he was vindicated even by Athanas- ius, the two Cappadocian Gregories, and Basil. But, on the other hand, the doctrine of the resurrection in the Gospels, he taught with equal clearness a separateness of essence between the Father and the Son, and the subordination of the Son, as a second or secondary God beneath the Father, and thus furnished a starting-point for the Arian heresy. The eternal generation of the Son from the will of the Father was, with Origen, the communication of a divine but sec- ondary substance, and this idea, in the hands of the less devout and profound Arians, who, with his more rigid logic, could admit no intermediate being between God and the creature, deteriorated to the notion of the pri- mal creature. But in general Arianism was much more akin to the spirit of the Antiochian school than to that of the Alexandrian. Origen was also accused of holding the doctrine of pre-mundane existence, and regarding the body as the prison of the soul; of teaching the resurrec- tion of the corporeal body with different sexes, the un- historical signification of paradise and of the history of creation; and the assertion of the loss of the divine im- age in man. The object of both was principally to de- fend themselves against the charge of Origenism, and to fasten it upon each other, and this not by a critical analysis of his works, but by theological invective. Arian- gen, but by personal denunciations and miserable in- vocatives (comp. the description of their conduct by Zöckler, Hieronymus, p. 396 sq.). The result of this controversy was that Rufinus was cited before pope An- statius (398-402), who condemned Origenism in a Ro- man synod, notwithstanding that Rufinus sent a satis- factory defence. Rufinus thereupon sought an asylum in Aquileia. He enjoyed the esteem of such men as Paulus of Samosata and Aurelius of Aquileia (410).

Meanwhile a second act of this controversy was opened in Egypt, especially by the theologians of Alex- andria, among whom the unprincipled, ambitious, and intriguing bishop Theophilus of Alexandria plays the leading part. This bishop at first was an admirer of Origen, cast aside the anti-Origenian influence, but afterwards, through a personal quarrel with Isidore and "the four tall brethren," who refused to deliver the Church funds into his hands, he became an opponent of Origen, attacked his errors in several documents (399-400) (in his Epistola Synodica ad episcopos Pala- tinos et al Cyriacis, 400, and in three successive Epis- tola Paschaler, from 401-405, all translated by Jerome, and forming Ep. 92, 96, 98, and 100 of his Epistolae, ac- cording to the order of Vallarini), and pronounced an anathema on Origen's memory, in which he was sup- ported by Epiphanius, Jerome, and the Roman bishop Anianus. It is remarkable that he was attacked with the same terms of invective and violent measures against the Origenistic monks, and ban- ished them from Egypt. Most of these monks fled to Palestine; but some fifty, among whom were "the four tall brethren," went to Constantinople, and found there a ready sympathy with the heresy of Origen. In 401. But in this way that noble man, too, became in- volved in the dispute. As an adherent of the Antiochian school, and as a practical theologian, he had no sympa- thy with the philosophical speculations of Origen. Yet Chrysostom knew how to appreciate Origen's merits in the exposition of the Scriptures. The excessive devotion to the West, the Christian love and justice to interfere with Theophilus in behalf of the persecuted monks, though he did not admit them to the holy communion till they proved their innocence. Theophilus at once set every instrument in motion to overthrow the long-envied Chrysostom, and employed even Epiphanius, then almost an octo- genarian, as a tool of his hierarchical plans. This old man journeyed in midwinter in 402 to Constantinople, in the imagination that by his very presence he would be able to destroy the thousand-headed hydra of heresy; and in turn he was poisoned by the emperor Theodosius. Chrysostom, who assembled the whole clergy of the city to greet him, nor pray for the dying son of the emperor, until all Origenistic heretics should be banished from the capital, and he might publish the anathemas from the pulpit. But when he found the emperor actuated by Nitrian motives, and soon took ship again to Cyprus, saying to the bishops who accompanied him to the seas- side, "I leave to you the city, the palace, and hypocri- ri; but I go, for I must make great haste." He died in the ship in the summer of 406. However, what the honest coura ges of Epiphanius failed to effect was ac- complished by the cunning of Theophilus, who now himself travelled to Constantinople, and immediately appeared as accuser and judge. He well knew how to use the dissatisfaction of the clergy, of the emperor Eu- doxius, and of the court with Chrysostom on account of his moral conduct and his bold denunciation of the emperor in Chrysostom's own diocese, on an estate "at the oak" (πχος τεχνον, Synodus ad Quercum) in Chaledon, he held a secret council of thirty-six bishops against Chrysostom, and there procured, upon false charges of immorality, unchastity, and his bold denunciation of the emperor, his deposition and banishment in 403 (see Hefele, ii, 78 sq.). Chrysostom was recalled indeed three days in conse- quence of an earthquake and the dissatisfaction of the people, but was again condemned by a council in 404, and banished from the court. See CHRYSOSTOM.

The result of this controversy was to inaugurate a code of theology, to exalt the deity of the Logos, and to elevate the spirit of Origen, but was still accessible to the narrow piety of Epiphanius and the noble virtues of
ORIGENIANS

ORIGENISTS

Chrysostom. Yet in spite of this prevailing aversion of the time to free speculation, Origen always retained many readers and admirers, especially among the monks in Palestine, two of whom, Domitian and Theodosius As- kidas, came to favor and influence at the court of Justinian I. But under this emperor the dispute on the ortho-
dodoxy of Origen was renewed on the occasion of the controversy with the monophysite controversy; and, notwithstanding Theodorus's influence, his opponents, with the assistance of Mennas, pa-
triarch of Constantinople, caused Origen to be con-
demned in the εἰςωδος ἑκκαθάρια in 544. That this judg-
ment is not just, and that the fifth ecumenical synod is highly improbable. But as the reading of Origen's writings had been made a heretical act by reason of their condemnation, no one ventured until very recent times to raise his voice for Origen, and his works and doctrines have gone out of sight, or passed out of exist-
ence. Says Schaff: "The vehement and petty personal quarrels over the orthodoxy of Origen brought no gain to the development of the Church doctrine. Indeed, the condemnation of Origen was a death-blow to theo-
logical science in the Greek Church, and left it to stiffen gradually into a mechanical traditionalism and formalism."

graphs of Repenning and Thomasius on Origen; and Neander, Der hell. Joh. Chrysostomus (Berl. 1848, 3d ed., ii, 121 sq.; Hefele (R.C.), Originesentuhr, in the Kir-
chen-Lexicon of Weitzel und Weiß, vii, 547 sq., and in his Hist. der Kirche, viii, 306 sq.; Zöckler, Hieronymus

Origienism. See Skoptsi.

Origiani. See ORIGINEST.

Origienistes, a title of two entirely distinct classes of heretics.

1. It is the name of certain heretical Christians who professed to adopt the theological views of the Church father Origen (q. v.). They developed as a body in the 4th century, and taught—

(1.) A pre-existent state of human souls, prior to the Mosaic creation, and perhaps for eternity, which souls were clothed with ethereal bodies suited to their original dignity. See Psevdo-entists.

(2.) That souls were condemned to animate mortal bodies, in order to expiate faults they had committed in a pre-existent state: for we may be assured, from the infinite goodness of their Creator, that they were at first joined to the purest matter, and placed in those regions of the universe which were most suitable to the purity of essence that they then possessed. For that the souls of men are an order of essentially incorporate spirits, their deep immersion into terrestrial matter, the modification of all their operations by it, and the heav-

ently body preserved in the Gospel, as the highest per-
fection of human nature, is a clear testimony. There-
fore, if our souls existed before they appeared as inhab-

itants of the earth, they were placed in a purer element, and enjoyed far greater degrees of happiness. And cer-

tainly he whose overflowing goodness brought them into existence would not deprecate their felicity, till by their mutability they rendered themselves less pure in the whole extent of their powers, and became disposed for the reception of such a degree of corporeal life as was exactly answerable to their present disposi-
tion of spirit. Hence it was necessary that they should become terrestrial men.

(3.) That the soul of Christ was united to the Word before the incarnation; for the Scriptures teach us that the soul of the Messiah was created before the begin-
ing of the world (Col. i, 15, 16; Phil. ii, 6, 7). This text must be understood of Christ's human soul, because it is unusual to propound the Deity as an example of humility in Scripture. Though the humanity of Christ was so godlike, he emptied himself of this fulness of life and glory to take upon him the form of a servant. It was this Messiah who conversed with the patriarchs under a human form; it was he who appeared to Moses on the holy mount; it was he who spoke to the prophets un-
der a visible appearance; and it is he who will at last come in triumph upon the clouds to restore the universe to its primitive splendor and felicity.

(4.) That the resurrection of the dead we shall be clothed with ethereal bodies; for the elements of our terrestrial composition are such as almost fatally en-
tangle us in vice, passion, and misery. The purer the vehicle the soul is united with, the more perfect are her elements. "It is written, 'Blessed are the meek,' who made all things assures us he made all things best at first, and therefore his recovery of us to our lost hap-
piness (which is the design of the Gospel) must restore us to our better bodies and happier habitations, which is evident from 1 Cor. x. 49; 2 Cor v. 1; and other texts of Scripture.

(5.) That, after long periods of time, the damned shall be released from their torments, and restored to a new state of probation; for the Deity has such reserves in his gracious providence as will vindicate his sovereign goodness and wisdom from all disparagement. Expira-
tory pains are a part of his adorable plan; for this sharper kind of favor has a righteous place in such creatures as are by nature mutable. Though sin has extinguished or silenced the divine life, yet it has not destroyed the faculties of reason and understanding, of conscience, and of moral sense, which is the most powerful. If, therefore, the vigorous at-
traction of the sensual nature be abated by a ceaseless pain, these powers may revive the seeds of a better life and nature. As in the material system there is a gravitation towards the centers, so in the soul these powers, which must of necessity be something analogous to this in the intellectual system; and since the spirits created by God are emaciations and streams from his own abyss of being, and as self-existent power must needs subject all beings to itself, the Deity could not but impress upon intimate natures and substances a central tendency towards himself; an essential principle of reunion to their great original. (This doctrine, in a somewhat modified form, is now advocated by some English di-

vines. Very recently the Rev. Edward Elliot has come out as the advocate of conditional immortality in his Life of Christ (Lond. 1872). See Brux. and For. Traetz, Rev. Jan. 1876.)

(6.) That the earth, after its confabulation, shall be come habitable again, and be the mansion of men and animals, and that in eternal vicissitudes. For it is thus expressed in Isaiah: "Behold, I make new heavens and a new earth," etc.; and in Heb. i. 10, 12, "Thou, Lord, in the beginning hast laid the foundations of the earth; as a vesture shalt thou change them, and they shall be changed," etc. Where there is only a change, the sub-

stance is not destroyed, this change being only as that of a garment worn out and, by the change, clearing of the soul of the world passes away like a turning scene, to exhibit a fresh and new representation of things; and if only
the present dress and appearance of things go off, the substance is supposed to remain entire. See MILLENNIANS.

By the 6th century the Origentists had completely subsided, and there have been no attempts in the Church at large since (see ORIGENTISM; ORIGENTISTS). 2. Origentists is also the name given to a sect of heretical Christians who, as appears from Ephippians, were followers of some unknown Origon, a person quite different from the father of the 2d and 3d centuries. In one place indeed Ephippians (a very bitter opponent of Origentionism) says he and his sect (whether or not the sect was derived from him (Ephip. Panar. lxiii, lxiv); but in another he speaks of them without doubt as followers of some other Origon (Anachthale). These Origentists are spoken of as given to shameful vices, but not what is here said of them. There was an Alexandrian philosopher of the same name, contemporary with the great Origon, but there is nothing known which connects him with the sect. Philaster is silent about them, while Augustine and Prudentianus are only able to repeat the statement of Ephippians.

Origin of Evil. See EVIL; SIN.

Origin of Man. See MAN; PREDAMITA.

Origin of Species. See CREATION; SPECIES.

Original Antiburghers is the name usually given to the Reformed Church in Scotland from the General Assembly (Antiburgher) Synod of Scotland. See ABBURGHERS. The occasion of their secession is generally called the "Old and New Light Controversy." This was a consideration of the power of the civil magistrate in matters of religion. The early decisions had laid what is commonly termed the Establishment principle. Gradually a change of opinion came over a part of the body, and some were disposed to question the expediency and New-Testament authority for national Church establishments. In 1780 it became a subject of debate in the General Synod and, from that time, the New-Light, or Anti-Establishment principles gained many advocates. Year after year the subject was keenly discussed, and in 1804 the Narrative and Testimony, or a New Secession Testimony, embodying these proposed views as those of the secession body, was adopted by the General Synod. A small number of members, however, headed by Dr. Thomas M'Crie, protested against the New Testament as embodying, in their view, important deviations from the original principles of the first seceders. When at length the Narrative and Testimony came to be enacted as a tercipe (see TERCIPE; ORIGENTISTS), M'Crie adhered to his sentiments, felt that it was difficult for them conscientiously to remain in communion with the synod. They were most reluctant to separate from their brethren, and accordingly they retained their position in connection with the body for two years longer. The New Testament had been already adopted by the synod. At length the four brethren, Messrs. Bruce, Aitken, Hogg, and M'Crie, finding that they could no longer content themselves with mere unavailing protests against the dogmas of the synod, solemnly separated from the body, and constituted themselves into a presbytery, under the designation of the Constitutional Associate Presbytery. But though they had taken this important step, they did not consider it prudent to make a public announcement of their meeting until they had full time to publish the reasons for the course they had adopted. Yet, as the General Assembly was then in the very act of the movement of the government reached the General Associate Synod, then sitting in Glasgow, which accordingly, without the formalities of a legal trial, deposed and excommunicated Dr. M'Crie. The points of difference between the original Seceders and the New Testament and the "Narrative and Testimony" which led to the secession of the four protesters and the formation of the Constitutional Associate Presbytery cannot be better stated than in the following extract from the explanatory ad-
dress which Dr. M'Crie delivered at the time to his own congregation:

"The New Testimony expressly asserts that the power competent to worldly kingdoms is to be viewed as 're-establishing the old political order of society,' in distinction from their religious interests. It is easily seen that this principle not only tends to exclude nations and their rulers from the direct jurisdiction of religious authority, but also to make them lose their power for promoting a religious reformation and advancing the kingdom of Christ, but also virtually condemns those of the latter which did in fact maintain the reformation, which the original Testimony did bear witness to as a work of God. Accordingly this reformation is viewed as a mere ecclesiastic law, or a law made by a reforming Parliament, etc., in so far as they recognize the legitimate right of a people to such a law, but the religion, are either omitted, glossed over, or explained away. In the account of the first Reformation the abolition of certain privileges is said to be the cause of the civil war; total and designed silence is observed respecting all the laws made in favor of the Protestant Confession and Discipline, by which the nation in its most public capacity stated itself to be on the side of Christ's cause; and even the personal reforming footings in 1568, is buried and forgotten. The same thing is observable in the account of the second Reformation, for it is stated that it is not the latter which it is thought necessary for securing the civil and religious rights of the nation, without saying whether they were right or wrong. But all the other laws of the reforming parliaments during the period, which were specified and approved in the former papers of this synod, and the civil constitution in 1649, which was formerly considered as the constitution of the nation, and the ecclesiastical laws, lies passed over without mention or testimony. Even that wicked act of the Scottish Parliament after the restoration of Charles II., by which all the laws and ordinances and ratifying Presbyterian religion and covenants were rescinded, is passed over in its proper place in the acknowledgment of one, and when it is mentioned it is condemned with reserve; nor was this done inadvertently, for in the act of Queen Mary and the Declaration of Right, it is established by law, it is not easy to condense a Parliament for rescinding that establishment.

"Another point which has been in controversy is the national obligation of the religious covenants entered into by this land. The doctrine of the New Testament is that 'restoration is not an essential duty'; and they are only entered into 'as members of the Church, and not as members of the State,' that the Church, invested with civil power have no other concern with it than as Church members; and accordingly it restricts the obligation of the covenants of this kind, to Church members, and all ranks only in their spiritual character and as Church members. But it cannot admit of a doubt that the National and Solemn League and Covenant is a religious oath in the most proper sense of the word; that they were intended as such by those who framed them; and that they were thus interpreted by the three kings: the civil rulers entering into them, enacting them, and setting up the whole civil polity on the basis of the religious; the Church being considered as the ecclesiastical. And the uniform opinions of Presbyterians from the time they were taken has been that they are religious oaths, and bind the conscience with the weight of a religious view. I shall only produce the testimony of one respectable writer (principal Forrester): 'The binding force, says he, is not as a civil contract; and what is the more: the subject of their affection: as, first, our Church in her representatives, and, in the general public interest, the government of the state in both nations; second, the state representatives and parliaments. Thus all assurances are given that either civil or ecclesiastical laws can afford; and the public faith of Church and State is plighted with inviolable ties, so that they must stand while we have a Church or State in Scotland. Both as Christians and as members of the Church and State, under either a religious or civil consideration, the religious oaths are binding, being regarded only as representatives, but also the incorporations (or body) of Church and State are under the same. On this broad ground and in this context the national obligations of all the covenants of this kind. And why should they not? Why should we seek to narrow their obligation? Are we afraid that their binding force would be too absolutely binding, and that we should be compelled to make the religious and the civil exactly parallel? If religious oaths conferring a moral duty, if oaths and vows are founded in the light of nature as well as in the light of God, as men and as Christians, as members of the Church and of the State, whenever there is a call to enter into such covenants, we have our respect due to the Church, and the care, as the covenants of our ancestors, which sedarers have witnessed for and formally renewed? In the former the testimony was expressly by both the sovereigns of this nation, and this nation under the letting of this nation. This nation, a national surrender of ourselves unto the Lord. It declares that the Solemn League
and Covenant was entered into and is binding upon the three kingdoms; that both of them are binding upon the Church of Scotland, and that the Church of civil constitutions is said to have been settled in consequence of the most solemn covenant engagements, and by the power of the civil magistrate is testified against as an act of national perjury. Yet, by the New Testimony, all are bound to declare that religious principles are not to be enforced by the power of the civil magistrate, but binding only on the Church and her members, as such; and that civil powers do not come in conflict with it but as Church members. Is it any wonder that there should be seceders who cannot submit to receive the covenant as an expression of the principles of the Constitution, and which private members, as such, and that those who have appeared should have been forced by the word of the civil magistrate. It is not a matter of small moment to restrict the obligation of solemn oaths, the breach of which is chargeable upon the State, than to explain away an absolute obligation. The quarell of God's covenant is not yet thoroughly pleaed by him against these guilty and apostatising lands, and all that have any due sense of the inviolable obligation of them should tremble at touching or ceuerrating them in the smallest point.

At the request of the brethren Dr. M'Crie drew up and published a paper explanatory of the principles involved in the controversy which had led to the breach. This work appeared in April, 1807, and was regarded by those who took an interest in the subject as a work which satisfied the general wishes of the principles of the Constitutional Associate Presbyterian Church. But, on the whole, the treatise attracted little attention at the time, although copies of it were eagerly sought many years after, when the Voluntary Controversy engrossed much of the public interest. The Constitutional Presbyterian continued steadfastly to maintain their principles, both with the small number of people who adhered to them, and from all who sought to join them they required an explicit avowal of adherence to the principles of the secession as contained in the original Testimony. For twenty-one years the brethren prosecuted their work and held fast their principles in harmony with one another, and to the great edification of the flocks committed to their care. In 1827 a change took place in their ecclesiastical position, a cordial union having been effected between the Constitutional Presbytery and the Associate Synod of Protestants, under the name of the Associate Synod of Original Seceders. See ORIGINAL SECEEDERS (ASSOCIATE SYOND OP).

Original Burghers is the name of that body of secessionists from the Scotch Establishment who in the reign of 1747 remained steadfast to the oath obligation, and favored the National Establishment, though they did not form a part of it. See ANTI-BURGHERS.

In the Origin of the original Burghers no importance is exaggrate in matters of religion, and the binding obligation of the covenants upon posterity, towards the close of the 18th century, the Associate General (Anti-burgher) Synod had deemed it necessary to remodel the whole of their thesmy, a proceeding which led to the formation of the Original Anti-Burghers (q.v.). The Associate (Burgker) Synod, however, did not proceed so far as to remodel their Testimony, but simply prefixed to the formula of questions proposed to candidates for license or ordination a problem or explanatory statement not requiring as much humour and comedy as matters in religion are, and in reference to the covenants, admitting their obligation on posterity, without defining either the nature or extent of this obligation. The introduction of this preamble gave rise to a violent controversy in the Associate (Burgker) Synod, which commenced in 1795, and has usually been known by the name of the Formula Controversy. The utmost keenness and even violence characterized both parties in the contention, the opponents of the preamble declaring that they were manifestly departure from the doctrines of the original standard, and the secessionists, whose defenders contended with equal vehemence that the same statements as those which were now objected to had already been given forth more than once by the Church courts of the secession. At several successive meet-
Synod became merged in the National Church of Scotland. A small minority of the synod declined to accede to the union, preferring to maintain a separate position, and to adhere to the secession Synod. The members of the Synod of United Original Seceders, henceforth to form one association for the support of the covenant. On May 18, 1842, most of the Original Burgesses who remained after their brethren had joined the Established Church, united with the synod of Original Seceders, henceforth to form one association for the support of the covenant. On May 18, 1842, most of the Original Burgesses who remained after their brethren had joined the Established Church, united with the synod of Original Seceders, henceforth to form one association for the support of the covenant.

It had previously been agreed that the Testimony adopted by the Synod of Original Seceders in 1827, with the insertion in it of the alterations rendered necessary by the union, was to be held as the Testimony of the United Synod, and made a term of religious fellowship in the body. The Synod of Original Burgesses was understood to approve of the acknowledgment of sins and bond appended to the Testimony, and it was agreed to by the Synod of Original Seceders that the question of the formula regarding the burgesses would not be disputed, but that the conditions under which the union was effected, and the Synod of Original Burgesses as then constituted ceased to exist.

At the present time, however, there appear to remain in existence twenty-seven congregations of Original Burgesses. They have arrived upon the preliminaries for a union with the established church, in accordance with the athletic views, and calling themselves the Associate Secession Synod. This body consists of only eleven congregations. These Original Burgesses have to this day continued consistently to maintain the views upon which the secession was at its origin based. They strongly vindicate the duty and necessity of national religion, and are therefore in favor of national establishments in opposition to the United Presbyterians and other advocates of the voluntary system. They are consequently also opposed to schemes for reunion among all Presbyterians, which would involve the principle of absolutism in the making of the principle of establishment an open question. But their establishment must be one which is based upon the Solemn League and Covenant, which was declared to be binding at the union of the two bodies in 1840, and in 1866 solemnly renewed by the synod. They are Calvinists of the strictest type, holding the doctrine of a limited atonement—that Christ suffered only for the elect. They are opposed to the use of hymns and instrumental music in public worship. The Original Secession Magazine, a periodical which has appeared once in the month, is published in accordance with the views and proceedings of the synod. See Original Secession Magazine; Oliver and Boyd's Edinb. Almanac; Marden, Hist. of Churches and Sects, ii, 298 sq.; Gardner, Faiths of the World, iii, iv, v; and the references under Scotland and Scotch Presbyterianism.

Original Seceders (1) (Associate Synod of) is the name of a body of Scotch Presbyterians who originated in 1827 by union of what was then the Constitutional Associate Presbytery and the Associate (Antiburgher) Synod, now generally known as Protectors (q. v.), because they took exception in 1827 to the basis of Union between the two great branches of the secession. See Scotland, Church of; Presbyterianism in Scotland. The articles agreed upon as such a basis were drawn up by Dr. McCrie, on the one side, and Prof. Paxton on the other. The Testimony, which was enacted as a term of fellowship, ministerial and Christian, in the Associate Synod of Original Seceders, was drawn up in the historical part by Dr. McCrie, and no where do we find a more noble, luminous, and satisfactory view of the true Seceders, and of their contentions for the reformation of the church. Dr. McCrie shows that the four brethren who formed the first Seceders, though soon after this deed of secession they formed themselves into a presbytery (Dec. 6, 1738), still for some time acted in an extra-judicial capacity, and in this capacity they issued, in 1738, a "Testimony for the Principles of the Reformed Church of Scotland." It was not, indeed, until two years more had elapsed that they resolved to act in a judicative capacity, and accordingly, in December, 1739, they published the rules which regulated the principles and proceedings of the Church of Scotland, and against the course of defection from them. This Testimony, as Dr. McCrie shows, was not limited to those evils which had formed the immediate ground of secession, but included others also of a prior date, the condemnation of the reformation of the church of Scotland, the establishment of episcopacy, and the power which the faithful party in the Church had all along borne. The whole of that Testimony they carried along with them to a state of secession. In prosecuting their Testimony, they deemed it their solemn duty to renew the national covenants, the neglect of which had often been complained of in the Established Church since the Revolution.

The points of difference between the Original Seceders and the Cameronians or Reform Presbyterians are thus admirably sketched by Dr. McCrie in the historical part of his Testimony of 1827:

1. We acknowledge that the fundamental deed of the secession, or rather the breach, is essentially unalterable, because of its agreement to the Divine will revealed in the Scriptures, and because it was not connived at, not in the presence of the covenants, but in the violation of the covenants; and that the nation sinned in overthrowing it.

2. We condemn the conduct of the nation at the Revolution in 1688, in the same terms, and for the same reasons, as the National Church; we condemn the covenants, and we condemn the nation which neglected them, and in not looking out for magistrates who should be devoted to the maintenance of the true religion, as formerly settled, and rule them by laws subsequent to its advancement.

3. We condemn not only the conduct of the nation, but the conduct, at that time, of the Established Church in not recognizing episcopacy, but also the conduct of Scotland in not reminding them of their obligations, and in every way competent exciting them to reform, conformably to a prior treaty and covenant; and particularly the conduct with which the union with England was revoked, with continuance of episcopacy, in England, with all that flowed from this and partakes of its sinful character.

4. We condemn the breach of the supreme authority vested in the General Assembly, as established by laws in England and Ireland, and all the assumed exercise of it in Scotland, particularly by dissolving the Assembly, without taking into consideration the sole right of appointing and discharging the members of their own body. See Knox, 'History of the Church,' and the references under the Assembly.

5. We condemn the abjuration oath, and other oaths which, either in express terms or by implication, approve of the complex constitution.

6. We consider that there is a great difference between the arbitrary and tyrannical government of the persecuting period and that which has existed since the Revolution, which has been conducted under the power of the great body of the nation, and in consequence of a claim of right made by the representatives of the people, and not of the monarch (as the nation does) many of the qualifications which they sought to possess according to the word of God and our covenant and civil constitution. The established church, by sanctioning the civil office by maintaining justice, peace, and order in the church, and by the glory of God, and protecting us in the enjoyment of our religious liberty, has generated in the hearts of a great number of the people, holding these views, and endeavoring to act according to them, we can, without dropping our testimony in behalf of a former reforming period, or approving of any of the evils which cleave to the constitution or administration of the state, acknowledge the present civil government, and yield obedience to all its lawful commands, not for wrath but for conscience' sake; and in doing so we have this advantage that we avoid being dragged insidiously, notwithstanding the numerous pretexts respecting the obedience to be rendered individually, the necessity they have to have recourse to gloss upon these, which, if applied to other pretexts running in the same strain, would tend to undermine the conclusion of civil liberty in union with the principles and practice of the Christians of the first ages who lived under heathen or Arian emperors; or of those underPopes; or of those under popular princes; or of our reforming fathers in Scotland under queen Mary, and of their successors during the first years of the restoration of episcopacy, and after the Restoration down to the time at which the government degenerated into an open and avowed tyranny.

On the question as to the lawfulness of taking the oath of supremacy, which so early as 1747 rent the secession body into two sections, the Original Seceders avowed in their Testimony a decided coincidence in statement with the Antiburghers. This is plain from the following explanations given by Dr. McCrie, in which the
religious clause in the oath is shown to be inconsistent with the succession Testimony:

1. As it is a matter of great importance to swear by the great name of God, so the utmost caution should be taken to avoid all actions and oaths subject to which we are required to take; and it is the duty of ministers and Church courts to give direction and warning to their people concerning the dangerous nature of these professions of religion, and more especially when the persons requesting the renewal of the covenants are such as are not of another oath sanctioning an explicit profession of religion, in consequence of which they may be in danger of involving the Church of Scotland in consciences which cannot be understood as objecting to the clause in question on account of its requiring an adherence to the true religion prescribed by the laws. This is in accordance with the standard of the Scriptures (if it could be understood in that sense), and is made an interference with the religious liberty declared and defence of their principles concerning the present civil government. 2. The profession of religion requires the profession of the doctrine of the laws, and in the absence of the laws, any profession or act of the Church of Scotland, and authorized by the laws.

In these respects we accredit the Revolution settlement and the present laws a privilege, and agree to all which the Associate Presbytery thankfully expressed in commendation of them in their Testimony, and their declaration and defence of their principles concerning the present civil government. 3. The profession of religion requires an adherence to the laws, and in the absence of the laws, any profession or act of the Church of Scotland, and authorized by the laws. In these respects we accredit the Revolution settlement and the present laws a privilege, and agree to all which the Associate Presbytery thankfully expressed in commendation of them in their Testimony, and their declaration and defence of their principles concerning the present civil government.

The Judicial Testimony finds fault with the national profession and settlement made at the Revolution, both maintain that they are not included by any important part in: the religion professed in this realm and authorized by the laws. It is admitted, with some respect to its applying to any profession different from that which is made and authorized at the time when the oath is sworn, the being admissible of the true religion, as well as the Seceders, agreeing with that which was made in this country and authorized by the laws between 1650 and 1652, is different from and inconsistent with that profession which is presently made by the Church of Scotland, and therefore is not admissible of the Testimony of the Anabaptists, and of the Dedication to the Church of Scotland, and authorized by the laws.

controversy the Synod of Original Seceders deemed it right to issue an address on the subject. This production, entitled "Vindication of the Principles of the Church of Scotland, in Relation to the Questions presently agitated," was published in 1843. It condemned the voluntary system on various grounds: 1. On account of its final schismical, communistic, and antichristian tendency; 2. In variance with sound policy; 3. As unscriptural; 4. As directly opposed to one important design of supernatural relations—the improvement of human society; 5. As striking at the foundation of God's moral government, so far as it assigns duties to political, while thus manifesting in the strongest and most decided manner the principles of establishments in opposition to the voluntary principle, the Original Seceders took occasion, in the course of the same pamphlet, to lay down with equal distinctness the ground on which they felt themselves excused from all prospect of an immediate return to the communion of the Established Church.

"Our objections," they say, "to the Established Church of Scotland are not confined to the administration: we cannot unreservedly approve of her constitution as it was, which are chargeable on the Church of Scotland may be in communion with that Church, yet they, together with many faithful men who died before the secession, and some who have been raised up in the Church. That event, were all along dissatisfied with several things in the establishment of religion as in the Revolution, and the ratification of it the union between Scotland and England. The first Seceders, in their 'Judicial Testimony and Apology,' distinguished between several important points, with respect to which that settlement involved a ruinful departure from the previous settlement of religion. The first Seceders stood to this point, and they were the original Church of Scotland, on which they were aware that the Established Church of Scotland has it not in her power to correct all the evils of the Revolution settlement, and to which they felt themselves bound to point out; but they cannot warrantably quit their position of secession until the Established Church shows a disposition to return to that former constitution by using means to correct what is inconsistent with her, in the way of those powers which belong to her in the capacity of an independent society under Christ, her Head, and by due application to the state for having those laws rescinded or altered which affect her purity and abridge her freedom. It will be found, on a careful and candid examination, that a great part of the evils, in point of administration, which were chargeable on the Church of Scotland may be traced, directly or indirectly, to the defects and errors contained in the Establishment, and as it is her duty, so it will be her safety seriously to consider these, and, following the direction of Scripture and the examples of former reforming authors, to confine them before God, and seek for their removal."

The evils to which the document here refers were chiefly a want of a formal recognition of the national covenants, of the divine right of presbytery, and of the spiritual independence of the Church. The year in which the "Vindication" appeared formed an important era in the history of the Established Church of Scotland, since from that date commenced that line of policy in the General Assembly which resulted at length in the disruption in 1843. It was not to be expected that the Original Seceders, feeling, as they did, a lively interest in every movement of the National Church, and being the only ones with one eye on the crisis of her history upon which she was entering. In the following year, accordingly, a pamphlet was drawn up, remarkable as being the last production which issued from the pen of the venerable Dr. M'Crie, entitled "Reasons of a Fast," appointed by the Associate Synod of Original Seceders. Character and tendency: 2, as remarkable allusions to the peculiar circumstances of the Church of Scotland. Nor were such allusions inappropriate or unreasonable. From that period the struggles of the Established Church to maintain spiritual independence, under various attacks, against the intrusion of unacceptable ministers, became the all-engrossing subject of attention in Scotland. The views of the Original Seceders were in harmony with the majority of the General Assembly; and the important proceedings from year to year of that venerable court were watched with deep and ever-increasing anxiety. At length, in 1842, a change took place in the position of the Original Seceders, a union having been formed between that body and the Associate Synod of Original Seceders, which gave rise to a new denomination, entitled the Synod of United Original Seceders (see next article).

Original Seceders (2) (Synod of United) is that body of Scotch Presbyterians organized in 1842, as was seen in preceding article, by union of the Synod of Original Seceders with the Synod of United Seceders. Previous to the final act for this union it had been agreed that the Testimony adopted by the Synod of Original Seceders in 1827, with the insertion in it of several alterations rendered necessary by the union, should be taken as the Testament of the United Synod. One important alteration agreed to by the Synod of Original Seceders was that the question in the formula regarding the Burgess-oath should be dropped. To understand the position which the United body of Original Seceders occupied after the union, it must be borne in mind that the Testimony of 1827 was drawn up in its historical part by Dr. M'Crie, was essentially Antiburgher in its whole nature and bearings. This element was dropped in the Testimony of 1842, and thus the character of the Testimony underwent an important change. On this subject it is necessary to state briefly the historical part of the Testimony of 1842: "The Synod of Original Seceders, in their Testimony, published in 1827, after stating their reasons for not continuing to approve of the decision condemning the swearing of the oath by seceders, suggest it as their opinion that an agreement might be made of the subject of difference which would be at once agreeable to truth and not hurtful to the conscience of any." This suggestion was readily and cordially met by the Synod of Original Burghers, and joint measures were in consequence adopted, with the view of ascertaining the practicability of such an arrangement. In concluding the negotiation, both parties proceeded on the principle that, desirable as union is, if the reality of the thing is sought, and not the appearance merely, this would be secured more effectually, and with more safety to truth, by candid explanations on the points of question, than by studiously avoiding the agitation of them—a plan which, while it makes greater pretensions to charity and peace, lays a ground for subsequent irritation and dissenion. "In the course of explanation, it was found that the only difference of opinion was the two words relating to the meaning and necessary application of certain terms of the oath, which, as the question originally came before the session courts as a question of practice, did not appear to be an insuperable obstacle to a spiritual adjustment of the dispute. After repeated conferences, it was satisfactorily ascertained that the members of both synods were agreed on all points with the judicial Testimony of the first Seceders, particularly in its approval of the profession of religion made in this country, and authorized by the laws between 1638 and 1850, on the one hand, and its disapproval of the defects in the settlement of religion made at the Revolution on the other. Encouraged by this harmony of settlement as to the great cause of reformation, so much forgotten and so keenly opposed from various quarters in the present time, and feeling deeply the solemn obligations under which we lie to come forward with a manifest and deliberate reverence that cause; and the Burgess-oath, the original ground of separation, being now, in the providence of God, abolished, and both parties having now for various reasons seen it to be their duty to refrain from further controversy, it was agreed that the synods agreed to unite upon the following explanatory declarations and resolutions, calculating, in their judgment, to remove the bars in the way of harmonious fel-
lows and co-operation, and to prevent, through the blessing of God, the recurrence of any similar difference in future: 1. "That when the Church of Christ is in danger from adversaries who hold persecuting principles, or who are employing violence or insidious arts to overturn it, the legislature of a country may warrantably and justly assemble those of its most important and influential citizens, or statesmen, to sit as a tribunal, for the purpose of establishing a security for the religious liberty of the nation; and that such a tribunal, or any other tribunal, is a lawful and proper establishment. 2. That no Christian, without committing sin, can, upon any consideration, any moral or civil law, be considered as a defaulter, or as having committed corruption or defect in the profession or establishment of religion. 3. That a public oath can only be taken according to the declared and known sense of the legislature or enacting authority, and no person is warranted to swear it in another sense of his own, contrary to the former. 4. That no Church court can warrantably give a judicial toleration or allowance to do what they declare to be sinful, or what there is sufficient evidence from the Word of God is sinful."

Those who hold high Antiburgher views maintain that the ruling element of the Original Secession Testimony, who were the determiners of the proceedings of the Anti-Burgher party of the secession in 1746, viz. that "those of the secession cannot safely of conscience and without sin swear any burgess-oath with the said religious clause while matters, with reference to the profession of the church, are in such a condition as at present; and particularly that it does not agree unto or consist with an entering into the bond for receiving our solemn covenants." So strongly did the Antiburgher Synod of that time regard this decision as virtually comprehending the whole secession clause, that they declared that the Burghers who had opposed this decision "had materially dropped the whole Testimony among their hands, allowing of, at least for a time, a material abjuration thereof." Thus it is plain that the Antiburgher Synod made the decision of 1746, in regard to the burgess-oath, the exponent of the judicial Testimony, as well as of the declinature and the act of renewing the covenants. Hence the Original Seceders, in uniting with the Original Burghers, and adopting the Testimony of 1842, might be regarded as acting in opposition to the decision of 1746, which was the ruling expository element of the Testimony of 1827. Another peculiarity which distinguished the secession Testimony was the formal recognition and actual renewing of the covenants. To this peculiarity the original secession body steadfastly adhered, allowing no student to be licensed and no profession to be made of the oaths which had not been joined to the bond, or solemnly promised that he would do so on the very first opportunity that offered. The descending obligation of the covenants was distinctly maintained according to the Testimony of 1827, and the same doctrine as avowed also by the United Original Seceders in their Testimony of 1842. In their steps, they were only following in the steps of the first seceders, who had no sooner broken off their connection with the Established Church of that day than they fell back upon the Church of the former period, and proceeded to identify their cause with that of the Reformed Covenanted Church, and thus did they by actually renewing the covenants. By their act relating to this subject, published in 1748, they considered the swearing of the bond was called for and rendered necessary by the strong tide of defection from the Reformed Church and act in such a manner as to make themselves heirs to the vows of their fathers. Dr. M'Crie accordingly, in referring to this part of the history of the first seceders, tells us in the historical part of the Testimony of 1827: "The ministers and elders, having been taken for having it administered to the people in their respective congregations; and at a subsequent period (1744) they agreed that all who were admitted to the ministry should previously have joined in renewing the covenants, while such as opposed or slighted the duty should not be admitted to scale ordinaries."

Thus both the formal recognition and the actual renewing of the covenants came to be necessary terms of fellowship in the early Secession Church. The work of renewing the covenants was not actually inaugurated in the assembly of the people of Edinburgh, or in any of the churches of the city, but it passed through in only two settled congregations, when a stop was put to it by the synod having forced upon it the settlement of the question, "Whether those in communion with them could warrantably and consistently continue in a union with that body which has not made this act?" That 'Here I protest, before God and your lordships, that I profess and allow with my heart the true religion professed within this realm, and authorized by the laws thereof.'" The question involved in swearing the burgh-oath respected the character of the Revolution settlements. It was on this point that the secession body became divided into two conflicting synods. From the Testimony of 1827 it is plain that the Original Seceders regarded both the principle and practice as inherent by them from the first seceders. Nor does there seem to be any just case for supposing that the refusal of the Synod and the United Synod of the United Original Seceders in 1842, in so far as regards the question as to the descending obligation of the covenants. But in the latter Testimony a clause occurs which seems to indicate a somewhat modicum of sentiment, and the secession covenants. The clause in question reads thus: "It is also agreed that while all proper means are used for stirring up and preparing the people of their respective congregations to engage in this important and seasonable duty, there shall be no value made in those congregations where it has not been formed or practiced."

The clause marked in italics is not found in the Testimony of 1827, and must therefore be considered as one of those alterations in the Testimony of the Original Seceders which was deemed necessary in order to the accomplishment of the union of the Original Burghers. The year which succeeded the formation of the Synod of Original Seceders was the year of the disruption of the Established Church of Scotland, an event which was one of deepest interest to the Christians of Scotland, if not of the world, but more especially to the representatives of the first seceders. The formation of the Free Church of Scotland, in a state of entire independence of all state interference, and professing untrammeled to prosecute the great ends of Christ's Church, submissive to the guidance and authority of her Great Head alone, was hailed by the newly formed congregations as a joy that was the more acceptable to the hopes, and the prayers of their forerunners, who had concluded the protest which formed the basis of the secession in these remarkable words: "And we hereby appeal unto the first free, faithful, and reformatting General Assembly of the Church of Scotland. As years passed on, after the memorable events of 1843, the conviction was growing stronger and stronger in the minds of many both of the ministers and people of the United Original Seceders that in the Assembly of the Free Church they could recognise the General Assembly to which the first fathers of the secession appealed, and that therefore the time had come when the protest of Nov. 16, 1738, must be fallen from. At length it was resolved in the synod of the body to lodge a representation and appeal on the table of the Free Church Assembly, with a view to the coalescing of the two bodies. The Memorial was thereafter put in motion, on the express understanding that the brethren of the United Original Secession Synod who thus applied for admission into the Free Church of Scotland should be allowed to retain their peculiar views as to the descend-
gations connected with the United Original Seeders refused to accede to the union with the Free Church, and preferred to remain in their former position; and accordingly a small body of Christians still exists holding the principles and calling themselves by the name of the United Original Seeders. Some theologians admit that we were born less pure than Adam, and with an inclination to sin; but in so far as this inclination or concupiscence, as it is called, is from nature, it is not properly sin. It is merely the natural appetite or desire, which, as long as the will does not consent to it, is not sinful. Bengel believed that original sin is taken away by baptism, and maintains, like the above, that concupiscence is not sinful. The apostle Paul, however, holds a very different opinion, declaring in the plainest language that the proclivities to sin is in itself sinful. 8

8. Romans viii. 8, he says: "What shall we say then? Is the law sin? God forbid. Nay, I had not known sin but for the law; for I had not known lust except the law had said, Thou shalt not covet. But sin, taking occasion by the commandment, wrought in me all manner of concupiscence.

This class in the church of St. Cuthbert, representing a curious concerning the nature of original sin arose in the 16th century in Germany. A party of Jena, led by Matthias Flacius, endeavored to prove that the natural man could never co-operate with the divine influence in the heart, but through the working of innate depravity, the spiritual life was developed. Flacius was the keenest opponent in Victorinus Strigelius, and a public disputation on the subject of the original sin was held at Weimar in 1560. On this occasion Flacius made the strong assertion that original sin was the very essence of man, language which was believed to imply either that God was the author of sin, or that man was created by the devil. Hence even the former friends of Flacius became his bitterest opponents.

Oriolli, Bartolommeo, an Italian painter who devoted himself largely to the sublimity in the school of St. Cuthbert, flourished at Trevigia about 1616. He executed numerous works for the churches in his native city, which are commended by Federici. Oriolli was also a good portrait painter, and frequently introduced portraits into his pictures, instead of ideal forms. There is a painting of this class in the church of St. Cuthbert, representing a number of the people of Trevigia. Lanzi says he painted more pictures for public exhibitions at Trevigia than any other artist, and that he belonged to that "numerous tribe of painters who in Italy were ambitious of uniting in themselves the power of poetry and painting, and who, besides their beautiful compositions, sought further distinction by imitating, either in preceptr or in art, gave vent to their inspirations in their native place by covering the columns with sonnets and the churches with pictures, but without exciting the envy of the adjacent districts.

O'Ron occurs three times (Job ix. 9; Sept. "apokol. Vulg. Orion; xxxviii. 81, 82; Diod. Arturus; Amos vi. 8, μεταφανταζομαι, Orion) in the A.V. as the rendering of the Heb. בִּשָּׁל, from בַּשָּׁל, to be fat, and hence either to be strong or to be dull, languid. The last sense prevails in most derivatives, and thus בַּשָּׁל, commonly means fool or impious person (as Ps. xxxli. 10; Eccles. ii. 14), but in Job ix. 9 (comp. xxxviii. 81; Amos viii. 6) is plainly applied to one of the greater constellations of the sky. It is noted by most ancient interpreters to refer to the large and brilliant constellation Orion, or "the Giant," situated in the southern hemisphere with respect to the ecliptic, but which is crossed near its middle by the equinoctial. It is known by the three bright stars in its belt. The constellation Oriental astronomy was Nimrod, the mighty hunter, who was fabled to have been bound in the sky for his impious. The two dogs and the hare, which are among the constellations in the neighborhood of Orion, made

dependently of divine grace, of originating, prosecuting, and consuming good works. God, they allege, gives us the ability to believe, but we can experience the ability without further assistance. This doctrine has been revived in our own day by the members of the Evangelical Union, commonly called the United Original Seeders. Some theologians adhere to this view, and hold that the testimony of 362, 361; Hetherington, Hist. of the Church of Scotland, p. 532, 531; Stanley, Lect. on the Hist. of the Church of Scotland, lect. ii sq.; and the authorities quoted in the article. See also Scotland, Church of; Presbyterianism in Scotland.

Original Sin. This expression is frequently used in a twofold sense, to denote the imputation of Adam's first sin to his posterity, and also that native depravity which we have derived by inheritance from our first parents. The first view of the subject—the imputation of Adam's first sin—has already been considered in the article on the Fall. According to the second view we came into the world, in consequence of the sin of Adam, in a state of depravity. On this point the Westminster Confession of Faith explicitly declares: "By this sin," referring to the strife of the serpent and the tree, "they fell from their original righteousness and communion with God, and so became dead in sin, and wholly defiled in all the faculties and parts of the soul and body. They being the root of all mankind, the guilt of this sin was imputed, and the same death in sin and corrupted nature conveyed to all their posterity, descending from them by ordinary generation." Again, in another article the Confession teaches: "Man, by his fall into a state of sin, has wholly lost all ability to any spiritual good accompanying salvation, so that a natural man, being altogether averse from that good and dead in sin, is not able by his own strength to convert himself, or prepare himself thereunto." This doctrine pervades the whole of the sacred writings, and may be called indeed a fundamental and essential truth of revelation. Thus before the flood we find the inspired penman declaring (Gen. vi. 5), that "the whole world of men was wicked in the sight of God," and that "the wrath of God was kindled against the earth." After the fall, the apostle Paul declares that "all have sinned, and come short of the glory of God," and that "the whole generation of men was made evil continually." Again, after the flood, the same statement is repeated (viii. 21): "The imagination of man's heart is evil from his youth." David also (Ps. li. 5) declares: "Behold, I was shapen in iniquity, and in sin did my mother conceive me." The original and innate depravity of man might be deduced from the doctrine of Scripture respecting the necessity of regeneration. Our blessed Lord affirms (John iii. 8): "Except a man be born again, he cannot see the kingdom of God." We are said to be "saved by the washing of regeneration, and renewing of the Holy Ghost, which he shed on us abundantly through Jesus Christ our Saviour." Such language has no meaning if it be not true that we are utterly depraved by nature. How early does this innate corruption make itself manifest? Herein lies our duty; for us to examine our own hearts, or look around us in the world, without having the conclusion forced upon us that the wickedness which everywhere prevails must have its seat in a heart that is "deceitful above all things, and deceitful in the sight of God." The doctrine of original sin has been denied by heretics of different kinds. Socinians treat it as a falsity and absurd idea. The followers of Pelagius maintain that, notwithstanding the results of the fall, a man still retains the power, in
ORION

his train complete. There is possibly an allusion to this belief in "the bands of kest" (Job xxxviii. 31), with which Gesenius (Jexa. i. 458) compares Prov. vii. 22. In the Chronicon Piscatiae (p. 90) Nimrod is said to have been "the mother of Orion and the stars," to which the Geni- sians say, was deified and placed among the stars of heaven, whom they call Orion" (comp. Cederinus, p. 14).

See Nimrod. In Is. xiii. 10 the word kestlin is rendered "constellations," i.e. the Orion or giants of the sky, the greater constellations similar to Orion. Some Jewish writers, the rabbins Isaac Israel and Jonathan, and among them, identified the Hebrew kesil with the Arabic sahil, by which was understood either Sirius or Canopus. The words of R. Jonah (Abulwafid), as quoted by Kim- chin (Lez. Heh. s. v.), are, "Kesil is the large star called in Bel and the name of the star of Ashur, and it is called after its name kesil." The name Sokhil, "fool- ish," was derived from the supposed influence of the star in causing folly in men, and was probably an additional reason for identifying it with kesil. See Gese- nius, Theaur. p. 701; Niebuhr, Descript. Arabiae, p. 112; Ideeler, Uber Ursprunge und Bedeutung der Stern- namen, p. 246, 283; Michaelis, in Suppl. p. 1919 sq. Squar's Astronomy.

ORION, a mythological personage of the Greeks, was represented as a gigantic hunter, and reputed the hand- somest man in the world. His parentage is differently stated. According to the commonly received myth he was the son of Hyrius of Hyria in Boeotia, and was called in his native country Kandoun. Another account makes him the son of Poseidon and Euryale, while some say that he was Autochthonous, or "earth- born." So immense was his stature that when he waded through the deepest seas he was still a head and shoul- ders above the water, and when he walked on dry land his stature reached the clouds. Orion was a general favorite, and soon rendered himself celebrated. Diana took him among her attendants, and even became deeply enamoured of him. His gigantic stature, how- ever, displeased Eonopion, king of Chios, whose daughter Hero or Merope he demanded in marriage. The king, not daring to deny him openly, promised to make him his son-in-law as soon as he delivered his island from wild beasts. This task, which Eonopion deemed impracticable, was soon performed by Orion, who eagerly demanded his reward. Eonopion, on pretence of com- plying, intoxicated his illustrious guest, and put out his eyes with arrow points when he had fallen asleep and was about to sleep. Orion, finding himself blind when he awoke, was conducted by the sound to a neighboring forge, where he placed one of the workmen on his back, and, by his directions, went to a place where the rising sun was seen to the greatest advantage. Here he turned his face towards the luminary, and, as is reported, he immediately recovered his eyesight, and hastened to punish the perfidious cruelty of Eonopion. Aurora, whom Venus had inspired with love, carried him away into the island of Delos, to enjoy his company with greater security: but Diana, who was jealous of this, destroyed Orion with her arrows. Some say that Orion had provoked Diana's resentment by offering violence to Opis, one of her female attendants, or, according to others, because he had attempted the virtue of the goddess herself. According to Ovid, Orion died of the bite of a scorpion, which the earth produced, to punish his vanity in boasting that there was not on earth any animal which he could not conquer. It is said that Orion was an excellent workman in iron, and that he fabricated a subterranean palace for Vulcan. After death, Orion was placed in heaven, where one of the constellations still bears his name. The constellation of Orion, situated near the feet of the bull, was composed of seventeen stars, in the form of a man holding a sword, which has given occasion to the poets often to speak of Orion's sword. As the constellation of Orion, which rises about March 9, and sets about June 21, is generally supposed to be accompanied, at its rising, with great rains and storms, it has acquired the epithet of aquanus, given it by Virgil. Orion was buried in the island of Delos, and the altar erected to the memory of Orion by the Delians, who, the poet, showed, as containing the remains of this cele- brated hero, was nothing but a cenotaph. The daugh- ters of Orion distinguished themselves as much as their father, and when the oracle had declared that Boeotia should not be delivered from a dreadful pes- tillence before two of Juno's chalices were immo- lated on the altars, they joyfully accepted the offer, and voluntarily sacrificed themselves for the good of their country. Their names were Menipphe and Me- tioche.

ORISSA, an ancient Indian kingdom, now a province of India, is situated near the head of the Bay of Bengal, on its north-western shore, a short distance south-west from Calcutta, and is bounded on the north by Bengal, east by the Bay of Bengal, south by the country of the Telugus, and west by the Ganges. It is irregularly shaped, about 300 miles long, and 240 wide, and had in 1872 a population of 4,317,990. It is supposed that the province was anciently much larger than it is now, and that its sovereignty formerly sustained a rank much above that of most Hindu rajahs, and that it was num- bered among the most powerful of the ancient Indian sovereignties.

Before the 6th century B.C., Orissa, Odour, or Utkala, names whose very meaning is not yet fixed, must have been a land of swamps, lakes, and jungles, amid which few people cared to live. A more or less people seem to have been hill-tribes and fishermen of the aboriginal non-Aryan stock, whose types are well preserved in the Savars and Khonds of the present day. At what time Aryan immigrants from northern India settled in the country it is not easy to say, but the rock inscriptions of a later Buddhist period date back to the middle of the 8th century B.C. The hills and wilds of Orissa abound in rock-hewn caves, shrines, and statues of Buddha, and the lonely dwelling-places of Buddhist monks have since been tenanted in their turn by wor- shippers and ascetics of the various Brahmanic schools that rose upon the ruins of the faith promulgated by the semi-mythical Hindu reformer Sakyamuni, and were established by the Hindú Constantine Anaka. In Oris- sa the spread of Buddhism appears to synchronize cu- riously with the progress southward of the Yavanas, who had been conquered by Alexander, and who had been Cynic philosophers of the Iowan of Hebrew write and the Ionian Greeks of history. There is no doubt, we think, with Dr. Hunter, who only follows up the clue furnished by former scholars, that the Yavanas who invaded Orissa in the 8th century B.C. were chiefly descendants of the men who under Alex- ander and his successors ruled Afghanistan and the Punjab, whence they roved or were driven onwards into Behar, and down to the Ganges to Orissa. One of Asoka's edicts carved on the rocks of the last-named country speaks of "Aryakeso, the Yona king," or, in other words, of Antiochos the Yona, or Asoka, or Ionian. It is well known that a Yavana dynasty ruled Orissa for 146 years, from the early part of the 4th century A.D., and that with its final overthrow in A.D. 473 fell the sup- remacy of that Buddhist faith which for more than seven centuries had supplanted the older Brahmanic systems. It is worth noting that a like revolution from Buddhism to Brahminism marks the downfall of yet later Yavan dynasties in Central and Southern India. In the buildings of the Buddhists and their religious heirs the Jains, traces of Greek art are unmistakably visible wherever Buddhism and the Yavanas met; we find here, as in the Punjab, strength and gradually growing fainting on its way to the Orissa shore. From the remains of sculptures, inscriptions, etc., we may infer that the early civilization of Orissa was high. The temple of the sun at Kamakar—erected about the 12th century—exhibits carvings representing the planets, sculptured figures of
animals, etc., which show that at that date the plastic and mechanical arts were in a more advanced state in that part of India than they were in England.

Orissa maintained its position as an independent monarchy till 1586, when, its royal line having become extinct, it was made an outlying province of the empire of the Great Mogul. Out of the many existing titles of this empire, the more valuable portions of Orissa were seized by the nizam of Hydrabad. The French, who had taken possession of a part of the country long known as the Northern Circars, attempted to drive the English (who had not yet established themselves in Southern India) out of India. The Maharattas, who had seized a portion of Orissa in 1740, were forced to surrender it to the English in 1803. The soldiers of the East India Company were marched into Orissa at the opening of the present century, and an engagement was subsequently entered into between the company and the native chiefs and princes, by which the former bound themselves to perform certain services for the country (as maintaining the river-banks in good repair), while the latter engaged to pay a yearly tribute. Of the many principalities into which the country is divided, the native prince generally holds a governor over the British government, and the result was that numbers of the estates were sold, and the government, as a rule, became the purchaser. Much of the territory originally forming a portion of this kingdom thus fell into the hands of the British.

Draining the rice-banks and the cultivation of the civil crops, viz. Pûru in the south, Cuttack in the centre, and Balsore on the north. The sea-coast, which is the eastern part of the province, is level, and far more populous than the central and western divisions, which are mountainous and covered in many places with primeval forests, inhabited by wild beasts, or men almost as untamed and rude as they. The climate, soil, productions, animals, insects, birds, reptiles, and fish of Orissa are similar to those of Bengal and other adjacent portions of Hindostan lying near the tropic of Cancer. The villages, houses, food, clothing, dress, literature, and trades of the Oriyas are also much like those of the Bengalese and the people of other large portions of India. The present population of Orissa is principally made up of Hindis, Mohammedans, Santals, and Bhumijas, the Hindis constituting by far the larger number. From its liability to inundation, the country is not much inhabited for three or four miles inland from the sea. Beyond this low tract the plains are sufficiently elevated for security, and are highly cultivated and densely populated. Further inland the country becomes mountainous, covered in part by forests, where the last vestiges of the Indian races, in face of British, Goan's, Saronas, and Bhumijas. The Gonds or Khonds are believed to be the descendants of the aboriginal inhabitants of the country. This tribe occupied an area extending from north of the Mahanadi, south to the banks of the Godavari. Their mountain-haunts are admirably suited for defence, as the districts which they inhabit are almost inaccessible; and although they do not yet appear to have adopted fire-arms, they manage their battle-axes and bows and arrows with an arduousness and courage that make them formidable enemies. The Khonds are a totally distinct race from the aborigines of the Indus, and the Kunbis who occupy the plains, but there is but little resemblance between them and the other hill-tribes. See Khonds. Some ethnologists claim the Santals to have been the aborigines of Orissa, but there does not seem to exist very good ground for such assertion. See however, Santals.

In Orissa, as elsewhere in India, the history of the people resolves itself for the most part into the history of their religion. As Buddhism faded away, successive forms of Vishnu and Siva worship took its place. Bhubaneswar, with its 7000 shrines, now reduced to less than half that number, witnessed the establishment of the temple of the Sun at Kanarakan, on the Orissa coast. In the holy city of Puri, sacred to the black-skinned goddess Jagannaut, the Lord of the World, and other religions find their common meeting-place. "The fitchees and bloody rites of the aboriginal races, the mild flower-worship of the Bedas, and every compromise between the two, along with the various spirituities of the great Indian reformists, have here found refuge." Once every year the holy city of Puri is the attraction to the poor, ignorant natives, drawn thither simply by a superstitious veneration, which formerly cost the lives of millions. The humane policy of the British has largely done away with human sacrifices in every form. But though the car of Jagannaut (q.v.) no longer crushes out the lives of thousands, and the Meritah (see art. Khonds, Religious Rites and Sacrifices) victims are saved from a horrible death, thousands yet fall a prey to an impure atmosphere and unwholesome food to which the 9200 plagues, which are peculiarly native to the country, are believed to owe their existence. In the month of August, 1874, the sanitary authorities of Calcutta found 4600 cases of fever in Calcutta, and 1800 cases more in the suburbs, in 1178 houses. The worst part of it came from rice, pounders of putrefying rice. And if any escape all this unjuired, they are sure to be further tried in their homeward journeys—oftentimes hundreds of miles long—through the pouring rain, sleeping many of them on the grass or mud, and consequently dying of exposure in numbers by the way, or carrying home with them the seeds of life-long suffering. It is reckoned that at least 10,000 people perish every year in Puri or on the way, and the number was far greater some years ago, before the government took measures to alleviate the worst horrors of this deadly pilgrimage.

The natives of Orissa, composed, as we have seen, of different tribes, of course do not all speak in one tongue, but though there are a score or more of dialects, there are only three principal vernacular languages spoken by the Oriyas. 1. The Oriya, one of the Hindf family of languages, derived principally from the Sanscrit. This is spoken by the greater part of the Hindf population. 2. The Hindostani, derived principally from the Arabic and Persian, and spoken by the Mohammedans. 3. The Santal, with which may be classed the Bhupia or the Bonga tribes, and the Tonga. The Oriya contains many religious and literary works, some translated from the Sanscrit, and others original. Most of the religious books are poetical, and some of them possess a great degree of literary merit. Missionary LABORS.—Thus far comparatively little has been effected for Christianizing the natives of Orissa. The districts of Pûru and Cuttack are occupied by the English General Baptist missionaries, who began labors there in 1821. Although they had to wait six years for their first convert, many followed, and this station is now one of the most flourishing in the missions. It has furnished many native teachers and preachers. In 1888 there were 18 stations, with 9 ordained and 8 unordained foreign workers, and 22 ordained and 12 unordained native workers; 8816 adherents, 1044 communicants, and 25 schools with 1250 scholars, and an avowedly executed version of the Bible into the Oriya tongue was prepared by Mr. Sutton, one of the missionaries. He also prepared a dictionary and a grammar. The district of Balsore is the site of the Free-will Baptist mission. This district lies on the west side of the Bay of Bengal. It is about 150 miles in length, and 60 miles wide, and contains about 500,000 inhabitants. On its northern boundary lies a considerable tract belonging to the province of Bengal,
which is inhabited by Orcias. The Free-will Baptists began their labors in 1835, and now employ there 10 missionaries, 22 native preachers, 5 churches with 654 members, and several well-conducted schools. See Bacheler, Hindooism and Christianity in Orcias; Sterling, Orcias; Hunt, Orcias; and Orest, Orcias under Native and British Rule (1872, 2 vols., 12mo); Newcomb, Cyclop. of Missions, s. v.; Chambers, Cyclop. of Christian Missions, p. 158, 389; Brit. Qu. Rev., 1872, p. 120 sq.

Orcney Islands (Norse, Orkney or, from orb, “circle” in Latin; Old Norse, Orb, “circle”), a compact group, separated from Caithness by the Pentland Firth, and counted a Scottish possession, are situated between 58° 41′ 24″ and 59° 28′ 2″ N. lat., and between 2° 22′ 2″ and 3° 26′ 10″ W. long.; and cover an area of 244.8 square miles, or 156,672 acres. The surface is very irregular, and the land is indented by numerous arms of the sea. Previous to the middle of the last century the agriculture of Orkney was, in more than an ordinary degree for the time, in a primitive state. There was little communication then with the mainland, and improvements were slowly adopted. The sheep industry, however, was noted. For instance, there was for half a century after it was in use elsewhere. Until towards the end of last century, little advance seems to have been made in the management of the land, the inhabitants deeming it more important and profitable to spend their time in the maintenance of their flocks. They suffered periodically from bad seasons and violent storms, when less help could be afforded to them from without. In recent times the agricultural and mechanical industries have been in a more healthy state, and their exports, which in 1845 amounted only to £49,038, now run up to £200,000 annually. The temperature of the Orkneys is comparatively mild, considering their northern latitude. This arises partly from the surrounding sea, but chiefly from the neighborhood of the Gulf Stream to the western shores. The mean temperature in February, the coldest month, taking a series of thirty-three years from 1826, was 38°, and in July 55.14°. Only twice during that period did the mean monthly temperature fall below the freezing-point, in February, 1858 and 1855, when it fell to 31° and 31.04°; and during the same period it was never so high as 69°, except in 1832, when it reached 60.64°. Of the 67 islets, only about 30 are inhabited, by 8,295 (in 1866) people. The principal of these inhabited islands are Pomona, or Mainland, Hoy, North and South Ronaldsay, Westray, Sanday, Eday, Stronsay, Rousay, and Shapinsay. The chief towns are Kirkwall, the capital, and Stromness, the seaport.

History.—The Orkneys, under the name Orcades (whence the modern adjective Orcadian), are mentioned by the ancient geographers, Piny, Polomy, Mela, and by other classical writers, but of their inhabitants we know almost nothing till the dawn of the Middle Ages. They were most probably of the same stock as the British Celts. From an early period, however, the Norsemen resorted to these islands, as a convenient spot from which to make a descent on the Scotch and English coasts. In 876 Halid Haarfager conquered both Shetland and Orkney. During the whole of the 10th century they were ruled by independent Scandinavian jarls (earls), but in 1098 they became formally subject to the Norwegian crown. Thus they remained till 1468, when they were given to James III of Scotland as a security for the dowry of his wife, Margaret of Denmark. The islands were never redeemed from this pledge; and in 1590, on the marriage of James I with the Danish princess Anne, Denmark formally re- signed all pretensions to the sovereignty of the Orkneys. During their long connection, however, with Norway the language and traditions of the primitive Celtic population disappeared, and the present inhabitants are of the pure Scandinavian stock.

Religion.—Christianity was introduced into the Orkneys by the Norsemen in the beginning of the 11th century. Down to the time of the Reformation the Orkneys and Shetland Isles formed a separate bishopric, under the archbishop of Trondhjem, and the bishop's seat was Kirkveag, the present Kirkwall. After the Reformation the episcopal see was divided into 32 parishes, having 8 parishes of the Church of Scotland. At present, however, the Orkneys are divided into 22 parishes, forming 3 presbyteries and 1 synod. There are also about 30 congregations belonging to the Free and United Presbyterian churches. See also Norsemen and Orkney and Shetland.

Orlandini, Niccoio, one of the most noted characters of the Order of the Jesuits, was born at Florence, Italy, in 1554. He entered the society in 1572, where he was distinguished by the purity of his morals and proficiency in literature. He became rector of the college at Nola, and afterwards president of the seminary for novices at Naples. He died at Rome in 1606. He was engaged on a history of his order, but did not live to complete more than the first volume of it. It was afterwards continued by Sacchini, Evangelista, Favearey, and Cornula; in all seven volumes. The work is published under the title Historia Societatis Jesu prima part (five Ignatius, A.D. 1540—1556) (Rome, 1615, 3 fol.). See Sacchini, Notice, which forms the introduction to the history above referred to.

Orlando, Bernardo, a Piedmontese painter, flourished at Turin in the first part of the 17th century. At that time the rich collections of pictures and drawings in the royal galleries at the court were made subservient to the instruction of young artists, which was intrusted to a painter of the court. Orlando was charged with this office, and appointed painter to the duke in 1617. But we call attention to him here because he also painted some pictures for churches.

Orlay, Bernard van, or Bernard of Brussels, a celebrated painter, largely devoted to the development of sacred art, was born in that city about the year 1490. He went to Rome when he was very young, where he had the good fortune to become a pupil of Raphael. On his return to Brussels he was appointed principal painter to the government of the Netherlands, and was likewise employed for many years by the emperors Charles V. and Charles I. The style of his drawings, paintings, and his taste and coloring agreeable. He very frequently painted on a ground of leaf-gold, especially if he was engaged on a work of importance, a circumstance which is said to have preserved the freshness and lustre of his colors; his hunting-pieces, in which he introduced portraits of Charles V. and the nobles of his court, he usually took the scenery from the forest of Sognies, which afforded him ample variety. He was engaged by the prince of Nassau to paint sixteen cartoons, as models for tapestry, intended for the decoration of his palace. Each cartoon contained only two figures, a knight and a lady on horseback, representing some members of the Nassau family. They were designed in an elevated style; and by the prince's order they were afterwards copied in oil by Jordaeus. He painted for the church of a monastery at Antwerp a picture of the Last Judgment, which is one of the treasures of that place. Bernard van Orlay died in 1560. Waagen mentions several excellent pictures by him in the collections in England, especially in those of the duke of Devonshire at Devonshire House, Piccadilly, and at Chiswick; at Kedleston Hall, the seat of the earl Scarsdale, where is a picture of St. John the Baptist; and at the Caledonian, where is St. John in the presence of Joseph and Elizabeth—the figures are three quarters the size of life—which is one of the finest remaining by Van Orlay; and at lord Spen...
Orleans, an important commercial town of France, capital of the department of Loiret, and formerly capital of the old province of Orleans, which now forms the greater part of the departments of Loiret, Eure-et-Loir, and Loir-et-Cher. It is situated on the right bank of the Loire, here crossed by a bridge of masonry and wood, and is seventy-five miles and a half south-south-west of Paris by railway. Close to the city is the forest of Orleans, one of the largest in the country, consisting of 94,000 acres, planted with oak and other valuable trees. The city and the environs are the site of a king's magnificent plain sloping towards the Loire, and watered by that river and the Loiret, and is surrounded on the land side by a wall and dry ditches, on either side of which are pleasantly shaded boulevards. Around it are eight prosperous and populous suburbs. Among its principal buildings are the cathedral, with two lofty and elegant towers, one of the finest Gothic edifices in the country; the tower; the bishop's residence; the houses of Jean of Arc, of Agnes Sorel, of Diane de Poitiers, of Francois I., of Pothier; the churches and hospitals, which are numerous, &c. The town is noted in ecclesiastical history for the several church councils which have been held there.

I. THE FIRST COUNCIL OF ORLEANS (Concilium Aurelianense) was held July 10, 511, by order of Chovis. It was attended by the archbishops of Bourges, Bourges, Auch, Tours, and Rouen, with twenty-seven bishops, among whom were Quidbert, bishop of Rodes, near Clermont, Melanius, bishop of Rennes, and Theodosius of Auxerre. Thirty-one canons were published:

1. Establishes the inviolability of churches as places of refuge.
2. Declares that a runaway slave taking refuge in a church shall be given up to his master, an oath having been first made by the latter not to hurt him.
3. Forbids clerks and monks to go to the prince to obtain favors without letters from their bishop.
4. Exacts that a bishop willfully ordaining a slave unknown to his master shall pay twice his price to the master.
5. Permits deacons and priests in a state of penance to baptize in cases of necessity.
6. Forbids a wife of a priest or deacon to marry.
7. Submits to the bishop's jurisdiction all churches built within his territory.
8. Forbids to marry a brother's widow, or a sister's widow.
9. Submits to the bishop's jurisdiction all abbots, and directs that they shall attend him once a year at the place which he shall appoint.
10. Forbids monks to use the stole or handkerchief ("lanzas") within their monasteries.
11. Declares a monk who shall leave his monastery and marry to be forever excluded from taking orders.
12. Orders a feast of forty, and not fifty, days before Easter.
13. Orders the proper observation of the Rogation days.
14. Forbids all familiarity between clerks and women.
15. Excommunicates all who deal with diviners.
16. Enjoys bishops to attend the offices of the church every day except the next day of the feast of St. Paul in Barillon, A.D. 507, x, xii; Libbi, Conc. iv, 1403.

II. A SECOND COUNCIL was held in 582, on May 24, by order of Theodic, Childerbert, and Clothaire, the three kings of France. Twenty-six archbishops and bishops attended from the provinces, Lyons, and Aquitaine. Twenty-one canons were published against simony and abuses, most of which were old regulations renewed:

15. Forbids to accept the bequests of suicides; permits those of persons killed in the commission of any crime.
16. Condemns that they be ordained for the order of those who have eaten of meats offered to idols, or of things strangled, &c.
17. Excommunicates abbots who despire the orders of their bishops. See Labbe, Conc. iv, 1776.

III. A THIRD COUNCIL was held at Orleans May 7, 588. Nineteen bishops attended, among whom were Lupus of Lyons, who presided, Pantaghus of Vienne, Leo of Sens, &c. Thirty-three canons were published:

1. Orders that every metropolitain shall permit two years to pass without convoking a provincial synod shall be suspended from celebrating mass for one year, and also those bishops who neglect to attend it without just hinderance.
2. Directs that metropolitans be consecrated by a metropolitam in the presence of all the bishops of their province, and the bishops of each province by the metropolitian.
3. Directs that clerks who have received orders of their own free will shall, if they marry afterwards, be excommunicated: that if they were ordained without their own consent they shall be only deposed: that clerks committing adultery shall be shut up in a monastery for life, without, however, being deprived of communion.
4. Orders that persons who fall back from a state of penance into a worldly life shall be deprived of communion until the point of death.
5. Prompts to work in the fields on Sunday, but permits travelling on horseback or in a carriage, the preparation of food, and the sale of wine, provided it be not the proper meanness of house and person; the dinum of which things is at the will of them that belong rather to the Jewish than the Christian observance of the day.
6. Forbids lay persons to leave church at mass before the end of the Lord's Prayer, or if a bishop be present, before he has finished blessing.
7. Forbids Jews to mix with Christians from Holy Thursday to Easter-day. See Labbe, Conc. v, 704.

IV. A FOURTH COUNCIL was convened at Orleans in 541. Thirty-eight bishops attended the deputies of twelve absent attended; Leonitius, archbishop of Bourbon, presided. Thirty-eight canons were published; most of them similar to those published in the preceding councils. The following are among those which differ:

1. Orders the celebration of Easter every year according to the table of Victoria (or Victor).
2. Orders that no one at the oblation of the holy chalice shall presume to offer anything but wine mixed with water, because it is held, as sacrilegious to offer anything different from what the Saviour instituted in his most holy commandments.
3. Excommunicates those who swear, after the fashion of pagans, upon the heads of beasts, or who invoke the names of false gods.
4. Declares that any person desirous of having a parish upon his property, must, in the first place, give a sufficient endowment for a clerk who shall serve it.

Such is supposed to have been the origin of Church patronage. See Labbe, Conc. v, 886.

V. A FIFTH COUNCIL was held at Orleans October 29, 549, by Childerbert, king of France. Twenty bishops (among whom were ten afterwards reverenced as saints) and twenty-one deputes of those who were absent attended, collected from the three kingdoms of France and all the provinces of the Gauls, except that of Narbonne, which was still in the occupation of the Goths. Sacerdos, bishop of Lyons, presided. Twenty-four canons, for the most part renewing those of the preceding councils, were published:

1. Condemns the errors of Eutyches and Nestorius.
2. Condemns excommunication for small offences.

F. Forbids bishops to ordain a priest without the clergy's consent.

2. Forbids to give the people a bishop when they dislike, and declares that neither the people nor clergy ought to be intimated in making their election.
3. Imposes a fine of ten pounds upon the bishop's consent.

VI. A COUNCIL of less importance was convened at Orleans in 1025 by king Robert, at which several bishops were present. Several measures were proposed that were found to be absurd, among whom were Stephen (or Herbert) and Lysioyce, ecclesiastics of Orleans. See Labbe, Conc. ix, 866; Spicil. p. 740.

Orley, Jean Van, a Belgian painter, was born at Brussels in 1656. He first studied with his father, but

Ormond, William, a minister of the Methodist Episcopal Church, was born in Green County, N. C., Dec. 22, 1769; was converted Dec. 11, 1787; entered the itinerancy in 1791; travelled and preached extensively from Maryland to Georgia; and died in Brunswick, Ga., July 20, 1810. He was a large, robust, powerful man, and many souls were converted under his labors. See Minutes of Conferences, i, 116.

Ormuzd and Ahirman. The most difficult religious problem for the mind to solve is that of the existence of evil in this world. If there be a God, then must that God be good; and as nothing can happen without his permission, it is unnatural to suppose that God would create a world in which he would have to punish those whom he had created. If, then, evil exists, we should expect that the world which he governs would be a place where everything would be good, virtuous, and happy. But the contrary is the case. The world, as a matter of fact, is full of evil, of sin, and of misery. Whence, then, comes this? Is the Deity not good? or is his power limited? or how is this contradiction between what we see actually going on in the world to be explained? Without the higher ideas given us by revelation, the problem could not be solved; but it is interesting to examine what were the conclusions to which the mind of man, unaided by the light of reason, was necessarily led by the examination of the objects of his own reasoning powers. It then attempted to solve the problem in two ways: the one was pantheism, the other dualism. In pantheism it is denied that there is any real difference between good and evil. Things do not exist, but merely seem to exist. This whole external world is a mere illusion, in which the world-spirit develops itself in various ways, and which finally it will absorb back into itself. Just as the bubbles upon a stream seem to have a separate existence for a time, and float upon its surface, bright in the sunshine with reflected colors, and dark and lifeless when they burst, so too, but finally they break all back into the main flood of waters, so is it with men. They seem to have a separate existence for a time, and live some in sunshine and some in shade, but really they are all portions of the world-spirit, and at death become again indistinguishable parts of its existence, none the better and none the worse for what happened to them in life. It is this same world-spirit which makes the plants grow. They have no merit and no blame for their wholesome or noxious qualities. Beauty, richness of colors, utility earn them no praise; nor is the poisonous hemlock blamed when it destroys man's life. So human actions are but higher developments of the activity of this same world-spirit; and as they are his doings, he cannot praise or blame them. Like want, squatter, and crime in a picture, they are unrealities, and nothing follows from them.

It was in India that pantheism was elaborated into a perfect system; but the religions both of Egypt and Babylon were based upon the same fundamental idea, which is at the root of pantheism, that good and evil are not essentially opposed, but in appearance only. In the religious systems of the ancient Medes and Persians we find a totally different conception. Zarorist, its reputed author, had views too high and noble to be conciliated with a solution which ignores the reality of their entire present state of things. On the other hand, he could not believe that the Deity, whom he conceived to be essentially good and altogether perfect, could himself have created evil, and admitted it into the world which he had created. There seemed, therefore, but one way to escape from the dilemma, and that was to suppose that evil also had an independent existence, and that therefore it was possible for him to do evil in his moral acts, as well as in material nature. There cold and heat, light and darkness, tempest and sunshine seemed ever at variance, waging perpetual war for the ascendancy; and so he conceived that in opposition to Ormuzd, the god good, and principle of goodness, there stood Ahri-
man, an evil god, and the author of all evil and sorrow and death. Ahriman likewise seemed to him an independent power, not called into being, but equally eternal with Ormuzd himself; eternal as regards his pre-existence, but not eternal in the future. Zoroaster could not conceive the world without the faith; and therefore evil could go on forever; and therefore, not very logically, he taught that a being endowed with an infinite pre-existence was nevertheless finite. In distant ages three prophets, sprung from Zoroaster, were to bring into the world the three remaining books of the Zend-Avesta, and convert the world to the faith; and thereafter evil was to disappear, and the whole world become pure and happy, as it was when first created by Ormuzd, before Ahriman had entered it, and marred it by his mischievous activity.

On the Zend-Avesta, however, it appears that the Zend-Avesta is not all of the same date, and that this dualism is not found in its most ancient sections. There are very early chapters that contain traces even of a polytheistic nature-worship, in which the gods have no personal existence, but are mere powers, such as the sun, the wind, the earth, and fire. As the same sort of worship is found in the older religious basis of India, it seems as if this was the primitive religion of the whole Aryan stock. But this system was too sensuous to long satisfy men's minds, and the next stage in the Zend-Avesta is that in which the Deity have a distinct form, and the Deity who are real persons possessed of self-consciousness and intelligence. These deities are some good and some bad, the former being called Asuras, "spiritual beings," while the latter are the Devas, or Dei—a word etymologically the same as the Latin Deus, but originally signifying the sky. In Sanscrit, Greek, Latin, and most languages the word has a good meaning, and signifies the Supreme Deity. But the Iranians, in their recoil from nature-worship, gave it a bad sense, and it soon became equivalent with them to fiends and devils.

The Zend-Avesta, however, soon went one step farther. In the old nature-worship there had been no attempt to subordinate one power to another. But when the deities were regarded as persons, the question soon arose, How did these various beings combine to act together? was there among them any order of agreement? or any superiority of one over another? Now here it is the especial glory of Zoroastrianism that it conceived of the existence of one supreme God. Ormuzd is the highest object of adoration, "the true Creator, Preserver, and Governor of the universe." Mr. Rawlinson gives the Persian name Ahurâ-Mazdâ, and gives several explanations of it, the most probable being that of Haug, "the living wise." He is set forth "as the source of all good, and the proper object of the highest worship. He is the creator of life, both the earthly and the spiritual. He made the celestial bodies, all earthly substances, all good creatures, and all things good and true. "He is himself good, holy, pure, true, the holy God, the holiest of all, the essence of truth, the father of all truth, the best being of all, the master of purity." Moreover, he is "perfectly happy, and possesses every blessing, health, wealth, virtue, wisdom, immortality." From him comes all good to man. On the pious and the righteous he bestows not only earthly advantages, but precious spiritual gifts, truth, devotion, "a good mind," and everlasting happiness; and as he rewards his friends on earth, so is the suffering of the bad, this angle is an aspect in which he is but seldom represented.

In this description of Ormuzd, gathered by Mr. Rawlinson from the Yâspâ, or Book of Sacrifice, a part of the Zend-Avesta, we are moving among thoughts grand as those of the Old Testament, but as this writer remarks, the conception of Ormuzd is less spiritual and less awful than that of Jehovah. The ascription to him of health, and also of the physical qualities of brightness and lucidity, shows that they did not regard him as purely spiritual; while his being so predominantly the author of good things in a great measure deprives him of Jehovah's most sublime attribute of justice.

But Zoroastrianism did not stop here. The contemplation that this is in the world led to a highly developed dualism, in which Ahriman stands opposed to Ormuzd as a being possessed of almost equal power, but using it only for the worst purposes. Though we do not find this doctrine, as was said above, in the most ancient sections of the Zend-Avesta, yet even there the distinction between good and evil, truth and falsehood, right and wrong, are described in strong colors; and the name Ahriman (in ancient Persian, Angro-Mainyu, the dark spirit) occurs but in a highly poetical passage, not as a real personage, but as a figure of speech. But in course of time the "dark spirit" came to be regarded as a living power; and as men noticed how in the struggle of life evil seemed as mighty as good, he was invested with attributes as great as those of Ormuzd himself. As, too, it was inconceivable that the good deity would have allowed such a being to come into existence, it was concluded that evil must be co-eternal with good. But as man's heart dictates to him that good is better than evil, and must finally prevail, and as the thought was unendurable that the struggle could go on forever, and this world be eternally miserable, the thought arrived at that at some distant period Ormuzd would gain the victory, and evil depart out of the world forever.

Meanwhile a fierce war is carried on, in which every act of Ormuzd is watched by his enemy, and immediately inverted and utterly spoilt. The good deity spends his time in devising schemes of benevolence for the happiness of his people, and Ahriman is equally active, and even more successful in inventing pests and annoyances, which turn every creation of Ormuzd into a place of trial and misery. The imagination, too, soon called into existence numerous personifications of the fear of the multitude of these dread powers in the conflict, and each especially had his council of six, by whose instrumentality the conflict was maintained. On the side of Ormuzd the council is more completely defined than on that of Ahriman. It is composed of the two Arambashpars, or immortal saints, of whom the first, Bahman, "the good mind," originally a mere attribute of Ormuzd, has for his office the maintenance of life in animals and of goodness in man. Arîb-sîkh, the second, means "the clearest truth." He was regarded as the light of the whole creation, and his business was to wash the veil from the eyes of the various luminaries, and enable them to dispense heat and light. The third, Shahrarâz, was the dispenser of riches. The fourth, Isfand-Ârmat, represented the earth. As the Iranians were a purely agricultural people, the earth always held a high place in their esteem, and Armaiti, the earth-goddess, was also goddess of fertility. Under her charge was all growth and vitality, and she was the giver of abundant harvests. The last two were Kôrdád, "health," and Amerdâl, "immortality." The vegetable world was especially dear to them, and the intruders of the Ahrims were subjected to various torments, by the armies of Ormuzd are commanded by the angel Serosh, described as "the sincere, the beautiful, the victorious, the true, the master of truth." Under his command they wage perpetual war with the Devas, whom sometimes he even slays, and guard the whole world especially that of the earth, from their attacks. Ahriman's council of six consists of Ako-mand, "the bad mind;" Indra, the Vedic god of storms and war, but simply a destructive being in the Zoroastrian mythology; Càvura, who may be Siva; Narâkaiti, Taric, and Zaric, the two latter being "wanderers" and "pillars;" but this council is not elaborated with so much care as that of Ormuzd, and several of its members are very shadowy persons.

In his general summary of Mazdaism, as the worship
ORNAMENIUS TUS

of Ormuzd is called, after Mazdâ, the second part of the deity's name, Mr. Rawlinson (p. 387) points out that, besides their belief in a spiritual world, composed partly of good and partly evil intelligences, the Zoroastrians held very enlightened views with respect to human duties and hopes. In their system truth, purity, piety, and industry were the virtues chiefly valued and inculcated. Evil was traced up to its root in the heart of man; and it was distinctly taught that no virtue deserved the name but such as was co-extensive with the whole sphere of human activity, including the perfect triad of thought, word, and deed. Man's industry was to exert itself in reclaiming the soul from the thorns and weeds and barrenness with which it had become embosomed. Thus they entered upon a religious duty, in which man was a fellow-worker with Ormuzd. Worship consisted in the recitation of prayers and hymns; the offering of soma-juice, which was not allowed to ferment and become intoxicating, as was the case in India, but was drunk fresh; and finally in sacrifices, that of the horse being looked upon as the most acceptable. The flesh was only shown to the sacred fire as an act of consecration, and was then eaten at a solemn banquet by the priest and his fellow-servants.

The Zoroastrians were devout believers in the immortality of the soul and a conscious future existence. They taught that immediately after death the souls of men, both good and bad, proceed together along an appointed path to "the bridge of the gatherer." Over this, from its extreme narrowness, only the souls of the good can pass, while the wicked fall from it into the gulf of punishment below. Even the good have to be assisted in their passage by the angel Serosâ, but when safely over the archangel Barman rises from his throne to greet them severally with the words, "How happy art thou who has come hither to us from mortality to immortality." After this the pious soul goes joyfully onward to the presence of Ormuzd, to the immortal saints, to the golden throne, and to Paradise. As for the wicked, when they fall into the gulf, they find themselves in outer darkness in Ahriman's kingdom, where they are forced to remain and fed on poisoned banquets. The one dark spot, therefore, in the Zoroastrian religion was this dualism, which placed opposite to the good god Ormuzd a being of nearly equal might and activity, Ahriman, who wages with him constant war. Yet even this appears to have been a development from the primitive creed. The earlier portions of the Zend-Avesta are strongly monothestic, are averse to idolatry under every form, and mark in the strongest way the opposition between good and evil. But as time went on, and men mused upon this mystery, the vision of evil in a world made by a good god, the figure of the bad intelligence, Ahriman, began to stand out in stronger colors, till he became a god too, endowed with attributes well-nigh as mighty as those of Ormuzd. Then round the two there grew up a mythology of angelic beings, towards some of whom at last even a religious reverence was paid verging on idolatry; and so the spirituality of the original creed of the Iranians was lost.

Ornamentus Tus is the name of a spirit worshiped by the South Sea Islanders. There are superstitious prevuions of several such spirits, and they are thought to reside in the world of night, and are never invoked by wizards or sorcerers. They are a different order of beings from the gods, and are believed to be the spirits of departed relations. The natives were greatly afraid of them, and believed that any present ing offerings. "They seem," says Mr. Ellis, in his Poly-

esian Researches, "to have been regarded as a sort of demons. In the Leeward Islands, the chief ornamentus were spirits of departed warriors who had distinguished themselves by forcery and murder, attributes of character usually supposed to belong to these evil genii. One of these, named Te'i, celebrated fii was honored with an image, through which it was supposed his influence was exerted. The spirits of the reigning chiefs were united to this class, and the skulls of deceased rulers, kept with the images, were laid in the temple on the same altar with the same worship. Some idea of what was regarded as their ruling passion may be inferred from the fearful apprehensions constantly entertained by all classes. They were supposed to be exceedingly irritable and crude, avenging with death the slightest insult or neglect, and were kept within the precincts of the temple. In the name of Te'i, at Masu, the ruins of their abode were still standing when I last visited the place. It was a house built upon a number of large, strong poles, which raised the floor ten or twelve feet from the ground. They were thus elevated to keep them out of the hands of men, as it was said they were constantly strangling or otherwise destroying the chiefs and people. To prevent this, they were also treated with great respect; men were appointed constantly to attend them, and to keep them wrapped in the choicest kinds of cloth; to take them out whenever there was a pace attu, or general exhibition of the gods; to anoint them frequently with fragrant oil; and to sleep in the house with them at night. All this was done to keep them pacified. And though the office of calming the angry spirits was honorable, it was regarded as dangerous; for if during the nights, or at any other time, these keepers were guilty of the least impropriety, it was supposed the spirits of the images or the skulls would hurl them headlong from their high abodes, and break their necks in the fall." The names of the principle ornamentus were Mauri, Bua-rai, Te'a-fao. They were considered the most malignant of beings, exceedingly irritable and implacable. They were not confined to the skulls of departed warriors, or the images made for them, but were occasionally supposed to resort to the shells from the sea-shore, especially a beautiful kind of murex, called the murex ramosce. These shells were kept by the ear some peculiar singing noise perceived on applying the valve to the ear was imagined to proceed from the demon it contained.

Ornament is the usual and proper rendering in the O. T. of the Hebrew 7757, adi (Sept. usually κλασμα). The Israelites, like other Oriental nations, have always been remarkable for their love of ornament (Gen. xxvii, 47; Exod. xxxii, 2, xxxiii, 4, etc.), not only in costly garments and braiding the hair (1 Peter iii, 3 [see Hair]), but also in jewelry and gold (Ezek. xxvii, 13 sq.). The men were usually content to wear simply seal-rings [see Sral], and indulged in expensive attire only on solemn or public occasions; unless their position, as in the case of princes, required more display (Ps. cxlv, 5; 2 Sam. xi, 30; 2 Macc. iv, 38, etc.). But the women, especially young damsels and brides, wore many and very valuable ornaments (2 Sam. i, 24; Jer. i, 32; Isa. iii, 17 sq.; lxi, 10; Judith x, 4; xii, 16; comp. Esth. ii, 12), generally in the form of rings, chains, and bracelets. Sometimes the young women purposely decorated their body and face with very barbarous devices (Isa. xlvi, 21; Ps. cxxxiv, 17, 22). Ornaments are enumerated in various passages (see Ins. iii, 19 sq.; Hos. ii, 15; Ezek. xxvi, 11). Among the ornaments peculiar to
ORNAMENT

females was the golden head-dress in the form of the holy city (see Mishna, Edajoth, ii, 7, לְמַעַן יְשִׁיעָה, so explained by the rabbins). Idols were also adorned with gold and silver (Jer. x, 4; Esai, iv, 19; 2 Macce. ii, 2), as now the images of the Virgin in the Roman churches. See ATTIRE: EPHOD.

The number, variety, and weight of the ornaments ordinarily worn upon the person form one of the characteristic features of Oriental costume, both in ancient and modern times (see Thouvenot,肥, p. 184 sq.; Van Lennep, Bible Lands, p. 831 sq.). The monuments of ancient Egypt exhibit the hands of ladies loaded with rings, ear-rings of very great size, anklets, armlets, bracelets of the most varied character, and frequently inlaid with precious stones or enamel, handsome and richly ornamented necklaces, either of gold or of beads, and chains of various kinds (Wilkinson, ii, 385-341).

The modern Egyptians retain to the full the same taste, and vie with their progenitors in the number and beauty of their ornaments (Lane, vol. iii, Appendix A). Nor is the display confined, as with us, to the upper classes; we are told that "even most of the women of the lower orders wear a variety of trumpery ornaments, such as ear-rings, necklaces, bracelets, etc., and sometimes a nose-ring" (Lane, i, 78). There is sufficient evidence in the Bible that the inhabitants of Palestine were often devoted to finery. In the Old Testament, Isaiah (iii, 18-23) supplies us with a detailed description of the articles with which the luxuriant women of his day were decorated, and the picture is filled up by incidental notices in other places; in the New Testament the apostles lead us to infer the prevalence of the same habit when they recommend the women to adorn themselves, "not with braided hair, or gold, or pearls, or costly array, but with good works" (1 Tim. ii, 9, 10), even with "the ornament of a meek and quiet spirit, which is in the sight of God of great price" (1 Pet. iii, 4). Ordinary ornaments were more largely displayed at festivals, whether of a public (Hos. ii, 13) or a private character, particularly on the occasion of a wedding (Isa. lxi, 10; Jer. ii, 32). In times of public mourning they were, on the other hand, laid aside (Exod. xxxiii, 4-6).

With regard to the particular articles noticed in the Old Testament, it is sometimes difficult to explain their form or use, as the name is the only source of information open to us. Much illustration may, however, be gleaned both from the monuments of Egypt and Assyria, and from the statements of modern travellers, though we are in all respects in a better position to explain the meaning of the Hebrew terms than were the learned men of the Reform era. We propose, therefore, to review the passages in which the personal ornaments are described, substituting, where necessary, for the readings of the A. V. the more correct sense in italics, and referring for more detailed descriptions of the articles to the various heads under which they may be found. The notices which occur in the early books of the Bible imply the weight and abundance of the ornaments worn at that period. Eliezer decorated Rebekah with "a golden nose-ring (נֵזֶם, nesem) of half a shekel weight, and two bracelets (תַּמִּיד, tamid) for her hands of ten shekels weight of gold" (Gen. xxiv, 22); and he afterwards added "trinkets (וֹלֶנֶת, keli, articles in general) of silver and trinkets of gold" (verse 53). Ear-rings (תַּבִּישׁ, תַּבִּשַּׁת, תַּבִּישָׁת, nesem in their ears) were worn by Jacob's wives, apparently as charms, for they are mentioned in connection with the magic "teaurnut of the bridegroom," which was given to Jacob all the strange gods which were in their hand, and their ear-rings which were in their ear" (Gen. xxxv, 4). The ornaments worn by the patriarch Judah were a "signet" (עֵינָיָן, chôhâdm), which was suspended by a string (לֹעָת, pathîh) round the neck, and a "staff" (Gen. xxxviii, 18): the staff itself was probably orna-

mented, and thus the practice of the Israelites would be exactly similar to that of the Babylonians, who according to Herodotus (i. 195), "each carried a seal, and a walking-stick, carved at the top into the form of an apple, a rose, an eagle, or something similar." The first notice of the ring occurs in reference to Joseph: when he was made ruler of Egypt, Pharaoh took off his signet-ring (תַּבִּישָׁת, tabîshat; in this, as in other cases [Esth. iii, 16; iv, 8; x, 4], the signet-ring is an ornament, but the symbol of authority) from his hand and put it upon Joseph's hand, and put a gold chain (נֵזֶם, râbîd; also a chain worn by a woman [Esth. xvi. 11]) about his neck" (Gen. xlii, 42), the latter being probably a "simple gold chain in imitation of string, to which a stone scarabaeus, set in the same precious metal, was appended" (Wilkinson, ii, 389). The number of personal ornaments worn by the Egyptians, particularly by the females, is incidentally noticed in Exod. xi, 22: "Every woman shall ask (A. V. "borrow") of her neighbor's trinkets (תַּבִּישָׁת, keli, as above) of silver and trinkets of gold . . . and ye shall spoil the Egyptians." In Exod. xi, 2, the order is extended to the males, and from this time we may perhaps date the more frequent wearing of rings and trinkets among the people. It is said in the former passage, "Ye shall put them upon your sons and upon your daughters," we find subsequent notices of ear-rings being worn by all events by young men (Exod. xxxxi, 2), and again of offerings both from men and women of "nose-rings (תַּבִּישָׁת, châch, A. V. "bracelets; some authorities prefer the sense "buckle"); in other passages the same word signifies the ring placed through the nose of an animal, such as a bull, to lead him by) and ear-rings, and rings, and necklaces (תַּבִּישָׁת, kumzâ, A. V. "tablets; a necklace formed of perforated gold drops strung together), all articles of gold" (Exod. xxxv, 22). The profusion of these ornaments was such as to supply sufficient gold for making the sacred utensils for the tabernacle, while the layer of brass was constructed out of the brazen mirrors (תַּבִּישָׁת, mâridh) which the women carried about with them (Exod. xxxviii, 8). The Midianites appear to have been as profligal as the Egyptians in the use of ornaments; for the Israelites are described as having captured "trinkets of gold," armlets (תַּבִּישָׁת, steath, A. V. "chains") and "earrings," cognate terms, used in Isa. iii, 20, means "step-chains," which is used here (with a slight variation, verse 10 without reference to its etymological sense) and bracelets, rings, ear-rings (תַּבִּישׁ, agil, a circular ear-ring of a solid character), and necklaces (תַּבִּישׁ, kumzâ, as above), the value of which amounted to 16,750 shekels (Num. xxxi, 50, 52). Equally valuable were the ornaments obtained from the same people after their defeat by Gideon: "The weight of the golden nose-rings (תַּבִּישָׁת, nesem, as above; the term is here undefined; but, as ear-rings are subsequently noticed in the verse, we think it probable that the nose-ring is intended) was a thousand and seven hundred shekels of gold; besides collars (תַּבִּישָׁת, sakharonim, A. V. "ornaments; the word specifies moon-shaped disks of metal, strung on a cord, and placed around the necks either of men or of camels) and ear-pendants (תַּבִּישָׁת, neiphôth, A. V. "collars" or "sweet-jewels;" the etymological sense of the word is pendânts, which were no doubt attached to ear-rings) (Judg. viii, 26).

The poetical portions of the O. T. contain numerous references to the ornaments worn by the Israelites in the time of their highest prosperity. The appearance of the bride is thus described in the book of the Canticles: Thy cheeks are comely with beads (תַּבִּישׁ, torim, A. V. "rows;" the term means, according to Gesenius [Thes. p. 662] "row of pearls or beads; but as the etymological sense is connected with circle, it may rather mean the individual beads, which might be
strung together, and so make a row, encircling the cheeks. In the next verse the same word is rendered in the A.V. "borders." The sense must, however, be the same in both verses, and the point of contrast may perchance consist in the difference of the material, the beads in ver. 2 being of some ordinary metal, while those in ver. 11 would be of gold); and very per- forated [pearls] (כּ֖רֹם בָּרִי, charusim, A.V. "chains"; the word would apply to any perforated articles, such as beads, pearls, coral, etc.); we will make thee beads of gold with studs of silver" (i, 10, 11). Her neck, rising tall and stately "like the tower of David built for an armory," was ornamented with a crown of hanging the "thousand bucklers, all shields of mighty men, on the walls of the armory" (iv, 4); her hair, falling gracefully over her neck, is described (iv, 9) figuratively as a "chain" (פָּרָת, anád), and "the roundings" (not as in the A.V. "the joints") of her thighs are likened to the pendant (כּ֖רֹם בָּרִי), "jewels;" rather this is the lace-work fringe of the drawers enveloping the lower limbs) of an ear-ring, which tapers gradually downwards (vii, 1). So again we read of the bridegroom: "his eyes are ... fitly set," as if they were gems filling the sockets of rings (v, 12); "his hands are as gold rings (כּ֖רֹם בָּרִי פָּרָת, gélilim) set with the beryl," i.e. (as explained by Gesenius, Thesaur. p. 287) the fingers when curved are like gold rings, and the nails dyed with henna resemble gems (rather the fingers had rings literally). Lastly, the yearning after close affection is expressed thus: "set me as a seal upon thine heart, as a seal upon thine arm," whether that the seal itself was the most valuable personal ornament worn by a man, as in Jer. xxii, 24; Hag. ii, 23, or whether perchance the close con
guity of the seal to the wax on which it is impressed may not rather be intuitional (Cant. viii, 6). We may further notice the imagery employed in the Proverbs to describe the effects of wisdom in beautify-
ing the character; in reference to the terms used we need only explain that the "ornament" of the A.V. in i, 9; iv, 9, is more specifically a wreath (תּ֖רֶשׁ, tárach) or garland; the "chains" of i, 9, the drops (פָּרָת, anád, as above) of which the necklace was formed; the "jewel of gold in a swine's snout" of xi, 23, a nose-ring (כּ֖רֹם בָּרִי נַעֲרָה), as above; the "jewel" of xx, 15, a trident, and the "ornament" of xxv, 12, an ear-pendant (כּ֖רֹם בָּרִי, chafáh, as above). The passage of Isaiah (iii, 18-23) to which we already referred may be rendered as follows: (18) "In that day the Lorí will take away the bravery of their anklets (כּ֖רֹם בָּרִי akásin), and their lace caps (כּ֖רֹם בָּרִי shébasíhá; rather, perhaps, disks attached to the neck
case), and their necklaces (lanettes): (19) the ear-pen-
dants, and the bracelets, and the light veils; (20) the turbaná, and the step-chains, and the girátal, and the scent-bottles, and the amulets; (21) the rings and nose-rings; (22) the state-dresses, and the cloaks, and the shawls, and the purses; (23) the mirrors, and the fine linen clothes, and the turbans, and the light dresses." The earlier, from which the earlier, from (from the cap, cap. vi) subject the illustration of this article, it being premised that the object of the inquiry was to ascertain what constituted a proper article of dress, and what might be re-
garded by rabbinical refinement as a burden: "A woman must not go out (on the Sabbath) with linen or woolen
laces, nor with the straps on her head; nor with a frontlet and pendants thereto, unless sewn to her cap; nor with a golden tower (i.e. an ornament in the shape of a tower); nor with a tight gold chain; nor with nose-rings; nor with finger-rings on which there is no seal; nor with a needle without an eye (§ 1); nor with a needle that has an
eye; nor with a finger-ring that has a seal on it; nor with a diadem; nor with a smeddling-bottle or balm-flask (§ 3). A man is not to go out ... with an amulet, unles
it be by a distinguished usage (§ 2): knee-buckles are clean, and a man may go out with them; step-
chains are liable to become uncleans, and a man must not go out with them" (§ 4). See each article named in its place.

Ornaments (or Decorations), Architectural, are additions to simple structures in the form of these features, for the purpose of embl
ishment or elegance. Thus the Doric shaft, while an
swering the constructive purposes of a simple square or round pier, is ornamented with fluting; and its capital, with its beautifully proportioned echinus and abacus, supporting the volute should do the weight of the entablature. The other classic orders illustrate this in a richer manner. Thus the Corinthian column, with its fluted and elegant shaft, resting on an ornamented base, and crowned by an ornamented capital, takes the place of what might have been, had utility alone been consulted, a plain pier of rubble-work, with a rough stone to rest upon, and another on the top to receive the load.

In classic architecture, as in every good style, the same principle pervades all the ornamental features, viz. the beauty of the ornament is in direct proportion to a manner suitable to their use; for instance, a column be
ing a member for support, should be of such a form as to denote this; the constructive use of a cornice being to protect the top of the wall, and to shield the front of it from the rain and sun, it should be made of such material as would serve to keep water and dust from it, and to look at the same time elegant enough to express its purpose. In classic architecture, the cornice consists of several members, in which the constructive decoration is well seen; the mutules and modillons beautifully indicating in an ornamental manner their original use, while the leaf enrichments of the small mouldings give life and animation to the building. In mediaeval art the same principle prevails in a much greater degree, and over a more complex system of construction. The shafts, with their elegant and pur-
pose-like bases and caps, are arranged so that each sup-
ports a separate member of the vaulting. The arch mouldings are divided so as to indicate the rings of their constructive formation. The buttresses, so ele-
gant in outline, express the part they serve in sup-
porting the vaulting; the pinnacles, with their orna-
mental finials, are the decorated dead-weights which steady the buttresses. The foliage and ornamental orna-
ments are also beautifully and suitably applied, as the growth and vigor of the supporting capitals and cor-
bels, and the running foliage of the string-courses, arch-
mouldings, etc., fully illustrate.

The following are the principal styles of art to which these remarks can hardly be said to apply: as, for ex-
ample, the Assyrian, Egyptian, and Hindú styles, where we find many features applied in a manner meant to be ornamental, although actually contrary to their con-
structive use. In these styles (and also in Greek architecture), human figures, bulls, and other animals are placed as columns to carry the weight of a super-
incumbent mass. This is evidently wrong in prin-
ciple, except when the figure is placed in an attitude to indicate that he is supporting a weight, as a Greek figure in the temple; the cases religious usage seem to have overcome true artistic feeling. There are also many forms of ornament used in all styles of the origin of which is obscure and their advantage doubtful;
such are the zigzag, chevron, billet, etc., so com-
mon in early mediaeval art, and the scrolls of Ionic and Indian art, and the forms and interlacing work of the North in the Middle Ages. Such things may be admissible in colored decoration, such as the confused patterns of Saracen art, and the shell-pat-
terns of Indian art; but where ornamental form is used, we use the requirements of the construction as carefully followed, and as the guide to the decorative. If all principle is lost, and the ornament runs wild. This has frequently occurred in the history of art, and in no case more markedly than in the art of the Renaissance.
The material in use must also have an influence on the form and style of the ornament. Thus stone-carving and metal-work must evidently require different treatment. Fac-simile leaves might be formed in iron, but could not be so carved in stone. This constructive element should be carefully attended to in designing. All imitations of the natural must, as in some extent, be natural. Natural objects, such as leaves, flowers, etc., cannot be copied absolutely literally; and in fitting the conventional treatment to the nature of the material used lies the great skill of the artist.

Ornaments, Ecclesiastical, a designation of the various minor articles of furniture, utensils, pictures, etc., used in some churches.

Soon after the establishment of the Church as a state institution, i.e. in the time of Constantine, ornaments more or less costly began to be introduced. In addition to the observations on the sacred vessels and utensils of the church, and all gifts which were called Ammos, and Erypojite, and which were a sort of symbolical memorial or hieroglyphical representation of the kindness and favor that had been received, sentiments of other sorts, such as are worn upon the person, for which see article Vestments. (See illustrations on following page.)

See Bingham, Antiquities of the Christian Church, bk. xii.; Riddle, Christian Antiquities, p. 741 sq.; 811 sq.; Coleman, Ancient Christians exemplified, p. 280 sq.; and the Church of England especially, Hook, Church Dictionary.

Or'nan (Heb. Or'non), 171, 87; Sept. Or'non; Tarquam usual 171, 87, but also 171, 87; 171, 87; 171, 87; and 171, 87; Vulg. Or'non), the form in which the name of the Jebusite king, who in the older record of the book of Samuel is called Araunah, Aranah, Ha-avrah, or Haorah, is given in Chronicles (1 Chron. xxii. 15, 18, 20-25, 28; 2 Chron. iii. 1). See ARAUNAH. In some of the Greek versions of Origen's Hexapla collected by Bahrdt, the thrashing-floor of Oran (Or'non roe Isouvaitou) is named for that of Nachon in 2 Sam. vi. 6.

Oro (1) the name given in the Torus country of West Africa to Monde Jumbo (q. v.). (2) The provincial war-god of the pagan natives of Polynesia. Such was the delight which he was supposed to have in blood that his priest required every victim offered in sacrifice to be covered with its own blood in order to its acceptance. When war was in agitation a human sacrifice was offered to Oro, the enemy or the god was known by it being called fetching the god to preside over the army. The image of the god was brought out; when the victim was offered, a red feather was taken from his person and given to the party, who bore it to their companions, and considered it as a symbol of Oro's presence and sanction during their subsequent preparations. Oro was, in the Polynesian mythology, the first son of Taurua, who was the founder and father of the gods; he was the first of the fourth class of beings worshipped in the Leeward Islands, and appears to have been the medium of connection between celestial and terrestrial beings. In Tahiti Oro was worshipped under the representation of a straight log of hard casuarina wood, six feet in length, uncarned, but decorated with feathers. This was the great national idol of the Polynesians. He was generally supposed to give the response to the priests who sought to know the will of the gods or the issue of events. At Opos, which was considered the birthplace of the god, was the most celebrated oracle of the people.

Orobio, Isaac de Castro, a Spanish physician, noted as a philosopher and polemic against Christianity, was born in Tetuan, Morocco, in 1620. His parents, who were Jews, though outwardly professing Romanism, educated him in Judaism. Balbanor Orobio—this was his name while in the Church—studied
the scholastic philosophy at the University of Alcala de Honores, in which his acquisitions were so considerable that he was appointed lector in metaphysics in the University of Salamanca. He afterwards applied himself to the study of medicine, which he practiced at Seville. Upon suspicion of Judaism he was cast into the prisons of the Inquisition, where during three years he underwent torture worthy of the barbarity of that infamous tribunal, and which often, according to his own declaration, so perplexed his understanding as to make him ask himself, “Am I really Don Balthasar Orobio, who walked about freely in Seville, who lived
Orobo 455
Orovisus

at ease, and had the blessing of a wife and children?" Sometimes he thought that his past life had been nothing but a dream, and that the frightful dungeon where he had been his birthplace, as, according to all appearance, it was destined to see him die. At other times, as he had a very metaphysical mind, he formed arguments and then resolved them, thus performing the part of the Devil in the Calvinistic Church, and, like the Devil, not at the same time. In this way he amused himself, and constantly denied that he was a Jew. After appearing twice or thrice before the inquisitors, he was treated as follows: At the bottom of a subterranean vault, lighted by a single lantern, he was permitted to lie in a close coffin; two persons guarded the judge, and the other the secretary of the Inquisition, who asked him to confess the truth, declaring that, in case of a criminal's denial, the holy office would not be deemed the cause of his death if he should expire under the torture, but it must be attributed to his own obstinacy. Then the executioner stripped off his clothes, tied his hands and feet with a strong cord, and set him on a low stool, while he passed the cord through some iron rings fixed in the walls; then, drawing away the stool, he remained suspended above the cord, which the executioner drew tighter and tighter, until the Jew groaned, as if confessing; the judge assured the court he could not bear more without expiring. These cords put him to exquisite torture by cutting into the flesh, and making the blood burst from under his nails. To prevent the cords tearing off the flesh, the executioner made a kind of bandage, which he fastened tightly about the breast, which were drawn so tight that he would not have been able to breathe if he had not held his breath while the executioners put the bands around him. By this device his lungs were enabled to perform their functions. During the severest of his sufferings he was told that he must begin the confession of his torments, and that he had better confess before they proceeded to extremities. Orobo adds that the executioner, being on a small ladder, to frighten him, frequently let it fall against his shin-bones. The staves, being sharp, caused him dreadful pain. However, all the tortures of the holy office were insufficient to wrest from him the avowal of his true sentiments, which would have drawn down upon him the most cruel punishment.

He was at length set at liberty, left Spain for France, and was appointed by Louis XIV as professor of medici

The question of the nature and origin of the soul.

or usus ad Augustinum de errore Priscillianistarum et Origenistarum, together with Augustine's answer, Ad Orosium contra Priscillianistarum et Origenistarum, both in the collection of sermons of St. Augustine at Rome.

Augustine, Orosius proceeded thence to Palestine with a recommendation from Augustine to Jerome, who was then living at Bethlehem, to consult with this learned Church father too. While in Palestine, Orosius wrote a treatise against Pelagius, who was at that time spreading his heresies among the Latin Christians, and in the year 416. It was in the city of Amsterdam that Orobo had his famous conferences with the theologian Philip de Limborch (q. v.), who, persuaded of the force of his own arguments in favor of the Christian religion, published them, together with the objections of Orobo: De veritate religionis Judaeorum cum confutatione religionis Christianorum, in three treatises, under the title of Philippi a Limborch amica collation eum erudito Judio (Torgow, 1687; Basle, 1740). Orobo wrote, Certamen philosophicum propugnarea diecim ac naturalis adversum Judaeum, Erodem, et Mosis (Latin and Dutch, Amsterdam, 1684, 1703, and 1781): — Requesta a un Predicatore super in perpetua observancia de la divina Ley: — Explicacion del capitulo libri IV y sustancia De leyes de Damas de: — Una epistola testificativa con un Judio philosophe, que negava la ley de Mose y siendo Athenio asaltaba la ley de Naturalezza: — Israel venegh, ou exposition naturelle des proprietes Hablats de que les Chrétiens appliquent a Jesu leur pretendu Messis (translated from the Spanish into French by Henriques, Lond. 1770). With respect to the question of the nature and origin of the soul, it was not written by Orobo himself, but only compiled from his works by Henriques, who is men-
tioned as the translator; and it is remarkable that neither Basnage nor Wolff, who appear to have had his works as published in Spanish before them, enumerate any treatise with this title. The work Is-

raw_text_end
superstitions, but that it would be still worse were it not for Christianity. This historical work, which comes down to the year 417, consists of seven books, divided into chapters. It begins with a geographical description of the world, then treats of the origin of the human race according to the book of Genesis, and afterwards relates the various accounts of the mythologists and poets concerning the heroic ages. Then follows the history of the early monarchies, the Assyrian, Babylonian, and Persian; the conquests of Alexander, and the wars of his successors; as well as the early history of Rome, the contents being chiefly taken from Polybius. Pompeius and Justinian. The fourth book contains the history of Rome from the wars of Pyrrhus to the fall of Carthage. The fifth book comprises the period from the taking of Corinth to the war of Spartacus. Orosius quotes his authorities, several of which are from works which are lost. The narrative in the sixth book begins with the war of Sulla against Mithridates, and ends with the birth of our Saviour. The seventh book contains the history of the empire till A.D. 415, including a narrative of the taking and sacking of Rome by Alaric, which was the great event of that year. The internal history of Orosius is not so interesting as his narrative moral reflections, and sometimes whole chapters of advice and consolation, addressed to his Christian brethren, and intended to confirm their faith amid the calamities of the times, which, however heavy, were not, as he thinks, from the wrath of God. The Romans, he says, in their conquests had inflicted equal wrongs on other countries. His tone is that of a Christian moralist impressed with the notions of justice, retribution, and humanity, in which most of the heathen historians show themselves deficient. He deprecates ambition, conquest, and glory gained at the expense of human blood and human happiness. As a historian, Orosius allows considerable critical judgment in general, though in particular passages he appears too cedulous, as in ch. x of the first book, where he relates from report that the marks of the chariot-wheels of Pharaoh's host are still visible at the bottom of the Red Sea. (As an instance of the incidental value of the passages taken by Orosius from older writers, see Savigny, Das Recht des Besitzes, p. 176.) In the main, however, the work is not strictly original, but is largely taken from Justin and Eutropius.

That it was highly prized in the Middle Ages is proved by the fact that there are a great many manuscript copies extant. The Historia has often been published (Augsburg, 1471; Vicenza, 1475; Cologne, 1526, etc.; Leyden, by Haverkamp, 1738 and 1767). King Alfred made a free translation of it into the Anglo-Saxon language. A Latin version was published by Daines Barrington, with an English version of it (Lond. 1773, 8vo), but of which a more much more accurate edition, with a literal translation into English, and valuable notes, was published by Dr. Bowditch in 1835. The very remarkable additions of Alfred are especially valuable, as containing "the only geography of Europe written by a contemporary, and giving the position and the political state of the Germanic nations so early as the 9th century." A translation of Alfred's version forms a volume of "Bohn's Antiquarian Library" (1847). One of the best editions of Orosius is that of Dr. Rich, published in 1835, with notes, published at Leyden. Orosius died in Africa. Several other works, such as Questiones de Trinitate et alia S.S. locis (Paris, 1553), have been erroneously attributed to him. See Möhler, De Oroesio Viti equestri Historiarum Libris Septem adserere Pagenos (Hil. 1843), and Gemeniades, De Vita Illustriss., p. 39, 46; Schönenmann, Bibl. Patr. Hist. vol. I; Lardner, Works (see Index); Engle, Cyclopaedia.

Orphic. See Hymn.

Or'pah (Heb. Or'pah), supposed to be transposed for Ὄρπα, a gazelle; Sept. Ὀρπή, a Moabish woman, wife of Chillon, son of Naomi, and thereby sister-in-law of Ruth, B.C. 1360. On the death of their husbands Orpah accompanied her sister-in-law and her mother-in-law on the road to Bethlehem. But here her resolution failed her. The offer which Naomi made to the younger women that they should return "each to her own mother's house," after a slight hesitation, she embraced. "Orpah kissed her mother-in-law," and went back "to her people and to her gods," leaving to the unconscious Ruth the glory, which she might have rivaled, of being the mother of the most illustrious house of that or any nation (Ruth i, 4, 14). See Ruth.

Orphian. The customary acceptance of the word orphian is well known to be that of "children deprived of their parents;" but the force of the Greek word ὀρφαῖος (rendered comfortless in, the king James version, John xiv, 18) implies the case of those who have lost some dear protecting friend; some patron, though not strictly a father; and in this sense it is used, 1 Thess. ii, 17: "We also, brethren, being taken away from our care over you," ἀπεφόρητοι ἁίτισα. Corresponding to this import of the word it may be used by Christ in the passage of John's Gospel.

Orphanages or Orphan Asylums, a term applied to those philanthropic institutions which provide a home for orphaned children until their education or training has fitted them for safe contact with the world at large.

The history of the origin of orphan asylums is very uncertain. What the Romans understood by pueros (or puellae) alimentarii cannot properly be compared to our institutions called orphanages. Trajan, who did much to protect orphans, both the Antonines, and Alexander Severus, established foundations for them; but such institutions do not seem to have been frequent till the introduction of Christianity, which gave encouragement for the founding of so many institutions beneficial to mankind. See Asylums; Hospitals. In the Middle Ages orphan asylums became quite frequent, especially in thriving and opulent cities of the Continent, and enactments were secured in the Church to take proper care of children bereft of their parents (comp. Lea, Stud. in Church History, p. 74). In Germany and Italy many orphanages date from the 16th and 17th centuries, but by far the most famous of the institutions which originated in that period is the Orphan House at Halle founded by A. H. Francke (q. v.) in 1698. In many of the more notable of such institutions the Orphan House founded at Ashley Down, near Bath, England, by George Muller (see his Life of Trust), stands perhaps second on the list. Both these institutions are noted not only for their extensive orphan labor, but also for their missionary enterprise at home and abroad. But while the former has largely devoted itself also to educational and business enterprises (see Hurst's Hagenbach, Church History of the 18th and 19th Centuries, i, 130, 140, 306), Muller's single and small Orphan House, founded in 1856, on his own premises, has grown to five orphanages, each of one extensive property, in the course of thirty years, and has reached such a capacity that indigent beneficiaries, and all such supported, not, as in the former, by endowment and traffic, but by unasked-for contributions to Muller: "all," as he believes, "in answer to prayer and faith." The five orphanages built up over thirty years ago; and the receipts has gone to meet the current expenses during the thirty-seven years of the history of the enterprise. Whatever has been received beyond what has been needed for present use has not been funded for possible future need—no for future lack has been apprehended—has been immediately applied in the works of mercy in various parts of the country. As many as 150 missionary have been aided by the "surplus" funds. During the year ending May 26, 1874, Muller received
ORPHANS

£37,655 15s. 6d., with which 189 missionaries and 122 schools were supported in whole or in part, 2201 orphans maintained, and 47,413 Bibles or parts of the Bible, and 3,775,971 tracts and books distributed. From the beginning up to May, 1874, he had instructed in all 38,800 children in the various schools entirely supported by the British and Foreign Bible Society; in the same number of children Mr. Murray (who had been appointed to designate it), besides tens of thousands benefited in other schools assisted by its funds, not only in Great Britain, but in Spain, Italy, India, and British Guiana. Added to this, more than 467,000 Bibles and Testaments in various languages, and 50,000,000 religious tracts, have been distributed through its agency, 190 missionaries supported year by year, and 4408 orphans brought up. In most of the institutions the care of the orphan is relinquished only to a competent person, usually one following a trade. The boy or girl, however, is more or less under the eye of the orphanage until the apprenticeship is satisfactorily completed. The Jews, noted for their philanthropic labours, have adopted this Christian institution, and have founded several large orphanages. One of their most noted is at Berlin, called the "Auerbach'sche Waisenanstalt." 

The question of most consequence in relation to the public support of orphans is, whether it is best, in a moral, physical, and economical point of view, to bring up large numbers of orphans in great establishments where they live together, or to put them out singly in trustworthy families paid by the community (see Brit. Qu. Rev. Oct. 1875, art. v.). In Germany this question was long and thoroughly discussed, and for a time the majority favored home-training; the asylum advocates have finally got the control, and orphanages are fast multiplying. Most of the governments of Europe now support orphanages. Institutions founded by private charity in many cases receive aide also from the government if they stand in need of it. In the United States orphans have received great consideration. We here distinguish three classes: (1) those supported by the national government; (2) those supported by single states; and (3) those supported by private (especially Church) charity. One of the most successful of the last named is the Hocord Mission of New York City. A model orphanage on British soil is that at Erdington, founded by Josiah Mason at an expense of £15,000,000, and supporting over 300 orphans.

Orphans. See HUSBANDS.

Orophonelists, a set of mystagogues in the early ages of ancient Greece, who were wont to appear at the doors of the wealthy, and promise to release them from their own sins and those of their forefathers by sacrifices and expiatory songs; and they produced on such occasions a collection of books of Orphes and Musaeus, on which they formed their promises.

Orpheus (supposed to be the Vedic Ῥίδου or Ἀρίδου, an epithet both of Indra and the sun), a semi-mythic name of frequent occurrence in ancient Greek lore. The early legends call him a son of Apollo and the muse Clio, or of Oleagrus and Clio, or Polymnia. His native country is Thrace; but many different localities were pointed out as his birthplace—such as the mounts of Olympus and Pangeus, the river Enipeus, the promontory of Serrium, and several cities. Apollo bestows upon him the lyre, which Hermes invented, and by its aid Orpheus moves men and beasts, the birds in the air, the fishes in the deep, the trees, and the rocks. He accompanies the Argonauts in their expedition, and the power of his music wards off all mishaps and disasters, rocking monsters to sleep and stopping cliffs in their downward rush. His wife Eurycle (τὴν Σανσκρ. Urna, the Dawn) is bitten by a serpent (? = Night), and dies. Orpheus follows her into the infernal regions; and so powerful are his "golden tunes" that even stern Pluto and Proserpina are moved to pity; while Tantalus forgets his thirst, Ixion's wheel ceases to revolve, and the Danaiides stop in their weep-some task. He is allowed to take her back into the "light of heaven," but he must not look around while they ascend. Love or doubt, however, draws his eyes towards her, and she is lost to him forever (τὰ πρώτα τῶν συνολίων της ακμῆς της στοιχείου της τιμής τῆς τις πέφυκεν, ἔξω, πολυτρωμένη, ἀναδιδόμενη τὴν ἀνθρώπων τάξεως ἀληθής, ἑαυτὰν τῷ κατά τὸν αὐτούς, ὁ πείνας, ἐν συνειδητεῖς ἀληθείας, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τὸν αὐτούς, ἐν τῷ κατά τ_Abstractus. The text is incomplete and contains a mixture of English and Greek. The section appears to discuss the role of Orpheus in ancient Greece, mentioning his relationship with Apollo and his influence over nature. The text also touches on the Orphic mysteries and the connection with Greek mythology. The extract contains a translation of a passage in Latin, which seems to be part of a larger discussion on Orpheus. The text is fragmented and lacks proper context, making it challenging to provide a coherent summary. Further research into the historical and mythological context of Orpheus would be necessary to accurately translate and interpret this passage.
ORPHIC MYSTERIES 483

Orphic Mysteries, a class of mystic ceremonies performed at a very early period in the history of Greece. The followers of Orpheus devoted themselves to the worship of Dionysus, not, however, by practicing the licentious rites which usually characterized the Dionysia or Bacchanalia, but by the maintenance of a pure and austere mode of life. The devotees were dressed in white linen garments, and partook of no animal food, except that which was taken from the ox offered in sacrifice to Dionysus.

Orphrey (Aurum Phrygatum, gold or Phrygia), the name of an ornamental border of a cope or alb, because it is an imitation of the famous Phrygian embroi- dery. England was famous for this work, and M. Paris relates that the cope, struck with its beauty, directed the Cistercian abbots to buy up all the specimens they could, saying, "England is our garden of pleasure and delight; its treasure is inexhaustible: where much is, then, thence much may be taken." His order was obeyed, and many of the best vestments and copes thus ornamented. In some English inventories the rich apparatus (apparatus) of the alb for the neck and hands are called epatularia and manicularia.

Orr, James M., a Presbyterian minister, was born near Fair Haven, Preble County, Ohio, March 31, 1838. He was educated at Miami University, Oxford, Ohio; studied theology in the Alleghany Seminary, Pa.; was licensed by the Ohio First Presbyterian, April 1, 1862; and ordained by the Argyle Presbytery, March 10, 1864, as the pastor of East Greenwich Church, N. Y. He died near Fair Haven, Ohio, April 18, 1865. Mr. Orr's minis- try was short, but he gave evidence of being a most ac- ceptable and useful minister. His style of writing and his delivery were exceedingly chaste. See Wilson, Presb. Hist. Almanac, 1866, p. 278.

Orr, Robert, a Presbyterian minister, who flour- ished in this country during the colonial period, was either a native of Scotland or Ireland, probably of the latter country. He came to America in 1716, and ac- cepted the pastorate of a church in Massachusetts. He was a member of the first American presbytery (organized in 1705 or 1706 at what is now supposed to be Freehold, N. J.). Orr died about the year 1725. See Gillett, Hist. of the Presb. Ch., 1, 29, 1853.

Orrente, Pedro, a Spanish painter, was born at Montalegret, in Murcia, in 1550. It is not known under whose guidance he studied in his own country. Afterwards he went to Italy, and became the pupil of Giacomo da Ponte (Bassano), whose manner of coloring he adopted, though his own style of coloring and design was very different. Some authors say that he was not a pupil of Bassano, and that he never went to Italy, supposing that he was a pupil of El Greco, and afterwards imitated the manner of Bassano, from seeing his work in Spain; but Lanzi conclusively shows that he visited Italy, where he painted some works which Conca pronounced superior to those of Bassano. On his return to Spain he was fa- vorized with the protection of the duke of Olivares, who employed him to paint several pictures for the palace of Buen Retiro. He painted many works for the churches and convents at Valencia, Cordova, and Toledo. His works are numerous, and are to be found in most of the principal cities of Spain, where they are held in high estimation. In the cathedral at Toledo is an admi- red picture by him representing Santa Leocadia coming out of the sepulchre, and in the chapel of Los Reyes Nuevos, in the same church, was a picture of the Nativity, since removed to the royal collection at Madrid; it is a grand composition, admirably ex-

ecuted. In the same church are some superb land- scapes, and a picture of Orpheus charming the brute creation, one of his most celebrated works. He died at Toledo in 1644, and was interred in the same church as El Greco.

Or-Sarua, Isaac ben-Moses, of Venice, by way of abbreviation also called Μέσος, i. e. Rabbi Isaac Or-Sarua, and by his contemporaries styled לוס ובריס, i. e. "our great Master," while others called him לוס יבריס, i. e. "the wonder of the age," or רבי סרוא, i. e. "our holy master," is one of the greatest Talmudic authorities of the 14th century. Or-Sarua witnessed the awful treatment of his coreligionists in France, who were obliged to wear some kind of mark on their clothes. He witnessed the persecutions against the Jews of Ger-

many, which seem to have been the order of the day, and speaks of the horrible massacres that took place at Frankfurt-on-the-Main in 1241, where many suffered martyrdom. Or-Sarua attained to a great age, for he flourished about 1200-1270. To satisfy his thirst for learning, he undertook great journeys, in order to hear the greatest teachers of the German and French academ- ies. He was probably before 1217 at Regensburg, where he attended the lectures of the famous R. Jehuda the Fious, the author of the ethical work entitled סווקדד. About 1216-17 Or-Sarua was at Paris, where the Jewish academy was in a very flourishing condition under the presidency of the famous R. Jehuda ben-Isaac Sir Leon. Or-Sarua was one of the most prominent of Leon's pupils, in whose spirit he lived and labored. From France Or-Sarua returned to Germany, living and laboring at different places, especially at Vienna; hence he is called Isaac ben-Moses of Vienna. He is the au-

thor of a great Talmudical work entitled לוס יבריס, a ritual code and commentary. He is also said to have written a commentary on the Pentateuch, which is still extant. The works of Or-Sarua were published for the first time at Seytomi (1602, 2 vols. fol.). See De Rossi, Dizionario storico degli autori Ebrei, p. 332 (German transl. by Hamburger); Wolf, Bibl. Hebr. i, 654 sq.; iii, 651, No. 1167; Dr. H. Gross, R. Issak ben-Mose Or-

Sarua aus Wien, in Frankel-Grits, Monatschrift, 1871, p. 248-264. (B. P.)

Orsi, Benedetto, an Italian painter, was a native of Pescia, and flourished about 1660. Lanzi says he was an eminent pupil of Baldassare Franceschini, called Il Voltornato. There is a fine picture of St. John attributed to him in the church of St. Stefano, at Pescia. He also painted the frescoes of Mercy for La Campagnia de Nettuno. There still exists a large circular picture in the church of St. Maria del Letto, at Pistoia, which is enumerated by good judges among the finest works of Voltornato, till an authentic document proved the real painter to be Benedetto Orsi.

Orsi, Bernardino, an Italian painter, flourished at Reggio in the early part of the 15th century. Accord- ing to Tiraboschi he was an eminent artist in his time. Most of his works have perished. Lanzi says Reggio still boasts a Madonna di Loretto painted by him in the cathedral in 1501.

Orsi, Giuseppe Agostino, an Italian Roman Catholic priest, was born at Florence May 5, 1617. He received his education from the Jesuits, and in 1708 he entered the monastery of the Dominicans at Fiesole. Having been teacher of theology and philosophy in the monastery of St. Mark, at Florence, he was in 1722 called to Rome, and appointed secretary in the Congrregation of the Index; in 1727 he became papa Benedict XI; and died in 1716. Besides his work De seculorum Roman Pontific. de def. fidei controversa, judicio (Rome, 1739), which was written for the purpose of defending papal infallibility, he also wrote a Church History (21 vols.), reaching as far down as the year 600 (Rome, 1704 sq., and 1724 sq.). A continuation of
which, in 29 vols., reaching down to the Council of Trent, was written by the Dominican Becchetti (Rome, 1770 and 1786). See Theologiae Universalis----, &c.; Hoefer, N. Biogr. Générale, xxxviii, 885-896.

Orsi, Lelio (called LELIO DA NOVELLARA), an Italian painter, was born at Reggio in 1511. Banished from his native city for some unknown reason, he established himself at Novellara, where he gained such great distinction as to acquire the surname of Ornato. Notwithstanding he was one of the oldest artists of his time, it is held that his works have been the admiration of succeeding times—very little is known of his life with any certainty, and his history is mostly founded on supposition. The cardinal Tiraboschi wrote his life, compiled from a variety of sources. The Italian writers say that he was "in pittura grande, in architettura ottimo, e in disegno massimo" (in painting grand, in architecture excellent, and in design pre-eminent). Tiraboschi conjectures, on the authority of a MS., that he imbied his taste of design at Rome; others suppose that he was a pupil of Michael Angelo, or that he studied the designs and models of that master; and others, again, that he was a pupil of Giulio Romano. There is great similarity in his style to that of Correggio, though he is of a far more robust character; his works having the same grace in his chiaroscuro, in the spreading of his colors, and in the beauty and purity of his head and eyes, possessed with great probability, that he was a pupil of that master. At all events it is certain that he was on friendly terms with Correggio, that civilities passed between them, and that Orsi attentively studied his works, and copied some of them, as is evident from his fine copy of the celebrated Nolle, now in the possession of the noble house of Gazzolo at Verona. Tiraboschi says he painted several works for the churches of Rome. It would therefore seem probable, as Tiraboschi asserts, that he first studied at Rome, and afterwards improved his style by imitating the works of Correggio. Lelio says "his design is evidently not of the Lombard school, and hence the difficulty of supposing him one of the scholars of Correggio, in which his earlier works, at least, would have partaken of a less robust character." He painted many noble frescoes in the churches of Reggio and Novellara, most of which have perished. Lelio says, "for such of his works as are now to be seen at Modena we are indebted to Francesco III, of glorious memory, who had them transferred from the fortress of Novellara to the dual palace for their preservation. Few of his works now remain in public view, but in Novellara or Reggio, the most having perished or been removed, one of which last, representing St. Rocco and Sebastiano along with S. Giobbe, I happened to meet in the studio of Signor Armand at Bologna." There are a few MSS. which have been published by the late Milanese Baroni, besides the above-mentioned frescoes.

Orsi, Prospero, a Roman painter, was born in 1560. According to Baglioni, he was employed by pope Sixtus V in the palace of St. John of Lateran, where he painted two ceilings, one representing the Children of Israel passing through the Red Sea, and the other Isaac Blessing Jacob. He was the particular friend of the Cav. Giuseppe Cesari d'Arpino, whose manner he imitated. He afterwards abandoned historical subjects for grotesques, for which he had extraordinary talents, and for this reason was called Prosopero delle Grotesche. He died in 1586, in the pontificate of Urban VIII.

Orsin. See Benedict XIII; Ursinus

Ortega, Juan de, a Spanish architect, flourished during the 11th century. According to Miliza, he was the son of Vela Velasquez, and a native of Fontana d'Ortunno, near Burgos. He is said to have made a pilgrimage to Jerusalem, and to have erected at Montserrat a church, a monastery, and a hospital, still existing.

Orthega, Raymundo, a Spanish theologian noted for his antiquarian labors, was born at Beja in the 15th century. Nothing further is known of him, and not as all history. His work, De Antiquitatis Lusitaniarum, which is reputed to have been written about 878, is a valuable treatise, and will perpetuate the memory of this scholar. He died towards the close of the 9th century.

Orthodoxy (ωθόδοσις, from δόξα, right, and εἶδος, an opinion) are those whose doctrine is right—those whose religious opinion is in accordance with an assumed or generally prevalent standard. This last is with Roman Catholics the dogmas of their Church, with Protestants it is the doctrine which is generally considered as orthodox among us are such as were generally professed at the time of the Reformation, viz. the fall of man, regeneration, atonement, repentance, justification by free grace, etc. The national standard of orthodoxy is not the same in all countries; for those opinions and observances which are received by the majority of any nation, or are patronized by the ruling power, are recognized as the standard faith; hence the Greek Church is orthodox in Russia; the Roman Catholic in Spain, Portugal, France, etc.; the Anglican Church in England; the Presbyterian in Scotland; but in Ireland the rule of the national Roman Catholic, the state Church is on the Anglican model; so that it is a disputed point which set of religious opinions and customs should be acknowledged as orthodox. Again, in Upper Canada the orthodox faith is the Protestant one, while in Lower Canada, a Roman Catholic establishment of religion, which is also the opinion of the majority, is Roman Catholic. In New England the term is employed to distinguish those Congregational churches which hold the evangelical creed from the Unitarian and Universalist churches. See Orthodoxy.

Some have thought that, in order to keep error out of the Church, there should be some human form as a standard of orthodoxy, wherein certain disputed doctrines shall be expressed in determinate phrases directly levelled against such errors as shall prevail from time to time, requiring those especially who are to be public teachers in the Church to subscribe or virtually to declare their assent to such formularies. But, as Dr. Doddridge observes, 1. Had this been requisite, it is probable that the Scriptures would have given us some such formularies as these, or some directions as to the manner and form in which they should be drawn up, published, and received. 2. It is impossible that weak and passionate men, who have perhaps been heated in the very controversy thus decided, should express themselves with greater propriety than the apostles did. 3. It is plain, in fact, that this practice has been the cause of great contempt in the Christian Church, and such formularies have been the grand engine of dividing it, in proportion to the degree in which they have been multiplied and urged. 4. This is laying a great temptation in the way of such as desire to undertake the office of teachers in the Church; it will be most likely to deter and afflict those who have the greatest tenderness of conscience, and therefore (being equal in other respects) best deserve encouragement. 5. It is not likely to answer the end proposed, viz. the preservation of uniformity of opinion; since persons of little integrity may satisfy their conscience, however what they may believe, some all believe as articles of peace, or in putting the most unnatural sense on the words. And whereas, in answer to all these inconveniences, it is pleaded that such forms are necessary to keep the Church from hereby, and it is better to commit to some favoritisms such forms of orthodoxy than that a freedom of debate and opinion should be allowed to all teachers; the answer is plain, that when any one begins to preach doctrines which appear to those who attend upon him dangerous and subversive of Christianity, it will be time enough to proceed to such a form of orthodoxy as their apprehension will require, and his relation to them
Orthodoxy and Heterodoxy. The use of these two words implies the possession of a standard of truth, so that what agrees with it is right, and what disagrees with it is wrong. In the general domain of truth, where there are no comparative stipulations, and in philosophy, this distinction cannot be made. Yet as Christianity started with the consciousness of possessing the truth, it was from the first led to establish principles—though less clearly defined than they were afterwards. Indeed we find heresy mentioned already in the New Testament, and even in the absolute sense of excluding from the church, from the obedience of the gospel, those who transgress in religious doctrines and religious life. Christ came into the world to disclose the truth, as he said, and his disciples were to witness in the same power (John xiv, 6); every one who is of the truth hears his voice (John xvii, 37). Hence any one who followed his teachings is οἱ δικάσιμοι τῶν λόγων τῆς δικαίους ζωῆς (2 Cor. xii, 2, sqq.), and in the true church is the church (Euseb. Church History, iv, 3), little different from what was later designated as orthodoxy (G. Major, De voc. do. signif. Vit. 1854). Thus there arose in the apostolic time the κανών τῆς ἀληθείας, a regula veritatis; every departure from it was soon stamped as heresy, and afterwards more correctly called ἱδροδοξία, by which we are to understand only οἱ δικάσιμοι πρὸς τῆς ἀληθείας τοῦ εὐαγγελίου (Gal. ii, 14; comp. 2 Cor. xii, 2, sqq.), διδάχην ὡς ἑκατέρας (Rom. xvi, 17). He who teaches differently, ἱδροδόξασθαι καὶ μὴ προσερχεῖται ἐκ γὰρ νόμου τῆς ἀληθείας τῷ μακαρίῳ (1 Tim, vi, 3, 5). Plato considered heterodoxy as error, not as a simple departure from orthodoxy. Yet the ancient Church did not particularly attach itself to these denominations of orthodoxy and heterodoxy as designating the contrast between the Christian truth and its opposite, for its doctrines were not yet firmly enough established. But as they gradually came to be more strictly defined, that which agreed with the decisions of the Church was called orthodox, and whatever differed from them heretical. In the end there was nothing but orthodoxy, and only to acquire real power when the Church attained a secure footing in the state. We find the expression often used by Eusebius, Athanasius (whom Epiphanius calls the father of orthodoxy, Hist. ixix, c. 2), etc., and also among the Latin, e.g. in the writings of Jerome. Isidore of Hispalis says in the Origines (vii, 14): "Orthodoxus est recte credens et ut credit recte vivens." The Church as the embodiment of religion in the community needs a firmly established doctrine as its basis; it no longer leaves the individual free to believe as he chooses. Unity of doctrine with the Church, or at least the acceptance of its fundamental principles, constitutes orthodoxy, departure from them is heterodoxy. A tendency to the use of these words was already apparent in the ancient Church, for we find Ignatius in the beginning of the 2nd century designates those who depart from the general faith, as τροπολογοῦντες (Ad Smyrn, c. 6), and warns his readers against being led into error ταῖς ἱδροδοξίαις (Ad Magn. c. 8). But he uses them more in the etymological than in the ecclesiastical sense. The ecclesiastical use of them did not become general before the 4th century, when the regula veritatis gradually acquired a more objective form in the canon of Scripture, in the confessions of the Church, the decrees of the synods, and the assertion of the Church possessing the standard of truth. In cases of uncertainty, the Church or the synods decided as to what was conformed to the doctrine of the Church (orthodox), and what contrary to it (heterodox). Thus it gradually proclaimed more and more loudly, especially in the East, that the doctrine it taught constituted the standard, and that every doctrine differing from it was heterodox. This question of orthodoxy twice attained paramount importance in the Church. First in the difficulties concerning the dogma and ecclesiastical usages which, in the case of a great church, were more remote from the rest of the world than from their own churches, and led to a separation between the Eastern and the Western churches. In these discussions, and particularly on that concerning images, the Greek Church always based itself on its antiquity and its orthodoxy, till in the course of the dispute the ἱεροτή τῆς ἀδοξασίας was established. The whole body of doctrine was revised, assuming specifically the name of orthodoxy, which it still maintains. The first formal exposition of its dogmas by John of Damascus (732) had already borne the title of εἰς ἐκείνης τῆς ἀδοξασίας πίστεως, which was also the case with other distinguished dogmatic works after him, such as the Sophianica and the Catena τῆς ἀδοξασίας πίστεως, and Nicetas Acominatus's Σημαντικόν ἀδοξασίας. The Greek Church consequently claims to possess the absolute truth, which she preserves without attempting to develop it, like a miser who culls her gold as carefully as she preserves her gold, and only in such a way as not to endanger her wealth, and to respect churches as heterodox, schismatic, and heretical. This is evinced in all official acts and documents of the Greek Church, as also from the generally received confession of the archbishop of Kief, Peter Moglias, which bears the inscription ὁ Ορθοδόξιος ὁμολογεῖ τῆς καθολικῆς καὶ αποστολικῆς ἱερατικῆς ἄνωθεσίας. See Schröck, Kirchengesch. xvii, 466 sq.; Marheinecke, Üb. d. Ursprung u. d. Entwickelung d. Orthodoxie u. Heterodoxie, etc., in Daub u. Creutzer, Studien, iii, 1807.

The second occasion when the question of orthodoxy acquired such importance was at the time of Luther's Reformation. The whole body of doctrine was revised and determined down to the most minute dogmatic definitions. The adherents of the Reformation in the 16th century were from the first obliged to defend themselves against the accusation of heresy and neologism. They were thus obliged to prove their conformity with the ancient Church, and therefore their orthodoxy. But as on this point there was no ecclesiastical authority to refer to, every member of the Protestant Church was obliged all the more diligently to prove his unity of doctrine with the true Church of Christ, and only to acquiesce in the objections from his association those who did not conform to that standard. The disputes which preceded the drawing up of the Formula of Concord greatly strengthened this feeling, and soon those alone were considered orthodox who accepted every article of that formula. The zeal of the contending magnified the importance of the mooted points until it led almost to a separation. The orthodox party considered as the possession of the absolute truth was sufficient, without absolute purity of life; it was a time of dead orthodoxy. There were certainly men of active and living piety in the party, but the paramount consideration was that of conformity to the doctrine of the Church, so that thoroughly worldly men who accepted fully every article of the formula were in high honor in the Church; while such men as John Aret, Spener, Gottfried, and a few others, not at their own request, but obtained it by their own exertions, were highly esteemed and learned G. Calixtus, and the pious and active Spener. Pietism, which arose about that time, aimed in the work—although opposed also by the followers
ORTHODOXY, FEAST OF

ORTLIBENSES

of Spencer, and the orthodoxy party became but a shadow of its former self. Soon, however, under the influence of Kant, philosophy also entered into the strife. As it prevailed, orthodoxy became but a name to be mocked at (Nicolas Elias Hartknoch), and all the old enemies were formerly denounced as heterodox, may even heretical, were desirous to be converted. The Rationalists—when they retained Christ and the Bible—based their Christianity on reason; and every one was considered orthodox who still adhered to positive Christianity. As for definite Church doctrines, they seemed to be forever consigned to oblivion. The reaction, however, came from the same side from whence the attack had proceeded. In Kant himself there were already signs of this. Fichte, Schelling, Schleiermacher, Bauer, Hegel, etc., threw discredit on the so-called revelations of the philosophic school, and led the way to a more thorough comprehension of the Biblical, and in consequence of the ecclesiastical doctrines. Theology now received a fresh impulse from such men as Schleiermacher, Neander, etc. The issue of the controversies thus raised will be found treated under Protestantism, Rationalism, and similar heads. See also ORTHODOX.

Orthodoxy, Feast of. The Council of Constantinople, held under Photius, in the year 873, and reckoned by the Greeks as the eighth general council, fortified image-worship by new and firm decisions, approving and renewing all the decrees of the Nicene Council. The Greeks, a superstitious people, and controlled by monasteries, feared that a banishment of the images would cause them by heaven that they resorted to consecrate an anniversary in remembrance of it, which they called the Feast of Orthodoxy.

Orthosa (Ορθοσα, v. r. Κοτοσα, Vulg. Ortho
sia), a place on the shore of Palestine, to which Tryphon, when besieged by Antiochus Sidetes in Doras, fled by ship (1 Macc. xvi. 37). Orthoisa is described by Pliny (v. 17) as north of Tripolis, and south of the river Eleutherus, near which it was situated (Strabo, xvi. p. 753). It was the northern boundary of Phoenicia, and distant 1130 stadia from the Orontes (ib. p. 270). Shaw (Trav. p. 270–1, 2d ed.) identifies the Eleutherus with the modern Nahr el-Bârid, on the north bank of which, corresponding to the description of Strabo (p. 753), he found "ruins of a considerable city, whose adjacent district pays yearly to the bashaw of Tripoli a tax of fifty dollars by the name of Ortoisa. In the Peutinger Tables, also, Orthoisa is placed thirty miles to the north of Tripoli, and Antarsia to the north of Orthoisa. The situation of it is likewise further illustrated by a medal of Antinous Pius, struck at Orthoisa; upon the reverse of which we have the goddess Astarte treading upon a river. For this city was built upon a rising ground on the northern banks of the river, within half a furlong of the sea, and, as the rugged eminences of Mount Libanus lie at a small distance in a parallel with the shore, Orthoisa must have been a place of the greatest importance, as it would have hereby the entire command of the road (the only one there in this part of Phoenicia and the maritime parts of Syria)." (See also Antorsia, v. r. Astorisia, v. r. Astorizia.) On the other hand, Mr. Porter, who identifies the Eleutherus with the modern Nahr el-Kebir, describes the ruins of Orthoisa as on the south bank of the Nahr el-Bârid, "the cold river" (Hemsib, p. 542, 555, ed. 1875), thus agreeing with the accounts of Prolemy and Pliny.

The statement of Strabo is not sufficiently precise to allow the inference that he considered Orthoisa north of the Eleutherus. But if the ruins on the south bank of the Nahr el-Bârid be really those of Orthoisa, it seems an objection to the identification of the Eleutherus with the Nahr el-Kebir; for Strabo at one time makes Orthoisa (xiv. p. 670), and at another the neighboring river Eleutherus (τον ποταμον ποταμον), the boundary of Phoenicia on the north. This could hardly have been the case if the Eleutherus were 8½ hours, or nearly twelve miles, from Orthoisa. Kiepert (Map) locates Orthoisa at Nahr Arku, midway between these two points (Robinson, Later Bib. Res. p. 582).

According to Josephus (Ant. x. 7, 2), Tryphon fled to Apamea, while in a fragment of a letter, quoted by Grimm (Müller's Joseph. ii. 181, Procli Hist. iii. 644, fr. 14), he is said to have taken refuge at Polemais. Grimm reconciles these statements by supposing that Tryphon fled first to Orthoisa, then to Polemais, and lastly to Apamea, where he was slain.

Ortiz, Alonso, a noted Spanish theologian and historian, was a native of Toledo, and flourished in the early part of the 13th century. He has written a history of the canon of Toledo, and while in this position he was employed by cardinal Ximenes to revise the Mozarabic Liturgy. At his death Ortiz bequeathed his library to the University of Salamanca. He left six essays, which were collected and published in one volume under the title of De la herida del rey Don Fernando el Católico, consolatorio a la princesa de Portugal; Una oración a los reyes católicos (in Spanish and Latin); Dos cartas mensajeras a los reyes, una que escribía la ciudad, la otra el cabildo de la iglesia de Toledo; Contra la carta del presbiterio de Aragonia (Seville, 1493, fol.). The most important among them are a treatise, in twenty-seven chapters, addressed to the princes of Portugal, daughter of Isabella, on the death of her husband, and a discourse addressed to Ferdinand and Isabel, on the taking of Granada in 1491, in which he rejoices over the event, and expresses also his satisfaction at the cruel expulsion of the Jews and heretics. "These two discourses," says Ticknor, "are written in a pompous style; yet they are not wanting in merit, and the second contains one or two really fine and even touching passages on the peace enjoyed by Spain since its hated enemy had been expelled, heart-felt expressions of the author who found an echo in all the Spaniards." Besides these two treatises, this volume contains an account of an attempt at assassination committed against Ferdinand the Catholic at Barcelona Dec. 7, 1472; two letters from the city and cathedral of Toledo, asking that Granada may not take precedence before Toledo; and an attack against the prothonotary Juan de Lucena, who had ventured to blame the severity of the Inquisition. He wrote also Miscelanea theologica, on the sacraments, and of Mozarabo (Toledo, 1500, fol.; with a preface)—Drecrinium mixtum secundum regulam beati Iesiri, dictum Mozarabo (Toledo, 1502, fol.). These two works are of great value on account of the learned preface and of their scarcity. See Nicolas Antonio, Bibliotheca Hispana nova; Ticknor, History of Spanish literature, v. 488; Hoefer, Nouv. Biog. Générale, xxxii, 891; Stud. u. Krit. 1868, iii, 537; Meth. Quart. Res. July, 1867, p. 437. (J. N. F.)

Ortlibenses is the name of a Christian sect, sometimes spoken of as a branch of the ancient Valo, or Woldenses (q. v.). They were afterwards identified with the Brethren of the Free Spirit. The Ortlibenses are mentioned in the del prope libri Lucaniani, and the Walenses (Bibl. Mar. xxxv, 266), where also they are called, but apparently by a false reading, Orbilbari. The Ortlibenses appear to have been a party of the disciples of Amael de Dena, who formed themselves into a sect under the influence of a leading man named Andreask, early in the 13th century (Gieseler, Eccles. Hist. iii. 467). Reiner describes them as repudiators of nearly all the articles of Christian faith. Thus they denied that there was a Trinity before the nativity of Jesus Christ, who, according to them, only then became the Son of God. On the day of Easter they added a third, during the preaching of Jesus Christ, namely, the apostle Peter, whom they acknowledged as being the Holy Ghost. They held the eternity of the
world; but had no notion of the resurrection of the body or the immortality of the soul. Notwithstanding this they maintained (perhaps by way of irony) that there would be a final judgment, at which time the pope and the emperor would become proscyphoi to their seat. They declared that the death and resurrection of Jesus Christ. His cross, they pretended, was penance and their own abominable way of life; this, they said, was the cross Jesus Christ bore. They ascribed all the virtue of baptism to the merit of him who administered it. They were of opinion that Jews might be saved without baptism, provided they joined their ranks. They boldly asserted that they themselves were the only true mystical body, that is to say, the Church of Christ. The Ortliebenser herey seems to have been closely associated with the pantheism of Amalric, and with his theory as to the incarnation of the Holy Spirit. See, besides the works by Reiner and Giesebert above referred to, Neander, Ch. Hist. iv, 570, 571.

Orton, Azaizah G., D.D., a Presbyterian divine, was born in Tyringham, Berkshire County, Mass., Aug. 6, 1789. He graduated at Williams College, Williams-town, Mass., in 1813; studied theology in Princeton Theological Seminary, Princeton, N. J.; was licensed by the Presbytery of Long Island, in 1821, and ordained in Cranberry, N. J., in 1822. He labored successfully at Seneca Falls, N. Y., Lisle, Greene, and Lisle a second time. He died at the latter place Dec. 28, 1864. Dr. Orton wrote largely for the press, especially on capital punishment, slavery, and poverty. He was the author of profound investigation; his powers of abstraction were seldom equalled. Infidelity in all its phases found in him an unbounding opponent. Never for one moment did he seem to doubt the divinity of Christ, the inspiration of the Bible, or the sacredness of the ministry. See Wilson, Preb. Hist. Ali.m (1866), p. 298. (J. L. S.)

Orton, Job, S.T.P., an eminent English divine of the Quaker body, noted as an exponent of sacerdotal writ and as a pulpit laborer, was born at Shrewsbury Sept. 4, 1717. To his parents, who were the patrons of piety and good men, he was indebted for early instruction in the Christian faith, and he imbued from them the principles of pure religion. In his native town he acquired a considerable portion of classical learning. In his sixteenth year he was put under the tuition of Dr. Charles Owen, of Warrington, who had usually with him a few young men designed for the work of the ministry. In 1734 he was sent to Dr. Doddridge at the Bearthamsey at Ashdown. Having gone through the ordinary course of studies, he was in 1739 appointed assistant to the doctor in his academical labors. Young Orton discharged the duties of this office with singular ability, prudence, and success. In 1741 he was taken from this situation to his native town by the united voices of the Presbyterian and Independent congregations, which joined to receive him as their pastor. On Dr. Doddridge's decease, he was pressingly invited to succeed him in the academy and congregation; but this, as well as a call to succeed Dr. Hughes in London, he declined, and continued his labors at Shrewsbury till compelled by ill-health to resign the pastoral office. After this he devoted himself to literary pursuits, so far as his health would allow, till his death, which occurred at Kidderminster July 19, 1783. Few men were more diligent than Mr. Orton, or more conscientious in performing the various duties of his office. To the end of his life his heart was set on doing good; and when he had ceased to preach, conversation, letters, plans of sermons, were sent to his friends, and every private method in his power was resorted to. With the same view he published books: viz. Discourses on Eternity (1764, several editions), On Death (1774, 12mo), On Christian Worship (1775, 12mo):—Meditations for the Sacrament (1777, 12mo):—several volumes of Sermons, etc. His Life of Dr. Doddridge (Salop, 1756, 8vo, and often) is one of the most useful books to a student and a minister. But the principal work from the pen of Dr. Orton was published after his decease, and is entitled A Short and Plain Exposition of the Old Testament, with Devotional and Practical Reflections on the Passages (ed. by Robert Goulteman, from the author's MSS., 6 vols. 8vo, 1798; 2d ed. 6 vols. 1822). "It is composed on the plan of Doddridge's Expositor, with which it forms a complete commentary on the entire Bible. It is well adapted to the object for which it was intended, and exhibits good sense and a decided expository spirit by its own department it has not been superseded" (Kitto). See Jones, Christian Biog. s. v.; Kippis, Biog. Brit. v., 508; Allibone, Dict. of Brit. and Amer. Authors, ii, 1462, 1463; Lowndes, Brit. Lib. p. 640, 621.

Orus. See Horus.

Orvis, Samuel, a minister of the Methodist Episcopal Church, was born at Denmark, Lewis County, N. Y., Dec. 5, 1813; was converted in 1829, preaching in 1839; joined the Black River Conference in 1842, and died at Carthage, N. Y., Sept. 14, 1850. Mr. Orvis was one of the brightest ornaments of his conference. His sermons were digested, symmetrical, and powerful, his scholarship respectable and sound, and his study in reference to the spiritual was full of affection and success, and all his efforts were by his fervent piety made very acceptable and useful. See Minutes of Conferences, iv, 616; Black River Conf. Memorial, p. 290. (G.L.T.)

Oryx, a species of antelope held in high estimation among the Egyptians. Sir John G. Wilkinson says: "Among the Egyptians the oryx was the only one of the antelope tribe chosen as an emblem, but it was not sacred; and the same city on whose monuments it was represented in sacred subjects was in the habit of killing it for the table. The head of this animal formed the prow of the mysterious boat of Pharaoh-Sokari-Osiris, who was worshipped with peculiar honors at Memphis, and who held a conspicuous place among contemporary gods of all the temples of Upper and Lower Egypt. This did not, however, prevent their sacrificing the oryx as a sacrifice or for any of the purposes to which the priests fancied they could discern, as in the case of oxen exempted from sacrifice. And if the laws permitted the oryx to be killed without the mark of the pontiff's seal (which was indispensable for oxen previous to their being taken to the altar), the privilege of exemption might be secured to a single animal when kept apart within the inaccessible precincts of the temple. In the zodiacs the oryx was chosen to represent the sign Capricornus. M. Champollion considers it the representative of Seth, and Horapola gives it an unenviable character as the emblem of impurity. It was even thought to foreknow the rising of the moon, and to be indignant at her presence. Pliny is disposed to give it credit for better behavior towards the dog-star, which, when rising, it looked upon with the appearance of adoration. But the naturalist was misinformed regarding its love of the barren mother. Such were the fables of old writers; and judging from the important post it held in the boat of Sokari, I am disposed to consider it the emblem of a good rather than of an evil deity, contrary to the opinion of the learned Champollion." See Antelope.

Orzechowski, Stanislaus (better known to learned Europe under his Latinized name of Orychovi-rion), is one of the most noted of Polish theologians of the Reformation period. He was born in Galicia in 1513, pursued his elementary studies at Przemysl, and
then went to the universities of Vienna and Wittenberg. At the latter place he became intimately acquainted with Luther and Melanchthon, and adopted their opinions; not, however, from a sense of piety and love of truth, but because his reckless character craved novelty. 'Having been sent to Germany,' he says himself, 'I began to be the subject of contamination. I considered that it would be very honorable to me, if, by introducing some German doctrines, I should be distinguished from my equals in age, as, for instance, such principles as to disobey the pope; to have no respect for the laws; to belong to no church property; to know nothing about God; to exterminate the monks. After three years of study I arrived at the truth that all which is old, is paternal, is not just. I wished to advance further, and I passed to Carlstadt, of whom it was said that all that he has taken from Luther he has made still worse. 'To the guidance of such leaders I intrusted myself, and whoever made more and boldier innovations, him I considered better and more learned.' This description of the particular tenets which he confessed, expressed in the means of his dignities, he did it in an indirect manner when he had joined the Reformists and attacked the Protestants; and although the account which he gives of his connection with the Reformers was written in order to throw odium on the Protestant doctrines, he gave at the same time a true picture of his passion and his character, which only his life has been equally dangerous as a friend or as an enemy. After having finished his studies at the German universities, Orzechowski visited Rome, and returned to his native land in 1549, thoroughly imbued with the opinions of the Reformers. He began openly to broach them in his country; but he soon perceived that they could not afford him any worldly advantages, while the Roman Catholic Church could dispose of wealth and honors in favor of its defenders. He therefore entered into orders, and was, after some time, promoted to the canonry of Przemysl. But, although a member of the Roman Catholic clergy, he could not entirely conceal his real opinions, being continually excited by his relative, Rey, of Naglowicz, one of the first Protestant writers of his country. Afraid of losing, by an overt attack on the Roman Catholic Church, the advantages he derived as one of the clergy, he decided to adopt a more indirect manner. Thus he opened a discussion in several writings on the councils of Ferrara and Florence, questioning the supremacy of the pope over the Eastern Church, although ostensibly professing a great respect for those councils, and was publicly denouncing the authority of the Polish Church, which was of Eastern origin, to the Church of Rome as its supreme (head). He also openly defended the matrimony of the priests. Having been cited before the ecclesiastical authorities for attempting innovations dangerous to the repose of the Church and the purity of its doctrines, Orzechowski made a recantation of his opinions, and the book which contained them was condemned to be burned. This submission of Orzechowski to the authority of his Church was not, however, of long duration; and when the rector of Kazimierz, Maronecz, accused a wife of a priest, described as a part violent against the clergy. Soon afterwards he himself publicly married Magdalene Chelmicki; and when the bishop of Przemysl and the above on that account before the tribunal, he arrived in company with such numerous and powerful friends that the bishop dared not open the court, but, affecting to judge him by default, signed a decree of excommunication, inflicting upon him the penalty of infamy and confiscation of property. Orzechowski, not in the least intimidated by these proceedings, gave a public justification of his conduct before the provincial congregation. He explained at the same time before the tribunal of the province of the violent and cruel proceedings, and made an appeal from the episcopal sentence to the archbishop. Public sentiment favored Orzechowski, and, though the highest governmental authority had approved the episcopal verdict, no officer dared to execute the Church decree. The delay only encouraged the opposition; and when in 1550 a diet was convened to further consider the case, general opinion was so outspokenly arrayed against the Church that Orzechowski found it an easy task to fan the popular feeling into a flame, and thus unconsciously became a most valuable servant to the Reformation cause, though he had himself turned the cold shoulder to it. His bitter attack of Romanism opened the eyes of the people, and soon the bishops were beginning to consider who had been so eager to rush his country headlong into irreparable ruin. It was thought for an opportunity to reconcile this able and violent antagonist. On Feb. 17, 1559, absolution was granted him, and he thereupon presented to a Roman Catholic synod a declaration of his entire adherence to its tenets, and at the same time resigned his ecclesiastical dignities. But as the pope of Rome refused to approve the action of the synod and bishops, Orzechowski broke out anew in invectives against Rome. This time, however, his opposition proved no longer as formidable as heretofore, the golden opportunity for leadership having been lost to him. The world feared the Reformation cause did not to trust him after his denunciation. The Romanists put his writings into the Index Expurgatorius, and he was declared a servant of Satan. In 1557 he was excommunicated anew, but when, soon after, his wife died—the principal obstacle to reconciling the pope and emperor having been removed—by the marriage contract—Orzechowski was approached kindly, and in 1559 was finally reconciled to the Church which he had so long and violently and ably attacked. He now directed his hostility to the Protestants, and for many years was Rome's ablest champion in Poland. His writings of this period abound in the same virulence and severity which characterize his works against Rome. He died in the second half of the 16th century. The life of this extraordinary individual is one of the most striking proofs that the highest talent, destitute of principle, is unable to produce anything that is really great or good. The principal cause of popular discontent with Rome in Poland, and the principal promoter of Protestant liberty, he betrayed by the fickleness of his character and the versatility of his opinions the high vocation to which his great talents and bold character seemed to entitle him. He might have been the founder of Protestantism in Poland. He died an abject slave to papal error and superstition, and left his country in darkness and slavery, instead of securing for it religious and civil freedom. See Krasinski, Hist. of the Poles (in Eng.), i, 172-198.

O Sapia! (O Wisdom!) These are the opening words of the first of a series of anthems, one of which was sung with the Magnificat every evening, in the Church of England, before the Reformation, for the eight days preceding Christmas—yea; that sung on Dec. 17 beginning O Sapia! The series is here given in an English translation:

"Dec. 17. O Sapia! O Wisdom! which camest out of the mouth of the Most High, reaching from one end to the other of the world, teaching us how to order all things, come and teach us the way of understanding.

"Dec. 18. O Adoni! O Lord and Ruler of the house of Israel, who appeared to Moses in a flame of fire in the bush, and gave him the law in Sinai, come and deliver us with an unstained arm.

"Dec. 19. O Ratis Jessei, O Root of Jesse, which standest for an ensign of the people, at whom kings shall shut their mouths, and on whom the Gentiles shall seek, come and deliver us now; tarry not.

"Dec. 20. O Clavis David! O Key of David, and Sceptre of the house of Israel, thou that openest, and no man shutteth; and shuttest, and no man openeth; come and bring the prisoner out of the prison-house, and him that sittest in darkness, and in the shadow of death.

"Dec. 21. O Oriens! O Day-Spring, brightness of the everlasting light, and Sun of Righteousness, come and enlighten them that sit in darkness, and in the shadow of death."
Oscillatorium (object to be kissed), viz. poëzis od Miasmi (for peace of the Mass); the "paz" for the holy kiss, as used in the ancient Church. It was a piece of wood or metal, with a picture of our Saviour, the blessed Virgin, or the like, painted or embossed upon it. By the act of the kiss, the priest made the celebration of mass, and afterwards handed to the people for the same purpose; a custom which probably originated in the ancient kiss of charity, which was practiced by the Christians at the service of the Eucharist. See also Paz.

Oscar (q.v.), 2 Esdr. xii, 40, Osee (Ozer, 2 Esdr. i, 28), Osias (Derspi, Rom. ix, 25), less correct modes of Anglicizing the name of the prophet Hosea (q.v.).

Osgood, David, D.D., a noted Congregational minister, was born at Andover, Mass., Oct. 14, 1747, and was educated at Harvard College, class of 1771. He studied theology at Andover, of which one of his ancestors was a founder, and was ordained to the ministry Sept. 14, 1774. He settled as pastor of Medford, where he continued nearly fifty years, and became a distinguished preacher. He was a zealous Federalist, and one of his sermons in 1794, upon Genet's appeal to the people against the government, attracted great attention, and rapidly passed through many editions. His election sermon in 1809 was the most celebrated of his discourses. He was a thorough Calvinist, "a truly good and great man, and an earnest and fearless preacher." A volume of his Sermons was published at Boston in 1824. See Sprague, Annals of the Amer. Pulpit; Drake, Dict. Amer. Biog., s.v.

Osgood, Thaddeus, an American minister, noted as a philanthropist, was born at Methuen, Mass., Oct. 24, 1775, and was educated at Dartmouth College, class of 1803. He studied divinity with Drs. Lothrop and Emmons, and was ordained about 1806; was stated supply in Southbury, Conn.; and was a missionary in New York and Canada. He organized the first Church in Buffalo, N.Y., and many others; in 1812 he collected $9000 in England for a school in Quebec, and gathered there 200 boys in a Sabbath-school; went again to England in 1825, and collected $900 for a society to promote education and industry; in 1857 formed another society in Canada to supply Bibles for seamen and emigrants; was many years a distributor of tracts and founder of Sabbath-schools; went a third time to England for benevolent objects; and closed his useful life at Gloucester, Mass., Jan. 19, 1852. See Drake, Dict. Amer. Biog., s.v.

Oshe'a (Heb. Hoshe'a, อ่ 8; Sept. Aesec; Vulg. Osee), another form (Num. xiii, 8) of the name of Josedek (q.v.), the son of 2 Eliahu.

Oshima (i.e. big island) is a Japanese island, sometimes called Vires, or Barrowbyld Island. It is about eight miles long and five wide, and there are many villages with considerable population on it. But as the inhabitants of Oshima are principally Japanese, we refer to the art. JAPAN.

Osander, Andreas (1), a distinguished German theologian of the Reformation period, and a disciple of Luther, was born at Gunzenhausen, in Bavaria, Dec. 19, 1498. His father was a blacksmith, called Hoermann, out of which name his son, after the fashion of his time, manufactured the classic-sounding name Osander. Andreas studied successively at Leipzig, Altenburg, and Ingolstadt. He composed a dictionary of the vernacular languages, particularly in Hebrew, as also in theology, mathematics, and even in medicine. After completing his studies, he was made teacher of theology in an Augsburg convent at Nuremberg, but in 1522 accepted the principles of the Reformation, and became an evangelical preacher in one of the churches of that city. He labored with marked success for the Reformation, frequently defending it in public conferences against the Roman Catholic clergy. His eloquence gained him great reputation, and he was soon looked upon as one of the principal followers of Luther. Gieseler speaks of Osander as at this time "the highly endowed Reformer, former of Nuremberg" (Evckes, Hist. iv, 469 sq.). In 1529 he was sent to the Conference of Marburg, whose object was to reconcile the Lutheran and Swiss theologians principally on the doctrine of the Eucharist. Osander seems to have sided on that point most consistently with Luther against Zwingli, but on the doctrine of justification he held some peculiar views, yet they did not differ enough from the Lutheran views to make any schism from them. In 1539 he was one of the Protestant theologians who appeared before the Diet of Augsburg to advocate the cause of the Reformation. He took an active part in the proceedings which resulted in the drawing up of the Confession of Augsburg. In 1546 he attended at the conference in Smalsal (q.v.). But upon the publication of the Interim (May 15, 1548) Osander felt that he could no longer stay at Nuremberg, and he retired, after twenty-seven years of successful Reformation labors there, in 1549, to the court of duke Albert of Prussia, who had formerly been much pleased with his preaching. It is said that he expected to be called to England, but that Cranmer refrained from inviting him on account of his combative tendencies. Albert, however, offered him the professorship of theology in the newly organized University of Köenigsberg. Osander accepted the position as it was offered to him, and had scope for the spread of his doctrinal views. These were somewhat peculiar, and differed from those of the other Reformers, particularly on the question of justification. In opposition to the external view of justification by faith alone, as they taught it, Osander insisted that "faith is the medium of the indwelling of Christ in the human soul." This form of statement he proved from Luther's writings was authorized, but he used it, in distinction from Luther, to describe living faith as appropriating Christ, and thus developed the view in a mode similar to that of the Germanism to which he was closely related. The principal fault in Osander's doctrine was especially, the unwarrantable stress he laid upon his peculiar shape of the dogma, constituting justification and redemption as only one act. His doctrine seems to have amounted to the following propositions: 1. That Christ, considered in his human nature only, could not have his obedience to the divine law obtain justification and pardon for sinners; neither can we be justified before God by embracing and applying to ourselves, through faith, the righteousness and obedience of the man Christ. It is only through that eternal and essential righteousness which dwells in the nature of God, and is exercised in his human nature united to the human, that mankind can obtain complete justification. 2. That a man becomes partaker of this divine righteousness by faith, since it is in consequence of this uniting principle that Christ dwells in the heart of man with his divine righteousness. Now, wherever this divine righteousness dwells, there God can behold no sin; therefore, when it is present with Christ in the hearts of the regenerate, they are, on its own account, considered by the Deity as righteous, although they be sinners. Moreover, this righteousness cannot dwells; the same righteousness is faithful to the pursuit of holiness and to the practice of virtue. Osander indeed maintained that what was called justification by orthodox theologians should be more properly designated redemption (illustrated by the case of a merchant rescued from slavery). In the union between the signification of Ersatz and a "pouvoir," it is only by metonymy that it can mean "to pronounce a person just" (comp. Planck, iv, 249 sq.; Tholuck's Amtsgeg., 1833, No. 54, 55; Schenkel, ii, 355). He was opposed by Francis Staphylus, Morlin, and others. (On Osander's doctrine see in its earliest form after 1529.) His doctrine is considered in the Studien u. Kritiken, 1844; it is further developed in the two disputations which he held, A.D. 1549 and 1550, in his treatise De unico Mediatori, 1551, and in various sermons.) Says Baur, in his Dogmengesch., p. 382:
"Justification, according to Osianer, is the mystical union of man with Christ as the absolute principle of righteousness... The believer is so embodied in Christ that in this living concrete unity he is flesh of his flesh, bone of his bone. In this spirit, Concordia is incorrect in representing his doctrine as excluding the human nature of Christ from the work of redemption." As Osianer considered justification, it is evidently not to be understood as a judicial act of God, as it was held by the Reformers, who all adopted on this point the theory of Anselm, but as something subjective, as a communication of an inner justice operating directly upon a conscience. This doctrine was never violently attacked by the Lutherans, though they were opposed to it, so long as Luther's magnanimous spirit was able to receive it. Osianer was well received by all controversies which did not seem to him to be indispensable for preserving the purity of truths leading to salvation. While at Nuremberg Osianer therefore escaped violent opposition, but when established at Königsberg, so much farther removed from the personal influence of his own devoted friends, and the great Reformer himself no longer on earth to stay the strife, the jealousy of competitors, the newness of Osianer's views, joined to a certain freedom—much removed, however, from immorality—of manners, created many enemies, and involved him in bitter controversies, which commenced with his first disputa- tion, De Christo in Matthaei Evangelio (1549), and lasted until (1550). The strife was for a while subdued by the authorities, who favored Osianer and excused his opponents, but broke out with renewed violence when he published in Latin and in German his Confession, entitled in the former De unico mediatori Jes. Chr. et justificatione fidei Confessio A. Osianardi (Regiom. Oct. 1551, 4to), or in German Bekennniss e. d. einigen Mitlur Jes. Christ. u. v. d. Rechtfertigung (1551; 2d ed. 1552). Osianer by this publication simply inflamed the strife, because he here treated his opponents with arrogance and harshness, which was not the part of a man who had hazarded his life at Königsberg in September of this year, tried in vain to adjust the controversy; and when all seemed lost for Osianer, his devoted friend the duke called for a judgment from the theologians of all the German estates of the Augustinian Confession. The Witttemberg judgment alone tried to vindicate the essential agreement of Osianer with Lutheranism, and this only the duke presented, but failed, nevertheless, to bring about a peaceful settlement. Osianer was finally, on account of his heretical views, called before the Synod of Witt- temberg, where the members determined to understand him, he could be the subject of further controversy he died, at Königsberg, Oct. 17, 1552. His faithful adherents, who continued the controversy after his death, are called Osianianae (see below).

They were well received in mathematics, astronomy, and physics. He was very eloquent, but he had all the coarseness of his age; he overwhelmed his adversaries with insults, unbecoming jokes, and cynical jests. His works were numerous, but are now altogether forgotten; the most important are, Conjecturae de ultimis temporibus ac de fine mistic (Nurembr. 1544, 4to)—Harmonia Evangelica, libri ii, Graece et Latine (Basle, 1537, fol.; ibid. 1567, Greek and Latin; Paris, Robert Eratine, 1545, Latin only; translated into German by J. Schweinzer, Frankfort, 1540, 4vo). This is the first Protestant Harmonia, but it is worthless because Osianer labored under the new and erroneous opinion that the four Gospels, instead of being a narration of the same events, were an account of four different periods, chronologically following each other, and that the similitude of events was the result of a similarity of circumstances.—Fabbia sacra, quas inter antiquos Latines veritatem vestigia fundationem, et difficirosis locorum succinunt explicationem, multas inappr dispositiones observationes, continet (Tubing. 1600, fol.; four times reprinted). Osianer was the first to publish Copernicus's Astronomia, to which he wrote a preface (Nurembr. 1545, 4to). Osianer, Andreas (2), called the Younger, son of Lucas the Elder, was born at Baumburgo, Würt- temberg, May 6, 1692. He became, in 1897, pastor at Augsburg, preached to the University of Würt- temberg in 1599; general superintendent in 1598; and, finally, chancellor of the University of Tubingen in 1605. Osianer died in 1671. He left sermons, essays, and theological treatises, the best-known of which is Papa non popo, hoe est, popa et popol iurare (Tubing. 1582, 4vo), et Red- theringa confessor (Tubing, 1599, 8vo; Frankl. 1610, 12mo).

Osianer, Johann Adam (1), a distinguished German Protestant writer, was born at Vaihingen, in Württemberg, Dec. 8, 1626. He became, in 1698, chancellor of the University of Tubingen, and died there Oct. 25, 1697. Among his theological works we note, Commentariis in Pentateuchum (Tubing. 1676-78, 5 vols., fol.), which was until the close of the last century considered one of the best commentaries on the Pentateuch: —In Josenum (ibid. 1681, fol.); —In Judeam (ibid. 1682, fol.); —In Genesis (ibid. 1682, fol.); —In primum et secundum libros Samuelis (Strutt, 1687, fol.); —Tractatus theologici de magia (Tubing. 1687, 8vo); —Primaria evangelica, seu dispositiones in Evangelia dominica- calia et festivalia (ibid. 1685-1691, 14 pts. 4to); —De aegla Hebrenorum, Gentilium et Christianorum (ibid. 1678, 3to). Gronovius inserted in the fourth volume of his Thesaurus antiquitatum Graecorum the part of this treatise which refers to the places of refuge among the Greeks and Romans. See Jöcher, Allg. Gelehrten-Lex.; Hoefer, Nouv. Bio. Générale, xxxvi, 905. (J. N. P.)

Osianer, Johann Adam (2), a German philosopher and theologian, son of the preceding, was born at Tubingen in 1701. He became professor of Greek in the university of that city, and died there Nov. 20, 1756. He wrote a number of essays on questions of philosophy, literature, and philosophy. The best-known among them is entitled De immortaliitate animae rationes, ex lumine Hebraic et Grec (Tubing. 1743, 8vo), and on the subject of the different nations. See Walchius, Bibli. theol. selecta; Hoefer, Nouv. Bio. Géné- rale, xxxvi, 906. (J. N. P.)

Osianer, Lucas (1), called the Elder, son of Andreas Osianer (1), was born at Nuremburg Dec. 16, 1584. He accompanied his father to Königsberg, and was educated at that high school. Upon the comple-
tion of his studies he went to Sutsia, and was made deacon at Göppingen in 1555, and two years later special superintendent at Blaubeuren; in 1560 he passed with the same title to Stuttgart, where he was appointed court preacher in 1567; and finally in 1568 he was appointed court preacher at Stuttgart. He died Sept. 7, 1604. His activity was as remarkable as his erudition. He had taken part in the conferences of Maulbronn in 1564, and also in 1576, when he assisted in framing the so-called Formula of Maulbronn; also in the conferences of Mönepgel in 1586, and of Regensburg in 1594. In 1584 he had taken an active part in opposing the persecutions directed against the Anabaptists. He wrote against Sturm in defence of the Formula of Concord; against Mentzer on the human nature of Christ; against Melanchthon's doctrinal election; against the Reformed theologians on the controverted points; against the Jesuits, etc. He even published a treatise against Mohammedanism. Osianter's principal works are, Epistola historica ecclesiastica centuria xx (ex Historia Magdeburgica) (Tub. 1607, 3 vols. 4to); — Eiusdem Lectiones ecclesiasticae, qua Augustanae Confessionis theologii habent cum Calevianis (ibid. 1614, sm. 8vo); — Eiusdem controversiarum, qua Augustanae Confessionis theologii habent cum Calevianis (ibid. 1614, sm. 8vo); — Eiusdem controversiarum religiosis, qua haec inter Augustanae Confessionis theologos et protestantes habeatur (ibid. 1615, sm. 8vo); — Historia, als fontes Hebraici textus exsudato, cum brevi et perspicuo expositione Lucii Osianerti incursus locis theologiis (1584-1586, 7 vols. 4to; 13th ed. 1655; it was also translated into German by David Forster [Stuttg. 1668]), and passed through many editions.)

Osianter, Lucas (2), called THE YOUNGER, son of the preceding and brother of Andreas the Younger, was born at Stuttgart, May 6, 1571. He became professor of theology at Tübingen in 1619, and died there April 20, 1626. He gave much attention to the Anabaptists, and wrote against the Jesuits, the Reformed Church, the Anabaptists, the Schwenckfeldians, etc., and was accused of having started the difficulties which divided the theologians of Tübingen and those of Giessen on the doctrine of the atonement and self-abasement of Christ. His immoderate attacks against J. Arndt's Wahre Christenthum, in 1623, led him into very disagreeable disputes. He wrote sermons and numerous theological works, mostly polemical. See Jörcher, Allg. Gelehr.-Lexikon; Hoefner, Nouv. Bio, Générale, xxxix, 905. (J. N. P.)

Osianteria is the name of a body of Lutheran theologians who adhered to the doctrines of Andreas Osianter (q. v.) concerning the redemptive character of Christ by virtue of his divine nature alone. Osianter was opposed by Melanchthon and others, but principally by Stauins (q. v.), professor of Hebrew at Königsberg, who adopted the opposite extreme, that Christ's divine nature had no concern in the satisfaction he made, and that the mediation between God and man belonged to Jesus, considered in his human nature only. After the death of Osianter the strife was continued by his disciples. They were at first upheld by Osianter's former protector, the duke; but in 1564 a council condemned their doctrines, and demanded that all Osianterians should abjure their heresies. They protested, and were for the greater part obliged to leave the country. Osianter's son-in-law, the court preacher Johann Funck, was compelled to recant by the synod of 1556; but afterwards returned to his errors; he became also connected with political troubles, and paid the penalty of his heresy with his life. See Funck. After this the party soon lost all importance, and the troubles ended. Mörlin, the leader of the orthodox party, who had been exiled from Kö¬ningsberg and more than once made a new confession of faith denouncing the Osianterian heresy. The confession, in order that it should not be considered a new formula, but only a reassertion of the old, was called Repetitio corporis doctrina Christiana; this name was afterwards changed, however, to Corpus Doctrinae Protestantiae (in 1567), and all the Osianterians were banished from Prussia, after which they soon became extinct. See references in the art. OSIANTER.

In recent times the Osianterian view of justification has been espoused by Dr. John Forbes in his Analytical Commentary on the Epistle to the Romans (Edinb. 1868, 8vo). See British and Foreign Church Rev., Oct. 1868, art. ii.

Osiris, according to others, Absir, or Hybris (Mong-eyed), a celebrated Egyptian deity, whose worship was universal throughout Egypt. This name appears in the hieroglyphs as a sun disc, the rays of which are expressed by a throne and an eye; at a later period, that of the 19th, a palauquin is substituted for a throne; and under the Romans, the pupil of the eye for the eye itself. Osiris does not indeed appear to have been universally honored till the time of the 11th and 12th dynasties, or about 1650 B.C., when Abydos, which was re¬puted to be his burial-place, rose into importance. In the monuments of this age he is called "great god, eternal ruler, dwelling in the west, and lord of Abut" or Abydos. Even at the most remote period individuals after death were supposed to become Osiris. Festivals and ceremonies performed or addressed to them were, in this character, referring to their future life and resurrection. At the time of the 18th dynasty this title of Os¬iris was prefixed to their names, and continued to be so till the time of the Romans and the fall of paganism. The Greek and Roman writers greatly differ in their opinions concerning this celebrated god, but they all agree that, as king of Egypt, he took particular care to civilize his subjects, to polish their morals, to give them good and salutary laws, and to teach them agriculture. After his death he was said to have left a form and likeness of himself that was preserved to enable alive to go and spread cultivation in the other parts of the earth.

He left his kingdom to the care of his wife Isis, and of her faithful minister Hermes or Mercury. The command of his troops at home was left to the trust of Heracles, a warlike officer. In this expedition Osiris was accompanied by his brother Apollo, and by Anubis, Macedo, and Pan. His march was through Ethiopia, where his army was increased by the addition of the Satyrs, a hairy race of monsters, who made dancing and playing on musical instruments their chief study. He afterwards passed through Arabia, and visited the greatest part of the kingdoms of Asia and Europe, where he enlightened the minds of men by introducing among them the worship of the gods, and a reverence for the wisdom of a supreme being. At his return home Osiris found the minds of his subjects roused and agitated. His brother Typhon had raised seditions, and endeav¬ored to make himself popular. Osiris, whose sentiments were always of the most pacific nature, endeavored to convince his brother of his ill conduct, but he fell a sacri¬fice to the attempt. Typhon murdered him in a secret apartment, and cut his body to pieces, which were dis¬tributed among the associates of his guilt. This enraged incensed Isis; she revenged her husband's death, and, with her son Osiris, she defeated Typhon and the parti¬sans of his conspiracy. She recovered the mangled pieces of her husband's body, the genitals excepted,
the measure of Osiris, he had a chest made of the same dimensions, richly ornamented and carved, and produced it at a banquet, where he promised to give it to whomever should fit it; and when all had lain down and tried it, and it had not fitted none of them, he had it heated down in it, and was immediately covered over by the conspirators, who placed the lid upon it, and fastened it with nails and molten lead. The chest was then hurled into the Nile, and floated down the Tanitic mouth into the sea. This happened on the seventeenth of the month Athyr, in the twenty-eighth year of the reign or age of Osiris. Kheir or Pan, and his attendant deities, discovered the loss of the god; Isis immediately cut off a lock of hair and went into mourning, and proceeded in search of Anubis, the child of her sister Nephthys by Osiris; and, having found him, bought him for a trifle, and, meanwhile dispatched to Byblos, and, lodging in a tamarisk, became enclosed in the tree, which was cut down by the king, and the trunk, containing the chest and the body of the god, was converted into a pillar to support the roof of the palace. The goddess proceeded to Byblos, and ingratiated herself with the queen's women by plaiting their hair and imparting to it an ambrosial smell, so that the monarch, whose name was Melcarthus, and his wife, Sosias or Nemanoum, invited her to court to take care of their own child. She endeavored to confer immortality upon him by placing him on a fire, and changed his body to the image of the god, and paid the most superstitious veneration to that animal. Osiris, according to the opinion of some mythologists, is the same as the sun, and the adoration which is paid by different nations to an Anubis, a Bacchus, a Dionysus, a Jupiter, a Pan, or a Bacchus, is the same as that which Osiris received in the Egyptian temples. Isis also after death received divine honors as well as her husband; and as the ox was the symbol of the sun, or Osiris, so the cow was the emblem of the moon, or Isis. Nothing can give a clearer idea of the power and greatness which was exercised by popular superstition, which has been found on some ancient monuments: "Saturus, the young-est of all the gods, was my father; I am Osiris, who conducted a large and numerous army as far as the deserts of India, and travelled over the greatest part of the world, and visited the streams of the Ister, and the remote shores of the ocean." Three parts of all the inhabitants of the earth." Osiris was generally represented with a cap on his head like a mitre, with two horns; he held a stick in his left hand, and in his right a whip with three thongs. Sometimes he appears with the head of a lion; at other times, he is represented as a student in different conceptions, which, however, is a proper emblem of the sun (Plutarch, In Isid. et Os.; Herodotus, ii, 144; Diodorus. 1; Homer, Od. xii, 323; Ælian, De Anim. iii; Lucian, De Dea Sgr.; Pliny, viii.). In the Egyptian Ritual, or "Book of the Dead," and other inscriptions, Osiris is said to be the son of Seb or Saturn, and born of Nu or Rhea; to be the father of Horus by Isis, of Anubis, and of the four genii of the dead. Many mystic notions were connected with Osiris: he was sometimes thought to be the son of Ra, the Sun, or of Atum, the setting Sun, and the Bennu or Phoenix; also to be a reaper, or self-creating, in which case he is identified in some instances with the Sun or the Creator, and the Pluto or Judge of Hades. Osiris was born on the first of the Epagomenae, or five additional days of the year. When born, Chronos or Saturn is said to have given him in charge to Famine; having become king of Egypt, he is said to have civilized the Egyptians, and especially to have taught them agriculture, the culture of the vine, and the art of making beer; he afterwards travelled over the earth, and conquered the people everywhere by his persuasion. During his absence, Isis was united to Osiris, who guarded it strictly, and Set or Typhon, the brother of Osiris (who was born on the third of the Epagomenae), was unable to revolt against him. Typhon had, however, persuaded seventy-two other persons, and Aso, the queen of Ethiopia, to join him in a conspiracy; and, having taken

tetrad of deities, whose local worship was at Abydos, but who was the last repetition of the gods of the other names of Egypt, and who had assumed a heroic or mortal type. In form, Osiris is always represented swathed or mummmied, in allusion to his embalmment; a network, suggestive of the net by which his remains were fastened together; a shroud over his head, to which he wears the cap off, having at each side the feather of truth, of which he was the lord. This is placed on the horns of a goat. His hands hold the crook and whip, to indicate his governing and directing power; and his feet are based on the cubit of truth; a panther's skin on a pole is often placed before him, and flowers and garlands hang over his shrine, connecting him with Dionysus. As the "good being," or Omnosoph the meek-hearted, the celestial or king of heaven, he wears the white or upper crown. Another and rarer type of him represents him as the Tar, or emblem of stability, wearing the crown of the two Truths upon his head. His worship, at a later time, was extended over Asia Minor, Greece, and Rome, and at an early age had penetrated into Phoenicia, traces of it being found on the coins of Malta and other places. He became introduced along with the Egyptian worship of the dead into the Greek and Roman empire. But the attacks of the philosophers, and the rise of Christianity, overthrew these exotic deities, who were never popular with the more cultivated portion of the Roman world. See Pritchard, Mythology, p. 208; Wilkinson, Man. and Cust. iv, 314; Bunse, Egyptian Mythology, 14.

Oski, Rhenus (also Hisschke), a rabbi at Prague, where he died in 1673, is the author of ה'פואידא ומשנה, a manual for preachers, containing in alphabetical order certain loci communes, compiled from different authors, of which only the first part has been published (Prague, 1660; Hamburg, 1712), while the second part is yet in MS. in the Oppenheimianian:

ן"ני יבש ומשנה ביא מנה תוא ותא, Cabalistic Midrash on the Pentateuch, with large extracts from the Me'khitcha, Pesikta, Zohar, and other Cabalistic works (Wilmsdorf, 1681; Amsterdam, 1700; Lemberg, 1800; Amsterdam, 1870, fol.); which however must be distinguished from ה'פואידא ומשנה ביא סולמך האsticky, an introduction to the subject of ascetism (Salzburg, 1884); and ה'פואידא ומשנה ביא מנה סולמך, Cabalistic observations on the ritual for the Sabbath. See Freib, Bibl. Jud. i, 412 sq.; D. Rossi, Dizionario storico degli autori Ebrei, p. 254 (Germ. trans. by Hamburg); Etheridge, Introduction to the Targum of the Book of the Twelve, p. 111; H delighted, Hisschke, u. Literature, p. 402; Steinmechted, Jewish Literature, p. 225. (B. P.)

Osmond or Osmund, Sr., an English prelate of the 11th century, was son of the count of Seex, in Normandy. He succeeded his father, and gave most of his goods to the clergy. In 1066 he followed William the Conqueror to England, and received from him the county of Dorset and the charge of lord chancellor. The king, judging him better fitted for the Church than for the management of temporal affairs, made him bishop of Salisbury about 1078. He died Dec. 5, 1099, and was canonized by pope Calixtus III in 1458. In order to render the manner in which divine service was conducted more uniform, he wrote a treatise of ecclesiastical forms, named sometimes Liber ordinatis, sometimes Consuetudinarium ecclesiæ, or again Horiarum preces. This work, with some slight alterations, remained in use until the time of Henry VIII; was the origin of the most popular manuals for public devotion with the English clergy, and has principally contributed to hand down Osmond's name to posterity. See Hist. litur. de France; Butler, Lives of the Saints; Inetti, Hist. Engl. Ch. I, xvi, n. 4; Charton, Early Engl. Ch. p. 291; Hoefert, Treatise on the Church, p. 117; Gresham, Exacta, xxvii. 907; Hook, Eccles. Biogr. s. v.; Wright, Biog. Brit. Lit. (Anglo- Norman period); Collier, Eccles. Hist. (see Index in vol. viii); Allibone, Dict. of Brit. and Amer. Authors, s. v.

Osorio, Francisco Meneses, a Spanish painter, was born at Seville in the latter part of the 17th century. He studied under Murillo, and became one of the most successful imitators of that artist. In concert with Juan Garzon, one of his fellow-disciples, he painted several pictures in the churches and convents of Seville. In 1688 Osorio was chosen major-domo of the academy of that city, to which he presented his picture of the Conception, which was greatly admired. At the death of Murillo, in 1685, he was employed to finish the works at Cadiz left incomplete by that master. He copied the works of Murillo to perfection, and particularly excelled in groups of children. Some of his works are: Elijah Fed in the Desert, in the church of San Martinio at Madrid, and the picture of St. Catharine, in the Capuchin monastery at Cadiz—his finest production. Osorio died at Seville about 1700.

Osorio (or Osorius), Geronimo (1), a learned Roman Catholic, Portuguese divine, and an excellent Latin poet and writer. He was born at Lisbon in 1565. Showing an extraordinary inclination for literature, he was sent, at thirteen, to the University of Salamanca, and there learned Greek and Latin, and studied the law. At nineteen he removed to Paris, to be instructed in Aristotle's philosophy. After three years he went to Bologna, where he devoted himself to theology, learned Hebrew, and studied the Bible, in which he became so great a master, that on his return home, John III, king of Portugal, appointed him professor of divinity at Coimbra. Taking priest's orders, he was given the care of the church of Tavora by Dom Luis, infante of Portugal, and soon after the archdeaconry of Evora by cardinal Henry, archbishop of that province, and brother to King John; and at last he was nominated to the bishopric of Silves by Catharine of Austria, that king's widow, who was regent of the kingdom during the minority of her grandson Sebastian. When this prince became of the proper age for the personal administration of his kingdom, he resolved upon an expedition against the Moors in Africa, much against the persuasions of Osorio, who thereupon, to avoid being an eye-witness of the calamities he dreaded, made various pretences to go to Rome. Here pope Gregory XIII gave Osorio many testimonies of his esteem; but he had not been absent above a twelvemonth when the king called him home. Not long after this Sebastian was slain in a battle against the Moors in August 4 (1578), while the tumults in Portugal which succeeded this fatal event Osorio labored incessantly to prevent the people of his diocese from joining in them; and failing in this effort, he laid it so deeply to heart that he died of grief, August 16, 1680. He is much commended for his piety and charity. He maintained several learned men in his palace, and at meals had some portion out of St. Bernard's works read, after which all present were at liberty to propose any difficulties that occurred upon it. As a writer, Du Pin observes that his diction is easy and elegant for which reason he is called the Cicero of Portugal, as being a great imitator of Cicero, both in style, choice of subjects, and manner of treating them. His compositions are not intermixed with quotations, but consist of connected reasons. He does not endeavor in his Commentaries and Paraphrases to extend or explain the text, but to explain it, and show its order and series fully. These were collected and published at Rome (1592, in 4 vols, fol.) by Jerome Osorio, his nephew, who prefixed his uncle's life to the edition. The titles of his works are: De nobilitate civitatum Christianarum et desuntis, with the omissions of the foregoing; some have thought this last to have been written by Cicero, and that Osorio found it and published it as his own. —De regis institutione et
disciplina:—De rebus Emanuei regis invitationis virilis et auspicio gestis.—Itam, cum profuturum Joannis Metelli, de reperiri Indias.—De justitia celesti, lib. x, ad Reginaldum Polum Cardinalern.—De vera sapientia, lib. v, ad Gregorium XIII, P. M.—besides paraphrases and commentaries upon several parts of Scripture. He wrote to queen Elizabeth of England, and, he made her to turn papist. He was answered by Walter Haddon, master of the requests to that queen. See *Gen. Bifog. Dict. s. v.*; *Wetzer u. Wele, Kirchen-Lezikon, s. v.; Aschbach, Kirchen-Lezikon, s. v.; Hallam, Intro. to the Lit. of Europe, i, 238.*

Osmorio, Geronimo (2), nephew of the preceding, was canon of Evora, and, having been educated by his uncle, endeavored to imitate his style, but he was not so fine a writer, though he seems to have had more learning. He wrote, besides a life of his uncle, *Notitiae in Hieronymis Osmorii Paraphrasis Paulinorum*, subjoined to his uncle’s *Paraphrase* in the third volume of his works. Du Pin says these “Remarks” are valuable, and filled with critical observations on the Hebrew language:—*Paraphrasis et Commentaria ad Ecclesiasten nunc primum edita:* *Paraphrasis in Canticum Canticorum* (Lugdii, 1611, 4to.).

*Ospary* (by ornithologists, *Osprey*) is the rendering in the A. V. of the Hebrew עַשְׁפָּר, *asphark* (Sept. ἀλατιος, or sea-eagle; which Jerome follows, halætus and halætus, some copies translating it aquila marina; but the Veneto-Greek MS. has γὰτω, the vulture, from mere conjecture); the name of some unclean bird which the law of Moses disallowed as food to the Israelites (Lev. xi, 13; Deut. xiv, 12). The Hebrew etymology, from the root עָשָּׁר, to strengthen, would seem to point to some bird remarkably powerful, fierce, or impudent. Bochart supposes the black eagle to be meant, but reasons upon the mere conjecture that by the word ἀλατιος is intended μελατηος (Hieron. iii, 188, etc.).

The traditional interpretation favors the English rendering, the name and description of this bird having been copied and preserved from hand to hand, at least from Aristotle’s time to our own. Thus, Gesner and Aldrovandus copied from Aristotle (Ray, *Preface to Willoughby’s Ornithology*); from them Willoughby took the names of his birds; and on this system Linnaeus based his classification (Neville Wood, *Ornithologists’ Text-book*, p. 8). Aristotle, about B.C. 300 (probably contemporary with the translation of the Pentateuch into Greek; see above), describes the ἀλατιος as a sea-eagle dwelling near seas and lakes; and his birds are the ones that seizes its prey, and not being able to carry it, it is drowned in the deep” (*Hist. Animal.* ix, c. 32). The same word is found in the writings of Pliny (A.D. 70) with the following description: “There remains (to be mentioned) the halietus, having the most penetrating vision of all (eagles); soaring (or balancing itself) on high, and upon perceiving a fish in the sea, rushing down headlong, and with its breast dashing aside the waters, seizing its prey” (*Hist. Nat.* x, 8). The *halietus* is described in the very words of Aristotle and Pliny (B. C. 300 and 23 B.C.) Willoughby (lib. xii, Bonon. 1504, p. 194). For the transference of names into the Linnaean system, see *Systema Naturae*, i, 129 (Holmiae, 1767). The word, according to its etymology, signifies sea-eagle, and the traditional English word is *osprey*. The following accounts from modern naturalists are strikingly in accordance with the ancient descriptions of the halietus, or sea-eagle, occur in Europe, Asia, Africa, America, and Australia (Selby’s *British Ornithology*).

Mr. Macgillivray describes “its savage scream of anger when any one approaches the neighborhood of its nest, its intimidating gestures, and even its attempts to molest individuals who have ventured among its native crags.” Mr. Selby (Illustrations of British Ornithology, 1829), respecting the *osprey*, observes, “It is strictly piscivorous, and is found only in the vicinity of lakes, rivers, or such pools as abound with fish. It is a powerful bird, often weighing five pounds; the limbs are very muscular in proportion to its general dimensions; its feet are admirably adapted for retaining firm hold of its slippery prey.” Mr. Montagu (Ornithological Dictionary, 1802, s. v., *Ospary*) remarks, “Its principal food is fish, which it often catches with great dexterity, by puffing upon them with vast rapidity, and carrying them off in its talons.” See also Grandison’s edition of *Pliny*, with Notes and Excursus by Curvier (Paris, 1828), p. 215. This fine and powerful bird of prey has a wide geographical distribution. It is spread over the whole of Europe and Asia from Norway to Kamtchatka, from Ireland and Portugal to India and Japan. On all the coasts of the Mediterranean it is common, and in Africa it reaches from Egypt to the Cape. In America Dr. Richardson found it in the Arctic regions; Wilson and Audubon describe it as abundant throughout the United States; and it is seen fishing in the West Indies.

Its prey is fish, and to obtain this it selects its eyry on some bold headland jutting out into the sea, on a cliff overlookmg the broad reach of a river, or a blasted pine that springs out of the rifted rock where a cataract plunges down the steep. The manners of this bold seaing have been eloquently described by Wilson:

“In leaving the nest, he usually flies direct till he comes to the sea, then sails around in easy curving lines, turning sometimes in the air as on a pivot, apparently without the least exertion, rarely moving the wings, his legs extended behind him, as is done by birds of prey. The length and curvature of wing distinguishing him from all other hawks. The height at which he thus elegantly glides is various, from one hundred to one hundred and fifty and two hundred feet, sometimes much higher, all the while calmly reconnoitering the face of the deep below. Suddenly he is seen to check his course, as if stricken by a particular object, which he seems to survey for a few moments with such eagerness that he appears fixed in the air, flapping his wings. This object, however, he abandons, or rather the fish he had in his eye has disappeared, and he is again sailing around as before. Now his attention is again arrested, and he descends with great rapidity; but ere he reaches the surface侦out off on another course, as if ashamed that a second victim had escaped him. He now sails at a short height above the surface, and by a zigzag descent, and without seeming to dip his feet in the water, seizes a fish, which, after carrying a short distance, he probably drops, or yields up to the bill-and-eagle, and again ascends by easy spiral circles to the higher regions of the air, where he glides about in all the ease and majesty of his species. At once, from this sublime aerial height, he descends like a perpendicular torrent, plunging into the sea with a loud rushing sound, and with the certainty of a rife. In a few moments he emerges, bearing in his claws his struggling prey, which he always carries head foremost, and having risen a few feet above the surface, shakes himself as a water spaniel would do, and directs his heavy and laborious course directly for the land... The hawk, however, in his fishing pursuits, sometimes mistakes his mark, or overrates his strength by striking fish too large and powerful.
for him to manage, by whom he is suddenly dragged under; and though he sometimes succeeds in extricating himself after being taken down three or four times, yet often both parties perish. The bodies of the sturgeon, and of several other large fish, with a fish-hook fast grappled in them, have at different times been found dead on the shore, cast up by the waves" (Amer. Ornith. s. v. Fish-lake).

With this may be compared the description of another modern naturalist, Dr. Richardson: "When looking out for its prey it sails with great care and elegance, in undulating lines at a considerable altitude above the water, from whence it precipitates itself upon its quarry, and bears it off in its claws." The oncopry belongs to the family Galeosidae, order Raptorees. It has a wide geographical range, and is occasionally seen in Egypt, but as it is rather a northern bird, the Hebrew word may refer, as Mr. Tristram suggests to us, either to the Aquila neroa or Aquila neroidea, or more probably still to the very abundant Circatus gallinus which feeds upon reptilia (Nat. Hist. of Bible, p. 185).

Ossa, a Homeric female deity, the messenger of Zeus. She was worshipped at Athens, and seems to have corresponded to the Latin goddess Fama.

Ossat, Arnaud d', a French cardinal and diplomatist, was born of very humble origin Aug. 28, 1536, at Larroque. He lost both his parents when but nine years of age, and entered the service of Thomas de Marca, who gave him as a servant to his nephew and ward, John de Marca, lord of Castelnau-Magnac. Being present while his master was taking his lessons, D'ossat soon learned enough of Latin to teach it to the less capable nobleman. Receiving the tonsure Dec. 26, 1556, he entered the Church, and afterwards accompanied his former master and two other young gentlemen to Paris as their tutor. These returned to Gascony in 1562, and D'ossat remained in Paris, where he continued his studies under Ramus, whose intimate friend he soon became. He was for a while professor of rhetoric and philosophy at the University of Paris, but soon after went to Bourges to study law under Cujas, and became counsellor to the Parliament. In 1574 he went to Rome as secretary to the French ambassador, Paul de Foix, and now remained most of the time in that city, first in a subordinate position, then as ambassador of Henry III and Henry IV. In that capacity he rendered his employers great service. It was D'Ossat who reconciled the Church of Rome and Henry IV. He was made cardinal in 1599, and died at Rome March 13, 1604. Cardinal D'Ossat is a remarkable instance of elevation to Church dignity by the force of personal merit. He wrote, Expositio Annali Ossati in disputacionem Jacobis Corpetarri de methodo (Paris, 1634, 8vo), in defense of Ramus; and a collection of Lettres addressed to the minister of state, Villeroi, which are models of diplomatic correspondence (1st ed. Paris, 1624, fol.; best by A. de la Houssaye, Paris, 1697, 2 vols. 4to, with notes, reprinted, with more notes, Amst. 1707, 1714, 1732, 5 vols. 12mo). This work was translated into Italian by Jerome Canini (Venice, 1729, 4to). He is also considered the author of the Letters published under the name of cardinal Joyeuse, and of a remarkable Memoir on the League, written in Italian in 1590, and published in the Vie du Cardinal D'Ossat, Anon. (by Madame d'Arconville). See Gallus Christianus, vol. xii, 14; Francus, Gallus, et Ossati parata; Alby, Hist. des Carthes, illus; Morédi, Dict. hist.; France pontificale; Nicéron, Mémoires, xxiv, 31-40; Jervis, Hist. of the Church of France, i, 224 sq.

Ossenians, a name sometimes given to the followers of Eliazi, in the 1st century, who taught that faith may and ought to be dissembled.—Buck, Theol. Dict. s. v.; Farrar, Eccles. Dict. s. v.

Ossifrage occurs in the A. V. at Lev. xi, 13; Deut. xiv, 12 (where it is classed among unclean birds), as the rendering of the בַּעַל‎ (p̄ē'ras; Sept. yāphē, Vulg. græs), which is supposed to be derived from the root purav', בַּעַל‎, to break, from the power of its beak to crush the bones of its victims. Hence the Latin compound ossifragus, or bone-breaker, is simply a translation of the Hebrew name. There has been much difference of opinion as to the bird intended by this term, but it is evidently a large bird of the eagle kind, and is very possibly called in these passages by a general name, bestowed indifferently by the Jews, with no accurate discrimination of species. The Targum of Onkelos, and the Sept., and Vulg., understand the "vulture," and many modern versions concur in this reading. Others think the word denotes the black eagle, and some the falcon. It is perhaps the great sea-eagle, which, as it differs in its colors during the several stages of its growth, has obtained three distinct systematic names: Falco ossifragus, Falco albicilla, Falco albicans. When it has attained its fifth year, it puts on its last suit, which is a dusky brown, intermixed with gray, with a white tail. It is about the size of the golden eagle, and inhabits the cliffs along the sea-shore. It is found in the northern parts of Europe and in Asia. But most prefer to identify the Hebrew bird in question with the species commonly known as the Vulture of the Alps, which was the ossifrage of the Romans. It was called by the Hellenic

Lämmeregyer or Vulture of the Alps (Gypastea Barbara).
OSSIAGO (bone-hardening). See OSSIDAPA.

Ossalg (or, "a bone," and legere, "to gather"), the process of collecting the bones of the dead. It was customary among the ancient Greeks, when the funeral pyre was burned down, to quench the dying embers with wine, after which the relatives and friends collected the bones of the deceased. This last practice received the name of the Ossalgum. The bones, when collected, were washed with wine and oil, and deposited in urns, which were made of different materials, sometimes even of gold.

OSSIPAGA (bone-fisterner), an ancient Roman deity, whose office it was to harden and consolidate the bones of infants.—Gardner, Faiths of the World, p. v.

OSSARIUM, the vases or urns in which the ashes of the departed are deposited. See Urns.

Oster, P. J., a missionary among the Jews in France, was born at Strasburg March 6, 1804, where he also studied for the ministry. In November, 1828, he was engaged as a missionary by the London Society for Propagating the Gospel among the Jews, and was stationed at Marseilles, visiting and also preaching to the Jews in Paris, Metz, Colmar, Montbeliard, Besançon, Lyons, Avignon, etc. In 1835 he was stationed at Metz, whence he undertook extensive journeys through the south of France. After fourteen years' labor in the missionary cause, Mr. Oster resigned his office in 1843, and was during the last four years the minister of the Lutheran congregation in Posen. Too great exertion in the duties of his office had, however, an injurious effect on his health, for the restoration of which he was advised to undertake a voyage to South Australia. He died, however, Oct. 24, 1847, having been eight weeks on the sea. Besides his French translation of Dr. A. McCaul's מה נ来る וללה (the Old Path), under the title Les Sentiers d'Israel, he published also a brochure, Les Conjectures d'un Israelite Français sur l'Origine du Culte Monastique, examinees (Metz, 1840), against a certain Derrick, who denied the existence of the apostles, and the authority of the laws of Moses. See the proceedings of the London Society in the Jewish Expositor (London, 1829-31); the Monthly Intelligencer (1830-34); Jewish Intelligencer (1835-40), where Mr. Oster's interesting missionary journals are found.

Osterwald, Jean Frédéric, an eminent French-Swiss Reformed theologian, was born at Neuchâtel, where his father was pastor, in 1668. In 1676 he went to Zurich to study under Prof. Ott, and in 1678 went to the University of Saumur, where he graduated in 1679. He then completed his studies at Orleans under the renowned Claude Pajon; at Paris under Pierre Alli, Jean Claude, etc.; and at Geneva under Louis Tronchin. He was ordained at Neuchâtel in 1685, appointed deacon in 1686, and in 1693 was appointed regular of the congregation for the care of souls, and consacratory by the clergy. He died at Neuchâtel April 14, 1747. Osterwald wrote, Traité des sources de la corruption, qui règne aujourd'hui parmi les chrétiens (Neuch. and Amst. 1700, anon.; often reprinted, and translated into English under the title of A Treatise concerning the Causes of the Present Corruption of the Church, and the Remedies thereof, 3d ed. Lond. 1711, 8vo; and in Watson's Tracts, No. 6; it was also translated into Dutch in 1706, and twice into German in 1715 and 1716). By this work Osterwald, who during his long and active life had, with Wimfels (q. v.) and Turrettin (q. v.), altogether called the Swiss triumvirate—labored zealously for the promotion of practical piety, sought a departure from that phase of orthodoxy which, recognising profession as a principal obligation, had dwelt upon it so prominently as to lose sight of the holy living required of the Christian professor. Osterwald attributes the corruption of Christians to the tendency to dispute concerning certain dogmas, and considered the bad state of morals as arising from the people seeking to derive comfort, but not improvement, from Scripture. He accused them of attaching more importance to the knell of the Reformation than to the advocates of spiritual and practical piety. To insist on morals as of paramount importance was considered a heresy. This corruption was further authorized by the doctrine that good works are unnecessary, and also that it is impossible to fulfill all the requirements of the law, as if the regenerate man remained as impotent as the natural man. Osterwald also asserted that the Reformation was not a complete work, and that the reformations of morals was yet to take place. There was also a want of unity, the
OSTIARII

Church being divided into numerous parties excommunicating each other. It was therefore necessary to lay aside all these vexatious minor points, and to adhere firmly to the essential doctrine, for fear lest religion should be still more dishonored. The teachings even of the cadiachemias were more doctrinal than practical. Pastoral care was deficient. This work, exhibiting in bold relief the defects in the teachings of these hierarchs, met with great success, but awakened also considerable opposition. In 1792 Osterwald published a Catechism, which was translated into Dutch, German, and into English, under the title of The Grounds and Principles of the Christian Religion, a Catechism, in a Catechist's Discourse... An Argument of the Books and Chapters of the Old and New Testament, with Practical Observations, translated by John Chamberlayne, Esq. (5th ed., London, 1779); the arguments and reflections with which this was accompanied have been translated into most of the European languages, and are much esteemed.—The Preliminary Discourse, the Argument of the Books, etc. (ibid. 1722, 8vo):—The Argument of the Books, etc. (ibid. 1728, 8vo):—The Nature of a Discourse concerning the Nature of Charity, and the Means of obtaining it (ibid. 1708, 8vo):—Lectures on the Exercise of the Sacred Ministry, translated and enlarged by Thomas Stevens, M.A., of Oxford (ibid. 1714, 8vo).—The Does of Reading the Holy Scriptures, and the Disposition with which they ought to be Read; translated by John Moore, A. B. (ibid. 1750, 18mo):—An Abridgment of the History of the Bible (ibid. 1750, 18mo).—See Schweizer, Gesch. der ref. Centralb. i., 708; Hagenbach, Hist. of Modern Times (see Index in vol. ii); Hook, Eccles. Brev. viii, 481 sq.; Hurst's Hagenbach, Ch. Hist. of the 18th and 19th Centuries, i, 113 sq.; Herzog, Real-Encyklopädie, x, 730 sq.; Darling, Cyclopedia Bibliographica, ii, 2256. (J. N. P.)

OSTIARII (door-keepers), the lowest of the minor orders in the Western Church. They are spoken of by Church writers of the 3d or 4th century. The fourth Council of Carthage prescribed as the form of their admission to office the delivery of the church-key to them by the bishop, with the words: "Behave thyself as one who must render account to God of the things locked under these keys." They arranged catechumenal orders of tonsure and sacerdotal degrees, announced the word and had charge of the church. From this word ostiaria are derived the words kaisier and usher. The second master of Winchester is called hostarius. The Greek Church only partially adopted the institution of porters, and soon let it die out. In the West they always lived near the church. See Walbott, Sacred Archaeology, p. 414; Riddle, Christian Antiquities (see Index); Mosheim, Eccles. Hist. vol. iii; Westrop, Handbook of Archaeology, p. 72; Coleman, Anc. Christianity, p. 127, 186. See Door-keepers.

OSTRICH (ョッ), yamah, always with ｮ咫, daughter of the ostrich, i.e. the female ostrich. See also the cognate ｮｮ, yau, Lam. iv, 3. In Job xxxiii, 13, the word ｮｮ, notas, feathers, is wrongly rendered ostrich.—while ｮｮ, females ostriches, is translated peacocks, in the A. V.; Sept. ｮｮ, Deut. xiv, 5, but in Isa. and in Mic. i, 8, Sept. ｮｯ, see Schleusner, Lex. s. v.). In Arabic the bird is called ｮｮ, also ｮｮ, i.e. camel-bird; like the Persian ｮｮ, morgh; comp. Greek ｮｮ, peacock (Diol. Sic. ii, 50, and Lat. Struthio cyanus, in Pliny.

1. Names.—(1.) It is now generally admitted that the word ｮｮ should be rendered ostrich; as the passages in which it occurs require us to consider this inhabitant of the remote desert, and seem thus to exclude the ｮｮ, the usual rendering in the English Version (Job xxx, 29; xxxix, 13; Isai. xiii, 21; xxxiv, 13). See OSTR. The etymology of the word also accords better with the former rendering. The word ｮｮ, yamah, like ｮｮ, renemah, appears to be due to the habit of uttering loud-sounding cries; and the third syllable, yamah, is as ｮｮ, "the daughter of vociferation," or "loud meaning," is in conformity with the others, and an Oriental figurative mode of expressing the same faculty (which exists not, we think, in the females alone, but in the whole species); for the ostrich has an awful voice, which, when heard on the desert, is sometimes missed in the night, even by natives, for the sound of a beast. This, too, is the almost unanimous rendering of the old translators (Genes. Thes. ii, 609), while the reference of the word to the ｮｮ, supported by Oedmann (Stan. ml. iii, 35 sq.), rests on no early testimony. Bochart (i, 830 sq.) could not understand the male ostrich by ｮｮ, in Lev. xi, 16; Deut. xiv, 15; but no ancient version supports this rendering. See NIGHT-HAWK. Gesenius (Thes. s. v. ｮｮ) refers the word to the root ｮｮ, which signifies "to be greedy or voracious," and demurs to the explanation given by Michaelis (Suppl. ad Lex. Heb. p. 1127) and by Rosenmüller (Not. ad Hieroz. ii, 229, and Schol. ad Lex. xi, 16), who trace the Hebrew word yamah to one which in Arabic denotes "hard and sterile land"—the same and accordingly would mean "daughter of the desert." Without entering into the merits of these various explanations, it will be enough to mention that any one of them is well suited to the habits of the ostrich. This bird, as is well known, will swallow almost any substance, pieces of iron, large stones, etc.; this it does probably in order to assist the triturating action of the gizzard: so that the Oriental expression of "daughter of voracity" is eminently characteristic of the ostrich. With regard to the two other derivations of the Hebrew word, we may add that the word of to the root of ｮｮ is very apt to resemble that of the lion, so that the Hottentots of South Africa are deceived by it; and that its particular haunts are the parched and desolate tracts of sandy deserts.

(2.) ｬﾑ ﾄ(127) occurs only in the plural number ﾄ, ｬﾑ, ｬﾑ, ｬﾑ (Sept. ｬﾑ, Vulg. struthio), in Lam. iv, 5, where the context shows that the ostrich is intended. The word is probably used in the sense of "crude like the ostriches in the wilderness." This is important, as showing that the above word, which is merely the feminine form of this one, with the addition of ｬﾑ, "daughter," clearly points to the ostrich as its correct translation, even if all the old versions were not agreed on it. (3.) ｬﾑ, ｮｮ, in the plural form (ｮｮ, ｮｮ, ｬﾑ, renemah; Sept. ｮｮ, Vulg. struthio), alone occurs in Job xxxiii, 13; where, however, it is clear from the whole passage (13-18) that ostriches are intended by the word. The A. V. renders renemah by "peacocks," a translation which has not found favor with commentators; as "peacocks" for which there is a different Hebrew name (ｮｮ), were probably not known to the people of Arabia or Syria before the time of Solomon. See Peacock. The Hebrew renemah appears to be derived from the root ｮｮ, Roman, "to wall," or "to utter a stridulous sound," in allusion to this bird's nocturnal cries. Gesenius compares the Arabic ｮｮ, "a female ostrich," from the root ｮｮ, "to sing." 2. Description.—The head of the ostrich is small, and not ungraceful. The height of its body and legs is somewhat like that of a duck, is flat, with a nail at the apex, and broad at the gape: the eyes, hazel-colored, have a clear and distinct vision of objects to a great distance, although seen when obliquely they have an opalescent appearance; the auditory apparatus is large and flat, so that in the painting season ostriches are said to be very deaf; the neck,
cided whether the two species are polygamous, though concurrent testimony seems to leave no doubt of the fact; and, as the situation is the same in both, this also must vary with the season, viz., when the eggs are in the nest, which is merely a circular basin scraped out of the soil, with a slight elevation at the border, and sufficiently large to contain a great number of eggs; for from twelve to about sixty have been found in them, exclusive of a certain number always observed to be outlying, or placed beyond the raised border of the nest, and amounting apparently to nearly one third of the whole. These are supposed to feed the young brood when first hatched, either in their fresh state, or in a corrupted form, when the substance in them has produced a disease. These eggs are of different periods of laying, like those within, and the birds hatched form only a part of the contents of a nest, until the breeding season closes. The eggs are of different sizes, some attracting to seven inches in their longer diameter, and others less, having a dirty white shell, finely speckled with rust color; their weight borders on three pounds. Within the tropics they are kept sufficiently warm in the day-time not to require incubation, but beyond one or more females sit constantly, and the male bird takes that duty himself after the sun has set. It is the indirect heat of the roof which keeps them warm; and at other times different sounds are uttered, likened to the cooing of pigeons, the cry of a hoarse child, and the hissing of a goat; and from the opening of the coop to the emptying it the nest is never left. This is the last-mentioned animal is a dexterous purloiner of their eggs; and it may be here added, in proof of the odor of smelling not being quite so obnoxious to the ostrich as is asserted, that Caffres and Hottentots, when they daily rob a nest for their own convenience, always withdraw the eggs by means of a stick, in order to prevent the female finding out the larceny by means of the scent which human hands would leave behind; for then they will not continue to lay, but forsake the abode altogether. This circumstance may account for the small number of eggs often found in their nests. Tristram states (Ib., ii, 74): "Two Arabs began to dig with their hands, and presently brought out four fine fresh eggs from the depth of a foot below the sandy ground." 4. Locality. - The ostrich roams over the whole of Africa from the Sahara to the Cape; but principally affects vast desert plains, over whose lofty stature gives it a great command of sight. It is still abundant in the Arabian peninsula, and extends into the waste and arid regions that bound it on the north. It was predicted both by Isaiah (xxii. 31, 21) and by Jeremiah (ch. 1. 59) that ostriches should dwell at Babylon, than which there could scarcely have been devised a feature more strongly fitted to mark the silence and desolation, not merely of the city itself, but of the wide region in which it stood, and the utter contrast of this condition with that in which it sat the lady of kingdoms, and the centre to which converged all the traffic of a plain that swarmed with towns and cities. The bird of the desert still strides over the Euphrates plains. Herbert says he has a roost that he has seen it on the eighth of February, and the second of March. The nest is always made of very sociable in that country, but they are not found in the neighborhood of the great cities. It is not yet finally de-
The two species appear promiscuously in Asia and Africa, but the troops or coveys of each are always separate. This is a peculiar mark of the ostrich. The ostrich is often black, which grows largest in Caffraria, predominates to the north of the equator. One of the last mentioned, taken on board a French prize, and wounded in the capture, was brought to London, where it was able to peck its food from a large flock by the help of its beak from the ground. The enormous bird afterwards shown in Bullet’s museum was said to be the same. The common-sized ostrich weighs about eighty pounds; whence it may be judged that the individual here mentioned may have been at least forty pounds heavier.

A Scopannus Notice. The ostrich is mentioned in the Old Testament among unclean birds (Lev. xi, 16; Deut. xiv, 15), less, perhaps, because of the voracity with which it swallows glass, metals, etc. (Elian, Anim. xiv, 7; Shaw, Trav. p. 389), than because it appeared to the Hebrews as a kind of hybrid, half bird and half beast (comp. Somner, Bibl. Abbas., i. 257), or because the ideas of desolation and terror were naturally associated with its home in the desert. Indeed, the Arabians and Ethiopians eat the flesh of the ostrich with delight (see Diod. Sic. iii, 28; Strabo, xvi, 772), and in India, and even in France, the ostrich is esteemed as a delicacy, and even the dainties that were placed on the supper-tables of the ancient Romans. The fat of the ostrich is sometimes used in medicine for the cure of palsy and rheumatism (Pococke, Trav. i, 209). It is mentioned as being in common use by the general Arabians (see Anim. xiv, 13; Lampird, Vit. Helingah, p. 27). But it is only when young that it could be palatable to a modern taste; and it is always dry and hard (see Aben-Ezra, on Exod. xxviii, 29; Galen, De Aliment, Facult. ivi, 20). African Arabs, says Mr. Tristram, eat its flesh, which is good; and in general the Arabs use the feathers of the ostrich as very stupid bird; indeed they have a proverb, “Stupid as an ostrich;” and Bochart (Hieros, ii. 865) has given us five points on which this bird is supposed to deserve its character. They may be briefly stated thus: (1) Because its head is small, and its iron, stones, etc.; (2) Because when it is hunted it thrusts itself into a bush, and imagines the hunter does not see it; (3) Because it allows itself to be deceived and captured in the manner described by Strabo (xiv, 772, ed. Kramer); (4) Because it neglects its eggs; (5) Because it has a small head and few brains, such is the reason why the Arabs have expressed with regard to the ostrich; a bird, however, which by no means deserves such a character, as travellers have frequently testified. “So wary is the bird,” says Mr. Tristram (Ibid, ii, 73), “so open are the vast plains over which it roams, that no ambuscades or artifices can be employed, and the vulgar resource of dogged perseverance is the only mode of pursuit.”

Dr. Shaw (Travels, ii, 348) relates an instance of want of sagacity in the ostrich, that he “saw one swallow several leaden bullets, sucking hot from the mouth.” We may add that not unfrequently the stones and other substances which a bird has proved fatal to them. In this one respect, perhaps, there is some foundation for the character of stupidity attributed to them (Pliny, x, 1; comp. Diod. Sic. ii, 50). Mr. Tristram, however, remarks, “The necessity for swallowing stones, etc., to expand the stomach, is the favorite food of the tame ostriches I have seen being the date-stone, the hardest of vegetable substances” (Nat. Hist. of the Bible, p. 239). The statement that when erect “she scorneth the horse and his rider,” may be referred both to the height and the swiftness of the bird. The ostrich is the largest of all known birds, and perhaps the wisest of all cursorial animals. The capture of an ostrich is often made at the sacrifice of the lives of two horses (Ibid, ii, 73). Its strength is enormous. The wings are useless for flight, but when the bird is pursued they are extended and act as sails before the wind. The ostrich’s feathers are disguised are the long white plumes of the wings. The best come to us from Barbary and the west coast of Africa. The ostrich belongs to the family Struthionide, order Caradovs.

The name Ostrich, Sr., an English name, is a king of Ber- nicia, in Northumbria, England, from 834 to 858. He was a son of Ethelfrith, who was born in 604, and who became one of the most powerful Saxon monarchs. Osw- ald was noted for his piety and charitable nature. As a youth, while living in banishment among the Scots in Ireland, he had been instructed in Christianity and baptized by pious monks, and through their influence
he was filled with an ardent zeal for the Christian faith. He sought to re-establish in England the Christian religion, which had been abandoned by the people. In order to carry out this objec-
tive, he applied to the monks of Iona to send him one of their number. They consecrated the excellent and amiable monk Aidan as bishop, and sent him to North-
ubria. Until he had gained a complete knowledge of the Anglo-Saxon tongue, Oswald himself acted as his own interpreter. By this joint activity of the English king and Aidan, a firm foundation was laid for the Church in that district, and the success of their labor was truly unparalleled. Oswald founded an episcopal see in the island of Lindisfarne; and, aided by other missionaries from Iona, bishop Aidan converted in a few years the whole north of England to Christianity. Oswald, after a reign of eight years, met his death in battle with the pagan tribe of the Mercians, Aug. 5, 642. He fell by the sword of Penda, who worshipped Odin, and never left the altar of his grim war-god dry for want of a victim to offer up. The Irish historian in Millers's History of the Anglo-Saxons that "previously to his battle with the Welsh king (Cadwallon), which occurred soon after he was seated upon the throne of Bernicia, he planted the image of the cross upon the field of battle, and charged his men to bend the bow in the hollow which they had made in the earth to receive it. When the cross was firmly secured he exclaimed, 'Let us all bend our knees, and with one heart and voice pray to the true and living God that he in his mercy will defend us from a proud and cruel enemy; for to him it is known that we have commenced this war for the salvation and safety of our people.' All knelt, as he had commanded, around the cross, and when the last murmur of the solemn prayer had died away, they marched onward with stouter hearts to meet the terrible enemy. Of the battle we have no other record than that Cadwallon fell, and his army was destroyed. The spot where the cross was planted was afterwards called Heavon-field, and was for ages held in great reverence by the people. Penda hated not the Christians who adhered rigidly to the ancient and stern laws of their new faith. He forbade the intercourse between Christianity and Odinism which Aidan abhorred them. The reason why he attacked Oswald is not known. It may have been to revenge the fall and defeat of Cadwallon, or it may have been simply love of conquest. Nor has it ever been charged that he attacked the Christian king because he was the latter's avowed Christian. All that is known is that Penda attacked and slew him at Maserfelth on Aug. 5, 642. In the above-mentioned work by Miller we read that "while the barred javelin which caused his death was still fixed in his breast, he never for a moment ceased to pray, and that for centuries after his death his name was ever linked with the following pious sentence: 'May the Lord have mercy on their souls! As Os-
wald said when he fell on the battle-field.'" Of his charitable nature it is related that "one day, as he was about to partake of the refreshments which were placed before him in a silver dish, the almoner, whose office it was to relieve the poor, stepped in and informed him that a number of beggars were waiting without solicit-
ing arms. When his eye alighted upon the rich vessel in which the dishes were piled, the thought of their wants and his own unnecessary want before him so striking a contrast that he ordered the un-
touched food to be distributed among the beggars, and the silver dish to be broken up and given to them." But Penda, after the battle of Maserfelth, ordered the head of the Christian king to be severed from the body, and, transfixed on stakes, to be

exposed to public gaze. Oswald was canonized. The fifth of March became Oswald's day, and the legend of Oswald influenced the monks of the monastery of the Icelandic Osvald Saga. See Miller, History of the Anglo-Saxons; Oswald Saga (Edinb. 1834). His name was cherished in the affection and respect of his nation, and hence soon began to be honored as that of a saint. Miracles were said to be wrought at his tomb and by his relics; and indeed the faith in them prevailed through the whole of these islands. Oswald's remains were carried to Bardney, in Lincolnshire, by Ostrhida, and afterwards to St. Oswald's, in Gloucester-
shire, by Eilfeila, the daughter of king Alfred. But more than the English legend - the German myth has embellished Oswald's name. See Keil, Leben der Kirchenlehrer, i, 234 (Mitau, 1874; Engl. trans. Phila. 1875, i, 301); Clement, Handb. of Legendary and Mytho-
logical Art, p. 243 (New York, 1872); Neander, Ch.
History (Torrey's transl.), iii, 20 sq.; Theologisches Uni-
versal-Lexicon, a. v.; Die beiden Osvaldsgedichte, ed. in Haupt's Zeitschrift für das Altersthum, vol. ii, and by Etmüller (Zürich, 1845); Zingerle, Die Osvaldsgende (Stuttg. 1856); Wright, Biog. of Brit. Alexandria and demolished its fortifications, this was not accomplished without great difficulty and considerable bloodshed (A.D. 646). Saad Ibn-Abi Wakkas and Abu-Musa el-sa’ara, two of Mohammed’s companions, were also deprived by him of their command. Othman removed them to a province further to the north, but he occupied the minbar (pulpit), and while at prayer in the mosque the place which the Prophet had used, instead of placing himself, as his predecessors Omar and Abu-Bekr had done, a few steps lower down. He had also lost from off his finger a silver signet-ring which he had once belonged to the Prophet and with which the caliphs his predecessors had sealed their despatches—an ominous circumstance, which was regarded by all zealous Moslems as the greatest blow that could be inflicted on their rising empire; and he had recalled from his exile Hakem Ibn-Aas, whom the Prophet himself had banished from Mecca. Othman was further accused of excessive prodigality towards his favorites. Finally public discontent ran so high that the elders of the Arabian tribes and the most illustrious of Mohammed’s own companions met at Medina, and threatened Othman with deposition unless he could justify his public acts. Othman resented this daring action of his subjects as an outrage upon his authority, and he not only ignored the message, but even severely abused the messenger. The people continued their protestations, and loudly clamored for his abdication, even threatening violence to his person had not Ali, who had considerable influence with the rebellious subjects, promised immediate remedy in the caliph’s name. Quiet was only maintained for a short time, however; for Ayesha, the Prophet’s widow, sorely hated Othman, and she fanned an insurrection which resulted in the murder of Othman in his own palace, his soldiers having previously deserted him. His mutilated body lay unnoticed for three days; but was finally buried in a hole, without any ceremony, according to Abu-Bula and Abtari, on June 16, 656 (18th day of Dhu-l-Qa’dah, 10 A.H.), the third day after Othman had been murdered and was not only well versed in the Koran, but was the first to make an authentic copy of this sacred book of Is’ami, thus furnishing the basis for all future copies of the Koran. The transcription was done under his own supervision by Zeyd Ibn-Thabit, Abdul- luh Ibn-Obeyr, and other companions of the Prophet. Othman himself transcribed the Koran several times, and while in the palace awaiting his assassination he was found to enjoy the companionship of the Koran. See Abul-Faraj, Hist. Dynast. (transl. by Pococke), p. 31 sq.; Ockley’s Hist. of the Saracens, vol. i. Price, Mohammedan History, vol. ii. Eng. Cyclop., v., and the authorities there quoted.

Othman I and III. See Turks.

Othman, St. (Audemar, Automar), is the name of one of the most celebrated monastics of the Middle Ages. He was the first real abbot of the conveny of St. Gall, one of the most noted of ascetic solitude in Europe. As has been seen in the article St. Gall, the disciples of Gallus remained together after his decease, and appointed one of their own number as custos of the monastery; such as the abbot Othman. Of those whom his brethren delighted to honor, and he occasionally held that post. He was well fitted for places of distinction. He had been as thoroughly trained as his customary of his times in Courland, and enjoyed the favors and protection of duke Waldemar, whose family took great interest in the county of St. Gall. As this establishment was hindered in its progress by the Franks, duke Waldemar concluded to make them a present in it by surrendering it to them in 728, and Othman was appointed abbot. He now exerted himself greatly in establishing the conveny, and to give it a permanent basis. By Popen’s order the rules was changed from Columban’s to Benedict’s, in order to harmonize with the other Frankish convents. This change, however, did not prove quite successful, as the French wished to place the convent under the immediate dependence of the diocesan bishop, in order to have greater control over it—a step which the monks themselves strenuously resisted. The chronicles of St. Gall give a very full account of these disputes. Othman took a decided part of the former by occupying the minbar (pulpit), and while at prayer in the mosque the place which the Prophet had used, instead of placing himself, as his predecessors Omar and Abu-Bekr had done, a few steps lower down. He had also lost from off his finger a silver signet-ring which he had once belonged to the Prophet, and with which the caliphs his predecessors had sealed their despatches—an ominous circumstance, which was regarded by all zealous Moslems as the greatest blow that could be inflicted on their rising empire; and he had recalled from his exile Hakem Ibn-Aas, whom the Prophet himself had banished from Mecca. Othman was further accused of excessive prodigality towards his favorites. Finally public discontent ran so high that the elders of the Arabian tribes and the most illustrious of Mohammed’s own companions met at Medina, and threatened Othman with deposition unless he could justify his public acts. Othman resented this daring action of his subjects as an outrage upon his authority, and he not only ignored the message, but even severely abused the messenger. The people continued their protestations, and loudly clamored for his abdication, even threatening violence to his person had not Ali, who had considerable influence with the rebellious subjects, promised immediate remedy in the caliph’s name. Quiet was only maintained for a short time, however; for Ayesha, the Prophet’s widow, sorely hated Othman, and she fanned an insurrection which resulted in the murder of Othman in his own palace, his soldiers having previously deserted him. His mutilated body lay unnoticed for three days; but was finally buried in a hole, without any ceremony, according to Abul-Faraj, Hist. Dynast. (transl. by Pococke), p. 31 sq.; Ockley’s Hist. of the Saracens, vol. i. Price, Mohammedan History, vol. ii. Eng. Cyclop., v., and the authorities there quoted.

Othniel (Heb. Othni‘el,בֹּזֶן, my lion; Sept. 0361v. r. Psychology, the first name of six sons of Shemshiah; a mighty warrior of valor, a porter in the tabernacle service (1 Chron. xxvi. 7). B.C. cir. 1013.

Othniel (Heb. Othni‘el,בֹּזֶן, my lion; Sept. Οθωνιλ, the first judge or regent of the Hebrews after the death of Joshua. He was the son of Kenaz, the brother of Caleb (but see Rosenmuller, Schol. in Jos. p. 295 sq.), of the tribe of Judah. See Caleb; Kenaz. Othniel displayed extraordinary valor in seizing the city of Debir, or Kirjath-sepher, for which exploit he was rewarded by the gift of Achash, the daughter of Caleb, in marriage. Afterwards he was made the instrument of delivering the Hebrews from the severe bondage in which they had been held for eight years by the Mesopotamians. During the forty years of his administration (B.C. 1567-1527) the Hebrews remained faithful to Jehovah their God and king, and consequently prospered (Josh. xiv. 16-19; Judg. i. 11-15; ii. 8-11; 1 Chron. iv. 13; xxvii. 15). See Judges.

Otho or Otto, St., of Bamberg, a noted Pomeranian prelate, and the evangelist of that now Prussian province, was born about 1062, and was descended of a noble but not wealthy Suabian family. He received a good education, according to the fashion of those times. Providence brought him to Poland, where he became private tutor of the sons of some of the noblest families. Thus he became known to the duke Wladislaw Herr-
Otho, who invited him to his court, and made him his chaplain (1082-1103). Having the confidence of the duke, he was soon employed on political missions, and in this way became known to the emperor Henry IV. This monarch finally drew Otho to his own court, and made him one of his chaplains, and, as such, secretary. Otho got into great favor with the emperor. He was appointed imperial chancellor: and when the bishopric of Bamberg, in the year 1102, fell vacant, was placed over that diocese. In the year 1104, Feb. 2, Otho entered upon his duties. He did not receive the papal consistory until the year 1106, by Pascal II (q.v.). "As a bishop, Otho was distinguished for the zeal and interest which he took in promoting the religious instruction of the people in their own spoken language, and for his gift of clear and intellectual exposition. He was marred, however, with the severity of a monk, his bodily wants, and by this course, as well as by his frugality generally, was able to save so much the more out of the ample revenues of the bishopric for carrying forward the great enterprises which he undertook in the service of the Church and of religion. He loved to take from himself to give to the poor; and all the presents he received from princes and noblemen, far and near, he devoted to the same object. He caused many churches and edifices to be constructed for the embellishment or the greater security of his diocese, and especially took pains to found new monasteries. He was, with many of the more seriously disposed in his times, he cherished a strong predestination for the monastic life (Neander). In the contest about ecclesiastical institutions [see Investiture] between Henry V and Gregory VII (q.v.), Otho was inclined to favor the principles of the Gregorian Church government, but finally got tired of the quarrel, and accepted an invitation from the duke Boleslav of Poland to go to Pomerania in order to carry on a Christian mission there. Having obtained the sanction and blessing of pope Honorius II on this work, Otho began his journey on April 24, 1124. "Fondly attached as he was to monastic ways, the experience of his predecessor in this missionary field taught him to avoid every appearance of that sort, and rather to present himself in the full splendor of his episcopal dignity. He not only provided himself in the most ample manner with everything that was necessary for his own support and that of his attendants in Pomerania, but also took with him costly raiment and other articles to be used as presents to the chiefs of the people; likewise all the necessary arms and armor, which it visibely manifest to the Pomeranians that he did not visit them from interested motives, but was ready to devote his own property to the object of imparting to them a blessing which he regarded as the very highest." On his first missionary journey he baptized in Pyritz, near Stargard, 7000 pagans; was favorably received in Kammin, where the first Church for the Pomeranians was founded by him. After having remained there for forty days, during which time he instructed and baptized the people, he determined to push his mission and return to his native country, where he found the people strongly attached to their ancient customs, and where he had every reason to expect a more determined opposition. Otho came near suffering martyrdom at this place, and, without having effected his purpose, he had to repair to Stettin, the capital town of the country, which he was on the first unfavorable, but finally, after a patient waiting of some months, Christianity triumphed, and the downfall of paganism could be made known to the duke. Otho then returned to Wollin. The inhabitants of this town heard Otho's preaching, and believed what they were told, and the example of the capital city, had already sent persons to Stettin for the purpose of obtaining exact information respecting the manner in which the Gospel was there received. The news they obtained could not fail to make the most favorable impression, and Otho was received in Julin, or Wollin, with demonstrations of joy and respect. The activity of the clergy during the two months which they spent in this place scarcely sufficed to baptize all who offered themselves. After having laid the foundations of the Church at Stettin, Otho proceeded to other places, Otho felt bound to make a visitation-tour to the communities already founded by him, and bestowed confirmation on those who had been before baptized. Julin, or Wollin, was made the first bishopric of Pomerania, to which post Boleslav nominated Adalbert, one of his chaplains, who by his direct direction had accompanied bishop Otho as an assistant. By way of Poland Otho returned to Bamberg, where he was received with great joy, March 29, 1125. In the year 1126 he undertook a second missionary journey by way of Germany to Hiile, Magdeburg, and Haverg. The theme of this second journey was that at the diet held at Use- dom a decree was issued which permitted the free preaching of the Gospel in all places. The bishop now commenced sending his clergy two by two into all the towns and villages, intending to follow them. In Wolgast and Gützow the temples were destroyed, and Stettin, which had relapsed into paganism, was brought over again to Christianity. Otho then returned to his episcopal see at Bamberg, keeping however a lively correspondence with the mission in Pomerania. He died June 60, 1139. Whether Otho introduced the sacrament of confirmation, the form of whom he had converted to Christianity is a point which remains to be investigated. See Vita Ottonis Bamb. ed. Kneepk (Monum. Germ. vol. xiv); Sulzbach, Leben des heiligen Otto von Bamberg (Regensburg, 1865); Kersch, Geschichte von Böhmen und Pommern (Hamburg, 1889); Mittler, Otto, episcopatus Bambergensis Pomeranian apostolus et exemple monaste- rii Ensdorfensis praecipuus dotator (Amb, 1780); Otto von Bamberg (Stettin, 1792); Buch, Memoria Ottonis Episcopi Bambergi (Jena, 1823); Barthold, Geschichte von Böhmen und Pommern (Hamburg, 1889); Neander, Church History (Torrey's transl.), iv, 23-30, 130; Kurtz, Lehrbuch der Kirchen- geschichte, i, 296; Gieseler, Text-book of Church History, ii, 396 sq.; Niedner, Lehrbuch der chriat. Kirchen- geschichte, p. 244. (B.P.) Otho von Otten悠悠 Freising en), a noted German monastic who attained to high ecclesiastical offices, and was one of the crusaders, was a nobleman by descent. The date of his birth is not exactly known; it is supposed to be Dec. 5, 1109; some, however, put it in 1106. He was the third son of duke Leopold of Austria, and of Agnes, daughter of emperor Henry IV. In 1110 (or 1125) he joined the Cistercians, studied in Paris under Abelard, and became an adherent of Gilbert. In 1131 he was made abbot of Morimund, in Champagne, and bishop of Freising (en) in 1136. He did much towards raising the monasteries which were in a bad condition, and was looked upon as its second founder. He had also great influence in the general affairs of the country. In 1147 he took part in the crusade with his half-brother, emperor Conrad III; was afterwards chosen by his nephew, emperor Frederick 1, to negotiate between his two brothers; and when the emperor went as far as the Alps with the emperor in his second journey to Rome in 1158, then finally settled at Mor- mund, where he died, Sept. 22, 1158. He was much esteemed for his knowledge and his piety. Otho wrote, De dualis christiadus, or De mutatione jedici (extending from the creation down to his own times) — De gestis Frederici imperatoris (dictated to his secre- tary, canon Radewich of Freising, who afterwards added two sections to it). Both works were first published.
by Cosquinian, under the title Ottone Episcopi Frey- 
singenus Rurbe origine mundi ad ipsius teque tempora 
(Strasb. 1515), and afterwards in Ursusius, Ger-
manica hist. illustr. (Frankl. 1585 and 1670, fol.); in 
Tissier, Bibl. patr. Citeroa. (Par. 1689); and Radewig's 
collection in Murator, Scriptores rerum Ital. The 
history of Frederick I is found in Schiller, Allg. Statim- 
lang-historischer Memoiren. The first four books of this 
Chronicle are a mere compilation from Orosius, 
Eusebius, Isidore of Seville, and other previous writers; 
but the last contains a most interesting narrative of the em-
peror, especially concerning the affairs of Germany in the 
thirteenth century, 11th, 12th, and 12th centuries. Otto is an 
important and trustworthy historian, and judicious for the 
times in which he lived. His Chronicle was continued 
down to the year 1210 by another Otton, Appendix 
Ottone a S. Blaso a fine libri septim Otto rurbe usque ad 
anum Salutis 1210. Another work of Otto of Frey- 
singen is a treatise concerning the end of the world, 
according to the book of Revelations, which is generally 
appended to his Chronicle. See Huber, O. von Frey-
singen (Munich, 1847); Wiedemann, Otto von Freyst-
sen Leben u. Wirken (Passau, 1842).

521; Herzog, Real-Enzyklop., s. 798. (J. H. W.)

1. Annales. 
In his Annales for Germany, Otto of Charle-
magne the greatest European prince of the Middle 
Ages, noted alike in secular and ecclesiastical history— 
the former for his valuable service to German unity 
and influence, and in the latter for the support he gave 
to the papacy, and for the independence which he main-
tained towards the popes—was the son of the emperor 
Henry I, and was born in 912. He was carefully trained 
for succession to the throne, and enjoyed the esteem 
of his associates and of the people. On the death of his 
father in A.D. 936 he was crowned king of the Germans. 
He was regarded in a serious and generally triumphant 
war, in the course of which he reduced the power of the 
dukes, and conquered and converted the heathen Danes, Wends, 
Bohemians, and Hungarians. He also interfered in the French dissen-
sions, and thus acquired influence among that people, 
while at home he strengthened his individual power 
by gathering around him the leaders of the nation, and 
especially the best of the clergy. When his throne had 
been secured beyond venture, he turned his attention to 
Italy for the purpose of making his power felt over 
the whole length of the empire. Otto appeared 
first as the champion of Adelaide, the young sister 
king Lothaire, who had been imprisoned and otherwise 
ill-used by Berengar, the poisoner of Lothaire, and the 
susurer of the Italian crown. Otto liberated Adel-
aide, whom he married at Pavia in the year 951, 
and forgave Berengar, and allowed him to retain 
the sovereignty of Italy, but as his vassal. Otto then 
returned to Germany. After some years, fresh com-
plaints from pope John XII (q. v.) of the tyranny of 
Berengar, who was then waging war against the papal 
thrones, caused Otto to re-cross the Alps, and to go to 
the rescue of the popes in the extremity of need. 
OttO defeated Berengar and his son and colleague 
Adalbert. He was thereupon himself acknowledged by a 
diet held at Milan as king of Italy, and crowned by 
the archbishop with the iron crown of the Lombards 
in the church of St. Ambrose at the close of 961. 
In the following year Otto repaired to Rome, where pope 
John XII crowned him emperor of the West, as being 
the successor of Charlemagne, Feb. 2, 962. " Never did 
a more important event in history take place, making 
less difference between those who witnessed it, and being 
less commemorated by subsequent historians, than the 
coronation of Otto I at Rome in the year 962. By 
the coronation of Charles 162 years earlier, the first 
foundations had been laid for the empire; by the coronation 
of Otto that empire itself was founded anew, and from 
that time forward it had an uninterrupted existence."
(Reichel, The Roman See in the Middle Ages, p. 124). 
For a short period the spiritual and temporal heads of 
Christendom seemed to be happily united, but the 
so-called popes, influenced either by mistrust or jealousy, 
soon again interrupted that happy concord by concurren-
ting new intrigues with Alberich, the son of Beren-
gar. Otto, who heard complaints from many quarters 
against the pope's licentiousness and tyranny, first 
remonstrated with him by means of an envoy. John 
XXII, as an emperor, held an undignified station, 
which, however, never took place. Invited by the Romans themselves, the emperor now returned 
to Rome with an army, and the pope fled. The 
Romans having sworn that they would never elect 
other pope without the concurrence of the emperor 
and his son, he did a synod, in the year 963, in the 
church of St. Peter, and here many grave charges were 
variably preferred against the absent pontiff, who was de-
posed Dec. 4, and Leo VIII (q. v.), declared his successor. 
Fierce wars were the result of this step. Popes and 
anti-popes contested the throne possession of Rome. 
No sooner had Otto departed from Rome than John re-
entered the city and drove away Leo, and as papal incumbent 
more once practiced many acts of cruelty, this 
time seeking revenge upon those who had favored the exali-
lation of his rival. The struggle for the possession of 
the Roman see lasted for some years, and was finally 
ended by the death of John and Berengar. The election of John's 
successor was held without the emperor's consultation, 
though it had been especially stipulated that Otto's 
interests would be heeded. This brought Otto again to 
Rome, which he besieged and took. He banished the 
pope elect, Benedict V (q. v.), and reinstated Leo VIII. 
The year after, when this pope died, Otto instituted 
John XIII (q. v.). The Romans revolted against 
this action as soon as the emperor had turned his back 
on their city, and Otto was again obliged to return in 
his turn and put down this insurrection in the 
hanged thirteen lea, and many others he condemned to 
severe punishment. His presence at Rome he turned into 
service to himself by causing his son Otto, then a child 
of six years, to be anointed and crowned as his colleague 
and emperor by the pope, in order that the claims of his 
house might have the sanction of the Church. He also in 972 married his son to the princess 
Theophania, under whose powerful influence Eastern 
manners and luxury were introduced at the German 
court. Otto died at Mühldeben, in Thuringia, May 7, 
972, and was buried at Magdeburg. He left a son, 
Frederick, who founded the limits 
of the empire, and restored the prestige of the imperial 
power more nearly to the rank which it occupied 
under Charlemagne but no other emperor. He ap-
pointed counts-palatins, founded cities, bishoprics, 
and monasteries, and did good service to the empire in 
reorganizing the shaken foundations of its power in Eu-

erope. Otto's policy towards the see of Rome is worthy 
of notice, for while he showed himself zealous for 
the interests of the Church, endowed abbeys and convents, 
and honored deserving men among the clergy, yet he had 
ever asserted his sovereign right in the elections of the 
popes, a right of choice which his successors continued to exercise for a long time after-
wards (until the pontificate of Gregory VII). See

Otho II of Germany, son of the preceding, and ruler from 973 to 985, deserts no special notice at our hands, except that the Church has preserved a tradition of his visit to Rome, and in settling the internecine strife of the Italian princes. He was intent in the latter part of his reign in collecting a large army against the Sarcens, whom he wished to expel from Sicily; but he died before the plan could reach execution. See Gebrechert, *Jahrbücher des deutschen Reichs* (Berl., 1840).

Otho III of Germany, son of the preceding, was emperor from 983 to 1002. He was born in 980, and was crowned at Aix-la-Chapelle first, and at Rome in 996, whither he had been called by pope John XV to quell the insurrection of Crescentius, a remarkable character of the Middle Ages, who aspired to re-establish the Roman empire under a nominal allegiance to the Eastern emperors. Pope John XV dying in the mean time, Gregory V assumed the pontificate, and it was this pope who crowned Otho III. After the restoration of peace the emperor returned to Germany; but the renewed rebellion of Crescentius drove Gregory from the papal throne, and instituted a Calabrian Greek as antipope under the title of John XVI, compelled Otho to return to Italy, where success, as usual, attended his measures. Crescentius, who had thrown himself into St. Angelo, was seized and beheaded, together with twelve of his chief adherents; the antipope imprisoned, Gregory restored; and on the speedy death of the latter, Otho's old tutor, Gherbert, archbishop of Ravenna, was raised to the papacy under the title of Sylvester II. Otho, elated with his success, took up his residence at Rome, and there he organized the government, erected new buildings, and showed every disposition, notwithstanding the ill-concealed dissatisfaction of the Romans, to convert their city into the capital of the Western empire. The near approach of the year 1000, to which so many alarming prophecies were then believed to point at the end of the world, induced Otho to undertake a pilgrimage to the Holy Land, where he founded an archbishopric. On his return, after visiting Charlemagne's grave at Aix-la-Chapelle, and removing the consecrated cross suspended from the emperor's neck, he again repaired to Rome to consolidate his schemes of establishing a Roman empire. The insurrection of the Romans frustrated his plans, and, escaping from Rome at the risk of his life, he withdrew to Ravenna to await the arrival of powerful re-enforcements from Germany; but before they had crossed the Alps he died, in 1002, apparently from the effects of a disease to which he had been administered to him by the widow of Crescentius, who, it is believed, had deliberately set herself to win his affections that she might have an opportunity of avenging the death of her husband. With Otho III the male branch of the Saxon imperial house became extinct. See Wilam, *Jahrbücher des deutschen Reichs unter Kaiser Otto III* (Berl., 1840), and the histories referred to in the article Otho I.

Otho IV of Germany ruled from 1198 to 1218, but he played no part worth of special mention here. He was crowned by Innocent III in 1209, but on account of the occupation of the papal territory he was visited by this same pope, who, having originated in his power he found it impossible to contend with the rival ruler, Frederick II, and retired to Brunswick, where he died, Nov. 19, 1218.

Otho, Georg, a distinguished German Orientalist, was born at Satttenhausen, near Cassel, in 1834. He became professor and librarian at the University of Marburg, and died in that city May 26, 1868. Besides a large number of academical discourses, and Latin essays on various points of philosophy and of Biblical exegesis, he wrote, Oratio funebria in obtitui Justi Jungmannii (Cassel, 1868, 4to);—De aurantibus textus HEB- raicorum idem, in *Corpus Scriptorum Latinorum*;—Samaritanae, Rabbinicae, Arabicae, Ethiopi- carum, et Persicarum, ex optimis autoribus excerpta (Franz. 1701, 8vo). Otho, in his grammars, adopted the plan and system of James Alting (q.v.); they were therefore extremely useful as a companion to a knowledge of the classics, his works, and reprinted with the latter's grammars in 1717 and 1730.—*Fundamenta punctuacionis linguae sacrae, et Institutiones Child. et Syn.*;—*Palæstina linguarum Orientalium* (ibid. 1702, 4to), destined to facilitate the comparative study of Oriental languages. It contains the first translation in the hands of Otho, the transcript accompanied by the Latin version of Arius Montanus, in the Targums of Onkelos, of Jonathan, and of Jerusalem, and the Syriac, Samaritan, Arabic, Ethiopian, and Persian translations, each with a literal Latin translation. It gives also all that part of both the smaller and the larger Masorah which relates to these four characters, and the notes of R. Solomon, Aben-Ezra, etc. The whole is preceded by a model of parsing in each of these languages, and followed by glossaries for all the words contained in the book.—*Virga Arborum polypogetos* (Marb. 1692, 4to); a work of the same kind as the preceding, more elaborate, but less extensive; it embraces only the first eleven verses of Num. xxxvii. A letter of Otho is inserted in Lacroze, *Theureus epistol., i., 311. See Jöcher, *Ally. Gel.-Lex.*; Supplement ; Hofer, Neue Bibl. Générale, xxxviii, 929. (N. F. P.)

Otho, Johannes Heinrich, a noted Swiss Hebraist, was born April 15, 1651, at Berne, in Switzerland. He received his education in the native tongue till 1669 to Lausanne, thence to Saumur, Orleans, Paris, and Oxford. In 1678 he returned to his native country, was appointed public teacher of philosophy at Lausanne, where he died, July 16, 1719, after having occupied some professorships in different places. Otho published several works on the Hebrew, which to this day are used with great advantage, viz. *Lexicon Rabbinico-philologicum in quor. ordine alphabetic notorut et referunt pro eponyme quod circa patrum Hebraorum dogmata, ritus et statuta in uteroque Talmide, Maimonide et aliorum scriptur occurring* (Basel, 1665); enlarged edition by Zacharias (Altona, 1757). In a later edition, which was published at Geneva in 1675, the Talmudical treatise *Shekheim*, with notes and a Latin translation by the same author, is also given:—*Zechiaoth 230* i. e. *Historia doctorum Maimonici quopae etiam Syriensis magi Hierosolymitani praestantiae et vice pro hortius recensuitus* (Oxf. 1672, later ed. by Roland, Amst. 1675; and Wolf, Berl. 4to). In *Fürst, Bibl. Jud., iii., 59 sq.; Jöcher, Allgemeines Gelehrten-Lexicon, iii., 1142; Supplement by Rotermund, v, 1273 sq.; Bibl. Brentani Class., vol. vi, fasc. ii, p. 291 sq. (B. P.)

Otho, Julius Conrad (originally Naphkili Margalita), a distinguished German Orientalist, belonged to a very ancient Jewish family, distinguished for its great learning and Talmudic lore, of which five mem- bers have united with the Christian Church. Naphkili Margalita was born at Vienna Sept. 12, 1562, and joined the Church in 1603 at Altona, where he was appointed professor of Oriental languages, and died at the same place in 1667. He wrote, *Usus lingua Hebraica, et exposito mystico document. Hebr. Ver. Test.* (Nürnberg, 1604).—*Grammatica Ebraica* (ibid. 1605):—*222* i. e. *Oculorum discoveret seu monstratio dogmatum, quae omnes Rabbinii recte sentientes ante et post Christi nativitatem de unitate essentiae divinae Trinitate personarum, et de Messia posterratil religiernunt, etc.* (ibid. 1605; Stettin, 1615); a work consisting of extracts from the Talmud and the Sopher to prove the validity of the Christian doctrine.—*Lexicon Rabbinicum, et hebraicum cor- rum Sacrae Scripturae complectens, in juxta ordinem alphabeticum ponuntur nominia, verba, verbaes et radi- culae literae et vocae inde derivate* (Nürnberg, 16...). See *Fürst, Bibl. Jud. iii., 60; Wolf, Bibl. Hebr. i, 480; Stein- schneider, *Bibliographie der hebräischen Literatur*, Coll. 297; Catalogus Bibliorum Hebr. in Biblioth. Bodleiana, p. 2080; Jöcher, Allgemeines Gelehrten-Lexicon, iii, 1142;
Supplement by Rotermund, v, 1300; Fabriano, Delectus argumentorum et syllabarum eruditorum, etc. (Hamburg, 1725), p. 388 sq.; Löschner, De causis linguæ Hebr. (Leips. 1706), p. 169; Delitzsch, Staat auf Hoffnung (Erlangen, 1869), vii, 146 sq. (B. P.)

Othobon, Synod of, was held in London, A.D. 1286, under cardinal Othobon, and claims attention, not only as representing the united churches of England, Wales, Scotland, and Ireland, but as displaying a commendable zeal for discipline, and embodying its decrees in constitutions, many of which are still in force. It directs that the laity be carefully instructed in the baptismal formula, in order that in cases of emergency they might be qualified to administer the rite; and it enjoin, for the first time, the indicative form of absolution after confession, still retained in the office for the visitation of the sick. Several of its canons are directed against simoniacal contracts for benefices, non-residence and pluralities, commutations of penance, appropriations of tithes to monastic houses, and commendams, which, originating in early times when interruptions were perpetually occurring to regular ministerial appointments, were afterwards grievously perverted.

Otho'nius (O'Sioviac, Vulg. Zochias), a corrupt form (1 Esdr. ix, 28) of the name MATTIANIAN (Ezaa x, 27).

O'tolenko, SAmuel ben-DaVeN ben-JeCheh, of Casale, a noted Italian rabbi, flourished for a while at Venice, and died at Padua Aug. 25, 1718. He distinguished himself as a poet and grammarian, and published היסא י' הניבכ, the "Mantle of Samuel," being extracts from the פאש קא לך of Isaiah Horwitz (q. v.); to which he also wrote an Index (Venice, 1717).—Ibn Abi Amr, Bernard, Berechja ben-Moses ben-Nechemia of Modena, important for ascetic literature (ibid. 1701),—Correccio seu institutio paenitetium, a ritual containing precepts, prayers, hymns, etc. (2d ed. Venice, 1719). See Fritsch, Bibl. Jud. iii, 58; Wolf, Bibl. Hebr. i, 1094; iii, 1080; Jäger, Allgemeines Gelehrten-Lezenik, iii, 1134. (B. P.)

O'Toole (or Tuatha), Laurence, an eminent Irish prelate, belonging to the princely sept of the Hy-Murays of Leinster, in which province he was born in 1134. He was educated in the convent of St. Canice, one of whose seven ancient churches still remains. He was very pious in early youth, and at the age of twenty-five was chosen a bishop; the duties of the office were almost literally forced upon him. Afterwards he became the abbot of the above monastery, and in 1162 he was made archbishop of Dublin, which position he readily accepted, that he might the more easily distribute the available funds of the diocese to the poor. He was consecrated by Gelasius, the Irish bishop of Armagh, who Leland says refused to attend the Roman Catholic council in Cashel. Gregome, his predecessor, and three other Dano-Irish bishops before him, had been ordained by the archbishops of Canterbury, to whom they had severally promised "canonical obedience." With O'Toole the foreign consecrations of the Dublin bishops ceased. He was the first archbishop ever consecrated in Ireland (comp. Usher, Religion of the Early Irish, vol. i.; Ware, Irish Antiqu. i, 312). O'Toole was a prominent man in the national council at Clare, called by Roderick, the last Irish king. At this meeting the school or monastery of Armagh was raised to the rank of a university, and a rule was passed that no one should be received as a lector or theological professor unless he had graduated in this university. In this and several other instances we perceive the efforts which were then made to introduce Roman doctrines into the Irish Church, and to bring the "diverse and schismatical sects" which distempered the church, which legislates had spoken, to "the one Catholic and Roman office." O'Toole was a true patriot. When the treachery of MacMorrough was developed, and the English invasion had become evident, he took a decided stand for his country. After several fruitless efforts to adjust matters, he risked his life between the conflicting parties to prevent the massacres of the people. In 1171, during a serious division among the English, he conceived the idea of arousing the whole nation, and of driving all the foreign invaders who had been confined on the island. He accordingly set forth from province to province, addressing the nobles and common people, and urging them to arise simultaneously, and to meet in Dublin. He was so far successful as to collect a great number of untrained and unorganized men, but king Roderick and his chieftains at that time were unequal to the hour, and through their jealousies, indolence, and self-confidence the golden moment was passed, and all was lost. In 1175 he was sent to England to sign articles of arrangement between Roderick and Henry, which then amounted simply to an acknowledgment of the latter as feudal lord, without any reference to the soil or internal government. In 1179 O'Toole set out for Rome, no doubt to present the oppression of Ireland; but in passing through England Henry would not let him proceed unless he would take an oath not to do or say anything in Rome that he would not say at home to the Irish king. This oath, however, he is accused of not having kept. Again, in 1180, he was sent by Roderick to England; but Henry refused to see him, to hear his message, or to allow him to go back to Ireland, and, to end the whole matter, the king and queen of England immediately for NORMANISM. O'Toole, however, being determined to get a hearing, soon followed him. But on reaching Eng., or Augum, in France, he was taken sick and died—some say of poison (Ware, Irish Antiqu.). At all events the king was glad to get rid of him. When about to die he was asked to make his will, to which he replied, "The Lord knows I have not a hap'urth [a penny] on earth that is my own." He was canonized in the Church of Rome by pope Honorius III in 1225. Laurence O'Toole lived in eventful and perilous times. From the general history of this period there must have been strife and covetousness going on between the old Irish Church, founded seven hundred years before by St. Patrick, and the new hierarchy which the bishops of Rome were then establishing in Ireland. But on which side he was cannot be easily determined. We only know that politically and ecclesiastically the kings of Ireland were in alliance with King John of England. At this period, and for centuries afterwards, all the materials of history were exclusively in the keeping of Rome and England, and they are not known to publish anything against themselves. Tradition says there was found among his books in Dublin a copy of the New Testament in the Irish language, but there is no documentary testimony for it, since between the Danes and the Anglo-Saxons all such testimony seems to have been destroyed. Geraldus, who was historiographer to the invading army of Henry, very coolly says that in his time "many old and precious manuscripts were torn up by the boys for book-covers, and were used by tailors for measurements"—inter pueros in libris literariis ad librum vitiosum, et inter sectores ad lambris pro vestium forma dimendis, in Moore's Hist. of Ireland, Am. ed. p. 154). The same destruction seems to have been very great in the time of James II of England, for it appears to have been the policy of the first English invaders of Ireland, as a means of preserving their own authority, to efface as far as possible from the memory of the people every trace of their former nationality and the independence of their church. See Todd, Ancient Irish Church, p. 133 sq.; De Vinne, History of the Irish Primitive Church. (D. D.)

Ott, Johann Baptist. See Ott, Johann Heinrich.

Ott, Johann Heinrich, a noted Swiss Protestant divine and Orientalist, was born in the canton of Zurich.
in 1617. His father, also a minister in the country, placed him at Zurich under the care of the distinguished Breitinger. In 1668 he went to study at Lausanne; sometime after at Geneva and Grossingen, in the company of Hottinger; after rapid advancement under professors Gomar and Alting, he went to Leyden and Amsterdam. Here for five years he applied himself to the study of rabbinical learning and the Oriental languages. He then returned to Switzerland and was later in England and France. After his arrival home he became minister of the Church of Dietlickow, where he remained twenty-five years. In 1651 he was appointed professor of eloquence at Zurich, of Hebrew in 1656, and of ecclesiastical history in 1668. He died in 1682. Ott maintained an extended literary correspondence, and was principally on theology. The following is a complete list of his works:

- **Catholicus**
- **Oratio de causis Jesu Christi**
- **De Jesu Christi**
- **De resurrectione**
- **De magni Christi Galilaei**
- **De alphabeta et verbo scribendi omnium haecatium**
- **Universa poesis philologica tractata**

His son, Johann Baptist, an Orientalist and anti-quietarian, was born in 1601. He became professor of Hebrew at Zurich about 1702, and wrote several anti-quietarian tracts. He died on August 13, 1773. A man of ardent piety and apostolic spirit, endowed with extraordinary power as a preacher, he exerted a great influence among his brethren, and extended his work beyond the limits of his own Church. He proclaimed the necessity of regeneration and of a holy life with great force and directness. He took part in union meetings, held often in the woods and kept up for several days. He instituted prayer-meetings, and trained pious laymen to lead them; and he maintained a close fellowship with men of like mind in other religious denominations, especially with Martin Böhm, a Mennonite, and with Asbury and Wright, who John Wesley sent to labor in America. In 1784 he assisted Dr. Coke in ordaining Asbury as the first bishop of the Methodist Episcopal Church. On Sept. 25, 1800, in conjunction with Bohn, he convened a conference at Baltimore, which resulted in the organization of the society of the United Brethren in Christ. Otterbein is said to have been elected their first bishop or superintendent. This, however, is denied by Dr. Harbaugh, in his *Fathers of the German Reformed Church* (p. 53-74). No bishop was elected until 1818, and proves by substantial evidence that Otterbein never left the communion of the German Reformed Church. Otterbein worked for a revival in the Church, and not for an organization out of it. When he saw that the movement was tending to this result, he held on to it, not to organize it, but to prevent its organization; not to carry it forward, but to restrain and control it. Only when the case became hopeless did he withdraw. In the quietude of old age, he silently mourned over the "evil" (Path of the G. B. Church, ii. 71). It would therefore appear that while Otterbein was practically the founder of the United Brethren in Christ, he did not intend to establish a new religious denomination; and, like John Wesley, never really severed his connection with his own Church. See, besides Harbaugh; Corwin, *Manual of G. Reformed Church* (p. 173 sqq.); Drake, *Dict. of Amer. Bap.* (E. de S.)

**Otterson, James**, a Presbyterian minister, was born in New York City Oct. 11, 1791. He graduated at Columbia College, New York; studied theology with Dr. J. M. Mason; was ordained by the Associate Presbytery of New York, and installed as the successor to Dr. Proudfit, pastor of the Church of Broadalbin, Fulton
OTTILIA, N. Y., in 1821. About the year 1827 he was called to the united pastorate of the Reformed Dutch churches at Hempstead and Oyster Bay, on Long Island, X. Y. In 1834 he succeeded Dr. Van Vranken as pastor of the Church in Freehold, N. J.; he next took charge of the Church at the White House, in Hunterdon County, N. J.; in 1845 he was called to the Church in Johnstown, N. J.; his last charge was in Wilmington, Del., which he relinquished in 1863, and retired to the house of his son, a prominent member of the bar at Philadelphia, Pa. He died Sept. 17, 1867. Mr. Otterson possessed a clear, analytical mind, which showed the effect of early culture. He was a good scholar, a sound and able theologian, and a very instructive and edifying preacher. See Wilson, Preb. Hist. Abnamare, 1868, p. 13. (J. L. S.)

OTTILIA. See ODILLA, S.

OTTINI, Felice, a Roman painter, who, according to Pascali, was a pupil of Giacinto Brandi. He possessed excellent talents, a fine taste, and was employed almost in his youth to decorate the chapel of P. P. di Gesu and Maria at Rome. He died young, in 1695.

OTTINI, Pasquale (sometimes called Pasqualeote), an Italian painter of note, was born at Verona in 1570. He studied with Felice Riccio, called Brusaerci, of whom manner he imitated so happily that he was employed to finish some works left incomplete by his master at his death. Lanzi says "he was a good artist in regard to forms, and of no common expression, particularly in the work he conducted after having seen Raphael's. Of this we have a striking example in his Murder of the Innocents, at St. Stefano, and his picture of St. Nicolo, with other saints, at St. Giorgio, in the best style of Venetian coloring. In other instances his coloring is somewhat faguid—a defect most probably from time and unfavorable situation." He was in high repute in his native city, and the learned Alessandro Carli, in his history of Verona, says that he approached nearer to Paul Veronese than any other artist of that city. He died in the great plague in 1630. He is said to have executed some beautiful etchings. Barteschi has given a description of only one known print by him, which he commands in the highest terms. It represents the burial of Christ, and is signed Pasq. Ottii, Verz, inc.

OTTO OF BERBERG. See OTTO OF BERBERG.

OTTO OF FREISING. See OTTO OF FREISING.

OTTO OF PASSAU (some have it of Nassau), for a time teacher in the Franciscan convent of Basle, was there connected with the Pietistic sect of the Friends of God, and apparently knew the author of a book of edification for the use of the laity, entitled Die Vierwandtsanzen Aun. u. der Goldene Thron (1836). It consists of directions for leading a Christian life, and insists particularly on its subjective aspects. It was first printed at Augsburg in 1480, and lately under the title of Die Kron der Aeltesten (Regensburg, 1836). It was translated into Dutch (Utrecht, 1480, and often reprinted). See Pfeiffer, Deutsche Mystiker des 14ten Jahrh. (Stuttgart, 1845); Aschschi, Kirchen-Lexikon, iv, 408, 409; Herzcg, Real-Encyklop. x, 741. (J. F. P.)

Ouch (only in the plur. ouch, mishbetoth, text. ures, e g. brocote, as Psal. xiv, 14; hence setings), beets, in which gams are set; hence the sockets for fastening the precious stones in the shoulder-pieces of the high priest's ephod (Exod. xxviii, 11, 14, 25; xxxix, 18, 16). See EPHOD.

Oudo or Oudh (Sanarct, Ayodha, i. e, "invincible"), a province of British India, separated on the north from Nepal by the lower ranges of the Himalayas, which gradually slopes to the Ganges, which forms its west boundary. The south and southwest is situated in lat. 25° 34'—29° 6' N., long. 73° 45'—88° 11' E., has an area of 27,890 square miles, or rather less that of Scotland, with a population in 1872 of 11,220,747. It is one great plain, the slope of which from north-west to south-east indicates also the direction of the principal rivers. These are the Gomti, the Glagora, and the Rapti, which swarm with alligators. The northern part, on the edge of the Himalayas, is not very well known. It forms a portion of the Terai, a vast unhealthy tract stretching along the borders of Nepal, and covered with impassable forest. This climate is cool and pleasant from November to March; during the next four months it is hot and sultry, after which follows the long rainy season, but in general it is considered the healthiest along the whole valley of the Ganges. The soil is light, and, except small nodules of chalk and alluvium, rather sandy, but there are rarely a few trees seen. Formerly it was more copiously watered than it is now, the clearing of the jungles having greatly decreased the moisture of the land. The chief crops are wheat, barley, gram, maize, mustard, rice (of the finest quality), millet, maize, jowar, bajas, various kinds of pulse and oil-seeds, sugar-cane, tobacco, indigo, hemp, and cotton. In 1872 there were 12,673 square miles of cultivated lands in Oude, and 5,088 additional capable of cultivation. The manufacturing industry is not much developed; soda, saltpetre, and salt are the only articles produced. The revenue of the province is derived from the rent of villages, rice, and opium. The population is 1,712,886, in 1872, and 3,678,443, in 1874. There are 7,776,100,000 rupees of the Bengal army. In 1869 Oude contained 7,776 Christians, 9,713,780 Hindus, 1,011,110 Mohammedans, 56 Buddhists, and 457,684 persons of all other creeds. Hindostan is the language most in use, with a mixture of Persian and Arabic and less of Hindi than in the more easterly provinces. The houses of the people are generally of mud or unburnt brick, and the walls are carried up six or seven feet above the roof, to form a kind of covered court for the women. The roof is covered during the rains by a light temporary roofing of bamboo and grass. The rooms have no ceilings, and the floors are of earth, well packed and smooth.

The most characteristic feature in the social economy of Oude is that of the village communities, each of which constitutes a political unit itself. They exist as a land-tax is one of the oldest institutions of the country. At the time of the British annexation it was supposed that the chief's known as talukdars, who received this tax from the immediate cultivators of the soil, and paid a fixed sum on account of the revenue to the native government, were merely middlemen, who exacted from the villagers as much as possible, but themselves possessed no proprietary rights whatever. Acting on the assumption that they were only collectors of revenue, the first land settlement made under British rule, in 1866-67, disregarded the talukdars of nearly all their villages, and provided for the payment of the land-tax by the actual occupants of the soil directly to the government. The injustice of this settlement led to great dissatisfaction, and was ultimately admitted by the British authorities. The result was that the ancient and true system of land tenure, with well-established rights of property in the soil, which were entitled to recognition, notwithstanding the frequent extortion which had been practiced upon the subordinate proprietors. The present land settlement, completed in 1865, recognizes the rights of both classes, confirming to each the right of occupation, and ascertaining the value of the land by the time of the annexation in 1865. According to the
OUDE

parliamentary accounts for 1871–72, it is so framed as to
secure village occupants from extortion, and to exact
certain duties and responsibilities from the talukdars.
Half the gross rental is paid to the government. The
net land revenue in 1871–72 amounted to £1,207,592.
In the same year the licenses for the sale of spirits and
drugs, and the excise on opium, yielded £78,190.
The total revenue in 1872–73 amounted to £2,656,692; ex-
penditures, £626,519. The total number of educational
institutions in 1871–72 was 1548, with an average daily
attendance of 57,720 pupils. They comprise the Can-
mudis, in Lucknow, and the schools in the Lucknow
Room 56 were in the college department; 11 high schools,
and 747 village schools; 81 schools for girls, with 1908
pupils. The expenditure for the support of schools amount-
ed to £47,420. In each school district a library is main-
tained for the use of the schoolmaster; and there is said
to be a school within four and a half miles of every child
in Oude. There is a museum at Lucknow. Seven news-
papers, four English and three native, are published in
the province.

Oude is believed by Sanscrit scholars to be the an-
cient Kosala. The country was conquered by a Mohammedan army
in 1195, and made a province of the Mogul empire. In
1738 the vizier of Oude, Safdar-Jung, rebelled against
his imperial master, Ahmed Shah, and forced the latter to
make the governorship hereditary in his family. His son,
Sunder-Jung, became the first to found the dynasty, which
ruled the country, generally in a most deplorable manner, until the East India Company
found itself forced to adopt the extreme measure of
annexation, Feb. 7, 1856. The necessity for this high-
banded but most beneficial act is claimed by the Brit-
ish to be the interposition of the statistics of crime in Oude
during the years of its independence. One item will
suffice: from 1848 to 1854, there were, on an average, no
fewer than 78 villages burned and plundered every year,
while murders, robberies, abductions, and extortions were
every-day occurrences. A feeble king, a bigoted soldi-
ery, and a lawless peasantry had brought about a most
helpless and ruinous anarchy. Many British residents
in India, however, disclaimed this state of affairs, and
regarded the step as unjust towards the people of Oude,
and as impolitic for Britain. When the mutiny of 1857
broke out, Oude became one of the great centres of
rebellion. Upon this the confiscation of all the estates
of the talukdars was proclaimed by lord Canning; but
when the country was subdued by force of British arms
the estates of all such as laid down their arms and swore
fealty to the king was restored to their owners by an
act of the British government. The forts of the petty chiefs, however, were dismantled and the inhabitants disarmed. The province is now admin-
istered by a chief commissioner. The principal feature of
the present condition of affairs in Oude is the preser-
vation in their integrity of the estates of the talukdars.
Missionary labours have been extensively carried on in
Oude, and have been crowned with great success. Thus
the Methodist Episcopal Church, which has by far the
most flourishing mission, has its headquarters at Luck-
now, and supports an English and native church; a
periodical, the India Missionary, goes out 8,000 copies
per month. A religious newspaper called the Witness, with 656 subscribers; a
boarding-school, and 1,000 Sunday-school scholars.
We have not room here to give further details, but re-
fer the reader to the art. INDIA and the books men-
tioned below.

One of the principal towns of Oude, of like name, is
noted on account of a temple erected there in honor of
Hanumat, the fabled monkey-ally of Rama, an
incarnation of the god Vishnu. The ancient city of
that name was situated opposite the modern Oude, where its
remains are still seen. Ayodhya was one of the oldest
seats of civilization in India. It was the capital of the
solar dynasty, or one of the two oldest dynasties of
India, deriving its descent from the sun; but it obtained
special renown through Rama, the son of Dasaratha, a
king of that dynasty. Its great beauty and immense
size are dwelt upon in several of the Puranas and mod-
ern poems, but more especially in the Ramayana, the
first and last books of which contain a description of it. According to some Puranas, Ayodhyā was one of the seven sacred cities, the living at which was supposed to be a free open air, and was inhabited by souls who were in
secure eternal bliss. It was also called Sāketa, Kosala,
and Uttarā-kosala. See Goldstucker's Sanscrit Dic-
tionary, s. v. Ayodhyā; Chambers, Cyclop. s. v.; The
American Cyclop. s. v.; Bishop Thomson, Our Oriental
Mistresses, 2nd ed. p. 538 sq., 360 sq.; Butler, Land of the Veda, s. v.

Oudin, CAMILL, a distinguished French writer,
was born at Mézières-sur-Meuse, Feb. 14, 1638. He
was the son of a weaver. After studying at Char-
levalle, he joined the Premonstrants in 1655, chiefly
with a view to devoting himself entirely to study. The
history of ecclesiastical writers first attracted his atten-
tion. In 1669 he was appointed professor of theology
in the abbey of Moreau, and the next year grand-prior.
Finally, after taking charge for a while of the Church
of Epinay-sous-Gamaches, in the diocese of Rouen, he
retired into a convent in 1677 to resume his former
scientific labours. After visiting the divers establish-
ments of the order in London, Bruxelles, and the
Netherlands, he obtained permission to settle at Paris
in 1683, and soon became intimate with the learned
Benedictines of St. Maur, who placed their rich his-
torical materials at his disposal, in order that he might
write for them a history of their orders—a task which,
however, he never attempted. He enjoyed great repu-
tation for learning, and was even considered a model
of piety and regularity. But his superiors, frightened
at an intimacy which sprung up between him and the
renowned Jourdan, confined him to the abbey of Ressen,
near Beauvais, in 1692. The severe penances to which
he was subjected contributed also to disgust him with
monastic life; and having finally succeeded in escaping
to Holland in 1692, he made an open profession of Pro-
testantism at Leyden. He was subsequently appointed
under-librarian of the university of that place, and died there in Sept., 1717. Abbé Boulliot, in his Histoire Arden-
noise (vol. ii.), says of Oudin: "Contrary to what usually
happens to such deserters, he always preserved the
general esteem of his co-religionists. This was owing
merely to the purity of his life. To those who advised
him to marry, he answered that he had become a Cal-
vinist for the sake of truth, and not to free himself from
cellibacy." Oudin's principal works are, Supplementum
de scriptoribus vel de scripta ecclesiasticis de Bellarmino
omnibus ad annum 1460 (Paris, 1686, 8vo). This
work, which is the first attempt at supplying the authors omitted by Bellarmin, contains, according to Cave, a large
number of errors:—Le Prémontré déjoué (Leyden, 1692,
dimo)—Veterum aliquid Galliae et Belgii scriptorum
opuscula sacra numquam edita (ibid. 1692, 8vo) —
Historia abbatii Calvi-Montis, in Acta Sacrorum,
vol. iii. (1701)—De Codicibus in Sacris, in Mascon, Hst. de la
criticum (Leyden, 1717, 8vo). In this work he
claims that the Codex Alexandrinus dates only from the
10th century, and that the questions Ad An-
tiochum principium were attributed by mistake to
St. Athanasius in his Lorraine Edition, and that

tante.

Ouen, Sr. (Lat. Audenu), a French prelate, noted
for his civil ministrations to king Dagobert, and highly
esteemed by that monarch, was born at Sançy, near
Seine-et-Marne, in 1066. He was the son of a merchant
of Meudon, of which his parents were lords. After
studying in the monastery of St. Medard, he received
an office at the court of king Clothaire IL Under Dag-
Oultz, St. Ouen and St. Eloi, afterwards bishop of Rouen, became the principal minster of the nation, St. Ouen holding the position of chancellor. But not without the onerous civic duties thus imposed upon these excellent men, they labored zealously for the spiritual welfare of the people. St. Ouen in particular greatly profited by his intimate association with St. Elmo, bishop of Reims, in the diocese of Meaux. Some time after St. Ouen entered the Church itself, and was ordained priest by Dieudonné, bishop of Macon. On his return from a mission to Spain he was made archbishop of Rouen. He is generally believed to have been installed May 27, 537, as related in the annals of the cathedral church of Rouen, St. Ouen was consecrated bishop of Noyon and of Tournai. The diocese of Rouen, which yet contained many very uncivilized districts, gained greatly under the government of Ouen. He took part in the council of Châlons-sur-Saône, Oct. 25, 644. Pope Martin I having in 651 requested of the Clovis II some of his most learned bishops to be sent as legates to Constantinople to inquire into the question of monothelitism, St. Ouen and St. Eloi were designated for that purpose, but, for reasons unknown at present, they did not go on that journey. After the death of Edward the Confessor, St. Ouen became the subject of the new mayor of the palace, Warato, sent to St. Ouen to Cologne to negotiate peace with Pepin, duke of Austrasia. The bishop proved successful in this undertaking, but died soon after his return at Clichy-in-Garenne, Aug. 26, 649. He was succeeded by his nephew Theodoric, and later, in the church which now bears his name. Ouen wrote a Vita Eligii, which may be considered as one of the most valuable documents we possess for the history of the 7th century. MS. copies of it were preserved in many churches and monasteries. It was first published by Surisius, but with many omissions. D'Achery having found two MS. copies—one in the library of the abbey of Corbie, the other in that of Conches, in Normandy—carefully compared them, and published the complete work of Ouen in the fifth volume of his Speciología, in 1661. Ghesquierre also published the Vita Eligii, revised by means of MSS. from the collections of the Bollandists at Antwerp, in the Acta Sanctorum, Belgici, iii, 294-381. It was translated into French, from these various editions, by Louis de Montigny, archdeacon of No- uen (Faria, 1626, 8vo); also anonymously (by Levesque, a pupil of Ghesquierre) in 1689, 8vo. It was also published by Charles Monmarteau (ibid. 1847, 8vo); and by abbot Parenty, canon of Arras (Arras, 1851, 12mo). These two latter translations are accompanied with very instructive and learned notes. A life of St. Remy, in MS., preserved in the abbey of St. Ouen, was attributed to Ouen. See Gallisi Christianis, vol. xi; Hist. litt. de France, 1666; Pommery, Hist. de l'abbaye de St. Ouen; Hist. des archives de Rouen; France pontificale; The Counte, Ann. eccl. de France; Student's History of France, p. 47; Hoefner, Noue, Bibl. Générale, xxxviii, 978.

Oughtred, William, an eminent English divine, noted especially as a mathematician, was born at Eton, Buckinghamshire, in 1575. Being educated at Eton as a foundation-scholar, or "collegier," he was elected thence, in 1602, to King's College, Cambridge, of which in regular course he was admitted perpetual-fellow. He greatly cultivated classical learning, as the elegant Latinity of some of his works indicates; but he applied himself chiefly to the study of mathematics. While yet an undergraduate he invented An Easy Method of Geometrical Delineation, which, though not given to the public until 1647, was then immediately translated from English into Latin by Christopher Wren, at that time a gentleman-commoner of Wadham College, Oxford. Oughtred took his degree of B.A. in 1596, and of M.A. in 1599. In 1600 he projected a horizontal instrument delineating diaz upon any kind of plane, and for working most questions which could be performed by the globe. In 1603, or thereabout, Oughtred was ordained priest, and presented to the living of Aldholt, near Guilford, in Surrey, upon which appointment he left the university for the purpose of his studies. He continued his mathematical pursuits, but at the same time distinguished himself by the faithful discharge of his pastoral duties. The mathematical sciences were to him "the more than Elysian fields," and his house was continually filled with young gentlemen who came thither from all parts of Europe. He wrote a Tractatus de Triangulis about 1614; and in pursuing the same subject he invented, not many years afterwards, an instrument called The Circles of Proportion. All such problems in arithmetic, geometry, astronomy, and navigation as depended upon simple and compound proportion were reduced by him, and the sliding rule that was projected for those uses, as well as that of gauging. In 1628 he was engaged by the earl of Arundel as tutor to his son, lord William Howard, whose patronage of science has much to do with the history of its progress during the 17th century. For the use of his pupil Oughtred published, in 1631, Arithmetica in numeris et speciebus institutio, qua tum logistica tum analitica, atque totius mathematicae divisus est. This manual contained so many new and excellent theorems, both in algebra and geometry, that it was translated into Latin, and reprinted in a new edition by the author, in 1638. The first English edition, with additions, appeared in 1634 at Oxford. Oughtred, appealed to Sir Bulstrode Whitelocke and all his old friends, and they appeared in such numbers in his behalf on the day of hearing that he was cleared by the majority, though the chairman and many other Presbyterians were active against him. He sometimes amused himself with his practical sports, and was sprightly at the age of eighty. Fuller (worthies, i, 145) says that "this aged Simeon had a strong persuasion that before his death he should bold Christ's anointed restored to the throne, which he did to his incredible joy, and then had his 'dimitis' out of this mortal life about 30, 1669." According to Collier (Dictionnaire), Oughtred died about the beginning of May, 1669, having expired in an ecstasy of joy upon hearing the news of the vote at Westminster which passed for the restoration of Charles II. David Lloyd says that "Oughtred was as feculent in physics, as he was in arithmetic, geometry, and the sphere of all measures, music, etc.; exact in his style as in his judgment, handling his tube and other instruments at eighty as steadily as others did at thirty—owing this, as he said, to temperance and industry; principling his people with plain words, as he did with the Greeks; and in the acquisition of useful arts: advancing new inventions in all things but religion, which, in its old order and decency, he maintained secure in his privacy, prudence, meekness, simplicity, resolution, patience, and contentment." He had one son, whom he put an apprentice to a watchmaker, and for whose use he wrote a book of instructions in that art. He left besides a great number of papers upon mathematical subjects; and in most of his Greek and Latin mathematical books were found notes in his own handwriting, with an abridgment of almost every problem attempted in the books. Many of his books came into the museum of William Jones, F.R.S., and with the manuscripts passed into the hands of Sir Charles Scarborouh. Such of the latter as were found suitable for publication were printed at Oxford in 1676, under the title Opuscula Mathematica auctorum oeconomicae. Many of Oughtred's MSS. are in the library of the earl of Macclesfield. See Bug. Dict.; Allibone, Dict. of Brit. and Amer. Authors; Engl. Cyclop. Oultil, Gerber Azkenazi, a rabbi of the 17th century, studied at Nikolsburg under Menachem Mendel Kozin, and at the age of 16 entered the Hasidic movement. He lived at the rabbinship at Prossinitz, then at Hanau, Nikolsburg, and Vienna. When, however, in the year 1670, the Jews
OUR LADY OF MERCY

487

OUSELEY

were expelled from the last-named place, he went to Metz, where he died in 1694. He wrote: [Arabic text]

One hundred and twenty-four legal decisions, which were afterwards published by his son (Frankfort-on-the-
Main, 1699) — in 'Homoiletic discourse on the Pentateuch' (ibid. 1699) — Discoursat haben, published by his grandson (ibid. 1710).

See Furst, Bibl. Jud. iii, 60; Jost, Amaelien, 1840, p. 80.

Our Lady of Mercy, Sisters of, is the name of the modern Roman Catholic religious order founded in Dublin by Miss Catharine McAuley in 1830. Miss McAuley was born in Gormanstown Castle, near Dublin, Sept. 29, 1787, and died Nov. 13, 1841. Her parents, who were Roman Catholics, died when she was a child, and she was brought up without any definite religious faith. But she became a Roman Catholic, and devoted herself and her large fortune to the service of the poor. She induced several ladies to join her, purchased a house in Dublin, and there, in 1827, opened an asylum for destitute young women and a free school for poor children.

Soon afterwards and her companions undertook a regular novitiate in a convent of Presentation nuns, and in 1831 assumed there the habit and took the vows of the new order. The rules received the sanction of the archbishop of Dublin Jan. 23, 1834; but subsequently the rule of St. Augustine, modified to suit the active duties of the nuns, was formally approved by Gregory XVI in 1855, and formally confirmed by him in 1840. As thus organized the Sisters of Mercy have in view, besides other charities, the visitation of the sick and prisoners, the instruction of poor girls, and the protection of virtuous women in distress. Wherever their means permit, they found "houses of mercy," in which destitute girls of good character are cared for until employment can be found for them. The sistershood is divided into two classes, choir sisters and lay sisters. The former are employed about the ordinary duties of the order, and the latter about the domestic avocations of the convent, and such other duties as may be assigned to them. Candidates for membership of either class undergo a preliminary "postulancy" for six months; at the end of that time they assume the white veil and become novices. The novitiate lasts two years. The vows, which are taken for life, bind the members to poverty, chastity, obedience, and the service of the poor, sick, and ignorant. The sisters are subject to the bishops, and have no general superior. In the United States the communities of each diocese form one single community. The order had a convent in New York, erected by the professed choir sisters and confirmed by the bishop. The habit of the order is a black robe with long loose sleeves, a white coif, and a white or black veil. In the streets a bonnet of black crape is worn instead of the coif and veil.

The Sisters of Mercy have spread considerably over Great Britain and her colonies. The first American house was established at St. John's, Newfoundland, in 1842, and the first in the United States at Pittsburgh in 1843, where they now have their mother-house and novitate, and seven convents and houses in that state; and teach in the diocese of Cleveland. In and around the city of Hartford, which embraces Connecticut and Rhode Island, they have 128 sisters, novices, postulants, and lay-sisters in nine convents and houses (Providence, two; South Providence, Newport, Pawtucket, and Woonsocket, K. 1.; Hartford, New Haven, Conn., two), with seven academies under their charge, besides free and parochial schools, two orphan asylums at Hartford and one at South Providence, the whole containing apparently 6395 pupils. Since Feb. 17, 1868, the Hamilton School, one of the public schools in New Haven, has been conducted entirely by them, eleven now teaching nearly 500 children (probably included in the above number of pupils), at a cost to the city of $5600, according to the report for the year ending Sept. 1, 1870 (see chap. xx.). The nuns number more than 120, and attend upon them over 900 in their eighty or more convents and houses in twenty-one different states (Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Maryland, North Carolina, South Carolina, Georgia, Mississippi, Louisiana, Arkansas, Missouri, Tennessee, Kentucky, Illinois, Iowa, Nebraska, California), with thirty-nine academies (some of them on a large scale, as at Manchester, N. H., Providence, R. L., Vicksburg, Miss., etc.), twelve orphan asylums, and over fifty other schools (free, parish, or industrial), under their charge, containing in all probably from 20,000 to 25,000 pupils. They have hospitals at Worcester, Albany, Pittsburgh (had 2680 patients in one year), Chicago (cost $75,000), Louisville, Omaha, and San Francisco; houses of mercy in New York, Pittsburgh, and San Francisco; a house of providence in Chicago; a Magdalen asylum apparently near San Francisco. Those in Georgia are said in the Catholic "Directory" to be a branch of an order founded (in 1829) by the late bishop England of Charleston, "where the nuns renew the vows of religion every year, and live under a rule approved by the bishop." There are five convents in the State of New York, one at Albany, New York, and four at Long Island;

Our Lady of Mercy, a mission of the Wesleyan Methodist Connection in Ireland, noted as a missionary, was born at Dunmore, Galway, in 1762. He was the eldest son of his house, the brother of General Sir Ralph Ouseley, and cousin of Sir William and Sir Gore Ouseley, the Orientalists; and his family is distinguished in British military, diplomatic, and literary history. He was designed for the government service, and received a classical education. Married while not yet of age, his recklessness speedily brought him towards financial and moral ruin; but a peculiar episode in his history, closing with an almost fatal gunshot, led him to consider most seriously his spiritual condition. Thus solemnized in his thoughts, he was in 1789 converted by some Methodist soldiers quartered at Dunmore, where Ouseley then resided. He at once began to preach with the same vigor and zeal which he had displayed in his military services, and soon became a most ardent Gospel evangelist. The people heard him with wonder. Attacking at the same time Roman superstition and Protestant indifference, he preached in season and out of season, exhorted in the streets and churchyards, fairs and markets, and was accustomed to attend the wake-houses, or places where the dead lay, there to mingle with the crowds that were collected for the purpose of "hearing mass;" and while the priest read the prayers in Latin, he would translate every part that was good into Irish, and then go on with his own assembly, according to the Irish practice, to deplore a priest, on their eternal interests. He rode on horseback from town to town, generally addressed the crowd without dismounting, and preached from three to five times a day. For seven years he travelled in this manner throughout the province of Connaught, and as far as Leinster, where his name appears in the Irish annals. He was then received into the Wesleyan Conference, and in 1799 was appointed missionary to Ireland. It was just at the close of the rebellion, and the Catholic Irish often treated him rudely; but being a master of the Irish language and thoroughly acquainted with the Irish character, he succeeded in converting thousands. Charles Graham travelled with him. Together they went into the worst fields of the country, to the darkest and strongest holds of popery and of Satan. On enter-
ing a town, the Bible in hand and their hats off, pro-
cessions of the people followed them to some convenient
place, where they worshipped in the following manner:
First they sang a translation of one of Charles Wesley's
hymns. Next a brief fervent prayer was so uttered
that all heard it, some standing and crossing themselves,
some on their knees among their hearers. Then one
of the ministers proclaimed a text in both Eng-
lish and Irish, and preached a short but powerful ser-
mon, the other following with an exhortation. Their
discourses were mostly in Irish, but were often inter-
spersed with English passages. These brave itinerants thus boldly grappling with the monster evil of the land,
Protestants generally, who comprehended that there
was no alternative if popery was ever to be conquered,
as well as many of the clergy of the Establishment,
took sides with them, and welcomed them to their
homes and their parishes; sustained and encouraged;
Protestants of all denominations stood faithfully around
them. Moreover, Ouseley was an Irish gentleman, his
family was influential, and his father, having been con-
vert, sided with him. The wonderful missionary had
thus a prestige which commanded respect among his con-
temporaries, and his virtues, as sincerely as the "Priscilla,
Dearly beloved Virgin" procured it, he is said, many a respect-
ful hearing. Allusions in his sermons to her and the Scripture
saints often secured reverent attention, without com-
promising his Protestantism. His popish hearers were
seldom scandalized at anything, except the general
treatment of the "Kill Mary" after the final prayer.
Without provoking the prejudices of his hearers, he
treated them with a courage and frankness which he
charged their admiration and secured their good-humor. Thus
in a town filled with Romanists he hired the bell-
man, as was his custom, to announce through the streets
preaching for the evening. The man, afraid of oppo-
sition, uttered the announcement timidly and indis-
tinctly. Ouseley, passing in the street, heard him, and,
taking the bell, rang it himself, proclaiming aloud:
"This is to give you notice that Gideon Ouseley, the
Irish missionary, is to preach this evening in such a
place and at such an hour; and I am the man myself!"
When Coke applied to the Irish Conference for the first
official approval of his Asiatic project, and that body,
looking upon him with almost kiliolatrous affection as
its own chief apostle, not only sanctioned his plan, but
voted him several of its ministers as missionaries, Ouse-
ley stood forth on the Conference floor and begged,
with tears, to be permitted to accompany them. His
services, however, could not be dispensed with at home,
and he was thus continued in his warfare to the last.
When he was about sixty years old, and during the
nearly half a century of devoted labor, he was still abroad
on the highways and in the market-places as actively as
ever, preaching fourteen, sixteen, and sometimes twenty
sermons a week. In the last year of his life he was
several times prostrated by sickness, but rallying his
remaining energies, he went forth again and again to his
missionary labors. On April 8, 1839, he finished his
ministry at Mountmellick, where he that day preached
twice, once in the street. He returned to Dublin
to "sleep on his death-bed. "I have no fear of
death; the Spirit of God sustains me; God's spirit in
my support," was his dying exclamation. He died
May 14, 1839, in the hundredth year of Methodism.
"Gideon Ouseley," says Stevens, "will be forever rec-
ognised as the Protestant apostle of Ireland; it is hardly
too much to affirm that no one man has, directly and
indirectly, done so much for her deliverance from the
stupendous burden of superstition under which popery
has crushed her."
Besides his incessant missionary
was the author of several polemical publica-
tions, the most important of which was Old Chris-
tianity and Papal Notions. The priests could not re-
sume the conclusive arguments of this work; for its
educated author was an adept in the controversy.
Many popish laymen, popish schoolmasters, and even
candidates for the priesthood, were converted by it, and
not a few of these converts became preachers of the
Wesleyan body or of the Established Church. See
Stevens, Hist. of Methodism, vol. iii (see Index); Riley,
Life of Ouseley (London and New York, 1848); Arthur,

Otram (or Owtram), William, D.D., an Eng-
lish divine, was born in Derbyshire in 1625. He entered
Trinity College, Cambridge, in 1641, and upon the com-
pletion of his university course became rector of St.
Mary Woolnoth, London, which position he resigned in
1666; was appointed archdeacon of Leicester in 1669;
became prebendary of Westminster in 1670, and was
also for some time rector of St. Margaret's, Westminster,
the latter office he retained by his contemporaries.
Both the Churchmen and the Dissenters had great con-
fidence in his piety and his judgment (see Stoughton,
Eccles. Hist. [Church of the Restoration], i, 439).
He was well versed in rabbinical learning, and in the writ-
ings of the fathers. He died in 1679. His works are:
De Sacrificiis Libri duo, quorum altero explicatur om-
ia Judaorum nonnulla Gentium Profanorum Sacrifi-
cia; altero Sacrificium Christi contra F. Socinum
(London, 1667, 4to; Amster. 1688, 12mo); this was trans-
lated into English, with additional notes and indexes,
by John Waddington, under the title of Two Dissertations
on Sacrifices; the first on all the Sacrifices of the Jews,
with Remarks on some of those of the Heathens; the sec-
ond on the Sacrifice of Christ; in which the General
 Doctrine of the Christian Church on these Subjects
is developed (London, 1681, 4to; 1782, 8vo; 1833, 8vo).
"Some of the best discussions on the sub-
ject of sacrifice," says Orme, "are to be found in this
work; and in no work is the typical relation of the an-
cient sacrifices to the nature and design of the death
of Christ more satisfactorily explained. The English
translation is respectfully executed, and has made the
work accessible to all."
"This work," says Horne, "is of singular use to the divinity student, as affording, in
a comparatively small compass, one of the most mas-
terly vindications of the vicarious atonement of Christ;"
—Twenty Sermons preached on several Occasions (1652,
8vo, posth.; 2d ed. 1679, 8vo). These were edited by
Dr. J. Gardiner, bishop of London, who recommends them
highly in his preface. See Allibone, Dict. of Brit. and
Amer. Authors, vol. ii. s. v.; Orme, Bibli. Bibl. s. v.;
Horne, Intro. vol. ii.

Ouvrard, René, a French eclesiastic, was born at
Chamion about 1630. He was intimate with Jansenists
and other enthusiasts. He died in 1694. He pub-
lished treatises on music, theology, and mathematics.

Ovalle (sometimes written Ovagile), Alfonso
pe, a Jesuit of Spanish extraction, was born in Chili in
1601. He died in 1651. He published in 1646 a His-
1903061020orical Account of the Kingdom of Chili and the Jesuit
Missions in that country. See Backer, Biblioth. des ter-
virions de la Compagnie de Jésus (1864), 21 series, p. 451.

Ovampoland. See Ovampos.

Ovampos, or, as they are sometimes called, Otji-
herero, are Africans, seemingly the connecting link
between the Khoikhoi (q. v.) and Negro (q. v.). The
country they live in is called Ovampoland, and is sit-
uated in the region north of the great Namakauland
(q. v.), in South Africa, extending north to the Cunune-
River, and south to the parallel of 29° S. lat. The land
of the Ovampos is a much more fertile country than Na-
makauland, from which it is separated by a wide belt
of densely bushy country. It has but few rivers, and
these not of a perennial nature. About fifty miles from
the coast the country rises to a table-land about 6000
feet above the level, and then declines both east and
west. It is divided by the desert of the Kalahari and the
region of Lake Ngami. Many strong indications of copper-ore
are found in various places. The principal rivers, or,
rather, water-courses, are the Swakop, Kusi, and their
branches, which enter the Atlantic a few miles north of Walvis Bay. The other rivers in the south lose themselves in the sands. The climate is healthy, except near the coast, where fever in some seasons prevails. It seldom rains in the coast region, which is a very desolate one, and almost devoid of water. Thunderstorms are very violent in the summer season. All the large mammals are either in the sea or in the surrounding water. As the climate is dry, the land is sparsely populated. The people are mostly farmers and herders. The vegetation is sparse, consisting mainly of grass and scrub.

Omnipotence, as a concept, is a fundamental aspect of ancient Egyptian beliefs. In their polytheistic pantheon, each deity was associated with a specific aspect of nature or human activity. Omnipotence refers to the ability to control or influence events and actions without limitation.

An ancient Egyptian oven. That in which the mistress of a house baked her bread (Lev. xxvi. 26; and see Jahn. Bibl. Archetol. i, 213; ii, 182). This oven was built of brick, and was smears within and without with clay. A fire was kindled within it, and the dough was placed upon the side, where it baked, and was called נֶבֶק פֶּנֶק, meophē tannār (Lev. ii, 4). The οἰκήθειν of the Greeks appears to have been of a similar construction. Each household possessed such an article (Exod. viii, 9), and it was only in times of extreme dearth that the same oven sufficed for several families (Lev. xxvi, 26). It was heated with dry twigs and grass (Matt. vii, 30), and the leaves were placed both inside and outside of it. It was also used for roasting meat (Mishna, Tann. iii, 8). The heat of the oven furnished Hebrew writers with an image of rapid and violent destruction (Psa. xxi, 9; Hos. vii, 7; Mal. iv, 1). But the Hebrews did not always possess such an oven, and often seem to have baked their bread on the ground, which was first heated by a fire, or on thin plates of metal, and sometimes to have made an excavation in the earth, which answered the purpose (see Gesenius, Thesaur. s. v. "πάρνη"). See BAKE.

Among the modern Orientals the dough, when prepared, is not always baked at home. In towns there are public ovens and bakers by trade; and although the general rule in large and respectable families is to bake the bread at home, much bread is bought of the bakers by unsettled individuals and poor persons; and many small households send their dough to be baked at the public oven, the baker receiving for his trouble a portion of the baked bread, which he adds to his day's stock of bread for sale. Such public ovens and bakers by trade must have existed anciently in Palestine, and in the East generally, as is evident from Hos. vii, 4 and Jer. xxxvii, 21. The latter text mentions the bakers' street (or, rather, bakers' place or market), and this would suggest that, as is the case at present, the bakers, as well as other trades, had a particular part of the ba-
zaar or market entirely appropriated to their business, instead of being dispersed in different parts of the towns where they lived. See CRACKNEL.

For their larger operations the bakers have ovens of brick, not altogether unlike our own; and in large houses there are similar ovens. The ovens used in domestic baking are, however, usually of a more portable description, and are made of stone, earthenware, or copper, inside of which, when properly heated, small loaves and cakes are baked, and on the outer surface of which thin flaps of bread, or else a larger wafer-like biscuit, may be prepared. This is adapted to the nomad state of the people in general. It is generally implied by the Hebrew term awmar. It usually consists of a large jar made of clay, about three feet high, and widening towards the bottom, with a hole for the extraction of the ashes (Niebuhr, Des. de l'Arab. p. 56). Occasionally, however, it is not an actual jar, but an erection of clay in the form of a jar, built on the floor of the house (Wellsted, Travels, i. 350). The oven is frequently covered with a chimney made of mud, to create a draught.

Another mode of making bread is much used, especially in the villages. A pit is sunk in the middle of the floor of the principal room, about four or five feet deep by three in diameter, well lined with compost or cement. When sufficiently heated by a fire kindled at the bottom, the bread is made by the thin pancake-like flaps of dough being, by a peculiar knack of hand in the workman, stuck against the oven, to the height of a couple of inches, for a few moments, till they are sufficiently dressed. As this oven requires considerable fuel, it is seldom used except in those parts where that article is somewhat abundant, and where the winter cold is severe enough to render the warmth of the oven desirable, not only for baking bread, but for warming the apartment. See FURNACE.

Another sort of oven, or rather mode of baking, is much in use among the pastoral tribes. A shallow hole, about six inches deep by three or four feet in diameter, is made in the ground; this is filled up with dry brush-wood, upon which, when kindled, pebbles are thrown to concentrate and retain the heat. Meanwhile the dough is prepared, and when the oven is sufficiently heated the ashes and pebbles are removed, and the spot well cleaned out. The dough is then deposited in the hollow, and is left there over night. The cakes thus baked are about two fingers thick, and are very palatable. There can be little doubt that this kind of oven and mode of baking bread were common among the Jews. Hence Hezel very ingeniously, if not truly, conjectures (Real-Lexikon, s. v. Brot) comes the רדס ערב (rādās urba), Sept. seev yovavern, Vulg. castit velatum, hole-bread baskets, of Gen. xi, 16, which he renders, or rather paraphrases, "baskets full of bread baked in holes," not "white baskets" [see BASKET], as in the A. V., nor "baskets full of holes," as in our margin; nor "white bread," as in most of the Continental versions, seeing that all bread is white in the East. As the process is slower and the bread more savory than any other, this kind of bread might certainly be entitled to the distinction implied in its being prepared for the table of the Egyptian king.

There is a baking vessel called in Arabic ταζ, which is the same word (rayyūs) by which the Sept. renders the Heb. דם (mashabath), "pan," in Lev. ii, 5, etc. This leaves little doubt that the ancient Hebrews had this ταζ. It is a sort of pan of earthenware or iron (usually the latter), flat, or slightly convex, which is put over a slow fire, and on which the thin flaps of dough are laid and baked with considerable expedition. This mode of baking can only be carried out in this way at a time. This is not a household mode of preparing bread, but is one of the simple and primitive processes employed by the wandering and semi-wandering tribes, shepherds, husbandmen, and others, who have occasion to prepare a small quantity of daily bread in an easy, off-hand manner. Bread is also baked in a manner which, although apparently very different, is but a modification of the principle of the ταζ, and is used chiefly in the houses of the peasantry. There is a cavity in the fire-hearth, in which, when required for baking, a large, rude and hollow clay pot, a bough of broom, a plate of iron, or sometimes copper, is placed over the hole, and on this the bread is baked. See BREAD.

Another mode of baking is in use chiefly among the pastoral tribes, and by travellers in the open country, but is not unknown in the villages. A smooth, clear spot is chosen in the loose ground, generally in an old walled wall, not uncommon in the Eastern deserts and harder lands—being preferred. On this a fire is kindled, and when the ground is sufficiently heated the embers and ashes are raked aside, and the dough is laid on the heated spot, and then covered over with the glowing embers and ashes which had just been removed. The bread is several times turned, and in less than half an hour is sufficiently baked. Bread thus baked is called in Scripture יָכָה (yqāḥ), "cake" (Gen. xvii, 13; Ezek. iv, 12, etc.), and the indication 1 Kings xix, 6 is very clear, "cake baked on the coals" (coal-cakes), i.e. cakes baked under the coals. The Sept. expresses this word very fairly by ערבבים, paraves, pome subretens (Gen. xvii, 6; Exod. xii, 39). According to Busbequius (Itin., p. 86), the name of Hegath, which he interprets ערבבים, "cakes," was in his time still applied in Bulgaria to cakes prepared in this fashion; and as soon as a stranger arrived in the villages, the women baked such bread in all haste, in order to sell it to him. This conveys an interesting illustration of Gen. xvi, 6, where Sarah, on the arrival of three strangers, was required to bake "quickly" such ash-bread—though not for sale, but for the hospitable entertainments of the unknown travellers. The bread thus prepared is good and palatable, although the outer rind, or crust, is apt to smell and taste of the smoke and ashes. The necessity of turning these cakes gives a satisfactory explanation of Hos. vii, 8, where Ephraim is compared to a cake not turned, i.e. only baked on one side, while the other is raw and unripe. See Ash-Bread.

Overall, Joxus, an English prelate, was born in 1559, and, after a proper preliminary training, was educated successively at St. John's College, Cambridge, and at Trinity College, of which he was chosen fellow. In 1596 he was appointed regius professor of divinity, when he took the degree of D.D. and, about the same time, became a fellow of Christ's College of the same university. In 1601 he was preferred to the dignity of St. Paul's, London, by the recommendation of his patron, Sir Fulks Greville, and queen Elizabeth; and in the beginning of James's reign was chosen protonotary of the lower house of convocation. In 1612 he was made bishop of Lichfield and Coventry; and in 1618 was transferred to Norwich, where he died in May, 1619. He was buried in that cathedral where, lay undisturbed till the restoration of Charles II, when Cosin, bishop of Durham, who had been his secretary, erected a monument in 1669 to his memory. Overall is characterized by Wood as being the best scholastic divine in the English nation; and Cosin, who perhaps may be thought to rival him in that position, adds that he is himself a most learned prelate, and expressly declares that he derived all his knowledge from him. Bishop Overall is also extolled by Smith for his distinguished wisdom, erudition, and piety. In the controversy which in his time divided the Reformed churches about predilection and grace, he held the middle ground, and, as his biographer says, "he seemed to have paved the way for the reception of that doctrine in England, where it was generally embraced a few years afterwards, chiefly by the authority and in-
fluence of architect Laur. Overall had a particular friendship for Gerard Vossius and Grotius; and was much interested in the art of painting. He was one of the last great men to obtain it, so ill required. He labored heartily himself to accord the differences in Hol-

land, upon what is known by the name of the Quin-
quarticular controversy. Overall's chief work was the Catholic Church and the Kingdoms of the Whole World (London, 1690). This treatise was adopted by the

conventions of Canterbury and York, but was left unpub-

lished by request of James I. Overall's object in its compilation was to advocate the superior claims of the Catholic Church to the throne, and to claim for those who would place the episcopal office, as by divine right, superior to the throne. He also denies the Presbyterian claim of the superiority of the προφυσικος over the king by
divine right. He also teaches that "there is no more necessity of one visible head over the Catholic Church than of one visible monarch over all the world," and that "a government, which had originated in rebellion, ought, when thoroughly settled, to be considered as or-
dained by God, and as such to be obeyed by clergy and

lay.

Not having received the royal confirmation, the Congregational Church of London and of several other

places, yet it is certain that there is no room to doubt that it was designed to be received as an authentic exposition of the mind of the Anglican Church on the subjects of which it treats. This work, preserved in manuscript for eighty-four

years, was first given to the world by archbishop San-

croft in 1690, with the design of injuring the new gov-

ernment; but an important passage in it which had been overlooked reconciled William Sherlock to the oaths, and he no longer refused to take them. A new edition of the work was published in the "Library of Anglo-Catholic Theology" (1844). Bishop Overall also wrote Sententia de Prædestinatioane (London, 1651). He is besides named among the translators of the Bible, and as a writer of that portion of the Catechism of the Church of England which concerns the sacraments. For Overall's Notes on the Common Prayer, see Nichols, Commentary: for his remarks on The Nativity of Our Viable Head, see Wordsworth, Christian Institutions, iv, 135; and for his remarks On a Middle State, see Campbell, 

Doctrines of a Middle State. See also Biographical

Dictionary, s. v.; Allbon, Dictionary of British and 

American Religion, 1910. A. C. H. P. M.

astical Biography, i, 128 sq.; iv, 297 sq.

Overbagh, Peter A., a minister of the Reformed (Dutch) Church, was born in 1778. He studied the-

ology under Livingston, and was licensed to preach in 1808. From 1805 to 1806 he was stationed at Beth-

lehem and Cormyns, N. Y.; from 1806 to 1809, at Wood-

stock; from 1809 to 1817, at Woodstock and Flatbush (Uster Co.). After 1834 he also preached at Plattekill

station. He died in 1843. Through his influence the character of the community in which he spent his min-

istry was greatly changed. He organized a Church in Flatbush with a dozen members, and left it with three hundred, besides having formed a new organization near by. Overbagh's labors, though mostly obscure, resulted in many conversions, and he was regarded as an eminently useful and faithful man. See Corwin, Manual of the Reformed Church in America, p. 174, 175.

Overbeck, Friedrich, a distinguished German painter, to whom is justly awarded a large share of the merit for the movement in the early part of this century from which arose the modern German school of art, was born at Lubeck July 3, 1789. He began his studies as an engraver, and the drawings in his early period are adopted and continued to exist in carrying out cer-

tain notions of art, and the mode of studying it, essen-
tially different from those inculcated in the academy, he was expelled along with certain other students who entertained the same views, and in 1809 set out for Rome. There he was soon afterwards joined by the now world-wide renowned painters Cornelius and Schadow; and these three, animated with similar ideas, and mutually encouraging one another, laid the founda-

tion of the romantic school in Germany, and made taste for art in Europe at the present time. The old

German school of painting, partly under the influence of the dominant French taste, and partly guided by the maxims and practices of Mengs (q. v.), had been seeking inspiration almost exclusively from classic sources, and the romantic school grew up as a reaction from the later painters of Italy. But coincident with the cast-

ting off of the trammels of modern French criticism and ancient forms in literature, there had been growing up a desire for a return to a less academic or eclectic sys-

tem in art; and Friedrich Schlegel, a leading critic and advocate of the Romantic school in literature, was the

herald and prophet of the new school of national Ger-

man art. Overbeck was well prepared to become one of the advocates and propagators of these new ideas, and, together with his two celebrated friends and a host of other young artists of the new school, he threw all his entire devotion to the style of the Italian artists prior to the period of the Renaissance, particularly Fra An-

gelico (b. 1387; d. 1455), and manifested a strong aver-
sion to a dependence on the form of drawing in the style of Greek or classic art in works embodying religi-

ous subjects; although many of his compatriots—Cor-

nelius, for instance—modified or perhaps enlarged these ideas, and studied the works of Michael Angelo and those of Raphael's later style executed under the influ-

ence of classic art. Overbeck first became noted by a picture of the Madonna, which he exhibited in the Academy at Berlin in 1811. He was next employed, along with Cornelius and others, by the Prussian consular, general Bartholdi, to execute certain frescos illustrating the history of Joseph: the Selling of Joseph and the Seven lean Years being the subjects assigned to him. After completing these, he painted in fresco, in the villa of the marchese Massimi, five large compositions from Tasso's Jerusalem Delivered. In 1814 he and several of his artistic brethren abjured Lutheranism, and embraced the Ro-

man Catholic religion. In 1815 he completed Christ at the Foot of the Cross and the Martyrs, St. Jerome, which went so far to secure his great reputation; but his grand picture, Christ entering Jerusalem (about eight feet by five and a half), finished in the following year for the Marien-

kirche at Lubeck, was that which may be said to have established his fame: there can be little hesitation in saying that it created its era. It is not one of the great pictures that everyone respects; it is one of the grandest, and the only one that is one of the grandest, and indeed the only one that can be mentioned here, even if we had the materials for completing the list. Overbeck's chief work is a fresco at Assisi, The Miracle of Roses of St. Francis. His oil-pictures are inferior to his frescos, being dry and weak in color. His great picture, The Influence of Religion on Art, preserved in the Stadel Institute at Frankfurt, and well known from the engraving, is an admirable com-

position, and is indeed the most famous specimen of his powers as a painter in oil-colors. In this vast pro-

duction he has sought to symbolize in a single design the development of art—inciting man to worship, music, sculpture, and painting—under the influence of Chris-

tianity. Christ in the act of blessing, and the Virgin recording the Magnificat, occupy the middle of the up-

per compartment of the picture, while the saints and prophets, the Old and the New Testament personages, are assembled around, and the representatives of the several arts fill the different stages or compartments.
OVERBERG

into which the picture is divided. It is a work full of learning, thought, and fine feeling, but one which to un-
cultured English is to do full justice to. He stood an
artist to study from the artist's own point of view, and with
a clear conception of his central idea—to an ordi-
nary spectator by no means an easy matter. He ex-
ecuted a great many drawings remarkable for high feel-
ing, most of which have been engraved. One of his best
et engravings, a delicate design of which was done
by Delaroche, delicately engraved in the line manner, is
a work of high excellence. He died at Rome Nov.
12, 1869, and was buried in one of the churches of
the Eternal City in tribute to his eminent services to
the Church and to the world of art. His work was
marked by unflagging invention, great refinement and delicacy
of expression, considerable power of drawing, and
a style of composition which presents his design with the
greatest conceivable perspicuity. Where there is ob-
scurity, as there sometimes it is, it rests in the idea and
not in the manner of its presentation. But his treat-
ment of his themes is essentially subjective: in other
words, he seems to have always sought to carry out
Schlegel's principle that in all Christian themes the
measure must be spiritual and symbolic rather than
historical or realistic. He sought to display a certain
devotional beauty and simplicity rather than brilliance or
brilliance of style. This spirituality and symbolism of
style and thought rise in the works of Overbeck not in-
frequency into grandeur, and are always impressive;
but often, even in his hands, they run into coldness,
otherwise than artistic refinement. But the nobility of
its aim, the great artistic knowledge and power, the
fine poetical genius which pervades almost every pro-
duction of his pencil, and his singleness of purpose,
must always secure for the name of Friedrich Overbeck
a high place in the history of art, and one of the very
highest among the painters of the 19th century" (Eng.
Cyclop.). See Nagler, Künstler Lexikon, s. v.; Raczyński,
Histoire de l'Art Allemand modern.; Brockhaus,
Conversations-Lexikon, s. v.

OBERBERG, BERNHARD, a distinguished German theologian and writer, was born at Hockel, near Osnau-
bridge, about 1757. In 1779 he began to study theology at Münster, where he was ordained priest in 1780, and appointed professor in the normal school of Münster in 1783. In 1789 he became intimate with princess Amelie Gallit-
zh (q. v.), and this friendship lasted until death. In 1809 he was appointed regent of the episcopal seminary,
and in 1812 he was installed as coadjutor in the Consistory in Münster, Nov.
9, 1826. He was very active in promoting the cause of education in the diocese of Münster. His principal works are, Auseinandersetzung mit der Scholastie (1795);—
Die Bischofsbriefe (1796);—Religionshandbuch nebst den gesammten Kutschesien (1817);—several eds.). His biog-
ography was written by J. Neurmann (Münster, 1829)
and by Krabbe (ibid. 1832; 2d ed. 1846). See Pierer,
Universalllexikon, xii, 529; Herzog, Real-Encyclop. x,
743 sq. (J. N. P.)

OVERBECK, Sir Thomas, an English author who
flourished in the second half of the 17th century, but
of whose personal history we know scarcely anything, is
named as the author of A true and perfect Account of
the Execution, Trial, Condemnation, and Execution of Joan Pery and her two Sons for the supposed Murder of
William Harrison, written by one of Thomas Shirley,
M.D., in London (1678):—Querries proposed to the seri-
ous Consideration of those who impost upon oth-
ers in things of divine and supernatural Revolution, and
proacute any upon the Account of Religion; with a De-
sire of their candid and Christian Resolution thereof
(1677)—in answer to criticisms on the above, Ratiosci-
urnum Veruculum, or a Reply to Atias Otaeinum, etc.

OVERSEER (usually _UID, pakt, 'visitor', Gen.
xxix, 4; xli, 34; but Piel of TO, to preside, in 2
Chron. ii, 2, 18; xxxiv, 13; 's, in Prov. vi, 7;
Owen, Griffith, a minister of the Society of Friends, flourished towards the close of the 17th century. He died in 1717. As a minister of the Gospel, he was lively and pathetic; as a member of religious society, he was active and exemplary. William Penn, in one of his letters, mentions him as “tender Griffith Owen, who sees and feels.” For some years he was an active member of the government, and was a counter-minister, but his chief occupation was still to study medicine, and he was eminently useful in the newly settled province. He was universally beloved through life, and lamented at death. See Janney, Hist. of the Friends, iii, 67, 187.

Owen, Henry, M.D., a learned divine of the Church of England, was born in 1716, near Dolgelly, in Merionethshire. He was educated at a Grammar school of Ruthin, in Wales, whence he was removed to Jesus College, Oxford. His attention was primarily directed towards the medical profession; but, changing his purpose, he took orders, and, after various preferments, became in 1760 rector of St. Oure, Hart Street, and vicar of Edmonton, in Middlesex. In 1775 he also obtained the living of Edmonton. He died in 1795. He published, The Intent and Propriety of the Scripture Miracles, a most valuable work.—Observations on the Four Gospels:—Directions to Students in Divinity:—Inferences from the State of the Septuagint Version of the Old Testament:—Critica Sacra, or a Short Introduction to Hebrew Criticism:—Collatio Codicis Cotonicani Nepos, cum editio Romana a vno clarissimo Johanne Ernesto Grabe, deemed the most ancient manuscript in Europe, Critical Dissertations on several passages of Scripture, and quotations used by the Evangelical Writers. “All of Dr. Henry Owen's works,” says Orme, “are characterized by sound criticism and laborious research. Bishop Marsh, who says that he is an excellent critic, observes that his Historical and Critical Account of the Septuagint Version could be read by every man who would be acquainted with the history of that version” (Hibb., Hibb., [1839] p. 187). See Nichols, Lit. Anecdotes; Allibone, Dict. Brit. and Amer. Auth. s. v.; Jones, Christian Biogr. s. v.; Hook, Eccles. Biogr. s. v.

Owen, James, a minister of the Society of Friends, was born Feb. 18, 1822, near Caesar’s Creek, Ohio, and was religiously trained. In 1826 his family removed to Hendricks County, Indiana, where he learned something of the difficulties and privations incident to frontier life. He was recorded as a minister Sept. 8, 1849. He labored in Iowa in 1849, visited the yearly meetings of Philadelphia, New York, and New England in 1850, and returned again to Iowa. In 1854 he again visited Iowa, and, in view of the rapid emigration of Friends to that state, left his home, then in Howard County, Indiana, and settled at Bangor, Iowa, in 1855. Here he was subjected again to many privations. Afterwards he visited the Friends of Indiana, Ohio, Maryland, and North Carolina, and labored among the freedmen in Kentucky, Tennessee, and Arkansas. March 16, 1869, he went on a visit to the Society of Friends and others in England, Ireland, and some parts of the Continent. He returned to America, and in 1870 returned to the course Board more than once the yearly meetings, and appointed meetings within the limits of Randolph and other counties, as many as seven per week. The climate of this latitude proved detrimental to his health, and an attack of typhoid pneumonia rendered him seek shelter for a time. He died Jan. 2, 1871, and was interred in the Friends’ cemetery at New Providence, Iowa. James Owen was eminently successful in his unusually abundant ministerial labors. The weightiness of his spirit, the edifying manner in which he preached, and the solemnity of his appeals, together with his sincere kindness and genial ways, gave him a place in the hearts of all, both old and young, within the scope of his acquaintance. See Friend’s Review (Philadelphia), Nov. 2, 1872.

Owen, John (1), an English divine of the Puritan age, and most conspicuous among the English Congregationalists of his day. Descended from an ancient and honored family in Wales, he was born (1616) at Statham, near Oxford. His father, Henry Owen, was an earnest and laborious minister in the Church of England, but a Nonconformist. At the age of twelve he was entered a student at Queen’s College, Oxford, “here he was in almost all things still a believer, though not a preacher,” and his progress in all the departments of learning were such as are not often equaled by maturer minds. From the first he seems to have had in view the clerical profession; but in the early years of his university life he was induced to think of the ministry, which was afterward decided by no better motive than ambition for eminence and power in the Church of England. In the progress of his studies he was shaken by the Spirit of God to higher thoughts and aspirations; and he began to work with religious conscientiousness, seeking to do God’s will, though he had not yet attained the full freedom of the sons of God. The Puritan habit of thinking and the Puritan spirit, which Owen had inherited from his father, brought him into collision with certain ritualists whom Laud, then chancellor of the university, was forcing upon Oxford, and which to the evangelical party of those days must needs have appeared to be the most odious superstition. He was compelled to choose between a compliance with the new regulations and a relinquishment of his place and hopes in the university, he chose the latter. He was then twenty-one years of age, having commenced master of arts in 1636. A few years before, he, having just been recently ordained to the ministry of the Church of England. That confession of Puritanism cost him (as he knew it must) the favor of an uncle in Wales who had chiefly supported him, and whose estate he was expected to inherit. At that time the conflict between the king Charles I and the English people as represented in Parliament was impending, and men everywhere, young and old, were taking sides. Owen had taken the side of reformation in the Church and of chartered liberty in the state; and all who knew him knew where he would be found. To such a man, so long as Laud might remain at the helm of the ecclesiastical establishment, there was no prospect of preferment. Many a Puritan clergyman in those days found refuge and employment as chaplain or tutor, or both, in the family of some nobleman or gentleman favorable to that party. Such a family was that of Owen’s uncle. He was employed at the outbreak of the civil war the nobleman in whose family he was then employed took arms for the king, while he himself declared for the Parliament, and not only lost his place, but was disinherited by his Welsh uncle. He then returned to Oxford, and in 1652 had the honor of going to London, which had become the metropolis of Puritanism. His religious life at the university and in the country had been earnest and resolute, but had not been enriched with the joy of salvation. He had not found in his own experience an assured peace with God through Christ. But it happened to him, not long after his removal to London, that having gone on a Sabbath morning to hear a celebrated preacher, he was disappointed by seeing a stranger in the pulpit. The unknown preacher’s text, “Why are ye fearful, O ye of little faith?” was so appropriate to Owen’s habit of mind that it commenced his most earnest and persevering study, and the sermon that followed led him into the light. Thenceforward he knew how to rest upon the Gospel with a cheerful and sustaining confidence. His removal to London seems to have been with a view to the publication of a work on the chief theological controversy of that age. His Display of Arminianism, published in 1642, was an elaborate confusion of the doctrines which Laud and his adherents were introducing into the originally Calvinistic Church of England, and which were regarded on all sides as having more than an accidental connection with the party of Arminianism in the state, as well as with tendencies Romeward in the Church. The learning and ability of that book,
written by a young man of twenty-six years, com-
manded its author to the Parliamentary committee for
purgation of the Church of scandalous ministers, and thus
it was the occasion of his being introduced to a pastoral
charge. The incumbent of the parish church at Ford-
ham, in Essex, having been found "scandalous," the
living became vacant. Owen was recommended to
supply the vacancy. In that retired parish his abil-
yity as a preacher, and his diligence in visiting the
families and catechising the children of his flock, gave
character and success to his ministry, so that in 1646
(when he was thirty years of age) he was called to
preach before the Board of Ordinances at one of their
monthly fasts. Not far from that time the incumbent of
Fordham, whose place he was occupying, having died,
the right of presentation to the living was exercised by
the patron, and Owen was displaced. Immediately the peo-
ples of Coggeshall, in the same county, invited him to
become their minister; and by the Puritan earl of War-
wick, patron of that parish, he was presented to the liv-
ing. The invitation came from a people who had been
trained in Christian knowledge and duty by faithful
ministers, and who called him because they knew him,
and used his services. The presentation without pre-
-ntation that the parish had become so competent to
choose; and his confirmation of the people's choice,
when they chose so wisely, was a matter of course. Till
this time Owen had accepted, in a general way, the
Puritanist creed; but he had not then been connected
with classical and synodical courts; but in connection with
his removal to Coggeshall he began to act more definite-
ly upon those principles of ecclesiastical polity which, in
that age and country, more than now and here, dis-
tinguished the Independents or Congregationalists from
the Puritans of the Presbyterian party. Long after-
wards, reviewing what he had asserted and practiced in
the administration of his parish at Fordham, and de-
scribing the change in his position, he said, "I found
that my principles were far more suited to what is the
judgment and practice of the Congregational men than
to those of the Presbyterian." Yet he had considered
himself a Presbyterian, for he had not consciously ad-
vanced beyond the position of his Puritan friends. His
acquaintance was not with any of the ministers or of
the people who held "the Congregational way," but
wholly with those of "the Presbyterian way." When
the question between those two parties was becoming
the great question in England, he set himself "serious-
ly to inquire into the controversy." After reading
much of what had been written on both sides, he pro-
ceeded to the examination of the question, which had
been in others controversies. He "took under peculiar
consideration and examination" the work "which
seemed most methodically and strongly to maintain
that which was contrary," as he thought, to what was
then his own persuasion. The book thus selected was
from New England—John Cotton's book of The Keys; and
to the "examination and confutation" of that book
he addressed himself "for his own particular satisfac-
tion." His own account of the result is, "Quite beside
and contrary to my expectation, at a time and season
when I was engaged in the work of a preacher in this
world, without the knowledge or advice of any
conference with any one person of that judgment, I was
prevailed upon to receive those principles which I had
thought to have set myself in opposition unto." He
had published, while at Fordham, a tract entitled The
Duty of Pastors and People Distinguished. His first
publication after coming to his new charge was Eshkol,
or Rules for Church Fellowship; and thenceforward he
found himself among the champions of Congregational-
ism, or Church independency against the theory of a
National Church under a National Church government.
Yet his mind and heart were always so much
more upon great questions in theology, and upon the themes
of Christian experience and Christian living, than upon
questions of Church polity. His Eshkol was a simple
tract for use in his own parish; but the more arduous
labor of his mind and of his pen, while he ministered to
that congregation of two thousand souls, appears in
other publication. Salus Electorum, Sanguis Jesu, or
the Death of Death in the Death of Christ, a volume
of more than 300 pages, quarto, was another of his battles
against the Presbyterians. About this time Eshkol,
having become a principal seat of the war, Fairfax,
the chief commander of the Parliamentary forces, had his head-
quarters for a while at Coggeshall during the siege of
Colchester, and Owen, who seems to have served tem-
porarily as his chaplain, became one of his friends. Af-
ster the fall of Colchester and the Commons of the Pre-
parliament committee who had been held captive there
(which virtually ended the war in England), he preached
a Thanksgiving sermon to the victorious army, and an-
other, at another place, to the committee in celebration
of their deliverance—the two sermons from the same
text, and so connected that they were published as one
discourse. At the age of thirty-two years he had at-
tained the highest rank among the preachers as well as
among the controversial theologians of his generation.
A few months later he was required, at very short no-
tice, to go to London as one of the representatives in
Parliament for his county. He had been a member of
that body before in the reign of Charles I., but a careful reading of it will show that while the
preacher did not find himself called to sit in judgment
on the High Court of Justice, or to pronounce a sentence
of approval or disapproval on what that court had done,
he did not fear to teach that inasmuch as kings have
their power from the formal or informal consent of the
people, and inasmuch as the people are therefore held
responsible in God's providence for the crimes of those
whom they permit to rule them, kings are of right re-
 sponsible to the people whom they rule. To the ser-
mon, as published by request of Parliament, he appended
a most timely Discourse on Toleration, maintaining
that religion, as such, does not come within the prov-
ince of the magistrate, and that, therefore, the state
ought not to concern itself with the suppression of any
religious error which does not directly assail the founda-
tions of society or the public peace. At the moment
when the party with which his interests were identified,
and of which as a religious party he had become a lead-
er, was wielding the supreme power, he demanded
Parliament liberty for all to worship God according to
their consciences. Less than a year after this, he had
been again called to preach before Parliament, the
principal officers of the army being also present,
among whom was Cromwell, then lately appointed
lord-lieutenant of Ireland. That was his sermon on
the shaking of heaven and earth, from Heb. xii. 27.
The next day Cromwell met Owen for the first time,
and, immediately taking him aside, announced his in-
tention with regard to Ireland, and invited him to go as
chaplain, and to aid in reforming and restoring the Uni-
versity of Dublin. Yielding to the advice of brethren
in the ministry, he declined to be the servant of the great chief,
whose final authority was equivalent to that of God;
he left his parish for the time. While preparations for
the expected campaign were in progress he had the op-
portunity of preaching on another memorable occasion
before Parliament, the council of state, and the council
of the army, the occasion being the first regular military
service when the attempt at military revolution by the Level-
lers had been suppressed. Going to Ireland, he remained
in Dublin preaching to attentive multitudes, investigat-
ing the affairs of the university, and devising measures
for its benefit. Returning with Cromwell to England, he
was again summoned to preach before Parliament, the day
of national fasting. In consequence of his repre-
sentations and appeals on that occasion, seconded as
they were by Cromwell, the Parliament passed an ordi-
nance for the encouragement of religion and learning in Ireland. Certain lands were appropriated to the support of Trinity College, to the founding of another college in that university with maintenance for teachers, and to the establishment of a free school with support for masters and scholars. At the same time six of the most acceptable preachers in England were sent over to give reputation to the restored university, and they, till the provided endowments should become productive, were to be supported from the public revenue. So conscious had Owen been in connection with public and private patronage, and in his judgment he was not excelled in the lord-general into Scotland, where Presbyterianism had anointed the second Charles for king, and was in arms against the commonwealth of England. Accordingly he was with Cromwell through that strange campaign in which sermons and theological disputations alternated with sieges and cannonading. Returning once more to his home and his parochial work, he was soon appointed dean of Christ Church College at Oxford, his great friend Cromwell having been already made chancellor of the university. The next year he became Rector of Oxford, and the chief responsibility for the welfare of the university came upon him. Owen's administration at Oxford was perhaps the most active—certainly not the least useful—period of his life. The university had been brought almost to ruin by the long war, Oxford being converted into barracks and military storehouses; the university was overwhelmed with debt; and the students, diminished in number, were characterized more by insubordination and licentious behavior than by diligence in study or by generous aspirations. To Owen was committed the public work of raising the university from its low estate, and of making it, more than it had ever been before, the seat of learning and of religion. He restored order and salutary discipline. He gathered about him men conspicuous by their ability, such as John Howe, Charnock, Thomas Goodwin, Theophilus Gale, Pocock the Orientalist, and Ward the mathematician—men not of the Independent party only, but of various party connections or of none. His government, severe towards licentious practices, was tolerant of honest differences; he conciliated the Presbyterians by bestowing upon them a seat in the university, and he had him as his patron and patron of which he was officially the patron; and, at a time when the use of the old Book of Common Prayer was regarded by law as proof of hostility to the existing government, he silently permitted a meeting of Episcopaliens every Lord's day hard by his own lodgings. So manifest was the revival and prosperity of learning there that, after the restoration of Charles II, even the enemies of Puritanism were compelled to acknowledge the fact. Clarendon's reluctant testimony for the university as governed by Owen is, "It yielded a harvest of extraordinary good. He taught, enlightened, and comforted all parties; and many who were wickedly introduced applied themselves to the study of learning and the practice of virtue; so that when it pleased God to bring king Charles II back to his throne, he found the university abounding in excellent learning, and little inferior to what it was before its desolation." While thus preserving the university, Owen never intermitted his work as a preacher, nor was he relieved from the responsibility of advising those in whose hands were the interests of the commonwealth. It is difficult to see how even he, under the best benevolent, could not have desired the welfare of the church. But during that period many of his most elaborate and learned treatises were published—some in Latin, others in English. Owen's retirement from the vice-chancellorship followed soon after the crisis at which Cromwell found himself constrained to decline the title of king, offered to him by the Parliament as a means of restoring the ancient forms of government under a new dynasty. Owen opposed that movement, and was the author of the petition which was presented to the protector in the name of his early and best friends, and which overruled in his own hand were sent over to gain the courts over him, and with convincing him, that though governing with more than kingly power, he could not assume the kingly name without the ruin of the "good old cause." Cromwell, invested with new dignity in the state, transferred the chancellorship of Oxford to his own Richard, who appointed a new vice-chancellor. Owen remained in the deanship of Christ Church College till a few months before the restoration of the Stuart monarchy. From Oxford he retired to his native place, where a Congregational Church, previously gathered by his ministry, received him as its pastor. But the suppression of such congregations, by an Act of Parliament forbidding more than five persons to meet for worship in any unauthorized place, was an early consequence of the restoration; and thenceforward his preaching to little secret assemblies was more and more onerous. The jurisdiction grew less violent, was always in violation of law. In 1663 he received, but for some unrecorded reason did not accept, an invitation to New England. The First Church in Boston called him to become the successor of John Cotton and John Norton, and the colleague of Increase Mather. For John Winthrop's successor, his influence was not, as was confidently expected. When Charles II, in 1671, proclaimed his "declaration of indulgence," virtually abrogating those acts of Parliament which inflicted penalties on Roman Catholic recusants and Protestant dissenters, there was a measure of freedom which Owen desired the state to use. He began to preach openly in London. Under his ministry a Church was constituted—the same which, in another generation, enjoyed the pastoral ministrations of Isaac Watts. He was still recognised as the leading man of the Independents; and, though under the ban of the law for his nonconformity, he was widely honored, and had powerful friends even in the House of Lords. On one occasion, being at Tunbridge Wells, when the king and the duke of York (afterwards James II) were there, he was invited to the royal tent; and Charles talked freely with him about the laws against dissenters. Afterwards, at London, the king invited him to repeated interviews on the same subject, and even intrusted him with a thousand guineas for the relief of suffering Nonconformists. Of course it was well understood, all the while, that the king's sympathy for conformity did not extend to the religious nonconformist Romanists. Those latest years of Owen's life were in one respect the most productive. Persecuted or tolerated, worshiping in secret conventicles or openly preaching the Word, he seems to have been always writing, and the demand for his books seems to have been constant. His greatest and best remembered works (of which the most voluminous is his Exposition of the Epistle to the Hebrews) are the produce of those years. His last work (destined to be posthumous) was Meditationen s the Glory of Christ, and the first sheet of which appeared in 1699. In it he alleged that he was to see that "Glory" face to face. His death took place at Ealing, near London, Aug. 24, 1688. Eleven days afterwards a procession of more than sixty noblemen in carriages drawn by six horses each, and of many others in mourning coaches and on horseback, followed his remains along the streets of London to their burial in Bunhill-fields.

Many of Owen's works have been often reprinted, and are among the classics of English religious literature. A collected edition of all his works in twenty-four volumes, the first book of which was issued in 1749, and a second volume by William Orme, was published at London in 1829. Another edition, in twenty-four volumes, carefully edited by the Rev. William H. Goud, and including a Memoir by the Rev. Andrew Thomson, was published at Edin-

Owen, John (2), a divine of the Church of England, was born in London, about 1755, and received his education at St. Paul's School and at Cambridge. Having taken orders, he became a popular preacher at Fulham, and obtained from bishop Porteus the living of Paglesham, in Essex. Dr. Randolph, the successor of the bishop in the see of London, insinuating upon Mr. Owen's residence in the deanery, was able to inaugurate the curacy of Fulham, whereupon the inhabitants of the parish presented him with a purse of near £700. On the institution of the British and Foreign Bible Society he became one of the secretaries, and for eighteen years was the most active of its members. He died Sept. 26, 1822. Besides various tracts and sermons, he was the author of The Retrospect, or Reflections on the State of Religion and Politics in France and Great Britain:-The Christian Monitor for the Last Days:-The Fashionable World Displayed: -Vindication of the Bible and Its History, and was a target in different parts of Europe. See Allibone, Dict. of Brit. and Amer. Auth. s. v.

Owen, John Jason, D.D., LL.D., a noted American Biblical scholar and educator, was born at Colbrook, Conn., August 1808. While very young, although surrounded by unfavorable circumstances, he devoted himself earnestly to study, more particularly with a view to the mastery of the ancient languages. His early life, especially, was characterized by remarkable perseverance. Without aid, except that furnished by his own mind, he undertook the study of Greek, and it is noteworthy that difficulties which seem as if they could not be successfully encountered even with the aid of an instructor he met and conquered solely by the power of his will. His preparations for the academical course he began under the tutorage of the Rev. Dr. Eliasha Yale, of Kingsborough, N. Y., to which place his parents removed about that time. Shortly afterwards he went to Middlebury College, and graduated in 1818. He then entered the theological seminary at Andover, Mass. After spending the requisite time in the last-named institution, he became a minister of the Presbyterian Church, to which body he rendered very efficient and acceptable services. Though he never accepted the pastorate of any congregation, he was accustomed to preach from time to time in the different churches throughout New York, in which city he had taken up his residence after graduation, or wherever else he might be spending his time. He was a very prominent member of the New York Educational Society, and also of the Young Men's Educational Society, and under his private and public instruction many young men have become qualified for the ministry of different religious denominations. At the opening of the Cornell Institute he became its principal. While there he edited his Xenophon's Anabasis, which was the first Greek text-book with English notes that was published in the United States. Under his direction also were published a Greek Reader, Xenophon's Cyropaedia, the Odyssey and Iliad of Homer, and a number of other works. These books attracted considerable attention and were warmly welcomed by all scholars. Prof. L. Schmitz, himself a celebrated Greek scholar, wrote to Owen from Edinburgh, in 1850, congratulating him on his success as a translator. It was a frequent regret of Prof. Owen's that the Greek language is too exclusively cultivated in schools from classical sources; and to remedy this defect he edited the Acts of the Apostles in the original for students, appending a lexicon for the same purpose (N. Y. 1859, 12mo). His most extensive literary undertaking was his Commentaries on the Gospels, the first volume of which appeared in 1857. Two volumes have since been printed, and manuscript for a third was in readiness for the printer at the time of his death, and was afterwards published. The three volumes are known by the title of A Commentary, Critical and Practical, on the Gospels of Matthew, Mark, and the Acts (N. Y. 1860, and often, 12mo). This work deservedly ranks among the very best for popular use which the scholarship of our country has produced. It is lucid, thorough, and evangelical. It meets fairly and fully every difficulty which arises. There is no parade of learning in it, but the results of extended reading and a careful and thorough independent investigation are given. The critical part of the work is beyond all doubt as able and satisfactorily performed as in any similar American or English work. In the year 1848 Dr. Owen resigned his position in the institute in order to take the chair of professor of ancient languages in the New York Free Academy, of which he became vice-principal. In the year 1866, the name of the institution being changed to that of College of the City of New York, he became vice-president of the faculty; and in this sphere he worked faithfully until about two weeks before his death, which occurred on Sunday, April 18, 1869. Dr. Adams conducted the funeral services. The presence of a large number of eminent clergymen, the most learned men and prominent citizens of the United States, indicated the high estimation in which he was so esteemed. As a man he was well known and highly esteemed by the learned men of England, Scotland, and America. He ranked as one of our best Greek scholars and most industrious of commentators. As a Christian, all who came in contact with him felt the influence of his holy life, and could not but recognize in him the love of that Saviour he endeavored to persuade others to follow. As an instructor, he was faithful, sympathizing, and kind almost to a fault. As a man, he was genial in his temper, earnest in his endeavors, and won the love of a large circle of New York's most distinguished residents.

Owen, Lewis, an English theologian and writer, was born in Merioneth County in 1572. After passing some time with the Jesuits in Spain, he left them to enter the world, and was ever after a bitter opponent of the society. He wrote The Running Register, recording a true Relation of the State of the English College, in Paris, with the History of the College, and Foreign Parts (1576); the most curious parts of it are to be found in Retinexta, i, 141: —The Unmasking of all Popish Monks, Friars, and Jesuits (ibid. 1629, 4to):—Speculum Jesuismum, or the Jesuit's Looking-glass (ibid. 1629, 4to); reprinted in Edward Williams, Speculum Spiritual. See also Price, General Biog. Dict.; Hoefer, Nouv. Biog. Générale, xxxiii, 1005; Hook, Ecles. Biog. s. v. (J. N. P.)

Owen (or Owing), Richard, was the first native American Methodist preacher, though for many years he acted only as a local preacher. He was converted under the preaching of Robert Strawbridge, in Baltimore Co., Md., and is described as "a man of a respectable reputation, good natural parts, and of considerable utterance, plain in his dress, plain in his manners, industrious and frugal." He was long the most effective co-laborer of Strawbridge, travelling the country in all directions, founding societies in Maryland and Virginia, and opening the way for the economic itinerants. He thus secured the pre-eminent position as the first native standard-bearer of the Methodist movement in the western hemisphere. Owen's temperament was congenial with that of Strawbridge, whose missionary activity he emulated, and whose funeral sermon he preached. Though he never lived with the grace of a large family, he often left wife and children and a comfortable living, and went without recompense to distant parts to publish the Gospel. In 1772 he was with Strawbridge stationed in Frederic Co. His name was printed in the
Minutes, but it is not said that he was received into the travelling connection until 1786. At the time of his death he had been preaching fifteen or sixteen years, and was stationed in Fairfax Co. He died at Leesburg in 1787. See Bennett, "Memorials of Methodism in Virginia," p. 260; Stevens, "Hist. of the M.E. Church," vol. 1.

Owen, Robert, a noted socialist and philanthropist, was born at Newton, Montgomeryshire, North Wales, in 1771. His parents were poor, but they gave him a good elementary education. Until he was fourteen, he delivered newspapers' papers' paupers' papers' in the little town and at Stamford. He then procured a situation in London, where he showed such talents for business that at eighteen he became a partner in a small cotton-mill. He was successful in this enterprise, and then removed to the Chorlton Mills near Manchester, where he was equally prosperous. In 1801 he married the daughter of David Dale, a manufacturer of Gloucester, who had established in 1784 a cotton-factory near Lancaster, now New Lancaster, on the banks of the Clyde. In this factory not only cotton-spinning, but other commodity spinning was established. It was visited at one time as many as 4000 persons were settled there in connection with it. Shortly after his marriage, Owen sold the Chorlton Mills and undertook the management of New Lancaster. The latter establishment had been a centre of disorder and immorality; but the introduction of morals and public order, under the new proprietor made a rapid change in affairs. The little colony established at Lancaster prospered both materially and morally. As a commercial speculation it was in a high degree successful; but the most remarkable feature was the benevolent care with which Mr. Owen attended to the welfare of the persons employed and to the education of their children. He here introduced many improvements, since adopted in other schools, so as to make instruction at once attractive and useful, and founded, if not the first, one of the earliest of the infant schools. Besides the ordinary routine of education, the children—of whom there were at one time 600—were taught various practical arts, and were instructed in singing and dancing, care being also taken of their health by building well ventilated school-rooms and providing for active exercise. The reputation of the establishment spread rapidly; it was visited by persons of rank and influence, giving to Lancaster a European celebrity. In 1812 he published his "New View of Society, or Essays on the Formation of Human Character," and afterwards a Book of the New Moral World, in which he predicated the extinction of moral character and the "New Socialism." The unfavorable reception which his system received among the English clergy induced him in 1823 to relinquish his connection with New Lancaster and to betake himself to the United States. About 1824 he purchased from a Pennsylvania German colony, under Frederick Rapp, a tract of land on the Wabash, in Posey Co., Indiana, and founded the settlement of New Harmony, where he endeavored to carry his theory of the co-operative system into effect. Largely composed of vagabonds and adventurers from all nations, this colony persisted to Owen's death. He died in New Harmony, Indiana, in 1858. In 1827 he married a New England girl, who lived with him until his death. They had seven children, the last of whom was born in 1841. In 1835 he married a New England girl, who lived with him until his death. They had seven children, the last of whom was born in 1841.

Owen insisted on an absolute equality in all rights and duties, and the abolition of all superiority, including alike that of capital and that of birth. Being desirous of improving the condition of the industrial classes, he speculated on the causes of evil, and approached the subject from the extreme sensational point of view. He regarded the power of circumstances as controlling, and he was led to consider action as simply obedience to the stronger motive. He thus introduced the idea of physical causation, and the will, and made the rule of right to be each one's own pleasures and pains. He believed that man is born a passive creature with certain susceptibilities, and that external circumstances acting on these susceptibilities of necessity give rise to our dispositions, and through them form our whole character and the character of an individual is formed for him, and not by him. This doctrine, which is the most extreme development of philosophic necessity that the present age has known, was doubtless in great part the result of a too exclusive experience with that which exists chiefly as the appendages and machinery of commercial life, and which is made up of those whose poverty and ignorance unite to render them to an unusual degree passive instruments. As a philosopher...
Owen must be condemned; but whatever may be thought of the opinions he held, there can be little doubt of his extreme benevolence, his moral integrity, and his executive ability, more especially as displayed in his early life. His publications are, A New View of Society (Lond. 1819).—Observations on the Effects of the Mopther's Rights Question (1832).—Adresses to the Inhabitants of New Lanark (Lond. 1816).—Tracts Relative to the New Society (1817).—Two Memorials in Behalf of the Working Classes:—Discourses on a New System of Society, with an Account of the Society of New Lanark (Hibbert, 1825).—Robert Owen's Opening Speech, and his Reply to the Rev. Alexander Campbell: the Debate on the Evidences of Christianity, the Social System, and Socialism, between Mr. Owen and Mr. Campbell (Bath, 1829).—Mr. Owen's Memorial to the Republic of Mexico (Cincinnati, 1829).—Book of the New Moral World (Lond. and N.Y.).—The Resolution in the Mind and Practice of the Human Race (Lond. 1849). See Packard, Life of Robert Owen (Phil., 1866); Martin, Biographical Sketches; A. J. Booth, Robert Owen, the Founder of Socialism in England (1869); Noyes, Hist. of Prophecy; Kohn, History of the British Freethinkers, vol. v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.; Drake, Dict. of Amer. Biog., s. v.; Hodge, New Biog. Générale, s. v.; Farrar, Critical Hist. of Free Thought, p. 201 sq.; Morely, Hist. of Modern Philosophy, p. 293 sq.; New-Englanders, 1866, p. 599; Amer. Free思. Rev. April, 1866, p. 544.

Owen, William, a Congregational minister, was born in Pembroke, Herefordshire, Wales, Oct. 23, 1844, and was educated at the Congregational Memorial College, Brecon, from 1866 to 1870. He was ordained for the ministry at Coalburgh, Ohio, in September, 1870, and became pastor of the Congregational society in that place. Too severe application to his studies in college and overwork in his pastoral labors soon wore on his constitution, and he died of consumption Jan. 14, 1875, on his first charge.

Owens, Thomas, a minister of the Methodist Episcopal Church, South, was born in South Carolina Jan. 8, 1857, and was the son of Thomas and Frances Owens. His parents took him to the Natchez country when young, and settled in what is now Jefferson County. Thomas was an early child, and devoted to various purposes. In his twenty-fourth year he became an earnest seeker of salvation from sin. As a preliminary step, he united with the Church in 1810, and was soon after converted while kneeling to receive the holy com- mencement. He was encouraged to accept the view already indicated by Gesenius (Thesaurus, p. 922), on etymological grounds, that a heron is indicated in the Hebrew שֵׁעָרָה (šē‘arah), and that the night-heron is the only one, perhaps, in all respects suited to the passages. It is a bird smaller than the common heron, distinguished by two or three white plumes hanging out of the black-capped nape of the male, and by its partially nocturnal habits. The Arabic ʿAb-ʿon (ʔəb, ʔən), rendered "little owl" and "owl of the desert," is perhaps most applicable to the white or barn owl, Strix aluco. Bochart (Hieroz., ii. 267) referred this name to the owl on the seal of the Assyrian king, on account of the assumed signification of κοράς, "cup," by him fancied to point out the pouch beneath the bill (so Gesenius, Thesaurus, p. 695); whereas it is more probably an indication of the disproportionate bulk and flatness of the head compared with the body, of which it teaches the eye full half of the width of the head, whereas the feathers are raised in their usual appearance. Κοράς is only a variation of κύρις and κυρίς, which, with some inflexions, additional or terminal particles, is common to all the great languages of the Arabian Night-Heron.

2. Ês (אֶשֶׁר, Lev. xi, 17; Deut. xiv, 16; Ps. civ, 6), rendered "little owl" and "owl of the desert," is perhaps most applicable to the white or barn owl, Strix aluco. Bochart (Hieroz., ii, 267) referred this name to the owl on the seal of the Assyrian king, on account of the assumed signification of κοράς, "cup," by him fancied to point out the pouch beneath the bill (so Gesenius, Thesaurus, p. 695); whereas it is more probably an indication of the disproportionate bulk and flatness of the head compared with the body, of which it teaches the eye full half of the width of the head, whereas the feathers are raised in their usual appearance. Κοράς is only a variation of κύρις and κυρίς, which, with some inflexions, additional or terminal particles, is common to all the great languages of the
old continent. The barn-owl is still sacred in Northern Asia.

3. Kippōs (יוֹפָס, "great owl," Isa. xxxiv, 15) has been variously supposed to designate the hedge-hog-otter, osprey, bittern, and owl. Gesenius (Thesaur. p. 1226), with Bochart, deriving the word from the root רָפָס, raphas, "to draw together, to contract," thinks it to be a species of serpent, Serpens juculans, i.e. the arrow-snake, so called from its darting, springing, in the manner of the rattlesnake. But as the text evidently speaks of the habits of a bird, we may perhaps acquiesce in the translation owl. There are noticed in Egypt and Syria three well-known species of the genus Strix, or owl: Strix bubo, "the great-eared owl;" Strix flammea, the common barn-owl; and Strix paserina, the little owl. In this list Strix aëtea, the long-eared owl, Strix brachyotus or vulaca, the short-eared owl, known nearly over the whole earth, and Strix orientalis of Hasselquist, are not included, and several other species of these wandering birds, both of African and Asiatic regions, occur in Palestine. The eagle-owl, or great-eared owl, Strix bubo, we do not find in ornithological works as an inhabitant of Syria, though no doubt it is an occasional winter visitor; and the smaller species, Bubo Atheniensis of Gmelin, which may be a rare but permanent resident, probably also visiting Egypt. It is not, however, we believe, that species, but the Otus scops of Cuvier, which is common in Egypt, and

which in all probability is the type of the innumerable representations of an eared owl in hieroglyphical inscriptions. This may be the species noticed under the indefinite name of kippōs.

4. Yānāh (יאנאת, Lev. xi, 16; Deut. xiv, 15; Job xxx, 29; Isa. xiii, 21; xxxiv, 13; xlviii, 20; Jer. iv, 89; Mic. i, 8), the ostrich (q. v.).

5. Lilith (לִילִית, Isa. xxxiv, 14), "aereoch-owl," but better in the margin night-monster (q. v.).

Ox (QE. Vulg. Idox), given (Judith viii, 1) as the son of Joseph, and father of Merari, among the ancestors of Judith (q. v.).

Ox, the different terms denoting this family, or part of it, in the A.V., are the renderings of the following Hebrew words:

1. Abbir, יְבֻר, is translated "bulls" in Ps. xxii, 12; l, 13; lxviii, 80; Isa. xxxiv, 7; Jer. l, 11. This word is properly an adjective, derived from יְבַע, to be strong, and means mighty; hence transferred to the bull in allusion to its strength. But in Ps. lxviii, 80 it should probably be rendered prince (see Gesenius, Thesaur. s. v. יבִּי).

2. Elaph, יָלָף, which occurs only in the plural, alophim, יָלָפים, derived from יָלָף, to learn, in allusion to the domestic and docile disposition of the animal, and used in the common gender, including the whole family, like the English bee--an ox or cow. In Deut. vii, 18; xxviii, 4, 18, 51, it is translated kine; in Ps. xvii, 7; Prov. xiv, 4; Isa. xxx, 24, oxen.

3. Allaph, יָלָף, also written, defectively, יָלָף, is from the same root, in the same signification, but is used in the masculine gender only, grammatically, while including animals of both genders. It is found in this sense in Jer. xi, 19, rendered "ox," and in Ps. cxlv, 14, in the plural, "oxen;" but in Jer. xi, 19 the word is properly an adjective, tame, gentle, and the rendering should be, "I was like a tamed lamb," not, as in the English Version, "I was like a lamb or an ox." See Gesenius, Thesaur. s. v. יָלָף.

4. Bakar, יָבָר, in the common gender, a word for all oxen or meat cattle; generally a herd. The word is derived from יָבָר, to Cleave, to lay open, in allusion to the use of the beast for ploughing (comp. Latin armentum, from arare). This very general and very common word is usually rendered herd, herds, as Gen. xiii, 5; Deut. xvi, 2; Hab. iii, 17; or oxen, as Gen. xii, 16; 1 Sam. xi, 7; Amos vi, 12. But two phrases deserve especial notice, the ben-bakar, בֵּן-בָּר, son of the herd, or of a bull, which is translated calf, colt, in Gen. xviii, 7, 8; 1 Sam. xiv, 32; but bullock in Lev. i, 5; Numb. xv, 8, 9; and again, par ben-bakar, בֵּן-בָּר, literally, an ox, son of the herd, which is rendered bullock, or young bullock, as Lev. iv, 3; xvi, 3; Ezek. xliii, 19, 23, 25, and often. See CATTLE.

5. Egel, יָגָל, from an obsolete root, said to signify to roll (see Gesenius, Thesaur. s. v. יָגָל, a calf, possibly from the idea of the endyo as rolled or wrapped together; and so always translated, as Exod. xxxii, 4; Isa. xi, 6; Mal. iv, 2; except in Jer. xxxi, 18; xlvii, 21, where our English Version wrongly has bullock, bullocks. The feminine form, egilāh, יָגָלָה, is also frequent, and is rightly rendered heifer, as Gen. xv, 9; Isa. xv, 5; but in Hos. x, 5 the English Version represents the plural by the word calf. See CATTLE; HEIFER.

6. Par, יָבָר, or יָבָר, probably from the root יָבָר, to be hore, referring to the bearing of the yoke; but the word usually means a bull, young bullock, and is hence often referred to the root יָבָר, in its more usual sense, to break, in allusion to the fierceness and violence of his anger. It is usually spoken of bullocks for sacrifice only, as Exod. xxix, 5; Lev. iv, 5, 4, 5, 7; Numb. xxviii, 11, 19, and often; so Hos. xiv, 2, where the meaning is, "So will we offer our praise as victims," or sacrificial bullocks. But in Ps. xxii, 13 it means bulls, without reference to sacrifice. (See also No. 4 above.) See BULLOCK.

7. Tan"med, יָנָה, from the root יָנָה, to subject to the yoke; hence a par or goke, as of asses, Judg. xix, 10;
the kind of tokens by which the priesthood pretended to recognise their sacred individuals. The cattle of Egypt continued to be remarkable for beauty for some ages after the Moslem conquest.

The domestic buffalo was unknown to Western Asia and Egypt till after the Arabian conquest: it is now common in the last-mentioned region and far to the south, but not beyond the equator; and from structural differences it may be surmised that there was in early ages a domesticated distinct species of this animal in Africa. The buffalo (Bos bubalis) is not uncommon in Palestine; the Arabs call it jīmā. Robinson (Bib. Res. iii, 300) notices buffaloes “around the lake el-‘Hūleh as being mingled with the neat cattle, and applied in general to the same uses. They are a shy, ill-looking, ill-tempered animal. These animals love to wallow and lie for hours in water or mud, with barely the nostrils above the surface. In Syria and Egypt the present races of domestic cattle are somewhat less than the large breeds of Europe, and those of Palestine appear to be of at least two forms, both with short horns and both used to the plough, one being tall and lank, the other more compact; and we possess figures of the present Egyptian cattle with long horns bent down and forwards. From Egyptian pictures it is to be inferred that large droves of fine cattle were imported from Abyssinia, and that in the valley of the Nile they were in general stall-fed, used exclusively for the plough, and treated with humanity.

There are now fine cattle in Egypt; but the Palestine cattle appear to have deteriorated, in size at least, since Biblical times. “Herds of cattle,” says Schubert (Oriental Christian Spectator, April, 1853), “are seldom to be seen; the bullock of the neighborhood of Jerusalem is small and insignificant; beef and veal are but rare delicacies. Yet the bullock thrives better, and is more frequently seen, in the upper valley of the Jordan, also on Mount Tabor and near Nazareth, but particularly east of the Jordan on the road from Jacob’s-bridge to Damascus.” See also Thomson (Land and Book, i, 318), who observes that danger from being gored has not ceased among the half-wild droves that range over the luxuriant pastures in certain parts of the country.” In Palestine the Mosaic law provided with care for the kind treatment of cattle; for in treading out corn—the Oriental mode of separating the grain from the straw—it was enjoined that the ox should not be muzzled (Deut. xxv, 4), and old cattle that had long served in tillage were often suffered to wander at large till their death—a practice still in vogue, though from a different motive, in India. But the Hebrews and other nations of Syria grazed their domestic stock, particularly those tribes which, residing to the east of the Jordan, had fertile districts for that purpose. Here, of course, the droves became shy and wild; and though we are inclined to apply the passage in Psa. xxii, 12 to wild species, yet old bulls, roaming at large in a land where the lion still abounded, no doubt became fierce;
OX

OXENSTIERN

and as they would obtain cows from the natives, there must have been wild breeds in the woods, as fierce and resolute as real wild Uris—which ancient name may be a mere modification of Reem. See UCOM.

There was no animal in the rural economy of the Israelites, or indeed in that of the ancient Orientalists generally, that was held in higher esteem than the ox; and it is regarded as a most precious animal among those patient labors depended all the ordinary operations of farming. Ploughing with horses was a thing never thought of in those days. Asses, indeed, were used for this purpose [see Ass]; but it was the ox upon whom devolved for the most part this important service. The permanent value of the ox to "a nation of husbandmen like the Israelites," to use an expression of Michaelis in his article on this subject, will be at once evident from the scriptural account of the various uses to which it is applied. Animals of the ox family were used for ploughing (Deut. xxvii, 10; 1 Sam. xiv, 14; 1 Kings xix, 15; Job i, 14; Amos vi, 12, etc.); for food (Deut. xxvii, 4; Hos. x, 11; Mic. iv, 13; 1 Cor. ix, 9; 1 Tim. v, 18) [see AGRICULTURE]; for draught purposes, when they were generally yoked in pairs (Num. vii, 3; 1 Sam. vii, 7; 3 Sam. vi, and xxv, 14); for sacrifice, their flesh being eaten (Deut. xiv, 4; 1 Kings i, 9; iv, 23; xix, 21; Isa. xxvii, 13; Prov. xv, 17; Neh. v, 18); they were used in the sacrifices [see SACRIFICE]; they supplied milk, butter, etc. (Deut. xxxii, 14; Isa. vii, 22; 2 Sam. xvii, 29; See BUTTER.

The law which prohibited the slaughter of any clean animal, excepting as "an offering unto the Lord before the tabernacle," during the time that the Israelites abode in the wilderness (Lev. xxvi, 1-5), although expressively designed to keep the people from idolatry, no doubt contributed to the preservation of their oxen and sheep, which they were not allowed to kill excepting in public. There can be little doubt that during the forty years' wanderings oxen and sheep were rarely used as food, whereas it was flesh that they so often hastened after. (See Michaelis, Lives of Moses, art. 149.) See FLESH.

OX. The ox and the ass are often represented round the cradle of the Nativity, in allusion to Isa. i, 3. Beleth says that the lion and ox in front of doors, and a cock or eagle upon the church, were common representations.

OX.-GOAD (גָּדַּד; Sept. ἂγος; Vulg. romer, Judg. iii, 31). See Goad.

OX, WILD (אֲרֹץ, עַרֹץ, teḥ or teḥ; Sept. ὄρος; υἱολόγος; Aq. Symb., and Theod.; ὄρος; Vulg. oryx), is mentioned among the beasts that were to be eaten (Deut. xiv, 5); again, in Isaiah, "they lie at the head of all the streets like a wild bull in the neta." The most important ancient verses point to the oryx (Oryx leucoryx) as the animal denoted by the Hebrew term. It is not for the fact that another Hebrew name (yachmar) seems to stand for this animal, we should have no hesitation in referring the teḥ to the antelope above named. Col. H. Smith says that the antelope he calls the Nubian Oryx (Oryx Tucio) may be the animal intended, their flesh being eaten (Cherubim and Seraphim, p. 30); their flesh was eaten, however, is probably only a variety of the other. Oedermann (Ferm. Samml., p. iv, 23) thinks the Bubule (Aepycerus bubulius) may be the teḥ; this is the Bekker-el-eat of North Africa mentioned by Shaw (Trav. i, 310, 360 ed.). See ANTELOPE; FALLOW DEER.

Oxenbridge, John, a celebrated English Nonconformist, for some time minister in this country, was born at Daventry, England, Jan. 30, 1669. He was educated at Oxford, and also at Cambridge, and at the last university he took his degree in 1681. He was tutor of Magdalen Hall, Oxford; but was deprived of this position in 1684, because he refused to give up the practice of persuading his pupils to subscribe to certain religious articles of his own framing. He spent the next few years as a missionary in the Bermudes Islands. Through the intervention of the Long Parliament, he was appointed fellow of Eton College in 1648. He was ordained pastor of a church in Beverly in 1644. He afterwards settled at Berwick-on-Tweed, where he was silenced by the Bartholomew act in 1662. Having for some time urged the importance of the new settlements in Dutch Guiana, then under lord Willoughby, as a place of refuge for the ruinous poor labor, he moved from Oxenbridge to Surinam, where he labored for some time diligently and with success. In 1667 he visited Barbadoes, whence in 1669 he proceeded to Boston. He was ordained pastor of the First Church, Boston, in conjunction with the Rev. James Alestle, April 10, 1707; and remained there until his death, Dec. 28, 1674. Though Oxenbridge was a very popular preacher, his whole life seems to have been passed in religious controversy. His publications are, A Double Watchword (1661)—A Seasonable Proposition for Propagating the Gospel by Christian Colonies in the Continent of New Guinea (London). The arguments employed by Oxenbridge in this pamphlet are well chosen and ably pursued; but their influence was much weakened by a spirit of intolerant strife.—Electoral Sermon (1671)—A Sermon on the Seasonable and Needful Propagation of the Gospel, and the Propagation of Christianity among the Heathen, iii, 490; Drake, Dictionary of American Biography, s. v.; Allibone Dictionary of British and American Authors, s. v.

Oxendon, Alexander W., an American Baptist minister, of Revolutionary fame, was born in South Carolina Aug. 26, 1739. At the outbreak of the colonial struggle he enlisted, and was one of the famous Marion men. After the war he preached for many years, and died at a very advanced age, with sight, hearing, and intellect unimpaired, at Benton's Creek, Phelps County, Mo., Sept. 3, 1805.

Oxenstiern(a), Axel Gustavsson, one of the most illustrious statesmen of the 17th century, especially prominent in upholding the cause of the Reformation at a most critical period, was born June 16, 1585, at Fanoe, in the province of Upland, Sweden. He was descended from an ancient highly aristocratic family, distinguished in Swedish history. Early deprived of his father, he received under the direction of his mother an educational training becoming his rank. As in preparation for his future career in the Lutherian Church, which had already been introduced and established as the state religion by Gustavus Vasa (1523-60), he attended the German universities of Rostock, Wittenberg, and Jena, studying at the same time jurisprudence; but he found that it was not open to him, as a clergyman, in the ecclesiastical office; yet even in his subsequent career of diplomacy, he always preserved a fondness for theological subjects, and a zealous enthusiasm for the maintenance and propagation of the evangelical doctrines. After having finished his academic course by graduating at Wittenberg, he visited most of the German courts. In 1603 he returned home, and was called into state service by Charles IX (1604-1611). He was sent on several diplomatic missions, in which he showed such tact and skill that the king, verging on the grave, appointed him guardian of the royal family, and placed him with six others at the head of the regency. It was at Oxenstiern's urgent suggestion, after the death of the king, that the crown prince, though only seventeen years old, was declared of age by Nyköping (1611), and succeeded to the throne as Gustavus Adolphus. Oxenstiern was selected to act as chancellor of the kingdom, and in this high office he enjoyed and justified the full confidence and friendship of his sovereign, who leaned on him, as did Henry IV of France on Sully, in all the political conflicts and complications in which his reign became involved, his cool insight and prudence tempering the ardent impulses of the king, and contributing thereby not a little to his glory. It was also by Oxen-
Oxenstiern's influence, assisted by the queen-mother, that Gustavus Adolphus gave up contracting what in those days would have been considered a mesalliance with Ebba Brahe, and married the gentle and beautiful Mary Eleonore, a princess of the house of Brandenburg, which proved a mutually happy union. In 1618 (Jan. 10), as Sweden pleaded for peace, Wallenstein proposed a treaty of peace with Denmark, to give the country an opp. tunity, in a measure, to recover from internal and external commotions. In 1614 he accompanied the king to Livonia, and soon had the satisfaction (1617) of terminating hostilities between Russia and Sweden by an honorable treaty at Stolbowa. In 1621, after the king had departed for a campaign in Poland, he was despatched with several regiments to occupy and govern certain districts of Prussia; then under the suzerainty of Poland, which the Swedish arms had gained, and he filled this post four years to the advantage of the country. When, in 1628, Austria and the Catholic league attempted to secure the Baltic coast, he negotiated with the duke of Pomerania and the king of Denmark to replace or re-enforce the Danish garrison of Stralsund by Sweden's fleet, in which he represented Sweden. He made an impression that strong enough, so that Wallenstein, the imperial general, who had boasted that he would take that city even if it were bound by chains to the sky, had to beat an inglorious retreat. He succeeded also, supported by the mediation of England and France, in effecting an agreement by which he united with Poland, and these proceedings appear as arrangements preparatory to that grand undertaking of his administration—an expedition into Germany. The pious and chivalrous king had long meditated it, and it was prevented only by the censures of the pope, and by his minister. But now the measure was determined on, alike from the policy of self-preservation and the moral motive of succoring the sorely oppressed co-religionists who, since 1618, were waging an unequal struggle against the combined forces of Romanism. It is beyond our design here to delineate the origin and progress of the Thirty-years War (q. v.); we have only to sketch the course pursued by the great chancellor of Sweden. We will state briefly: Gustavus Adolphus landed in July, 1630, on the German coast with 15,000 choice troops, accompanied by his minister. Oxenstiern had put all his energy into the spoliation of the whole procuring men, money, and material; and his diplomatic talent had ample scope to overcome the lukewarmness and jealousy of the German Protestant princes. Their united activity restored again the fortunes of Protestantism. Gustavus was flushed with success; and continued to thrust into Germany as in triumph, defeated Tilly near Leipzig, and fell, Nov. 16, 1632, on the bloody field of Lützen, Bernhard of Saxo-Weimar finishing the battle victoriously against Wallenstein. The death of the king, well calculated greatly to encourage one and to dismay the other of the contending parties, did not move Oxenstiern to give up the cause as lost, though it added much to his embarrassments and responsibilities. There may also be remarked, as a proof of the authority and confidence he enjoyed at home, that when he sent what public missives his influence was sufficient to have them drawn up by him, but not signed by the royal hand; it was accepted as binding, and its tenor observed by the Swedish Diet. Oxenstiern was appointed a delegate to Germany with full powers to make any arrangement which he might deem best for the welfare of his country. He immediately exerted himself to increase the number and strength of the armies in the field, and went to Dresden and Berlin to concert measures for the effective continuation of the war. In March, 1633, he convened a congress of the German princes at Heilbronn, to give a new impetus to the works of the assembly; the last was the general director of the evangelical alliance. Also Holland and France, from which latter Sweden had been subsidized with money since Jan. 1, 1631, he tried to interest and stir up to more energetic assistance. At his re-
successor (1649). Oxenstiern, averse to a foreigner as sovereign, remonstrated most strenuously against such a step as unworthy of her talents, and fraught with evils for the country. She for the time desisted, under went in 1650 coronation, and for a while manifested mature deliberation to governmental affairs, but soon relapsed into her former ways, and, impatient of the restraint imposed upon her as the head of a moral and sensitive nation, carried out her resolution, and in 1654, in a diet purposely convoked, laid down the royal insignia to confer them on a crown prince. Oxenstiern, under the pretext of sickness, kept away from the deliberations necessary for the execution of this measure. He died in the same year (Aug. 28, 1654). Christina, not altogether too well affected towards him, bears this testimony to his character: *He had great capacity and knowledge of secular affairs and interests; he knew the strong and weak points of all the European states. He was possessed of consummate wisdom and prudence, had a vast capacity and a great heart. State affairs were for him amusement. He was ambitious, but loyal and incorruptible.* He was certainly the greatest politician and statesman which Sweden has produced. An extraordinary sagacity and immovable calmness characterized all his decisions, and energy and perseverance their execution. Nothing was deferred to the following day, and all in his power was accomplished speedily. His faculties in this respect border on the marvellous. On all important affairs his activity, his will, his loyalty is impressed. There is not a single branch of the Swedish government which does not owe to him improvements. His vast activity would have been impossible without strict gravity and order, which he expected of others as well as of himself. His good health and equanimity served to lighten the burden of work and care. He was unusually unfussful and disinterested; he never used his influence, extensive as it was, to advantage; he received no presents, nor did he repeatedly advance considerable sums for public purposes without interest. Frugal in his household, he was for display and luxury where he acted as representative of the state. As a negotiator he ranked with the highest diplomats of the period, even Richelieu not excepted. Cool, reserved, fully acquainted with human character, penetrating to the smallest details of the situation, he conducted affairs with a sure glance; only his haughtiness, which was sometimes excessive, damaged him now and then. His bearing was imposing, though his nature was only a little too mild. From his serious practical occupation, he read Greek and Latin classics, in which latter tongue he could fluently converse; and perused the Bible and the fathers of the Church. His letters to Grotius allow us to form an opinion of his vast erudition; often in his despatches to the king he would attach long treatises on the subjects under consideration. There are, however, few of his writings published. He is known as the author of the second volume of Chemnitz's *Historia ecclesiastica Germaniae*; and his correspondence with his son John (Comenius) has been edited by G. *Oxford, Councils of (Concilia Oxoniensia), were held in the Middle Ages. Of these the most important are:*

1. Convened in 1160, in which more than thirty Vauois or Publicani, who had lately come over into England, headed by one Gerard, and who denied baptisms, the Eucharist, and marriage, and who set at naught the authority of the Church, were condemned, and given over to the secular arm; upon which they were sentenced to be branded in the forehead, and publicly flogged out of the city, and were forbidden to re main in that neighborhood. They appear to have made but one convert, a woman, who soon returned into the Church. See Llabth, Conc. x, 1404; Wilkins, Conc. i, 438.

2. King John, on his return from abroad, assembled a larger body of council, by his personal authority, in London, and subsequently at Oxford, demanding a certain portion of the ecclesiastical revenues, but this was unanimously refused (Wilkins, Conc. i, 515).

3. Oxford, Councils of (Concilia Oxoniensia), were held in the Middle Ages. Of these the most important are:

1. Convened in 1160, in which more than thirty Vauois or Publicani, who had lately come over into England, headed by one Gerard, and who denied baptisms, the Eucharist, and marriage, and who set at naught the authority of the Church, were condemned, and given over to the secular arm; upon which they were sentenced to be branded in the forehead, and publicly flogged out of the city, and were forbidden to remain in that neighborhood. They appear to have made but one convert, a woman, who soon returned into the Church. See Llabth, Conc. x, 1404; Wilkins, Conc. i, 438.

2. Directs that bishops shall retain about them wise and charitable almoners, and attend to the petitions of the poor; above all, that they should judge with charity, and make confessions; that they shall reside at their cathedrals, etc.

3. Forbids bishops, archdeacons, and deans to take anything for collations or institutions to benefices.

4. Orders all beneficed and clerical tents, and those that live in private houses, to be attired in purple, and to have the small episcopal order, and to live tranquilly, and make a careful study of the Scripture, and to make the publick and private alms and benefactions.

5. Forbids the use of the virger, and the attendants that should attend in the church while the masses are being said, etc.

6. Forbids any one to receive benefices or benefactions from the bishops, or from their benefices, etc.

7. Forbids any one to wear more than once in the same day, except at Christmas and Easter, and when there was a special occasion, etc.

8. Ordi ners to curate to preach often, and to attend to the sick.

9. Directs that the ornaments and vessels of the church be properly kept, and that in every church there shall be a silver chalice and a white linen chasuble for the altar; and that the members thereof be burned, etc.

10. Forbids anyone to resign his benefice, retaining the vicarage, to prevent suspicion of unlawful bargain.

11. Forbids any one to be a benefice, unless he be regularly ordained, and be able to read, and to say Mass with a proper and considerable sum for his support.

12. Oxford, Councils of (Concilia Oxoniensia), where held in the Middle Ages. Of these the most important are:

1. Convened in 1160, in which more than thirty Vauois or Publicani, who had lately come over into England, headed by one Gerard, and who denied baptisms, the Eucharist, and marriage, and who set at naught the authority of the Church, were condemned, and given over to the secular arm; upon which they were sentenced to be branded in the forehead, and publicly flogged out of the city, and were forbidden to remain in that neighborhood. They appear to have made but one convert, a woman, who soon returned into the Church. See Llabth, Conc. x, 1404; Wilkins, Conc. i, 438.

2. Directs that bishops shall retain about them wise and charitable almoners, and attend to the petitions of the poor; above all, that they should judge with charity, and make confessions; that they shall reside at their cathedrals, etc.

3. Forbids bishops, archdeacons, and deans to take anything for collations or institutions to benefices.

4. Orders all beneficed and clerical tents, and those that live in private houses, to be attired in purple, and to have the small episcopal order, and to live tranquilly, and make a careful study of the Scripture, and to make the publick and private alms and benefactions.

5. Forbids the use of the virger, and the attendants that should attend in the church while the masses are being said, etc.

6. Forbids any one to receive benefices or benefactions from the bishops, or from their benefices, etc.

7. Forbids anyone to resign his benefice, retaining the vicarage, to prevent suspicion of unlawful bargain.

8. Forbids any one to be a benefice, unless he be regularly ordained, and be able to read, and to say Mass with a proper and considerable sum for his support.

9. Oxford, Councils of (Concilia Oxoniensia), were held in the Middle Ages. Of these the most important are:

1. Convened in 1160, in which more than thirty Vauois or Publicani, who had lately come over into England, headed by one Gerard, and who denied baptisms, the Eucharist, and marriage, and who set at naught the authority of the Church, were condemned, and given over to the secular arm; upon which they were sentenced to be branded in the forehead, and publicly flogged out of the city, and were forbidden to remain in that neighborhood. They appear to have made but one convert, a woman, who soon returned into the Church. See Llabth, Conc. x, 1404; Wilkins, Conc. i, 438.

2. Directs that bishops shall retain about them wise and charitable almoners, and attend to the petitions of the poor; above all, that they should judge with charity, and make confessions; that they shall reside at their cathedrals, etc.

3. Forbids bishops, archdeacons, and deans to take anything for collations or institutions to benefices.

4. Orders all beneficed and clerical tents, and those that live in private houses, to be attired in purple, and to have the small episcopal order, and to live tranquilly, and make a careful study of the Scripture, and to make the publick and private alms and benefactions.

5. Forbids the use of the virger, and the attendants that should attend in the church while the masses are being said, etc.

6. Forbids any one to receive benefices or benefactions from the bishops, or from their benefices, etc.

7. Forbids anyone to resign his benefice, retaining the vicarage, to prevent suspicion of unlawful bargain.

8. Forbids any one to be a benefice, unless he be regularly ordained, and be able to read, and to say Mass with a proper and considerable sum for his support.

9. Oxford, Councils of (Concilia Oxoniensia), were held in the Middle Ages. Of these the most important are:

1. Convened in 1160, in which more than thirty Vauois or Publicani, who had lately come over into England, headed by one Gerard, and who denied baptisms, the Eucharist, and marriage, and who set at naught the authority of the Church, were condemned, and given over to the secular arm; upon which they were sentenced to be branded in the forehead, and publicly flogged out of the city, and were forbidden to remain in that neighborhood. They appear to have made but one convert, a woman, who soon returned into the Church. See Llabth, Conc. x, 1404; Wilkins, Conc. i, 438.

2. Directs that bishops shall retain about them wise and charitable almoners, and attend to the petitions of the poor; above all, that they should judge with charity, and make confessions; that they shall reside at their cathedrals, etc.

3. Forbids bishops, archdeacons, and deans to take anything for collations or institutions to benefices.

4. Orders all beneficed and clerical tents, and those that live in private houses, to be attired in purple, and to have the small episcopal order, and to live tranquilly, and make a careful study of the Scripture, and to make the publick and private alms and benefactions.

5. Forbids the use of the virger, and the attendants that should attend in the church while the masses are being said, etc.

6. Forbids any one to receive benefices or benefactions from the bishops, or from their benefices, etc.

7. Forbids anyone to resign his benefice, retaining the vicarage, to prevent suspicion of unlawful bargain.

8. Forbids any one to be a benefice, unless he be regularly ordained, and be able to read, and to say Mass with a proper and considerable sum for his support.
benefice, having care of souls, any revenue out of another church.
42 and 43. Order monks to live in common, and forbid them to break into any one into their community under eighteen years of age.
44. Directs that a poor be given away to the poor what remains of their estates.
45. Forbids monks to make wills.
46. Directs that monks are to be regular to eat and drink at the appointed hours; permit them to quench their thirst in the refectory, but not to indulge.

In the Oxford copy of these constitutions two others are added relating to the Jews. See Johnson, Eccl. Canon. i, 459. 

(4) Convened in 1232, by Walter Reynolds, archbishop of Canterbury, in which ten constitutions were published:

1. Relates to the conferring of holy orders. Directs that such gifts shall be made only after consultation; enumerates those cases in which holy orders shall be refused. Also forbids to admit clerks ordained in Ireland, Wales, or any country within the bounds of the Church, unless it have been first examined and unananimously approved by the universities of Oxford or Cambridge.

2. Defines the assent and consent of the clergy to the translation of the text of holy Scripture is a dangerous thing, because it is not easy to make the sense in all respects agree, nor to reconcile one sentence with another by his own authority, translate any text of Scripture into English, and that no part of any such book thus separately composed in the time of John Wickliffe shall be read in public or private, without pain of excommunication.

3. Forbids any one, under pain of being publicly denounced excommunicate, to propose or assert any propositions which carry with them contrary to the Catholic faith or good morals.

4. Forbids all preaching, either in public or private, concerning things determined by the Church, unless it be in order to get at the true meaning. Forbids, also, to call in question the act of the Church of declaring the love of Christ, to preach anything contrary to them, especially concerning the adoration of the cross, the veneration of the images of the saints, the adoration of pilgrimages to holy places, or against taking oaths in judicial matters. Orders all preachers to encourage these things, as well as processions, pilgrimages, lights, etc. Or, if any oaths are demanded, to use oaths, promises, affirmations, oaths by angels, and holy Scriptures. Oft-fellers to incur the penalty of heresy.

5. Orders that none be admitted to serve as chaplain in any place without the consent of the bishop, or ordained there, unless he bring with him letters from his diocesan.

6. Orders the University of Oxford to be infected with new unprofitable doctrines, and dismissed with the new doctors or masters, to the scandal of the spirits of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

7. Forbids a priest to serve as chaplain in any place without the consent of the bishop, or ordained there, unless he bring with him letters from his diocesan.

8. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

9. Orders that none be admitted to serve as chaplain in any place without the consent of the bishop, or ordained there, unless he bring with him letters from his diocesan.

10. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

11. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

12. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

13. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

14. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.

15. Orders the appointment of a fit priest in every deanery, as the bishop may direct, to the care of the affairs of the university at home and abroad, and to the seemingly irreparable injury of the Church of England, which need to be reformed, in order that the Church of England may be one, the only true Church, in the faith and order of God's holy Gospels. Oft-fellers to incur the penalty of heresy.
spirit find place, and form to itself a party, inside of the Church. This party was intent on practical Christian life rather than on guarding the strict formula of orthodoxy. It was a very serious matter to the Church in both Church and state. The political liberalism culminated in reform, particularly in the abolition of the Test Act, in 1828. Parliament was thus opened both to Dissenters and to Catholics. Church reform was now undertaken. The popular voice called for an "adaptation" of the Church to the spirit of the age. Violence occurred at some points. At Bristol the populace burned down the episcopal palace. In 1833 one half of the bishops of Ireland were abolished. The very existence of the Church of England seemed to be in danger. It was as if the Established Church was torn apart. William, a learned and wise man in self to oppose the excesses of politics and the inroads of evangelism. It was members of the University of Oxford who inaugurated this movement. Oxford, as opposed to Cambridge, the seat of the evangelical party, had remained, to some extent, true to its High-Church reactionary traditions. It was here that the clerical spirit of the past had had its lastest seat. Here the Romanizing tendency of Laud had never entirely died out. Oriel College became the nursery of the new tendency, notwithstanding that a few years previously it had been the seat of a very liberal scientist, that the influence of his work had been felt on many young men; among them, John Keble, after 1831 professor of poetry, and author of the much-admired Christmas Carols; Edward Bouveyre Pusey, since 1828 canon of Christ Church and professor of Hebrew; John Henry Newman, who later onChapel, and R. H. Fr. R. H. Fr. Howte with these co-operated A. P. Perceval, rector at East Horsley. Frde and Perceval first gave voice to the movement. Perceval appeared in 1828 in a book—A Christian Peace Offering—aiming to allay the prejudices of the Anglicans against the Romanists. He argues that the differences between Anglicans and Romanists are not essential, and that the Roman is a true branch of the one Catholic Church. The debate as to the sacrament is mostly a battle of words. The two churches hold equally to the real presence; but the Roman in error is undertaking to explain the mode of this presence. The mode should be left to private judgment; but the laity should have the communion in both kinds. As to the mass, the English articles only deny that at each celebration of the Eucharist Christ suffers afresh the tortures of the cross; but that is a mystery of faith. The Communion is only a holy offering, and holds that, in some sense, the Eucharist is a sacrifice. Petitions to angels and to saints, and prayer for the dead, as also the veneration of relics, are per se harmless, but easily lead to men's sense their restriction or prohibition is justifiable. Pecuniary, though not based on Scripture nor taught by the early fathers, is not to be condemned. Auricular confession and indulgences are ancient customs, whose loss the Anglican Church regrets. Though not a complete substitute for the strict discipline of the primitive Church, they are much preferable to the lack of discipline which disgraces the English Church. As to justification, the Romish Church teaches not that man is justified by works alone, but that none is justified by works that are done without grace through Christ. Both the Romish and the Protestant churches teach this. Hence it tended to liberalism, both in Church and state. On this point they do not essentially differ. But works of supererogation (they are not mentioned by the Council of Trent) are to be rejected. The Church is infallible thus far, that is to say, it cannot teach any point of doctrine contrary to the apostolic and primitive Church. Hence, on the basis of reason they do not essentially differ. Yet the people who faithfully follow her decisions infallibly attain to salvation. The significance of this doctrine is as a safeguard against promiscuous rationalism. A limitation of private judgment is to be preferred to such danger. Every branch of the true Church is superior to rulers in spiritual things; but the temporal claims of the pope are illegitimate. As thus viewed by Perceval, the Romish errors are mere excrescences which can readily be thrown off without violence. The Church is not seriously disturbed by the Romish Church is simply a branch of this Church in temporary schism. He looks for a reunion. But he is all the more severe against Dissenters. What error of Romanism is half so serious as the breaking up of the unity of the Church by the Independents, the rejection of infant baptism by the Baptists? And what are all possible papal errors in comparison with the horrible, godless doctrine of a Decretum absolutum! But Frde, as an earnest, logical, ascetically pious and very gifted young man, went even farther than Perceval. At first inclined to rationalism, he came to be able to agree with his noted contemporary judge and confessor given ideas, it is independent for the Church for the ideas themselves. But where is the Church? An examination of the formation of the English Church convinced him that it was far from being the sole true Church. Its founders had been governed too much by arbitrary caprice in their so-called reform of the old Church. The true criterion of the Church is the ancient rule: "Quod semper, quod ubi, quod ab omnibus," The Church of the first centuries is true to this rule. From it there is no dissent. To it must all modern churches go back, for doctrine, for liturgy, for discipline. He had hoped for reconciliation with the Roman Church; but a visit to Rome convinced him that it had fallen far from the primitive pattern. So was it largely also with the actual Anglican Church. The reformers of the 16th century and the Church of England, which the Church, had substituted preaching in the place of the sacraments as a means of grace, had eliminated the essential sacramental element from the Eucharist; in a word, had retained only the merest crumbs of the apostolic preaching. But he found comfort in the assumption that the formulation of the Anglican Church are capable of being construed into the sense of the true primitive Church. Accordingly he insisted on celibacy, fasting, retirement from the world, and veneration for sacred things and places. He also looked on the revival of monkish orders as the best means of Christianizing the masses. In one respect he differed from most Ritualists. He insisted on the entire separation of the Church from state control. The friends of Frde at first went not so far as he in their disavowal of the Reformations. The Anglican Church had in fact been saved by the elbow of the pope. While it was true that it was the truest of all the severed branches, and, by proper culture, might yet be made to bear the good fruit of the original stock. But they saw in Frde's ideal primitive Church the sole goal of all their efforts, and in submission to Church discipline the sole remedy for rationalism.
Socinian views which the action of Parliament implied. In September Keble prepared a programme of action for the party, stating the doctrinal reforms they aimed at, and the means agreed upon to effect the end. The Churchman's Manual may be regarded as a sort of confessional of faith of the party. It was sent to all the Scottish bishops, and was warmly welcomed by them and others. The archbishop of Canterbury (Dr. Howley) refused it his official sanction, but did not object to its publication. This Manual is "the first tract put forth in any nation in the succession of the Tracts" (tracts 38, 41), arguing that not his party, but the opposers had fallen away from the idea of the primitive church, and declaring that the Thirty-nine Articles needed to be supplemented by a protest against Erasmianism and latinity. In addition to the opposition of the general creed of the priesthood. In 1836 the Tractarians involved themselves in a violent personal strife. Dr. Hampden, a Broad Churchman, was nominated by the crown to a professorship of moral philosophy at St. Mary's Hall, Oxford. The Tractarians used petitions and all other practicable means to prevent the confirmation. Dr. Thomas Arnold spoke up to the help of Hampden in the Edinburgh Review (April, 1836). It was the signal to a general attack. The Tractarian movement became the order of the day. Though defeated in the House of Commons, the party did not lose the zeal. In 1838 they began a series of translations from the fathers, entitled "A Library of the Fathers of the Holy Catholic Church anterior to the Division of the East and West." The Bible is the foundation of the apostolical doctrine, but the fathers are the channel through which it has come down to us—so says the Preface. In 1837, and later, some of the tracts showed a marked advance towards Rome. Rev. Isaac Williams, in tract 80, enjoined "reserve" in the communication of religious truths. It was an effort to revive the Roman Disciplina arcane; it denounced the preaching of all doctrines to the general public, as also the promiscuous distribution of the Bible. This and similar tracts excited general dismay. It was in vain that Pusey, in a letter to the bishop of Oxford, attempted to deny the Romanizing tendency. Keble wrote tracts in the same vein as Williams. The Tractarians in general had taught their followers to look indulgently on the errors of Rome, and to bewail the Reformation as a blunder. What wonder, then, that certain young enthusiasts were on the point of actually going over to Rome? To prevent this consummation Newman wrote the Tract 48. It was a most ingenious piece of sophistry, the point of which was to make it easy for the conscience to subscribe to the Thirty-nine Articles, and yet hold firmly all the essentials of Romanism. No other essay from the whole school made such a sensation as this. The Thirty-nine Articles had always been looked upon as a breactwork against all the errors of popery. This breachwork was now riddled through and through, and a free way opened for the influx of the whole host of papal errors. Shortly after the appearance of tract 90 Oxford became alarmed. A session of the university authorities declared that the tracts were in no wise officially sanctioned by the university, and that a subscription of the Thirty-nine Articles in the sense taught in tract 90 was utterly contrary to the spirit of subscription. Also the bishop of Oxford (hitherto friendly to the party) sent a message to Newman, censuring the tract in question, and forbidding their further publication. Other prelates joined in the condemnation. Newman yielded; and the tracts ceased to appear. A host of hostile writings was now set afoot. The evangelical party saw all its fears realized: the Tractarians were at the threshold of Rome. The Perverts.—It seemed a heavy stroke for the Tractarians that their tracts were now prohibited, and that most of the prelates had turned against them. But no very critical period. A new occasion was the occasion of the sifting of the party, throwing out the half-hearted elements, and drawing the genuine Anglo-Catholics into closer ranks. The general drift of the school disapproved of Newman's crypto-Romanism. Percival, in 1842, in a book, A Collection of Papers connected with the Protestant Reformation, made an attempt to divide the traditions of the church into two classes: the common teaching, and the private views of certain individuals. The first class embraced four points: apostolic succession, baptismal regeneration, the eucharistic sacrifice, and the infallibility of councils called according to the canons of 1571. To the second class belonged first opinions: turning towards the east in prayer, the purification of souls in the middle state, Pusey's view of sin after baptism, Williams's rescrutinio, and Keble's notion of mystical interpretation of Scripture. The first four points constituted the gold-en centre of the Tractarian system; and Pusey and Keble diverged slightly towards Rome; and farther still stood Newman, W. G. Ward, and many younger disciples. When, now, the official condemnation of Newman's tract 90 tended to drive the extremists back towards the centre, some had already gone too far to regain their equilibriumen. In a sermon of May 1848, Pusey called the transubstantiation so clearly that the authorities suspended his preaching for two years. Soon thereafter his assistant teacher in Hebrew, Sanger, went over to Rome. The next important case was Ward. He had taught the adoration of the substance in the Eucharist for some time, and was now charged with it in 1848, and in the Ideal of a Christian Church, 1844, the most offensive Romish views—Marialatry and mental reservation in subscribing the Thirty-nine Articles. A "conciliation" at Oxford degraded him from his university rights, and expelled him. In September, 1846, he went over to Rome. Newman thereupon clearly saw that a mid-position between Anglicanism and Rome was no longer practicable. He resigned his position, and followed Ward. Newman's act was the signal for a host. Oakley, fellow of Balliol, and priest of St. Margaret's, London, followed. Other perverters were: Oldburn, chief pastor at St. Mary's, Oxford; the poet F. W. Faber, rector of Elton; Thompson, pastor of St. Marylebone; Gordon, priest of Christ Church, Regent's Park. By December, 1846, not less than 150 clergymen and eminent laymen had become Romanists. It was not merely doctrines, however, but rites also that caused trouble. Several Romish usages were adopted and gradually introduced into many churches. These things alarmed the public. The press resounded with the cry, "No Popery!" Counteractive societies were formed. And in 1848 a schism occurred within the Tractarians. One Gorham was nominated to a parish in the diocese of Exeter. The High-Church bishop, Dr. Philpotts, opposed his appointment on the ground that he denied baptismal regeneration. After manifold protests and appeals, Gorham's views were justified by the highest
tribunal. This spread contamination among the Anglo-
Catholics. The Church, said they, is surrendered to
heresy and that too by a court of laymen. How can
she longer be a guardian of orthodoxy! It was now
feared that the Sacramentarians would in a body go
to Rome. But the bishops of Exeter and Oxford
exhorted to patience. But it was too late: Palmer, a chief
Tractarian, had sought communion with the Greek Church;
Maskell, priest in Exeter, had come to the conviction that,
with the ex-
ception of the Trinity, the English Church had not a
single settled doctrine: Dr. Townsend, of Durham, had
sought schism; Audley, bishop of Rochester, wrote
for the cause of a council. Others, in deeper despair, had set out
to colonize New Zealand, in hope of there realizing their
Church ideal. While this agitation was in progress,
England was awakened and astonished by the news, in
October, 1850, that the pope had raised Dr. Wiseman
to the dignity of cardinal and archbishop of Westminster,
and distributed England into twelve bishoprics. Noth-
ing, however, but regrets and disappointments were possible.
The pope had acted unannounced, said the Tractarians,
since England possesses already a sufficiency of Catho-
lic bishops. But conditions in the Roman Church far
from the Tractarian party: it rendered the Roman Church
more inviting and aristocratic, and attracted many of
their members into its bosom, especially from the high-
er classes. By Christmas, 1852, no less than 200 clergy-
men and more than as many laymen had gone over to the
Roman Church for purely formal reasons, and the con-
formism and the political agitation combined to check the
extreme High-Church bishops in their patronage of in-
novations. The bishops of Exeter, of Oxford, of Bath-
Wells, and the archbishop of Canterbury, assumed a more
conservative, more orthodox, and looked with increas-
gance of Rome, and counselled their clergy to beware of
giving deeper offence. But these counsels were poorly
heeded. The leaven of sacramentarism had been too
widely sown. It continued to work, and silently to
gain ground. Romanizing ritualism more or less pro-
nounced spread far and wide. Acurial consecration
was introduced in some parishes. In a few cases priests
were silenced for indulging in it. This feature is very
distasteful to the English sense of personal honor, and
has contributed largely to moderate the Tractarian ad-
vance. By the end of the year 1862 the whole number of
clergymen who had gone over to Rome amounted to
about 800.

Tractarian Doctrine.—The basal principle of the sys-
tem is salvation through the sacraments. The formal
principle is the exclusive authority of the visible Church
in all things. The sacramentarian is a absolutist in the
understanding by faith? Faith, so teaches Pusey, does not
justify, but simply brings us to God, who freely justifies
us by grace. This faith is wrought in us by God. Justification implies
the two acts on the part of God: the declaring of the soul
just, and the making of it what it is declared to be. The
first is an actus Dei forensis, the second a justitia
infusa. This double act is essentially but one. God
imputes not to us righteousness, but imputa it in
baptism, righteousness is given in germin. It grows by
the use of the means of grace. We are justified before
works; but works are germinally involved in faith.
God rewards each according to his works; hence works
stand in relation to the reward of grace. According to
this principle, justification is essentially a manifestation of
faith and faith is the grace-life produced by the justitia
infusa. This is essentially the Romish view, save that
works are not regarded as meritorious, but only as
a manifestation of the inner faith. Faith, as appropriat-
ing God's righteousness, both in works and in the po-
ter itself, acts upon a mystical infusion of the divine
life. Baptism regenerates, that is, the regularly administered rite is
the means through which God works regeneration. In
the Eucharist the bread and wine become really, but in
a spiritual manner, the body and blood of Christ; and
Christ, as so present, imparts himself to the believer as
spiritual food, unto salvation. The consecrated ele-
ments are not Christ, but Christ is present in them.
The Tractarians adore not the consecrated bread and
wine, but adore Christ specially and essentially in
the Church, as the organic body founded by Christ, and
perpetuated by apostolic succession, is the sole mediator
of grace, inasmuch as she alone can validly administer
the sacraments. The Church is one, holy, catholic, and
apostolic. But the attributes of unity and sanctity may
be obscured or suffer eclipse in times of schism and disobedience. The
Church, as an organism derived by direct succession
from Christ, is supreme authority in spiritual matters.
Her helps are the Scriptures as interpreted by patristic
tradition. But as both Bible and tradition admit of dif-
ferent interpretations, hence it is ultimately to the au-
tonomy of the Church that the believer must look for
infallible guidance. The grace and truth that were
in Christ passed over to the apostles, and thence to the
Church. The unity of the bishops finds expression in
general councils; and the embodiment of the councils
is the episcopate. The unity of the Church is to be
the successor of Peter. Thus trastarianism, when followed out, leads to
Rome.
As a school of theology, trastarianism is a revivish
ces.
ial scholasticism. It is purely realistic and unspeculative.
Trut is to be sought for not by processes of thought,
but by consulting authorities. It is objectively exist-
it, and attempts to balance its existence by formularies of
Church life. Thus, trastarianism is aesthetic, earnest, active,
contemplative, constructive. Regarding itself as the
visible manifestation of a divine institution, it lays great
stress on the outward form of the Church life—on ar-
chitectural ceremonies, manners, and daily conduct.
With all its narrowness and errors, it has infused an
entirely new spirit into life that was once the very
staid, cold life of the High-Church party in the Church of
England. It has also in the same way affected the
Protestant Episcopal Church in America.
Quite recently the ritual innovations of the Tracta-
rians have been repeatedly opposed by legal prosecution.
The points involved are: the eastward posture of the
celebrant of the Eucharist, lights on the altar, incense,
the mixed chalice, and unleavened bread (wafer). A
case in 1867 against Westerton failed. Cases in 1868 and
1869 against Mackonochie and Purchas led to little
result. The case against Bennett for the most extreme
ritualistic practices resulted in Bennett's favor. This
decision of the Court of Arches was appealed by the
judicial council to the Privy Council; but in 1872
the Privy Council dismissed the case. In great part
attempts of the same nature have also failed of result.
So at present the ritualists have pretty nearly all the
liberty of action they could desire.

Oxlee, John, a distinguished English divine, was
born at Gisborough, in Cleveland, Sept. 25, 1779. In
1802, owing to his knowledge of the Greek and Latin
languages, he was selected as second master of Tun-
bridge Grammar School by the eminent Dr. Vicesimus
Knox, its first master. There Oxlee's Hebrew, Chaldean,
and Syriac studies were begun. From 1816 to 1826 he held the rectory of Scawton, in the North Riding of Yorkshire, for the Rev. Thomas Worsley, afterwards master of Downing. In 1836 the archbishop of York presented him to the rectory of Moleseley, Hunts. He died Jan. 30, 1864. Mr. Oxlee, though self-taught, became master of more than 130 languages or dialects, the last being the Yuroba. He wrote The Christian Doctrines of the Trinity and Incarnation (Lond. 1850, 3 vols. 8vo):—Three Sermons on the Christian Hierarchy, deducing an uninterrupted Triple List of Bishops, etc.;—Three Letters to the Archbishop of Canterbury;—Apostolical Books of Enoch, etc.;—Thr a Letters to Mr. C. Wellesley on Unitarian Error;—Three Letters to the Rev. F. Nolan, and Two Letters to the Bishop of Salisbury, on the Spurious Text of the Heavenly Witnesses:—A Reply to the Rev. R. Tower, the Roman Catholic Head of Ampleforth College, near York:—Three Letters to the Archbishop of Canterbury, on the Impropropriety of requiring Jesus to forsake the Law of Moses, etc.;—Three more Letters on the Inviolability of the Right to Concert the Jews to the Christ in the Faith in the Manner hitherto practiced, with a Confutation of the Diabolology. He was also curator of Oxford University’s Magdalen College’s Journal; the Christian Remembrancer for 1822; the Voice of Israel; the Voice of Jacob; Jewish Chronicle; but more particularly of seven letters addressed to S. M., the Jew, occupying 110 pages in The Jewish Repository. In his work on The Christian Doctrines, etc., the mass of learning is astonishing; through more than 1000 pages we are presented with correct extracts from early and late Jewish writers, accompanied with an exact English translation. The Letters to archbishop Lawrence are filled with exceedingly rare extracts, and Dr. Nicholls, the late regius professor at Oxford, in said to have expressed his wonder how the works quoted had been obtained, considering that the author’s benefice was worth but £229 a year. Nearly up to the day of his death Mr. Oxlee was engaged in literary pursuits. He left behind him many works yet unpublished. See Gent. Mag., Feb. 1855, p. 208 sq.; Darling, Cyclop. Bibl. iog. ii, 2298; Allibone, Dict. of Brit. and Amer. Auth. s.; Kitto, Journal of Soc. Lit. April, 1844; Coleridge, Works, p. 457. (J. H. W.)

Ozanam, Antoine Frédéric, a distinguished French philosopher and polemic, was born at Milan April 18, 1813. He studied at the college in Lyon and in 1832 went to Paris to study law. He took the degrees of M.A. and LL.D. and, in 1840 was called to the professorship of foreign literature by the Academy of Sciences of Paris, a position which his thorough knowledge of English, German, Italian, and Spanish, besides his ability to command a correct and fluent French, enabled him to fill with great success. He died at Marseilles Sept. 8, 1853. Ozanam was a zealous opponent of Protestantism. Among his works, the most important is Dante et la philosophie Catholique au treizième siècle (Paris, 1850, 8vo; 2d ed. 1845). Four Italian and one German translation appeared between the first and second editions. It has been very variously judged, according to the standpoint taken by the critics. Ozanam, following the example of Artaud de Montor, attempted to prove the Roman Catholic orthodoxy of Dante against the assertions of Rosetti and Ugo Foscolo. In this Lamennais agreed with him; only the latter maintained that Dante’s orthodoxy was but a concession made by him to the prevailing views of his age. Valuable as is Ozanam’s work as a sort of commentary or key to Dante’s Divina Commedia, it might have been made more so had he been able to entertain such ultramontane views. A more impartial appreciation of his author would have brought him nearer to the evangelical Church, which he condemned without knowing anything of its doctrines. Among his other remarkable works are:—Le dictionnaire de la langue francaise; Boemo et St. Thomas de Canterbury (Paris, 1863, 8vo and 12mo):—Les Poetes Francais en Italie au treizeieme siecle (ibid. 1852, 8vo), valuable to the theological student who desires an acquaintance with the period of which it treats, for it gives full portraits of St. Francis, Fra Pacifico, St. Bonaventura, Giacomo di Verona, Thomas de Celano, the author of De Isra (q. v.), Giacopone da Todi, the author of the famous hymn, Cur Mundus Mutilat, and the famous Statut Mater Dolomana. There is also a History of Civilisation in the Fifth Century, which was translated into English by Glynne, and was published at London in 1859, in two vols. post 8vo. Besides, Ozanam contributed largely to the Correspondant, L’Université Catholique, and L’Ere Nouvelle. His complete works were published after his death, under the title Oeuvres completes de A. F. Ozanam (Paris, 1856, 8 vols. 8vo). Ozanam was one of the eight students who, in 1833, founded the Société de St. Vincent de Paul, which has since become so powerful in France. See Amélie, Notice, in the Journal des Débats, Oct. 9 and 12, 1858; Leguay, Étude Biog. sur Ozanam (Paris, 1854, 8vo); Le Correspondant, Sept. 26, 1838; Collombet, Biographie de F. Ozanam (1838); Lacordaire, Conférences, v. 267; Hoefer, Nouv. Biog. Générale, xxxviii, 1018; Revue Chrétienne, Oct. 1860, p. 579.

Ozianus (Ozian), the Greekized form of the name of three Hebrews.

1. Uzziah (q. v.), king of Judah (Matt. 1, 8, 9).
2. Uzzi (Ezra vii, 4), one of the ancestors of Ezra (2 Esdr. i, 2).

3. The son of Micah of the tribe of Simeon, one of the "governors" of Bethulia, in the history of Judith (Jud. vi. 15, 16, 21; vii. 23, 30; viii. 10, 28, 35; xx. 4). See Judith.

Zeiel (Ozeel, l. e. Uzziel), given (Jud. viii. 1) to the son of Joseph, and father of Eleazar, in the ancestry of Judith (q. v.).

Ozni (Heb. Oznî, "2Yo, my ear, or eared, i.e. having long ears, or attentive; Sept. 'Azîw v. r. 'Azâw), the fourth named of the seven sons of Gad (Numb. xxvi, 16); called Ezbon (q. v.) in Gen. xlvi, 16.

Oznîte (Heb. same as Oznî (q. v.), a patronymic title of one of the families in the tribe of Gad (Numb. xxvi, 16).

Ozniah. See OSPRY.

Ozo’ra (Ozopûp v. r. 'Ezerîp), a corrupt form (1 Esdr. ix, 34) for MACHNADERAI (q. v.), one of the heads of returned exiles (Ezra x, 40).
The Dominicans were encouraged by their general, Raymond de Penafort, whose attention was always di-
rected towards the conversion of Jews and Mohammed-
dans. That Pablo was a convert from Judaism appears
from a letter written by pope Clement IV to the king
of Aragon, in which he says: "Ad haec autem dilectione
suis commissis de Christianis quibus habeas non
modicum profuturas, quia ex Judaeis transire originem,
et inter eos iusteris Hebrew instructus, lingua novit... et
tem et errores illorum." The disputation referred to
was first published, with omissions and interpolations,
and a bad Latin translation, by Wageneel, Tela ignea
Sacrorum Romanorum; always was made papal minister of
state, as successor to Con-
salvia. In this new position Pacca proved an enthusiast.
He urged the pope to unbend his resistance against Na-
poleon, and would suffer the pontiff to listen to no
proposals except the most favorable for Rome. When
Napoleon gained possession of Genoa, Pacca was im-
mediately arrested, together with the pope, and imprisoned
as a rebel, July 6, 1809. After the Concordat at Font-
tainebleau in 1813, Pacca was suffered to go free, but
his counsel to publish a bull of excommunication made
his imprisonment a necessity, and he was banished to
the island of Lampedusa. He entered Rome May 14, 1814, in the same carriage with the
pope, whom he had served so faithfully. In 1815
he was again the companion of the pontiff in his flight
from the Eternal City. After the pope's return to Rome Pope Pius VI summoned a Congregation for Missions in China, and in 1816 was sent on a mission to Austria. In 1821 he was made bishop of Porto and St. Rufinus. He was born in 1830 he was given the seats of Ostia and Velletri, and was made prefect of the holy see, and archpriest of the Basilica of St. John Lateran. He died April 19, 1844. He was actuated to the last by a strong desire to re-establish the papacy in its former glory, and was convinced that the power of the pope could be secure only by a firm adherence to the ecclesiastical rights which obtained in the Middle Ages. He was also a great friend of the Jesuits, and it was his influence which caused the pope to give them restoration. Pacca narrated his experiences in a most agreeable and skilful manner, under the title Memorie istoriche, etc. (2d ed. Rome, 1830, 3 vols.). He also wrote Rela-
zione del viaggio di papa Pio VII (Rome, 1833), etc.
His complete works were published and translated into French and German. See Biographie Universelle, vol. lxxxv, s. v.; Ami de la Religion, Mai, 1844 (Paris); L'Univers (Paris, 1844); Hoefler, Nouv. Biog. Générale, s. v., Biographie Univers. et portail des Contemporains, vol. v. s. v.

Pacca was brought to the notice of the pope, who became so
much interested in him that he was ordained archbishop in partibus of Damietta, and was despatched to Cologne
as papal nuncio. Abroad the same capacity which distinguished him at school was manifest, and he was
attracted into strengthening papal influence.

Pacca, Pierre, a French pulpit orator, was born in
Bretagne near the opening of the 17th century, and
was early admitted into the Congregation of the Or-
tery. He very soon became noted as a preacher, and
the churches in which he preached were always thronged.
In 1745 he published, under the title Discours de piété
(Paris, 3 vols. 12mo), a series of sermons anonymously.
The holy Inquisition which they contain made him objec-
tional to the ecclesiastics, and as soon as it was
learned that Pacca was their author he was sent into
the country and subjected to severe treatment. He
died May 3, 1760.
Pacca, Bartolomeo, an Italian prelate of note in
secular and ecclesiastical history, was born at Bene-
vento, near Naples, in 1576. He was educated at the
college at Naples and at the Clementine College
in Rome, he entered in 1778 the ecclesiastical school
which Pius VI had just then founded. Pacca here
was not the esteem of his teachers, but he

Pacca, Giovanni, one of the most distin-
guished of the old Italian masters in art, was born at
Siena in the latter part of the 15th century. He lived
at Siena until 1355, when, owing to his participation in
a conspiracy of the people against the government, he
was compelled to flee. Lanzi says that he would cer-
tainly have been hanged had he not been protected by the
Osservanti monks, who concealed him for some time in
the convent which he succeeded in mastering it. He
and joined II Rosso in France, where he was in all pro-
bability ended his days not very long afterwards, as
nothing further is known of him, and he does not ap-
pear to have left any works in France. There are still
several excellent paintings, both in oil and in fresco, by
Pacchiarotto in Siena. There are also a beautiful fresco
in Santa Croce, and some excellent frescos in Santa
Caterina and San Bernardino. Speth takes particular
notice of these frescos in his Art in Italy, and terms
Pacchiarotto the second hero of the Sienese school—
Razza, called Sodoma, being the first. Pacchiarotto is
also highly praised by Lanzi. In Santa Caterina is the
Visit of St. Catherine of Siena to the Body of St.
Agnes of Montepulciano, in which are heads and figures
worthy of Raphael. According to Speth these works
can be justly compared with Raphael's alone; and he adds that designating Pacchiarotto as of the school of Perugino is only magnifying the injustice he had already undergone in having his works long reported as the works of Perugino. If therefore he were the pupil of Perugino, "what Perugino supplied was only the spark," says Speath, "which in Pacchiarotto grew into a flame." Pacchiarotto had a certain misfortune that many other excellent masters have undergone by reason of their omission by Vasari. About 1818 the king of Bavaria purchased two beautiful small easel pictures in oil and on wood, now in the Pinakothek at Munich, which are recognized as Pacchiarotto's extant masterpieces. The one represents St. Francis d'Alessi, with two angels in the background, and the other the Madonna and her Child, with four angels in the background. They are pronounced two of the best pictures in that rich collection. His works much resemble those of Pietro Perugino; at the same time they are more fully developed in form and are of wonderful force of coloring; in expression also many of his heads are admirable. See Lanzi, Storia Pittorica, etc.; Speath, Kunst in Italien, vol. ii; Spooner, Biog. Hist. of the Fine Arts, vol. ii, s. v.; English Cyclop. s. v.

Paccori, Ambrogio, a French theologian, was born at Caen in 1549, of a very humble family. Ambitious as a youth, he made his way to college training in the high school of his native place, and he finally became its director. In 1706 he removed to Paris, and gave himself to authorship. He died at Paris Feb. 12, 1730. He wrote a large number of works, principally on practical religion and education. A list of his principal works is given in Hoefer, Nouv. Biog. Générale, s. v.

Pace ("Pace, tec'ad, a step, as elsewhere rendered," not a formal measure, but taken in a general sense (2 Sam. vi, 13).)

Pace, Richard, a very learned English prelate, was born about 1482, at or near Winchester. He was educated at the charge of Thomas Langton, bishop of that diocese, whom he served as amanuensis. The bishop, pleased with his proficiency, particularly in music, sent Pace to study at Pclhua, where he met with Cuthbert Tostonal, afterwards bishop of Durham, and William Latimer, by whose instructions Pace was much profited. Upon his return home he settled at Queen's College, Oxford, in which his benefaction had been proved; soon after he was taken into the service of Dr. Christopher Bainbridge, who about this time became a cardinal, and later Pace was summoned to court. His accomplishments rendered him very acceptable to Henry VIII, who seems to have made him secretary of state, or at least employed him in matters of high concern. Though much engaged in political affairs, he went into orders: in the beginning of 1514 he was admitted a prebendary in the church of York, and the same year was promoted to the archdeaconry of Dorset. These preferments were conferred upon him while he was employed by the king in a foreign embassy to Vienna. He then persuaded Maximilian to intervene in Italy, and procured for the emperor the alliance of the Swiss cantons. Upon the death of Coet, in 1519, he was made dean of St. Paul's, London. He was also made dean of Exeter about the same time; and in 1521 prebendary in the church of Sarum. At the death of Leo X, Wolsey, who aspired to the tiara, sent Pace to Rome to plead his cause before the sacred college; but Adrian VI was elected before his arrival there. Being employed not long afterwards as ambassador to Venice, he fell under the displeasure of Wolsey. The reasons for this are that he had shown a willingness to assist Charles, duke of Bourbon, with money, and that he had not forwarded the cardinal's designs for the papal chair. Wolsey used every means to bring him into disfavor with the king. He accused him of treason, and deprived Pace for the space of two years of all royal advice as to the pleasure of his mission, and of all allowances for his maintenance. This severe treatment threw Pace into temporary insanity. After recovery Pace studied the Hebrew language with the assistance of Robert Wycelfe. Being introduced to the king at Richmond, Henry expressed much satisfaction at his recovery, and admitted him to a private audience, in which Pace remonstrated against the cardinal's cruelty to him. Wolsey, urged by the king to clear himself of the charge, summoned him before him, and, with the duke of Norfolk and others, condemned the unfortunate prelate, and sent him to the Tower of London. After two years' confinement he was discharged by the king's command. He resigned the deaneries of St. Paul and Exeter, and lived in retirement at Stepney, near London. He died there in 1562. Pace was a skilful diplomatist, and not less distinguished for his amiable and his great learning. Leland eulogizes Pace highly; and it appears that he was much esteemed by the learned men of his time, especially by Sir Thomas More. The latter admired him for his candor and sweetness of temper, addressed to him more letters than to any other of his friends, and could never forgive the man that caused his misfortunes. Stow gives him the character of a very worthy man, and one that gave him just and faithful advice. He was a strong advocate of that antiquary, "and endowed with many excellent parts and gifts of nature; courteous, pleasant, and delightful in music; highly in the king's favor, and well heard in matters of weight." There is extant a remarkable letter of his to the king, written in 1527, wherein he very freely gives his opinion concerning the divorce; and Fiddees observes that he always used a faithful liberty with the cardinal, which brought him at last to confinement and distraction. Pace published a number of works. The most important is, De frusto qui ex doctrina perceptitur liber (Basle, 1511), dedicated to Dr. Coet. It was written at Constance, while Pace was ambassador in Hungary; but, inveighing much against drunkenness as a great obstacle to the attaining of knowledge, the people there, supposing him to reflect upon them, wrote a sharp answer to it. Erasmus was also highly incensed at some passages in it, and calls it an indirect performance; or a silly book, in which Pace had, between jest and earnest, represented him as a beggar, hated alike by the laity and clergy. He bids Sir Thomas More exhort Pace, since it was evident from his little judgment, that he should confine himself to the translation of Greek writers than to venture upon works of his own, and publish such mean and contemptible stuff (Erasmus, Epist. 275, and Epist. 287). — Epistola ad Erasumum, etc. (1520). These epistles are in a book entitled Epistola aulog eruditorum vitro. Pace also wrote a book against the unlawfulness of the king's marriage with Catherine in 1527, and made several translations: among others, one from English into Latin, Bishop Fisher's sermon, preached at London on the day upon which the writings of Malory were burnt. He also translated a Greek text from Greek into Latin of Plutarch's work, De commodo ex inimiciis copiendo. See General Biog. Dict. s. v.; Hook, Ecclesi. Biog. s. v.; Hoefer, Nouv. Biog. Générale, s. v.

Pachamama, a name of the goddess of the earth among the ancient Peruvians.

Pacheco, Francisco, a noted Spanish painter, was born at Seville in 1571, of a good and influential family. An uncle of his was canon of the cathedral of Seville, and a distinct patron of the arts. He inherited all the advantages of culture which his country could command, Pacheco started out in life with unusual fitness for an artistic course. His very earliest works attracted general attention, and in 1598
he was one of the principal painters employed on the
great decorations or catafalque of Philip II. In 1600 he
was appointed, together with Alonso Vasquez, to paint
a series of large pictures illustrating the life of St. Ramon for the cloister of the convent of the Merced. In 1603 he executed some works in dis-
temper in the palace of Philip III. In 1627 he was the
painter of the Conception of San Lorenzo, and in 1628
he was the principal assistant painter of the Conception
of the Prado at Madrid. The altarpiece of the Archangel
Michael expelling Satan from Paradise, which was in the
church of San Alberto at Seville, was regarded his masterpiece. There are still at
Seville two pictures of San Bernard in San Clemente, and
a picture in San Alberto. See Antonio, Bibliotheca
Scriptor. Hispanice, iii, 456; Ticknor, Hist. Spanish Lit.
iii, 19; Spooner, Biog. Dict. of the Fine Arts, s. v.;
English Cyclop. s. v.

Pachomius (Παχώμιος), as Socrates and Palladias
writes the name, or Pachomius (Παχώμιος) (1), or
"the elder," according to the author of Vita Pach-
omii, was an Egyptian ascetic of the 4th century,
and one of the founders, if not pre-eminently the
founder, the regular cloister life. See Monast.
Chirch. "To the person who wishes to understand the present," says Tillemont (Mem. des cir., vii, 167), "for the
name of St. Pachomius is no new feeling, but a just
recognition of the obligations which she is under to
him as the holy founder of a great number of mon-
estries, among the instigators of the institutes of
convents, but of the conventual life itself, and of the
holy communities of men devoted to a religious life." Pachomius was born in the Thebaid of heathen par-
tons, and was educated in paganism; and while a
lad, going with his parents to offer sacrifice in one of
the temples of the gods, was hastily expelled by
the order of the priest as an enemy of the gods.
The incident was afterwards recorded as a prognostic of
his subsequent conversion and saintly eminence. At
the age of twenty he was drawn for military service
under the tyrant Maximin against Constantine and
Licinius. The conscripts were embarked in a boat and
conveyed down the Nile; and being landed at
Thebes were placed in confinement, apparently to pre-
dent desertion. Here they were visited by the Chris-
tians of the place, and a grateful curiosity led Pacho-
mius to inquire into the character and opinions of the
charitable strangers. Struck with what he had heard
of them, he seized the first opportunity of solitude to
offer the simple and touching prayer, "O God, the
creator of heaven and earth, if thou wilt indeed look
on the error of my ignorance of thee, the only true God, and wilt deliver me from this affliction, I will obey thy will all the days of my life, and
will love and serve all men according to thy command-
ments." He was, however, obliged to accompany
his fellow-conscripts, and suffered many hardships
during this period of enforced service: but when the set-
tlement of the contest released him he hastened back
into the Thebaid, and was baptized in the church of
Chenobosias, near the city of Diospolis the Less: and
aspiring at pre-eminent holiness, led an ascetic life,
under the guidance of Palemon (q. v.), an anchorite of
high reputation, whom he visited at a time when he
withdrew with Palemon to Tabenna, an island in the Nile, near the common
boundary of the Théban and Tenthirty noms. Some
time after this removal his companion Palemon died,
but Pachomius found a substitute for his departed
companion in his own son John, who, gladly became his disciple. In A.D. 325, directed by
what he regarded as a divine intimation, Pacho-
mius invited men to embrace a monastic life; and
obtained first three disciples, and then many more, form-
ed them into a community and prescribed rules for
their government, and as the community increased, he
appointed the needful officers for their regula-
tion and instruction. He built a church as a place of
worship and instruction for the shepherds, to whom,
as there was no other reader, he read the Scriptures. So successful were his labors for the propagation of Christianity that the bishop of Tentyra would have gladly raised him to the rank of presbyter, and even required of the patriarch of Alexandria, when visiting the Thebaid, to ordain him; but Pachomius, being aware of the design, hid himself until the patriarch had departed. His refusal of the office of presbyter did not, however, diminish his reputation or influence; new disciples flocked to him—of whom Theodorus or Theodore was the most illustrious. New monasteries sprang up all around his own. Of these several communities he was himself visitor and regulator-general, or archimandrite, each cloister having besides a separate superior and a steward; thus, e.g., his disciple Theodore was superior of the monastery of Tabenna. Pachomius’s residence was now at the monastery of Proi, which was made the head of the monasteries of the district. He died there of a pestilential disorder which had broken out among the monks, probably in A.D. 348, a short time before the death or expulsion of the Arian patriarch Gregory and the restoration of Athanasius. Some, however, place the death of Pachomius in A.D. 360.

The monastic communities which he had founded had been so regularly constituted as bodies that the continuity of their existence was not interrupted by his own death or that of other individuals. Even before Pachomius’s death (348) his community numbered eight or nine cloisters in the Thebaid, and 3000 (according to some 7000) members; a century later it counted no less than 60,000. The mode of life was fixed by a strict rule of Pachomius, which, according to a later legend, an angel communicated to him, and which Jerome translated into Latin. The formal reception into the society was preceded by a three-years’ probation. Rigid vows were not yet enjoined. With spiritual exercises manual labor was united—agriculture, boat-building, basket-making, mat and coverlet weaving—by which the monks not only earned their own living, but also supported the poor and the sick. They were divided, according to the grade of their ascetic piety, into twenty-four classes, named by the letters of the Greek alphabet. They lived three in a cell. They ate in common, but in strict silence, and with the face covered. They made known their wants by signs. The sick were treated with special care. On Saturday and on certain other days the monks partook of the Eucharist. Pachomius also established a cloister of nuns for his sister, whom he never admitted to his presence when she would visit him, sending her word that she should be content to know that he was still alive. Pachomius, after his conversion, never ate a full meal, and for fifteen years slept lying on a stone. Tradition ascribes to him all sorts of miracles, even the gift of tongues and perfect dominion over nature, so that he trod without harm on serpents and scorpions, and crossed the Nile on the backs of crocodiles!

The monastery of Proi was also called the name of Pachomius: (1.) two Regula Monastic. (2.) The shorter of these, preserved by Palladius, is said to have been given to Pachomius by the angel who conveyed to him the divine command to establish monasteries. This rule is by no means so rigid as the monastic rules of later times. Palladius tells us that at the monasteries at Tabenna and in the neighborhood subject to the rule contained 7000 monks, of whom 1500 were in the parent community first established by Pachomius; but it is doubtful if this is to be understood of the original monastic of Tabenna or that of Proi. (b.) The longer Regula, said to have been written in the Coptic, a ( barbaric?) language, translated into Greek, is extant in a Latin version made from the Greek by Jerome. It is preceded by a Prefatio, in which Jerome gives an account of the monasteries of Tabenna as they were in his time. Cave (Usit. Litt. ad n. 849, in i, 298 [ed. Oxf. 1740–1743]) disputes the genuineness of the Regula, and questions not only the title of Pachomius to the authorship of it, but also the title of Jerome to be regarded as the translator. He thinks that it may embody the rule of Pachomius as augmented by his successors. It is remarkable that Regula, which comprises in all one hundred and ninety-four articles, is divided into several parts, each with separate titles; and Tillemont supposes, therefore, that they are separate pieces collected and arranged by Benedictus Anianus. This Regula was first published at Rome by Achilles Statius, A.D. 1515, and then by Petrus Cacciano, also at Rome, A.D. 1588. It was inserted in the Supplementum Bibliothecae Patrum of Morellus (Paris, 1639), vol. i.; in the Bibliothecae Patrum Asceticae (ibid. 1631), vol. i.; in the Codex Regulare of Holtenius (Rome, 1681); and in successive editions of the fathers. (2.) Homils, extant in a Latin version, first published by Gerard Vossius with the works of Gregory of Thaumaturgus (Mayence, 1604), and given in the Bibliotheca Patrum (at supra). (3.) SS. PP. Pachomii et Theodori Epistolas et Verba Mystica. Eleven of these letters are by Pachomius. They abound in incomprehensible allusions to certain mystic symbols contained in or signified by the letters of the Greek alphabet. They are extant in the Latin version of Jerome (Opera, l. c., and Bibliothecae Patrum, l. c.), who subjoined them as an Appendix to the Regula, but without explaining, probably without understanding, the hidden significance of the alphabetical characters, apparently employed as ciphers, to which the correspondents of Pachomius had the key (comp. Gennadius, De Viris Illust. c. vii; Sozomen, Hist. Eccl. iii, 14). (4.) Ex tre na tevrenkov rov drais ao wrongly. Paricopter, Procopius S. Pachomis s. Pachomii, first published in the Acta Sanctorum (Maii, vol. iii), in Latin in the body of the work, p. 346, and in the original Greek in the Appendix, p. 62, and reprinted in the Bibliotheca Patrum of Galland (vol. iv), where all the extant works are given.

The life of Pachomius, as given by Eusebius, the Bishop of Caesarea, and Hieronymus, in his Life of Pachomius, is a work written by a Persian historian, Biocb rov drais Parcopereov, Vita S. Pachomis, in barbarous Greek, the translation perhaps of a Sahidic original, by a monk of the generation immediately succeeding Pachomius; there is also a second memoir, or extract, either by the writer of the life, or by some other writer.
of the same period, supplementary to the first work, and to this the title Parapinomena de SS. Pachomio et Theodorio has been prefixed; and there is an account of Pachomius in a letter from Ammon, an Egyptian bishop, to Theophilus, patriarch of Alexandria, Εὐσέβεια τας ἐλεημονίας τῆς περί πολιτικίας καὶ βίου ἡγεμονίας, Παραμετρία τῆς Αἰετολίας Ἀκροπόλεως, Epistolae episcopii Aegyptii, and Epistolae de Conversatione: Vita Putea Pachomii et Theodori. All these pieces are given by the Bollandists, both in the Latin version (p. 235-351) and in the original (Appendix, p. 25-71), in the Acta Sanctorum (Mail., vol. iii), with the usual introduction by Papebroch. See Acta Sanctorum, sub Mai. 14; Tillemont, Memoires, vii, 167-235; Schaff, Church Hist. ii, 195-198; Neander, Church Hist. vol. ii; Gennadius, De Viris Illustris, cap. vii; Smith, Dict. of Greek and Roman Biog. and Mythol., vol. ii, s. v.; Cellier, Hist. Générale des Autres Sacrés et Éccles., iii, 357 sq.; Stud. u. Krit. 1846, No. i; Milman, Hist. of Christianity; Mosheim, Eccles. Hist. vol. i; Lea, Hist. of Sacerdotal Celibacy. See also Monastery; Monasticism; Monk; and the literature on early Monasticism.

Pachomius (2), distinguished as 'The Younger,' is the most interesting figure published by Robert Rodewald (Vita Patrum [Antw. 1615, fol. p. 238] is one of a series of Posthumous Memoirs of the period, and is of five thousand monks. The MSS. have Pachomius instead of Paulomius. The truth of the whole history is, however, strongly suspected by the editors of the Acta Sanctorum, who have even ventured to set it in the introduction to the account of Pachomius of Tabenna. See Smith, Dict. of Greek and Roman Biog. and Mythol. s. v.

Pachomius (3), an Eastern monastic, is supposed to have flourished in the 7th century either in Egypt or Syria, some time after the subjugation of the country by the Persians. He is recorded as the author of Pachomii Monachi Sermo contra Mores sui Sacri et Providentia Divinae Contentum, published by V. E. Loescher in the appendix to his Sermo, etc., Dissertationes Sacri et Literar. Argumentis (Wittenberg, 1729). See Fabricius, Bibliogr. Graec. iv, 131.3.

Pachymeres, Georgius (Γεώργιος ἢ Παχύμερος), one of the most important of the later Byzantine writers, was born in or about A.D. 1242 at Nicomedia, with his father, an inhabitant of Constantinople, had fled after his capture by the Latins in 1204. Hence Pachymeres sometimes claims to be a native of Constantinople. First of all with a careful and learned education, he left Nicomedia in 1261, and took up his abode in Constantinople, which he had then just been taken by Michael Paleologus. Here Pachymeres became a priest. It appears that he was a priest, and he also, according to the spirit of the time, studied the law, for in after-years he was promoted to the important posts of Ἀριστείων, or advocate-general of the Church of Constantinople, and Δικαίωτος, or chief justice to the imperial court, perhaps in ecclesiastical matters, which, however, were of high political importance to the reign of Michael Paleologus and his successor, Andronicus the elder. As early as 1297 he accompanied, perhaps as secretary, three imperial commissions to the exiled patriarch Arsenius, in order to investigate his alleged participation in a suspected conspiracy against the life of Michael Paleologus. They succeeded in reconciling these two chiefs of the state and the Church. The emperor Michael having taken preparatory steps towards effecting a union of the Greek and Latin churches, Pachymeres sided with the patriarch Joseph, who was against the union; and when the emperor wrote in defence of the union, Pachymeres, together with Justus Job, drew up an answer in favor of the former state of separation. When the emperor Andronicus repealed the union, Pachymeres persuaded the patriarch Georgius Cyriacus, who was for it, to abdicate. VII.-17.

It seems that Pachymeres also devoted some of his time to teaching, because one of his disciples was Manuel Philo, who wrote an iambic poem on his death. Pachymeres probably died shortly after 1310; but some believe that his death took place as late as 1340. There is a wood-cut portrait of Pachymeres prefixed to Wolf's edition of his works (1746). The title page of the edition bears the name of Michael Anicius, Episcopos Constantinopolitanae, Episcopos Constantinopoli, and Episcopos Constantinopolitanae: Vita Putea Pachomii et Theodori.

Pachymeres wrote several important works, the principal of which are: Historia Byzantina, a history of the emperors Michael Paleologus and Andronicus the elder, in thirteen books, six of which are devoted to the life of the former, and seven to that of the latter. This is a most valuable source for the history of the time, written with great dignity and calmness, and with as much impartiality as was possible in those stormy times, when both political and religious questions of vital importance agitated the minds of the Greeks. The style of Pachymeres is remarkably good and pure for his age.--Καὶ ἐπαναλαμβάνω, a political autobiography of Pachymeres, which is lost. Were this work extant, we should know more of so important a man as Pachymeres:—Epitome in universam fere Aristotelis Philosophiam;—Epitome Philosophia Aristotelis;—Περί ἰσχύος ἀρρενίας, a paraphrase of Aristotle's works on ethics and politics ascribed to Aristotle himself;—Παράφρασις τίς τόν τοῦ ᾿Ιουσιοῦ τοῦ Ἀριστοτέλους τούτου:—De Processione Spiritus Sancti, a short treatise;—Διαφάνους τῆς Ἀρουντένος, a description of the column of the Archangel Michael;—De Glorificatione des Ἀγίων τῶν Βασιλικῶν, and De Glorificatione of his victories over the Persians, in the church of St. Sophia in Constantinople:—several minor works. See Leo Allatius, Diatribe de Georgio; Hawkins, Scriptura Byzantina; Fabricius, Bibliogr. Graec. vii, 715.

Paci, Ranieri, called del Pescio, an Italian painter, was a native of Pisa, and studied under Antonio Donemono Gabbiani, whose master he was. According to Morrono, he executed some works for the churches of his native city in a reputable manner. Lanzi says that by carelessness and inattention he degenerated into a completely mannerism. He flourished in 1718.

Paci. See Paccianus.

Paccianus, a Spanish prelate of the 4th century, who among the Church writers were the first to put Augustine's figure not inconspicuously, is supposed to have become bishop about A.D. 390, and to have died at an advanced age under Theodosius (about 390). For information regarding the personal history of Paccianus we rely mainly on his own letters (i. 106 and 132 of his Lib. de Viris Illustris, also contr. Ruffin. t. i. c. 24). He describes Paccianus as the descendant of a noble family, and married in early life; for Paccianus had a son, Flavius Dester, a friend of Jerome, who dedicated to him his work De Viris Illustris. About the time Ambrose of Milan became an ecclesiastic Paccianus entered the service of the Church, and soon rose to positions of influence. He finally became bishop of Barcelona. Paccianus was especially renowned for his chastity and eloquence. Jerome says also that Paccianus wrote several sermons, among which we express the most surprise, that Novatian, and one entitled κειρώνος. A work of Paccianus against the Novatian is still extant in the form of three letters addressed to a Novatian of the name of Sympronianus, or Sempronianus as some read it. The work called by Jerome κειρώνος, is in use, is no longer extant. But Paccianus tells us in his libellus de fide, which of his has come down to us, and which is entitled Panariens sive Exhortationibus Libellus ad Pandectotentum, that he had written a book called Cervulus. We also possess a sermon by Paccianus on baptism (Sermon de baptismate), intended for the use of catechumens. The greater part of all these writings, so far as can be ascertained, Paccianus to have been a master of the Latin language, and Jerome's estimate of Paccianus as "Scriptor eloquens" is not overdrawn. But there is not much evidence of
great scholarship or originality, nor anything striking in the writings of Pacianus. What we still possess of them were first brought out by Titius (Paris, 1587, 4to). Next came Galland in his Bibliotheca Patrum, vii, 257-276; and likewise the Bodleian manuscript Lag. donum, f. 1001 and Mss. coll. 512, 1013, 1014. Jerome's works referred to above, Acta Script. Bodl. ad 9 Mart. p. 44; Cave, Scriptor. ecclesiasticorum hist. liter., i, 234; Tillemont, Memoires, viii, 389; Ceiller, Hist. des Auteurs Sacres et Ecclés., v, 156 sq.; Alzog, Piatrólog., Smith, Dict. of Greek and Roman Biog., and Mythol. s. v.

Pacianus, Paolo Maria, an Italian ecclesiastical antiquary, and historian, was born at Turin in 1710. He studied at Bologna, became professor of philosophy at Genoa, and in 1761 settled at Parma as librarian to the grand-duke, who also appointed him his anti- quyary and director of some public works; besides which he was historiographer of the Order of Malta. He died in 1785. His principal works of interest to us are, De cultu S. Ioannis Baptistæ antiquitatum Christianorum (1754, 4to), a masterpiece full of information—Monumenta Peloponnesiacæ (2 vols. 4to);—Memoires of the Grand Masters of the Order of St. John of Jerusalem (2 vols. 4to), by Fahrmin, Veil Italiens, du Moyen Age, s. v.; Leonys, Life of Pacianus prefixed to his Letters to M. de Cugy; Tipaldo, Biog. degli Italiani illustri, vol. x, s. v.

Pacification, Edicts of, a name given to certain edicts issued by sovereigns of France, intended, under special circumstances, to afford toleration to the Reformed Church of that country. The first edict of this kind was granted by Charles IX in 1562, tolerating the Reformed religion in the vicinity of all the cities and towns of the realm. March 19, 1563, the same king granted a second edict at Amboise, permitting the free exercise of Protestantism in the houses of gentlemen and lords high-justiciaries (or those who had the power of life and death) to their families and dependents only, and allowing other Protestants to have their meetings in such towns as they had them in before March 7. Another, called the Edict of Longuemau, sanctioning the execution of that of Amboise, was published March 27, 1568. Afraid of an insurrection of the Huguenots, Charles revoked these edicts in September, 1568, forbidding Protestantism, and commanding all its ministers to leave the kingdom in fifteen days. But on Aug. 8, 1570, he retractated, and published an edict on the 11th, allowing the return of lords high-justiciaries and their families in their houses for all who chose to attend. He likewise gave them four towns, viz. Rochelle, Montauban, Cognac, and La Charite, as places of security for them during the space of two years. Nevertheless in August, 1572, he authorized the St. Bartholomew massacre, and at the same time issued a declaration forbidding the exercise of the Protestant religion, and thereby proved clearly that the successive edicts which he had granted the Protestants, instead of intending their relief, had simply sought to lull them into a false and deceitful security, in order to give time and opportunity to that cruel monarch for his preparation of the massacre of St. Bartholomew (q. v.).

In April, 1576, Henry III made peace with the Protestants, and the edict of pacification was published in Parliament, May 14, permitting them to build churches. But the faction of the Guises began the war again. Several leagues for defence of the Catholic religion, which became so formidable that it obliged the king to assemble the states of the kingdom at Blois in December, 1576; where it was enacted that there should be but one religion in France, and that the Protestant ministers should all be banished. In 1577 the king, to secure peace, published an edict in Parliament, Oct. 5, granting the same liberty to the Reformed which they had before. However, in July, 1580, the league obliged him to publish another edict, revoking all former grants, and ordering all Protestants to leave the kingdom in six months, or conform.

Henry IV, on his coronation, abolished, July 4, 1591, the edicts against the Protestants. This edict was verified in the Parliament of Châlons, but was never fully restored. The most momentous edict of pacification, however, was the Edict of Nantes, issued by Henry in 1598. It proved the most effectual measure of relief which the French Protestans had ever enjoyed. By this edict of toleration they were allowed the free exercise of their religion, declared to be eligible to all public offices, and placed in all respects on a footing of equality with their Roman Catholic fellow-subjects. This edict was confirmed by Louis XIII in 1610, and by Louis XIV in 1652. But the latter in 1686 abolished it entirely. See Huguenots; Nantes, Edict of.

Pacification, a noted Italian medieval ecclesiast, was born at Verona in 776, and after having entered the service of the Church, was made archdeacon of the cathedral in his native town. He had great me-
PACKARD

on Christian Union (1850) to bishop Potter, of Pennsylvania. He also published, in 1856, A Reply to an Article in Forbes’s Psychological Journal (London) on Disease of the Kidney. He edited eleven of the thirteen volumes of the Philadelphia Journal of Prison Discipline, and contributed to the other two volumes; issued several pamphlets on the same subject; and wrote for the Princeton Review, the New-Englander, and other periodicals.

In July, 1843, he was elected president of Girard College. In 1848 he became one of the charter members of the University of Pennsylvania.

In 1837—The Teacher Taught (1839), reprinted in London under the title of The Sunday-School Teacher’s Handbook:—An Inquiry into the Alleged Tendency of the Separation of Convicts one from the other to Produce Disease and Derangement, by a Citizen of Pennsylvania (1843);—The Teacher Teaching (1861):—The Rock (1861; London, 1862):—Life of Robert Owen (Philadelphia, 1866):—The Daily Public School of the United States (1866), a vigorous protest against the inefficiency of the system. See Allibone, Dict. of Brit. and Amer. Authors, s. v.; Drake, Dict. of Amer. Biog., s. v.; Index to the Review, vol. vii.; etc.

Packard, Hesekiah, D.D., a Unitarian minister, was born at North Bridgewater, Mass., in 1761. He graduated at Harvard College in 1787; was minister at Chelmford, Mass., from 1798 to 1802; at Wiscasset, Me., from 1802 to 1830; and at Middlesex Village, Mass., from 1830 to 1866. He died in 1869. He published single sermons, etc. (1798-1816). See Sprague, Amadrul, Unitarian, viii, 291; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Packard, Theophilus, D.D., a Congregational minister, was born March 4, 1769, at North Bridgewater, Mass. He graduated at Dartmouth College in 1786, and was ordained pastor in Shelburne, Mass., Feb. 20, 1779, where he remained until his death, which occurred Sept. 17, 1855. He published Sermons in 1796, 1808, 1815, and 1818; and in 1820 the Life and Death of (his son) Isaac T. Packard. See Sprague, Amadrul, i, 408; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Packer, David, M.D., a minister of the Methodist Episcopal Church, was born in Newark, N. J., Feb. 20, 1803; was licensed in Berkeley, N. J., in 1829; was ordained as a不通坏 the 1830s; and was the speaker of the Pennsylvania assembly in 1837. He was a member of the Pennsylvania Senate in 1838, and was elected to the United States Senate in 1839. He was a member of the Pennsylvania House of Representatives in 1841, and was elected to the United States Senate in 1842. He was a member of the Pennsylvania House of Representatives in 1843, and was elected to the United States Senate in 1844. He was a member of the Pennsylvania House of Representatives in 1845, and was elected to the United States Senate in 1846. He was a member of the Pennsylvania House of Representatives in 1847, and was elected to the United States Senate in 1848. He was a member of the Pennsylvania House of Representatives in 1849, and was elected to the United States Senate in 1850. He was a member of the Pennsylvania House of Representatives in 1851, and was elected to the United States Senate in 1852. He was a member of the Pennsylvania House of Representatives in 1853, and was elected to the United States Senate in 1854. He was a member of the Pennsylvania House of Representatives in 1855, and was elected to the United States Senate in 1856. He was a member of the Pennsylvania House of Representatives in 1857, and was elected to the United States Senate in 1858. He was a member of the Pennsylvania House of Representatives in 1859, and was elected to the United States Senate in 1860. He was a member of the Pennsylvania House of Representatives in 1861, and was elected to the United States Senate in 1862. He was a member of the Pennsylvania House of Representatives in 1863, and was elected to the United States Senate in 1864. He was a member of the Pennsylvania House of Representatives in 1865, and was elected to the United States Senate in 1866. He was a member of the Pennsylvania House of Representatives in 1867, and was elected to the United States Senate in 1868. He was a member of the Pennsylvania House of Representatives in 1869, and was elected to the United States Senate in 1870. He was a member of the Pennsylvania House of Representatives in 1871, and was elected to the United States Senate in 1872. He was a member of the Pennsylvania House of Representatives in 1873, and was elected to the United States Senate in 1874. He was a member of the Pennsylvania House of Representatives in 1875, and was elected to the United States Senate in 1876.

Paddock, Benjamin Green, a pioneer preacher of the Methodist Episcopal Church, is noted for his valuable Christian labors in the territory now known as the Wyoming Conference, and covering those portions of the great states of Pennsylvania and New York situated near the much celebrated valley of the Wyoming. He was born in Bennington, Vt., Jan. 14, 1819. His mother is still remembered as a woman of deep piety. For eighty-five years she lived a holy life. An abiding moral influence was thus exerted upon the domestic circle, and Benjamin was one of the first of a numerous household to give his heart to God. At the age of sixteen he was converted under the Rev. Benjamin Bidlack, and joined the Methodist Church. He entered the itinerant ranks in 1810, when his name first appears upon the Minutes of Conference. He had labored the preceding year on Westmoreland Circuit under the Rev. James Kelsey. Packard's work was chiefly in the Wyoming valley and its adjacent mountain region. He had a voice of uncommon sweetness and power, and the effect with which he sang for Jesus is still remembered in that section. Later he was stationed at the important charges of Ulica, Canandaigua, and other places for many years. In 1848 he was superannuated, and he never after resumed the active work of the ministry. He took up his residence first at Clinton, where he educated his children at college, and later he lived at Rome, New York. His long life of usefulness closed at last at Metuchen, N. J., Oct. 7, 1872.

PADOVANO

gone to enjoy the attentions of his children residing there. His dying hour was most tranquil and joyful. His son, the Rev. Z. Paddock, who reached him the evening previous to his death, while it was characteristic, was most exultant. His last words were, "Forbear. Hallelujah, all is well!" Like most of the pioneer preachers of Methodism, Mr. Paddock's early educational advantages had been meager, and he was dependent upon his own industry for the culture he secured. He studied much and wrote some, but he never became pre-eminent among his fellows for commanding intellect, to judge from his productions as published in the Memoir cited below. He was a "remarkable" man, a "pious" man, a "significance" of a heart. He "infused things from the emotions, and to him the good was the test of the true" (Dr. Wheden, in Meth. Qu. Rev. April, 1875, p. 948). See the Rev. Z. Paddock, Memoir of the Rev. B. G. Paddock (New York, 1875, 12mo); Min. of An-
nual Conferences, 1874, p. 52.

Paddock, James H., a minister of the Methodist Episcopal Church, was born in Sussex Co., N. J., Aug-
ust 28, 1839. We are unable to gather any authentic in-
formation concerning his early life. In 1859 he experi-
enced religion, and joined the Methodist Protestant Church. His conversion was remarkable. He imme-
diately began to exhort sinners to repentance, and suc-
cess attended his efforts, attracting the attention of the Church. He was soon licensed to preach, and entered the travelling connection of that Church. He labored on Albany, Canaan, Sterling, and Auburn circuits, serving each charge with acceptability. In 1872 he joined the Wyoming Annual Conference of the Meth-
odist Episcopal Church, and was stationed at Stoddards-
ville, a laborious circuit full of care. But he did his work well. In 1873 he was stationed at Newport, but he did not live to see the end of his conference year. He died March 30, 1874, from the effect of an acciden-
tal pistol-shot. J. H. Paddock was a kind, companion-
able, and good Christian minister. See Minutes of An-
nual Conferences, 1874.

Paderborn, a German city, the seat of several im-
portant ecclesiastical councils, and till 1808 ranking as a
free imperial bishopric, owes its foundation to Charle-
magne, who nominated the first bishop in 795. During
the Middle Ages it was one of the most flourishing of the
Hanseatic cities, while it was also numbered among the
most beautiful. In 1562 it was forcibly deprived by the
prince-bishop, Theodor von Fürstenberg, of many of the
special rights and prerogatives which it had enjoyed since its foundation, and was com-
pelled to acknowledge the Roman Catholic as the pre-
dominant religion in place of Protestantism, which had
been established during the time of Luther. The
latter prince-bishop was Francis Egon, von Fürstenberg,
1789-1808. At that time Paderborn was, in accordance
with a decree of the imperial commissioners, attached
as a hereditary principality to Prussia, which had taken
forbids possession of the territory; and, after being
for a time incorporated in the kingdom of Westphalia,
was restored to Prussia in 1813, and is now the chief
town of a district in the Prussian province of Westph-
alia. It is situated in 51° 43' N. lat., and 8° 45' E.
long, in a pleasant and fruitful district, is built at
the source of the Pader, which bursts forth from below
the cathedral with sufficient force to drive mills within
twenty paces of its point of exit, and has a population
of 11,279. The city has narrow, dark, old-fashioned
streets, presenting no special attractions, although it
has many buildings, including a large number of in-
stance, the fine old cathedral, completed in 1145, with
its two magnificent façades, and containing the silver coffin in
which are deposited the remains of St. Liborius. It
continues to be the seat of a Roman bishop and chap-
tels; there are about five Protestant churches in Pader-
born. The Gustavus Adolphus Society has established
and aids several Protestant societies.

The most important of the councils held at Pader-
born was that of A.D. 777, called under the govern-
ment of Charlemagne to confirm the new baptized
Saxons in the faith. It was ordered by the emperor, who aimed at a centralization of power in his vast pos-
sessions, that all should take an oath to abide forever in
the Christian faith; and they that refused to do so
were punished with the loss of all their property. See

dacoe's head of one of the families of Nethinim who
returned from Babylon (Ezra ii, 44; Neh. vii, 47). R.
C. ante 520.

Padova (Masereto), Angelo, an Italian painter who
flourished at Padua about 1489, and painted in the
refectory of the monastery of Santa Giustina a picture of
The Crucifixion, which Lanzi says is designed in a
grand style, and executed with great spirit. He was a
close imitator of the style of Andrea Mantegna.

Padova, Girolamo da, called also Girolamo
del Santo, an Italian painter, was born at Padua in
1480, and died about 1560. He was celebrated in his
day for his small pictures of historical subjects,
which he decorated with bas-relief sarcophagi and
monumental ornaments, with inscriptions copied for
the most part from the Paduan marbles. On the
death of Bernardo Parentino, in the year 1631, Padova
was commissioned to continue the admirable
works executed by that master in a cloister in the
monastery of Santa Giustina. In these Lanzi says Padova showed himself greatly inferior to Pa-
rentino in design and expression; but Lanzi com-
ments Padova's elegant accessories, designed from
the antique.

Padovano, Francesco, an Italian painter, was born
at Padua in the year 1552. It is not known with whom he studied, but he painted history with considerable reputation. He possessed inventive gen-
ius, and was a correct and graceful designer. He
painted some works for the churches, one of the best
of which is a picture in the church of La Madonna
del Carmine at Venice, representing a saint interced-
ing for the souls of the deceased, a subject which
he excelled in portraits, which were admired for their
truth, dignity, and excellent coloring. He died in
1617.

Padovano, Antonio and Giovanni, two old
painters, probably brothers, to whom Morelli attri-
butes the works in the church of S. Giovanni in
Basilica (see the next article). In his Notizie, Morelli
says that formerly there was the following inscrip-
tion on one of the gates, "Opus Johannis et An-
toni de Padova;" for which reason Morelli conject-
ures that they were the painters of the whole build-
ing.

Padovano, Giusto, an old Italian painter who lived
at Padua, was a native of Florence. His real name
was Giusto Menabuoi; but he was called Pado-
van from having been eventually a citizen of Padua,
where he chiefly resided, and died in 1397 at an
advanced age. Vasari says Padovano was a dis-
ciple of Giotto, and attributes to him the very ex-
tensive works which adorn the church of S. Giovanni
Battista in that city. In the picture over the altar
are represented various histories of St. John the
Baptist; on the walls various scriptural events and
typical stories; and round the choir is a choir of angels, where we behold, as in a grand
consistory, the Blessed, seated upon the ground,
arrayed in various garments. Lanzi says the composi-
tion of these works is very simple, but they are executed with a remarkable degree of diligence and fidelity.

Padua is the name of an Italian province formerly in Austrian Italy (see Italy), and of the capital of that province. This city is noted in ecclesiastical history as the seat of several Church councils, of which the most important was held there in the spring of 1556 by cardinals and representatives of the clergy and people of the city, which intended to effect the reformation of morals and the general purifying of the Church. Padua, it may be stated here also, is noted as the seat of one of the oldest universities in Europe. It was celebrated as early as 1221, and it supports forty-six professors, and is attended by about 2000 students. A pretty full account of the ecclesiastical history of Padua the reader will find in Wetzler u. Welte, *Kirchen-Lexikon*, xii, 916-920. For the councils, see Labbé, *Conc. xi*, 1918.

Pae Atua is the name of a general exhibition of the gods among the South Sea Islanders.

Peän (Peaus) is the name in the Homeric mythology of the physician of the Olympic gods. It was also applied as a surname to Aeneas, the god of healing.

Peän (Peain), a hymn anciently sung in honor of Apollo, has therefore sometimes also called Peän. The hymn was of a mirthful, festive character, sung by several persons under a skilful leader as they marched in procession. It was used either to propitiate the favor of the god or to praise him for a victory or deliverance obtained. It was sung at the Hygeia, and in the temple of the Pythian Apollo. Peains were usually sung among the ancient Greeks, both at the commencement and close of a battle, the first being addressed to Ares, and the last to Apollo. In later times other gods were also propitiated by the singing of peains in their honor, and at a still later period even mortals were often sung. The origin of the remote antiquity of singing peains at the close of a feast, when it was customary to pour out libations in honor of the gods.

Pedagogics (Gr. παιδαγωγική, from παις, παι- δίς, a boy, and ἂγων, to lead, guide; ἂ γωγίς, leading) is a technical term for the scientific presentation of educational principles, as distinguished from education itself—the latter signifying the application of means by which the mature mind seeks to develop in the immature the formation of an independent character. Pedagogics, or as it is generally Anglicized Pedagogics, is therefore related to education as theory is to practice. As a science it is founded on the natural history of childhood, the nature of the child, and the relation of the educator to the child. It is a science of psychology and theology, and we therefore make room here for a brief consideration of it.

Philosophy must rest upon a scientific apprehension of the nature of social life, with its permanent laws and its ideals, and also of the means to be employed that the laws may be fulfilled and the ideals realized—in other words, philosophy must be based on *etica*. It follows from this that the most important prerequisite for philosophy is psychology, the science that is specially concerned with the laws of man's spiritual nature; neither philosophy nor psychology may, however, justly disregard the results obtained by scientific inquiry in the department of man's physical nature. The relation of pedagogics to *theology* rests on the principle that the highest object to be sought in all training of youth is correct moral or, better, religious guidance; for education is not merely the imparting of knowledge and of facility in its use, but, before and above all else, it is the development of conscience—the moral consciousness—and of the sense of responsibility. Now all morality has its ultimate ground in the relation sustained by man to God. Even philosophers, like the sceptic Lotze (comp. Ueberweg, *Histo. of Philos.*, ii, 312-321), concede that the moral life will never find a surer platform nor a superior inspiration than is afforded by the principle of love to God. As this is the very cardinal principle of Christianity, pedagogics must be regarded as entering into vital relations with theological ethics; yet catechetical instruction in religion, which constitutes an element of popular education among Christian nations generally, brings it into external connection with practical theology only. Pedagogics, however, is not by any means a mere branch of theological instruction, but rather an independent science, which employs those referred to simply as helps, and, in general, derives its matter from the results obtained by the study of knowledge.

In pedagogical method, all systems of education admit of substantially the same division into a theoretical part, which treats of the principles of intellectual and moral training, and a practical, which discusses the application of such principles to particular objects. If the history of pedagogics be included, Stoy's system will come into philosophical, historical, and practical pedagogics may be adopted. The science must, at any rate, first present a history of pedagogics, then lay down its own principles of training, and, finally, show what character the education is to assume in the particular departments of life.

1. The History of Education (see Waiz, *Anthropologie der Naturvölker*, Leipzig, 1859), vol. i.—Education, in any proper sense, does not exist among savages. Their life is wholly sensual, and the training they receive does not in the least develop any real common sense, worthiness and keenness, and that merely for the purpose of self-preservation. With nations that have begun to rise above the merely natural state, it consists simply in transmitting what physical skill and intellectual attainments the family or tribe may possess. Among such peoples we may class the negro tribes of Africa, the tribes of South America, and, of the historical peoples, such semi-barbarous nations as the Huns, Mongols, etc. Education in the higher sense is found only among civilized nations, the oldest of which, as is well known, belong to Asia. These manifest in their methods of education the extraordinary diversities that distinguish the Asiatic nations generally from each other. When our acquaintance with the Chinese begins, their condition is the result of a national development that has progressed through many centuries, and whose internal character is but little known. The absolutism of the state is reflected in the educational system also. Its ideal is the inculcation of reverence for parents and superior authority, and the rod affords the only inducement for application to study for old or young. The Chinese therefore always remain in a state of childhood, despite their examinations, or, rather, even because of them; and their progress consists merely in their becoming full-grown children (comp. Ed. Blot, *Essai sur l'histoire de l'instruction publique en Chine*, etc. [Paris, 1846]; Carriere, *Die Anfänge d. Cultur. u. des oriental. Alterthums* [Leip- zig, 1863]). In India a different system prevails, which is connected with the system of religion, but in a manner quite unlike that which unites education and the wholly external idolatry of the Chinese world. Brahminism and the caste system have a determining influence. The students are educated into subservience to the superior or Brahminic caste, as being the highest revelation of the deity—to be lost in which is the religious ideal of Brahminism. The method of instruction is mild; the symbolic language of legends, traditions, and fables affords the means by which the subjugation of self towards Brahms and ultimate dissolution in the deity are inculcated. Women are considered incapable of culture, as in China (comp. Lassen, *Indische Ackerbauerakunde* [Bonn, 1847-57]; Dusch, *Die älteste praktische Pädagogik der heidnischen Alterthums* [Tubingen, 1855]). On the other hand, in Japan, so very much akin to China, until the reforms of our day by virtue of the American influence on the Japan- ese, see Johnson's *Cyclop. i*, 1485 sq.). In ancient Per-
the life of the individual was conditioned by the omnipotence of the state; hence self-assertion and self-development for the service of the despot, the representative of the state, rather than the annihilation of self and its dissolution in the deity, were the objects sought. Public instruction was therefore in harmony with the pedagogic principles of the Hellenic educational system, that was later applied in India and China, and received some training in their homes. The Zend-Avesta contains regulations for the training of the priesthood only (comp. Spiegel, Avestas, die Arel. Schriften d. Parsen [Leipzig, 1852-1891]; also Herodotus, i, 142-149; Plato, De Legg. iii, 694; Aesch. i, 1054, Xenoph. Mem. i, 4; Heron; Gymnast.: Hatab, ii, 22-738). Among the later Persians the luxuriousness and weakness of the nation, as a whole, brought with them a corresponding degeneracy in its education.

We lack definite information with regard to the systems of education among the Aryan nations of the Hellenic Asia; but the overpowering and almost fiendish influence of their cruel and licentious systems of nature-worship (Baal, Moloch, Astarte, etc.) prevented most of them from attaining to a superior social culture. Certain departments of learning were taught, however, as drawing, archery, and music, among the Babylonians, and Syrians; and an estimate of the culture of the Phoenicians may be formed from their commercial character. In Egypt all learning and culture was in the hands of the priests, who maintained schools for the sacerdotal class, to which no others were admitted (comp. Aen. ii, 495; Livy, ii, 25). The sacerdotal class were the inferior class as heirs to the throne. The common people were educated merely to be expert and extremely exact in the arts of which the caste to which they belonged made use in the prosecution of its particular calling. That the moral element was not overlooked, however, appears from the tribunal for the dead [see Egypt, § xii.: Osiris], and from the belief in a purifying transmigration of souls [see Mysteriarchos], i. e., a belief in an unending individual life in a sensible form. In later times, when the influence of Greece became paramount in Egypt, education was more generally diffused, and more method was applied to its promotion. Musical culture and a preference for exact studies then prevailed. The earnestness of former times, however, gave way to frivolity (comp. Diod. i, 80; Herod. ii, 79, 106; Plato, De Legg. 856 sqq.; Bunsen, Augustins Stelle in d. Welgeschichte [Gotha, 1845-56]). In the Hebrew character the religious tendency was especially prominent, and the Hebrew nation was chiefly important as being the people of God. The system of education in vogue aimed, in strict harmony with this idea, to teach and inculcate the principles of faithfulness to the covenant of God. Education was, in short, a corollary of religion, and the teaching was therefore wholly religious, and involved instruction in the law, the customs, and the symbolical observances of the nation, as well as the narration of its history; in illustration of these subjects. This training was committed to the family; but from the age of twelve years the Jew was admitted to the synagogue, in order to his further advancement, by listening to the reading of the sacred books and their explanation, and by sharing in the religious conversation of the congregation. Women are mentioned as holding public positions among the Jews (Deborah), and as being more respected than was usual among Eastern nations; but the Old Testament contains no trace of special provisions made for the education of females. Of course the Hebrews were a higher class than usually educated people, or the parent could not have conducted the intellectual training of his child. Besides, we learn from the sacred Scriptures that they were able to read and write, and had quite a knowledge of astronomy, and consequently of mathematics. The Stoics, of course, came into being after the Babylonian captivity (the so-called schools of the prophets [n. v.]), which flourished in earlier times, are outside of the field covered by the history of general education). Talmudic Judaism provided an organized system of schools for the rabbis. From these were developed real schools of learning, and facilities of a remarkable pedagogical order were afforded by them for the different so-called learned professions [see the articles Sura, Pumbedita, etc.]. During the Middle Ages in the Moorish schools of Spain, and in the universities of Paris and Oxford, the influence of the introduction of classical learning, especially in Spain and France, until the general persecutions inaugurated against them made their maintenance any longer an impossibility. In modern times the culture of the Jews partakes more and more of the character of that which prevails among the civilized nations among whom they live (comp. Herzog, Geschichte der Juden in Frankreich, ii.; Billbé, Gesch. der Juden in Frankreich, ii., 156 sq.; see also the articles Jewish, Education). The influence of Western nations upon the progress of civilization is of a more recent date, that of the Greeks being first. They held, on the one hand, the conviction that the individual is of no importance in himself as a mere member of the order of life, but, on the other hand, they manifested an active spirit that refused to be controlled by nature, seeking rather to subdue it and reduce it to harmony. These characteristics gave shape to education among them, first in the course of practical experiments during many ages, and afterward in the form of laws and institutions. The political tendency referred to predominated in the systems of the Doric tribes, while the broader recognition of manhood was the leading principle among the Ionians. The result was that popular education was more generally diffused among the former; while among the latter (at Athens) it was rather the privilege of the superior class. Slaves, however, were everywhere excluded from the privileges of learning. The Doric system sought to cultivate a manly, independent spirit, that should yet devote itself to the interests of the state. The means employed were gymnastics and music, and, at a later period, reading and writing. Youthful females likewise made use of these, for the cultivation of firmness and love of country. This spirit, ennobled and strengthened by philosophy, appears likewise in the school of Pythagoras, B.C. 585-470. He founded institutions for the purpose of promoting the health and purity of both body and soul [For his philosophy, see the art. Pythagoras]. The Ionian system, which made no provision whatever for the education of females, sought to attain καλαίσθανωσιν, the beautiful and the good. The habit of public training, which belonged to all classes, and to each other; but the influence of the former was not, as a general thing, beneficial, owing to the authority exercised by the nurses and house-slaves (παιδευταις). The public gymnasia taught reading, penmanship, grammar, arithmetic, music, and gymnastics, to which the use of weapons was afterwards added. The scepticism of the Stoics, and the exalted ideals of social culture entertained by Plato and Aristotle, do not seem to have exercised any important influence over the education of the people generally—which is true of all the various systems of philosophy. The influence of Plato's zealous opposition to the godlessness and licentiousness of the popular religion of the Greeks, however, was felt in the gradual undermining of the latter. Down to the time of Plato the real instructor of the Greeks was Homer; from that period on, the Jews were subjected to the influence of allegorical interpretation (comp. Hocheimyer, System d. griech. Erziehung [Göttingen, 1785-1786]; Gross, Die Erziehungswissenschaft nach d. Grundsatzen d. Gr. u. Römer [Ansbach, 1888]; Jacobs, Era. d. Heiligen zur Stützheiden: Jünger, Die Gymnastik und d. Heilige der Griechen, 1850; Kirchhoff, Die Era. u. d. Unterrichts bei d. Griechen, Etruskern u. Römern [Halle, 1851]; Kirkpatrick, The University [London, 1857, 12mo], p. 98-241; Opler, Lectures on Education
Among the ancient Romans the object of religious and social training, if considered apart from the elements introduced by the Sabine and Etruscan influence, was to fit the people for citizenship. Both domestic and public instruction were employed for this end. Seminaries were provided, though not in considerable number before the period when the more profound studies were reserved to the family. The influence of the pedagogus came gradually to occupy the place of the parent. Reading, writing, and the memorizing of authors belonged to the course of study. Rhetorical practice was confined to the philosophical schools, and does not date farther back than a later period. The new elements became very numerous from that period; new facilities for instruction were added to those already in use; and the higher learning was extended, after the Alexandrian model, to embrace the circle of the artes liberales—grammar, dialectics, rhetoric, geometry, arithmetic, astronomy, and music. In time a demand for practical schools of jurisprudence made itself felt; and subsequently (from A.D. 425) the need of schools of medicine, philosophy, grammar, and rhetoric was recognized, giving rise to universities with faculties. Educational theorists were Porphyrion, Secundus of Mixinum, Severianus, Quintilian—the professor eloquentiae—Plutarch, and also M. Aurelius (comp. Bernhardy, Grundriss d. Röm. Literatur [Halle, 1850]; Lange, Röm. Alterth. [Berlin, 1863]; Niemeyer, Originalläute der Griech. u. Röm. Classiker s.d. Theorie d. Erziehung u. des Unterrichts [Halle and Berlin, 1872]).

Christianity has a different ideal in education. Instead of giving a one-sided attention to the intellectual, political, and national relations sustained by man, it seeks to cultivate a complete character, that shall be developed in every direction, and that receives its profoundest moral determination from the conscious relation sustained by man towards that God who is revealed in the New Testament. It must be admitted, however, that this ideal was only gradually apprehended by the Christian world. The family was naturally the only school, at first. The Greek Church was the first to provide catechetical schools, of which that at Alexandria—from the middle of the 2nd century—became the most famous. The object of these schools was simply the preparation of adults for baptism, though philosophical questions that had been handled by the Christians also received consideration. See ALEXANDRIAN SCHOOLS. The Greek schools of philosophy, however (first of all that at Athens, then also that at Alexandria and the academies of the Neo-Platonists), continued to be the chief centres of learning in early Christianity, until, in A.D. 1088, the schism between the schola of Athens and the Alexandrian school had succumbed to the fanaticism of the monks and the hierarchy a century before; and the migrations of the nations rendered a renewal impossible. The clergy, who became the sole depositaries of learning in the West, contented themselves with merely guarding the treasures that had hitherto been acquired. The scientific impulse which took its rise from Mohammedanism led to the advance of culture, especially in Spain, where important contributions to learning were made by the Saracens and the Jews, more particularly in the field of the exact sciences, but also in natural philosophy and the philosophy of religion. (On the school at Cordova, after the 9th century, translations from Aristotle, etc., comp. among others, Erdmann, Gesch. d. Philos. philos. i, 307 sq.; Lewes, Hist. of Philos. vol. i; Christen Schools and Scholars to the Council of Trent [Lond. 1836], vol. i.) The churches in Germany, at the beginning of the Middle Ages, had only schools for the training of the clergy, with a practical and rather narrow aim. The most conspicuous seat of learning in the early Middle Ages was that of Bede and the monastery of Wearmouth, but it did not go beyond the purely traditional course of studies, whose sources and authorities were found in Augustinian, Cassiodorus, Boethius, and Isidore of Seville. From this school came forth Alcuin (q.v.), one of the principal supporters of learning in the Carolingian age, who deserves, at the same time, the highest credit for the reform of the cathedral and convent school system, which was carried through by Charlemagne. This reform had, of course, no intention of promoting popular education. It was to prepare men for a life of religious devotion, and the Abbot of St. Genebrau, thereto by Alcuin, sought first of all to train a cultured clergy that should be able to teach every individual the credo, the pater-noster, and similar things, in the vernacular. The diocese of Orleans alone in those times had incipient schools for the people. A century later, Bernard the founder of the Cistercian order, a student at St. Denis, and later the founder of the convent-school at Fulda, conceived the idea of educating the people generally, and in England Alfred the Great sought practically to realize the same end. The increased number of universities led, from the 12th century, to a decline of interest in the cathedral and convent schools; and as early as the time of Innocent III (1198–1216) they had become mere representatives of the illiberal and hierarchical culture of the Church, which the papacy sought, but in vain, to favor at the expense of the more liberal and untrammeled individualism of the universities. However, by the opening of the 14th century, experienced the effects of the general decay, which began with the opposition to the papacy of Avignon, and increased as the idea of the state was developed and the cities and commercial interests rose into importance, until, in the 15th century, it produced the overthrow of scholasticism. But a new spirit of inquiry, of independent thought and inquisitive criticism, that had escaped ecclesiastical control, was already at work, having appeared in connection with the revival of learning that began with Petrach (1304–1374). The new spirit, however, that spread through the universities of the 15th century, aroused a general interest in the study of classical antiquity and of the ancient languages. See RENAISSANCE. The beginnings of popular education in the modern sense are to be credited to the "Brothers of the Common Life," who established schools in Holland and along the Rhine in the 15th century. They discarded scholasticism, and devoted their attention to the Scriptures, the study of the fathers (Augustine, St. Bernard, etc.), and the languages, not for the purpose of preparing for an office in the Church, but in order to instruct the people. The noblest sons of the Intelligenz, exclusively humanistic learning being trained in these schools, e. g. Agricola, Al. Hegius, and Spigelberg. These were soon followed by other humanists, whose circles extended over all Germany (Busch, J. Wessel, Wessel, Conrad Celtis, Mutian, Ruffus, etc.; compare Voigt, Die Wiederherstellung des mr. der christl. Bildung in Deutschland, 1861). The schools of the Intelligenz were influential in promoting the study of languages, the former devoting himself more especially to the Hebrew, the latter to the Greek. Schools for such advanced studies were, however, established only in the larger and more favored towns; and the great majority of towns, as well as the entire open country, was without facilities for education, excepting those afforded by the discouraging labors of strolling scholars (comp. Baumer, Gesch. d. Pädagogik, vol. i. On education generally in the Middle Ages, consult Ruhlkopf, Gesch. d. Schule u. Erziehungswesen in Deutschland [Bremen, 1794.]., vol. i; Hahn, Das Unterrichtswesen in Frankreich [Breslau, 1848.]; and Christian Schools and Scholars, already referred to).

Luther, with his profound sense of what the people needed, was the first to raise the school for the people to the dignity of a national institution. He became the founder of the common-school system of Germany (comp. his excellent address to the German nobility in 1520, Schrif in an die Ruthkirchen aller Städte Deutsch., etc. [1524]; and the art. PÄBOCHSCH SCHULES). He advocated the popular education, not only in the family, but also in the school; that the children of citizens should be compelled to attend
the schools, and that the town-schools should give special attention to the study of Latin, while music and physical training should not be neglected. Melanchthon and the other leading Reformers of the 16th century seconded his efforts. Bugenhagen, Brenz, Zwinglei, and Calvin all gave attention to this work (comp. Schenk, Joh. linken to der Einheit der Witten Bern. Jg. [1601]).

Many practical difficulties arose, of course, especially in North Germany, and only the mere beginnings of a school system could be realized. The dogmatic disputes of the 16th and the miseries of the 17th century followed and blunted any further hope of immediate of the object, and proceed from this starting-point to the development of the various intellectual and physical powers. This is still the determining idea in modern education; but Pestalozzi himself, who, while filled with love for the people, was yet a thoroughly unpractical man, could only seek its realization, but not attain it. It was taken up by others, however, and applied to the work of education in the most diversified forms. It finds expression in the form of schools for the indigent, of institutions for the blind and deaf-mutes, of houses of refuge, of orphan asylums, etc.

The prevalent theories of education were, of course, not without influence upon the philosophical and ethical views of the great poets, and especially of the philosophers. The influence of Kant, with his "categorical imperatives," and of the "tragic" (Kahle) and "comic" (O. Grassi) and John Amos Comenius (1592-1671), bishop of the Bohemian Brethren, applied them in a more considerate and commendable way.—Among Roman Catholics but little was done for education at this time. The only name we can mention is that of Carlo Borromeo (1568-1584), archbishop of Milan. Nor was anything of importance accomplished within that Church during the century that followed the peace of Westphalia. The reformatory efforts in this direction—by the Jansenists, the Port-Royalists, the Fathers of the Oratory, and Fénelon, who wrote, among other subjects of this nature, on the education of females—were all directed against the Jesuits. A renewed interest in Germany for popular education was produced by the piety of Spener and Aug. Herm. Francke (1663-1727), the latter of whom, especially, aimed to develop the man into the Christian (comp. reports of the Pedagogium, Latin School, and School for German Citizens in the Orphan House at Halle). The Moravians are especially prominent as pedagogical missionaries. The revolution in pedagogy, which had resulted in a direct contrast to all foreign, and especially all churchly, systems of education, is illustrated by the activities of J. G. Bennigsen von Rousseau (1712-1778). His principle of a "return to nature" involved, as the ideal to be sought in education, the complete unfolding of the natural man; and it suggested, as the means to this end, the isolation of the individual, his separation from a world that is ruined by culture (comp. his Contrat Social; Emile: La Nouvelle Héloïse; also the biography by Venedy [Berlin, 1850] and by Morley [Lon.d. and N.Y., 1874, 2 vols. 8vo.]). The first of the so-called Realsculben was founded at this time (1729) by Semler (q. v.) at Halle, and others rapidly followed. The influence of Francke, and the influence of these men saved the schools from Rousseau's enthusiasm for the natural man. Basedow (1723-1790), however, was seized by it, and developed it into an external utilitarianism, which he sought to reduce to practice in the Pedagogium, or "little academy," at Dessau (1774). He held that the promotion of the physical well-being and the enlightening of the understanding are infallible means for developing children "into Europeans who shall be harmless, valuable to the community, and contented." The institutions founded by him were defended partly on the basis of the Church and the School, recognising the impossibility of training the head without the heart, and yet appreciating the usefulness of the secular teacher for the cultivation of man's emotional nature. Lord Brougham and Dr. Matthew Arnold were especially active in carrying the English pedagogical idea to light, and they succeeded so well that it became the common language of all those who desired that the frame and temper of society needed an extensive renovation, and that this reno-
Pedagogy must begin with the young. The presumptuous turn of mind, the absence of intellectual ability, supposed to result from instruction, addressing itself to the intellect alone, were to be corrected by a strong diversification in favor of a more subjective course of study. The student was to be imbued with principles and tastes rather than positive acquirements. The main object of training was to be the moral development, the change of character by habit, not the imparting of what is commonly called learning. Nay, much was to be unlearned—much rubbish taken down before men could begin afresh on the old foundations—much of the scholasticism of recent centuries removed; natural science and literary acquirements were to be taught, not that donation to which they had been raised in modern times by generations wanting in the habits of reverence and earnestness of feeling. Catholic (i.e., Protestant, of course) theology and moral philosophy, in accordance with catholic doctrine, were to be the main foundation of the improved education of these newer days; science and literature were not, indeed, to be neglected, but to be cultivated in subordination only to these great architectonic sciences, and discarded wherever they could not be forced into subordination. Thus a new generation was to grow up trained in the intellectual habits which were necessary to mere objective knowledge, if such should really ensue, to be far more than compensated by the higher cultivation of the immortal part, the noble discipline of piety and obedience. Such aspirations may be traced in contributions towards the ideal in the system of the second quarter of the century (about 1833) brought out; while those who are acquainted with the practical details of the subject know full well how deep a tincture has been introduced into the actual studies and habits of both universities, but especially of that of Oxford, by the prevalence of views such as these, expressed by energetic men, in language at once startling and attractive.

In the United States, men of intellectual ability have worked for the general diffusion of knowledge through a common-school system, but there has never been any pronounced effort for the training of the young religiously. Indeed, in our day the cry is for mental development independent of spiritual care; and while in rationalistic Germany there is provision for the religious training of every youth up to the highest class in the government schools, in other countries education and religious training are separate. In the United States, the coeducational idea has grown in favor, the time may come when the Sabbath-school will afford the only opportunity for the religious training of coming generations. True, chancellor Kent (Commentaries, ii, 187 sq.) has laid down the maxim that under our form of government the parent should be held responsible for the moral training of the child; but the chancellor ignored the fact that we are largely a floating population, constantly amalgamating with different races of different educational grades and various religious notions, that in any public which acknowledges the Christian civilization as its guide and base, the state should so educate the coming citizen that he may not only be able to interpret the law and have a head to understand, but a heart to cherish and observe.

2. The second part of pedagogy, as a science relates to the development of a system of education, on the basis of the foregoing history. Its first duty would be, perhaps, to describe the end sought, which must be the cultivation of the ethical principle, after which attention must be given to the subject who is to be trained—the pupil; and next to show the means by which the desired end may be attained. Without entering on the details of modern systems of pedagogy, it may be said that the result of all recent discussions has been to demonstrate that the general training in schools should not aim at a direct preparation for practical life, but at its intellectual aspects, should rather seek to lay a broad foundation of general culture upon which may afterwards be based the training required for any particular calling in life; and, further, that the grand object should be the moral and mental development of the child, particularly in point of character and manly independence. This conclusion demonstrates that the victory of the opposites of all religious instruction in secular schools can only be secured at the expense of morality and general culture.

2. The second part of this science has to deal with the relations of education to the constitution of society—in other words, it must treat of the organization of education and its relation to the other organizations of the country, both secular and ecclesiastical. It would lead us beyond the scope of this work to enter into the details of this branch of the subject. The outline of the discussion, however, is suggested by the above historical review, and many points will be found touched upon in various appropriate articles elsewhere given.

Literature.—On the history of education we mention, beyond what is ready at hand, is applied to the baptism of infants, in the Catholic Church, or what is popularly termed infant baptism. Under the general subject of baptism, it is that part which relates especially to the proper subjects of baptism. See Baptism.

1. That we, as of any other Christian rite, involves, naturally and necessarily, two things: the idea expressed in the rite, and the rite itself.

Each of these must be traced in its historical connection, since a rite or ordinance is the outgrowth of some idea which it is intended to symbolize. In this instance, the rite is the application of water in a certain way to a child; the idea is a certain relation of children to the Church, namely, that the children of Christian parents, by virtue of their baptism, are brought into such a relation to the Church that they are regarded as in a certain sense within its membership, i.e., just as there is a visible and invisible Church [see Church], so there should be recognised a visible and invisible membership; the former being acquired by actual public admission after profession, the latter being acquired by virtue of the descent, and holding good only until the persons enjoying such a membership reach the age of independent action, when it becomes of non-effect unless supplemented by the visible connection. Those entitled to invisible membership are consequently recognised by the Church as fit candidates for baptism, and therefore may be admitted to the rite when and as when asked for. This historical view of the idea and the rite in the early Church will naturally be taken by two pe-
riods—the New Testament or apostolic period, and the period of the fathers.

1. The Idea and the Rite in the New Testament.—

(a) The religion of the New Testament is historically, organically, and spiritually connected with the religion of the Old Testament, through the birth, the person, the position, the teaching, and the life and death of the Risen Christ, through his disciples, and through the sons of Abraham." He came "not to destroy the law or the prophets, but to fulfil." Many of the religious ideas which Christ proclaimed and fulfilled have their roots in the Old Testament. The idea which is necessarily involved in infant baptism is plainly a promi-

nently Jewish idea, a concept of a religious organization that the children of Jewish parents were members of the religious organization of the Jewish people. The whole people, as the seed of Abraham, were a divinely con-

stituted religious organization. The nation felt itself to be a religious organization in covenant with God. This caused what we call Church and State to be one, making a theocracy, in which what corresponds to Church and to State with us actually existed, though in union. They were "a Church in the form of a nation." It is a historical fact that infant children of Jewish parents were regarded as members of the religious national organization by virtue of their parentage. The conception of the family in the Old Tes-

tament brought children within the covenant which God made with Abraham and his family, and which was fulfilled by Jesus and his descendants, through Isaac and Jacob, when they became a nation. As a sign of this covenant the children were circumcision.

This idea of the family, bearing so plainly in the Old Testament the mark of divine origin and approval, appears also in the New Testament, and in the transitional fulfillment of the Old Testament in the religion of Christ, it passed into Christianity and the Christian Church also. It appears at first, of course, because John the Baptist and Christ and his apostles were Jews, and were circumcised in accordance with the age Jewish idea and custom. In the very persons of Christ and his apostles themselves this idea was illustrated in their families, and as they grew up it would naturally become a part of the system of opinions which would be formed by their Jewish education. After his baptism, Jesus was filled with the power of the Holy Spirit upon him, and after the day of Pentecost, when the apostles were under the full en-

lightenment of the Holy Ghost, we do not find this idea rejected explicitly as an unauthorized tradition of the elders, but implied in their actions and utter-

ances. Jesus commissioned the disciples of this, Petobaptists refer to the following inci-

dents and utterances: In Matt. xix, 1-15, the evan-

gelist has brought together two incidents touching family relations in the kingdom of heaven, as Christ viewed them. One relates to husband and wife, the other to children. In Christ's blessing little children, and saying, "Of such is the kingdom of heaven," the chief idea present, especially in Mark and Luke, is its illustration of the true Christian disposition. But, at the same time, in the bringing of the children to him by the mothers, the chief idea on their part is that of some peculiar good coming to their children by persons of saintly character or of high ecclesiastic position putting their hands upon them and blessing them. So thought they of Jesus. In his act and in his words there is a recognition of his part to this be-

lief of theirs, and in this response there is a recogni-

tion, strongly apparent in Matthew, of a peculiar posi-
tion of children as such in the kingdom of heaven. Calvin well remarks, "Tarn parvuli, quum corum similes." It is a manifestation, on the part of those bringing them to him, of feeling that they have a peculiar position as a part of the theocracy, and Christ recognises it in his kingdom of heaven. Its bearing upon infant bap-

tism lies chiefly in the fact that in this symbolic ac-

tion of Christ we have a recreation of a situation that there is also the basis of baptism. Says Meyer, in his Com-

mentary upon Matthew, "this blessing is a justification of infant baptism." The language of Jesus re-

garding Zachaeus contains the same conception of the family as a whole participating in salvation through the son of it (Luke xix, 4). The household of God (Acts xvi, 15), "the family of this house," Meyer, forasmuch as he also is a son of Abraham." Similar also is his language in his directions to his disciples (Matt. x, 12-13): "And if the house be worthy, let your peace come upon it" (Comp. Lange, ad loc.). This peculiar relation of the Old Testament conception of the spiritual child and the posterity in general, if this be assumed as the true sense, suggests doubtless Peter's expression (Acts ii, 39), "For the promise is unto you and to your children." Again he says, in reiterating the words of the angel to Cornelius (Acts xi, 16): "Who shall tell their posterity wherein thou and all thy house shall be saved." In the same way Paul and Silas say to the jailer: "Be-

lieve on the Lord Jesus Christ, and thou shalt be saved, and thy house" (Acts xvi, 31). Later than this, in the time of Paul's epistles, when the Church was more clearly a spiritual entity, fully constituted by God as a religious, national organization by virtue of their parentage, the peculiar relationship of children to Christ and to the Church is contained in Paul's language in his epistles. Thus in Eph. vi, 1, when he says, "Children, obey your parents in the Lord," as Alford renders it, that "the children are regarded as being His own in the Lord"—this is, as being within the sphere of that peculiar fellowship with Christ which this so frequent phrase signifies. This at least is certainly implied, while most commentators think that the reference here is really to baptized children, and that the apostle refers to them as belonging to the Church. So Braune and Riddle in Lange, Hofmann, Stier, Schaff, and others.

Meyer rejects any reference to baptism, but con-

siders the passage to contain this peculiar relationship of Christian parents and their children: "The children of Christians, even without baptism, were ἄγιοι (see i Cor. vii, 14; Acts xvi, 10) through their spiritual fellowship with their Christian parents" (Comm. ub. Eph.). In 1 Cor. vii, 14, this idea is very plainly ex-

pressed. There Paul says that the children of parents of which only one is a believer are holy and not un-

sanctified, that is, they are not separated from the fellowship and divine covenant; they do not belong to the unholy κόιμος (Meyer). They are ἄγιοι, holy—that is, not subjectively sanctified, but consecrated, standing within the fellowship and covenant of the Christian body, just as children under the old Jewish law stood within the religious covenant and con-

sciousness of the divinely constituted Jewish body. This results from the union which exists by birth and in the family life between the children and their Chris-

tian parents. They are thus included in the fellow-

ship of the Church in a certain real sense, and that without any personal holiness or faith on their part. The manner in which the apostle uses this in his argu-

ment shows that it was the established, univer-

sally acknowledged view among them at the time. It is, in fact, the conception and relation which existed under the Jewish economy continued in the New Tes-

tament Church. While touching upon this passage, we may notice its value as evidence of the actual practice of infant baptism at the time. Meyer, Kling, and some other modern German writers find in it evidence more or less strong against such practice. It is said by Meyer that "if the baptism of children had been in existence, Paul would not have argued as he did, because then the ἁγιότης of the children of believers would have had another ground"—that is, baptism itself, instead of their descent or blood in the family. But it is shown that the meaning implied it reverses the relation between the rite and the ἁγιότης, or holiness. The Jewish child was cir-
censured because he was holy, not to make him holy; and if children were baptized at the time, it was because they were holy, or consecrated by their birth in the believing family, not to make them holy; so that, even though children were baptized, their baptism would not be the ground of their holiness, and hence would not be used by Paul in his argument, the reason for such a conclusion becomes much weaker than might otherwise appear. In further proof of the prevalence in the apostolic Church of the idea upon which infant baptism is based, it is evident from Acts xxvi, 21, that the Jewish Christians in Paul's church circumcised their children, and probably also for some time after him. Paul in all probability did not oppose it; and the charge brought against him of teaching that they ought not to circumcise their children was "certainly false" (Meyer).

The scriptures from the thought and language of the New Testament that the idea of the peculiar covenant relationship of children of believing parents, so prominent in the Old Testament from Abraham to Christ, passed into the conception of Christianity which Christ and the apostles have given us. The family was the religious and political unit, and it was only when its head came into the religious organization of the Jews as they stood in covenant with God; the children were members of it at birth, and participators, according to their capacity as they grew up, in the blessings of the covenant which God had made with them. The theocracy of the Old Testament corresponds in its religious ideas and life, and in its organization and rites, with the Church in the New Testament. The Church of Christ is essentially the fulfillment and continuation of the theocracy of the Old Testament. They are one and the same Church. This connection, continuation, and fulfillment are expressed in the genealogies of the New Testament, in Christ's language, as in the Sermon on the Mount, and in Paul's writings, especially in the epistles to the Romans and Galatians, in which he insists on the fulfillment and continuity among believers in Christ of the Abrahamic covenant. Accordingly the family came, as a family could, into that form of the Church which succeeded under Christ, the Messiah. Formerly the children were circumcised as a sign and seal of their being in the covenant, and as a sign of entrance into the Church, and circumcision fell into disuse, the children would be baptized. This correspondence between circumcision and baptism is mentioned by Paul, Col. ii, 11, 12, in which passage, "buried with him in baptism" (ver. 12) is explanation of "ye are circumcised," and of "the circumcision of Christ" (ver. 11) (Meyer). See CIRCUMCISION, and the citations there made from Justin Martyr, evidently alluding to this passage of Paul, and from Tertullian and others of the fathers, showing that this was their understanding of the New Testament in regard to the relation of the two rites. Whether, therefore, in the instances of baptism recorded in the New Testament, children were actually baptized or not, its language clearly contains the idea and principle from which the practice so soon originated, and which is based in the evangelical church to-day.

(b) We come now to consider the evidence in the New Testament of the actual baptism of children, of the actual performance of the rite, which is a sign and seal of their being in the covenant, and of their being members of the religious body or family. John the Baptist, we have eleven particular instances of baptism mentioned, namely, of two individuals at different times: [1] the eunuch (Acts viii, 30); [2] Saul (Acts ix, 18); [3] Lydia and her household (Acts xvi, 15); [4] the jailer and "all his" (Acts xvi, 33); [5] "the household of Stephanas" (1 Cor. i, 16); the remaining instances are: [6] Crispus and Gaius (1 Cor. i, 14); [7] "many of the Corinthians" (Acts xviii, 8); [8] Cornelius and his household (Acts x, 47—52) and that gladly received his word" (Acts xi, 41) on the day of Pentecost; [10] "loath men and women" by Philip in Samaria (Acts viii, 12); [11] certain disciples who had been baptized unto John's baptism (Acts xix, 5). In the first two instances there could have been many children. In the next, three: the baptism of "a household" is explicitly mentioned, the phrase "all his" being synonymous with household. In the case of Crispus, Paul says (1 Cor. i, 14) that he baptized him; and in Acts xviii, 8, it is said that he "baptized the household of Stephanas." We find in this instance the inclusion of the household or family with its head in their belief, at least, and most probably they were baptized as the household of Stephanas. Of Cornelius it is said (Acts x, 2) that he was "one that feared God with all his house." It is not stated that infant children of the company gathered together to hear Peter speak, nor can we say it is probable that on the occasion of the immediate baptism of those who "heard the word," and upon whom "the Holy Ghost fell," that children were baptized. But this new religious relation of the household to Christ was taken by Cornelius and his household as belonging to the universal conception, as it had done in his devotion to Judaism; and as we have express mention of the baptism of households, as if it were a common custom, it follows with great probability that if there were children present in the case of Cornelius, and that it was an instance of "household baptism," as assumed by Schaff (Apost. Church, p. 571). Peter's language on the day of Pentecost has already been noticed in its bearing upon the idea connected with the rite. It has some force also as evidence of the baptism of infants, from the fact of its being part of an exhortation to repent and be baptized. In the remaining two instances, of the baptism of "men and women" by Philip, and of the disciples of John the Baptist, there is no implication of the faith or baptism of a family. We have then three instances certainly, and most probably five, out of eleven instances of baptism in the New Testament, in which households or families were baptized. That εὐγενής and οἰκία and οἱ αὐτὸς πάντες include children in their general meaning there is no question. That there are children in a household is not to be asserted: it is only a probability, but in the nature of the case a very strong one, amounting almost to certainty. And when we reflect that the mention of these households, with nothing to intimate that their baptism was strange or exceptional, implies the baptism of other households besides those mentioned, the question of Bengal expresses no more than the real strength of probability: "Who can believe that in so many families not one infant was found, and that the Jews, accustomed to circumcision, and Gentiles to the instruction of infants, should not have also brought them to baptism?" Conybeare and Howson say, "We cannot but think it almost demonstratively proved that infant baptism was the practice of the apostles." So Lange, Hedge, Schaff, and others.

(c) The presence of the idea or principle upon which infant baptism is founded in the ground of the practical rule of John the Baptist in the evidence of the actual practice of infant baptism can only be said to amount to a very strong probability or a moral certainty. All Baptists assert that there is no ground for the sentiment that this principle was not to be followed by Christians also, who are nevertheless pedobaptist in principle, declare that the evidence is against the practice in apostolic times. Thus Neander (Plant, and Training, p.

TheBaptistview
of this passage may be seen in the following extract from an article by the Rev. Irau Chase, D.D., in the
"Harper's New Monthly Magazine," (1864): "I am inclined to believe that Irenaeus, Christ, in becoming incarnate, and thus assum-
ing his mediatorial work, brought the human families into a new relationship under himself, and placed them in a condition in which they can be saved. In this sense he is the Saviour of all. He became, so to speak, the second Adam, the --- regenerate of mankind. Through him they are regenerated unto God ("per sum renascantur in Deum")." Comp. also the Christian
Revivals, June, 1888. But, though this may have been a view of Irenaeus, the preponderance of critical opin-
ion is very decidedly in favor of the view that this term was used in a stricter and more technical sense, and, generally, in- cludes baptism in its meaning.
Tertullian (A.D. 160-220), in his De Baptismo, has, as we have already mentioned, an unmistakable refer-
cence to infant baptism as being practiced, which very few Baptist writers are disposed to dispute. This treatise was written A.D. 202. The reference is as follows, in c. 18: "Itaque pro cujusque persone conditione, etiam uterque, cunctum baptismi
mi illustre est: precipue tamen circa parvulos. Quid enim necesse est, spondeo etiam periculo inqui? Jesu Christi donec, dum te destituit, destituenter manuum suas possess et pro ventuo male indolis falli. Ait quidem Dominus: Nolite illis prohibere ad me venire (Matt. xix, 14), veniant ergo, dum adolescent, veniant dum discunt, dum quo veniant, docentur: fiant Christi tiam quo Christiano tissse potest, tissi, quod imago, sicut quin dimissis, sive passivis et per pecorum?" (There-
fore, according to every one's condition and disposition, and also their age, the delaying of baptism is more profitable, especially in the case of little children. For what need is there that the godfathers should be brought into danger? because they may ei-
ther fail of their promises by death, or they may be deceived by a child's proving of a wicked disposition. Our Lord says, indeed, "Do not forbid them to come to me;" therefore let them come when they are grown up; let them come when they understand, when they are instructed, whether they are to come. Let them become Christians when they are able to know Christ. Why should their innocent age make haste to the
forgiveness of sins?) Tertullian thus advocates the delay of baptism in general, and in the case of little children especially, so that they may be brought to the font in a way as to imply that it was a common practice to baptize them as well as others. It is to be noted that he does not oppose the baptism of infants on the ground of its being an innovation, and not of apostolic origin, but on the ground of its not being profitable or expe-
dient; and in this respect, Tertullian, it is quite certain from the nature of the case, and from his frequent use of this argument in other mat-
ters, that he would have done so. If it was a frequent practice at that time, it must have been practiced at least some time before, and must have been regarded as legitimately involved in apostolic teaching and tradi-
tion.
From the time of Tertullian's De Baptismo, refer-
ces to the baptism of children are frequent and un-
equivocal, establishing the fact that it was a recog-
nised rise in the Church at the time, and was a com-
mon though not universal practice. Origen (A.D. 185-253) was himself baptized soon after his birth, and in his homily on LXXII it he makes this statement, "Infants are baptized for the forgiveness of sins." He also expressly asserts that "the Church derived from the apostles a tradition to give baptism even to infants." Tertullian's opposition seems to have had but little influence. Cyprian, a pupil of Tertullian, mentions and advocates infant baptism. The practice of it is also spoken of by Ambrose, Chrysostom, Greg-
ory Nazianzen, Augustine, and others. The Church from this time until the rise of a sect called the Petrosbaptists in France, about A.D. 1180, it existed in the Church without question. This sect opposed infant baptism because, as they said, "infants were not capable of salvation. They maintained themselves, however, only about thirty years; and we have no body of men rejecting infant baptism until the rise of the German
Anti-Petosbaptists, A.D. 1522.
The basis of infant baptism, when it appears in the age succeeding the apostles, seems to have been so
much the organic unity of the family, and the partic-
ipation of children in the covenant relations with their parents, as the belief in the efficacy of baptism to cleanse from sin and to insure the regeneration of the child. See Baptism.

dex, s. v. Infant Baptism.
Petosbaptists, a name given to most denomina-
tions of Christians who baptize children (παῖς and βαφθήτω), in distinction from the self-styled "Baptists," who baptize only adults. See PedaBaptism.
Petodosia (Gr. παιδόστια, a child, and δοσει, a sacrifice) is a term used among the ancients to denote the sacrifice of children to the gods. See SACRIFICE.
Paelinck, Joseph, an eminent Belgian painter, was born at Ghent, 1718. He first studied under professors Verhaegen and van den Keybus in the Academy of Ghent. He next went to Paris, and entered the school of David. On his return to Ghent he contended for the prize offered by the academy, which he obtained for his Judgment of Paris, and he was appointed professor of design in that institution. Immediately after wards resigned his professorship and went to Rome, etc.
where he remained eight years, diligently studying the
antiquities and the works of the great masters. He there
distinguished himself by painting a large picture repre-
senting the embellishments of Rome by Augustus. On
his return to his own country he executed many works
for the churches and public edifices, as well as for in-
dividuals, which justly rank him among the most eminent
of artists of his day. But his most renowned and highly
esteemed works on sacred subjects are, The Finding of
the Cross, in the church of St. Michael at Ghent:—The Ad-
oration of the Shepherds, in the convent of la Trappe
near Antwerp:—The Flight into Egypt, at Malines:—
The Departure of Simeon from the Temple:—The Return of
Tobit, from Maria Oudenoven:—The Assumption of
the Virgin, at Muyzen:—The Disciples at Emmaus, at
Everghem:—The Calvary, at Oostacker, etc. These
works are designed in a grand and elevated style, and
display a profound knowledge of art. He is accused of
over-fondness of academic display, but this blemish
is more apparent in his profane subjects, although
those of a sacred character are not entirely free
from it.

under which she was worshipped at Athens. See Min-
erva.

Paez, Gaspar, a Spanish missionary, was born at
Olmedo, in Castile, in 1564. Having completed his
studies at the college of the Jesuitical
order, which he had joined while yet a youth, he was
appointed to the mission at Goa. He sailed for
that port in 1587. At that time the numerous Portuguese
who had settled on the west coast of India,
attended with their houses, and their most
Christoval de Gama, being without a priest or spiritual
director of any sort, sent to Goa for some priests,
when Pæz and another Jesuit, named Antonio Mont-
serra, were despatched by the governor. The two
missionaries landed at Graciosa, in 1588, and
set out for Diu, where they made some stay, disguised as
Armenians. They then sailed for Muscat on April 5, 1588.
From thence they made for the port of Zeila in Abyssi-
nia; but on their passage thither they were boarded by
an Arab pirate, in sight of Dofar (Feb. 14, 1589), and
carried in irons to the capital of the king of Shoa (Xaer
in the Portuguese writers). They were at first kindly
received by this sovereign; but he himself being a trib-
untary to the Turkish pasha of Yemen, and bound by
treaty to send him all the Portuguese who might fall
into his hands, Pæz and his companion were sent to San-
úa, the capital of Yemen and the court of the pasha,
where they passed seven years in the most dreadful cap-
tivity. At last released by the intercession of the vice-
roy of India, who obtained their liberty upon the pay-
ment of a thousand crowns ransom for each, the two
missionaries returned to Goa in 1596. The order of
Pæz seems not to have been dammed by his past suf-
f erings; on the contrary, after spending several years
at Diu and Cambaya, he embarked a second time for
Abyssinia, and landed at Massawa in April, 1603. His
first object was to learn one of the most extensively used
native dialects, the Gheez, in which he soon acquired
such a proficiency as to be enabled to translate into it
the compendium of the Christian doctrine written by
Marcos George, and to instruct some native children in
the dialogue which that work contains. In 1604 Za-
Denghel, the reigning monarch of Abyssinia, hearing of
the attainments of Pæz and the proficiency of his pu-
pils, ordered him to appear at his court with two of
them, that he might judge for himself. Pæz was kind-
ly received by the king, who conferred upon him all
the rank and privileges of his court. On the following
day a thesis was maintained in his royal presence, when
Pæz's pupils answered every point that was put to
them by their opponents; the mass was next celebrated
in conformity with the Komish ritual; after which Pæz
was asked to preach a sermon in Ghazah, and pleased the
king that he gave himself a convert to Christianity, and wrote
to the pope and to king Philip III, of Spain, praying them
to send more missionaries, that all the people might speed-
ily be brought to accept Christianity. No sooner was
this royal wish made public than the Abyssinian priests,
dreading the ascendency which Pæz and his adherents
had gained at court, excited a rebellion. The king
was killed in battle October, 1604, but his successor So-
cinos, otherwise called Melek-Seghed, was even more
favorable to the Christian cause. Soon after his acces-
sion to the throne he summoned to his presence
Pæz, who celebrated mass and preached before all his court,
assembled for the purpose. The king was so much
pleased with Pæz that he gave him, besides a large
piece of ground at Georgia, on a rocky peninsula on the
south side of the lake Dembi, to build a monastery for
his order. He built a college, and another building
for himself. Thereupon, without the assistance of any Euro-
pean, but with the mere help of the natives working
under his orders, Pæz constructed a building which was
the astonishment of those who beheld it. A spring-lock
which he fixed upon one of the doors so that the king's
life when an attempt was afterwards made to assassi-
nate him. Pæz lived in great intimacy with Socinos,
whom he accompanied in all his military expeditions.
It was on one of these occasions that he visited Nagn-
ina, a town three days' march from the sources of the
Nile, and surveyed the neighboring country—a fact
which Bruce endeavored to discredit, for the purpose of
appropriating to himself the glory of being the first
European who visited the source of the Abbari, then
reputed to be the main branch of the Nile. Pedro
Pæz died in the beginning of May, 1612, just as his
mission to the throne he summoned to his presen-
t, the king persuaded the king to receive the general confession and repudiate all his wives but one. The Roman Cath-
olic faith, thus introduced into Abyssinia, did not long
remain the religion of the state. After the death of
Socinos Pæz worked to spread the Christian faith among the
Jesuits and re-established the old creed, which was
Christianity, though in a corrupt form. Besides the
translating of the catechism written by Marcos George,
and other tracts, into the native dialect of Abyssinia,
Nicolas Antonio (Bib. Nov. ii, 225) attributes to Pæz a
translation De Abyssinorum Erroribus, a general history of
Ethiopia, which was supposed to exist in manuscript
at Rome, and several letters which have been publish-
ed in the collection entitled Lettera Annuale. See
Historia de Etiopia a Alta, by Manoel de Almeida,
M.S., in the British Museum, No. 9641, fol. 105; Ludolf,
Historia Ethiopiae; Bruce, Travels; Salt, Abyssinia.—
English Cyclop. s. v.

Paganallia is the name of an annual Roman fes-
tival, celebrated by the inhabitants of each of the pagi
or districts into which the country was divided from
the time of Numa.

Paganelli, Niccolo, an Italian painter, was born
at Faenza in 1538, and died in 1620. It is not known
under whom he studied, but, according to Orelli, he
was an excellent artist of the Roman school. Last
says that some attributions to him are in a fine picture of St.
Martino in the cathedral, supposed to be the work of
Luca Longhi, and that his genuine works are recog-
PAGANI

527

PAGANISM

nised by the initials N. X. P. See Spooner, Biog.
H Hist. of the Fine Arts, ii, 641.

Pagan, Gregorio, an Italian painter, was the
son of Francesco Pagan, and was born at Florence
in 1558. He first studied under Santo di Titi, and after-
wards with Lodovico Cardi, called Cigoli, whose style
he adopted. Lanzi says he was praised by strangers
as a second Cigoli, and that he was much employed by
them; hence there are only a few of his paintings at
Florence. His most celebrated work, the Find-
ing of the Cross, in the Carmine, which has been en-
graved, was destroyed with that edifice by fire. He
painted a few frescoes, all of which have perished, ex-
cept one in the cloister of Sta. Maria Novella, recom-
manded by Lanzi, though judged by time. He died in
1605.

Pagan, Vincenzio, an Italian painter, was a
native of Monte-Rubmann, in Picenam, of whom there
are notices from 1529 to 1558. Colucci, in his Me-
moire de Monte-Rubmann, says he was a scholar of
Raphael. He executed many works for the churches
in the Roman territory, particularly in his native
place, at Fallerone, and at Saranno. One of his most
beautiful works is the Assumption of the Virgin, in
the collegiate church at Monte-Rubmann, designed and ex-
cuted entirely in the manner of Raphael. The Padre
Chiericati, in a letter of his, describes two of his works
of this church of his order at Saranno. In 1558 he was employed to
paint the altar-piece of the Capella degli Oddi, in the
church of the Conventuals at Perugia, which is
highly commended. In consequence probably of his
secluded life, little is known of this artist except his
works, which are of a high character. Lanzi in others
doubt whether he was really a scholar of Raphael, but
rather think he formed his style by contemplating his
works.

Paganism, a term synonymous with heathenism
and polytheism (q. v.), is used to denote the non-Bib-
lical religions of the world—that is to say, all those
religious notions not called out by the revealed Script-
ures. Hence the whole human race may be said to
be divided into Jews, Mohammedans, Christians, and
Pagans.

The word paganism comes from the Latin word pagus,
a country district, a canton, the adjective from which,
pagus, denoted pertaining to such a pagan; then not a
soldier; then boorish, or unlearned; and, finally, among
the Christian writers, one not a Christian, Jew, or Moham-
dean. Its application in the last sense, which it now
covers the highest extent, is, 50,228,000, or 19.43
per cent of the world's population. This form, which,
gradually became the religion alien to the Ro-
man empire and of the conquerors who embraced its
civilization, those who obstinately clung to the old idol-
atries were called, both in Latin and in the Teutonic
speech, by names which in themselves expressed, not
error in religion, but inferiority of social state: the
worshipper of Jupiter or of Woden was called in Latin
mouths a pagon, in Teutonic mouths a heathen.
The two names well set forth the two distinct standards
of civilization which were held by those who spoke the
two tongues. The pagus was the man of the coun-
try, as opposed to the man of the city. The Gospel was
first preached in the towns, and the towns became Chris-
tian, while the open country around them still adhered
to the old gods. Hence the name of the pagan, the rustic,
the man who stood outside the higher social life of the
civilized people, was a name of contempt, as any term of
the purer faith of the Church. In the England of the
6th century, and in the Eastern Germany of the 8th, no
such distinction, however, could be drawn. If all who
dwelt within the walls of a city had remained without
the Church, who should have been a Christian?
Votaries indeed among the independent Teutons.
In their ideas the opposition between the higher and the
lower stage was not the opposition between the man
of the city and the man of the country; it was the opposi-
tion between the man of the occupied and cultivated
land and the wild man of the wilderness. The cities,
where there were any, and the villages and settled land
generally, became Christian, while the rude men of the
heath still served Woden and Thunder. The worship-
ship of Woden and Thunder were then called Heathenism.
Pagan and heathen, then, alike mark the non-
believer as belonging to a lower social stage than the
Christian. But the standard of social superiority which
is assumed differs in the two cases. The one is the
standard of a people with whom the city is the centre
of the whole social life; and the other is the standard
of a people among whom the city, if it was to be found
at all, was simply the incidental dwelling-place of a part
of the nation which was in no way privileged over those
who dwelt beyond its bounds (comp. Gibbon, Decline
and Fall of the Roman Empire, ch. xxi; Freeman, Hist.
of the Norman Conquest, iv, 415).

The relation of the Christian Church to the vari-
ous forms of paganism, or, better, polytheism, which
it has sought to supplant, and continues seeking to
supplant, is a subject of great importance to the stu-
dent of ecclesiastical history. But we have not suffi-
cient room to enter here into a detailed account of pa-
ganism. We must content ourselves with saying that
the principal pagan religions of the world are briefly
defined as follows: Those of Japan, Buddhism and Sin-
tism; of China, Buddhism and Confucianism; of Tur-
key, Latins, Jews, in Indian, Hinduism, Buddhism,
and the religion of the Parsees; of Persia, Moham-
deanism and the Zoroastrian religion; of Africa, Fe-
tichism; of Polynesia, image-worship and hero-worship;
of the ancient aborigines of Lapland, Greenland, and
the North American Indians, a peculiar combination of spirit and fe-
tich worship, described under the article INDIANS. For
an account of these various forms of paganism, see
the articles treating of the different countries mentioned,
and of the various religious systems mentioned in that
connection.

The entire pagan population of the world is estimated
in Johnson's Family Atlas at 766,342,000, distributed as
follows:

<table>
<thead>
<tr>
<th>Country</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>America</td>
<td>3,999,000</td>
</tr>
<tr>
<td>Asia</td>
<td>666,951,000</td>
</tr>
<tr>
<td>Africa</td>
<td>34,972,000</td>
</tr>
<tr>
<td>Australasia</td>
<td>1,930,000</td>
</tr>
<tr>
<td>Pacific Islands</td>
<td>766,549,000</td>
</tr>
</tbody>
</table>

Against this there is an estimated Christian population,
including Protestant, Roman Catholic, and Greek com-
munions, of 689,969,000; a Mohammedan population of
50,228,000, or 19.43 per cent of the world's population.

In this place we confine ourselves to that form of
paganism with which Christianity came in contact im-
mEDIATELY after its organization and propagation, i. e.
the paganism of the Roman empire, and those powers
organized and controlled by institutions of a like stand-
ard of civilization. For the paganism of the remaining
world, in its relation to Christianity, see FETICHISM;
POLYEYTHISM.

I. Pagan Theology. — The theology of these pagans,
according to their own writers, e. g. Scevolga and Yarlo,
were of three forms. The first of these must be call-
ed fabulous, as treating of the theology and genealogy
of their deities, in which they say such things as are un-
worthy of deities; ascribing to them thefts, murders, adul-
teries, and all manner of crimes; and therefore this kind
of theology is condemned by the wiser sort of heathens
as nugatory and scandalous. The second sort of theol-
y of theology were Sanchonitha, the Phenician; and among
the Greeks, Orpheus, Hesiod, Pherecydes, etc. The sec-
and sort, called physic, or natural, was studied and taught by
the philosophers, who, rejecting the multiplicity of gods
introduced by the poets, and in a few cases, treating
of philosophy, but a more natural and rational form, and supposed that there
was but one supreme god, which they commonly made
to be the sun—at least this was an emblem of him—but at
too great a distance to mind the affairs of the world: they
therefore devised certain demons, which they consid-
ered as mediators between the supreme god and man;
and the doctrine of these demons, to which the apostle
is thought to allude in 1 Tim. iv. 1, was what the phi-
losophers had a concern with. They treated of their
nature, offices, and regard to men; and did Thales, Py-
thagoras, Plato, and the Stoics. The third form, called
political, or civil, was instituted by legislators, statesmen,
and politicians—such as, first among the Romans, Numa
Pompilius: it chiefly respected their gods, temples, altars,
secrets, and manners, and was not generally carried
beyond idolatry, the care of which belonged to the priests,
and this was enjoined upon the common people, to keep
them in obedience to the civil state. Thus things continued
in the Gentile world until the light of the Gospel was
sent among them. The times before were times of igno-
rance, as the apostle calls them: men were ignorant of
the true God, and of the worship of him; and of the
Messiah, and salvation by him. Their state is truly
described (Eph. ii. 12) that they were then "without
Christ; aliens from the commonwealth of Israel; stran-
gers from the covenants of promise. Now it was an emo-
tionless characteristic of Christianity that it was a prose-
luting religion. Its teachers acted under the especial
commission, "Go ye into all the world, and make disci-
plies of every creature," and no other religion ever showed
such a missionary spirit. Thus Christ, in the exordium
limina, a foe to the existing religious institutions of the
world, as they were looked at from a statesman's point
of view. But, more than this, Christianity refused to
become a peaceable member of any eclectic system.
The asceticism of the ascetics was superseded during
the early spread of Christianity by an eclecticism origin-
nating with Ammonius Saccas and his disciples, the Neo-
Platonists. This system became extremely fashionable
among the intellectual classes in the more learned re-
gions of the Roman empire. It was an attempt, a last
attempt, of heathenism to work itself into an alliance
with a foe of whom an inner conviction seemed to say
that he would in the end prove too strong for it. But
Christianity would not come to terms. It would not
even consent to the drawing up of preliminaries for a
treaty of peace. The words of its Master were con-
tinually illustrated by all Christian missionaries, "I
came not to send peace, but a sword." Christianity
sought not toleration, not compromise, but universal
supremacy. Thus, theoretically at least, the contest
between Christianity and paganism was a war which
could only be terminated by the extermination of one or the other,
and the process of resistance to extermination in
the process of paganism was that which constituted the sub-
stance of the struggle between it and Christianity. But,
that apart from this general antagonism between the
two religious systems, there was a special institution of
the empire, its official religion, with which Christians
came into fatal conflict almost by accident. This official
religion had more of the rising eclecticism in it than of
the old decaying polytheism, but it was little concerned
with moral or theological principles, its one prominent
requirement being the recognition of the emperor as an
object of worship. The sacrifice of a few grains of in-
cense to him was the test of religious obedience. To
frequt the temples, to offer sacrifices to the gods, to
take part in the mysteries, might be parts of religious
practice, but the recognition of one was at liberty to adopt them as
he pleased. But public piety, that which established a
citizen as, quid religion, a good citizen, was the relig-
ious veneration of the emperor, neither more nor less.
Thus the religion of Christians when tried by this test
was necessarily open to misconstruction. To burn in-
cessantly to the emperor was idolatry; not to burn it seemed
to be disloyalty and rebellion. They who would gladly
have taken an oath of allegiance, if it had been offered to
them simply as such, refused, with an unyielding firmness
to do so when it was presented to them under the form
of idolatry. It seemed strange that the absolute
stateanism of the empire did not devise some means
by which men so really loyal to it as were the early
Christians might be permitted to live in peace; but
perhaps the explanation is to be found in the fact that
the kingship and kingdom of Christ were ideas which
enjoined them to resist their rulers, who were a
prominent idea in the popular theory of the multi-
tude. Such an idea would look like rebellious rivalry to
the mind of a Roman statesman—one who would never
be able to appreciate the force of such words as "My
kingdom is not of this world," and who was only
dote to that worship of Christ which recognized him
as the king of the Christians, though an invisible one,
would be a repudiation of him by adoption of the visible
emperor as their suzerain. If the novel custom of defy-
ing the living emperor had not been invented, the Chris-
tians were never in a position to resist him without
hesitation, as is shown by the Apologies; and in
such a case it is not improbable that they might, so far
as public authority was concerned, have been tolerated
in their religion, provided its proselytizing principles
had not caused any disturbance of public order.
III. Popular Paganism and Christianity.—At the
same time that Christianity was thus opposed to the
state religion of the empire, it was also in a position
of strongly aggressive opposition to the popular relig-
on of every country within its boundaries, that of
the Jews and the Greeks, in which the Christian dis-
opened. Whether the popular religion was polytheis-
tism or some of the many varieties of fetishism, it
was certain to be denounced as false by Christian teachers,
and as entirely false that nothing would satisfy
Christianity except the entire abolition of what was
denounced. Thus Christianity arrayed against them-
selves a large class in those whose personal interest it
was that the old religion should be maintained, and in
the bulk of the ignorant among the people at large,
whom stolid habits and unreasoning prejudice would
enlist against innovators to whom no religion seemed
sacred. Such a position of antagonism to the old religion
was as essential to Christianity as uncompromising
opposition to Baal was essential to Elijah; and even
when Christians were not aggressive by positive oppo-
sition, their negative opposition was necessarily con-
spicuous. For the rites of polytheism were confi-
 ned to the temples; they pervaded all the customs
of social and public life. Christians were prevented from
attending the public games by the association of idola-
rous rites with them—the many images, the long line
of statues, the chariots of all sorts, the thrones, the
crowns, the processions, by the preceding sacrifices and
the procession. "It may be grand or mean," says Tertul-
lian; "no matter, any circus performance is offensive
to God. Though there be few images to grace it, there
is idolatry in one; though there be no more than a single

sacred car, it is a chariot of Jupiter; and anything whatever of idolatry, whether meanly arrayed or modestly rich and gorgeous, taints it in its origin" (De Spectac. c. vii). The theatres were equally forbidden, for "its services of voice and song and late and pipe belong to Apollo and Muses, and Minervas and Mercuries..." and the continuous practice of the cult of the beings who dwell in the names of their founders" (ibid. c. x). Even in the intercourse of private life, the Laces and Penates of the hall, the libations of the dinner-table, the very phraseology with which ordinary conversation was conducted, contributed to the horror of the nature of idolatry (Tertullian, De Idol. c. xv, xxii, xxiii), and the necessities of their anti-idolatrous principles thus soled Christians from the social assemblies of their heathen acquaintance, and made them in many respects a separate community. Above all, Christianity was the deadly foe of a widespread immorality, the extent of which is almost inconceivable. Polytheism was always a religion of mere ceremony, unassociated, as a religion, with any moral law. Hence the most religious man in the sense of polytheism might be a shameless profligate, but still the gods to whose service in their reported licentiousness and guilty princi- Gete (Sado- tes) of crimes against which even nature revolts (id. Apol. c. xlv). Vices of this class were terribly common among the Romans of early imperial times, and are exposed with scornful indignation by Tertullian in his Apology. It is not unlikely that the coarser insti- tutions was carried may also be seen by his denunciation of infanticide, in one bold sentence of which he says: "How many, think you, of those crowding around and gaping for Christian blood: how many even of your rulers, notable for their justice to you and for their se- vere measures against us, may I charge in their own consciences with the sin of putting their offspring to death?" (ibid. c. ix). Against the class of crimes thus indicated, Christianity protested by word and example. Tertullian fearlessly declaring in respect to the latter that "Christians were conspicuous for "a persevering and steadfast chastity." Popular habits and customs being thus so contrary to the spirit of Christianity, it could not fail that a very strong opposition must have been offered to its progress; and although vast multitudes were quickly gathered to the standard of the Cross, there was still a large and influential mass of the population in every country of the empire who looked upon it as the sign of an institution which sought the abolition of their cherished customs and habits, which made its disciples bad citizens and bad neigh- bors. Christianity was therefore to be hated and, if pos- sible, exterminated.

IV. Pagan Philosophy and Christianity.—Apart from the ruling powers of the empire, and from those classes which formed the bulk of the nations composing it, there was also a considerable class of highly educated men, especially in Rome and Alexandria, on whom old-fashioned polytheism had no hold, but who yet set themselves against Christianity. Among these were the Epicurean Celsus, who wrote a comprehensive work, The Word of Truth (now known only by Origen's refu- tation, i), against the "false faith" (or "false faith"—polaioi—polaioin—"the better" or "the most acceptable", Justin Martyr's Apology (Just. Mart. Apol. ii, 8; Euseb. iv, 5); Trypho the Jew, against whom the same apologist wrote an important work, his Dialogue with Trypho; and Lucian the satirist, who opposed Chris- tianity as a superstition unworthy of intelligent men (Lucian, De Morte Persergia, c. xi-xvi). Indeed, the contemptuous manner in which grave writers like Pliny, Tacitus, and Suetonius mention the new faith seems to show that the literary class in general was opposed to it, and did not even think it worthwhile to undertake any effective indoctrination on the part of the churches. That they gradually learned to feel more respect for it is shown by the rise of the ecletic school of the Neo-Platonists; but even among these there were bitter opponents of Chris- tianity, though there were indeed others who theoretically adopted a large portion of its principles. See Ec- lecticism; Neo-Platonism.

V. Persecutions of Christians by Paganism.—The broadest and most evident form of the struggle for life and supremacy between paganism and Christianity was that which is continuous from the conquest of the world to the latter by force. In this the state and the populace co-operated, and there is no reason to think that the intellectual classes and philosophers held aloof. The first approach to a general persecution was that begun at Rome by Nero (Tertull. Apol. c. v). St. Paul's account of his own sufferings (2 Cor. vii, 22), his refer- ence to the amphitheatre at Ephesus (1 Cor. xvi, 32), to actual persecution of Christians (1 Cor. iv, 9, and perhaps in Heb. xi, 38-39), to the position of the apostles as the "offscouring of the earth," to the "much tribu- lation" through which the faithful entered into rest, to his deliverance "out of the mouth of the lion," all seem to show that the struggle between paganism and Chris- tianity had begun even in apostolic times. But it is probable that persecution then was of a local kind, arising out of charges made by Jews against Christians, for in whom a charge of a devilish origin has been mentioned, indeed, that the Jews were driven out of Rome by Claudius on account of an inscription raised by one "Christus," probably one of the many false Christs that rose up at this period, and Christians who were not of the Syriac origin. Nothing like a persecution of anything like a Christian insurrection (as the historian's words are sometimes interpreted) was so alien to the spirit of the early Christians as to be beyond probability. Af- ter the great fire of Rome in the year 64, Nero, however, (who is said by Dion and Suetonius to have been himself the incendiary), accused the Christians of causing it, and brought upon them a terrible stampede of indigna- tion from the excited Romans. Tacitus wrote his an- alys of thirty years after that, and he describes their sufferings in a few graphic words. Nero invited the citizens to a festival in the imperial gardens (now the Vatican), and the chief spectacle which he then of- fered them was the martyrdom of their hated neigh- bors. Some were sewn in the skins of wild beasts, and torn to pieces by dogs; some crucified: some burned to death; some smeared over with inflammable substances, and used as torches or bonfires to light up the gardens after dark. This persecution lastec four years, and there can be no doubt that it was carried on in other cities as well as at Rome. During the course of it the apostle Peter was one of those who were crucified in the gardens, and St. Paul was hardened and left behind out of Rome. How many others went to make up the grand vanguard of the army of martyrs it is impossible to say, but the words of the heathen historian point to a great multitude rather than to a merely considerable number. It is usual to reckon ten periods of persecution, at intervals, spreading over the latter half of the 1st, the 2d, the 3d, and the 4th centuries. But this enumer- ation is arbitrary, and cannot be supported by historical evidence. During the whole of that time there was persecution going on in some part of the empire, although perhaps only gradually spreading from region to region. One of the most terrible of the general persecutions was that which im- mediately preceded the accession of Constantine, when it seemed as if Diocletian had nearly accomplished his object of destroying the very name of Christian. It is not the purpose of this article, however, to go into any details respecting these periods of persecution, and the subject may be dismissed with the following table, which represents the conclusions that may be arrived at from the examination of historical data:
PAGET

PAGET, See Pagot.

Paggi, Giovanni Battista, a noted Italian painter, was born at Florence in 1511, son of the richest and noblest family at Genoa in 1554. He was the pupil of Luca Cambiaso, and was distinguished chiefly as a painter, though he attained to distinction also as a sculptor and architect. About 1580 he was obliged to flee from Genoa in consequence of an unfortunate home quarrel, which involved him in the death of his brother, and a great impulse, especially in coloring, to the Genoese school of painting, of which he was the best master in his time. Paggi died in 1627. His masterpieces are two pictures in San Bartolomeo, and the Slaghter of the Innocents, belonging to the Doria family, painted in 1596. In 1607 he published a short treatise on the theory of painting.

Pagl, Anthony, a noted French ecclesiastical writer, was born at Rogas, a small town in Provence, in 1624. He took the monk's habit in the convent of the Cordeliers at Arles in 1641. After he had finished the usual course of studies in philosophy and divinity, he spent a while, and was at length made fourth successive times provincial of his order. These occupations did not hinder him from devoting time to the study of chronology and ecclesiastical history, branches of learning in which he excelled. His most considerable work is entitled, Critica historic-chronologica in Amadis ecclesiastico Baroniis, in which, following that learned cardinal year by year, he has rectified a greater number of mistakes, both in chronology and in facts. Pagl published the first volume of this work, containing the four first centuries, at Paris in 1698, and gave it to the clergy of France, who allowed him a pension. The whole work was printed after his death in four volumes folio, at Anvers, or rather at Geneva, in 1705, by the care of his nephew, Francis Pagli, of the same order. It is carried to the year 1196, where the Baronius ends. Pagl was greatly assisted in it by the abbé Longuever, who also wrote the eulogy of our author, which is prefixed to the Geneva edition. This Critique is of great utility; but the author, too fond of striking out something new, has given a chronology of the peoples of the first three centuries which is not approved by the critics more or less impeaches his reliability as a historian. His style is simple, but his matter evinces study and care. Pagl was in correspondence with the learned of his time in France and in England. Among his friends were Stillingfleet, Spinetum, Doddwell, cardinal Nisii, etc. He died in 1699. See Niceron, Mémoires, vol. i and xvii; Ersch u. Gruber, Encyclop. a. v. (J. H. W.)

Pagl, François, nephew of the preceding, also a distinguished French ecclesiastic, was born at Lambesc, in Provence, in 1654. He was educated first by the priests of the Oratory at Toulon, and then by his uncle Pierre, and then by the bishop with a desire to serve the Church. François entered the Order of the Cordeliers, and after teaching philosophy for some time, sought further mental development under the guidance of his uncle, and thus became that learned man's assistant. His Critique on Amadis, which was a work of his own, which he afterwards published under the title Brevisrarium Histor. chronol, crut. illustr. pontif. Roman. gesta, concilia, general. acta, nec non compara tomm aceror, rureum, tum antiquum eccles. discipline, copiae complete (1717-1747). In this Pagl manifests great zeal for ultramontane theology and the exaltation of the papacy. He died at Orange, Jan. 21, 1721. See Niceron, Mémoires, vol. viii, a. v.
Under Leo X he was professor of a school of Oriental literature, founded by that pontiff at Rome: but after Leo's decease he accompanied the cardinallegate to Avignon, and subsequently removed to Lyons, where he became a zealous opponent of the Reformed religion, and was the means of founding a hospital for the plague. He died there in 1541, honored and regretted by rich and poor.

The learned works of Pagninus have been highly esteemed by some, severely criticized by others. (1.) He published at Lyons, in 1528, Votarli et noti Testamenti nova translatio, which had been the labor of thirty years, and was to have been published at the expense of Leo X had he lived to see it finished. In the preface he details the care which he had taken to make the work perfect. It is the first Latin Bible in which the verses of each chapter are distinguished and numbered as in the original, and is remarkable for the extreme closeness with which the Latin is made to follow and take the shape of the Hebrew idiom. Richard Simon charges him with this as a fault, saying that it not only makes his language obscure and barbarous, but sometimes changes the sense of the original. Servetus published a folio edition of this work, which he infected with his own errors, at Lyons in 1642. That of Arian Montanus, in the Antwerp Polyglot, exaggerates the peculiarities of his Latin style. Still the editions of 1589 and 1610-13, in 8vo, which give an interlinear and word-for-word translation of the Hebrew, with the vowel-points, is to this day the most convenient Hebrew Bible for beginners. (2.) His Thesaurus Linguae Sanctae (Lyons, 1529, in folio) is much esteemed. The folio edition of Geneva, 1614, by J. Mercier and A. Cavalleri, is very inferior, and in many places corrupt. There is also a Paris edition, in 4to, of 1548.

(3.) An abridgment of the Thesaurus in 8vo, with the title Theoueri Pagnini Epitome, was printed at Antwerp in 1616, and often reprinted. He also published (4.) Insignes seu introductiones ad sacras litteras librum (Lyons, 1528, 4to; ibid. 1536, fol.), (5.) Hebrewarum institutionum libri quatuor ex Rabbī David Kimchi priore parte fere transscripti (ibid. 1526; Paris, 1549), both 4tos. (6.) An abridgment of this grammar, also in 4to, was published at Paris in 1546 and 1558. (7.) Curate Arzenges in Pentateuchum (Lyons, 1586, folio), in six volumes. This is a collection of the comments of Hebrew, Greek, and Latin writers on the five books of Moses. He also produced several other learned works. See Histoire des hommes illustres de l'ordre de St. Dominique, by Touron; Bibliotheca Sacra, by Sixtus of Siena.

Pagoda (according to some, a corruption of the Sanscrit word bhâgavata, from bhagavat, sacred; but according to others a corruption of put-pada, from the Persian put, idol, and pada, house) is the name of certain Hindî temples, which are among the most remarkable monuments of Hindî architecture. Though the word itself designates but the temple where the deity—especially Siva, and his consort Durgâ or Pârvati—was worshipped, a pagoda is in reality an aggregate of various monuments, which in their totality constitute the holy place sacred to the god. Sanctuaries, porches, colonnades, gateways, walls, tanks, etc., are generally combined for this purpose, according to a plan which is more or less uniform. Several series of walls form an enclosure; between them are alleys, habitations for the priest, etc., and the interior is occupied by the temple itself, with buildings for the pilgrims, tanks, porticos, and open colonnades. The walls have at their openings gopuras, or large pyramidal gateways, higher than themselves, and so constructed that the gopura of the outer wall is always higher than that of the succeeding inner wall, the pagoda itself being smaller than the smallest gopura. The extent of the enclosing walls is generally considerable; in most instances they consist of hewn stones of colossal dimensions, placed upon one another without mortar or cement, but with such admirable accuracy that their joints are scarcely visible. The gateways are pyramidal buildings of the most elaborate workmanship; they consist of several, sometimes as many as fifteen stories. The pagodas themselves, too, are of a pyramidal shape, various layers of stones having been piled upon one another in successive recession; in some pagodas, however, the pyramidal form begins only with the higher stories, the broad basis extending to about a third of the height of the whole building. The sides of the different terraces are vertical; but the transition from one to the other is effected by a vault surmounted by a series of small cupolas, which hide the vault itself. A single cupola, hewn out of the stone, and surmounted by a globe, generally crowns the whole structure; but sometimes the latter also ends in fantastical spires of a fan-like shape or in concave roofs. The pagodas are covered all over with the richest ornamentation. The pilasters and columns, which take a prominent rank in the ornamental portion of these temples, show the greatest variety of forms; some pagodas are also overlaid with strips of copper, having the appearance of gold. There are pagodas of all sizes in India. Some

of them have been erected by wealthy Hindîs for the purpose of performing their private devotions in them, and correspond in character to the Western chapels. In the case of the large pagodas, vast endowments in many instances are expended in their support, as well

Wat-Cheng Pagoda, Bangkok.
Seoul Pagoda, Rangoon, Burma.

"The pagodas in Burma," says Mr. Boardman, "are the most prominent and expensive of all the sacred buildings. They are solid structures, built of brick, and plastered. Some of them are gilt throughout, whereas in most cases the pagoda in Tavoy is about fifty feet in diameter, and perhaps one hundred and fifty feet high. That which is most frequent is not so large. It stands on a base somewhat elevated above the adjacent surface, and is surrounded by a row of more than forty small pagodas, about six feet high, standing on the same elevated base. In various niches round the central image are small alabaster images. Both the central and the surrounding pagodas are gilt from the summit to the base, and each one is as high as a small bell of iron, which is also gilt. Attached to the umbrellas of the central pagoda is a row of small bells or jingles, which, when there is even a slight breeze, keep a continual chiming. A low wall surrounds the small pagodas, outside of which are temples, pagodas of various sizes, and other appendages of pagoda worship, sacred trees, stone statues, sacred bells to be rung by worshippers, and various figures of fabulous things, creatures, and persons mentioned in the Burman sacred books. Around these is a high wall, within which no devout worshipper presumes to tread without taking off his shoes. It is considered holy ground. Outside this wall are perhaps twenty Zayats, and a kyung. The whole occupies about an acre of ground. The total number of pagodas in Tavoy is immense. Large and small, they probably exceed a thousand. Before leaving America, I used to pray that pagodas might be erected into Christian churches. But I did not know that they were solid monuments of brick or stone, without any cavity or internal apartments. They can become Christian churches only by being demolished and built anew." The Dagong pagoda at Rangoon is the most magnificent in Burmah. A description of it is given by Mr. Judson. See her Memoir, and the Christian Offering.

The mode of worship in these heathen temples is as follows: When a Hindu comes to a pagoda to worship, he walks round the building as often as he pleases, keeping the right hand towards it; he then enters the vestibule, and if there be a bell in it, as is usually the case, he strikes it upon two or three times. He then advances to the threshold of the shrine, presents his offering to the Brahmin in attendance, mutters inaudibly a short prayer, accompanied with prostration of the body, or simply with the act of lifting his hands to his forehead, and straightway retires. The ceremonies observed by the Hindus in building a pagoda are curious. They first enclose the ground on which the pagoda is to be built, and allow the grass to grow on it. When the grass has grown considerably, they turn an ash-colored cow into the enclosure to roam at pleasure. Next day they examine carefully where the cow, which they reckon a sacred animal, has conveyed itself to rest its body, and having dug a deep pit on that consecrated spot, they place there a marble pillar, so that it may rise a considerable distance above the ground. On this pillar they place the image of the god to whom the pagoda is to be consecrated. The pagoda is then built quite around the pit in which the pillar is placed. The place in which the image stands is dark, but lights are kept burning in front of the shrine.

"The term pagoda is, in a loose way, also applied to those Chinese buildings of a tower form which consist of several stories, each story containing a single room, and being surrounded by a gallery covered with a protruding roof. These buildings, however, differ materially from the Hindu pagodas, not only so far as their style and exterior appearance are concerned, but inasmuch as they are buildings intended for other than religious purposes. The Chinese call them To, and they are generally erected in remembrance of a celebrated personage or some remarkable event; and for this reason, too,
they are placed on some elevated spot, where they may be conspicuous, and add to the charms of the scenery. Some of these buildings have a height of 190 feet; the finest known specimen of them is the famous Porcelain Tower of Nanking. The application of the name pagoda to a Chinese temple is well understood, for, as a rule, the Chinese temple is an insignificant building, seldom more than two stories high, and built of wood; the exceptions are rare, and where they occur, as at Pekin, such temples, however magnificent, have no architectural affinity with a Hindu pagoda.

Shنشף, Talmud, i. p. 265; ii. 17; Nuث, Chinese Empire, ii, 166 sq.; Bon's India; Trevor, India, p. 89-92.

Pa'ath-Moab (Heb. Pa'ath Moab', פַּאַת מוֹאָב, governor [lit. pasha] of Moab; Sept. Φαθαβ [v. r. Φαθαβ, etc.] Moab; Vulg. Pahath-Moab, "governor of Moab"), the head of one of the chief houses of the tribe of Judah, who signed his name to the sacred covenant of Nehemiah (Neh. x, 14). B.C. 410. "As we read in 1 Chron. iv, 22, of a family of Shilonites, of the tribe of Judah, who in very early times had dominion in Moab," it may be conjectured that this was the origin of the name. It is perhaps a slight corroboration of this conjecture that we find in Ezra ii, 6 that the sons of Pahath-Moab had among their number "children of Joab;" so also in 1 Chron. iv we find these families who had dominion in Moab very much mixed with the sons of Caleb, among whom, in 1 Chron. ii, 54; iv, 14, we find the house of Joab. It may further be conjectured that this dominion of the sons of Shelah in Moab had some connection with the migration of Elimelech and his sons into the country of Moab, as mentioned in the book of Ruth; nor should the close resemblance of the names עֶזְרָא (Ophrah), 1 Chron. iv, 14, and עֶזְרַא (Orpah), Ruth iv, 4, be overlooked. Jerome, indeed, following doubtless his Hebrew master, gives a mystical interpretation to the names in 1 Chron. iv, 22, and translates the strange word Jashub-lehem, "they returned to Leem" (Bethlehem). The author of Quest. Heb. in Lib. Paralleps. (printed in Jerome's works) follows up this opening, and makes Jokim (qui statur festo solis) to mean Elakiam, and the men of Chezob (rivi mendacii), Joash and Saraph (securre et incendere), to mean Mahlon and Chilion, who took wives (תַּשְּׂא) in Moab, and returned (i.e. Ruth and Naomi did) to the plentiful bread of Bethlehem (house of bread); interpretations which are so far worth noticing, as they point to ancient traditions connecting the migration of Elimelech and his sons with the Jewish dominion in Moab mentioned in 1 Chron. iv, 21. However, as regards the name Pahath-Moab, this early and obscure connection of the families of Shelah, the son of Judah, with Moab seems to supply a not improbable origin for the name itself, and to throw some glimmering upon the association of the children of Joshua and Joab with the sons of Pahath-Moab. That this family was of high rank in the tribe of Judah we learn from their appearing fourth in order in the two lists (Ezra ii, 6; Neh. vii, 11), and from their chief having signed second among the lay princes (Neh. x, 14). It was also the most numerous (2918 [2912]) of all the families specified, except the Benjaminite house of Sennah (Neh. vii, 38). The name of the chief of the house of Pahath-Moab in Nehemiah's time was Hashub; and, in exact accordance with the numbers of his family, we find him repairing two portions of the wall of Jerusalem (Neh. iii, 11, 23). It may also be noticed, as slightly confirming the view of Pahath-Moab being a Shilonite family, that whereas in 1 Chron. ix, 5-7, and Neh. xi, 5-7, we find the Benjaminite families in close juxtaposition with the Shilonites, so in the enumeration of the wall, where each family built the portion over against their own habitation, we find Benjamin and Hashub the Pahath-Moabite coupled together (Neh. iii, 23). The only other notices of the family are found in Ezra viii, 4, where two hundred of its males are said to have accompanied Eliehoenai, the son of Zerahiah, when he came up with Ezra from Babylon; and in Ezra x, 50, where eight of the sons of Pahath-Moab are named as having taken strange wives in the time of Ezra's government." See Pashua.

Pah-kwa, a Chinese charm, consisting of eight diagrams arranged in a circular form; it is in most common use in China. The figure is thus formed. The eight diagrams are described by Mr. Cuthbertson, an American missionary to the Chinese, as follows: "They are triplets of lines, whole and broken, the various combinations of which produce eight sets of triplets, each having its peculiar properties. These by further combinations produce sixty-four figures, which also possess their peculiar powers. The first set is representa-

Pah-kwa.

tive respectively of heaven, vapor, fire, thunder, winds, water, mountains, earth. These mysterious figures embody in some incalculable manner the elements of all change, the destinies of all ages, the first principles of all morals, the foundation of all actions. They, of course, furnish important elements for the subtle calculations of the diviners. From such a system of calculation the results obtained must depend wholly upon the ingenuity of the practitioner. The figure of the eight diagrams is seen everywhere. It is often worn on the person. It is seen, too, posted in conspicuous positions about houses, chiefly over the door, to prevent the ingress of evil influences." See Doolittle, China and the Chinese (N. Y. 1866, 2 vols. 12mo); Nevins, China and the Chinese (N. Y. 1889, 12mo).

Pa'y (1 Chron. i, 50). See Pau.

Paigeolino, an Italian engraver, of whom scarcely anything is known, has left a light but spirited etching, bearing his name, after the picture by Paul Veronese, representing The Mother of Moses brought to Pharaoh's Daughter as a Nurse for her Son. Zani spells his name Piegolino.

Palla is, according to the Purāṇas (q. v.), one of the disciples of Vyāsa (q. v.), the reputed arranger of the Vedas (q. v.); he was taught by the latter the Rig-Veda, and, on his part, communicated this knowledge to Bāhka- dial and Indraprami. This tradition, therefore, implies that Palla was one of the earliest compilers of the Rig-Veda.

Pain (MYSTICAL), a certain indescribable agony which has been believed by mystics to be necessary to prepare them for a state of rapture. "This mysterious pain," says Mr. Vaughan (Hours with the Mystics), "is no new thing in the history of mysticism. It is one of the trials of mystical initiation. It is the death essential to the superhuman height. With S. Theresa the physical nature contributes it much more largely than usual; and in her map of the mystic's progress it is lo-
Qualifications of Officers, and on the numerous Evils arising to the Revenue from the Insufficiency of the present Scarcities (1772). The ability displayed in this his first prose composition induced one of the commissioners of excise to give him a letter of introduction to Benjamin Franklin, then in London as a deputy from the colonies to the North American Association, which had met in January, 1775, editor of the Philadelphia Magazine. In 1776, at the outbreak of our colonial conflict, he embraced the cause of the colonies, and enlisted as a volunteer in the army. He had previously influenced public opinion in favor of independence from British throne by an article which he published in the Pennsylvania Journal (October, 1775), entitled "Serious Thoughts." In it he declared for political equality, and gave expression to the hope of the ultimate abolition of slavery. He now further encouraged the radical movers for separation of the colonies from the mother country in a pamphlet entitled Sense (Phila. 1776, 8vo). These writings made a profound impression, especially the latter, and contributed in an eminent degree to make the people of this country of one mind. The masses, who had reasoned but little or not at all, were excited to action. Thousands who would otherwise have been passive, if not opponents to the independence scheme, were brought to the aid of the Revolutionary movement. True, some of his political teachings could not have the endorsement of the moral and religious element; yet the truth cannot be withheld that Thomas Paine was one of the most powerful actors in the Revolutionary drama, and that, whatever his failings, errors, or vices, his service to his adopted country should not be forgotten. Some writers have denied his political services, and have declared it impossible that a stranger could have wrought such influence on the outbreak of the colonial struggle, he could have influenced public opinion in America; but such should remember that the contemporaries of Paine—and worthy men many of them certainly were who associated with Paine—judged differently, and not only freely circulated his writings, but gave expression to their worth for political purposes by voting him £500 through their legislatures, besides conferring on him the degree of M.A. (Pennsylvania University), and membership in their choicest literary association, the American Philosophical Society. Though in the prime of his power he was, in December, 1776, he published his first Crisis, which opened with the phrase, "These are the times that try men's souls." So well was it believed to meet the emergency of those times that it was, by order, read at the head of every regiment, and is pronounced to have done much to rouse the drooping ardor of the people. He continued such publications until the attainment of peace in 1783. In 1777 he was made secretary to the Congressional Committee on Foreign Affairs, but in 1779 he was obliged resign this post, because he had in an exchange of courtesies endorsed the conduct of his country. In 1781 Paine was sent to France with colonel Lawrence to negotiate a loan, in which he was more than successful; for the French government granted a subsidy of six millions of livres to the Americans, and also became guarantee for a loan of £1,500,000. In 1789 he was appointed by Congress as the United States minister to France. Paine employed...
himself chiefly in mechanical speculations. In 1787 he embarked for France, and, after visiting Paris, went to England, with a view to the prosecution of a project relative to the construction of an iron bridge, of his own invention, at Rotherham, in Yorkshire. This scheme was so much admired by the manufacturers of the kingdom, but his writings, in which he foretold, or rather recommended, the change that was approaching in France, brought him a supply of money. On the appearance of Burke's Reflections on the French Revolution, Paine wrote the first part of his celebrated Rights of Man, in answer to that work, which the most famous of all the replies to Burke, and circulated in innumerable editions, not only in English, but also in foreign versions. The second part was published early in 1792; and on May 21 in that year a proclamation issued against wicked and seditious publications evidently alluded to, though it did not name, the Rights of Man. On the same day the attorney-general commenced a prosecution against Paine as the author of that work, because of his outcry against the English aristocracy, and severe assaults on the British constitution. While the trial proceeded, Paine was said to have been deserted by his friends. He set off for France, arriving there in September, 1792. The garrison of Calais were under arms to receive this "friend of liberty," the tricolored cockade was presented to him by the mayor, and the hand-somest woman in the town was selected to place it in his hand. This was the only figure that had been in the hands of the worthy of the honors of citizenship, and being chosen member of the National Convention for the department of Calais, he proceeded to Paris, where he was received with every demonstration of extravagant joy. On the trial of Louis XVI he voted with the Girondists against the sentence of death, proposing his imprisonment during the war, and his banishment afterwards. This conduct offended the Jacobins, and towards the close of 1793 he was excluded from the convention on the ground of being a foreigner (though naturalized), and immediately after he was arrested and committed to the Luxembourg. Just before his confinement Paine had finished the first part of his work entitled the Age of Reason, and having confided it to the care of his friend Joel Barlow, it was published (see below). On the fall of Robespierre he was released. In 1796 he published the second part of his Age of Reason, and in May, 1796, he addressed to the Council of Five Hundred a work entitled Decline and Fall of the System of Finance in England, and also published his pamphlet entitled Agrarian Justice, being a plan for mollifying the distress of the agricultural laborers of England. English cruises, he remained in France some years longer. He had, however, written to Mr. Jefferson, who had then but recently been elected president of the United States, and expressed a wish to be brought back to America in a government ship. Jefferson at last replied, offering Paine a passage in the Maryland sloop of war, which he had sent to France for a special purpose. In his letter, dated March, 1801, Jefferson expresses his high estimate of Paine's services in the cause of American independence in the following words: "I hope you will feel the new general to sentiments worthy of former times. In it will be your glory to have steadily labored, and with as much effect as any man living. That you may long live to continue your useful labors, and to reap their reward in the thankfulness of nations, is my sincere prayer." Paine did not return to America, however, until August, 1802: he reached Baltimore in the following October. His first wife had died about a year after their marriage; he lived about three years with his second, whom he married soon after the death of his first, and they were separated by a mutual consent; he is said, on account of her physical disability. During his last residence in France he led a dissolute life, and one of the women he supported followed him to this country. He died in the city of New York, June 8, 1809, and, being refused burial by the Quakers, was interred in a field on his own estate near New Rochelle. Cobbett, some eight or nine years afterwards, disinterred Paine's bones and carried them to England; but instead of arousing, as he expected, the enthusiasm of the republican party in that country, Cobbett only drew upon himself the universal contempt. Paine's political and religious admirers in America erected in 1839 a showy monument, with a medallion portrait, over his empty grave. There is now a hall in Boston, supported by freethinkers, which is called after him. While Paine's character has sometimes been compared with Gibbon (q. v.). Both wrote on religion, philosophy, and politics. But these two authors are so very unlike each other that they should be compared only as extremes of the same general school. The freethinker Paine is a character of a very different kind from the freethinker Gibbon. The latter is the polished scholar, the polite man of letters; the former an active man of the world, educated by men rather than books, of low tastes and vulgar tone. Gibbon's religious scepticism is that of high life, Paine's of low. In the treatment both had been to the doctrine of the other hates. The one is a philosopher, the other a politician. Schooled in the politico-philosophical doctrines of Rousseau, Paine became the exponent of this Frenchman among the lower orders of the Anglo-Saxon family, by combining in his teachings the doctrines of Rousseau with those of the English deists, and thrice, as he clothes his thoughts betrays, besides, great familiarity with the bitterness of Voltaire. An edition of Paine's Political Writings was published at Boston in 1856 (2 vols. 8vo), and at New York (1860, 12mo); and in the latter year his so-called Theological Writings were issued. In London a complete edition of his works was published in 1861. The two great works of Thomas Paine are, as we have seen above, The Rights of Man and The Age of Reason. Of the former we have not place to treat here, as the religious views espoused therein reappear, only in a more objectionable form, in the second work. The Age of Reason was a pamphlet admitting of quick perusal. It was afterwards followed by a second part, in which a defence was offered against the replies made to the former part. The object of the two is to state reasons for rejecting the Bible (pt. i, p. 3-19; pt. ii, p. 8-82), and to explain the nature of the religion of deism (pt. i, p. 3, 4, 21-50; pt. ii, p. 83-83), which was proposed as a substitute. A portion is devoted to an attack on the external evidence of revelation, or, as the author blaspheously calls it, "the three principal mysteries of the Christian religion," a perversion of history and mystery; the latter of which he asserts may exist in the physical, but not by the nature of things in the moral world. A larger portion is devoted to a collection of the various internal difficulties of the books of the Old and New Testament, and of the schemes of religion, Jewish and Christian (pt. ii, p. 10-48). The great mass of these objections are those which had been suggested by English or French deists, but are stated with extreme bitterness. The most novel part of this work is the use which Paine makes of the discoveries of astronomy; in revealing the secret of life, he has had a plant for the idea of interference on behalf of this insignificant planet — an argument which he wields especially against the doctrine of incarnation (pt. i, p. 37-44). But no part of his work manifests such bitterness, and at the same time such a specious mode of argument, as his attacks on the doctrine of redemption and substitutional atonement (p. 20). The religion which Paine proposed to substitute for Christianity was the belief in one God as revealed by science; in immortality as the continuance of conscious existence; in the natural equality of man; and in the obligations of justice and mercy to one's neighbour (pt. ii, p. 3, 4, 50). As a writer, Paine must be granted to possess a vigorous and clear style; though somewhat coarse and simi-
ple, it is enlivened with comparisons and illustrations which render it very popular and attractive. He was clearly the heir of the points of arts of objects against which he directed his attack, and accordingly he was a vigorous assailant; but he was unequalled, either by competent knowledge or by habits of patient investigation, for the examination of the diversified subjects he attempted; certainly not in their bearing. He was not a bold and original thinker, but he lacked the amount of knowledge necessary for inquiry and criticism; hence he proved but a feeble and ignorant foe of Christianity. He assailed it without understanding it, and condemned without careful examination. His own testimony must forbode the inferiority of his uncontrolled brain. He had a firm religious belief in the existence of a God and a future life, but decried the sacred Scriptures as contradictory, though he had no a copy of the Bible at his command while criticizing. Thus while he stated some of the common difficulties which really exist in the Gospel history acutely, he frequently exposed himself for want of sound knowledge, when he thought that he was exposing the sacred writers. But, besides all this, the grossness and sordidity of his language—his satire and blasphemous ribaldry he is a fit parallel to Voltaire—reasonably shock the refined feeling of all Christians. Many things may easily be accounted for, and his attacks on Christianity forgiven him, or should at least be covered with the mantle of charity, when we consider that Paine was soop refuted by the connotings of the English Establishment in which he had been reared; and then, influenced by the shallow inoffensiveness of the French Revolutionists, quarreled with the Bible, when it was only a quarrel with bishops. Of what Christianity really is, in its highest and broadest catholic sense, we do not believe that he had the remotest idea; and so far as the world advanced in Biblical knowledge that the Tractate (N. Y., March 25, 1876) says truly: "His best arguments, if they may be so called, would not, if published to-day, attract the slightest attention, nor would anybody think them worthy of serious refutation. The opponents of Christianity are now men of larger calibre, greater knowledge, and more respectable method. They perhaps do less mischief than he did, because fewer people understand them. He was an infidel without science, erudition, or philosophy. He was simply a sharp debater, a caroller, and a technical disputant. As such he was necessarily abjured by the learned. The Tractate clearly places him in a class for which we cannot entertain the highest respect, and to whose guidance methodical thinkers in these days will not resign themselves."

A book so confused as Paine's Age of Reason did not, of course, remain long unanswered. Bishop Warburton, in his Sermons on Thomas Scott as representing the best known; but we may add to these names those of J. Aichinolf, Elias Boudinot, John Disney, Samuel Drew, J. P. Estlin, David Levi, W. McNeil, Thomas Meek, Michael Nash, Uzal Ogden, John Padman, William Pattern, J. Priestly, T. Shames, David Simpson, Thomas O. Summers, Robert Tilton, W. John Tyller, W. Wait, G. Wakefield, E. Wallace, and T. Williams, and still leave the list unexhausted. When Robert Hall was asked his opinion of the Age of Reason, he replied, "My opinion of it, sir? Why, sir, it is a mouse nibbling at the wing of an archangel." See, on Paine and his literary productions, Salmquanda (Lon'd., ed.), i, 134: Dibdin, Sunday Library, vi, 335; Lowndes, British Libr. p. 1761; Lon'd. Month. Rev. (1754), p. 96; Brit. Rev. June, 1811; Edinb. Month. Rev., iii, 434; Blacker, Mag. x, 701, xxiv, 49, 199, xxx, 96, 966; xxiv, 667, 670; xxxvi, 341, 361, 366; Niles Register, xxx, 397; Carey, Museum, i, 20; ix, 179; Spirit of the Pilgrims, iv, 338; Living Age, xvi, 169; Hist. Mag. (N. Y.), July, 1857, p. 206; Lon'd. Quar. Rev. July, 1858; Atlantic Monthly, July, 1859; Allibone, Dict. of Biog. and Men of Letters, i, 190, 191; Author of "The Englishman," Men and Times; Randall, Jefferson: Memoirs of S. Grellet; Address on Paine, by W. A. Stokes (1859, 8vo). The principal biographies of Paine are: Francis Ogly's (George Cheetham) (Lon'd., 178, 8vo); James Cheetham's (N. Y. 1809, 8vo); Sherwin's (1818, 8vo); G. Valse's (N. Y. 1841, 8vo); by the editor of the National (Lon'd. 1850, 12mo); by the editor of Paine's Political Writings (Bost. 1850, 2 vols. 8vo); by the author of The Religion of Science (N. Y. 1860, 12mo). We hardly know whether to believe in the name of the Hebrew, entitled Light from the Spirit World: the Pilgrimage of Thomas Paine and Others to the Seventh Circle in the Spirit World, by Rev. C. Hammond (Medina, N. Y., 1852, post 8vo).

Paint is the rendering of the A. V. in Jer. xxii, 14 of the Heb. לְעַחַ חֲשָׁא, properly to anoint, as in Gen. xxxi, 18; Dan. vi, 24. In Ezekiel xxi, 40 the original is בִּצְחַ, to smear. In 2 Kings ix, 20, and Jer. iv, 30, the Heb. word is בַּפִּ, pink, of uncertain etymology; but, according to Fürst, akin to Sanscrit पिन, Latin pinax, pinnax. It denoted a mixture of burned or pulverized antimony, and zinc, which was softened with oil, and applied to the eyes by a pencil or short, smooth style of ivory, silver, or wood, which was drawn between the closed eyelids. By this process a black ring was formed around the eyelids (see Hartmann, Läppereien der Asien, ii, 446 sq.; id. Hebräer, ii, 149 sq.; iii, 198 sq.; S. Grand in the Museum Hogan, iii, 175 sq.). The allusion in Wisd. xiii, 14 is to the custom, which prevailed especially among the Romans, of painting with red colors the cheeks of Idols on holidays. A similar custom to this is alluded to in the Hebrew entituled, הָאָ, In the East, where the women paint not only their cheeks, but their eyebrows, and the inner surface of the eyelids (comp. Shaw, Travels, p. 294; Niebuhr, Bedouin, p. 65; Travels, i, 292; Joliffe, Travels, p. 187; Rosenmüller, Morgenl., iv, 269 sq.; Hartmann, Monatsschrift, vii, 307, 309, 312, 301, 307; Ruppell, 4rab. xxxvi, 65) (Winer). The use of cosmetic dyes has prevailed in all ages in Eastern countries. We have abundant evidence of the practice of painting the eyes both in ancient Egypt (Wilkinson, ii, 342) and in Assyria (Layard, Nahr, ii, 329); and in modern times no usage is more general. It does not appear, however, to have been by any means universal among the Hebrews. The notices of it are few; and in each instance it seems to have been used as a meretricious art, unworthy of a woman of high character. Thus Ezzebel "burned her eyes in painting" (2 Kings ix, 30, margin); Jeremiah says of the harlot city, "Though thou restent thy eyes with painting" (Jer. iv, 50); and Ezezkel again makes it a characteristic of a harlot (Ezek. xxxii, 40; comp. Joseph. War, iv, 9, 10). The expressions used in these passages are worthy of observation, as referring to the mode in which the process was efected. It is thus described by Chandler (Travels, ii, 140): "A girl, closing one of her eyes, took the two lashes between the forefinger and thumb of the left hand, pulled them together, and then thrusting in at the external corner a leaflet which had been immersed in the soot and extracting it again, the particles before adhering to it remained within, and were presently ranged around the organ." The eyes were thus literally "put in paint," and were "rent" open in the process. A broad line was also drawn around the eye, as represented in the accompanying cut. The effect was an apparent enlargement of the eye; and the expression in Jer. iv, 30 has been by some understood in this sense (Gesen. Thesis. p. 1239), which is without doubt admissible, and would harmonize with the observations of other writers.
Ancient Egyptian Vessels for holding Kohl, and Instruments used in applying it. (From specimens in the British Museum.)

the passages referring to eye-paint already quoted from the Bible, we may notice probable allusions to the practice in Prov. vi. 25, and Isa. iii. 16, the term rendered “wanton” in the last passage bearing the radical sense of painted. The contrast between the black paint and the white of the eye led to the transfer of the term פַק (pāk) to describe the variegated stones used in the string-courses of a handsome building (1 Chron. xxix. 2; A. V. “glistering stones,” lit. stones of eye-paint); and, again, the dark cement in which marble or other bright stones were imbedded (Isa. liv. 11; A. V. “I will lay thy stones with fair colors”). Whether the custom of staining the hands and feet, particularly the nails, now so prevalent in the East, was known to the Hebrews, is doubtful. The plant, ḥēmā, which is used for that purpose was certainly known (Cant. i. 14; A. V. “camphire”), and the expressions in Cant. v. 14 may probably refer to the custom of Smith. With a view of lengthening and reduce the eye in appearance to what is called almond shape. It imparts a peculiar brilliancy to the eye, and a languishing, amorous cast to the whole countenance. Brides are thus painted, and many heighten the effect by application to the cheeks of colored cosmetics. The powder from which the κόλη is made is collected from burning almond-shells or frankincense, and is intensely black. Antimony and various ores of lead are also employed. The powder is kept in vials or pots, which are often disposed in a handsome cover or case; and it is applied to the eye by a small probe of wood or ivory, or silver, called smet, while the whole apparatus is called mudhāy (Land and Book, i, 184, 185). See EYK.

Modern Oriental Apparatus for “Painting the Eyes.”

Painter, Gnomon, a Presbyterian minister, was born in Shenandoah Co., Va., Feb. 14, 1756; graduated at Greenville College, Tenn.; studied divinity at the South-Western Theological Seminary, Maryville, Tenn.; was licensed by Marion Presbytery Sept. 24, 1829, and ordained April 16, 1824. In addition to his labors as a minister, he taught school till 1852 in Wythe Co., Va. About that time he took charge of the congregation of Anchor and Hope and Draper Valley, and afterwards New Dublin, Va., and remained with these three churches till his death, Feb. 20, 1863. Mr. Painter was a man of sterling worth and great personal influence. He was one of the pioneers of Presbyterianism in that part of Virginia. As such he practiced great self-denial in the work of the Master—his labors being constant and devoted in teaching and preaching. See Wilson, Pref. Hist. Almanac, 1867, p. 448. (J. L. S.)

Painting. We have no means of knowing what progress the art of painting made among the ancient Hebrews, as it is generally supposed that all pictures and sculptures were forbidden by the Mosaic law (Ex. xxiii. 1; Numb. xxxivii. 9). In later times their principal houses were beautifully painted with vermillion (Jer. xxvii. 14). Among the ancient Assyrians this art appears to have been cultivated, as mention is made in Ezek. xxvii. 15, 15, of “men portrayed upon the wall, the images of the Chaldeans portrayed with vermillion, girded with girdles upon their loins, exceeding in dyed attire upon their heads, all of them princes to look to.” This description of the interior of the Assyrian palaces completely corresponds with and illustrates the monuments of Nimrud and Khorsabad, as brought to light by Mr. Layard. “The walls were of sun-dried bricks, and where they rose above the sculptured slabs they were covered with paintings.” See ASSYRIA. Among the Egyptians, from the employment of hieroglyphics, it is supposed that the art of the painter was generally associated with that of the scribe. The painter held his brush in one hand, and his palette or saucer of color in the other. From the representation given of two artists engaged on a painting, it will be observed that though the easel stands upright, they had no contrivance to support or steady the hand; hence, while Egyptian painters appear to have been very careful in tracing their outlines with chalk, which they effaced if any imperfection were discovered. It is evident that
the manufacture of images and painted toys was car-
ried to a remarkable extent, as well as the decoration of mummy-cases. Wilkinson gives the following ac-
count of the ancient art:

"Mention is made of an Egyptian painting by Herod-
ottus, and the paintings represented in Beni Has-
to Cyrene, probably on wood, and in profile; for the full
face is rarely represented either in their paintings or bas-
reliefs. The faces of the kings in the tombs and temples
of Egypt are unquestionably portraits, but they are al-
ways in profile and the only ones in full face are on
wood, and of late time. Two of these are preserved in
the British Museum, but they are evidently Greek, and
dated thereafter the conquest of Egypt by the Romans.
It is therefore vain to speculate on the nature of their
painting, or their skill in this branch of art; and
though some of these portraits taken from the mummies
may prove that encaustic painting with wax and unphtha
was practiced in ancient Egypt. In the case of these,
which is the first known, there is uncertainty, nor can we conclude, from a specimen of
Greek time, that the same was practiced in a Phara-
onian.

The fresco painting was entirely unknown in Egypt;
and the figures on walls were always drawn and painted after the work was quite dry. But the colors with a transparant
varnish, which was also done by them, was not done by the Egyptians. There is said by the younger Pliny to
have been used for this purpose on the painted ex-
terior of a house at Stabia may have been a substitute
for the usual varnish, which last would have been far
more durable under a hot Italian sun.

Pliny states, in his chapter on inventions, that 'Gy-
gis, a Lydian, was the earliest painter in Egypt; and
Euhor, a cousin of Diodorus according to Aristotle, the
first in Greece; or, as Theophrastus thinks, Polytheon the
Athenian.' But the painting represented in Beni Has-
to Cyrene evidently dates before any of those artists. Pliny, in
writing of these, says, 'The only remains of which the
Egyptians pretend that it was invented by them 6000
years before it passed into Greece—a vain boast, as every
one will allow. It must, however, be added that all the
arts (however imperfect) were cultivated in Egypt
long before Greece existed as a nation; and the remark
made above, even in the time of the ordinary period of
the Trojan war, can only be applied to the Greeks as it is known by the same unquestionable author-
ity at Beni Hasn, dating about 900 years before the
time usually assigned to the taking of Troy.

"It is probable that the artists in Egypt who painted
on wood were in higher estimation than mere decora-
tors, as was the case in Greece, where 'no artists were in
regue that those who executed pictures on wood, for ne-
thir差丁 nor any other wall painter was of any re-
nown.' The Greeks preferred movable pictures, which
could be taken away in case of fire, or sold if necessary
and, as Pliny says, 'there was no painting on the walls
of Apelles' house' (or 'no painting by Apelles in the
walls of a house'). The painting and decoration of build-
ings was another and an inferior branch of art. The pic-
tures were in temples, and in temples that mas-
ters in later times in churches; but they were not dedica-
tions, nor solely connected with sacred subjects; and
the temple was, as the means of security. Often it was
as a repository of treasure. They had also picture-
galleries in some secure places, as in the Acropolis of
Athens.

Outline figures on walls were in all countries the ear-
liest class in painting; then came the copies of Latian;
and in Egypt they preceded the more elabor-
ate style, that was afterwards followed by bas-relief and
intaglio. In Greece, during the middle period, which
was that of the best art, pictures were painted on wood
by the first artists; and Rousell-Routhou thinks that
of any they painted on walls, this was accidental: and
the finest pictures, being on wood, were in after-times
considered as genuine. This was the case with the
Greeks 'as a spoliation,' which having left the walls bare,
as Pliny admits, monochrome, or painted on uniform
color, like those of Egypt; and, indeed, statues in Greece
were at first of one color, doubtless red like those of the
Egyptians, Romans, and Brúnsicans. For not only bas-
reliefs were painted, which, as parts of colored building,
was a necessity, but statues and pictures; and, indeed,
they were made to resemble real life. For that statue by
Scopas, of a Bacchanale, with a disconsolate countenance,
whose cadaverous hands held the reed, may be thought
that it was painted, and not of a monochrome color; and the statue of the Pan at Aulis, or of Paris, of
beard of ivory, was admired by a painter himself, could only have been parts of the whole colored building. After that period, the statues of the Olympian Jupiter; and ivory statues were said to have been invented turning yellow by the application of
colour.

"If the artists of Greece did not paint on walls, it was not from any mistaken pride, since even the greatest of
them would paint on their own account; but those in modern days who study decorative art do it
well to remember that to employ superior taste in orna-
mental composition is no degradation, and the advanced
specimens of decorative work in the Middle Ages were
executed by the most celebrated artists.

" Egyptian, ii, 277 sq. See Color; Picture.

Paisiello, Giovanni, an eminent Italian composer,
who wrote both secular and Church music, was born at
Taranto in 1741. He received his musical education in the Conservatorio St. Onofrio at Naples, under the
guidance of the celebrated musician Durante. Of Pai-
siello's earlier works none are of special interest to us,
but they were principally of a secular character. Some
of his best works, among which is Il Barbiere de Se-
rigio, were written during an eight years' residence at
St. Petersburg. At Vienna he composed two scena-
nophinies for a Serenata, and an oratorio, and the
title of opera buffa Il Re Tedoro. Between 1785 and 1799 he produced a number of operas for the Neapolitan theatre, and was appointed by Ferdinand IV his Maestro di Cappella. In conse-
quence of having accepted under the revolutionary gov-
ernment the office of national director of music, he was
suspended from his functions for two years after the
restoration of royalty, but eventually restored to them.
In 1802 he went to Paris to direct the music of the consular chapel, and while in that position wrote a Te
Deum for Napoleon's coronation. The indifferent re-
ception shortly after his return to his opera of Prosperine
led him to return to Naples, where he died in 1816.
His compositions are characterized by sweetness and
gracefulness of melody and simplicity of structure.
Besides no fewer than ninety operas, instrumental quar-
tets, harpsichord sonatas, and concertos, he composed
masques, requiems, cantatas, an oratorio, and a high-
ly praised funeral march in honor of General Hoche.

Paisiello; Fétis, Biographie Universelle des Musiciens,
.s. v.

Pajon, Claude, a noted French Protestant divine,
celebrated as an apostle of the new doctrines, but also
distinguished as somewhat alien to orthodox teachings.
was born at Remorantin, in Low Béarn, in 1626. Belonging to a family which had early and fervently embraced the Reformed theology, Claude Pajon was educated with great care in order that he might prove faithful to the good cause, and when he decided to enter the work of the ministry he was sent to the theological seminary at Angers, under the guidance of Missour, Daceux, and Capellus, he prepared for his life-work. In 1650 he was made pastor at Marchenoir, and he held that place until 1666, when he was called to a professorship in divinity in his alma mater, as successor of the much-distinguished Amyraut (q. v.). That good man held several academic posts on the Calvinistic and Augustinian plane of predetermination and grace. Pajon in like manner stirred up considerable agitation by his peculiar views on these subjects. He denied the immediate concursus in providence, and the direct influence of the Holy Spirit in conversion. The gracious influence of the Holy Spirit he held to be so intimately united with the efficacy of the Word that there was no possibility of an immediate influence of the Spirit upon the heart; that its influence was principally upon the understanding, through the medium of the Scriptures and the whole course of a man's life and conduct; views, which were orthodox against the extreme Calvinists as Pelagianism, brought him into disrepute, and he felt compelled to resign his professorship. In 1668 he accepted a call as pastor to the Protestant Church at Orleans; but, as he continued to advance the principles and teachings of his predecessors, he encountered the combined opposition of the leading theologians of the French Protestant Church, and was subjected to much annoyance and severe treatment. By the influence of Jurieu and others, several synods were held to consider his heretical dogmas, and, in spite of many friends who rallied to his defence and support, he was condemned by the synods, first in 1677, and at several synods following. The Academy of Sedan also condemned his doctrines, and that without a hearing; and when he desired to defend himself, the privilege was denied him on the ground that he only wished an opportunity to propound his heresy. Pajon died Sept. 27, 1655, at Carre, near Orleans. His views found advocates, and Pajonism is not an extinct heresy in our day. The origin of the heresy, we think, is easily accounted for. The French Church had originally adopted the unmodified Calvinistic predestination dogma. Many of the thinking minds of the French Protestant Church sought for a milder doctrine more in harmony with a common-sense interpretation of the Scriptures. Consequently there arose conten tions and divisions in the French Church, which far back, as far as the opening of the 17th century. John Calvin, the author of the Protestant faith, as he lived at Sedan, and later at Saumur, advocated a modera te scheme of elections, and it is therefore not particularly wonderful that the French theologians Amyraut, Placeux, and Pajon should have tried their skillful hand in the pruning of a tree whose fruit the masques would not relish as it first came to them. See PREDESTINATION. Among the ablest advocates of Pajonism were Isaac Papin (q. v.), Lenfant, Ailius, Du Vidal, and many others. Of the fifty works which Pajon composed, he published only two: the sermon on 2 Corinthians iii, 17 (Saumur, 1666), the doctrines of which were more or less set forth by Isaac Papin under the name of Pajonism. — An Examination of the Legal Precedents (of P. Nicole) (q. v.) (Orleans, 1673, 2 vols.); an excellent defence of the Protestant faith against the Romanists:—Remarks on the Pastoral Call (Amsterdam, 1695). The doctrinal views of Pajon were especially argued with ability from the Reformed side by Claude and Jurieu, Traité de la Nature et de la Grace, ou de Congres général de la Providence, et du Congres particulier de Grace efficace, composer les apôtres de M. l'évêque, etc. (Paris, 1697); also by Lenfant and Spanheim: from the Lutheran side by Val. Ernest Lischer (Esercoitation Theol. de Claudii Pajonis ejusque Sedato- rumus quos Pajonismus vocant Doctrina et Fatas [Lipsiae, 1692]). On the relation between his individual opinion and the general dogmatic system of the Reformed Church, and on its significance in the Reformed theology, see Zeller's Théol. Jahrb., 1852, 1853; Schweizer, Centralbekenntnisse, ii, 564 sq.; Ebrard, Dogmatik, vol. i, § 43; Gass, Dogmengeschichte, ii, 309 sq.; Dorner, Gesch. d. luther. Rel. in Deutschland, p. 448 sq.; Frank, d. Theol., d. cap. 7; and Theol. der Kirche, ch. 49 sq. See also Schrörck, Kirchengeschichte, d. 2. Pajon, Louis-Esaié, a member of the same family, was born May 21, 1725, at Paris, and died July 24, 1796, at Berlin. He served the French churches of a different inclination, and became during the time of the consistory. He edited Beauvoulet's Hist. of the Reformation, and translated the Moral Lessons of Gellert (Leipsiæ, 1772, 2 vols.). See Hoefer, Neue Biogr. Générales, a. v.

Pajonism. See Pajon, Claude.

Pakington, Dorothy, a learned English author, who wrote much on practical religious topics, flourished near the middle of the 17th century. She was the daughter of lord Coventry and wife of Sir John Pakington. She died in 1678. She was highly esteemed by her contemporaries for her piety and virtues. She wrote, The Gentleman's Calling:—The Lady's Calling (Oxf. 1673, 8vo):—The Government of the Tongue:—The Christian's Birthright:—The Causes of the Decay of the Christian Art of Conformity. (Oxf. 1680, 8vo; 2d ed., 1687). The book is dedicated to Dr. Pridgen, 1841, lep. 8vo). At the time of her death she was employed on a work entitled The Government of the Thoughts. This lady is one of the many to whom has been ascribed also the authorship of The Whole Duty of Man. Dr. Hill, in the dedication of his Anglo- Suez Grammar to Sir John Pakington, favors this impression, and Sir James Mackintosh (Edinb. Rev. xlv, 4, a.) adopts this theory. The subject is treated at some length in the article “Hawkins, W. B.” in Allibone, Dict. of Brit. and Amer. Authors, ii, 883.

Palkouch. See Gourd.

Pakuda, Bachja ben-Joseph, ibn-, a noted Jewish moralist, lived between A.D. 1050 and 1100. Nothing is known of his personal history, not even when and where he was born, nor how and where he was educated. But he is distinguished as the author of a work in Arabic, known in Hebrew under the name of היאקודה, Le Dutes de l'Heart, an ethical treatise, written in a kind of poetical prose, but considered as a poem more on account of its sublimity of style and language than for its actual versification. This work, in which he is styled, the Prince of instruction, and the teacher of more legality," was translated twice into Hebrew, by Joseph Kimchi (q. v.) and by rabbi Jehovah ben-Samuel ibn-Tibbon (q. v.), and afterwards into several other languages, and has found its way into almost every Jewish library. In Bachja's system there is no poetry, no idealism, no theosophy. He is the lawyer and judge, the practical jurist, to whom man and his happiness, here and hereafter, are the objects of philosophical speculation. He is orthodox without an exception, in theology as well as in the acknowledgment of the Jewish sources, viz., the Bible and tradition, neither of which he subjects to any criticism. But he adds to these two sources of information a third, viz., reason, which he places at the head, and thus, by means of reason, Scripture, and tradition, he seeks to demonstrate "that the performance of spiritual duties is not a meritorious addition to that piety which is manifested in obedience to law, but is the foundation of all law." As a poet, Bachja is especially famed for a poem on "Self-examination," יאור וטו, or יאור ראו, also called from its initial יאור, generally appended to the editions of the Koshob ha-Leboebot, and written in the style of the Arabic Mekamin, or rhymes without metre. This poem has been translated into Italian by
Ascaralli and Altarini, into German by Sachs and M. E. Stern, and into English by the Rev. M. Jastrow in the Journal of the American Oriental Society. The palace of Nebuchadnezzar II at Babylon lived before, after, or at the same time with Neb-Geberl (q. v.) is not fully ascertained; but he never mentions Geberl or any of his books, which some take as a proof that he lived before Geberl. See Gritz, Geschichte der Juden, vii, 48 sq.; Braunschweiger, Geschichte der Juden in den roman. Staaten, p. 51 sq.; Jost, Gesch. d. Judenheim. u. s. Zekten, ii, 412 sq.; Fürst, Bibl. Judaica, i, 76 sq.; De Rossi, Dizionario storico degli autori Ebrei (German transl. by Hamburger), p. 54 sq.; Jellinek, Introd. to the Chokot ha-Lebaloth (Leipizig, 1849); Schreiber, Transl. of the Chokot ha-Lebaloth, with exc. annotations (Vienna, 1866); Ueberweg, Hist. of Philosophy, i, 418, 420, 426; Munk, Esquisse historique de la Philosophie chez les Juifs; Sachs, Religionspoesie der Juden in Spanien, p. 65 sq., 278 sq.; Elderidge, Introd. to Hebrew Literature, p. 247 sq.; Finn, Sephar- dim, p. 177; Lindo, Hist. of the Jews in Spain and Portu- gugal, p. 61; Da Costa, Israel and the Gentiles, p. 290; Wise, Lecture on Babylonia (in the Imperialist [Cincinnati], Dec. 1872); Zunz, Literaturgeschichte der synagogalen Poesie, p. 201; the same, Adjectamenta ad Cantat. codic. Bibl. Acad. Rouen, p. 318 sq.; Lippis, Historia d. Juden über die jüdischen Philosophen des Mittelalters (Vienna, 1876), i, 43 sq.; but especially Kaufmann, Die Theolo- gie des Babyl und-Palast (ibid. 1874). (B. P.)

Pal, Kirshu, the first Christian convert at Scaram- pore, in India, forsook the faith of his fathers late in the last century, and became a native Christian minister. He made many converts, lived a devoted Christian life, and died peacefully and triumphantly in Christ. He is principally known to the Christian world as the author of the beautiful hymn beginning “Oh thou, my soul, forget no more;” translated by Joshua Marshman in 1801. (S. S.)

Palace (the rendering in the A. V. usually of חָיֵּב, "armón [חָיֵּב], harmón, Amos iv, 8), a castle, as rendered only in Prov. xviii, 19; and uniformly of גָּיוֹן, Tirâh, a citadel, 1 Chron. xxix, 1, 19; so in Nehemiah, Ezra, Esther, and Daniel; but prop. of מֵעָה, horgâlî, 1 Kings xxi, 1; 2 Kings xx, 18; Psa. xlv, 18, 24; xlvii, 12; Prov. xxxv, 28; Isa. xlii, 22; xxxix, 7; Dan. iv, 34, 36; the Chal. and Aram. always, Ezech. iv, 14; Dan. iv, 29; vi, 18, a regal edifice, esp. the temple of Je- hovah, as elsewhere rendered; less prop. of מַעֲשָׂה, ap- pâden, a fortress, Dan. iv, 5; גָּיוֹן, Tirâh, Cant. vii, 9; Ezek. xxx, 4; a castle, as elsewhere chiefly; also מִשְׁמַנְת, bikhôn, a large house, Esth. 5, 7; v, 7, 8; and מִשְׁמָת, a house, in certain combinations; in the N. T. αὐλή, Matt. xxxii, 5, 88, 69; Mark xiv, 54, 64; Luke xi, 21; John xviii, 5, a court or hall, as elsewhere sometimes rendered; παρακολούθω, Phil. i, 13, the praetor- ium (v. q. v.), as rendered in Mark xxv, 10, in Scripture, denotes what is contained within the outer enclo- sure of the royal residence, including all the buildings, courts, and gardens (2 Chron. xxxvi, 19; comp. Psa. xlvii, 4; xcv, 7; Prov. ix, 3; xvii, 19; Isa. xxiii, 18; xxx, 2; Jer. xxi, 14; Amos i, 7, 12, 14; Nah. ii, 6). In the N. T. (the text of Luke is αὐλή, v. q. v.) is applied to the residence of a man of rank (Matt. xxxvi, 5; Mark xiv, 66; Luke xi, 21; John xviii, 10). The specific allu- sions to the palace built by Herod, which was after- wards occupied by the Roman governors, and was the praetorium, or hall, which formed the abode of Pilate when Christ was brought before him (Mark xv, 16); the other passages above cited, except Luke xi, 21, re- fer to the residence of the high-priest.

The particulars which have been given under the head House (q. v.) require only to be aggravated to convey suitable ideas of a palace. It is true, that in the general arrange- ments and distribution of parts are the same in the palace as in the house, save that the courts are more numerous, and with more distinct appropriations, the buildings more extensive, and the materials more costly.

The palace of Nebuchadrezzar II was that which Solomon built, as supposed by those who hold that the palace built by Solomon, thought by most interpreters to be the same with that called "the house of the forest of Lebanon," of which some particulars are given in 1 Kings vii, 1-12; and if that passage be read along with the description which Josephus gives of the same pile (Ant. v, 5), a faint idea may be formed of it, as a magnificent collection of buildings in adjoining courts, con- nected with and surrounded by galleries and colonnades. To the same Jewish historian we are also indebted for an account of Herod's palace, doubtless drawn from per- sonal knowledge (Josephus, Ant. iv, v, 4, &c.), which ap- parently occupied the same site, namely, the eminence of Zion, doubtless immediately adjoining and including the castle of David, or the present citadel of the metropolis. See Jerusalem.

There are few tasks more difficult than the attempt to restore an ancient building of which we possess nothing but two verbal descriptions; and these difficulties are very much enhanced when one account is written in a language like Hebrew, the scientific terms in which are, from our ignorance, capable of the least latitude of interpretation; while the other, though written in a tongue of which we have some knowledge, was composed by a person who never could have seen the buildings he was describing. Notwith- standing this, the palace which Solomon occupied him- self in erecting during the thirteen years after he had finished the Temple, is a building of such world-wide notoriety that it cannot be without interest to the Bib- lical student, and that those who have made a special study of the subject, and who are familiar with the arrangements of Eastern palaces, should submit their ideas on the subject; and it is also important that our knowledge on this, as on all other matters connected with the Bible, should be brought down to the latest date. Almost all the restorations of this celebrated edifice which are found in earlier editions of the Bible are what may be called Vitruvian, viz. based on the principles of classical architecture, which were the only ones known to their authors. During the earlier part of this century attempts were made to introduce the principles of Egyptian design into these restorations, but with even less success. The Jews hated Egypt and all that it contained, and everything they did, or even thought analogous to it, was condemned to the outcasts and lepers of that land of bondage. [Nevertheless it is certain that the Temple (q. v.) was in a large measure a copy of many of the Egyptian structures which remain to this day.] On the other hand, the exuation of the palaces, the palace of Solomon, of the temple of the Persians at Persepolis, have thrown a flood of light on the subject. Many expressions which before were entirely unintelligible are now clear and easily understood, and, if we cannot yet explain everything, we know at least how to look for analogies, and what was the character, even if we cannot predicate the exact form, of the buildings in question. ["Al- though incidental mention is made of other palaces at Jerusalem and elsewhere, they are all of subsequent ages, and built under the influence of Roman art, and therefore not so interesting to the Biblical student as this. Besides, none of them are anywhere so described as to enable their disposition or details to be made out with the same degree of clearness, and no instruction would be conveyed by merely reiterating the rhetorical florishes in which Josephus indulges when describing them; and no complete plan in such a book as this can be made of itself so as to render its elucidation indispensable in such an article as the present." See Architecture.]

1. The following is substantially the reconstruction of Solomon's famous palace as proposed by Ferguson in his Handbook of Architecture. v. q. v. It is intended to be, of course, to be at all certain what was either the form or the exact disposition of such a palace, but, as we have
the dimensions of the three principal buildings given in the book of Kings, and confirmed by Josephus, we may, by taking these as a scale, ascertain pretty nearly that the building covered somewhere about 150,000 or 160,000 square feet. Less would not suffice for the accommodation specified, and more would not be justified, either from the accounts we have, or the dimensions of the city in which it was situated. Whether it was a square of 400 feet each way, or an oblong of about 550 feet by 300, as represented in the annexed diagram (fig. 1), must always be more or less a matter of conjecture. The form here adopted seems to suit better not only the exigencies of the site, but the known disposition of the parts.

(a.) The principal building situated with-

Fig. 2. Conjectural Sections of "the House of the Cedars of Lebanon," according to Ferguson.
PALACE

as Jerusalem, it is scarcely likely that the great hall of the palace was permanently open even on one side. Another difficulty in attempting to restore this hall arises from the number of pillars being unequal ("15 in a row"), and if we adopt the last theory (fig. 2, B), we have a row of columns in the centre both ways. Fergusson supposes as a second reason, a seated figure of one of the pillars with a column, by a wall at one end, which would give 16 spaces to the 15 pillars, and so provide a central space in the longer dimension of the hall in which the throne might have been placed. If the first theory be adopted, the throne may have stood either at the end, or in the centre of the longer façade, or even be inferred from what we know of the arrangement of Eastern palaces, we may be most certain that the latter is the correct position.

(b.) Next in importance to the building just described is the hall or porch of judgment (ver. 7), which Josephus distinctly tells us (Ant. viii. 6, 2) was situated opposite the centre of the longer side of the great hall; an indication that may be admitted with less hesitation, as such a position is identical with that of a similar hall at Persepolis, and with the probable position of one at Khorsabad. Its dimensions were 50 cubits long, and 30 cubits wide (150 feet at least), and its disposition can easily be understood by comparing the descriptions which we have with the remains of the Assyrian and Persian examples. It is thought by Fergusson to have been supported by four pillars; but it would have had three; the principal one opening from the street and facing the judgment-seat, a second from the court-yard of the palace, by which the councillors and officers of state might have entered (fig. 1, in the direction M), and a third from the palace, reserved for the king and his household, as shown above (fig. 1, in the direction N).

(c.) The third edifice is merely called "the Porch." Its dimensions are not all given in the sacred text. Josephus does not describe its architecture; and we are unable to understand the description contained in the Bible, owing apparently to our ignorance of the synonyms of the Hebrew architectural terms. Its use, however, cannot be considered as doubtful, as it was an indispensable adjunct to an Eastern palace. It was the ordinary place of business of the palace, and the reception-room—the Guesten-Hall—where the king received ordinary visitors, and sat, except on great state occasions, to transact the business of the kingdom.

(d.) Behind this, we are told, was the inner court, adorned with gardens and fountains, and surrounded by cloisters for shade; and besides this were other courts for the residence of the attendants and guards, and, in Solomon's time, for the harem. How the harem, or house of his harem: all of which are shown in the plan (fig. 1) with more clearness than can be conveyed by a verbal description.

(e.) Apart from this palace, but attached, as Josephus tells us, to the Hall of Judgment, was the palace of Pharaoh's daughter—too proud and important a personage to be grouped with the ladies of the harem, and requiring a residence of her own.

(f.) There is still another building mentioned by Josephus, as a "parish or temple, supported by massive columns, and in the Hall of Judging," on the valley; but it may have been in front, in the palace in the city; but more probably was, as shown in the plan, in the centre of the great court. Fergusson thinks it could not have been a temple, in the ordinary acceptance of the term, as the Jews had only one temple, and that was situated on the top of Mount Moriah; but it may have been an altar covered by a baldachino. This would equally meet the exigencies of the description as well as the probabilities of the case; and so it has been represented in the plan above (fig. 1, a). If the site and disposition of the palace were as above indicated, it would require two great portals: one leading from the city to the great court, shown at M; the other to the Temple and the king's garden, at N. This last, Fergusson supposes, was situated where the streets then were which led up to the City of David, and where the bridge afterwards joined the Temple to the city and palace.

The recent discoveries at Nineveh have enabled us to understand many of the architectural details of this palace, which before were quite obscure. They were almost inexcusable. (See the Jour. of Soc. Lit. Jan. 1852, p. 422.) We are told, for instance, that the walls of the halls of the palace were wainscoted with three tiers of stone, apparently varicolored marbles, hewn and polished, and surmounted by a fourth course, elaborately carved. The pillars had likewise in their隼leaf facings with designs on them. Above this the walls were plastered and ornamented with colored arabesques. At Nineveh the walls were, like these, wainscoted to a height of about eight feet, but with alabaster, a peculiar product of the country, and these were separated from the painted space above by an architectural band; the real difference being that the Assyrians revelled in sculptural representations of men and animals, as we now know from the sculptures of the walls of the palace, home as well as from the passages in Ezekiel (xxiii. 16), where he describes "men portrayed on the wall, the boats and the vessels of gold and silver, which were with them, and with the treasures of Egypt, vermillion," etc. These modes of decoration were forbidden to the Jews by the second commandment, given to them in consequence of their residence in Egypt and their consequent tendency to that multiform idolatry. Some different rules also held for the Beths, or agendas, or soft alabaster, though admirably suited to bassi-relievi, was not suited for sharp, deeply cut foliague sculpture, like that described by Josephus; while, at the same time, a composition material used by the Jews might induce them to limit their ornamentation to one band only. It is probable, however, that a considerable amount of color was used in the decoration of these palaces, not only from the constant reference to gold and gilding in Solomon's buildings, and because that as a color could hardly be used alone, but also from such passages as the following: "Build me a wide house and large"—or through-aired—"chambers, and cut thee out a window; and it is ceiled with cedar, and painted with vermillion" (Jer. xxii. 14). It may also be added that in the East all buildings, with scarcely an exception, are adorned with color internally, generally the three primitive colors used in all their intensity, but so balanced as to produce the most harmonious results. See ASSYRIA.

2. Quite different is the scheme proposed by Thenius in the Ezech. Handb. zum. A. T., of which the following is substantially a reproduction: (a.) Of this plan, proceeding from without, the first part was "the House of the Forest of Lebanon," so called, probably, because it was constructed of cedarwood from Lebanon. This served as an audience-chamber or hall of state (Joseph. l. c.), and was hung around with costly armor (I Kings x. 16, 17). The Targum calls it "the house of the cooling of the king," probably because of the refreshing air which its size, its elevated site, and its open construction secured for it. Some have thought it was a sort of winter garden or conservatory; but this is less probable. Its proportions, 100 cubits of length, 50 of breadth, 30 of height, and 15 of the height, the inner measurement; so that the area of this hall was larger than that of the temple, the height of both being the same (vi. 2). A solid wall of masonry enclosed the wood-work (ver. 9). The area of this hall was surrounded by four rows of columns, the upper part in ver. 2 is commonly taken to indicate four straight lines of pillars, and much perplexity has been caused on this supposition by the subsequent statement (ver. 3) that there were 40 pillars, 15 in a row. If there were 4 rows intersecting the hall lengthways, and 15 intersecting it breadthways, there must have been 60 pillars in all. This has led some arbitrarily to read three for four, contrary to all the codices and all the versions, the Sept. excepted. But דל cannot signify a series in line,
but a series surrounding or enclosing (comp. vi, 86; vii, 18, 20, 24, 42; Ezek. xlv, 23); so that the four rows of pillars went round the hall, forming four aisles inside the wall, or, as the Vulgate renders the passage, "qua-
turque decumbulacra inter columnas cedrinas" (fig. 3). On
these pillars beams of cedar-wood rested, running from the front to the wall, and forming a substantial rest for the upper story. This consisted of side chambers or galleries (ῥαπτήρες, comp. vi, 5, 8), and it is to the number and order of these that the statement in ver. 3 refers: "And the chambers which were upon the beams, forty-five [in number], fifteen in each row [circuit], were wainscoted with cedar-wood" (fig. 4, a a). These were
roofed with beams (ὤποιγνία, A. V. "windows," which the word never means) in three rows, i. e. there were three stories of galleries, and in these "sights" (ἱγιάοια; Sept. χώρα) over against each other in three ranks, i. e. each chamber in the three stories had an opening to the interior, facing a corresponding opening in the opposite chamber (fig. 4, b b). The different compartments of the galleries communicated with each other by means of doors. These, as well as the windows (the Sept. has χώρα in ver. 5, which shows that it read ἥξυμα, where the present reading is ἥξυμα, of which it is impossible to make sense), were square with an over-
beam. These galleries were probably reached by a winding stair in the outer wall (figs. 3 and 4, d d), as in the Temple (vi, 8).
From this description, the idea we form of "the House of the Forest of Lebanon" is that of a large hall, open in the centre to the sky, the floor of which was surrounded with four rows of pillars, affording a promenade, above which were three tiers of galleries open to the interior, divided each into fifteen compartments like the boxes in a theatre, but with doors communicating with each other. As the height of the entire building was thirty cubits, we may divide this so as to allot eight feet to the supporting pillars, eighteen to the galleries, and four to the beams and flooring of the galleries. The building, thus conceived, answers to the description of it by Josephus, as Κορυνθίων ιστραγγισμος, by which he means, not that it was in the Corinthian style of architecture (Keil), but that it was built after the Corinthian fashion—that of a hall, surrounded by a row the king’s heavy architraves, on which rested beams running to the wall, and supporting a floor, which again supported shorter pillars, between which were windows, the whole being hypostyle (Vitruv. vi, 3, 1).
(b) If now we regard this building (fig. 5, B) as placed lengthwise in the middle of a court (A), it is easy to understand the arrangement of the portico of pillars (D), the length of which was the same as the breadth of the building (ver. 6). These did not run along the side of it, but were behind it, forming a colonnade fifty cubits long by thirty wide, conducting to the residence of the king. This terminated in a porch, or entrance-hall, which had pillars and an ἄπη, i. e. a threshold or perron (A. V. "thick beam;" Targ. נרוניקס, "imen"). By this was the entrance to the throne-room or hall of judgment (E), which was wainscoted with cedar from floor to ceiling (ירשא תֶּפָצ, "this is the reading followed by the Vulg. and Syr. instead of the second תֶּפָצ, which is a manifest error, vii, 7). Then came the king’s residence in another court (F) behind the throne-room; and of this the residence of the queen, which may or may not have been the harem, formed a (probably the back) part. The space G is added conjecturally, for it containing the offices of the palace, and perhaps "the
PALACE

545

PALÆOGRAPHY

King's prison." All these buildings were externally of
hewn stone, and the whole was surrounded by a solid
wall enclosing a court.

3. Very different again is the reconstruction proposed
by Prof. Paine, in his Solomon's Temple, etc., of whose
scheme we here subjoin a brief outline. He maintains
that the structure was situated on the north side of
the Temple, immediately adjoining its area, where the tower
of Antonia eventually stood, adding 2 Kings xi in
proof of this position. He holds that the entire struc-
ture was one, the palace being the same elsewhere called
"the House of the Forest of Lebanon." The pillars are
by him distributed on the outside of the building, in
successive rows of different heights, supporting the
walls in terrace style. There is thus in reality but one
story, although there is the appearance externally of
portions, like those of Bayeux, Sens, Noyon, Beau-
vais, Auxerre, Meaux, and Laon. See Walcott, Sacred
Archæol. s. v.

Paladin, Filippo, an Italian painter commended
by Hackert, flourished about 1600, and executed several
works for the churches in Syracuse, Palmaro, Catania,
and other places. Lanzi thinks this artist the same as
Filippo Palladino (q. v.).

Paladini, Litterio, an Italian painter, was
born, according to Hackert, in 1691. He studied at
Rome under Sebastiano Conca, and afterwards
improved himself by a diligent study of the antique
models. On his return to Messina he was employed
on several considerable fresco works for the church
of Monte Vergine. This work is on a grand scale,
PALEOLOGUS 546

PALMAS

been founded by the learned French Benedictine, Jean Malilhon, whose De Re Diplomatica, first published in 1581 in 1 vol. fol., reprinted in 1709, and again in 1789, in 2 vols. fol., is still, perhaps, the most masterly work on the subject. Along with the Nouveau Traité de Diplomatie (Par. 1760-1765, 6 vols. 4to) of the Benedictin de St. Marc, and the Elements de Paléographie (Par. 1858, 2 vols. 4to) by M. Natalis de Wailly, it is the great authority for French palaeography. English palaeography is perhaps less favorably represented in Ait's Œuvres et Progrès de l'écriture (Lond. 1829), than Scottish palaeography in Anderson's and Budden- day's Dictionary of Scottish (Edinb. 1739). Muratori treats of Italian palaeography in the third volume of his great work, the Antiquitates Italicae Medii Ævi; and among later works on the same subject may be mentioned the Diplomatica Pontificia (Rome, 1841) of Marino Marini. The palaeography of Greece is illustrated in the Palæographia Graeca (Par. 1708) of Montfauno. Spanish palaeography may be studied in the Bibliotheca de la Paleografía Española (Mad. 1738) of Don C. Rodriguez. Of works on German palaeography, it may be enough to name Eckardt's Introductio in Rem Diplomaticam (Jena, 1762); Pannartz's Commentarium de Re Diplomatica (Norimb. 1745); Walther's Lexicon Diplomaticum (Göt. 1745); and Kopp's Palæographia Critica (Mannh. 1817). Hebrew palaeography has been elaborated by Gesenius in his Geschichte der Hebräischen Sprache (der Schriften und der Wörter, 1823), and other works in the German, Lithuanian, and Remains, p. 158 sq. The great work on palaeography generally—one of the most sumptuous works of its class ever published—is the Palæographie Universelle (Par. 1839-1845, in 5 vols. fol.) of M. J. B. Silvestre. See LAMPE, Wart- ing, D. B. 

Paleologus is the name of an illustrious Byzantine family, which first appears in history about the 11th century, and is in many of its representatives intimately connected with the ecclesiastical history of the Middle Ages. The family attained to imperial dignity in the person of Michael Palæologus (q. v.). See EAS- Type. 

Palestina (Exod. xvi, 14; Is. xiv, 29, 31). See PALESTINE. 

Palafox, Juan de, a Spanish prelate, noted as a theological writer, was born in the kingdom of Aragon in 1600. The descendant of an illustrious family, and a distinguished scholar of the University of Salamanca, he was called by Philip IV to a place in the "council of the Indies," and afterwards to like situation in the "council of the Indies." He embraced a little later the ecclesiastical profession. The king appointed him, in 1639, bishop of Puebla-de-los-Angelos, in Mexico, with extensive administrative powers. In the exercise of his functions Palafox had some disputes with the Jesuits; he submitted these differences to pope Innocent X, and went to Europe to sustain his cause. The king of Spain, satisfied with Palafox's conduct in America, gave him the bishopric of Osma. He died soon after (Sept. 15, 1639), leaving a high reputation for piety. Towards the end of the 17th century a procedure was instituted for his beatification; but the case was delayed for a long time, and, in spite of the efforts of the Spanish government, the court of Rome decided not to confer the honor on a declared enemy of the Jesuits. The works of Palafox were collected and published at Madrid in 1762, in fifteen volumes. Among them are, Le Pasteur de la Nuit de Noël (Pastor de Noche-buena) (Brussels, 1665);—The Shepherd of Christmas-ee, translated into French (Par. 1678);—La Congrégation de la Chine pour les Tartares (Fondation de l'Ordre de Tartares), published in Spanish and in French (ibid. 1678); and several mystical treatises, some of which were translated into French by the abbe Le Roy. See Dinouart, Vie du véritable Don Jean de Palafox, Évêque d'Angoulême (Col. 1767); Nio- 

Palairet, Elias, was one of the latest of the classical commentators who attempted to illustrate the language of the New Testament from the usage of the various authors of classic Greek, a line of interpretation which was the early part of the last century into especial favor with many eminent scholars, both on the Continent and in this country. Palairet, who was a French Protestant minister living at Tournay, in Belgium, and usually published at Leyden, in 1752, in an octavo volume, some short notes of classical illustration of terms in the New Testament. He entitled Observations philologico-critica in sive Norii Faderis libros. These notes indicate much learning, but they partake of the fault of the school by exaggerating the likeness of the sacred to the classic Greek authors. Palairet, who seems to have afterwards undertaken the pastorate of a French congregation at Greenwich, issued in the year 1755 a specimen, printed in London, of a much larger work, parraking of the character of a continuous commentary on all the books of the New Testament, on the principle of his Observations. The work, however, which was to have been published by subscription, never appeared. 

Pai al (Heb. Palal, yx法官; Sept. Φαλαχ, v. t. Φαλαχ, Φαλαχ, and Φαλάλ), son of Uzar, and one who aided in repairing the wall of Jerusalem (Neh. iii, 25). B.C. 446. 

Palmas, G. Antonio (Γρηγόριος ὁ Πάλμας), an eminent ecclesiastic of the 14th century, was born in the Asiatic portion of the then reduced Byzantine empire, and was educated at the court of Constantinople, apparently during the reign of Andronicus Paleologus the elder. He ignored the opportunity of worldly greatness, of which his parents and himself stood in need, and the imperial favor gave him the prospect, and with his two brothers became, while yet very young, an inmate of one of the monasteries of Mount Athos. Here the youngest of the three died; and, upon the death of the superior of the monastery soon after, the two surviving brothers placed themselves under another superior. With him they remained eight years; and on his death Gregory Palamas withdrew to Sceate, near Berhassa, where he built a cell, and gave himself up entirely, for ten years, to divine contemplation and spiritual exercises. The severity of his regimen and the coldness of his contact with the world did not diminish his high repute and the affection and respect in which he was held. The urgent recommendation of the other monks of the place induced him then to leave Sceate and to return to Mount Athos; but this change did not suffice for his recovery, and he removed to Thessalonica (Can- taxeuzenus, Hist. ii, 89). It was apparently while at Thessalonica that his controversy began with Barlaam, a Calabrian monk, who visited Constantinople soon after the accession of the emperor Andronicus Paleologus the younger, A.D. 1289, and, professing himself an adherent of the Greek Church and a convert from the Latin Church, he wrote and published several works, obtained the favor and patronage of the emperor Barlaam appears to have been a conceited man, and to have sought opportunities for decrying the usages of the Byzantine Greeks. For his supercilious humor the wild fanaticism of the monks of Mount Athos presented an admirable subject. Many of them who aimed at the highest spiritual attainments were accustomed to shut themselves up for days and nights together in a corner of a cell, and there abstract their thoughts from all worldly objects. Resting their beards on their chests, and turning their eyes on their bellies, they imagined that the seat of the soul, previously unknown, was revealed to them by a mystical light, and at its discovery they were rapt into a state of ecstatic enjoyment. The existence of this light, described by Glóbón as "the creature of an empty stomach and an empty brain,"
appears to have been kept secret, and was only revealed to Barlaam by an incantuous monk, whom Cantacuzenus abuses for his communicativeness. Barlaam eagerly seized the opportunity afforded by this discovery to assail with bitter reproaches the fanaticism of these Hesychasts (ἡσυχαστῆς) [see Ἡσυχαιτία] or Quietists. He said before the synod, "men with their souls in their navel," and he identified them with the Massilians or Euchites of the 4th century. The monks were roused by these attacks, and as Gregory Palamas was the most able, and learned among them, they put him forward as their champion, and employed both his oratory and his pen against the attacks of the sarcastic Calabrian. Palamas and his friends tried at first to silence the reproaches of Barlaam by kindly remonstrance, and affirmed, as to the mystical light, that there had been various similar instances in the history of the Church of a divine luminous surrounding the saints in time of persecution, and that sacred history recorded the appearance of a divine and uncreated light at the Saviour's transfiguration. Barlaam caught at the mention of this light as uncreated, and affirmed that nothing was uncreated but God, and that Barlaam's light (Gnosis or Light) which was seen by the Apostles of Mount Tabor, was visible to the bodily eye, the monks must have two gods, one the Creator of all things, confessedly invisible, the other this visible yet uncreated light. This serious charge gave to the controversy a fresh turn. Nicholas of Crete put the light of the Church, fearing that his infuriated opponents, who flocked to the scene of the conflict from all the monasteries about Thessalonica and Constantinople, would offer him personal violence, appealed to the patriarch of Constantinople and the bishops there, and charged Palamas not only with sharing the fanaticism of the Omphadopoeists, and with the use of deceptive prayers, but also with holding blasphemous views of God, and with introducing new terms into the theology of the Church. A council was consequently convened in the church of St. Sophia, at Constantinople, in 1341, in the presence of the Emperor John Cantacuzenus, the learned, and a vast concourse of the common people. As it was not thought advisable to discuss the mysteries of theology before a promiscuous multitude, the charge against Palamas and the monks of blasphemous notions respecting God was suppressed, and only the charge of holding the old Massalian heresy respecting prayer, and of using deceptive prayers, was proceeded with. Barlaam first addressed the council in support of his charge; then Palamas replied, retorting upon Barlaam the charge of blasphemy and perverseness. The council decided in favor of Palamas, and acknowledged his errors and became reconciled to his adversaries. Mortified, however, at his public defeat, he returned to Italy, and reconciled himself to the Latin Church. Nicephorus Gregoras states that the decision of the council on the question of the Massalian heresy charged against the monks was deferred, that Barlaam was convicted of malignity and arrogance, and that the heresy of Palamas and his party would probably have been condemned also, had not the proceedings of the council been cut short by the emperor's death in 1341. The cause foreseen by Barlaam was taken up by another Gregory, surnamed Acindynos; but the party of the monks continued in the ascendant, and Palamas enjoyed the favor of John Cantacuzenus, who then exercised the chief influence at the court of the emperor John Palaeologus, a minor. It appears that Cantacuzenus intended to procure the depopulation of the patriarch of Constantinople and the elevation of Palamas. In the civil war which followed (1342–1347) between Cantacuzenus and the court (where the admiral Apeacenus had supplanted his brother, being the son of his father's sister), Palamas, who had come to be called "the Apeacenus of Byzantium," was imprisoned in 1346, not on any political charge, but on the ground of his religious views; for the patriarch now supported Gregory Acindynos and the Barlaamites against the monks of Mount Athos, who were favorable to Cantacuzenus. The Barlaamites thus gained the ascendency, and in a council at Constantinople the Palamites, as their opponents called them, were condemned. The patriarch and the court were, however, especially anxious to clear themselves from the suspicion of having caused Palamas' imprisonment. When the successful entrance of Cantacuzenus into Constantinople, in January, 1347, obliged the court to submit, Palamas was released, and sent to make terms with the conqueror. The patriarch Calecas had been deposed by the influence of her enemies just before the triumph of Cantacuzenus, and Gregory Palamas persuaded Cantacuzenus to assemble a synod, by which the deposition was confirmed, and Calecas banished to Ditymotichon. Acindynos and the Barlaamites were now in turn condemned, and the Palamites once more gained the ascendency. Isidore, one of their number, was chosen patriarch. Palamas himself was soon afterwards appointed archbishop of Thessalonica; though, as that city was in the hands of some of the nobility who were hostile to Cantacuzenus, he was refused admission to the city, but he obtained admittance after a time. This was in 1349. Meanwhile the ecclesiastical troubles continued: the Barlaamites withdrew from the communion of the Church; their ranks received continual increase, and the influence of the bishops grew over to their side the empress Irene, wife of Cantacuzenus, by persuading her that the recent death of her younger son, Andronicus, in 1347, was a sign of the divine displeasure at the favor shown by the emperor Cantacuzenus to the Palamites. To restore peace, if possible, to the Church, a synod was summoned, after various conferences had been held between the emperor, the patriarch Isidore, Palamas, and Nicephorus Gregoras. Isidore died in 1349, before the meeting of the synod, over which Callistus, his successor, presided. When it met, in 1351, Nicephorus Gregoras was the champion of the Barlaamites, who numbered among their supporters the archbishop of Ephesus and the bishop of Galus or Gaueus; the archbishop of Tyre, who was present, appeared to have been on the same side. Palamas was the leader of the opposite party, who, having a large majority and the support of the emperor, carried everything on its own way. The archbishop of Ephesus and the bishop of Gaueus were deposed. Barlaam and Acindynos (neither of whom was present) were declared excommunicated, and their followers were forbidden to propagate their sentiments. The popularity of Barlaam's cause, however, continued, and Palamas narrowly escaped violence. Of his subsequent history and death nothing seems to be known.

The peculiar leading tenets of the Palamites were the existence of the mystical light discovered by the more eminent monks and recluses in their long exercises of abstract contemplation and prayer, and the uncreated nature of the light of Mount Tabor seen at the transfiguration of Christ. The first attracted the notice and admiration of their opponents; but the second, with the consequences really or apparently deducible from it, was the great object of attack. The last seven books (xvii–xxiv) of the Historia Byzantina of Nicephorus Gregoras are devoted to a history of this controversy; and in the bitterness of his polemic spirit he charges Palamas with polytheism: with converting the attributes of the Deity into so many distinct deities: with affirming that the Holy Spirit was not one alone, or even one of seven, but one of "seventy times seven"; with placing in an intermediate rank between God and angels a new and peculiar class of uncreated powers (ἐνοίων τι καὶ ἐναντίων γένους ἐνεργείας ἡμῶν ἐνέργειας), which Palamas calls "the orthodox imperial victory of God and the ineffable light" (ἡ ἐνεργεία τοῦ θεοῦ καὶ τῆς ἄδρου ἐνεργείας), with holding that any man by partaking of the stream of this light, flowing from its inexhaustible source,
could at will become uncreated and without beginning (αἰτίας ἡγίσκειται γίγαντας καὶ ἀνώποι) and with numerous other errors. These alleged heresies were, however, mostly, if not altogether, the inferences deduced by Nicephorus Gregoras and other opponents from the Palamite dogma of uncreated light, and not the acknowledged dogmas of the Palamites. The same continuance, and vehemence of the controversy is a singular manifestation of the subtlety and misdirection of the Greek intellect of the period. The dogma of the uncreated light of Mount Tabor has apparently continued to this day and Palamite doctrine ascribed to the Church (Capparonnerius, Not. ad Nichph. Legend. ii, 1821, ed. Bonn), though probably now neglected or forgotten.

Palamas was a copious writer; many of his works are extant in MS., and are enumerated by Wharton Gery in the Appendix to Cave, and by Fabricius. Nicephorus says that he wrote more than sixty logoi, orations; and Boivin states that one MS. in the king's library at Paris contained more than seventy homilies or other short pieces. The statement of Gregoras, therefore, must refer only to the exterior works of Palamites. And I may add, that every copy of Palamite works which I have seen was found in the library of the imperial palace, or with the papal courts, or with me must be much too low an estimate.

The following have been published: Prospoporia, s. Prosporai, s. Orationes duae judiciales, Menisius Corpus accursi et Corporis esse defendentis, una cum Judicam Sententia (Paris, 1553) — Et haec sequentia ministerii eae ecclesiae, que in Kyriaco mense Ιουλίου Χριστοῦ in Æ παρισταται ὡς τα κατ' αὐτῷ φῶς αὐτὸς αἰτίας ἔτη. λογος οὗ, in venerabilem Domini et Dei ac Salvatoris nostris Jesu Christi Transformationem, ut probatur quod in ea est luminem incruentum esse. Oratio Prima. Ομολογία ἐκ τῆς αὐτής τοῦ Κυρίου ἐκ τῆς μεταμόρφωσις ἐν παράτασις ἡ ἀκ- τιστόν ιστο το κατ' αὐτὸν ἡ δύναμιν φῶς ἀλλ' αὐτὸ ἐν τῆς φύσει Θεοῦ λόγος Μετατραπτες in cunctem vernandum Dominum Transformationem; in quo probatur, quamquam incruentum est illius divinissimum Lumen, hanc tamen Dei Incarnationem esse. Oratio Secundae. These two orations were published in London without date (but probably in 1624), together with a number of other pieces of Barlaam, the Calabrian, and several Greek writers of a comparatively recent period — Αντιτριγληφι, Rhetorion Epiptomemen, s. Labarum Libro, Ctenon de Mor, published by the late Constance Porrini, s. Compendium ad cardinalis Bessarion, in the Opuscula Aurea of Petrus Arcadius (Rome, 1830, 1671) — S. Petri Athosita (s. de Monte Atho) Encyconium (in Acta Sanctorum, Junii, a. d. xii, lii, 335) — Erat Latinis antimo, Adorion Latium Contraflam — Εἰσαγωγή πρὸς τὴν Σωτηριομεγάλην ευφόρη Ἀγίων την Παλαιολογιῶν, Ἐπιστολα εἰς δικαίως coronam Augustum Amam Palæologiis, printed by Boivin in his notes to the Hist. Byzant. of Nicephorus Gregoras (Paris, 1702), p. 785. Boivin has also given two extracts from a writing of Palamites, one of non-orthodoxy, Adorion Latium Contraflam; the other very brief, from an Επιστολα ad Johnnem Gatarm. Various citations from his works are given by Nicephorus Gregoras. It is probable that the Tomus or declaration issued by the synod of Constantinople, in 1551, against the Barlaamites was drawn up by Palamas, or at least his inspection, as he is given by Comenius, as having given by Comenius, as having written a Latin version, in his Auctarium Novissimum (Paris, 1672), ii, 155, and is entitled Τόμος εἰς τὰς πρὸς τὴν Σωτηριομεγάλην ἐπιστολὰς τοῦ Ἱονίου εἰς ἑαυτὸν καὶ ἑαυτῷ αὐτὸν τῆς ἱεροσυνής τῶν ωφικνίων καὶ δωδεγής τῶν Βασιλακιών καὶ Παλαιολογίων, Tomus a divina sacrae Sygno adorion esse comtabi qui Barlaam et Androgyo opinions sunt, Cantacuzeno ac Palaeolotheos koptikou tychiakosmov, thia σωτηριομεγάλης εὐφόρης αἱ ἀγίων την Παλαιολογιῶν, εὐθύς αἱ εἰς χρυσόν Αὐγούστου Α/ion, τοῦ Κωνσταντίππου τοῦ τῆς Παλαιολογιῶν, τοῦ τῶν ὁμοίων καὶ συναπτομένων τῶν της σωτηριομεγάλης εὐφόρης πρὸς τὴν Παλαιολογιῶν.
country-house in the neighborhood of Siena, called Ce
ciniana, because it formerly belonged to Cecina, one of
Cecina, whom was passionately fond of his children.

In the course of his address Palæario turned to his ac-
cusers, disclosed to them their wickedness, and pro-
claimed that his relations were too dear to him to re-
pose him in the whims and fancies of his life. In referring to his

circumstances, he said:

"My only temporal happiness consists in living among
my books. A woolen rug as a protection against the
three sons, a chest of old clothes to wipe one's face,
the brow, a bed to rest on, and a simple bench to sit upon—
these are all I need. And do thou, O Christ, merciful
spirit, preserve and增长 those gifts which I have from
thee! Thou hast kindled in me a disdain of all earthly
goods, and the firm determination to speak in conformity
with the truth, and not according to my own will. Do thou
add to these favors plenty, temperance, and health, to
enrich me with virtuous entertainments, and with the
virtues which are pleasing to thee and thy children!"

Palæario's eloquent defence, in which boldness and can-
dor were tempered by prudence and address, triumphed
over the violence and intrigues of his adversaries. He
was declared free from the charges of his accusers. He
was, however, obliged soon after to quit Siena, as his
opponents had had his acquittal become only the more
embittered; but, though he changed the place of his
residence, he did not escape from the odium which he
had incurred; and we shall afterwards find him enduring
that martyrdom which he early anticipated, and
for which it appears to have been his object all along
in his proceedings. On the morning of the 14th of April,
the year 1543, he embraced an invitation from the sen-
ate of Lucca, where he taught the Latin classics,
and acted as orator to the republic on solemn occasions.
To this place he was followed by Marco Biatore, one of
his former adherents, a scholar who possessed such
unusual abilities in his own tongue which captivates the
valuable ear, and whose ignorance and loquacity had been severely chas-
tised, but not corrected, by the satirical pen of Are
tino. Lucca at that time abounded with men of enlightened
and honorable minds; and the eloquence of Palæario,
sustained by the lofty bearing of his spirit, enabled him
easily to triumph over his unworthy rival, who, disgraced
and driven from the city, sought his revenge through
the Dominicans at Rome. But by means of his friends in
the conclave, Palæario counteracted at that time the
informations of his accuser. About 1558 a very warm
invitation came to him from the officials of Milan to re-
move to that place and become a professor of eloquence.
The handsome stipend which was proffered him induced
the Reformer to reply favorably; and when he had set
tled at Milan he hoped for no further change until his
life was terminated in the peaceful and normal death
of old age. But the apprehensions of his former adherents
so excited the terror of the heresy-hunting Inquisitors, together with his
enemies, that they determined otherwise. For some ten years there
had been daily persecutions, imprisonments, and death-
punishment for many a soul devoted to the new cause,
this was not in itself sufficient. But when thunder was lighted
in the skies, men were afraid for him, but he quieted them with the
assurance that he knew of no danger. Upon the acces-
sion of Pius V, whom all regarded as the death-mes-
senger to Reformed doctrines in Italy, when Palæario's
friends had succeeded in obtaining his consent for re-
newal to Bologna, he was suddenly arrested in 1558,
and by pontifical authority his case, now over twenty
years settled, was ordered for a rehearing at Rome.
During his trial he was imprisoned in the Torre di
Nona, the most wretched of the three prisons of the In-
quiscition at Rome. His book on the benefit of Christ's
death, his whole compositions of Ochino (q. v.), his defence of
himself before the senators of Siena, and the suspi-
cions which he had incurred during his residence at
that place and at Lucca, were all revivified against him.
After the whole had been collected and sifted, the charge
was transferred into articles: that he denied purgatory; disapproved of burying
the dead in churches, preferring the ancient Roman method
of sepulture without the walls of cities; ridiculed the
monastic life; and appeared to ascribe justification sole-
lly to the actions of Christ, and thus surviving our sins
through Jesus Christ. For holding these truths he
was condemned, after an imprisonment of two years,
PALEARIO

PALEOTTI

be suspended on a gibbet and his body to be given to the flames; and the sentence was executed on July 3, 1520, in the seventeenth year of his age. A minute, which professes to be an official document of the Dominicans who attended him in his last moments, but which has neither names nor signatures, states that Paleario died confessed and contrite; but the two letters that are supposed to have come from his family on the day of his death are witnesses against this statement. If he did not openly express himself in them, lest they might thereby fail to reach their destination, there is yet seen all through them the same Gospel spirit which had always characterized him. They also afford a negative proof of the fact of the recantation being pronounced; for if he had really changed his sentiments, would he not have felt anxious to acquaint his family with the fact? or, if the change was feigned, would not the monks have insisted on his using the language of a penitent when they granted his permission to write? Paleario had before his apprehension taken care to secure his writings against the risk of suppression by committing them to the care of friends whom he could trust; and their repeated publication in Protestant countries has saved them from those mutilations to which so many of his writings of a similar nature have been subjected. From his letters it appears that Paleario enjoyed the friendship and correspondence of the most celebrated persons of that time both in the Church and in the republic of letters. Among the former were cardinals Sadolet, Dembo, Pole, Maffe, Basila, Filonardo, and Sondracit; and among the latter Flammingo, Riccio, Alciati, Vittorio, Lampadario, and Boiardi. His poem on the immortality of the soul, entitled De immortalitate animae, libri tres (1626, 1660), was received with applause by the learned. Of his orations, it is, perhaps, no high praise to say that they placed him above all the moderns who obtained the name of Ciceroanians, from their studious imitation of the style of the Roman orator: they are certainly written with elegance and spirit. His letter on the Council of Trent, addressed to the Reformers, and his testimony and pleading against the Roman pontiffs (Aietio in pontificibus Romanos et eorum auctoribus, ud imperatore Rom, reges et principes Christianarum reipublicae summos [Eccenesici concilii praesides, cum de consilio Tridentino habendo de liberta auctoris, drawn up with a design to get it presented to the ambassador of the papal nuncio at the Council of Trent, is a regular plan in defence of the Protestants, and was published at Leipzig in 1606; see Acta Eruditorum for Jan. 1696, p. 44), evince a knowledge of the Scriptures, soundness in the faith, candor, and fervent zeal worthy of a Reformer and confessor of the truth. In the composition of his life of the Council of Trent, the most learned of the humanists, it is said that cardinal Pole had a large part, that Flaminio (q. v.) wrote a defence of it, and that activity in circulating it formed one of the charges on which cardinal Morone (q. v.) was imprisoned and Carmeseghi committed to the flames. No wonder of that sort a man M'Crie writes: "When we take into consideration his talents, his zeal, the utility of his writings, and the sufferings which he endured, Paleario must be viewed as one of the greatest ornaments of the Reformed cause in Italy." The works of Paleario, entitled Opera, ad illud editionem quitam post auctum recensuerat et auctore exhausta, nunc nova accesserunt auctore Iosepho Patavensi, were brought out at Amsterdam in 1698, and were reprinted at Jena in 1728. The tract on the benefits of the death of Christ fared no better than its author. The Inquisition hunted for the book with such success that nearly every copy was brought into its hands and burned. For three hundred years nothing was known of it save what history reported. In 1843, however, a copy of the Italian edition was discovered in the University of Cambridge, in England, which was brought out, with the French translation 1592, and the English of 1654, by the Church of Cantingham at Cambridge, and, with a German translation by Tischendorf, at Leipzig in 1856. See Young, Life and Times of Paleario (London, 1850, 2 vols. 8vo); Blackburn, Avito Paleario and his Friends, with a revised edition of The Benefit of Christ's Death (Philadelphia Presbytery, Board, 1867); Gurllit, Leben des A. Paleario (Hamb. 1885); Bonnet, A. Paleario et la Ref. de l'Italie (Paris, 1863); M'Crie, Hist. of the Ref. in Italy, p. 131 sq., 278 sq., Jahrh. deutsch. Theol. 1870, iii, 419.

Pombang, formerly an independent kingdom on the east coast of Sumatra, now a Netherlands residency, is bounded on the north by Jambi, north-west by Bentuk, south by the Langoung districts, and south-east by the Strait of Basco, has an area of 61,911 square miles, and a population amounting, in 1885, to 575,697 souls. Much of the land is low-lying swamp, covered with a wilderness of impenetrable bush; but in the south it rises into mountains, of which Oeloe Moesi is 6180 feet in height. Gold-dust, iron-ore, sulphur with arsenic, lignite, and common coal are found; also clays suited for making coarse pottery, etc. Springs of pure oil occur near the coast of Bali Beok, and of mineral water in various places. Rice, cotton, sugar, pepper, tobacco, and in the interior cocoa-nuts are grown; the forests producing gutta-percha, gum-castic, ratsans, wax, benzoin, satinwood, etc. The rivers abound with fish; and the island is well supplied with deer, wild pigs, tigers, leopards, the wool of which is exported, and with elephants. The whole of the island of Jawa is entirely deficient in water, but in the dry season the thermometer ranges from 80° to 92° F., and in the rainy season, 76° to 80°; but the climate is not considered unhealthy, except in the neighborhood of the mountains.

The natives are descended from Javanese, who in the 16th century, or earlier, settled in Pombang, and ruled over the whole land. The race, however, has become mixed with other Malays, and the language has lost its purity. In the north-west interior is a tribe called the Koeboes (Kohboes), of whose origin nothing is known, but who are probably the remainder of the aborigines. They do not follow agriculture, but go about almost naked, and live chiefly by fishing and hunting. No clear idea of a Supreme Being seems to be possessed by them, though they believe in existence after death. See MALAYS.

Palencia, Alonso de, a celebrated Spanish author, deserves a place here for his labors in practical religious literature and his edition of Josephus. Palencia was born in 1423; at the age of seventeen became page to the bishop of Burgos, and, after travelling in Italy and on the continent, was made royal historiographer. He died near the close of his century. He wrote El Espacio de la Cruz (1485), and several other works of like character, still in MS., besides the great historical works on which his fame rests. His version of Josephus was finished in 1492. See Prescott, Ferdinand and Isabella, i, 196; English Cyclopaedia, and the literature there given.

Paleotti, Gabriele, an Italian cardinal, was born at Bologna Oct. 4, 1524. His father, who was a lawyer, intended Gabriele also for that profession; but at maturity he decided for the clerical life, and, contenting himself with a simple canonicate, he refused the bishopric of Majoerca, which Campeggio wished to resign in his favor. In 1566 he was put on the committee of the Index Expurgatorium. He was sent to the Council of Trent to sustain the interests of the Church, and Pius IV decorated him with the purple March 12, 1565. Pius V enfranchised Jan. 30, 1566, with the bishopric of Bologna. A particular friend of St. Charles Borromeo and of Sextus V, he received more than thirty votes in the conclave assembled to appoint a successor to the latter. The bishopric of Salina was given to him March 20, 1591. He died at Rome July 3, 1597. He was a member of the Society of Jesus (Rome, 1549) — Archiepiscopale Romoniasis (ibid. 1594) — De nostri spiruinae
Palestine

Heb. Pērešeth, פֶּרֶשֶׁת, Joel iii, 4; "Palestina," Exod. xv. 14; Isa. xiv. 29, 31; in the Bible means Philistia, "the land of the Philistines," and after Israel. The name is of uncertain origin. It is of Hebrew word is found, besides the above, only in Ps. 1, x, 8; lxxvii, 3; lxxviii, 4; and civil, 9, in all which our translators have rendered it by "Philistia" or "Philistines.

The Sept. has in Exod. Φιλιστηρίον, but in Isa. and Joel Φιλίστιτος; the Vulg. in Exod. Philistim, in Isa. Philistrea, in Joel Philistin. (See below.)

In the present article it is used in a much wider sense. It is employed in the same sense in which most of the Greek and Roman geographers understood it (Παλατίνη, Παλαιστίνη) — as denoting the whole land allotted to the Israelites by the Lord after the conquest of Canaan. Some recent writers confine the name to the country west of the Jordan, extending from Dan on the north to Beer-sheba on the south. Others again appear to extend it northwards as far as the parallel of Hamath, and southward to the borders of Egypt. It is here used, however, to denote the country lying on the east as well as the west side of the Jordan: while, on the other hand, it is confined to the territory actually divided by lot among the Israelites, thus excluding large sections of what is generally known as the Land of Promise. Palestine, indeed, is here taken as synonymous with the Holy Land — substantially the same land given by Jehovah to his chosen people, and long held by them. The present article is intended to bring together a general view of the ancient, and especially the Scriptural, information on this subject, and to illustrate it by the mass of elucidation and confirmation which modern exploration has afforded.

I. Situation. — The geographical position of Palestine is peculiar. It is central, and yet almost completely isolated. It commands equal facilities of access to Europe, Asia, and Africa; while, in one point at least, it stands apart from all. The Jews regarded it as the centre of the earth; and apparently to this view the prophet Ezekiel refers when he says, "Thus saith the Lord God, This is Jerusalem: I have set it in the midst of the nations and countries that are round about her." (v. 26.) The idea was adopted and perhaps greatly expanded by the rabbins and some of the early Christian fathers. One of the absurd Christian traditions still preserved in Jerusalem is that the Church of the Holy Sepulchre is the physical centre of the earth; and a spot is marked by a circle of marble pavement and a short column under the dome of the Greek Church which is said to be the exact point as indicated by our Lord himself (Murray's Handbook, p. 164). The main thought, however, in this tradition is, in principle, strictly true. Palestine stood midway between the three continents of Europe, Asia, Egypt, and Greece. It was for many centuries the centre, and the only centre, of religious light and of real civilization, from which all other nations, directly or indirectly, drew their supplies. It is a remarkable fact, which every travel and every observer admits, that in "some still unpeopled regions of the-known world," during the whole period of Jewish history, light — intellectual, moral, and religious — radiated from Palestine, and from it alone. The farther one receded from that land, the more dim the light became; and the nearer one approached, it shone with the purer radiance. The heavenly knowledge, which emanated from the "seven stars" and divers manners through the Jewish patriarchs and prophets was unfolded and perfected by our Lord and his apostles. In their age Palestine became the birthplace of intellectual life and civil and religious liberty. From these have since been developed all the scientific triumphs, all the social progress, and all the moral grandeur and glory of the civilized world. There was a fulness of prophetic meaning in the words of Isaiah which is only now beginning to be rightly understood. "In the midst of Zion shall be the great throne," and with the law, and the word of the Lord from Jerusalem. And he shall judge among the nations, and shall rebuke many people; and they shall beat their swords into plowshares, and their spears into pruning-hooks" (ii, 3, 4).

Palestine is, by the peculiarity of its situation, almost isolated. Connected physically with the great body of the Asiatic continent, it is yet separated from the habitable parts of it by the arid desert of Arabia, which extends from the eastern border of Syria to the banks of the Euphrates, a distance of nearly three hundred miles. Another desert, not altogether so wide nor so difficult, sweeps along the southern confines of Palestine, as a barrier against all Egyptian invaders, and in a great measure prevented communication with that nation. The Mediterranean completely shut out the western countries of the three great seas of the world. On the one side of its shores, the countries of Asia Minor and the west — was Palestine isolated. Its only direct link of connection with the outer world was Syria on the north; and even there the lofty chains of Lebanon and Hermon confined the channel of communication to one narrow pass, the valley of Cœle-Syria. These," says Stanley, "were the natural fortifications of that vineyard which was 'hedged round about' with tower and trench, sea and desert, against the 'boars of the wood' and 'the beasts of the field'" (Sin. and Pal., p. 114).

It was not without a wise purpose that the Almighty located his chosen people in such a land. During a long course of ages they were designed to be the sole preservers of a true faith, and the sole guardians of a divine revelation. It was needed, therefore, to separate them geographically from the evil example and taleful influence of the heathen nations; and by the munities of nature to defend them, and that precious record of God's will committed to their custody, from all assaults, physical as well as moral. It has been well said by a recent thoughtful writer, that "the more we learn of its relative position in "Out of Zion surrounding countries, and of its own distinctive characteristics, the more clearly is the wisdom of heaven recognised in its special adaptation to the purposes for which it was chosen and consecrated" (Drew, Scripture Lands, p. 2). But when Judaism was at length developed into Christianity— when this 'sacred isle of the Gentiles' became the scene of the sufferings and death of the divine Saviour in Palestine from the region of dire prophecy into that of history — then the religion of God was finally severed from its connection, hitherto necessary, with a specific country and a chosen people — it became the religion of mankind. Then Palestine ceased to be God's country, and Israel to be God's people. The isolation of the land hitherto preserved the true faith; the exclusiveness of the people formed an effectual safeguard against the admission of the philosophical speculations and corruptions of other nations; but after the resurrection of Christ, and the establishment of the pure, national, spiritual faith revealed in the N. T., such material defences were no longer requisite. They would have been even prejudicial to the truth. Palestine was the cradle of the religion of God, to which reaching maturity, the cradle was no longer a fitting abode; the world then became its home and sphere of action. At that transition period the position of Palestine appeared as if specially designed to favor and consummate the divine plan, by the ready access it afforded for the message of truth to every kindred of men in every country. Before the establishment of Christianity, the sea had become the highway of nations. The Mediterranean,
hitherto a barrier, was now the easiest channel of communication; and from the shores of Palestine the Gospel of Jesus was wafted away to the populous shores and crowded cities of the great nations of the West. It is thus that a careful study of the geographical position, the physical aspect, and past history of Palestine is calculated to throw clear light on the development of the divine plan of salvation, and to afford some little insight into the councils of Jehovah. (See below.)

Climate has a great influence upon man. That climate which is best adapted to develop the physical
frame, to foster its powers, and to preserve them longest in healthy and manly vigor, is the most conducive to pure morality and intellectual growth. The heat of the tropics begat lassitude and luxurious effeminacy, while the cold of the arctic regions cramps the energies, and tends to check those lofty flights of poetic genius which give such a charm and sweetness to human life. Situated about midway between the equator and the polar circle, Palestine enjoys one of the finest climates in the world. Fresh sea-breezes temper the summer heat, and the abundance and beauty of trees clothed the land diffused an agreeable moisture through the bright sunny atmosphere; while the hills and mountains made active and constant exercise necessary, and thus gave strength and elasticity to the frame. Palestine has given to the world some of the most distinguished examples of high poetic genius, of profound wisdom, of self-denying patriotism, of undaunted courage, and of bodily strength. The geographical position and physical structure of the land had much to do with this. God in his infinite wisdom and love placed his elect people in the very best position for the development of all that was great and good. Well might the Lord say by the mouth of his prophet, “What could have been done more to my vineyard, that I have not done in it?” (Isa. v, 4). This position of Palestine, too, together with its great variety of surface, enabled it to produce a large variety of vegetable productions which so greatly contributed to endear it to its proverbially patriotic inhabitants.

II. The Boundaries of Palestine require to be defined with care and minuteness. Much confusion has arisen in Biblical geography from the way in which this subject has been treated, and from the diversity of views which prevails. No two writers agree on all points. The accounts of ancient geographers—Greeks, Romans, and Jews—are unsatisfactory, and sometimes contradictory; and when we come down to more modern times, we find much improved maps. Authors confound Palestine with “the Land of Promise,” as mentioned in Genesis and Exodus, and with the land defined by Moses in the book of Numbers (Rendel, Palest. p. 133 sq.; Cellarius, Geogr. ii, 464 sq.; Hales: Anal. of Chronology, i, 413; Kitto, Physical Hist. of Pal. p. xxxvii; Jahn, Biblical Antiquities; Encyclopedia Britannica. art. Palestine, 8th ed.). Others confine the name to the territory west of the Jordan, and reaching from Dan to Beersheba. Even dean Stanley, usually so accurate and so careful in his geographical details, does not make the distinction with sufficient clearness on this point (Sin. and Pal., p. 111, 114).

1. Boundaries of the Land promised to Abraham. The first promises made to Abraham were indefinite. A country was insured to him, but its limits were not stated. The Lord said to him at Shechem, “Unto thy seed will I give this land” (Gen. xii, 7); and again, on the heights of Bethel, after Lot had left him of Lift up now thine eyes, and look from the place where thou art, northward, and southward, and eastward, and westward; for all the land which thou seest, to thee will I give it, and to thy seed forever” (xiv, 13, 15). It was a large land, but this fact did not add one inch to the fourth of Palestine. At length, however, the boundaries were defined; in general terms, it is true, but still with sufficient clearness to indicate the vast extent of territory promised to Abraham's descendants: “In the same day the Lord made a covenant with Abraham, and gave unto Abraham the name of Isaac” (Gen. xv, 12). The line drawn from the Euphrates to the great river, the river Euphrates” (xv, 18). “The river of Egypt” was here probably the Nile. It should be observed that the Hebrew word is יְרֵא (river (Sept. ποταμός), and not יִרְאוֹ (watery or “torrent-bed,” as in Num. xxiii, 5 (Sept. ἐγχώριος), where Wady el-Atrash seems to be meant (see Kalilsh, Delitzsch, etc., ad loc.). From the banks of the Nile, then, to the Euphrates, the country promised to the patriarch extended. The covenant was renewed with the Israelites just after their departure from Egypt, and the boundaries of the land were given with more fulness: “I will set thy bounds from the Red Sea even to the sea of the Philistines (the Mediterranean)” (Judg. ii, 3, 20-23). But though the whole land was never occupied by the Israelites, there was a near approach to the possession of it, or the exercise of sovereignty over it, in the days of David, of whom it is recorded: “David smote also Hadasezer, the son of Rehob, king of Zobah, as he sent to recover his border at the river Euphrates” (2 Sam. viii, 3). That warlike monarch conquered the kingdoms of Hamath, Zobah, Damascus, Moab, Ammon, Amalek, Philistia, and Edom (ver. 5-14)—the whole country, in fact, from the border of Egypt to the river Euphrates. The Euphrates then descends to the Euphrates. This land was given in covenant promise to Abraham; but it was never included under the name Palestine.

2. The land described by Moses in Numb. xxxiv, 1-12 is much more limited than that which he promised to Abraham. He calls it “the Land of Canaan—the land that shall fall unto you for an inheritance” (ver. 2). Its boundaries are defined with great precision. On the south the border reached from Kadesh-barnna in the Arabah, on the confines of Edom, across the wilderness of wandering to the torrent of Egypt, doubtless that now known as Wady el-Arish. The word is here יְרֵא, torrent, and not יִרְאוֹ, river. This important distinction has been overlooked by Dr. Keith and others (Land of Israel, p. 85 sq.; Bochart, Opera, iii, 764; Shaw, Travels, ii, 45 sq.). The Great Sea was its western border. The northern is thus defined: “And this shall be your north border: from the great sea ye shall point out for you Mount Hor; from Mount Hor ye shall point out your border unto the entrance of Hamath; and the going forth of the border shall be to Zedad: and the border shall go on to Ziphon, and the going out of it shall be at Hazar-enan” (ver. 7-9). The interpretation of this passage has given rise to much discussion. Dr. Keith argues with considerable force and learning that Mount Hor, or, as it is in the Hebrew, הר חָ-הָר (זִיְרֹד), is Mount Casius, and that the chasm of the Orontes at Antioch is “the entrance of Hamath” (see Keith’s Land of Israel, p. 92-105). Dr. Kitto, on the other hand, following Rendel (Palest. p. 118 sq.), Bochart (Uebers. i, 307), and Cellarius (Geogr. ii, 464 sq.), locates this northern border-line near the parallel of Sidon, making some peak of southern Lebanon Mount Hor, and the lower extremity of the valley of Cæle-Syria the “entrance of Hamath.” See Hor, Mount. According to Dr. Porter, however, the “entrance of Euphrates” is the entrance from the Great Sea, the Red Sea, from the river of Egypt unto the great river, the river Euphrates” (xv, 18). “The river of Egypt” was here probably the Nile. It should be observed that the Hebrew word is יְרֵא (river (Sept. ποταμός), and not יִרְאוֹ (watery or “torrent-bed,” as in Num. xxiii, 5 (Sept. ἐγχώριος), where Wady el-Atrash seems to be meant (see Kalilsh, Delitzsch, etc., ad loc.). From the banks of the Nile, then, to the Euphrates, the country...
because he regarded it as beyond the proper boundaries of the land of Israel, but because it had already been apportioned by him to the tribes of Reuben, Gad, and Manasseh (xxiii, 1-38; xxiii, 39-45).

The eastern border, in the possession of all this territory, though David extended his conquests beyond it, and Solomon for a time exacted tribute from its various tribes and nations. The southern seaboard, and a large section of the Shephelah, remained in the hands of the warlike Philistines. The Phoenicians held the coast-plain north of Carmel; and the chain of Lebanon, from Zidon northward, continued in possession of the Gilebites and other mountain tribes (Judg. iii, 1-3). It is worthy of note that the sacred writer, when reckoning up the regions still to be conquered, was guided not by the borders of the Abraham covenant, but by the line of descent of the patriarchs (Deut. ii, 13; xxxiv, 2). This was the more so, as the southern march of the separate tribes was not fixed until the reign of Joshua. The description of Moses (Josh. xiii, 1-9). The reason why this whole land was not given to the Israelites is plainly stated: the Lord kept some of the aboriginal inhabitants in it for the purpose of chastising the cruel sottishness and the thoughtlessness and rebellion of his people (Judg. iii, 4; see Masius and Keil, ad loc.). Such, then, is the land described by Moses; but the name Palestine was never given to so extensive a region.

3. The boundaries of the land allotted by Moses and Joshua. The ten tribes are given in the following passages—the entire length of the eastern border in Num. xxxiii and Josh. xiii, 8-32; on the west side in Josh. xv-xvi. The south border was identical with that described by Moses (comp. Num. xxxiv, 3-5; Josh. xv, 2-4). The west border was also the same; the possession of the Amorrites remaining in their own hands (Josh. xv, 11; xvi, 8-5; xvii, 9, 10; xix, 29). The north border had Zidon as its landmark on the coast. Thence it was drawn south-east across Lebanon, probably along the line of the ancient Phoenician road by Kulaat es-Sheikh to Ijouk and Dan (Josh. xix, 29); thence it passed over the head of the northern shoulder of Hermon, and across the plateau of Hauran to the northern end of the mountains of Bashan (Num. xxxiii, 39; Deut. iii, 8-14; Josh. xii, 4-6). The only landmark on the east border is Salcah (Josh. xiii, 5; xii, 11; Deut. iii, 10). From Salcah it appears to have run south-west across the northern mountains of Judah (Josh. xii, 1, 2). It here turned westward, and followed the course of that river to the Dead Sea, thus excluding the territory of Moab and Edom. See TRIBES.

The south-eastern border of the tribes was thus considerably smaller than that described by Moses; and it was very much less than that given in covenant promise to Abraham. Even all allotted was never completely conquered and occupied. The Philistines and Phoenicians still possessed the coast along the coast (Judg. i, 19, 31); some of the northern tribes held their mountain fastnesses (ver. 33), and the Geshurites and Maachathites continued in their rocky strongholds in Bashan (Josh. xiii, 13).

4. The land distributed in the prophetic vision of Ezekiel is considerably larger than the south-west, and north with that of Moses. Its eastern boundary is different. Its landmarks are Hazar-enan, Hauran, Damascus, Gilead, and "the land of Israel by Jordan" (xlvii, 17, 18). The last point is indefinite, but probably it means that section east of the Jordan, in Moab, which was assigned to Reuben, Gad, and Manasseh, including, in addition to that of Moses, the whole kingdom of Damascus, and the possessions of Reuben, Gad, and half Manasseh.

5. Present Limits.—The country to which the name Palestine is now usually given does not exactly correspond with any of the boundaries described above. Its boundaries have never been laid down with geographical precision, but they may be stated approximately as follows: On the south a line drawn from the lower end of the Dead Sea to Beersheba and Gaza; on the west, the Mediterranean; on the north, a line drawn from the mouth of the river Litany to Dan, and thence across the southern foot of Jebel es-Sheikh to the plain of Jezdn opposite the northern end of the Hauran mountains; on the east, a line running from the northern angle through Jerash to the Red Sea. The length of Palestine is thus 130 English miles. Its breadth on the south is 70 miles, and on the north about 40. Its superficial area may be estimated at 7100 square miles. Its southern extremity, the end of the Dead Sea, is in lat. N. 31° 25'; and its northern, at the mouth of the Litany, 30° 25'. Its most westerly point, at Gaza, is in long. E. 34° 30'; and its most easterly, at Jerash, 36°. See SYRIA.

The eastern shore of the Mediterranean runs in nearly a straight line from Egypt to Asia Minor, and of this line the seaboard of Palestine forms about one third towards, not at, its southern end; Gaza being 50 miles distant from Egypt, while the mouth of the Litany is 250 from Asia Minor. Palestine occupies the whole breadth of the habitable land between the Mediterranean and the Arabian desert. Its boundaries on three sides are therefore fixed by the land that may be said to be impassable—on the west the sea, and on the south and east the desert: not, however, a desert of sand, nor a desert altogether barren, but rather a bleak, dry region, with a thin, flinty soil, yielding some tolerable pasture in spring, but almost a waste in the hot, dry months of summer. Natural causes have prevented the extension of the Israelitish territory in these directions, and likewise prevented the close approach of any settled nation; but it left free scope for flocks and herds, and a noble field for the training of an active, hardy race of shepherds.

On the south-east, Palestine bordered on Edom; but the Dead Sea, the deep valley of the Arabah, and the rugged Wilderness of Judaea, formed natural barriers which prevented all close intercourse. Hostile armies found it difficult to pass them, and a few resolute men could guard the defiles. On the northern boundary lay the countries of Damascus and Phoenicia, and intercourse with these had a serious effect on the northern tribes. The distinction between Jew and Gentile soon became less sharply defined there than elsewhere. The former lost much of their exclusive character, and their faith lost proportionately in purity. Idolatry was easily established in the chief places of the northern kingdom, and the borrowed Baalism of Phoenicia became in time the popular deities of the land (1 Kings xviii). This fact of itself shows how wise was that providential arrangement which separated the people dwelling in an isolated land, and prevented, by the barriers of nature, any close intercourse with those irrational systems, and barbarous and often obscene rites, which, under the name of religion, prevailed among the nations of the world.

III. Names.—1. Palestine.—In the A. V. of the Bible, as seen above, this word occurs only in Job 4 (אָבָא תְנֵא), Sept. Γαλιλαία ἄλλοφως, Vulg. territio Palestinae: "What have ye to do with me, O Tyre, and Zidon, and all the coasts of Palestine?" Here the name is confined to Philistia. In three passages (Exod. xv, 14; Isa. xiv, 29, 31) we have the Latin form Palestina; but the meaning is the same, and hence Sept. and Vulg. in one case Palestinam, and in the others ألأولأ. The Hebrew word פלשת properly comes from the Ethiopic root פלשת, "to wander," or "emigrate," and hence פלשת will signify "the nation of emigrants"—the Philistines (q. v.) having emigrated from Africa (see Reland, Palest., p. 73 sq.). The people gave their name to the territory in which they settled on the south of Palestine. It is smaller than that in which they lived. In addition to the usual Greek equivalent Παλαιστίνη (Ant. i, 6; ii, 15, 3; vi, 1, 13; xiii, 5). But it would seem that even before his time the Greek name began to be employed in a more extended signification. Herodotus states that all the country from Phoenicia to Egypt is...
PALESTINE

called Palestine (vii, 29); and he calls the Jews "Syrians of Palestine" (iii, 9, 11). An inscription of Ira-
lah, king of Assyria (probably the Pul of Scripture), as
deciphered by Sir H. Rawlinson, names "Palastu on
the Western Sea," and distinguishes it from Tyre, Da-
mascus, Samaria, and Edom (Rawlinson, Herod, i, 467).
In the same restricted sense it was probably employed —
if at all — by the Jews of Alexandria, in whose records at
Karnak the name ' Palastu has been deciphered in close connection with that of the Shairu-
tana or Sharra, possibly the Sidonians or Syrians (Birch,
doubtfully, in Layard, Nineveh, ii, 467, note). The ex-
tension of the name doubtless arose from the fact that
wherever the Jewish exiles began to look to a common
intercourse with Phoenicia and south-western Asia, they found the
coast from Phoenicia to Egypt in possession of the Phi-
listines; and consequently they applied the name Pa-
estina loosely to the whole country reaching from the
sea to the desert. Josephus uses it in this sense in a
few instances (Ant. i, 6, 4; viii, 10, 3; Ap. i, 22); and
Philo says, "The country of the Sodomites was a district of the
land of Canaan, which the Syrians afterwards called Palestine" (De Abraham, xxvi; comp. Vita Mosis,
xxix). The rabbinists also gave the name Palestine to all
parts of Asia Minor ruled by Jews, and Dion
Cassius states that "anciently the whole country
lying between Phoenicia and Egypt was called Pales-
tine. It had also another adopted name, Judea" (Hist.
xxxvii). From this time onward Palestine was the
name given to that land (Deut. xvii, 20), and in all cases it was confined to the country west of the Jordan,
but in others it embraced the eastern provinces (see
Ranel, and authorities quoted by him, p. 39 sq.). By
early Christian writers the word was generally, though
not uniformly, employed in this sense. Thus Jerome, in one passage: "Terrae Judaeæ, quæ nunc appellant Palestina" (ad Exch. xxvii); but in another, "Philis-
tiæ qui nunc Palestini vocantur" (in Am, i, 6; comp.
Isa. xiv, 29), Chrysostom usually calls the Land of
Israel Palestine (Ranel, p. 40). All ancient writers,
therefore, did not use the name in the same sense—
some applying it to the whole country of the Jews,
some restricting it to Philistia (Theodoreet, ad Ps. lix,
Ranel, li. c.). Consequently, when the name Palestine
occurs in classic and early Christian writers, the student of
geography will require carefully to examine the con-
text, that he may ascertain whether it is applied to
Philistia alone, or to all the land of Israel.

It appears that when our Authorized Version was
made, the English name Palestine was considered to be
equivalent to Philistia. Thus Milton, with his usual
accuracy in such points, mentions Dagon as
"dreaded through the coast
Of Palestine, in Gath and Ashkelon,
And Accaron and Gaza's frontier bounds" (Par. Lost, i, 464;)
again as

"That twice-battened god of Palestine"
(Hymn on Nat. 199)

—where, if any proof be wanted that his meaning is re-
stricted to Philistia, it will be found in the fact that he
has previously connected other deities with the other
parts of the Holy Land. See also, still more decisively, Stu-
mar's account of the O.T., and only once in the N. (Heb. xi, 9) γῆν τινα
γενεσίαν, but some analogous expression is often used by the sacred writers; thus in Numb. xxii, 11,
"The land which I sware unto Abraham" (comp. Deut.
xxxiii, 1-4; Gen. i, 24; Ezek. xx, 42; Acts vii, 5). Such
apellations were used when the object of the writer was
to attract the people's attention to some general ha-
dronic covenant, either in its certainty or in its fulfil-
ment. It is now frequently employed by writers on
Palestine who give special attention to prophecy (for a
good account of it, see Ranel, p. 18 sq.).

3. The Land of Promise.—This name originated in
the divine promise to Abraham (Gen. xiii, 15). Its
extent and boundaries are given by Moses (xv, 18-21;
Exod. xxiii, 31), and have already been considered.
The exact phrase, "Land of Promise," is not found in
the O.T., and only once in the N. (Heb. xi, 9) γῆν τινα
γενεσίαν, but some analogous expression is often used by the sacred writers; thus in Numb. xxii, 11,
"The land which I sware unto Abraham" (comp. Deut.
xxxiii, 1-4; Gen. i, 24; Ezek. xx, 42; Acts vii, 5). Such
apellations were used when the object of the writer was
to attract the people's attention to some general ha-
dronic covenant, either in its certainty or in its fulfil-
ment. It is now frequently employed by writers on
Palestine who give special attention to prophecy (for a
good account of it, see Ranel, p. 18 sq.).

4. The Land of Jehovah.—This name is only found
in Hos. ix, 3; "They shall not dwell in Jehovah's land." All the countries of the earth are the Lord's; but it appears, as Ranel states (Palest. p. 16), that in
some peculiar way Palestine was especially God's land.
Thus an express command was given, "The land shall
not be sold forever; for the land is mine" (Lxx. xxv,
23); and the Psalmist says, "Lord, thou hast been fa-
forable unto thy land" (Isxxv, 1); and still more em-
phatic are the words of Isaiah: "The stretching out of
his wings shall fill the breadth of thy land, O Imman-
uel" (viii, 8; comp. Joel i, 6; iii, 2; Jer. xvi, 18).
The object of these and many similar expressions was to show that Jehovah claimed the sole disposal of
Palestine. He reserved it for special and holy pur-
purposes; and he intended in all coming time to dispose of
it, whether miraculously or providentially, for carry-
out out those purposes, either for his own people or for others. It was the only land in which the Lord
personally and visibly dwelt; first in the Shekinah
The Land of Israel (מִדְנֵי אֲרָם, נ.T. γῆ Ἰσραήλ).—By this name Palestine was distinguished from all the other countries of the earth. Of course this must not be confounded with the same appellation as applied to the northern kingdom only (2 Chron. xxx. 20; Ezek. xxvii, 17). It began to be used after the establishment of the monarchy. It occurs first in 1 Sam. xxiii, 19, and is occasionally used in the later books (2 Kings v, 2; vi, 28); but Ezekiel employs it more frequently than all the sacred writers together (though he commonly alters its form slightly, substituting ישבון for ישנה), the reason probably being that he compares Palestine with other countries more frequently than any other writer. Matthew, in relating the story of the infant Saviour's return from Egypt, uses the name: "He arose, and took the young child and his mother, and came into the land of Israel" (ii, 21). The name is found in the apocryphal books (Tobit i, 4; in Josephus, who also uses "land of the Hebrews" (Εβραια χώρα); and in some of the early Christian fathers (Reland, p. 9). The name is essentially Jewish; it was familiar to the rabbis, but, in a great measure, unknown to classic writers. It is only applied to the people by the country which was actually occupied by the Israelites, and so it is used by the rabbins, who divided the whole world into two parts, "The land of Israel," and "the land out of Israel" (Reland, p. 9). In 2 Esdr. xiv, 31, it is called "the land of Sion.

6. The Land (מִדְנֵי אֲרָם).—This name is given to Palestine, emphatically, by way of distinction, as way of distinction, as "the land of the Hebrews," and "the land of the Hebrews." Thus in Ruth (i, 1), "There was a famine in the land (מִדְנֵי אֲרָם);" and in Jer. xii, 11, "The whole land is made desolate" (יִשׁבֶּן פְּנֵיהוֹ); and also in Luke's Gospel, "When great famine was throughout the whole land" (v, 25); and in Matt. xxiv, 38, "Now from the sixth hour there was darkness over all the land unto the ninth hour." This also was a strictly Jewish name (Reland, p. 29 sq.). In Daniel it is called "the glorious land" (Dan. xiv, 41).

7. Judea.—The use of this name in the Bible and by classic writers requires to be carefully noted. At first, its Hebrew equivalent, יִשְׂרָאֵל, was confined to the possession of the tribe of Judah (2 Chron. ix, 11). After the captivity of the northern kingdom, the name "Israel" continued to be employed, but with the restriction; and hence, during the second captivity, יִשְׂרָאֵל, was applied to all Palestine and to all the Israelites. In the same sense it was employed in Josephus, in the N. T., and in classic writers; and it was even made to include the region east of the Jordan (Matt. xix, 1; Mark x, 1; Josephus, Ant. ix, 14, 1; xii, 4, 11). In the book of Judith it is applied to the portion between the plain of Esdraelon and Samaria (xix, 19), as it is in Luke xxiii, 5; though it is also used in the stricter sense of Judaea proper (John iv, 3; iv, 7; ii), that is, the southernmost of the three main divisions west of Jordan. In this narrower sense it is employed throughout 1 Mac; see especially ix, 50; x, 38, 38; xi, 34). It is sometimes (War, i, 1; i, 1; iii, 5, 55) difficult to ascertain whether Josephus is using it in its wider or narrower sense. In the narrower sense he certainly does often employ it (Ant. v, 1, 22; War, iii, 4, 5a). Nicolaus Damascus applied these terms to the whole country (Josephus, Ant. i, 7, 2). See JUDEA.

The Roman division of the country hardly coincided with the Biblical one, and it does not appear that the Romans had any distinct name for that which we understand by Palestine. The kingdom of Syria, established by Pompey, of which Scardus was the governor (questor proprietor) in B.C. 62, seems to have embraced the whole seaboard from the Day of Issus (Iskanderun) to Egypt, as far back as it was habitable that is to say, to the desert, which forms the background to the whole district. "Judea" in their phrase appears to have signified so much of this country as intervened between Idumea on the south and the territories of the numerous free cities on the north and west which were constituted with the establishment of the province—such as Sebaste, Herodium, Anathoth, etc. (Josephus, Ant. of Geography, ii, 1077). The district east of the Jordan, lying between it and the desert—at least so much of it as was not covered by the lands of Pella, Gadicra, Canatha, Philadelphia, and other free towns—was called PERES.

8. The Holy Land (גণձת אֲרָם, נ.T. γῆ Ἰσραήλ; γῆ γάντας; Terra Sanceta). Next to Palestine, this is now the most familiar name of the country. Zechariah is the first who mentions it, "The Lord shall inherit Judah, his portion of the Holy Land" (ii, 12). The rabbins constantly use it, and they have detailed, with great minuteness, the constitutions of its sanctity. They did not regard it as equally holy. Judaea ranked first; after it the northern kingdom; and last of all the territory beyond Jordan (Reland, p. 26 sq.). The very dust and stones and air of the land are still considered holy by the poor Jews (Reland, p. 25). The name Tu-net( i.e. Holy Land), which is found in the inscriptions of Ramesses II in the land that was called by Moses on the east of the Jordan for its holy soil, was applied to Palestine (ut sup. p. 17). But this is contested by M. de Rougé (Revue Archeologique, Sept. 1861, p. 216). The Phoenicians appear to have applied the title Holy Land to their own country, and possibly also to Palestine, at a very early date (Brusch, p. 17). If this can be substantiated, it opens a new view to the Biblical student, inasmuch as it would seem to imply that the country had a reputation for sanctity before its connection with the Hebrews. The early Christian writers call it Terras Sancta (Justin Martyr, Tryphon; Tertullian, De Resurrectione; compl. in Flodo., p. 38). During the Middle Ages, and especially in the time of the Crusades, this name became so common as almost to supersede all others. In the present day, it is adopted, along with Palestine, as a geographical term. It was originally, and is now, applied only to the land allotted to the twelve tribes; and some Christian writers appear to confine it to the section west of the Jordan. More usually, however, it is employed in the same sense as Palestine (Reland, p. 21-28). In the long list of Travels and Treatises given by Ritter (Erkundung, Jordan, p. 31-56), Robinson (Jb. ii, 534-558), and Bonar (Land of Promise), the Holy Land is applied indiscriminately far beyond any other appellation. Quaresimus, in his Ecclissiasticum Terrae Sanctae (i, 9, 10), after enumerating the various names above mentioned, concludes by adding seven reasons why the title has in the title of his own work, "though of later date than the rest, yet in excellency and dignity surpasses them all," closing with the words of pope Urban II addressed to the Council of Clermont: "Quam terram merito Sanctam diximus, in quo est etiam passus pedes quern non illustraverit et sanctificaverit vel corpus vel umbra Salvatoris, vel montes vel torrentes, vel sanctae dignitatis, vel tenues Apostolorum communeas, vel martyrum eubendentius sanga fuius.

9. The modern name of the country is es-Sam (Geog. Works of Sadik Isfahani, in Ibn Haukal's Oriental Geog. p. 7), corresponding to the ancient Aram, and to our Arabic. In former times, this name includes far beyond what we usually call Palestine. The Jews to this day call Palestine by the Chaldean name of Arco-Kedeshi, or Holy Land, though Jewish maps may be found with "Land of Canaan," etc., upon them.

IV. Historical Allusions.—Early References.—The earliest notice of Palestine in courses is a latent one, and is contained in these memorable words of Moses:

"In the Most High's portioning of the nations, In his dispersion of the sons of Adam,
He set the bounds of the peoples
According to the number of the sons of Israel.
For the portion of Jehovah is his people;
Jacob the lot of his inheritance" (Deut. xxxii, 8, 9).
Thus the divine eye rested on Canaan, and it was set
apart for Israel from the first; so that all other inter-
mediate possessors were illegitimate tenants of a land
assigned by its true owner to another. The ecclesi-
astic claim of the line of David, however, has a more
ambitious dream. They linked paradise and Palestine
together, and record that Adam, shortly after his expul-
sion, migrated westward (Cain eastward), and deposited
his bones, or at least his skull, in one of the hills on
which the city of Shechem was built "in the city from
which event the place was called Golgotha, the place
of a skull." Whatever the fact may be, the thought is
not conceived amiss—that the first Adam should dwell
in the same land as the second, and lay his body in the
same grave. Helenon is made to claim this honor by
some; but all these fabricants agree that Adam died
in Palestine; and they have determined that the Church
of the Holy Sepulchre is the centre of the earth—"ηὐαὐ-
λος γῆ, ὑμικύλιος τεραια; just as the Greeks decided re-
garding Delphi and Apollo's shrine—"Apollo, qui umb-
ibilicum tertium turram obtinet" (see Jerome, De Loc.
Hebr., § 18: "Apollo, qui umbilicum tertium terrae
obtinet," wherein is the reference to the fathers are
given). This legend as to Adam is not altogether of Christian origin.
The Jews have a tradition that he died in Palestine,
affirming that the four, from whom Kirjath-Arba took
its name, were the sons of a daughter of Pharez, that
Isaham, Isaac, Jacob—but four matrons—Eve, Sarah,
Rebekah, Leah. The better known and more probably
tradition of the Jews is that Melchizedek, king of Salem,
was Shem, son of Noah (Jerome, Comment. on Isa. xii. 2).
2. pagan Faiths.—To Joppa, now Jaffa, there is at-
tached the wild legend of Andromeda, the maiden ex-
plored by her father Cepheus to the sea-monster, and
rescued by Perseus. The story of the surf, the rock,
the chain, the broken links still visible, has been told not
only by Greek poets, but by Christian amanuensis or
travelers, from Jerome down to Felix Fabri (Pliny, Ovid,
Jerome, Fabri), and even Eugene. This Cepheus, according
to Pliny, was king of Palestine, though an Ethiopian;
according to Ovid, he was son of Phoenice, who gave
name to Phoenician Palestine; while according to Tac-
itus he was king of the Jews—"Ethiopian promen
(has the soul of the oligarch, but he is not med-
tocre sedes pepulit" (Tact. Hist. v, 2). Pagan memories
and myths crowd themselves much more numerously
into the rocks and nooks of the "Holy Land" than we
generally know; names, exploits, temples, haunts of
gods and goddesses are associated with very many lo-
calities along the beaten track of the Syrian Ar-
shone, from the Gulf of Issus down to the Egyptian sea-
board. Palestine was not a blank when Israel entered it.
It swarmed with gods; and Joshua's task was not
merely to assail hostile forts or armies, but to range
temples whose every stone was obscurity; whose every altar
blasphe mously. The "Land of Promise" (like the human
spirit) was the haunt of every unclean and hateful idol,
before it was the dwelling of the living God. First un-
clean; then clean; and now unclean again; this is the
history of the land. Herodotus speaks of a temple of
the celestial Venus at Ascalon, and notes it as the most
ancient of all her shrines (Herod. i, 105; see Rawlinson's
Herod. i, 247); Athenæus mentions the dowering of
Aetragis, or Derecho, the Syrian Venus, in a lake near
Ascalon, by Mopsus, a Lydian (Rawlinson's Herod. i, 364);
Lucian refers to this later as the place where the sacred
fishes were preserved. Homer of the sea-born goddesses.
At the other extremity of the land, or Lebanon, this
same Venus was worshipped with vile rites. Byblus, Adonis,
Heliopolis were associated with like deities and like
worship (see Kenrick, Phœnicia, p. 306, 312). To this
respect, we may turn to the names of "the Phœnician
the tarte and the Greek Europe; the fable of Dædalus (also
called Hephaestos or Vulcan), the father of the Pho-
nician Cabiri, and of Hercules, the tutelary god of Tyre
and disciplines of the Tyrian people, to whom Hiram, the
friend of Solomon, built a temple, if Menander, quoted
by Josephus, wrote the truth (Joseph. Ant. vili, 5, 3).
Along the sea-coast we find, in disorderly profusion, the
legends of the Wost, the rudiments of the gods of Greece;
while in the interior we find the legends of the Eost,
the worm-out of the gods of Babylon and Asia Minor.
Widespread over Palestine had these fables settled down,
like so many uncivil birds, to preoccupy each crag and
city, and preserve the evidence of free faith and holy
worship. It was as if the idols of Sinhar, in their mi-
migration to the Tyre, had been permitted to rest for a sea-
son in Judea before finally settling down on the hills
and in the groves of Greece.
Though Palestine was, in the divine purpose, destined
for Israel by God, yet Israel was not its first possessor.
Other nations, seven in number (if not more), meted it
out between them—children of Ham, not of Shem;
say Jerusalem itself owed its origin to them. "Thy fa-
ther was an Amorite, thy mother a Hittite" (Ezek. xvi, 3).
These Canaanites were allowed to occupy it for a
season, that they might prepare it for its proper owners.
Wells were dug, houses were built, towns were reared,
terraces were thrown, vineyards were planted, oil-yards
were planted, the whole land was brought under cultivation,
so that when Israel came he found all things made
ready for his occupancy (Deut. vi. 11; Porter, Fire
Trees in Damascus; Giant Cities of Bashan). The
important fact is that the Palestinian history is the
same as the Phœnician, and it explains how a people, amounting to between two
and three millions, all at once sat down in comfort and
plenty in a new territory. They entered the desert
with the spoil of Egypt on their hands; they took pos-
session of Canaan with the riches and abundance of
seven nations at their disposal.
3. Classical References.—The Egyptian hieroglyphics
contain references to the nations of Canaan. The splen-
dor of Karkar under Thothmes is indebted as much to
the Phœnician Arav as to the southern Cush (Os-
burn, Egypt ii, 294). The paintings of Abu-Simbel tell us
how Memnones
"Makes to tremble the rebells of the Jebusites;"2
and how Sesostris "fought with the Hittites in the plains of the north"—how
he swept over Phœnicia—
"He prevails over you;
Ye cutters of Tyre,
Ye trappers and traders of Zidon,
He casts you down,
He hews you in pieces."
Hadasah (Kadesh Barnea), in the land of the Amorite,
is seen on a wooded hill, attacked by enemies. The
Phœnicians of both the Tyre and Sidon are described in
publishing a Jebusitish aggression against Phenoe, which Mr. Osburn
understands to be not the Idumæan Phenoe, but Wady
Maghrab, the mining district in the Sinaïtic desert
(Osburn, Egypt ii, 473). The hieroglyphical name for
Canaan is Nahkrune (Hdt. p. 254). But this is not the place
for enumerating these Egyptian references to Pal-
estine and its cities; nor for investigating the no less
important and interesting notices of them in the As-
syrian relics. Perhaps the time has not yet come for a
work on this subject, insomuch as new information is
finding its way to us every year; but the reader would
do well to study the works of Layard, Rawlinson, Botta,
Bonomi, and Smith.
Homer (who probably wrote in Solomon's reign)
makes no mention of the Jews or of Palestine, though
he very frequently names Phenoe and Sidon. That
Phœnicia, so often mentioned in the Odyssey, was Judea, its
king Solomon, and the twelve princes of its court
the heads of the twelve tribes, has been maintained,
but Homer must have been nodding grievously if he had
permitted himself that Corfu was at all like Palestine.
Herodotus, in his myth of Histiaeus (p. 400, 2), speaks of the "Lyrians in Palestine" in connection with the practice
That on the north is picturesque, and in some places grand. The outlines are varied; lofty peaks spring up at intervals, and are separated by winding wooded glens. On the south the general aspect of the ridge is dull and uniform, presenting the appearance of a huge gray wall, as seen from the coast. But in travelling down the road which runs along the broad back of the ridge, and near the coast, and Hebron, the succession of rounded hill-tops, thrown confusedly together, each bare and rocky as its neighbor. South of Hebron these sink into low swelling hills, similar in form, but smaller; and these again gradually melt into the plains of the Mediterranean.

But by far the most remarkable feature of Palestine is the Jordan valley, which runs through the land from north to south, straight as an arrow. There is nothing like it in the world. It is a rent or chasm in the earth's crust, being everywhere below the level of the ocean. This deep valley produces a marked effect on the ridges which border it. Their sides towards the valley are far more abrupt than elsewhere in Palestine: the ravines that descend from them are deeper and wilder; and towards the south, along the shores of the Dead Sea, there is a look of rugged grandeur and desolation such as is seldom seen elsewhere. It is aboutbreadth, about ten miles from brow to brow, expanding slightly at Tiberias and the Dead Sea, as if greater depth had made some enlargement of the lateral boundaries necessary. This valley forms a very striking feature on every map of Palestine, and it becomes the more striking the more accurately the physical geography of the land is delineated.

The remaining part of Palestine east of the Jordan forms a tract of table-land, to which the central valley gives some remarkable features. Every traveller in Palestine is familiar with the mountain-range—steep, straight, and of nearly uniform elevation—which, from every point in Judaea, Samaria, and Galilee, bounds the view eastward. This, in reality, is not a mountain-range; it is the side or bank of the eastern plateau, having itself an elevation of from 2000 to 3000 feet to which the depression of the Jordan adds another thousand. At only a few places, on the extreme north, and near the centre, do the tops of this ridge rise above the general level of the plateau. The ravines that descend from it are of great depth. At the north-east angle of the plateau, one ridge, that of Alarmon, dividing the fertile table-land of Bashan from the arid wastes of Arabia, is such an example of the great features of Palestine; it prepares the way for a detailed examination of the several divisions, and also for a more satisfactory review of the political structure of Palestine. In fact, a careful study of the physical geography of Palestine—its plains, mountains, valleys, and great natural divisions—affords the best key to its history. The great river, the Jordan, the region of Hebron, the Jordan valley with the coast. This fact is well known, and is well seen in the fertile table-land of Bashan from the arid wastes of Arabia. This is such an example of the great physical features of Palestine; it prepares the way for a detailed examination of the several divisions, and also for a more satisfactory review of the political structure of Palestine. In fact, a careful study of the physical geography of Palestine—its plains, mountains, valleys, and great natural divisions—affords the best key to its history. The great river, the Jordan, the region of Hebron, the Jordan valley with the coast. This fact is well known, and is well seen in the fertile table-land of Bashan from the arid wastes of Arabia.
PALESTINE

"Scala Tyrrhenum," "Ladder of Tyre"—rise to a height of from 200 to 300 feet, and drop into the deep sea, splendid cliffs of naked rock. Though the plains are here broken, and is now dreary and desolate, its soil, between the rocks, is deep and of wonderful fertility. It is abundantly watered also by copious fountains, and by streams from Lebanon. At the widest and best part of it, on a long promontory and an adjoining island, stood Tyre, a double city.

South of the Ladder of Tyre the features of the plain and the coast undergo a total change. This promontory, in fact, is the real commencement of the maritime plain, and the natural boundary of Palestine and Phoenicia. The banks and bars of the sea now disappear; the shore is low and sandy; the plain flat, rich, and loamy, and only a few feet above the sea-level. It spreads out in far reaches of cornfields and pasture-lands several miles inland, the mountains making a bold sweep to the east. On a low bank, projecting into the Mediterranean from the centre of this plain, stands Acra, the modern as well as the mediæval stronghold of Palestine. Across the plain, a few miles southward, flows the river Belus; and on its banks may still be seen that vitreous sand from which glass is said to have been first made (Strabo, xvi. 612). Still farther down the Kishon, a sluggish stream with soft, sedgy banks, falls into the plains of Esdraelon. There is more water and more moisture in this part of the plain than in any other part of Palestine; it is consequently among the most fertile sections of the country.

The course of the Kishon breaks what might be called the natural conformation of Palestine. It intersects the central mountain-range; and a branch or arm of the range, as if displaced by the river, shoots out in a north-westly direction, and, projecting into the Mediterranean, forms a new land—now only a promontory feature along the shore of Palestine. This is Carmel (q.v.). Its elevation is about 1800 feet; its sides are steep and rugged, deeply furrowed by ravines, and partially clothed with forests of dwarf oaks. There is little cultivation on the ridge; but its pastures are rich, and its flowers in early spring are bright and beautiful. The promontory of Carmel is bluff, but, as it does not dip into the sea, room is left for a good road round its base.

Immediately south of Carmel the plain again opens up, and continues without interruption to Gaza. Narrow, and yet flat and healthy, a sandy desert, running parallel to the coast, it gradually expands into the undulating pasture-lands of Sharon. The plain is not so flat here as at Acra, nor is it so well watered, though there are still streams and large fountains, with fringes of reeds and broad belts of green meadows. Here the course of the Kishon has treeless stretches of pasture, and the remains of ancient forests; but most of the plain is bare and parched. There is scarcely any cultivation. Farther south the surface becomes flatter, the average elevation less, and vegetation more scanty, owing to the lighter soil and lack of moisture. Around Joppa, Lydda, and Ramleh are pleasant orchards and large olive-groves, surrounded by wastes or drift sand. Here Sharon unites with Philistia, which, after an interval of naked downs, extends in widespread cornfields and vast expanses of rich, loamy soil southward almost to the valley of Gezer. This is the Shephelah—the "low country" of the Bible: the home of the Philistines, over which they drove their iron war-chariots, and on which they bade defiance to the light mountain-troops of Is rael. See PHILISTIA.

The maritime plain south of Carmel has some general features worthy of note. Along the whole seaboard runs a broad belt of drift sand, generally flat and sandy, but in places raised up into mounds varying from fifty to two hundred feet in height. The mounds and drifts are mostly bare and of a reddish gray color: though here and there they abound with shrubs and other lowly vegetation. The sand is most destructive, and nothing can stay its progress. It has encircled the ruins of Caesarea with a barren desert; it is slowly advancing on the orchards of Joppa, threatening them with destruction; it has drifted far inland to Ramleh, and is almost entirely covered up the city of Askelon, and is now invading the fields, vineyards, and olive-groves of Meijdal, Hamameb, and other neighboring villages. From Askelon southward the hills are higher than elsewhere; the sea itself is not less than three miles wide. The aspect of these bare hills and long reaches of naked drift is that of utter, terrible desolation.

Another feature of the plain is the depth of its wadys or torrent-beds. At the northern end of Sharon their beds are all actively low and sedgy, bordered by tracts of meadow, which, owing to their depression and the accumulation of sand along the coast, are overflowed during the rainy season, and thus converted into pools and morasses, some of which do not entirely dry up during the summer. In Philistia the wadys are deeply cut in the leamy or sandy soil; their banks are dry, bare; their beds too are dry, covered with dust, white pebbles, and flints.

The whole plain is bare and bleak. There are no trees, no bushes, and no fences of any kind, with the exception of a few small remnants of forests in the northern part of Sharon, and the orchards and olive-groves around a few of the principal villages, and the hedges of cactus that encircle them. One can ride on for days without let or hinderance. In summer all vegetation disappears. The plain stretches out, mile after mile, in easy undulations, like great waves, everywhere of a brownish gray color, appearing as if scathed by lightning. In early spring, however, it is totally different. It does not look like the same country. It is covered with green grass, and, where cultivated, with luxuriant crops of green corn; it is all spangled with flowers of the brightest colors, and in Sharon with forests of gigantic thistles. The coloring then far surpasses anything ever seen in Europe; but still the absence of houses, fields, and fences gives a dreary look. The villages are few, mostly very small and very poor, and at long intervals. In Sharon, and in the southern section of Philistia, there are stretches of twenty miles and more without a village. The plain is everywhere dotted, however, with low rounded tella—a few of them, as Tell es-Salih, Arak el-Men nap, and others, are entirely deserted and more—and these are covered with white bricks, inter mixed with hewn stones and fragments of columns, the remains of primeval cities. The plain has no good quarries; the rock along the coast, and over a great part of the plain, is a soft friable sandstone, not fit for miles after mile, in easy undulations, like great waves, everywhere of a brownish gray color, appearing as if scathed by lightning. In early spring, however, it is totally different. It does not look like the same country. It is covered with green grass, and, where cultivated, with luxuriant crops of green corn; it is all spangled with flowers of the brightest colors, and in Sharon with forests of gigantic thistles. PALEISTINE

close not to be full of danger; and though the catastro-
phoic was postponed for many centuries, yet, when it ac-
tually came on, it passed through this plain.

The breadth of this noble plain varies considerably.
At Cesarea on the north it is not more than eight
miles wide; at Joppa it is about twelve; while at Gaza,
the south, it is nearly twenty. Its elevation above
the level of the sea has not been ascertained by mea-
surement, but from its general appearance it does not
seem to have an average of more than 100 feet.

It is probable that the Jews never permanently occu-
pied more than a small portion of this rich and favored
region. Its principal towns were, it is true, allotted to
the Philistines, (Josh. xv, 46–50; Judges xi, 16; xxvii,
xii, 11, Dor, etc.); but this was in anticipation of the
intended conquest (xiii, 3–6). The five cities of the
Philistines remained in their possession (1 Sam. v, xxx,
10; xxvi); and the district was regarded as one inde-
pendent of and apart from Israel (xxvii, 2; 1 Kings ii,
39; 2 Kings viii, 2, 3). In like manner Dor remained
in the hands of the Canaanites (Judg. i, 27), and Gezer
in the hands of the Philistines till taken from them
in Solomon's time by his father-in-law (1 Kings ix, 16).
We find that towards the end of the monarchy the
tribe of Benjamin was in possession of Lydd, Jizma,
Orette, and Machaneh. This district, stretching from
the plain of Esdraelon ( Judges 18:4; at
Chron. xxxvii, 18); but it was only by a gradual proc-
ess of extension from their native hills, in the rough
ground of which they were safe from the attack of
chivalry and chariots. Yet, though the Jews never had
this region, it had a dense and compact popula-
tion, and towns probably not inferior to any in Syria.
Both Gaza and Askelon had regular ports (moomeni),
and there is evidence to show that they were very im-
portant and very large long before the fall of the Jew-
ish monarchy (Kennicott, Philoméne, p. 27–29).
Ashdod, though on the open plain, resisted for twenty-nine years the
attack of the whole Egyptian force: a similar at-
tack to that which reduced Jerusalem without a blow (2
Chron. xxi.), and was sufficient on another occasion to
destroy it after a siege of a year and a half, even when
fortified by the works of a score of successive monarchs
(2 Kings xxv, 1–8).

In the Roman times this region was considered the
pride of the country (Joseph. War, i, 29, 9), and some of
the most important cities of the province stood in it—
Cesarea, Antipatris, Diospolis. The ancient one port of
the city was called "the city of the plain," and it occu-
pied a position central between the Shephelah and Sharon.
Roads led from these various cities to each other—to
Jerusalem, Neapolis, and Sebastia in the interior, and to
Ptolemais and Gaza on the north and south. The com-
domains of Damascus, and, beyond Damascus, of Persia
and India, passed this way to Egypt, Rome, and the infant
colonies of the west; and that traffic and the constant
movement of troops backwards and forwards
must have made this plain one of the busiest and most
populous regions of Syria at the time of Christ.
Now Cesarea is a wave-washed ruin; Antipatris has van-
nished both in name and substance; Diospolis has shak-
ken off the appellation which it bore in the days of its
prosperity, and is a mere village, remarkable only for
the ruin of its fine mediaval church, and for the palm-
grove which still, it is said, exists in view. Joppa alone main-
tains a dull life, surviving solely because it is the near-
est point at which the sea-going travellers from the
West can approach Jerusalem. For a few miles above
Jaffa cultivation is still carried on, but the fear of
the Bedawin who roam (as they always have roamed) over
parts of this country, deterring all passers-by from ex-
torting black-mail from the wretched peasants, has de-
solated a large district, and effectively prevents its being
used any longer as the route for travellers from south
to north; while in the portions which are free from
this scourge, the teeming soil itself is deemed too un-
proitiuous to till. This is the case with the towns of
Cesarea and Lebanon, and in part to the forests which
condense the moisture of the atmosphere, yielding heavy
fertilizing dew. Fountains are abundant and copious; and
the torrent-beds are rarely—many of them never—dry.
Another fact is deserving of notice. The whole region,
consists of a granite outcrop, of the most solid and the
most impervious. A vast portion of it appears utterly desolate.
The“highwayslie waste, the earth mourneth and languisheth.”Thebaldmountains ofJudaharefar moredecorated with olive groves, dates, figs, and grapes. In the valleys, where the soil is fertile, fruits, vegetables, and olives are grown. In the mountains, herds of sheep and goats graze, and the slopes are covered with pine and oak trees.

The plain of Esdraelon (q.v.), as stated above, intersects themountain-chain, and forms a connecting link between the maritime plain and the Jordan valley. In this respect it may be termed the gateway of Central Palestine; and history tells how fully, and often how fatally, hostile nations and marauding tribes availed themselves of it to enter and spoil the land. It joins the plain of Acre on the west at the base of Carmel; it is connected with Sharon by an easy pass at Megiddo; and on the east two broad arms stretch down from it in great concaves to the principal fords and passes of the Jordan. Its features and history have already been so fully given that it need not here be described.

The isolated ridges of Moreh (now called by natives Jebel ed-Dahy, by travellers Little Hermon) and Gilboa, which lie between the eastern arms of Esdraelon, present a marked contrast to Tabor and the mountains of Galilee. They show that the humid and fertile north is giving place to the parched and naked south. They are bare, wild, and treeless; and their declivities look in places as if they had been covered with flag-stones. They illustrate broken links lying between the chains of Galilee and Samaria.

While Esdraelon intersects the mountain-chain, a portion of the chain, appearing as if displaced, shoots out from the mountains of Samaria in a north-western direction; and, running to the Mediterranean, intersects the plain of Esdraelon at its head. This Carmel, which, though physically united to the southern, bears more resemblance, in its luxurious grass, green foliage, and bright flowers, to the northern ridge. Carmel and the northern end of the Samaria range present the appearance of a continuous transverse ridge, enclosing Esdraelon on the south.

Between Esdraelon and Bethel—the territory originally allotted to the sons of Joseph, forty miles in length—the mountain-ridge presents some peculiar and striking features. The summits are more rounded and more rocky than those in Galilee; and the sides, though in many places bare, are generally clothed with scraggy woods of dwarf oak, terebinth, and maple, or with shrubbery of thorn-bushes. The fertile upland plains are still found here, though smaller than those in Galilee; the largest is the plain of Mekhina, along the eastern bank of the Jordan, stretching about ten miles south. The plains of Samir, Kubbatym, and Detim are much smaller. The hill-sides around them grow steeper and wider towards the south. The valleys running into Sharon are long, winding, mostly tillable, though dry and stoney and of little avail if not watered. The eastern chasm of the Jordan, are deep and abrupt; but being abundantly watered by numerous fountains, and being planted with olive-groves and orchards, they have a rich and pictur-esque appearance (comp. Van de Velde, ii, 314). In fact, the eastern declivities of the mountains of Ephraim, wild and rugged though they are, contain some of the most beautiful scenery and some of the most luxuriant orchards in Central Palestine (ibid. p. 335). Dr. Robinson writes of Tellzah, the ancient Tirzah (Cant. vi, 4), a few miles north of Nablus, “The town is surrounded by immense groves of olive-trees, planted on all the hills around; mostly young and thrifty trees” (iii, 302; and of one of the great wadys east of it, “Nowhere in Palestine, not even at Nablus, had I seen such noble brooks of water” (ibid. p. 306); and again of the whole district, “This tract of the Pale se, from el-Kurwa in the Ghirr to the round-ed hills which separate it from the plain of Samir, is justly regarded as one of the most fertile and valuable regions of Palestine” (p. 304 sq.). The features of the mountains are different from those of Galilee. Here there is a large, fertile, well-watered, and well-wooded plain; the ground is softer; the valleys are narrower, and the banks steeper. While the rich upland plains produce abundant crops of grain, yet this is a region on the whole specially adapted for the cultivation of olives, figs, and dates. The mountain-ridge may be said to divide the main regions—east and west—of Central Palestine; and, in the same manner as the Jordan divides the inhabited regions of Judah and Benjamin—both the physical features and the scenery of the range undergo a great change. The change does not take place rapidly—it is gradual. Immediately south of Shiloh the change begins. The little upland plains, which, with their green grass and green corn and smooth surface, so much relieve the monotony of the mountain-tops, almost disappear in Benjamin, and in Judah they are unknown. Those which do exist in Benjamin, as the plains of Gideon and Rephaim, are small and rocky. The soil alike on plain, hill, and glen is poor and scanty; and the gray limestone of the hills laps up everywhere. It gives the landscape a barren and forbidding aspect. Natural wood disappears; and a few small bushes, brambles, or aromatic shrubs alone appear upon the hill-sides. The hill-summits now assume that singular form which prevents deliberately rested his right hand on the head of Joseph’s younger son, saying, “In thee shall Israel bless, saying, God make thee as Ephraim” (Gen. xlviii. 18-20; comp. Stanley, S. and P. p. 226).

Passing southward from Samaria into Judah—from the turns of the Jordan and the mountains of Ephraim and Benjamin and Judah—both the physical features and the scenery of the range undergo a great change. The change does not take place rapidly—it is gradual. Immediately south of Shiloh the change begins. The little upland plains, which, with their green grass and green corn and smooth surface, so much relieve the monotony of the mountain-tops, almost disappear in Benjamin, and in Judah they are unknown. Those which do exist in Benjamin, as the plains of Gideon and Rephaim, are small and rocky. The soil alike on plain, hill, and glen is poor and scanty; and the gray limestone of the hills laps up everywhere. It gives the landscape a barren and forbidding aspect. Natural wood disappears; and a few small bushes, brambles, or aromatic shrubs alone appear upon the hill-sides. The hill-summits now assume that singular form which prevents deliberately rested his right hand on the head of Joseph’s younger son, saying, “In thee shall Israel bless, saying, God make thee as Ephraim” (Gen. xlviii. 18-20; comp. Stanley, S. and P. p. 226).

In the neighborhood of Bethlehem, and in the neighborhood of Christian populations, as at Bethlehem—villagessarecreep along the mountain-side, and in the upper stories of the houses, which are covered with thin grass, and the aromatic shrubs which clothe more or less almost the whole of Syria and Arabia. But they also glow with what is peculiar to Palestine, a profusion of wild flowers, daisies, the dry and stoney plains of the star of Bethlehem are elevated by a blaze of scarlet flowers of all kinds, chiefly anemones, wild tulips, and poppies” (S. and P. p. 136 sq.).

Fountains are rare, and their supplies of water scanty and precarious among the mountains of Benjamin and Judah. Wells take their places, and here deep into the white soft limestone rock; covered cisterns, into which the rain-water is guided, are also very numerous, and large open tanks. The gles which descend westward are long and winding, with dry rocky beds, and banks breaking down to them in terraced declivities. The lower slopes near the plain of Philistia are neither so bare nor so rugged as those nearer the crest of the ridge. Dwarf trees and extensive shrubbery, and aromatic plants, partially cover them; while little groves of olives, and orchards of figs and pomegranates, appear around the villages. The scenery is here far wider, sometimes expanding, as Surra, es-Sumt (Eliah), and Beit Jibrin, into rich and beautiful cornfields. The eastern declivities of the ridge, so fertile and picturesque in Samaria, are here a wilderness—bare, white, and without water; with little wood to shade and cool a stream or fountain. Naked slopes of white gravel and white rock descend rapidly and irregularly from the
brow of the ridge, till at length they dip in the founding precipices of Quarantania, Feshkia, Engedi, and Masada, into the Jordan valley or the Dead Sea. Naked ravines, too, like huge fissures, with perpenicular walls of rock, often several hundred feet in height, farrow these slopes from top to bottom. The wild and savage grandeur of this region is unexampled. The wandering shepherd (1 Sam. xxviii. 28) and the prowling bandit (Luke x, 30) is it the only part of Palestine to which that name can be properly applied. See JUDAH.

In the centre of this rugged region, on the very crest of the mountain-ridge, girt about with the muniments of nature, stood Jerusalem and the other historic cities and strongholds of the kingdom of Judah—many of them taking their names from their lofty sites, as Gibbon and Ramah and Gibeah and Geba. In vigorous exercise of this fortification, such as defending and protecting their flocks over the bare ridges and through the wild glens of the wilderness, the hardy soldiers of David received their training; and they proved that in mountain warfare they were invincible. This is not a region for corn. The husbandman would obtain from it its seeds of corn and its labor. But the terraced hill-sides, the warm limestone strata, and the sunny skies render it the best field for the successful culture of the vine and the fig; while the arid shrubs of the wilderness, and the succulent herbage among the rocks and gullies, afforded suitable food for flocks of sheep and goats. The dying patriarch appears to have had his eye on this region when he blessed Judah in these words: "Binding his foal unto the vine, and his ass’s colt unto the choice vine; he washed his garments in wine, and his clothes in the blood of grapes: his eyes shall be red with wine, and his teeth white with milk" (Gen. xlix., 11, 12). Though this section of the range now seems barren and desolate, no district in Palestine bears traces of such dense population in former days. Every height is crowned with a ruin; the remains of towns and villages thickly dot the whole country. Its ruins, its terraced hills, and its arid torrentous glens are now the distinguishing features of Judæa. The southern declivities of the mountain-range have some marked and peculiar features, which probably gained a name from the word "Country." From Hebron, where the ridge begins to decline, to Beersheba, where it finally melts away into the desert of Thib, this section extends. Here are bare rounded white or light-gray hills, gradually becoming smaller and farther apart, divided by long irregular dry valleys, which slowly become wider and more desolate, until at length hill and dale merge into an open undulating plateau. The soil on these southern hills is thin and poor; but in some of the valleys it is rich, and during spring and early summer the pasture is luxuriant. It was one of the regions most frequented by the patriarchs. It was a dry parched land, as its Scripture name Nega would seem to imply. It contains no perennial streams. Its torrent-beds are as dry during a great part of the year as its hill-tops; it is only after heavy rains, here very rare even in winter, that they contain any water. Fountains, too, are few and far between; and hence the patriarchs, like the modern nomads who pasture their flocks on it, were forced to depend on wells and tanks for their supply of water. These are very numerous. Miss Martineau, in riding from the desert to Hebron, notes, "All the day we continually saw wells and tanks beside our path, and under every angle of the hills where they were likely to be kept filled." (Eastern Life, p. 483). Water was absolutely necessary for the wants of men and animals; hence the labor expended on wells, and the obstinacy with which rival tribes disputed their possession (Gen. xxxi, 25, 30; xxxvi, 15, etc.). Vineyards and olive-groves disappear a few miles south of Jerusalem; the larger oak-trees, which are seen here and there farther north, give place to bushes and low shrubs; cultivated fields, too, and all signs of settled habitation, give place to the enclosures for sheep and goats, and black tents and roving Arabs. All picturesque beauty, all natural richness of scenery, is gone. The green pastures and the bright flowers of early spring are the only redeeming features (Bunac, Land of Promise, p. 29, 46; Martineau, p. 481; Harkness, p. 130). Miss Martineau has delineated the features of the southern declivities with great fidelity:

"It is no part of the prospect was there any loneliness, or any features of greatness and sublimity. Every aspect of country which I could call to mind was the narrow section of the mountain district immediately on the south of Hebron. No lakes or rivers, or masses of foliage, or deep ravines, or any lofty towering heights, are within the range of sight to one in the centre of the territory. For a few miles back in spring-time a smilling aspect is thrown over the broad downs, when the ground is reddened with the scarlet of the wild shrub, and the yellow of the palm, and the green of the herb and the golden of the ripe tops of the oil-press and the marigold. But this flush of beauty soon passes, and the permanent aspect of the country is not wild in deed, but noble and desolate. The plain is flat, the country say, austere plain—a tame, unplesant aspect, not causing alarm and loathing which alone is in it. There is not any lingering reminiscence of anything lovely or awful or sublime. As for the soil, the thin and scanty verdure, barely covering the windswept slopes, is not the thinness everywhere beneath the desert surface, sufficiently explains its nature. Here and there patches of deeper earth and richer soil, with clumps of trees, vary these pastures of the wilderness: as again they are broken by wide stretches of white and brown hues, interspersed with bushes of considerable height and size" (Scripture Lands, p. 5-7).

It is obvious that in the ancient days of the nation, when Judah and Benjamin possessed the teeming population indicated in the Bible, the condition and aspect of the country must have been very different. Of this there are not wanting sure evidences. There is no country in which the ruined towns bear so large a proportion to those still existing. Hardy a hill-top of the many within sight that is not covered with vestiges of some fortress or city. That this numerous population knew how most effectually to cultivate their rocky territories is shown by the remains of their ancient terraces, which constantly meet the eye, the only mode of husbanding so scanty a coating of soil, and preventing its being washed by the torrents into the valleys. These frequent remains enable the traveller to form an idea of the appearance of the country when thus terraced. Still more remarkable is the fact that in many parts of Judæa until the repeated invasions and sieges caused their fall, and the wretched government of the Turks prevented their reinstatement, and all this vegetation must have reacted on the moisture of the climate, and, by preserving the water in many a ravine and natural reservoir where now it is rapidly dried by the fierce sun of the early summer, must have materially influenced the look and the resources of the country.

The following elevations are taken (with some corrections from later sources) from Van de Velde, who has collected them from the best authorities, and arranged them, with valuable notes, in his Memoir of Map. In order to connect the Palestine ridge with Lebanon, of which it is the natural continuation, and with the desert of Thib until it falls, the heights of a few points beyond the bounds of the present map may be given:

In Palestine.

Tōm Nīha, the culminating point of southern Lebanon. Extends fifteen miles north of the Litān to 5800 Kērā of the usual scale over the range forty fathoms south of the

Kēdēsh-Naphtali, twelve miles south of the Litān

(Kelesh in an upland plain surrounded by peaks)
between Olivet and Jericho, with which all travellers in the Holy Land are acquainted, is a type, and by no means an unfair type, of the eastern passes, from Zuweirah and Ain-Jidi on the south to Wady Bidan on the north. It is only when the junction between the plain of Esdraelon and the Jordan valley is reached that the slopes become gradual, and the ground fit for the caravans near Kefer-Saba to Nablus, the passages, from Zuweirah and Ain-Jidi to the south to Wady Bidan on the north. It is only when the junction between the plain of Esdraelon and the Jordan valley is reached that the slopes become gradual, and the ground fit for the caravans near Kefer-Saba to Nablus, the passages, from Zuweirah and Ain-Jidi to the south to Wady Bidan on the north. It is only when the junction between the plain of Esdraelon and the Jordan valley is reached that the slopes become gradual, and the ground fit for the caravans near Kefer-Saba to Nablus, the passages, from Zuweirah and Ain-Jidi to the south to Wady Bidan on the north.

The western valleys are more gradual in their slope. The level of the external plain on this side is higher, and therefore the fall less, while at the same time the distance to be traversed is much greater. Thus the passage by Beth-aven, already mentioned, is the most direct through the Wady al-Auej, which falls from the other side of Taiyibe to the westward, has a distance of barely ten miles to reach the Jordan valley, at the same time falling not less than 2800 feet. Here again the valleys are the only means of communication between the lowland and the highland. From Jaffa and the central part of the plain there are two of these roads, going up to Jerusalem, the one to the right by Ramada and the Wady Aley; the other to the left by Lydda, and thence by the Beth-horons, or the Wady Suleiman, and Gibeon.

The crossing of the Jordan at its eastern end is thus the most direct route for the caravans from the west to the Jordan valley. The passes at the eastern end of the Jordan valley are of greater height and ruggedness than those on the western side. The eastern passes, though more difficult than those on the western side, are of such a nature as to present great difficulties to the passage of any large force encumbered by baggage. In fact these mountain passes really formed the security of Israel, and if they had been strong enough to settle her own intestinal quarrels without reference to foreigners, the nation might, humanly speaking, have stood to the present hour. The height, the distance, and consequent strength, which was the frequent boast of the prophets and psalmists in regard to Jerusalem, was no less true of the mountains on this side than of those on the other, but much more so. This is the case during the whole length of the southern and middle portions of the country. The precipitous descent

and ridges several hundred feet higher than the town. Jebel Gerizim, the highest point in Western Pales-
Palestine

Pelusium and Carchemish, must have looked at the long wall of height, which closed the road level roadway they were pursuing, as belonging to a country with which they had no concern. It was to them a natural mountain fastness, the approach to which was beset with difficulties, while its bare and soilless hills were hardly worth the trouble of conquering, in comparison to the plains of Egypt and the Nile, or even with the boundless cornfield through which they were marching. This may fairly be inferred from various notices in Scripture and in contemporary history. The Egyptian kings, from Rameses II and Thothmes III to Pharaoh Necho, were in the constant expectation of raids and forays from across the desert, at the south edge of the Dead Sea, its length is 150 English miles. Its breadth at the northern end is about six; at the Sea of Galilee it is nine; and at Jericho, where it is widest, it is about thirteen. There are places between these points where it is much narrower. Immediately south of Lake Me- rom, the lake on the Syrian side is very abrupt in descending to the Dead Sea, which has an elevation of about 900 feet, and breaks down to the Jordan on the east in steep banks, and to the shores of the Sea of Galilee on the south in long terraced declivities. From the western side of the terrace the mountains rise steeply, so that the terrace itself may be considered as a higher section of the valley. Along the south-west shore of the Sea of Galilee a dark ridge shoots out eastward and descends to the banks of the Jordan in forming cliffs, narrowing the valley to a width of about four miles. The next point where the western ridge projects is at Kurn Surtabeh, east of Shiloh. This peak resembles the horn of a rhinoceros, and hence its name; from it a rocky ridge of white limestone runs across the valley almost to the banks of the river in its centre. The peak of Surtabeh is remarkable as one of the signal-stations of the ancient Israel, from which beacons were lighted to announce the appearance of the new moon (Talmud, Rosh Ha-Shana, ii; Ireland, p. 346; Robinson, Biblical Researches, iii, 285).

The western bank of the valley, though everywhere clearly and sharply defined, is irregular, like a deeply indented coast-line, occasioned by the broken character of the ridge behind, and the gllens and broad plains which run into it. The eastern bank is different. It is straight as a wall, except for a short distance in the centre, where the rugged hills and deep gllens of Gilead break its uniformity. On the whole it is more abrupt than the western; and its top appears almost horizontal. This regularity arises from the fact that it is not, strictly speaking, a mountain-chain, but rather the bank or supporting wall of a natural terrace.

The northern section of the Jordan valley is flat. Around the site of Dan extends a plain of great fertility, now in part cultivated by Damascus merchants, as it was in primeval days by the Sidonians (Judg. xviii, 7). The uncultivated parts are covered with rank grass, and thickets of oak, sycamore, arbutus, and olive. South of this is a large tract of marshy ground, extending to the shores of Merom—the home of wild swine, buffaloes, and innumerable water-fowl. The marsh and lake are fed not only by the Jordan, but by great numbers of fountains along the side of the plain, and streams from the surrounding mountains. The lake Merom (q.v.) occupies the lower part of this basin, and has a broad margin of fertile land along each side. Below the lake the regularity of the valley is interrupted by the projecting terrace already mentioned, and the river is pushed over close to the eastern bank, along which it runs in a deep, wild glee. At the mouth of the upper Jordan, on the northern shore of the Sea of Galilee, is a low rich plain, several miles in extent, famous for its early and luxuriant crops of melons and cucumbers. It is cultivated by some families of nomad Arabs. The lake here fills the valley from side to side, with the exception of the little (3) The Jordan Valley.—The physical geography of this natural division of Palestine has already been so fully described that it will only be necessary in this place to supplement a few points serving to connect it with the mountain-chain on the west and the plateau on the east, and thus to apportion to it its place in the general survey of the country. See JORDAN.

The Jordan valley is the most remarkable feature in the physical geography of Palestine. Its great depression makes it so. It is wholly, or almost wholly, beneath the level of the ocean. It runs in a straight line part of this basin, and has a broad margin of fertile land along each side. Below the lake the regularity of the valley is interrupted by the projecting terrace already mentioned, and the river is pushed over close to the eastern bank, along which it runs in a deep, wild glee. At the mouth of the upper Jordan, on the northern shore of the Sea of Galilee, is a low rich plain, several miles in extent, famous for its early and luxuriant crops of melons and cucumbers. It is cultivated by some families of nomad Arabs. The lake here fills the valley from side to side, with the exception of the little
fertile plain of Gennesaret (q. v.) on the western shore. The eastern shore keeps close to the base of the hills, which rise over it in steep, bare acclivities. See GALILEE, SEA OF.

Between the Sea of Galilee and the Dead Sea the valley is broken in two sections by the projecting ridge of Surtabeh. Below this it becomes so narrow that the slope of the valley has a gently undulating surface, a rich, loamy soil, abundantly watered by streams from both the eastern and western mountains, and by numerous fountains along their base. A few spots are cultivated by the scattered inhabitants of Ghawaréin, who take their name from the valley, here called el-Ghôr. The uncultivated portions are covered with tall rank grass and jungles of gigantic thistles. The Jordan winds down the centre in a tortuous channel along the bottom of a ravine, whose high chalky banks are deeply furrowed and worn into lines and groups of white conical mounds.

At Kurn Surtabeh there is a break in the valley, as from an upper to a lower terrace. A ridge or bank extends across it from west to east, and is broken up in the centre, where the river cuts through, into "labyrinth of ravines with barren chalky sides, forming cones and hills of various shapes, and presenting a most wild and desolate scene" (Robinson, iii, 293). South of this point, the mountain-chain on the west recedes, and the plain expands; its surface becomes flatter; fountains and streams are neither so frequent nor so copious; the heat and interior make the surface parched and bare. Along the sides of the mountains, especially at the openings of ravines, are here and there masses of verdure and foliage; but the vast body of the plain is bare. A large part, too, towards the Dead Sea, is covered with a white saline crust, which gives it the appearance of a desert. But the rank luxuriance of the vegetation around fountains, along the banks of streams, and wherever irrigation is employed, as at Jericho, shows the natural richness of the soil, and proves that industry alone is wanting to develop its vast resources. The whole of this lower valley is now almost desert. With the exception of the few inhabitants of er-Ritha (Jericho), and a few families of nomad Ghawaréin, no man dwells there; and a curse, moral as well as physical, appears to rest upon the region.

The river here winds as before through a glen down the centre of the valley. The banks of the glen are steep, white, bare, and worn into little hills; while the river-sides are fringed with the richest foliage. Owing to the depth of this glen, neither river nor foliage is seen from the plain until the very low in reach. The plain along the northern shore of the Dead Sea is low and flat, and in the centre, near the Jordan, slumpy. The sea fills up the whole breadth of the valley; the precipitous mountains upon the east and west rising from the shore-line—sometimes from the bosom of the water. The scenery of this region is more dreary than that in any other part of Palestine. The white plain on the north, the white naked cliffs on the east and west, the gray haze, caused by rapid evaporation, quivering under the burning sunbeams—all combine to form a picture of stern desolation such as the eye seldom beholds.

The western shore of the sea follows the base of the cliffs to the southern extremity, where the salt hills, called Khakhim Usdum, "the ridge of Sodom," project from the west far into the Ghôr. On the east, the shore-line keeps close to the mountains for about three-quarters of its length; then a long, low, sandy promontory, called el-Lisân, "the Tongue," juts out into the sea. South of this there is a broad strip of marshy plain, covered with jungles of reeds and dense shrubbery of plants. Here, as in the rest of the western mountains, the gold of the nomad tribes of fierce and restless Arabs pitch their tents and cultivate a few fields of wheat and millet. The whole southern shore of the sea is low and slumpy. See SEA, SALT.

In regard to its levels, the whole Jordan valley divides itself into five stages, as follows: 1. The basin of Merom, now called el-Hûlêh; 2. the basin of Tiberias; 3. the valley to Kurn Surtabeh; 4. the plain of Jericho; 5. The Dead Sea. The levels taken by different travellers are very unsatisfactory. The elevation of the fountain of the Jordan at Dan, and consequently of the northern extremity of the valley, is not as yet accurately determined. The following are given (with the exception of the last) by Van de Velde (Memoir, p. 181):

Buried as it is thus between such lofty ranges, and shielded from every breeze, the atmosphere of the Jordan valley is extremely hot and relaxing. Its heating influence is shown by the inhabitants of Jericho, who are a small, feebile, exhausted race, dependent for the cultivation of their lands on the hardy peasants of the highland villages (Robinson, i, 550), and to this day prone to the vices which are often developed by tropical climates, and which brought destruction on Sodom and Gomorrah. But the circumstances which are unfavorable to morals are most favorable to fertility. Whether there was any great amount of cultivation and habitation in this region in the times of the Israelites the Bible does not say; but in post-biblical times there is no doubt on this point. The palmeries of Jericho and of Abila (opposite Jericho on the other side of the river), and the extensive balsam and rose gardens of the former place, are spoken of by Josephus, who calls the whole district a "divine spot" (Gbôth ḫwâpûr, War, iv, 8). Bethshan was a proverb among the rabbins for its fertility. Succoth was the site of Jacob's first settlement, and the spot where Joseph and Moses were born. Jericho, according to ancient tradition, was an old temple city, and thence to it, as still it is, an eligible spot. In later times indigo and sugar appear to have been grown near Jericho and elsewhere; aqueducts are still partially standing, of Christian or Saracenic arches; and there are remains all over the plain between Jericho and the river of former residences or towns and of systems of irrigation (Ritter, Jordan, p. 508, 512). Phaselis, a few miles farther north, was built by Herod the Great; and there were other towns either in or closely bordering on the plain. At present this part is almost entirely desert, and the road is confounded with the upper branch of the Sakât and Beisân. There indeed it is conducted on a grand scale; and the traveller as he journeys along the road which leads over the foot of the western mountains overlooks an immense extent of the richest land, abundantly watered, and covered with corn and other grain. Here, too, as at Jericho, the cultivation is conducted principally by the inhabitants of the villages on the western mountains. All the irrigation necessary for the towns, or for the cultivation which formerly existed or still exists in the Ghôr, is obtained from the waters of the eastern branches of the western mountains. For all purposes to which a river is ordinarily applied the Jordan is useless. So rapid that its course is one continued cataract; so crooked that in the whole of its lower and main course it hardly half a mile straight; so
PALESTINE

566

PALESTINE

broken with rapids and other impediments that no boat can swim for more than the same distance con-

tinuously; so deep below the surface of the adjacent country that it is invisible, and can only with difficulty be approached; resolutely refusing all communication with the west and north as far as the pass, in a level; the peculiar condi-
tions of which render navigation impossible—with all these characteristics the Jordan, in any sense which we

attach to the word "river," is no river at all: alike useless for irrigation and navigation, it is in fact, what its Arabic name signifies, nothing but a "great water-

ing-cone." (Shebet el-Khor.)

How far the valley of the Jordan was employed by the ancient inhabitants of the Holy Land as a medium of communication between the northern and southern

parts of the country we can only conjecture. Though not the shortest route between Galilee and Judea, it

would yet, as far as the levels and form of the ground are concerned, be the most practicable for large bodies;

though these advantages would be seriously counter-

balanced by the sultry heat of its climate, as compared with the fresher air of the more difficult road over the

highlands. The ancient notices of this route are very

scarce: (1) From 2 Chron. xxviii, 15 we find that the captives taken from Judah by the army of the northern

kingdom were sent back from Samaria to Jerusalem by

way of Jericho. The route pursued was probably by

Nabiim, the passes of the Jordan, and Bashan to Fassil into the Jordan valley. Why this road was taken is a mystery, since it is not stated or implied that

the captives were accompanied by any heavy baggage which would make it difficult to travel over the central

route. It would seem, however, to have been the usual road from the north to Jerusalem (comp. Luke xix, 11

with xix, 1), as if there were some impediment to pass-

ing through the region immediately north of the city.

(2) Pompey brought his army and siege-train from

Damascus to Jerusalem (B.C. 40) past Scythopolis and

Pelusium on the southern ridge of the Hermon, where

eties walked at the foot of the Wady Ferrah to Jericho (Joseph. Ant. xiv. 3, 4; War, i, 6, 5). (3) Vespasian marched from Emmaus, on the edge of the plain of Sharon, not far east of Hamleth, near Napestos (Nabulus), down the

Wady Ferrah or Fassil to Korose, and thence to Jericho

(War, iv, 8, 1); the same route as that of the captives

Judeans in No. 1. (4) Antoninus Martyr (cir. A.D. 600),

and possibly Willibald (A.D. 722), followed this

route to Jerusalem. (5) Baldwin I is said to have

journeyed from Jericho to Tiberias with a caravan of

pillages. (6) In our own time, we have escaped through the

passes by the route traversed by De Berton, a traveler with Dr. Anderson, who accompanied Lynch's Expedition as
geologist, but apparently as if by few or any other travelers.

(4. The Plateau east of the Jordan.—Eastern Pal-
estine, or the region beyond the Jordan valley, is widely
different in its physical geography from Western. Its
average elevation is about 2500 feet above the sea. The
Jordan valley is a rent or chasm in the earth's
crust; the country beyond it is an elevated terrace. This
elevation affects the scenery, the climate, the produc-
tions, and the inhabitants themselves. Nowhere else of the Jordan valley is there such a contrast between the

Plateau east of the Jordan, as there is between

the Jordan valley and the country in which it is

situated. There is more vegetation, more richness, and

more beauty everywhere on the east. The pastures of

Galilea and Bashan are still as attractive as they were

when Reuben and Gad saw and coveted them (Num.
xxiii, 1). The surface of Western Palestine is rough and

ragged, varied by plain and mountain ridge; the

east is nearly all a table-land, consisting of smooth

downs, watered by the accurate tracts made by the

rivers as the Misbar (Deut. iii. 10; Josh. xiii, 9, 16, etc.;
comp. Stanley, p. 479). It does not appear so from

the west, from whence the eye sees only a ridge, like a

huge wall, running along the horizon; for this pecul-

iarity is visible from every point on the east, and is very

striking when seen from some commanding spot, as

the top of Hermon, or the crest of Jebel Haurân. In

Western Palestine, again, the ancient cities are almost

obliterated, and the very foundations of the temples and

monuments can scarcely be discerned; in the east, the

magnificence of the existing ruins, and the perfect

preservation of some of the very oldest cities, are

subjects of continual surprise and admiration to the travel-

ler. Some have represented Eastern Palestine as main-

ly a poor country, with the three rivers, the Jordan,

the Gennesaret, and the Jordan, receiving all the semi-nomad state, dwelling in tents, and placing their

flocks in rude folds like the border tribes of Bedawin.

The country itself gives the best refutation to this the-

ory. It is everywhere thickly studded with old cities,
towns, and villages—many of them still bearing their

Scripture names. In no part of Western Palestine is there

evidences of such a dense population as throughout

Bashan and Gilead. The country was indeed rich

in pastures; but it was also rich in cornfields. The

northern section of it is to this day the granary of

Damascus.

The northern border of Palestine intersects that part of the ridge of Hermon now called Jebel el-Heish, pass-

ing Bâniâs, and the little lake Phiala (now Birket er-

Râm), which ancient geographers regarded as the head

source of the Jordan (Joseph. War, iii, 10, 7). This

ridge, the Heisch, extends from the sources of the Jordan to the mountains of Upper Galilea. It is broad, and is

interspersed with green upland plains and wide fertile

valleys. Its peaks and sides are mostly covered, more

or less densely, with forests of oak, sycamore, terebinth,

and here and there clumps of pine-trees. The timber is

larger and the woods denser than in any part of Western

Palestine (Porter's Damascus, i, 307). The forests,

however, are gradually disappearing under the destroying hand of the Bedawin and the Damascus

charcoal manufacturers. At the place where the bor-

der-line of Bashan and Gilead (Jebel el-Heish) rises to

the mountains of Upper Galilea, it passes up to a

precipitous altitude with that on the opposite side of the Hûleh; but it slowly decreases, and finally sinks into the table-

land a few miles south of the ruins of Kuneiterah. The

scenery of the southern end is beautiful. Lines and

groups of conical hills, perfect in form, covered from

base to summit with green grass and sprinkled with
green oaks, are divided by meadow-like plains and

winding vales, with here and there the gray ruins of a

town or village. The grass in spring is most luxuriant;

and the wild flowers—anemones, tulips, poppies, mari-
golds, cowslips—are more abundant than ever. The

leucanthemum, some white flowers, are much showy. The

superiority of the pastures and the abundance of flowers

owing to the forests, to the high elevation, and to the

influence of the neighboring snow-crowned peaks of

Hermon. At all seasons dew is abundant; one of the

highest summits is called Abu-Neddy, "the father of
dew," and clouds may often be seen hovering over the

ridge when the heaven elsewhere is as brass. This

illustrates the Psalmist's beautiful imagery: "As the
dew of Hermon, that descended on the mountains of Zion" (cxxxiii, 3). The ridge is now almost desolate. With

the exception of two or three small villages, and a few

families of nomads, it has no inhabitants. Its rich

soil is tillanted, and even its pastures are forsaken or

neglected.

At the eastern base of the ridge commences the noble

plateau of Bashan, at once the remotest and the largest

plain in Palestine. It extends unbroken southward to

the banks of the Yarmuk (thirty miles), and eastward to

Jebel Haurân (fifty miles). The western part of it

is called Janûd ( Governed), the eastern Hau-

rân. The former has a gently undulating surface; is

studded with conical and cup-shaped tell; is abundant-

ly watered, especially in the northern part, by streams

and fountains; and is famed throughout all Syria for

the excellence of its pastures. The surface is in places
stony, and covered with shrubberies of Hawthorn, ilex, and other bushes; elsewhere it is smooth as a meadow. Towards the west the plateau is intersected by deep ravines or gullies, which carry its surplus waters down to the Jordan. The high ridge which runs along the eastern side of the Jordan valley from Hermon to Gilead is the supporting wall of this plateau. Jaulin has now very few settled inhabitants; but it is visited periodically by the vast tribes of the Amazeh from the Arabian desert. Here is formed the great labyrinth, as at Edrei and Damah. In a few places long subterranean canals have been sunk, in others aqueducts have been made. There is an aqueduct at Shihba, in the mountains, upwards of five miles long; and there is one in the plain at Dera not less than twenty. Irrigation is not practiced in Bashan—it is too high to support it. The climate of Bashan is different from the scanty gravely covering of the hills of Judah; the great elevation, too, prevents the intense heat and evaporation which so seriously affect the low plains of Palestine. In another respect Bashan presents a very marked contrast to the west. Its old cities still stand. Their walls, gates, and primalve houses are in many places nearly perfect. The temples and monuments of the Greek and Roman period, and the churches and tombs of the early Christian age, are also in a good state of preservation. There are no remains of antiquity west of the Jordan (excepting in Ebal) which would make it more like the Bithynia of the ancients, or as it is called in the Bible, the Bashan of Bozrah, Salcah, Kenath, Shusha, or Edrei; and probably in no other country of the world are there specimens of the domestic architecture of the Roman or late Roman age. The province of Bashan is, therefore, a sort of the last refuge of desertion. This is mainly owing to the indentable courage of the Druses who inhabit it. They have taught rapacious Bedawin and rapacious Turks alike to respect them and the fruits of their industry. Gathered together in a few of the ancient cities and villages on the western slopes of the mountains, and along the southern border of the Lejah, they are able to bid defiance to all their enemies. A number of Christians and Mohammedans are settled among and around them. They cultivate large sections of the plain, and find a ready market for their grain in Damascus. See Bashan.

The slopes are easy, their tops rounded, and there are undulating plateaus along the broad summit of the ridge. Their surfaces are generally elevated from five to six hundred feet above the plain. On passing in among them the physical features assume new forms, and the scenery becomes very beautiful. Wild grasses and low-growing vegetation cover the whole, and in the more elevated parts, a kind of wild heather. The little meadows along the streams, the open spaces on the mountains, and the undulating forest glades, are all covered with rich herbage. Gilead is still "a place for cattle" (Numb. xxxii. 1). The highest peak of Gilead is Jebel Osha, near es-Salt. South of it the ridge sinks, and finally this slope into

PALESTINE
the plateau near the ruins of Gilead-Ammon. None of the peaks of Gilead have been measured, and their height can only be estimated by comparison with the plateau of Hebron. Viewed from the west, the top of the whole ridge on the east side of the Jordan appears nearly horizontal; yet both to the north and south of Gilead the summit of the ridge is on the level of the plateau. Jebel Osha, therefore, can scarcely be more than 700 feet above the plateau, which would make its elevation above the sea less than 4000 feet. This is much lower than the ordinary estimate. Like Bashan, Gilead contains the remains of many splendid cities, the chief of which are Gerasa, Rabbath-Ammon, Gadara, and Felix. The ruins of towns, castles, and villages are mingled with mountains in all directions. Settled inhabitants are now very few, and they are greatly oppressed by the inroads of the Bedawin, who, attracted by the rich pastures and abundant waters, penetrate all parts of the country.

See GENERAL

South of Gilead lies "the land of Moab" (Deut. i. 5; xxxii, 49), a plateau like Bashan, but more naked and desolate. Less is known of it than of any other part of Palestine. It has never been fully explored; and, with the exception of a few travellers passing through and following the main route, the plateau has, until recently, scarcely been examined. From the ruins of Ammon it extends in a succession of rolling downs to Kerak. On the west it breaks down in stupendous cliffs, 3000 feet and more, to the shore of the Dead Sea. Chaotic of singular wildness cut these cliffs to their base, and run far out across the plateau. Along the western plains are fringes of willow, oleander, tamarisk, and palms. The ravine of Kerak is its southern boundary; but the greatest of all the ravines is the Arnon, which formed the southern boundary of Reuben's territory (Deut. iii. 12). Wady Zurcha Matin is also a deep ravine, and is remarkable as having near its mouth the famous warm fountains, anciently called Callirrhoe (Joseph. Ant. xvii, 6, 6; Pliny, v, 16; I斌y and Mangles, Travels, p. 467 sq., 1st ed.). Along the western brow of the plateau, little conical and rounded hills rise at irregular intervals to a height of two or three hundred feet. The highest is Jebel Attarus. Not far from Heshbon is Jebel Neba, or Nebo (q. v.), a spur from the general Dead Sea wall. There are also some low ridges away to the eastward, separating the southern part of the plain from the desert. These are called the Wady Zerka, or, as they are more properly called, the "Ravines of the Dead Sea" (Travels, p. 373). The soil of the plateau is rich and deep; but being composed mainly of disintegrated limestone, and diffused over white calcareous strata, it is greatly affected by the sun, and assumes a barren and parched aspect during the summer. Among the western end, where are some remains of oak-forests; and in the deep ravines, and along the northern-declivities, trees and shrubs grow abundantly, but the vast expanse of the upland is treeless and arborescent (I斌y and Mangles, p. 474; Burckhardt, p. 364). At Wady Mojez (Arnon) the plateau begins to be more rugged aspect, being strewn with basaltic boulders, and dotted with rocky mounds. These extend to Kerak. The general features and character of the plateau agree perfectly with the incidental notices of the sacred penmen. It is "a land for cattle," famed throughout all Palestine for the abundance and richness of its pastures, and forming a constant source of dispute and warfare among the desert tribes (Burckhardt, p. 368). It was well termed Mishor, a region of "level downs," a "smooth table-land," as contrasted with the rough and rocky soil of the western mountains (comp. Stanley, S. and P. p. 317). The plateau of Moab is a thirsty region. Fountains, and even spring wells, are very rare; and there are no perennial streams; yet it abounds with traces of former dense population. The ruins of old cities—many of great extent—are still visible in its surface. In the writers of these we recognise the Bible names, as Heshbon, El-Ri, Medeba, and Aair. The want of fountains and streams

was supplied by tanks and cisterns, which abound in and near all the old towns. The "pools of Heshbon" are still there (cant. vii, 4; see Murray's Handbook for the Holy Land, p. 299). But the cities and villages are now deserted. Moab has no settled inhabitants. From Amman to Kerak there is not a single village or house. Large tribes of Bedawin roam over its splendid pastures; and a few poor nomads, with the warlike people of Kerak, cultivate some portions of its soil; but all the rest is desert.

The elevations of Eastern Palestine have not been taken with accuracy. Some of those collected by Van de Velde appear to be mere estimates. They may be given, however, in the absence of better:

Kneutralah, at the southern base of Hermou (v. Schulter) 3057
Platean, southward (v. Schulter) 3000
Platain of Hamran, approximation (Russeger) 3000
Ketel, highest summit of Hauran mountain (Russeger) 6400
Jebel Ajla, highest summit of Moab (much too high), approximation (Russeger) 6500
Jebel Osha (much too high), about 5000

The following books contain all the information yet given to the public regarding the plain of Moab:

2. GENERAL FEATURES.—It may be well now to group together a few of those characteristics of Palestine embodied or referred to in the preceding sketch of its physical geography, and which tend to illustrate some of the statements and incidental notices of the sacred writers.

(1.) To an Occidental reader Palestine does not appear either rich or beautiful. Calling to mind the glorious descriptions of the Bible, the Eastern traveller is apt to feel grievous disappointment, and even to accuse the sacred writers of exaggeration. They speak of the land as "a land flowing with milk and honey" (Exod. iii, 8; Lev. xx, 24; Deut. vi, 3; Josh. v, 6); "a good land, a land of brooks of water, of fountains and depths that spring out of valleys and hills; a land of wheat, and barley, and vines, and fig-trees, and pomegranates; a land of olive oil, olive and honey; a land wherein thou shalt eat bread without labour, and drink wine and milk without money" (Deut. ix, 11); a land which the Lord thy God careth for: the eyes of the Lord thy God are always upon it, from the beginning of the year even unto the end of the year" (Deut. xxxi, 12); "a goodly country, as the Lord hath promised, a land of flowery uplands and bountiful plains of Lebanon" (Josh. xi, 23). A thoughtful consideration of the whole subject, however, and a careful survey of the country, prove that the words of the sacred penmen were not exaggerated.

(2.) In the first place, it must be borne in mind that they were describing an Eastern, not a Western land. When Moses addressed the above words to the Israelites, he was accustomed, and so were they, to the flat surface, and cloudless, rainless sky of Egypt, and to the stern desolation of the Sinaitic desert. Compared with these, Palestine was a land of hills and valleys, of streams and fountains, of corn and wine.

[1.] After the "great and terrible wilderness," with its "fiery serpents," its "scorpions," "drought," and "rocks of fliut"—the slow and sultry march all day in the dust of that enormous procession—the eager looking forward to the well at which the encampment was to be pitched—the crowding, the fighting, the clamor, the bitter disappointment around the modicum of water when at last the desired spot was reached—the "light bread"—so long an object of national food when the quench descended, or an approach to the sea permitted the "fish" to be caught; after this daily
struggle for a peaceful existence, how grateful must have been the rest afforded by the Land of Promise!—how delicious the shade, scanty though it were, of the hills and ravines, the gushing springs and green plains, even the mere wells and cisterns, the vineyards and oliveyards and "fruit-trees in abundance," the cattle, sheep, and goats grazing the country with their long black tails; the bees swarming around their darkened abodes in rock or wood! Moreover they entered the country at the time of the Passover, when it was arrayed in the full glory and freshness of its brief springtide, before the scorching sun of summer had had time to wither its flowers and embitter its verdure. Taking all these circumstances into account, and allowing for the bold metaphors of Oriental speech—so different from our cold deprecating expressions—it is impossible not to feel that those wayward travellers could have chosen no fitter words to express what their new country was to them than those which they so often employ in the account of the conquest—a "land flowing with milk and honey, the glory of all lands."

[2.] Again, although the variations of the seasons in Palestine may appear to us slight, and the atmosphere divided between the mountain regions of Egypt, where rain is a rare phenomenon, and where the difference between summer and winter is hardly perceptible, the "rain of heaven" must have been a most grateful novelty in its two seasons, the former and the latter—the occasional snow and ice of the winters of Palestine, the famished deserts of Egypt. Nevertheless, it may be that even the variations between the heat of the days and the coldness of the nights, which strike every traveller in Palestine, are mentioned. The Israelites practiced no commerce by sea; and, with the single exception of Joppa, not only possessed no harbours along the whole length of their coast, but had no word by which to denote it. But that their poets knew and appreciated the phenomena of the sea is plain from such expressions as are constantly recurring in their works—the "great and wide sea," its "ships," its "monsters," its roaring and dashing "waves," its "depths," its "sand," its mariners, the perils of its navigation (Psa. cvii). See S.Ea.

(b.) In the next place, Palestine is not now what it then was. The curse is upon it. Eighteen centuries of war and ruin and neglect have passed over it. Its valleys have been cropped for ages without the least attempt at afforestation. Its hills have been allowed to crumble, and the soil has washed down into the ravines, leaving the hill-sides rocky and sterile. Its trees have been cut down, and never replaced. Its fields have been desolated, its structures pillaged, and its ruins left. All its resources are changed. The insecurity of life and property has taken away all incentive for maintaining the resources of the land, and extortion has robbed it of the last vestiges of thrift. What would the fairest country of Europe be under similar circumstances? But the close observer can still see the vast resources of the land, and abundant evidences of former richness, and even beauty. The products ascribed to it by the sacred writers are just those for which its soil and climate are adapted. The wide plains for wheat and barley; the sheltered glens and deep warm valleys for the pomegranate, the olive, and the palm; the terraced slopes of hills and mountains for the vine and the fig. Then there are the oak-forests still on Bashan; the evergreen shruberies on Carmel; the rich pastures on Sharon, Moab, and Gilead; and the full blossom of spring flowers all over the land.

(2.) Palestine now seems almost deserted. Few countries in the old world are so thinly peopled. Some of the plains—the lower Jordan, for example, and Southern Philistia—appear to be "without man and without beast." Yet in no country are there such abundant evidences of the former dense population. Even the miserable spot on plain, hill, glen, and mountain bears traces of cultivation. It is "a land of ruins." Everywhere, on plain and mountain, in rocky desert and on beetling
cliff, are seen the remains of cities and villages. In Western Palestine they are heaps of stones, or white dust and rubbish strewn over low tell; in Eastern, the ruins are often of great extent and magnificence. All this accords with the vast population mentioned alike by the writers of the Old Testament (Judg. xx, 17; 1 Sam. xv, 4; 1 Chron. xxviii, 4-b) and of the New (Matt. xxii, 30; Acts i, 10, xii, 1, etc.), and confirmed by the statements of Josephus.

(8.) It has been seen that Palestine has, in reality, only one river—the Jordan; yet it has several perennial streams, such as the Jabbok, the Arnon, and the historic Kishon, mentioned in Deut. ii, 39. The rhetoric of the Biblical authors, the treacherous nature of the loose alluvial "sand" of the plain under the sudden rush of the winter torrents from the neighboring hills, as compared with the safety and firm foundation attainable by building on the naked "rock" of the hills themselves (Matt. vii, 24-27).

These hill-towns were not what gave the Israelites their main difficulty in the occupation of the country. Wherever strength of arm and fleetness of foot availed, there those hardy warriors, fierce as lions, sudden and unexpected as serpents, swept down the coast like a flood. On the hills (1 Chron. xii, 8; 2 Sam. i, 28; ii, 18), easily conquered. It was in the plains, where the horses and chariots of the Canaanites and Philistines had space to manoeuvre, that they failed to dislodge the aborigines.

Judah "drave out the inhabitants of the mountain, but could not drive out the inhabitants of the valley," because they had chariots of iron; . . . neither did Mas-sae'el drive out the inhabitants of Bethshan . . . nor Megiddo, "in the plain of Esdraelon; . . . neither did Ephraim drive out the Canaanites that dwelt in Gezer," on the maritime plain near Ramleh; . . . neither did Asher drive out the inhabitants of Accho. . . . And the Amorites forced the children of Dan into the mountain, for they would not suffer them to come down into the valley (Judg. i, 19-34). Thus in this case the ordinary conditions of conquest were reversed—the conquerors took the hills, the conquered kept the plains. To a people so exclusive as the Jews there must have been a constant satisfaction in the elevation and inaccessibility of their highland regions. This is evident in every page of their literature, which is tinged throughout with a highland coloring. The "mountains" were to be held as splendid for Sirach (11, 25; 14, 3) the old Jewish historian, "the valley as fruitful as the plain, as good as the plain, and"—the saying was still current when they came to flourish on the "top of the mountains" (Ps. lxxxv, 3, 16). In like manner the mountains were to be joyful before Jehovah when he came to judge his people (xcviii, 8). What gave life to the hills was their spirit of independence and their consideration that the "mountains of Israel," the "ancient high places," had become a "prey and a derision;" while, on the other hand, one of the most joyful circumstances of the restoration is that the mountains shall yield their fruit as before, and be settled after their old estates (Ezek. xxxiv, 1, 8, 11). But it is needless to multiply instances of this, which pervades the writings of the psalmists and prophets in a truly remarkable manner, and must be familiar to every student of the Bible. (See the citations in Stanley's Sinai and Pal. ch. ii, viii.) Nor was it unacknowledged by the surrounding heathen. We have their own testimony that in their estimation Jehovah was the "God of the mountains" (1 Kings xx, 28), and they showed their appreciation of the fact by fighting (as already noticed), when possible, in the lowlands. The contrast is strongly brought out in the repeated expression of the text, "the mountain of Jehovah," "the mountain of Israel," "the mountain of Jehovah, the mountain of Israel," "the mountain of his sanctuary," "the mountain of Jehovah," "the mountain of the house of my God," "the mountain of the house of the Lord the highness of his name," "the mountain of Jehovah our God," "of the God of Jacob our father," the "mountain of Jehovah," "the mountain of Jehovah"—the Hebraic word abow—the God who is now a high fortress for us—"at whose command both chariot and horse are fallen," "who
burnth the chariots in the fire" (Ps. xx. 1, 7; xlvi. 7-11; lxvi. 2, 6).

But the hills were occupied by other edifices besides the "High Places." The tiny white domes which stand perched here and there on the summits of the eminences, and mark the holy ground in which some Mohammedan saint is resting—sometimes standing alone, sometimes near the village, in either case surrounded with a rude embankment of earth or shrubbery, and with the grateful shade and pleasant color of terebinth or cypress—are usually the successors of the "high places" or sanctuaries so constantly denounced by the prophets, and which were set up "on every high hill and under every green tree" (Jer. ii. 20; Ezek. vi. 13).

See Hill.

The building of the Holy Temple in Jerusalem has been made to many of the characteristic features of the Holy Land. But it is impossible to close this account without mentioning a defect which is even more characteristic—its lack of monuments and personal relics of the nation which possessed it for so many centuries, and gave it its claim to our veneration and affection. When compared with other nations of equal antiquity—Egypt, Greece, Assryia—the contrast is truly remarkable. In Egypt and Greece, and also in Assyryia, as far as our knowledge at present extends, we find a series of buildings and objects that will be most readily recognized as having a serious antiquity—a chain of which hardly a link is wanting, and which records the progress of the people in civilization, art, and religion as certainly as the buildings of the mediæval architects do that of the various nations of modern Europe. We possess also a multitude of objects of use and ornament, bearing witness to those nations, truly astonishing in number, and pertaining to every station, office, and act in their official, religious, and domestic life. But in Palestine it is not too much to say that there does not exist a single edifice, or part of an edifice, which can be sure that it is of more than one period anterior to the Christian era. Excavated tombs, cisterns, flights of stairs, which are encountered everywhere, are of course out of the question. They may be—some of them, such as the tombs of Hinnom and Shiloh, probably—are of very great age, older than anything else in the country. But there is no evidence either way, and as far as the history of art is concerned nothing would be gained if their age were ascertained. The only ancient buildings of which we can speak with certainty are those that were erected by the Greeks or Romans during their occupation of the country. Not that they have been restored or modernized, but that they remain, which separates them from any mere Greek or Roman building in Greece or Rome; but the fact is certain that not one of them was built while the Israelites were masters of the country, and before the date at which Westerwinder allocated the first century B.C. As with the buildings, so with the tombs. With one exception, the museums of Europe do not possess a single piece of pottery or metal-work, a single weapon or household utensil, an ornament or a piece of armor, of Israelitish make, which can give as the least conception of the manners or outward appliances of the nation before the date of the destruction of Jerusalem by Titus. The coins form the single exception. A few rare specimens still exist, the oldest of them attributed—though even that is matter of dispute—to the Maccabees, and their rudeness and insignificance furnish a stronger evidence than even their absence could imply of the total want of art among the Israelites.

It may be said that Palestine is now only in the same condition as Assyryia before the recent researches brought so much to light. But the two cases are not parallel. The soil of Antiochus is a loose loam or sand, of the description best fitted for covering up and preserving the relics of former ages. On the other hand, the greater part of the Holy Land is hard and rocky, and the soil lies in the valleys and lowlands, where the streams were very rarely built. If any store of Jewish relics were remaining embedded or hidden in suitable ground—as, for example, in the loose mass of debris which coats the slopes around Jerusalem—we should expect occasionally to find articles which might be recognized as having been made in Assyryia. Long before the mounds were explored, Rich brought home many fragments of inscriptions, bricks, and engraved stones, which were picked up on the surface, and were evidently the productions of some nation whose art was not then known. But in Palestine the only objects which have all belonged to the West—coins or arms of the Greeks or Romans.

The buildings already mentioned as being Jewish in character, though carried out with foreign details, are the following: The tombs of the kings and of the judges; the buildings of the Temple; the palace of Solomon; the house of Jehoshaphat; the monolith at Siloam—all in the neighborhood of Jerusalem; the ruined synagogues at Meiron and Kefr Bîrm. But there are two edifices which seem to bear a character of their own, and do not so clearly betray the style of the West. These are the enclosure round the sacred cave at Hebron, and portions of the western, southern, and eastern walls of the Haram at Jerusalem, with the vaulted passage below the Aksa. Of the former it is impossible to speak in the present state of our knowledge. The latter has been noticed much more by the ancient authors than by the modern. It is sufficiently said to name one or two considerations which seem to bear against their being of older date than Herod.

(1.) Herod is distinctly said by Josephus to have removed the old foundations, and laid others in their stead, enclosing double the original area (Ant. xx. 11, 3; War, i. 21, 1). (2.) The part of the wall which allows of knowledge to be the oldest contains the springing of an arch. This and the vaulted passage can hardly be assigned to builders earlier than the time of the Romans.

(3.) The masonry of these magnificent stones (alas truly called "building-stones"), on which so much stress has been laid, is not exclusively Jewish, but even Eastern. It was also found at Persepolis; it is also found at Cnidus and throughout Asia Minor, and at Athens—not on stones of such enormous size as those at Jerusalem, but similar in their workmanship.

M. Reinach, in his recent report of his proceedings in Phoenicia, has named two circumstances which must have had a great effect in suppressing art or architecture among the ancient Israelites, while their very existence proves that the people had no genius in that direction. These are (1) the prohibition of sculptured representations in the law, and (2) the command not to build a temple anywhere but at Jerusalem. The hewing or polishing of building-stones was even forbidden. "What," he asks, "would Greece have been, if it had been illegal to build any temples but at Delphi and Athens?" or Eleusinian? These, and for centuries, were the only temples to build, and of these certainly two were erected under the guidance of foreigners. The existence of synagogues dates from the time of the Maccabees, and the Jews then naturally employed the Greek style of architecture, which at that time reigned universally.

In fact the Israelites never lost the feeling or the traditions of their early pastoral nomad life. Long after the nation had been settled in the country, the cry of those earlier days, "To your tents, O Israel!" was heard in periods of excitement. The prophets, sick of the luxury of the cities, are constantly recalling the "tent" of that simpler, less artificial life; and the Temple of Solomon—nay, even perhaps of Zerubbabel—was spoken of to the last as the "tent of the Lord of hosts," the "place where David had pitched his tent." It is a remarkable fact that, eminent as Jews have been in other departments of art and science, and in that of command, the art of painting, or sculpture has never achieved any signal success. See Architecture; Artificer.

VI. Climate, etc.—1. Temperature.—Probably there is no country in the world of the same extent which embraces a greater variety in this respect than Palestine. On Mount Hermon, at its northern border, we approach
PALESTINE

2. Rain.—In Palestine the autumnal rains commence about the end of October. In Lebanon they are a month earlier. They are usually accompanied by thunder and lightning, but not particularly violent. The showers are often extremely heavy. In three days at a time, not constantly, but falling chiefly in the night; then there is an interval of sunny weather. The quantity of rain in October is small. The next four months may be called the rainy season, but even then the fall is not continuous for any lengthened period. The showers are often extremely heavy. In April rain falls at intervals: in May the showers are less frequent and lighter, and at the close of that month they cease altogether. No rain falls in Palestine in June, July, August, or September, except on occasions when some distant, but not very distant, storm cloud is visible, and not a cloud is seen in the heavens as large as a man's hand (1 Sam. xii. 17 sq.; Cant. iii. 11). In Lebanon the climate in this respect is somewhat different. In 1850 rain fell at Shumelin on June 27 and 28, and on Aug. 8, 9, and 12; and in Damascus, on rare occasions, rain is seen in the month of June. In Lebanon also clouds are occasionally, though not frequently, seen during the summer months. Dr. Barclay gives the following average of the rainfall at Jerusalem during seven seasons: 1846-47, 59 inches; 1847-48, 45 inches; 1848-49, 60.6 inches; 1849-50, 61 inches; 1851-52, 63 inches; 1852-53, 44 inches; 1853-54, 26.9 inches. This gives a general yearly average of 56.5 inches, which is 25 inches above the mean annual rainfall in England, and within one inch of that in Keswick, Cumberland, the wettest part of England (City of the Great King, p. 417, 428; Walsh, Water Supply of Jerusalem, p. 194).

3. Seasons.—Only two seasons are expressly mentioned in the Bible; but the rabbins (Talmud) make six, apparently founding their division upon Gen. viii. 22. They are as follows: (1) Seed-time: October to December. (2) Winter: December to February. (3) Cold: February to April. (4) Heat: Spring to June. (5) Heat: June to August. (6) Summer: August to October. These divisions are arbitrary. Seed-time now commences in October after the first rains, and continues till January. Harvest in the lower valley of the Jordan sometimes begins at the close of March; in the hill country of Judaea it is nearly a month later, and in Lebanon it rarely begins before June; and is not completed in the higher regions till the end of July. After the heavy falls of rain in November the young grass shoots up, and the ground is covered with verdure in December. In February and March the palms are green; and as the days become warmer they are ripe; and at its close, in favorable seasons, the almond-tree puts out its blossoms. In February and March the apricot, pear, apple, and plum are in flower. In May, apricots are ripe; and during the same month melons are produced in the warm plains around the Sea of Galilee. In June, figs, cherries, and plums ripen; and the roses of the "Valley of Roses," near Jerusalem, and of the gardens of Damascus, are gathered for the manufacture of rose-water. Autumn is the crowning month of the fruit season, during which the grape, fig, peach, and pomegranate are in perfection. The vintage extends on through September. In August vegetation languishes. The cloudless sky and burning sun dry up all moisture. The grass withers, the flowers fade, the bushes and shrubs take a hard gray look, the soil becomes dust, and the country assumes the aspect of a parched desert. The only excision of this general barrenness are the orange-groves of Joppa and those few portions of the soil which are irrigated. See AGRICULTURE.

The following are the principal works from which information is derived: of the climate of Palestine and Syria: (1) An Ecological Calendar of Palestine, by Buhle, translated by Taylor, and inserted among the fragments appended to Calmet's Dict. of the Bible. (2) Walsh's Calendariwm Palestinense, ed. J. D. Michaelis, 1755. (3) Vonluy, Voyage en Syrie, etc., 1787. (4) Schubert, Reise nach dem Morgenlande, vol.
PALESTINE

VII. Natural History. — Plants. —The various plants mentioned in the Bible are fully treated of in this work under their proper names. It is not necessary here to repeat what is said elsewhere, nor is it intended to give anything like a résumé of the botany of Palestine. All that is aimed at is to give some of the leading features of the vegetation of the country—to mention the principal plants now existing, and the localities in which they abound. The diversity of climate in Palestine has already been noticed. There is a regular gradation from the cold of Northern Europe to the heat of the tropics. This produces a corresponding variety of vegetation. Many of the plants of Europe, Asia, and Africa are found in the respective departments of Palestine. On the mountain-tops of Hermon, Bashan, and Galilee the products of the cold regions of the north grow luxuriantly; on the coast plain are some peculiar to Eastern Asia; and in the deep valley of the Jordan an essentially tropical vegetation prevails. (10)

(1.0) On the northern mountain-ridges, and in Bashan, the oak and pine are the principal natural or forest trees; the former sometimes forming dense woods, and growing to a great size. The cedar is now, and was probably always, confined to the higher regions of Lebanon. Among smaller trees and bushes are the juniper, dwarf elder, sumac (Rhus), and hawthorn; the ivy, honeysuckle, and some species of rose are met with, but not in great abundance. The celebrated "oak of Bashan" appears to be the Quercus Aegiptia; it has a massive trunk, short branches, and dense foliage; it is a regenerating tree, and an important provider of fuel. In Gilead, all over Jebel el-Heish, and Galilee. An oak of another and smaller variety (Quercus Coccifera), growing in bushes, not unlike English hawthorn in form, and having a leaf resembling holly, but smaller, spreads over Carmel, the ridge of Samaria, and the western slopes of the mountains of Judea, sometimes forming impenetrable jungles. Intermixed with it in some places are found the arbutus, hawthorn, pistachio, and cedars or locust-tree. Common brambles are abundant, as well as the styrax, the bay, the wild olive, and many other shrubs. Modern writers are inclined to attribute the "wild fig" of the Bible, to the Zizyphus Spinacea of Christ's time, papyrus, tamarisk, acacia, retama (a kind of broom), sea-pink, Dead Sea apple (Solanum Sodomorum), the Balsam of Ephraim, and on the banks of the river several species of willow and reed.

(2.0) The hills and plains of Palestine abound in flowers. In early spring large sections of the country are covered with them, looking like a vast natural parterre. The most conspicuous among them are the lily, tulip, anemone, poppy, hyacinth, cyclamen, star of Bethlehem, crocus, and mallow. Thistles are common in plain and mountain alike, while numberless small and creeping, with bright blue spikes, others large and formidable, with heads like the "flail" of the ancient Britons. On the hills are also found vast quantities of aromatic shrubs, which fill the air with fragrance; among these are broom, the great strength of others, especially the white kidan, prized for their beauty and easy motion (comp. Judg. v, 10). Mules are chiefly used as beasts of burden. As there are no roads and no wheel carriages, the mules are the carriers of the country, and are met on all the leading thoroughfares in immense files, garnished pro-

seen on the sides of valley, hill, and mountain were doubtless clothed with vines in ancient times. The olive is scarcely less abundant. It is found at almost every village in Western Palestine. But its greatest groves are about the cities of Nablus, and to a less extent in the vicinity of Galilee. It is not met with in the Jordan valley, and it is extremely rare in Gilead and Bashan. Some of the trees grow to a great size, though the branches are low and sparse. An olive-tree may be seen in the plain of Damascus upwards of forty feet in girth. The fig is abundant, especially among the hills of Judah and Samaria. Other fruit-trees less common are the pomegranate, apricot, walnut, almond, apple, quince, and mulberry. Date-palms are found at various places along the maritime plain; there are very few in the mountains, but they have been introduced from Jericho, the "city of palm-trees," though date-palms grow at various places along the Jordan valley, as at Gennesaret. In the orchards of Joppa are the orange, lemon, citron, and banana; and the prickly pear in great abundance formed into hedges. The principal cereals are wheat, barley, millet, Indian-corn, and rice in the marshy plain of the upper Jordan. Of pulse we find the pea of several varieties, the bean, large and small, and the lentil. Among esculent vegetables are the potato, recently introduced, carrots, lettuce, beets, turnips, and cabbages. In the sandy plains and in the Jordan valley are grown in immense quantities. Hemp is common, flax less so, and cotton is produced in large quantities. Mr. Poole states that indigo and sesame are grown in the valley of Nablus (Journal R. G. S. xxvi, 57). The sugar-cane was formerly extensively cultivated in the Jordan valley, especially around Jericho. Indigo is still grown in the gardens of Jericho and in the plain of Gennesaret. The tobacco-plant is common in Lebanon, and among the villages of Western Palestine. Silk is extensively produced. Mulberry groves are rapidly extending, and the rearing of silkworms is found even in the mountains of Western Palestine. At present silk is the most valuable of the exports. The growth of cotton is also increasing. But the heavy exactions of the government, and the insecurity of life and property, prevent capitalists from planting trees and cultivating the great plains. See each of these trees, fruits, and vegetables in its alphabetical place.

On the botany of Palestine the following works may be consulted: Shaw, Travels in Barbary and the Levant, 1819; Hasselquist, Voyages and Travels in the Levant, 1793; Reclus, Atlas Physique de l'Univers; of Pal.; Russell, Natural Hist. of Aleppo; also papers in Transactions of Linnean Society, vol. xxiii; and Natural Hist. Rev. No. v. See Botany.

2. Animals.—The zoology of the Bible, like the botany, is fully treated of in this work. The names of the several animals. All that is needed in this place, therefore, is to group together the principal animals at a present found in the different parts of Palestine, referring the reader for fuller particulars to the separate articles, and to the works mentioned at the close. It may be remarked that comparatively little is known of the fauna of Palestine. The great majority of travellers who visit the country have not time, and even if they had they do not possess the scientific knowledge necessary to minute researches in natural history.

(1.0) The domestic animals of Palestine are, with one or two exceptions, those common in this country. The horse is small, nearly, and sure-footed, but not famed either for speed or strength. The best kinds are bought from the Bedawin of the Arabian desert. Asses are numerous; some small and poor; others large and of great strength; and others, especially the white kinds, prized for their beauty and easy motion (comp. Judg. v, 10). Mules are chiefly used as beasts of burden. As there are no roads and no wheel carriages, the mules are the carriers of the country, and are met on all the leading thoroughfares in immense files, garnished pro-
PALESTINE

fusely with little bells and cowries. The camel is also employed for carrying heavier burdens, for performing more lengthened journeys, and for traversing the neighboring deserts. The best camels are bought from the wandering Berbers, who, in the oxen of Western Palestine is mostly small and poor, owing doubtless to hard work and insufficient food; but travelers have seen great droves of fine fat cattle upon the rich pastures of Jaulinn. There is a very tall, lank species in the plain of Damascus and in parts of the Hauran. Oxen are now very rarely slaughtered for food in the interior. They are mainly kept for field-labor and for "treading out the corn." The buffalo is found in the valley of the upper Jordan; but few if any specimens are met with elsewhere in Palestine. Large-tailed sheep abound, and form the main element of animal food. Herds of the long-eared Syrian goat cover the mountains in all parts of the land. They are the chief producers of milk and butter. The common street dog infests the towns, villages, and encampments, belonging to no one, though tolerated by all as a public servant—the only sanitary officer existing in Palestine. There is another variety employed by shepherds. Cats, like dogs, are common property, and are rarely seen domesticated like our own.

(2.) The wild animals include the brown Syrian bear, found in the upper regions of Galilee and in Jabel el-Heish; the panther in the hills of Judaea and Samaria, and occasionally in the mountainous parts of the Jordan; foxes in immense numbers everywhere; wolves, hyenas, foxes; wild swine in the marshes of the Jordan, and in the thickets of Bashan and Gilead; gazelles and fallow deer on the plain; the ibex or wild goat in the wilderness of Judaea; the hare and the coney (called by native mazeh); the common ground hog; the mole, squirrel, mole, rat, mouse, and bat. Porcupines and hedgehogs are rare; Mr. Poole says badgers abound at Helbron (Journal R. G. S. xxvi, 58).

(3.) Reptiles exist in great variety. Some parts of the country swarm with them. The most common are lizards, such as the gray, striped gray lizard, and the wall lizard, which bobs their hideous heads up and down on every ruin. Serpents of various kinds are numerous; the scorpion, tarantula, and chameleon are not so abundant. Frogs in vast numbers crowd the marshes and moist districts, and fill the air with their roar on the still summer evenings; the tree-frog and toad are also found; and little tortoises crawl over dry plains, and along the banks of pond and stream. The crocodile is said to exist in the Crocodile River, now called Naher Zerka, in the plain of Sharon. Of this Dr. Thomson writes: "You will be surprised to hear that there are now living in this marsh, but such is the fact. These millers say they have seen them often; and the government agent, a respectable Christian, assures me that they recently killed one eighteen spans long, and as thick as his body. I saw one long ago, something like a serpentine" (Land and Book, ii, 244). The creature seen at this place (if indeed the whole story was not a pure fiction on the part of the Arabs) was doubtless the Monitor Niloticus.

(4.) Birds of prey are very numerous, including eagles and vultures, in the neighborhood of Lebanon; hawks in great variety, and ravens all over the land; and owls, which howl and scream during the still night. Storks pass paying visits, and occasionally the white Ibis is met with; the heron, gallinule, and lapwing are also found. The rocky hill-sides abound with peregrine falcons; the cliffs in the gles with pigeons; the bushes with turtle-doves; and the lakes and marshes with ducks, teal, and other water-fowl. We also find the Jay in some beautiful varieties; the kingfisher, the woodpecker, the sparrow, the swallow, the cuckoo, and the Western skylark. Domestic fowls are not numerous in Palestine. A few barn-door fowls may be seen in the villages, but ducks, geese, and turkeys are extremely rare.

(5.) Insects are so numerous in some parts of the land as almost to be a plague. They include the common fly and mosquito; the bee, wasp, and hornet; great numbers of horse-flies; many species of butterflies; ants, spiders, grasshoppers, beetles, earwigs, and the beautiful glowworm and firefly. The most formidable species are the locust and the weevil, which some few are seen every year, but great flights are fortunately rare. One such occurred in the summer of 1833 which nearly desolated Eastern Syria. In many places they completely covered the ground; and for several days the air was so filled with them that the light of the sun was obscured as if by a mist. See each of the above-named animals in its alphabetical place.

Writers on the zoology of Palestine, or rather on Biblical zoology, are numerous. The following are the most important: Bochart, Hierozoicon, ed. Rosenmüller. 1792 A.D.; Hasseuldt, Travels; Russell, Nat. Hist. of Aleppo; Description de l'Egypte, tom. xx-xxii; Schubert, Reise; Kitto, Physical Hist. of Palestine; Tristram, Nat. Hist. of the Bible; Wood, Bible Animals. See ZOOLOGY.

VIII. Geology. Although several eminent geologists have passed through Palestine, we have yet no full scientific delineation—not even a satisfactory outline—of its geology. (See the brief sketch in Tristram's Nat. Hist. of the Bible, ch. ii.) The country ought in many respects to be the most interesting in the world to the geologist. It possesses some unique features. It bears traces of many epochs of change, extending over a vast period. Its wonderful history has been considerably affected by these agencies.

The general geological formation of Palestine is simple. The basis of the country—the great body of its land and plain—is Jura formation, or the plateau, which extends over Lebanon, the desert of Arabia, and the plateau southward to the mountains of Sinai. Russegger says it may "be classed with the Upper Jura formation, the oolite, and the Jura dolomite." The rock is not uniform in character, composition, or color. Most of it is white and gray, some of it is yellowish or reddish, and some of it is black, green, and gray; and abounding in fossils. As a general rule it becomes softer towards the south. At Bethel "are large masses of blue limestone with shells," and on the sides of Gerizim "is nummularic limestone; in some parts the rocks had been in a liquid state, for one kind had overflowed and enclosed the other" (Poole, in Introduction to R. G. S. xxvi, 55). Around Jerusalem dolomite prevails. The ancient buildings of the city appear to have been chiefly constructed of it. It is veined with red and white like marble, compact, partially crystalized, and has this advantage—that it is hard to split. The first formation of a more recent period are visible over the whole mountains. In many places the action of the atmosphere and the washing of winter rains have stripped it off the flint. It has been worked as marble and nodules of flint; and these are now strewn over the surface where the soft chalk, in which they were originally embedded, has entirely disappeared. Between Nablus and Samaria the ground is covered with flints (Poole, p. 57); they abound in the wilderness of Judaea. On the road from Bethany to Jericho, Poole says, "white nodules with black flint in the centre were thickly strewn about" (ibid.). In some places less exposed the upper crust remains; and thin layers of sandstone, soft and friable, alternate occasionally with the chalk (ibid.). Towards the borders of the Dead Sea some important changes are observed in the strata. Of the hills of the Plain of Nablus, Poole says, "The chalk of the cliffs is very strong in sulphur, and I got specimens of limestone of an oolitic structure, also of a seam of bituminous and calcareous limestone, with pieties about six inches thick" (p. 89). On the northern shore of the Dead Sea, and in other similar parts, the chalk is seen in the mountain along the south-west coast, "the chalk showed in several places overlaid by limestone," probably owing to the tilting of the strata, or some other volcanic agency. In Eastern Palestine the limestone is found in Hermon, and throughout Gilead and Moab.
but at Kerak it gives place to the ruddy sandstone strata which constitute the mountains of Edom, and which also appear beneath the limestone along the eastern shore of the Dead Sea. This eastern region has not been visited by geologist, and the notices of it are brief and unsatisfactory.

This field of limestone, which thus extends over all Palestine, has been interrupted and broken in several places, and in a very remarkable manner, by volcanic agency—an agency, however, which operated at a very remote geological period. In East Palestine the lava ejected from the earth in a state of fusion has flowed over the limestone, covering the whole area of the kingdom of Bashan. The centre of eruption appears to have been in Jebel Haurán, at the now extinct craters Tell Abu Habis, Tell Mabad, and Tell Kudr, between which and the Syrian streams flowed westward to the Lejah; and the Lejah itself is filled with smaller craters. The little conical and cup-shaped tell which stud the surface of Haurán were at all one time active volcanoes.

The basalt thus emitted from numerous openings spread over the whole region, forming the lofty peaks of Jebel Haurán, and sweeping across the plain to the Jordan. Neither the breadth nor the exact limits of this lava-field are yet known. On the north-west it runs up the sides of Jebel el-Heisch; on the north it is bounded by the river Awaj (Phrauntus); on the east it runs down the plain of Damascus. On the south it runs to the banks of the Yarmuk, and in places across the ravine to Northern Gilead. The Lejah is geologically the most remarkable province in Palestine. The hard black rock covers the entire surface to a depth of from thirty to one hundred feet—now stretching out in broad wave-like reaches, divided by fissures of great depth, now thrown up in vast heaps of jagged fragments, now partially crystallized, and extending in long ridges like the Ginn's Causeway. The rock is very hard, giving a metallic sound from the fragments. The basalt, spheruled boulders of the same material are strewn over portions of the western declivity of the plain (Porter, Damascus, ii. 241 sq.; Wetzelstein, Reisebericht über Haurán, p. 27 sq.; Wilson, Lands of the Bible, ii. 318 sq.; Buckhardt, Travels, p. 111 sq.).

On the west side of the Jordan, opposite Bashan, are two other lava-fields. The northern has its centre about three miles north-west of Safed, near the village of Jsh. Dr. Robinson thus describes it:—"We soon came upon a high open plain; and the volcanic stones increased as we advanced, until they took the place of every other material on the surface of the ground, seemed also to compose the solid formation of the tract. In the midst of this plain we came upon heaps of black stones and lava, surrounding what had evidently once been the crater of a volcano. It is an oval basin, sunk in the plain, about three or four hundred feet in length, and about one hundred and twenty feet in breadth. The depth is perhaps forty feet. The sides are shelving, but steep and ragged, obviously composed of lava; of which our friend Mr. Hebard had been able to distinguish three different kinds or ages. . . All around it are the traces of its former action, exhibited in the strata of lava and the vast masses of volcanic stones. It may not improbably have been the central point, or Albeiter, of the earthquake of 1837" (R. R. ii. 444). From this place the lava-streams and boulders radulate to a considerable distance. The high terrace which projects from the eastern side of this ridge to the Jordan below Merom is chiefly basalt; but it seems to be connected with the Haurán field, as it is of a hard, firm texture, while that of Jsh is soft and porous.

Another centre of volcanic action in former ages is on the high plain south-west of Tiberias, called Ard el-Hamma. The whole plain is a lava-field; and the double peak of Kurfn Hattin, on its north side, is basalt, and so also is the ridge which bounds the Sea of Galilee on the south. The rock is similar to that of Bashan.

The thickness of the bed may be seen in the cliffs on the mountain-side behind the warm baths of Tiberias. The base of these cliffs is limestone, while the whole superincumbent mass is black or dark-gray basalt. This field extends northward to the plain of Yarmuk, westward to Sefrieh, and southward to Edraelon. The soil covering it is thick black mould like that of Bashan. It appears that the greater portion of the substratum of Edraelon is basalt hidden beneath the soil (Wilson, ii. 984). But Jebel ed-Duby (Little Hermon), and all the hills south of the plain, are limestone; and volcanic rock is not again seen in Western Palestine (Anderson, Geological Reconnaissance in Lynch's Official Report, p. 124 sq.). On the east of the Dead Sea basin appears in boulders dotting the plateau of Kedron, a volcanie formation unparalleled in the geologic features that created the eastern and western lava-fields. It is a tremendous rent or fissure a hundred and fifty miles in length, rending asunder the whole limestone strata from top to bottom. Its extreme depth from the line of the fissure to the bed of the Dead Sea is above 4000 feet, no less than 5924 of which is beneath the level of the ocean. Such a rift in the earth's crust is without a parallel. It is singular that, though the rent was doubtless effected by a volcanic convulsion, and though volcanic rock covers such a large area on both sides of the rift, the valley, there are no traces of it in the southern and deepest part, except at one or two points to be afterwards noticed. The sides of the valley, and the rock in its bed, so far as visible, are limestone, ranged occasionally in horizontal strata, but usually upheaved and tossed into wild confusion. Along the eastern shore of the Dead Sea the limestone strata give place to sandstone. The sides of the valley, and the general conformation of the adjoining ridges, would seem to indicate that the limestone crust had been heaved up by some tremendous volcanic agency running from south due north, and causing that huge rent which runs through the basin of the Dead Sea, and across the Jordan valley. The evidences and often fearful results of recent as well as remote volcanic agency are visible along the whole Jordan valley, and over a large section of the adjoining districts. Beginning at the north we have the crater of Jsh, extinct indeed at the surface, but giving palpable proof in tremendous threes of earthquakes that internal fires are still raging. Next follow the copious saline springs of Tabibghah, on the northern shore of the Sea of Galilee; then the sulphurous springs of Tiberias, where the water gushes from the rock at a temperature of 146° Fahr. On the eastern side of the Jordan, in the glen of the Yarmuk, are the still hotter and more copious springs of Amatha, issuing from beneath lofty cliffs of igneous rock (Buckhardt, p. 876; Porter, Handbook for S. and P. p. 420). It is deserving of special note that at the time of the great earthquake of 1837, and on every recurrence of an earthquake in the region, these springs well out in much greater abundance, and their waters increase in warmth. There is thus evidently a subterranean connection between them. The towns and villages which have been most frequently visited by earthquakes in this region are those situated on the trap-fields; while villages between them built upon the limestone strata have in many cases escaped almost without injury. Proceeding still farther south, we find the "copious salt-springs" of Wady Milih, where the
Palestine is 586 Fehr, and emits "a fetid odor" (Robinson, iii, 308). Next come the springs of Calirihore, near the mouth of Wady Zurka. Main, which rise into the north-eastern part of the Dead Sea. They rise in the bottom of a sublime gorge. The base of the cliffs on each side is rudly ferruginous sandstone, above and through which black and dark-gray trap appears, while the great body of the mountain behind is limestone. In the neighborhood of the springs the land has been seen precipitating itself from a high and perpendicular shelf of rock, which is strongly tinted with the brilliant yellow of sulphur deposited upon it. On reaching the bottom we find ourselves at what may be termed a hot river. Jemdorov is it, and Pals-chiit has been so long battle-scarred; this continues as it passes downwards, by its receiving constant supplies of water of the same temperature. . ... We passed four abundant springs, all within the distance of half a mile, discharging themselves into the stream. . . . We had no thermometer, but the degree of heat in the water seemed very great; near the source it scalds the hand, which cannot be kept in for the space of half a minute" (Irby and Mangles, p. 468). Lynch found the temperature of the stream to be 95° Fahr. The temperature must be much higher at the sources. Along the course of the Dead Sea are numerous springs and salt-marshes. At its southern end is the remarkable ridge of hills called Khashm Usdum, composed in a great measure of pure salt. Large quantities of bitumen are often found floating on the Dead Sea, especially, it is said, after earthquakes. This is thrown up in sections from the submarine fires. Away at the northern extremity of the valley, at the western base of Hermon, are pits of bitumen (Handbook, p. 459).

All these things indicate volcanic agencies still in action beneath the surface, and tend to illustrate some of the most remarkable events in the long history of Palestine, from the overthrow of Sodom and Gomorrah down to the earthquake of 1837. Palestine has in all ages been a country of earthquakes. The sacred writers show that they were familiar with them. The Scriptures abound in allusions to them and figures drawn from them. From earthquakes the Psalmist borrows his figures, when he speaks of "mountains being carried into the midst of the sea" (xivi, 3); of their "skipping like rams, and the little hills like lambs" (cxix, 4-6). To earthquakes the prophet alludes in his figurative language—"The earth shall reel to and fro like a drunken, and be removed like a cottage" (Isa. xxiv, 20; comp. Ps. xxxiv, 18; 2 Chron. xxvi, 58; Jer. x, 10; Hab. iii, 6-8, etc.). There are, however, only two earthquakes expressly named in Scripture. The silence of the Scriptures is no evidence of a form of knowledge. "Amos dates his vision "two years" before the earthquake" (i, 1). It took place "in the days of Uzziah" (Zech. xiv, 5). The other instance of an earthquake mentioned in Scripture is that of the quaking of the earth and rending of the rocks at the crucifixion (Matt. xxvii, 51).

In the seventh year of Herod the Great Palestine was visited by a tremendous earthquake (Joseph. Ant. xv, 5, 2). We read of numerous others since that period (see Kitto, Physical Hist. of Palestine, chap. iv). See EARTHQUAKE.

The present bed of the Jordan valley is of a much later formation than either the limonites of the adjoining mountains or the rock of the trap-fields. The crust varies from 100 to 200 feet in depth, and through this the river has hollowed out for itself a deep tortuous channel, showing along its banks vertical sections. The lower parts consist mainly of tertiary deposits of indurated marl and conglomerate; while the upper stratum, now composing the surface of the plain, appears to be made up to a large extent of the washings and detritus of the chalk crust which originally covered the neighboring heights, enriched here and there with vegetable matter. The coast-plain, Sharon and the Caspian, are coated with a light soil—in some places chalky, in others sandy, with a large admixture of red alluvial clay, and on the top rich vegetable mould. The plains of Canaan, Arad-Hamath-Genearet, and Philistia, are coated with a dark soil—in some places chalky, in

Besides the incidental notices in the travels of Burek, hardt, and Drs. Wilson, Robinson, Thomson, and Tristram, the following works contain the fullest information we possess upon the geology of the different parts of Palestine and Judaea, viz. Professor Andrews' Recollections, in Lynch's Official Report (Baltimore, 1852, 4to, p. 75-207). His researches were confined to the Jordan valley and the regions immediately adjoining. (2) Russeger, Reihe, vol. iii. This work embraces an account of the environs of Jerusalem, Hebron, and Joppa, and parts of Gailee around Nazareth and Tiberias (Stuttgard, 1841-1849, 4 vols. with Atlas). (3) Poole's short paper in the Journal of R. G. S. vol. xxvi, giving brief notes of his journey from Joppa to Jerusalem and the Dead Sea, and then along the western shore and around the promontory of the Phœnicians, in 1843. (4) Wetstein, Reisebericht über Hannover und die Trachoniten, giving some account of the remarkable trap-fields of the Lejah, Jebel Hauran, the Safah, etc. (5) Porter, Five Years in Damascus, containing a full description of the physical geography of Bashan. See GEOLOGY.

The boundary of the Levite land as described in Judges xvii, 15, remains to give a brief sketch of the political divisions of Palestine under the rule of the tribes and nations which have in succession occupied it. These divisions are sometimes minutely described, frequently directly mentioned, and more frequently incidentally alluded to, by the sacred writers. It is mainly with the view of illustrating these Scripture references that the present sketch is given. All that is aimed at, however, is a brief general and connected view. Nothing more is needed in this place, for all the ancient tribes and more important provinces and districts are fully treated of in separate articles.

1. The Patriarchal Period.—This period extends from the earliest ages to the conquest of Palestine by the Israelites. The first notices we have of the land are contained in the 10th chapter of Genesis, where the sacred history commences with the descent of the patriarchs from the grandson of Noah. From this patriarchal Palestine got its first name—a name which clings to it still. In that most remarkable chapter the borders of the Canaanitish territory are defined. They extended from Sidon on the north along the coast to Gaza on the south, and from the river Jordan down to the line of Wady Gerar, to the plain of Sodom, now the southern section of the Dead Sea. Thence it was drawn to Lasha (q. v.), the site of which is not known, but it probably stood at the north-eastern end of the Dead Sea. It would seem that ancient Canaan corresponded almost exactly with Western Palestine.

The families and tribes which sprung from Canaan are mentioned; and it appears from their subsequent history, as given in the Pentateuch, that each of them settled down permanently in a territory of its own. See TERRITORIES. The boundaries of these territories are not given, but the locality of each is indicated either by direct statement or indirect allusion. Sidon was the first-born of Canaan, and he colonized Phoenicia on the coast. His capital, to which he gave his name, was outside the boundary of Palestine, but a section of his territory, which extended as far south as Carmel, was included in the land. The Hittites were a powerful tribe, which settled among the mountains in the south, with Hebron apparently for their capital (Gen. xvii, 20; xxiii, 16). The Jebusites had their stronghold on Zion; and they became the boldest antagonists to the progress to the time of David (Josh. xv, 83; 2 Sam. v, 6). The
Palestine

Map of Palestine in the Patriarchal Period.

Amorites, probably the most powerful of all the Canaanitish tribes, were widely spread (Josh. xxiv, 18). They had settlements in the mountains of Judah (Gen. xiv, 7, 18; Numb. xiii, 29), but their main possessions were on the east of the Jordan, where they occupied the whole country from Armon on the south to Hermon (Numb. xxxi, 13, 26; xxxii, 33; Deut. iii, 8). The Gergeshites appear to have been located among the mountains of Central Palestine, but there is no description of their exact territory in the Bible, and the theories of geographers are not satisfactory. The Hivites founded Shechem, in Central Palestine; Gibea, Beeroth, Chephirah, and Kirjath-jearim, farther south; and a little principality under Hermon, on the northern border (Gen. xxxiv, 2; Josh. ix, 9, 24; xi, 10, 19; 2 Sam. xxiv, 7). Canaan's other sons settled beyond the bounds of Palestine; the Arkites and Sinites in Lebanon; the Arvadites in an island off the coast of Phoenicia; and the Hamathites in Hamath.

But besides the Canaanitish tribes there are traces of other races—or perhaps another race—of aborigines in Palestine. The Rephaim are frequently mentioned. We find traces of them in widely different parts of the country. They gave their name to a little upland plain beside Jerusalem (Josh. xv, 8), and to a section of Mount Ephraim (xviii, 15). Bashan seems to have been occupied by them long previous to its conquest by the Amorites (Gen. xiv, 5; Deut. iii, 11). At the same remote period the Zevim dwelt in Gilead, and the Enem held the plateau of Moab. These are all spoken of as men of huge stature, and they appear to have been different sections of one great family. Of their history we know nothing except a few isolated facts; but it is remarkable that traditions of these giants cling to various localities in Palestine. Their marvellous exploits are recorded, their tombs of huge dimensions are pointed out, and the colossal boulders built and occupied are still shown in the ancient cities of Bashan. The race either died out or was exterminated in Bashan by the warlike herds of Amorites. The Moabites and Ammonites conquered the giant tribes south of Bashan, and long occupied their territory; and the ruins of Rabbath-Ammon and Rabbath-Moab still remain as memorials of their rule (Deut. ii, 20, 21). On the south-west of Palestine, along the coast of the Mediterranean, the Arim, another primaval tribe of giants, had their abode; but they were conquered by the Caphtorim, or Philistines; and the giant warriors Gath, Sippai, and Lahmi were probably among the last of them (1 Sam. xxi, 19, 20; 2 Sam. xii, 21; 1 Chron. xx, 4–8). The Amalekites were nomads, who roamed over the scanty pastures of the southern desert, scarcely crossing the border of Palestine.

At the time of the Exodus, all Western Palestine was held by these Canaanitish and Philistine tribes; and the country east of the Jordan was divided into three kingdoms. On the north lay the kingdom of the giant Og, the last of the Rephaim, which extended over Bashan and the section of Gilead north of the Jabbok. Between the Jabbok and the Arnon was the kingdom of Nibsam; while the region south of the Arnon was possessed by the Moabites. In addition to the tribes now enumerated, Moses mentions the Kenites, Kenizzites, and Kadmonites; but these, though included in the land promised to Abraham, had their territories in Arabia, beyond the boundaries of Palestine (Gen. xv, 18–21). The Perizzites are also mentioned as a tribe distinct from the Canaanites, residing in some part of Western Palestine. Little is known either of their origin or their possessions. See Canaan.

2. The Period from Joshua to Solomon.—At the commencement of this period an entire change was wrought in the political geography of Palestine. The country was divided among the twelve tribes of Israel. The eastern section was first apportioned. Moab's territory south of the Arnon was left untouched. A very clear and full account of the allotment of all the rest is given in Num. xiii. The table-land (Mishor) extepting from the Arnon to Heeshbon was given to the tribe of Reuben (comp. Josh. xiii, 15 sq.). Gad received the region between Heeshbon and the river Jabbok, together with an adjoining narrow strip along the Jordan (Num. xxxii, 1–2), Joram, extending up to the Sea of Chinnereth (ver. 24–28). The rest of Gilead and all Bashan were allotted to Maanasseh, and this was at once the largest and the richest allotment made to any of the tribes (ver. 23–28).

Western Palestine was divided among the remaining tribes. Judah received the country lying between the parallel of Jerusalem and the southern border; but subsequently a section on the south was given to Simeon; and another section was taken off its western side and allotted to Dan. These two tribes were thus, as regards their possessions, amalgamated with Judah (Josh. xv; xix, 1, 40–47). North of Judah lay Benjamin, confined to a narrow strip stretching across the country from the Jordan to Beth-horon, between the parallels of Jerusalem and Bethel (xviii, 11–25). Next to Benjamin came the children of Joseph, grouped close together—Ephraim on the south and Manasseh on the north. Their united portion reached from the Jordan to the sea, and from Bethel to the border of Esraelon (ch. xvi, xvi). In addition to this large mountain territory, the cities of Beth-sshean, Tazach, Megiddo, and a few others situated in Esraelon, were allotted to them. To Issachar was given the noble plain of Esraelon—a territory, however, whose fertility was more than overbalanced by its exposed situation (xix, 17–23). Zebulon received his lot amid the picturesque hills and plains of Lower Asia, having Tabor on the east, and the Great Sea, at the sea of
But though the whole land was thus allotted, it was not conquered. The Philistines still held their plain; and the mercantile Canaanites, whom the Greeks called Phoenicians, remained in their great seaports. Many cities, also, in different parts of the country, were retained by their Canaanitish founders (Judg. i, 21 sq.).

3. From the Death of Solomon to the Captivity.—On the death of Solomon, the tyranny and folly of his son rent the nation of Israel. Long before that time there had been rivalry between the powerful families of Judah and Ephraim; Rehoboam’s folly was the occasion of its breaking out into open hostility. The boundaries of the tribes were not disturbed by the rupture in the nation. Benjamin clung to Judah, and its northern border became the line of demarcation between the two kingdoms. Dan and Simeon occupied portions of the allotted territory of Judah, and were therefore reckoned parts of that tribe (1 Kings xii, 17); hence the southern kingdom is usually said to have consisted of only the two tribes of Judah and Benjamin, while in reality it included four (1 Kings xix, 8; 2 Chron. xi, 10; with Josh. xix, 41, 42). The remaining tribes east and west of the Jordan chose Jeroboam as their king; but Bethel (2 Chron. xiii, 19) and some other cities farther north were afterwards added to Judah (xv, 8).

The next change in the political geography of the land was brought about by the conquests of Assyria. The northern kingdom was invaded, Samaria its capital taken, and the whole people of the land carried away captive. Foreign colonists were placed in their room; and these, adopting the Jewish law, and conforming to some extent to the Jewish ritual, were the founders of

Carmel, on the west (ver. 10–16). Asher got the fertile plain of Acre and the coast of Phenicia up to Sidon (ver. 24–31). In the mountains on the northern border Naphtali found a beautiful highland home (ver. 32–39). The lot of Dan was too small, and the Philistines hemmed the tribe in so that they were unable to cultivate the rich soil of the Shephelah. They consequently made an expedition to the far north, and established an important colony on the plain of the upper Jordan (ver. 47; comp. Judg. xviii). See Tribe.
PALESTINE

579

PALESTINE

the nation and sect of the Samaritans (q.v.). A great part of Palestine—nearly the whole of the kingdom of Israel—now became a province of the Assyrian empire, and Syria was passed with it into the hands of the Babylonians. About a century and a half later Nebuchadrezzar, king of Babylon, took Jerusalem, and led the other section of the Jewish nation captive. Thus all Palestine lost its nationality, and was ruled by a provincial governor.

4. From the Captivity to the Destruction of Jerusalem by Titus.—This was the most eventful period of Jewish history, and the most remarkable for the changes which it brought about in the political geography of Palestine. The division of the land into tribes was now completely broken down, and the nations of the ancient races of the ancient nations which the Israelites had driven from their borders wholly or partially returned to their pos-
sessions. The Moabites reoccupied the Mishor immediately after the first captivity; and hence "the burden of Moab," written by Isaiah (ch. xvi, xvi), and the terrible prophetic curse pronounced by Jeremiah (ch. xlviii), include that country which the Moabites originally possessed before the conquests of Sihon (Num. xxii, 26, 28), and which they reoccupied after the captivity of the tribes of Reuben and Gad, to whom Moses had allotted the land. The Amorites of Bashan regained their old territories, and re-established the old names—Bashan, Argob, Havurán, Golan—which were subsequently better known as the Greek provinces of Batanea, Trachonitis, Auranitis, and Gaulonitis (Porter, Damascus, vol. ii). The Idumeans or Edomites, having been driven out of their own mountain homes by the Nabataeans, established themselves along and within the borders of Southern Palestine, to which they gave the name Idumea (q.v.). The neighboring nations and tribes also seem to have encroached upon the territories of the tribes of Judah. A large Gentile element was then and afterwards intro-
duced into Galilee, which produced important effects upon the subsequent history of the Jews in that province. See Galilee.

Under the mild rule of Cyrus the captive Jews were permitted to return to their own land. Ezra and Ne-
hemiah re-established the ancient worship and rebuilt the Temple; but, politically, the country remained a province of the Babylonian and Persian empires till the time of Alexander the Great, when it fell under Greek rule. On the death of Alexander the kingdom of the Seleucids, which controlled Syria and the Ptolemies in Egypt, fell into two parts. Palestine became at first a part of the former; but the rival dynasty soon attacked and captured it, and it remained for more than half a cen-
tury, nominally at least, under the rule of the Egyptian monarch. Thus the territory of Israel, which had been seated almost in the midst of Egypt, and the maritime plain of Palestine became the battle-ground. Aided by the Seleucids, the Jews threw off the yoke of the Ptolemies (B.C. 198), and became subject to the former. During all these troubles the Jews had an ecclesiastical government of their own, the high-priest being chief. But when Antichus Epipha-
nes ascended the throne of Syria, he captured Jerusa-
lem, put thousands of the inhabitants to death, and at-
tempted to abolish their worship. These acts of bar-
barity roused the spirit of the whole nation. The priestly family of the Maccabees (q.v.) headed a noble band of patriots, and after a long and heroic struggle succeeded in establishing the independence of their country. The Maccabees gradually extended their conquests over Samaria, Galilee, and a part of the country beyond Jordan. But internal dissensions and civil wars raged up, and the independence of the Maccabees was considerably weakened by the inter-
terference of Rome; and Pompey invaded Palestine and captured Jerusalem in the year B.C. 63. A heavy br-
tigue was levied, but the people were still permitted to retain their own rulers. In the year B.C. 39 Herod the Great received the title of "King of Judea" from the Roman emperor, and two years afterwards he succeeded

in establishing himself on the throne. See Herodian

Family.

At his death Herod bequeathed his kingdom to his three sons, Archelaus, Antipas, and Philip; but the supreme authority was in the hands of the Roman pref-
fec and procurators. In the N. T., and in the writings of Greek and Roman geographers of that age, Palestine is usually spoken of as divided into a number of prov-
inces. That on the west of the Jordan were Iudaea on the south, Samaria in the centre, and Galilee on the north, and the latter was divided into Upper and Lower. The provinces east of the Jordan were Peræa, embrac-
ing Gilead and the Mishor of Moab, and the four sub-
divisions of Bashan already mentioned—Gaulonitis, Au-
ranitis, Batanea, and Trachonitis.

5. From the Destruction of Jerusalem to the Present Time.—On the establishment of Christianity in the Ro-
man empire a new ecclesiastical division of Palestine appears to have been made, into Prima, Secunda, and Tertia; but the boundaries are not defined, the lists of their cities are confused, and the territory embraced ex-
tended far beyond Palestine proper (see Ronaldo, p. 204-
214).

After the Mohammedan conquest Palestine became a province of the empire of the Caliphs, and on the dis-
integration of the empire the unhappy country was the theatre of fierce struggles between rival Mohammedan tribes. About the middle of the 10th century the Fatimite empire seized it; and a century later it was overrun by the Seljuk Turks, whose cruelty to Christian pilgrims roused the nations of Western Europe to the first Crusade. Jerusalem was taken by the Franks in the year 1099, and Palestine was made a Christian kingdom. But the rule of the Crusaders was brief. Defeated by Saladin, they took refuge in a few of their strongholds. At length, in the year 1291, Acre was stormed by the Sultan of Egypt, and thus terminated the dominion of the Crusaders in Palestine.

For more than two centuries after this period Pales-
tine was the theatre of fierce contests between the shep-
herd hordes of Tartary and the Mamelukes of Egypt. In 1517 it was conquered by sultan Selm, and from that time till the present it has formed part of the Ot-
toman empire. See Syria.

6. Present Status.—Palestine now forms part of two great pashalis: (1) Sidon, embracing the whole of Western Palestine; and (2) Damascus, embracing all east of the Jordan. That part of Palestine lying within the pasha of Sidon is inhabited by the Dispensations of Jerusalem and Akka. The official residence of the pasha of Sidon is now in Beiruth, and hence his prov-
ce is sometimes called the Pashalic of Beiruth. The pashalis of Jerusalem and Akka are subject to the pasha: of Sidon, and the territory extends from Latieka on the
north to Gaza on the south.

The modern inhabitants of Palestine are a mixed race, made up of the descendants of the ancient Syrians, and of the Arabs who came in with the armies of the Caliphs. The number of the latter being small, the mixture of blood did not visibly change the type. This is seen by a comparison of the Christians with the Mo-
hammedans—the former are of pure Syrian descent, while the latter are more or less mixed; yet there is no visible distinction, save that which dress makes. In addition to these there are a few Jews, Armenians, and Turks; all of whom are easily recognised as foreigners. The Druses who live in Haurân, and occupy a few villages in Galilee and on Carmel, are converts from Mo-
hammedanism.

No census has been taken of the country, and the number of its inhabitants it is impossible to ascertain with any near approach to accuracy. One thing is manifest to every observer—the greater part of the country is desolate. Jerusalem, its capital city, has but 20,000 inhabitants; and the only other places of any note are Gaza, Hebron, Joppa, Acre, Nabûha, Beirût, and Damascus. Even villages are few, and separated by
PALESTINE 580

long reaches of desolate country. The following is the nearest approach which can now be made to the popula-
tion of the country:

Palestine of Jerusalem. (Bitter, Pal. und Syr. III., 383) 600,000

Pashalic of Acre (Robinson, iii, 438) 72,000

Refugees in the Pashalic of the Sidon line (estimate) 10,000

Eastern Palestine (estimate) 280,000

Of these about 80,000 are Christians, 12,000 Jews, and the rest Mohammedans.

The following general observations are by Dr. Olin (Travels, ii, 438, 439):

"The inhabitants of Palestine are Arabs: that is, they speak Arabic; though, with slight exceptions, they are probably all descendants of the old inhabitants of Syria. They are a fine, spirited race of men, and have been Mohammed Ali much trouble in subduing them, and still more in retaining them in subjection. They are said to be for Oriental, and to have the right ele-
ments for becoming, under better auspices, a civilized, intellec-
tual nation. I believe, however, it will be found im-
practicable to raise any people to a respectable social and
moral state under a Turkish or Egyptian, or any other Mohammedan government. The
religious system enter, and, from their unavoidable con-
nections, must enter, so deeply into the political adminis-
tration, that every change in the government will
mean in the people, beyond temporary alleviations of evils too
pressing to be endured, cannot reasonably be expected.
The Moors of Morocco and Syrians are about at the edge of the
civilization possible to Mohammedans of the present
thing; the Moslems of the independent countries being,
and generally to lack integrity. Rectitude is held very
lightly by all classes. The people are commonly temper-
ate, and in their conduct, to be denominated free under
virtue. Their situation, with regard to the physical means
of comfort and subsistence, is, in many respects, favora-

ble, and, under a tolerable government would be almost
unequalled. As it is, the Syrian peasant and his family
are poorer than the peasantry of Germany, and are
inferior to the laboring classes in Europe. The

necessity of the climate, the abundance of land and
its fertility, with the free and luxuriant pasture that
occurs in the valleys and the plains, it is nearly im-
possible that the peasant should not be well supplied
with bread, fruit, meat, and milk. The people almost
always dress in coarse, unbleached cloth, though of-

ten of a slight construction and mean appearance, must
be pronounced commendations when compared with the
dark, crowded apartments usually occupied by the corre-
sponding classes in Europe. Agricultural wages vary
a good deal in different parts of the country, but I had rea-
son to conclude that the average was not less than three
or four piastres per day. With all these advantages pop-

lations on the decline, arising from polygamy, military
conciliation, unequal and oppressive taxation, forced la-

bor, general insecurity of property, the discouragement
of trade, and the plague, as the plague, as

IX. Authorities.—The list of works on the Holy Land
is of prodigious extent. Of course every traveller sees
some things which none of his predecessors saw, and
therefore none should be neglected by the student anxi-
ous to investigate the manners and customs of the
Holy Land. A select list has already been pre-

sented in the article GEOGRAPHY, to which the student is
referred; and fuller catalogues may be seen in the
works of Ritter, Robinson, Van de Velde, and Bonar.
An almost exhaustive list, accompanied by critical no-
tices, is given by Tober (Bibliographia Geographica
Palestinae, in German, Leips., 1867), with a supplement on
the earlier works—from A.D. 338 to 1000 (in Latin,
Dread, 1875). The most important of these and of later
ones we note below.

(1) Josephus is invaluable, both for its own sake and as an accompaniment and elucidation of the Bible

narrative. Josephus had a very intimate knowledge of
the country. He possessed both the Hebrew Bible and
the Septuagint, and knew them well; and there are
few works in which he is more valuable, than in

how to compare the various books together, and com-

bine their scattered notices into one narrative, in a man-

ner more like the processes of modern criticism than
of ancient record. He possessed also the works of several
ancient historians, who survive only through the frag-
ments which Josephus had in his possession. In addition
other nameless sources of information, now lost to
us, which often supplement the Scripture history in
a very important manner. These and other things in
the writings of Josephus have yet to be investigated.

(2) The Onomasticon (usually so called) of Euse-
bius and Jerome, a tract of Eusebius (c 440), "con-
cerning the names of places in the sacred Scriptures;" translated, freely and with many additions, by Je
des (c 420), and included in his works as Liber de Situ et
Nominiis Locorum Hebraicorum. This arrangement is
according to the books of Scripture, but it was
thrown into one general alphabetical order by Lord
Berkeley, and finally edited by J. Chrysostom (Amst.,
1707, etc.). This tract contains notices (often very
valuable, often absolutely absurd) of the situation of
many ancient places of Palestine, so far as they were
known to the two men who in their day were probably
best acquainted with the subject. In connection with
it, see Jerome’s Ep. ad Evouochum de locutis—

an itinerary through a large part of the Holy Land.

Others of Jerome’s Epistles, and his Commentaries, are
full of information about the country.

(3) The most important of the early travellers from
the days of the Crusades till 1197 are contained in Early Travels in Palestine, a volume pub-

lished by Bohn. The shape is convenient, but the

translation is not always to be implicitly relied on.

(4) Reiland, Palestina ex Monumentis Veteribus Ili-
estrata (1714). This is still the best work on the an-
cient geography of Palestine. It is in three books: 1.

the country; 2, the distances; 3, the places; with maps
(excellent for their date), prints of coins, and inscrip-

tion. Reiland exhausts all the information obtainable
on his subject down to his own date (he often quotes
Maurand, published in 1688). His learning is im-

mense; he is extremely accurate, always ingenious,
and not wanting in humor. But honesty and strong sound
sense are his characteristics. He has combined and
classified his materials with great ability.

(5) Benjamin of Tudela, Travel (in Europe, Asia,
and Africa) from 1160-73. The best edition is that of A. Asher (1840-1), 2 vols. The part relating to

Palestine is contained in p. 61-87. The editor’s notes
contain some curious information; but their most val-

uable part (ii, 397-445) is a translation of extracts from
the works of Eusebius, and from the works of Yakut (see
Schulten in an Index Geographicius appended to his edi-
tion of Boaehidin’s Life of Saladin (1755, fol.). Yakut
has yet to be explored, and no doubt he contains a mass
of valuable information.

(6) Abulfeda.—The chief Moslem accounts of the
Holy Land are those of Edrisi (cir. 1150) and Abulfeda
(cir. 1300), and translated under the titles of Tabula
Syris and Deccor. Arabica. Extracts from these and
from the great work of Yakut are given by Schulten in
an Index Geographicus appended to his edition of
Boaehidin’s Life of Saladin (1755, fol.). Yakut has
yet to be explored, and no doubt he contains a mass
of valuable information.

(7) Quresmianus, Terra Sancta Elucidatio, etc.
(Ant., 1583, 2 vols., fol.), the work of a Latin monk who
lived in the Holy Land for more than twelve years, and
rose to be principal and commissary apostolic of the
country. It is divided into eight books: the first three,
general dissertations; the remainder, "peregrinations"
through the Holy Land, with historical accounts and
identifications (often incorrect), and elaborate accounts
of the Latin traditions attached to each spot, and of the
ecclesiastical establishments, military orders, etc., of the
time. It has a copious index. Similar informa-

tion is given by the abbé Mulsia (Les Saintes Lieux.
Paris, 1856, 3 vols., fol.), who had in his day far less
erudition than Quresmianus, and in too hostile a vein towards Lamarr

tine and other travellers.
PALESTINE

(3) The great burst of modern travel in the Holy Land began with Seetzen, who resided in Palestine from 1806 to 1807, during which time he travelled on both the east and the west of Jordan. It was the first time the tourist visited the Hauran, the Ghor, and the mountains of Ajlun: he travelled completely round the Dead Sea, besides exploring the east side a second time. As an experienced man of science, Seetzen was commissioned to prepare a topographical chart of Syria, and was the first to found the Oriental Museum at Gotha; and his diaries contained inscriptions, notices of flora and fauna, etc. They have been published in three volumes, with a fourth volume of notes (but without an index), by Kruze (Berlin, 1854-59). The Palestine journeys are contained in vols. i. and ii. of the second edition of the diaries, and giving their results, are in Zach's Monatli. Corresp., vols. xvii., xviii., xxvi., xxvii.

(9) Burchhardt, Travels in Syria and the Holy Land (1822, 4to). With the exception of an excursion of twelve days to Safad and Nazareth, Burchhardt's journeys south of Damascus were confined to the east of the Jordan. These regions he explored and described more completely than Seetzen, or any traveller till Weitzen (1861), and even their researches do not extend over so wide an area. Burchhardt made two tours in the Hauran, in countries which have passed almost entirely through the hands of Europeans—into the mysterious Lejah. The southern portions of the transjordanic country he traversed in his journey from Damascus to Petra and Sinai. The fulness of the notes which he contrived to keep under the circumstances was a marvel, its perfect and unimpeachable accuracy is astonishing. They contain a multitude of inscriptions, long catalogues of names, plans of sites, etc. The strength of his memory is shown not only by these notes, but by his constant references to books, from which he was completely cut off. His diaries are interspersed with lengthy accounts of the various districts, and the manners and customs, commerce, etc., of their inhabitants. Burchhardt's accuracy is universally praised; no doubt justly. But it should be remembered that on the east of Jordan no means of testing him as yet exist; while in other places his descriptions have been found imperfect or at variance with facts. The volume contains an excellent preface by Col. Leake, but is very defective from the want of an index. This is partially supplied in the German translation (Weimar, 1823-4, 3 vols. 8vo), which has the advantage of having been translated by a man of great learning and judgment. These portions are contained in ch. vi. and vii. The work is published in the Home and Col. Library, 1847.

(11) Robinson, (a) Biblical Researches in Palestine, etc., in 1858: 1st ed. 1841, 3 vols. 8vo; 2d ed. 1856, 2 vols. 8vo. (b) Later Disc. Res. in 1852, 1856, 8vo. Dr. Robinson's is the most important work on the Holy Land since Reland's. His knowledge of the subject and its literature was very great, his common-sense excellent, his qualifications as an investigator and a describer remarkable. He had the rare advantage of being accompanied on both occasions by Dr. Ed Smith, long resident in Syria, and perfectly versed in both classical and vernacular Arabic. Thus he was enabled to identify a host of ancient sites, which are mostly discussed at great length, and with full references to the authorities. The drawback to his work is a want of knowledge of architectural art and a certain dogmatism, which occasionally passes into contempt for those who differ with him. He too uniformly disregards tradition, an extreme nearly as bad as its opposite in a country like the East. The first edition has a most valuable appendix, containing lists of all the modern editions of all the books in the country, which in the second edition are omitted. Both series are furnished with indexes, but those of geography and antiquities might be extended with advantage. Dr. Robinson's latest contribution to Biblical geography appeared after his death, Phys. Geog. of the Holy Land (Bost. 1865).

(12) Ritter, Palestina und Syrien, embracing part of his great Erdkunde, 1848-55. These six volumes relate to the peninsula of Sinai, the Holy Land, and to Egypt, as well as to Jordan and the south of Syria. The principal portions of these works are respectively written by various authors, the names of whom are given on the title-page, and the maps are engraved by various artists. The volume is divided into the following parts: 1. General Geographical: 2. Physical Geographical; 3. Historical: 4. Topographical: 5. Historical Topographical: 6. Statistical. Ritter has to some extent followed the plan of Beland. He has collected with wonderful industry a mass of information, and has been upon Palestine—"in book, article, or missionary letter—down to his own time. The work is often confused, and the statements contradictory; and the learned writer, not having himself visited the country, cannot always separate facts from fancies in those he quotes. This portion of Ritter's work has been translated, with some condensation and addition, by W. L. Sage (N. Y. 1866, 4 vols. 8vo).

(13) Wilson, The Lands of the Bible Visited, etc. (1847, 2 vols. 8vo). Dr. Wilson traversed the Holy Land in 1845 and 1846, and describes in great detail the topography, in which his work is astonishing. He paid much attention to the topography, and keeps a close eye on his predecessor, Dr. Robinson. His book cannot be neglected with safety by any student of the Bible; but it is chiefly valuable for its careful and accurate description of the religious bodies of the East, especially the Jews and Samaritans. His Indian labors having accustomed him to Arabic, he was able to converse freely with all the people he met, and his inquiries were generally made in the direction just named. His notice of the Samaritans is unusually full and accurate, and illustrated by copies and translations of documents, and information not elsewhere given.

(14) Schwarz, A Descriptive Geography, etc., of Palestine (Philad., 1850, 8vo). This is a translation of a work originally published in Hebrew (Stephan Tebuth, Jerusalem, 1850, A.D. 1840) by Rabbi Joseph Schwarz. Taking as his basis the catalogues of Joshua, Chronicles, etc., and the numerous topographical notices of the Rabbinical books, he proceeds systematically through the country, suggesting identifications, and often giving curious and valuable information. The American translation is a copy of the English work of George Smith, but has a much greater number of maps, and is in a more supplied in the German version, Das heilige Land, etc. (Frankfort a. M. 1852).

(15) De Saulcy, Voyage autour de la Mer Morte, etc. (1858, 2 vols. 8vo, with Atlas of Maps and Plates, and Lists of Plants and Insects), interesting rather for its fullness and accuracy of its narratives than for the excellence of his views, and the atlas of admirably engraved maps and plates which accompanies the text, than for its own merits. Like many French works, it has no index, Translated: Narratives of a Journey, etc. (1864, 2 vols. 8vo). See The Dead Sea, by the Rev. A. A. Isaacson (1857). Also a valuable letter by "A Pilgrim," in the Athenaeum, Sept. 9, 1854. Of a more critical character are his Voyage en Terre Sainte (Paris, 1860), and Derniers Jours de Jerusalem (ibid. 1866).

(16) Lynch, Official Report of the United States Expedition to Explore the Dead Sea and the Jordan (Baltimore, 1852, 4to), contains the daily record of the expedition, and separate reports on the ornithology, botany, and geology. An unofficial Narrative had been published at Philadelphia in 1844; 2d ed. 1853. This contains the fullest account yet published of the Jordan and its valley, and of the Dead Sea.

(17) Stanley, Sinai and Palestine in Connection with their History (Lond. 1853; reprinted N. Y.). This is deservedly one of the most popular works on Palestine. Its author is an accomplished scholar and a graceful writer. It is a valuable object to have been so much to make fresh discoveries, as to apply
those already made, especially the surface of the country and the peculiarities of the scenery, to the elucidation of which he has been more imitated than Robinson, but his pictures, though clear and beautiful, are frequently overdrawn. He labors too much after minute details; and in his attempts to make each picture perfect he is sometimes obliged to peril, and even to sacrifice, the poetic vision and the poetic truth, and he occasionally manifests, and do not accord well with his own observations. The chief value of the book consists in the skill and vividness with which many of the leading events of Bible history are grouped upon their old scenes. The work contains an appendix on the topographical terms of the Bible, of importance to students of the English version of the Scriptures. See also a paper on "Sacred Geography" by Prof. Stanley in the Quarterly Review, No. clxxxviii.

(18.) Tobler, Bethlehem (1849), Topographie von Jerusalem u. seiner Umgebung (1854). These works are models of patient industry and research. They contain everything that has been said by everybody on the subject, and are truly valuable storehouses for those who are unable to refer to the originals. His Dritte Wanderung (1859) describes a district but little known, viz., the far northern country beyond Galilee, Emron, Ramleh, and thus possesses, in addition to the merits above named, that of novelty. It contains a sketch-map of the latter district, which corrects former maps in some important points. His fourth journey is described in his Palestine (1859).

(19.) Van de Velde, Syria and Palestine (1854, 2 vols. 8vo), contains the narrative of the author's journeys while engaged in preparing his large Map of the Holy Land (1858). Van de Velde's Memoir (1858, 8vo) gives elevations, latitudes, longitudes, routes, and much very excellent information. His Feste Israels contains 190 colored lithographs from original sketches, accurately and admirably executed, and many of the views are unique.

Of more recent works the following may be noticed: Porter, Five Years in Damascus, the Hawar, etc. (London, 1855, 2 vols. 8vo); Handbook for Syria and Palestine (last ed. Lond. 1875); Bonar, The Land of Promise (London, 1858); Thomson, The Land and the Book (N. Y. 1859, 2 vols. 8vo), the fruit of twenty-five years' residence in the Holy Land, by a shrewd and intelligent observer; Weiss, Reisebericht uber Hawar und die beiden Trachten (Berlin, 1860, with wood-cuts, a plate of inscriptions, and a map of the district by Kiepert), the first attempt at a real exploration of those extraordinary regions east of the Jordan, which were previously visited by Peguet. Three works of recent importance are: Graham's Cambridge Essays, 1858; Trans. R. S. Lit. 1860, etc.); Drew, Scripture Lands in Connection with their History (London, 1860); Tristram, Land of Israel (London, 1865); Manning, Those Holy Fields (London, 1874); Ridgaway, The Judæan Land (N. Y. 1876).

Two works by ladies claim especial notice. [1.] Egyptian Sepulchres and Syrian Shrines, by Miss E. A. Beaufr (1861, 2 vols. 8vo). The second volume contains the record of six months' travel and residence in the Holy Land, and is full of keen and delicate observation, caught with the eye of an artist, and characteristically recorded. [2.] Domestic Life in Palestine, by Miss Rogers (London, 1862), is what its name purports, an account of a visit of several years to the Holy Land, during which, owing to her brother's position, the author had opportunities of seeing at leisure the interiors of many unadorned Arab and Jewish households, in places out of the ordinary track, such as few Englishwomen ever before enjoyed, and certainly none have recorded. These she has described with great skill and fidelity, and with an abstinence from descriptions of matters out of her proper path or at second-hand which is truly admirable.

It still remains, however, for some one to do for Syria what Mr. Lane has so faithfully accomplished for Egypt, the more to be desired because the time is fast passing and Syria is becoming every day more laden with the weight of civilization.

There are some instructive views taken from photographs in the last edition of Keith's Land of Israel. Photographs have been published by Frith (London), Robertson (Cairo), Bonfils, (Beirut), Berghem (Jerusalem), Martin (London), the English and American Exploration societies, the editors of Corbis Cyclopaedia, and others.

Maps.—Mr. Van de Velde's map has superseded all its predecessors; but much still remains to be done in districts out of the track usually pursued by travellers. On the east of Jordan, Kiepert's map (in Wetstein's Haarser) is as yet the only trustworthy document, the substance of which is embraced in his new Wandkarte (Berl. 1875). Osborn and Coleman's large wall-map of Palestine (last ed. Phila. 1876) is good for cold relief, but lacking in details. The surveys of the British and American engineers are yet incomplete, and the results have not been utilized, all of which is too bad when we consider how much it all came to. Of Alnaw, Meuné's Bibel-Atlas (Gotha, 1869) is the best for ancient details; Clark's Bibel-Atlas (London, 1868) for popular use, and Smith and Grove's two sheets in Murray's Class. and Bib. Atlas for modern particulars.

Maps have been drawn and distinguished from series of maps, designed either for general or minute use, and embracing in great detail Lower Egypt, the Sinaitic Peninsula, and Palestine, with the latest and most authentic researches on both the ancient and the modern topography. The editor of this Cyclopaedia, Mr. C. C. Ward, and Mr. C. E. C. C., who accompanied him on his late tour, is embodied in this and the following volumes.

PALESTINE, Mission in. The honor of having sent the first missionaries to Palestine belongs to America. On Oct. 31, 1819, the "Instructions from the Prudential Committee of the American Board of Commissioners for Foreign Missions" were delivered in the Old South Church, Boston, to the Rev. Levi Parsons and the Rev. Pliny Fisk (q. v.), missionaries designated for Palestine. On Feb. 17, 1821, Mr. Parsons arrived at Jerusalem, while Mr. Fisk stayed at Smyrna. In the following year Mr. Fisk lost his companion, who on Feb. 10, 1822, left his earthly abode for the heavenly Jerusalem. The vacancy was soon filled in the person of the Rev. Jonas King, who, in company with Mr. Fisk and the famous missionary Joseph Wolff (q. v.), entered Jerusalem in 1829. Three years later their joint work of taking was started. The encouraging news sent to England by Rev. Joseph Wolff induced the noble man Lewis Wayte to undertake a journey to the East with the view of forming a mission there. In this undertaking he was accompanied by the Rev. W. D. Lewis. Mr. Wayte rented a convent at Antioch, intending to make it a place where missionaries might prepare themselves, but ill-health forced him to return home. In 1824 Dr. Dalton, a medical man, was sent out to aid Mr. Lewis in forming a settlement in Jerusalem, but the latter returned home that same autumn. Upon this Dr. Dalton made an arrangement with the two American missionaries, King and Pliny Fisk, to rent one of the small convents for their establishment. Pliny Fisk, however, died in November, 1825, before the arrangement was completed, and Dr. Dalton was again left alone. It is worthy of note that the Rev. Mr. Nicolayson (+ 1856) was sent to Palestine in December, 1825. But very soon after his arrival Dr. Dalton died, in January, 1826, of an illness caught on a tour to Bethlehem. Mr. Nicolayson returned to Beirit, and studied the language more thoroughly during that winter. In the summer of the same year (1826) a rebellion broke out, and Mr. Nicolayson arrived to Safed, and lived there till June, 1827, having much intercourse with the Jews.
The troubles that ensued in the following years made it
necessary for Mr. Nicolayson to leave the country until
the year 1852, when he returned and went to Beirut
with his family, at the time when the pasha had nearly
taken Acre. The country was now quite open. In
company with Mr. Calman, a converted Jew, Mr. Nic-
olayson undertook some journeys through the country,
and on returning to Beirut they found that two Amer-
can missionaries had arrived in the city. Mr. Thomas
son, had arrived on their way to Jerusalem to labor
among the native Christians. They also resolved to
attempt the renting of a house in the Holy City. Ac-
cordingly, in the autumn of 1833, Mr. Nicolayson and
family removed to Jerusalem, to a house on Mount
Zion, where he, Dr. Gerstmann, and others through the
spring, the Presbyterian missionaries at Damascus, the German
colony at Jaffa, the Edinburgh dispensary at Nazareth,
etc., see SYRIA, MISSIONS IN.

In 1833 the subject of a Hebrew church on Mount
Zion was agitated in England, and in March Mr. Nicol-
ayson was called to London to confer regarding it. He
returned in July, 1837, and labored alone in Jerusalem
for a year. In the following year the purchase of
mission premises was effected, and, to aid Mr. Nicolayson,
Dr. Gerstmann, a medical missionary, was sent out. In
the same year the plague visited Jerusalem, and this cir-
cumstance was the first germ of that most useful institu-
tion, the hospital at Jerusalem. The missionary work
was meanwhile carried on with good results. In Decem-
ber, 1839, the digging of the foundations for the church
was commenced, and on Feb. 10, 1840, the foundation of
the new building was laid. In the same year the fa-
mous, or infamous, Damascus persecution was inaugu-
rated, and Mr. Pieritz, a converted Jew, went to Damas-
cus, sent by Mr. Nicolayson to intercede in behalf of the
persecuted Israelites (see his Strenuous respecting the Per-
secuted Jews). The first public reading of the New
Testament, and the first interesting literary efforts to
Passing over the troublesome political incidents of the year
1840, we come to the year 1841, which was signalized by
an event in many respects the most remarkable in the
annals of Jewish Missions. We allude to the estab-
lishment of the Jerusalem bishopric, an account of which
is given in the two previous volumes of this work. A pass-
ing at the new See of St. James. Jan. 21, 1841, the
newly elected bishop arrived at Jerusalem, accompanied
by the Rev. G. Williams, his chaplain, the Rev. F. C. Ewald,
a convert from Judaism († 1874), and Dr. Mac-
gowan, a medical missionary. In the following year a
college, or house for the reception of converts, was
opened in the month of May (which, however, was
closed in 1844), and on Dec. 12, 1844, a hospital was
opened. In November, 1845, the mission was severely
tried by the sudden removal from the scene of his earthly
career of bishop Alexander. The sad event occurred in
the wilderness between Canaan and Egypt, on the
morning of Sunday, Nov. 28. Bishop Alexander
was succeeded by the present bishop Gobat, for-
merly vice-president of the Malta Protestant College,
which still exists. The see of St. James, and who arrived
at Jerusalem Dec. 28, 1846. In 1847 the Palestine
mission was enabled to record a public act of considerable
consequence to the Church and mission at Jerusalem. The
British ambassador at Constantinople, lord Cowley,
had succeeded in obtaining a firman recognizing the
Protestant Reformed Church, and giving it the status of a
congregation and community. In the year 1848, Dec. 21, the House
of Industry was opened, which, up to the present day, is
found an excellent adjunct to the mission. The sev-
enteenth anniversary of the entry of the first Protestant
bishop into the Holy City was selected for the con-
secration of the first Protestant church ever built there—
the first church, after many centuries, dedicated to the
pure and scriptural service of almighty God. The ser-
mon preached on this occasion by the bishop was on
"The lesson of the house and the church," and when the
reader reflects on the fact that the whole of the sermon was
"prayer for all people." This took place Jan. 21, 1849.
In the year 1851 it was thought necessary to examine
afresh into the wants and condition of the mission.
It was resolved to invite Mr. Nicolayson to visit Eng-
land for personal conference, the Rev. J. C. Reichardt,
having meantime labored with and among the Jews in the
place. The latter accordingly left England in the month of
October, lutevaxed with a special mission, partly,
as has been said, to act for Mr. Nicolayson, and
partly to co-operate with the local committee on the
spot, which it had been deemed expedient to form in the
year 1849, "in order to place the missions in a more
effective and satisfactory footing, with such assistance
as might be found available." Such plans were greatly
facilitated when the committee was afterwards provi-
dentially enabled to accomplish what it had often de-
sired, and convened at St. Stephen's, in London, with
the object of acquainting the English clergyman of some experience and standing
at home. This was brought about when the Rev. H. C. Crawford offered his services to the society for mis-
ionary labor in Syria. He arrived in the Holy City on
Feb. 21, 1852. The cause of Christ's Gospel in Pal-
estine was not only strengthened from this, but from
other sources also. The Church Missionary Society de-
emed it expedient to send a laborer to Palestine, and the
late king of Prussia also appointed a minister whose
cure was to comprise the German members of the Prot-
estant community. For this latter office the Rev. F. P.
Valentinier was selected, who at once expressed his ear-
nest desire to co-operate with those who had preceded
him in the work for the salvation of souls, and who has
since proved of the utmost value to the cause. An-
other valuable addition was in the same year made to
the medical department by the establishment of the
Deaconesses' Institution. During a period of sickness
the want of proper nurses had been severely felt. In
order to remedy this evil, bishop Gobat wrote to the
Rev. Theodor Fliedner, asking him to send two of the
poorest of his Sisters from Kaiserswerth to Jerusalem.
Passing at the New See of St. James. Fliedner himself brought four deaconesses. In the year
1854 a movement of a general character was set on foot
in order to counteract the growing influence of the mis-
ion. Mr. Cohen was deputed by baron Rothschild and
other Jews of influence to visit the Israelites in the
East, specially in Jerusalem, with a view to the im-
provement of their circumstances. But what was in-
tended to be a blow to the mission only proved a means
of making it better known. In the year 1856 it pleased
God to call to his rest the Rev. Mr. Nicolayson, and the
Rev. H. C. Crawford was placed at the head of the mis-
ion. On Feb. 5, 1860, Dr. Magowan was called to his
rest, and a few months previously, Nov. 22, 1859, Miss
Cooper, who at her own cost had established the Insti-
tution for Jewesses, was also called away. Ill-health
soon after compelled Mr. Crawford to leave Jerusalem
permanently, and his place was occupied by the Rev. J.
Barclay.

Looking at the present status of the mission at Jerusalem, we may record the following from the
latest report. Besides the bishop, there are employed
twenty-one missionaries, viz., two ordained missionaries,
two unordained missionaries and superior lay agents,
eight colporteurs, Scripture readers, depositaries, and
assistants, and eight school masters and mistresses, all
employed by the London Jews' Society, partly engaged
in direct missionary work, the Hospital, House of Indus-
try, especially in Jerusalem, and Beth Hanan. It is
also a fact worthy to be noticed that until the arrival
PALESTRINA

through a life of poverty during eight pontificates; his
works represent his love for the most of his day; his
music was admired, and his publications unreproachable.
He died in 1594. Palestrina's music is learned and grave; and
that written for the Church, when heard in the kind of
place for which it is adapted, and attended by pomp
and pageantry, is very impressive, and acts with irre-
resistible emotional power. But in the confines of a
room or chamber his compositions, whether sacred or
secular, have, with few exceptions, no charms for hear-
ers who have not cultivated a taste for simple, solid,
airless harmony, or for the intricacies of fugal points
and counterpoints. To the jurisprudence of this cele-
brated musician is added a study than genius. Though Palestrina's compositions are not above
criticism, it must be conceded that he ranks head and
shoulders above all his predecessors and contempo-
raries, and must be considered the first musician who
reconciled musical science with musical art; in short,
his works form a most important epoch in the history
of music. His memoir has been written by the abbe
Baini (1828) and by Winterfeld (1832).

Pael. See Bith-Pael.

Pae, Stephen, a noted Bohemian divine, flour-
ished during the anti-Reformation movement of the
15th century. He was at first a friend of Huss, but
finally turned, and became his most violent accuser
and persecutor. Of the early personal history of
Paez we have nothing at command. We first en-
counter him as a friend of Huss, and became so by
the great Bohemian Reformer. We are told that they
shared bed and table together. Paez sided not only
with Huss, but most enthusiastically he commended,
too, the writings and opinions of Wicklif, and fre-
quently spoke in their defence. Thus on a public
debate before the university at Prague, when he had
finished one of his speeches for the good cause by ex-
hibiting and explaining the views of Wicklif, he
threw the book from which he had quoted into the
midst of his audience, excnaling, "Let who will im-
pugn a single word, I will defend it." About 1409
several of Huss's most faithful adherents, then called
"Wicklifites," were imprisoned by king Wenzel.
Among these persecuted ones was Paez; and when
at last released after an eighteen months' incarceration,
he came out much quieted and greatly in fear of
the papists. Huss had remained all this time un-
moved, and proved his fitness for leadership; Paez
had been thoroughly frightened, and with equal force
proved his incapacity. True, he still remained an
adherent of the anti-Reformer; and when the papal bull
came out for the suppression of his works (Sept. 9, 1411)
they were put into the "Index." But in 1412, when the university held
a conference to consider in how far it was wise to sus-
nain Huss against pope and king, Paez withdrew from
Huss and endorsed the papists again (ibid. i, 175), in
so tame and cowardly a manner that Huss said of
Paez, "he walked and turned backwards like a
crab." The truth is, Paez was governed by world-
ly prudence. He saw that the Reformer's cause was
a desperate one. Few in numbers, Huss and his adher-
ents had to encounter the royal and papal power, and
therefore much likelihood of success. A timely retreat
would cover all past offences and soon restore
him to papal favor. He found, however, that he had
counted without his host. The papists demanded that
he should not only reject Huss, but oppose him; and,
rather than lose his gains in the conflict, and be-
come a most violent accuser and persecutor.
Huss had made his special point the supreme and sole
authority of the Scriptures. Paez replied by a defence
of the papal supremacy in the Church visible. But
Huss was more than a match for his former friend; and
he did not hesitate to repudiate. At the Council of
Constance before the Council of Constance with his case. Thith-
ter, too, Paez followed Huss, the bitter zeal of the papal

defender having in the mean time been greatly aggra-
vated by the unpleasant memories of frequent defec-
tions among his clients in the Reform's sound logic. When the cabinet in council assembled for private session were hesitating how to dispose of Huss, Palez
secured admission, and urged and insisted that the heretic should not be set at liberty again, and they finally adopted Paleet's policy. When word of this was taken to Huss, and he insisted upon a public bear-
ing before the council, Paleet again made use of arti-
tics and intrigues, and prevented a favorable reply to Huss's request. Paleet knew the power of Huss's elo-
quence, and he, as well as the other papiists who were ucarrying on the intrigue, feared the result of the experi-
ment he tried upon the council. He as well as his coadjutors failed, however, in securing his
condemnation unheard. King Sigismond saw the in-
justice of such an act, and prevented the plot; but even in the audiences granted, Paleet always care-
fully watched his opportunities to worst his rival in argument. His course at this time was in many res-
pects contemptible, yet it may be palliated on the ground that Paleet, probably, with all his animosity, merely sought the humiliation and not the life of Huss and that it was but a part of a general spirit which at the time controlled Paleet. Certain it is that Huss had been condemned, and efforts were making to se-
cure his abjuration of heresy, Paleet was among those who visited Huss in prison; and the gentle manner in which he treated his former friend evinces that he was not altogether void of shame and pity. But Paleet, trying to hold himself by native talent and unruffled industry, he was in the presence of one greater, because he allied with all these distinctions the virtue of honor and truthfulness.
Paleet had been selected by Huss as his con-
fessor in his dying hour, but the papiest servant felt too keenly the sad ending of this persecution to have com-
piled with Huss's request. When Jerome was perse-
cuted, Paleet again accused, but with less acrimony and persistency. Paleet died about the middle of the 15th century; of his writings none are now accessible. See Guillet, Life and Times of John Huss, vol. i and ii; Mon. Huss., as referred to above; Jenkins, Life and Times of Cardinal Julian, p. 46; Ep. Huss. i, in his Opp. vol. i; Palacky, Böhmische Geschichte, iii, 161 sq.
Paley, William, D.D., an eminent English divine and philosopher, and one of the most noted characters of the 18th century, was born at Peterborough, July 24, 1743. He was descended from an old and respectable family in Caven, in the West Riding of Yorkshire. During his infancy his father removed to Giggleswick, in Yorks., remaining there only a few years and afterwards appointed head-master of King Edward's School in that place. William was educated under the paternal roof, and speedily distinguished himself by great abilities, a studious disposition, and a ripeness and discrimination of intellect. In his seventeenth year he was entered a sizar of Christ's College, Cambridge. But unhappily, seduced by the influence of a few gay and dissolute compan-
ions, the first two years of his college life were enti-
tirely lost or mispent. The bad fruits of this vagabond life made him a sadler and a wiser man, and with his wisdom he hints that fortitude which helped him to disguise himself from this suicidal life and he resolved on a course of devoted study. So rapid was his progress that in 1763 he took the bachelor's degree with the highest honors. He then taught for three years in an academy at Greenwich. In 1765 he ob-
tained the badge of the Royal Society of London, the subject being A Comparison between the Stoic and Epicurean Philosophy with respect to the Influence of each on the Morals of a People, in which he characteristically argued in favor of the latter. Next year he was elected a fellow of his university, Christ's College, and soon after collected to Dr. Low's家喻户晓 of moral and political philosophy, as well as on the New Testament. This early occupation directed Paley's mind to subjects which, when more maturely studied, he saw to be applicable in the study of human nature. He had entered the priesthood in 1767, and in 1776, on his marriage, had of course been obliged to yield up his fellowship. His early patron, Law, who had become bishop of Carlisle, and who was well aware of Paley's merits, now promoted him in the Church. Paley has left an account of his life, in'The Life of the Right Reverence James, Lord Gladstow, by God's permission, to Appley, Westmoreland, till, in the course of years, he rose to be archdeacon of Carlisle (1782), and chancellor of the diocese (1785). He was a great friend to the abolition of the slave-trade: and in 1789, when the first great discussion in the House of Commons was expected, he drew up a short but appro-
riate and judicious treatise, entitled Comments against the Unjust Pretensions of Slaves-dealers and Holders to be indemnified by pecuniary Allowances at the public Ex-
pense, in case the Slave-trade should be abolished, and sent to the committee. The bishop of Durham, entertain-
ing great respect for him, recommended him for the service which Paley had rendered to the abolition cause, presented him with the valuable rectorcy of Bishop Wear-
mouth, worth twelve hundred pounds a year. His last years, largely given to literary labors, were extremely fruitful. He died in his 72nd year, leaving a last try for life, which he bore with his bodily pain meekly, ever trusting in the kind dispositions of a loving heavenly Father. Paley's piety with becoming progress became more fervent, elevated, and established as he advanced in life. He lingered, notwithstanding the malignity of his disease, until May 25, 1805, when he suddenly died. Dr. Paley was in-
clined to corpulency, and his countenance was no index of the intellectual and moral attributes—the suavity, benevolence, strong good sense, and clear judgment that distinguished him. Among his friends no man was more highly or more justly esteemed than Dr. Paley; his literary attainments were exceeded only by his many amiable traits of frankness and good-humor. In matters of opinion he was liberal-minded and chari-
table. He was a friend to free inquiry and an able support of the principles of civil liberty, as we have seen above. He was a peaceable man, and in the study of foreign policy he was suspected of heterodoxy, having manifested a strong inclination to Arian sentiments. As a writer, he is distinguished not so much for originality as for that power of intellect by which he grasps a subject in all its bearings, and presents it in the most proper and pub-
lical lectures on moral and political philosophy, as well as on the New VII.—19*
law of the land, and the Scriptures, as rules of action; rejecting, after Locke, the notion of a moral sense, or an innate capacity of moral judgment; and defining what he means by human happiness and virtue), Paley proceeds to explain the principles and to lay down the foundation of his system. His desire of introducing into the foundation of his system too much of the exactness of name and idea, and the method of coming at the divine will concerning any action by the light of nature is to inquire into the tendency of the action to promote or diminish the general happiness. Hence, then, Paley arrives at his principle of expediency. It is the utility of any moral rule alone which constitutes the obligation of it.

The obligation to keep a promise, according to the principle of expediency, arises from the circumstance that "confidence in promises is essential to the intercourse of human life," and the sense in which a promise is considered is that the promise is knowledgeingly and willingly conveyed to the mind of the person to whom it is made. Contracts are mutual promises, and therefore governed by the same principles; consequently, whatever is expected by one side, and known to be so expected by the other, is to be deemed a part of the contract. The contract, interpreted according to the "animus imponens," that is, in the sense which the imposer intends by them. Indeterminate duties are charity, gratitude, and the like. They are called indeterminate because no precise and formal limits can be assigned to their exercise. Another class belonging to this first set of duties originate from the constitution of the sexes. The second set of duties are those which a man owes to himself. As there are few duties or crimes whose effects are confined to the individual, little is said about them. A man's duty to himself consists in the care of his faculties and the preservation of his person, and the guarding against those practices which tend to injure the one or the other. The third division of duties are those which are due to God. In one sense, every duty is a duty to God; but there are some of which God is the object as well as the author: these are worship and reverence. The second part, which is devoted to the elements of political knowledge, is pervaded, in determining the grounds of civil government, and the reasons of obedience to it, by the same principle as that which constitutes the foundation of his moral system. 13 Utilitarianism is the foundation of all government. Hence, whatever irregularity or violations of equity, or fraud and violence
trated with singular ability, is briefly this: A revelation can be made only by means of miraculous interference. To work a miracle is the sole prerogative of the Supreme Being. If therefore miracles have been wrought in confirmation of the religious beliefs, they are the visible testimony of God to the divine authority of that religion. Consequently, if the miracles alleged in behalf of Christianity were actually performed, the Christian religion must be the true one. Whether the miracles were actually performed or not depends upon the credibility of those who professed to have been the recipients of them, that is, the apostles and first disciples of Jesus Christ; and their credibility is demonstrated from this consideration—that they passed their lives in lairs, dangers, and sufferings voluntarily undergone in attestation of the accounts which they delivered and solely in consequence of their belief in those accounts; and that they also submitted, from the same motive, to new rules of conduct. "They could not have been deceived; they must have known whether Christ was an impostor or not; they must have known whether the miracles he did were real or pretended. Neither could they have been deceivers; they had no intelligible purpose to accomplish by deception; they had everything to lose by it. On the other hand, by being still—by letting the subject rest—they might have escaped the sufferings they endured. It is perfectly possible, and entirelly out of the realm of human action, that men should set about propagating what they know to be a lie, and yet not only gain nothing by it, but expose themselves to the manifest consequences—enmity and hatred, danger and death. In 1892 Paley published perhaps the most widely popular of all his works, Natural Theology, or an Essay on the Existence and Attributes of the Deity, which, however, is based, and to a large extent borrowed from the Religious Philosopher, the work of a Dutch philosopher named Niedeweght, an English translation of which appeared in 1719. The present quotation is in part adequately reliable, but have been accounted for by Paley's own method of composition. The Natural Theology was "made up" from his loose papers and notes written while he was a college tutor, and in the course of such a long time as elapsed since its first composition, Paley had forgotten the sources from whence he derived them. It is also but fair to state that he has taken nothing which he has not greatly improved—" nihil tetigit, quod non omnicavit." Paley has made that clear, impression, and convincing which in the original was confused, illegi cal, incoherent. He has rearranged what he has borrowed; and, in all the rest of his productions, the matter is arranged and the argument followed out with consummate judgment. His object is to establish the fact of benevolent design in the works of the visible creation. Hence the existence of a Supreme Designing Intelligence is inferred; and his personality, unity, and goodness demonstrated. It is not only one of the most convincing, but one of the most delightful books in the English language. "In the character of a defender of the faith," says the Quarterly Review, "we cannot hold him to a line of unguarded admiration; in any other character his praise must be more qualified. The department of theology with which alone Paley was thoroughly conversant was the Evidence. He had not the necessary qualifications for a complete investigation of the doctrines. But see him how we will, we always find the good sense of a plain, shrewd, practical Yorkshireman displayed on these branches of religion. We think it next to impossible for an unbeliever to read the Evidence, in the order of his arrangement, unshaken. His Natural Theology is philosophical, and leaves nothing the natural man without the jargon of science; profound, but so clear that its depth is disguised. He cares not whence he fetches his illustrations, provided they are useful for the purpose." A valuable edition of this work, with notes and scientific illustrations, was published (1896-98) by Lord Brougham and Sir C. Bell, the former furnishing a preliminary discourse on natural theology. This discourse is divided into two parts: the first contains an exposition of the nature and character of the evidence on which natural theology rests, with the intention of proving that it is a much more refined and sure kind of either physical or mental philosophy; and the second is devoted to a consideration of the advantages and pleasures which the study is calculated to afford. Subjoined to the volume are some notes on various metaphysical questions connected with the subject. Besides the above works, Paley was the author of various sermons and tractates. Several editions of his entire works have also been published. One in four volumes, containing also posthumous sermons, and published by his son, the Rev. Edmund Paley, in 1888, may be regarded as the standard edition. There is also an American edition, with Life (Philadelphia, 1851, 8vo). See, in addition to the authorities already quoted, Memoirs of Wm. Paley, by W. Meadley (Sunderl. 1809, 8vo, and often); Ueberweg, Hist. of Philos. ii. 91; 991; McChesney, Scotch Philos. p. 981; Morell, Hist. Philos. 18th Century, p. 105, 297 sq.; Hagenbach, Hist. of Doct. vol. ii (see Index); The Quart. Rev. (Lonid.), ii. 83 sq.; ix. 388 sq.; Encyclopaedia Brit. s. v.; English Cyclop. s. v.; Allibone, Dict. of Brit. and Amer. Auth. s. v.

Palgrave, Francis, Sir, an English knight, distinguished alike as a zealous and intelligent antiquary and as a historian, was born of Jewish parentage, named Cohen, and lived in his early childhood nothing is known beyond the fact that at the age of eight years he translated the Batrachomymachia of Homer from a Latin version into French (1797, 4to). When Cohen joined the Christian Church we are not able to state, probably long before he was called to the bar of the Inner Temple (1792), and before having received the honor of knighthood (1832). Sir F. Palgrave was for many years deputy keeper of the Public Records of Britain (from about 1886). He died July 6, 1881. Of his many writings we will only mention the following: The Rise and Progress of the English Commonwealith, Anglo-Saxon Period, containing the Anglo-Saxon Policy and the Institutions arising out of Laws and Usages which preceded the Conquest (1832, 2 vols.):—The History of England: Anglo-Saxon Period (1831, 1835, 1868; vol. xxi of Murray's Family Library);—The History of Scotland and the Transactions between the Crown of Scotland and England (1837):—Truths and Fictions of the Middle Ages:—The Merchant and the Friar (1837, 1844):—The History of Normandy and of England (1837, 1840, 4 vols.). Besides many other works, he wrote articles to the London Quarterly, and other periodicals. His great merit, in his historic writings, consists in the extensive use made by him of original documents, by aid of which he not only himself very much enlarged our acquaintance with the history and social aspects of the Middle Ages, but pointed out to others the advantage to be derived from a careful study of the original sources of information. See Allibone, Dict. of Brit. and Amer. Auth, s. v.; Edinb. Rev., July, 1832; January, 1855, p. 158; Hallam, History of the Middle Ages, Preface to Sup. Notes. i, 11 (New York, 1872); Scott, Lectures on Modern History, hist. viii; Edinb. Rev., lxvi, 86; Westminster Rev., July, 1857; (London) Athenæum, 1857, Feb. 28; North Amer. Rev., April, 1858; Margallouthus, Vestiges of the Historic Anglo-Hebrews in East Anglia (London, 1870), p. 105 sq.; Fick, in the Evangel. (Lutheran) Quart. Rev., July, 1876, p. 378. Pali (a corruption of the Sanscrit Prākriti, q. v.) is the name of the sacred language of the Buddhists. Its origin must be sought for in one or several of the popular dialects of ancient India, which are comprised under the general name of Pārākriti, and stand in a similar relation to Sanskrit as the Romance languages, in their earlier period, to Latin. See Sanscrit.
PALICI

PALICi (i. e. demons), deities anciently worshiped in the neighborhood of Mount Etna, in Sicily. They were said to be twin sons of Zeus and Tetha, daughter of Hephaestus. In remote ages they were represented by human sacrifices. The temple of the Palici was restored to an asylum by runaway slaves.

Palilia, an ancient Roman festival which was celebrated annually on April 21 in honor of Palata, the god of shepherds. On the same day afterwards this festival was kept as a memorial of the first founding of the city by Romulus. A minute description of the ceremonies practiced on this day occurs in the Fasti of Ovid. The first object to which the festival was directed was a public lustration by fire and smoke. For this purpose they burned the blood of the October-horse (q.v.), the ashes of the calves sacrificed at the festival of Ceres, and the shells of beans. The people were also sprinkled with water; they washed their hands in springwater, and drank milk, mixed with must. In the evening the stables were cleansed with water, sprinkled by means of laurel branches, which were also hung up as ornaments. To produce purifying smoke for the sheep and their folds, the shepherds burned sulphur, rosemary, fir-wood, and incense. Sacrifices besides were offered, consisting of cakes, millet, milk, and other eatables, after which a prayer was offered by the shepherds to Palata, their preserving deity. Fires were then kindled, made of beaks of wax, and amidst cheerful strains of music, the sheep were purified by being made to pass through the smoke three times. The whole ceremonies were wound up with a feast in the open air. In latter times the Palilia lost its character as a shepherd festival, and came to be held exclusively in commemoration of the day on which the building of Rome commenced. Caligula ordered the day of his accession to the throne to be celebrated as a festival under the name of Palilia. See Gardner, Folkta of the World, p. 589, 590.

Palimpsest (παλιμπστος, rubbed out again), a term applied to ancient manuscripts, of which the older writings have been erased in order to use the parchment as paper for writing on them again. A good specimen is the Wofenbutts MSS. (q. v.).

Palingenesis (Gr. παλιγγενεσία, birth) is a term that appears to have originated among the Stoics, who employed it to denote the act of the Demiurgus, or Creator, by which, having absorbed all being into himself, he reproduced it in a new creation. This word is found in the New Testament (Matt. xix, 28, where it is used in allusion to the judgment of this world, and the αἰών μικρος; and Titus iii, 5, where it is used in reference to baptismal regeneration, λατρεύω παλιγγενεσίας) has given it a place in mystical theology, and divines have variously used it to express the resurrection of men, the new birth of the individual soul, and the restoration of the world to that perfect state that it lost by the Fall—"the new heavens and the new earth wherein dwelleth righteousness." The term is also applied to designate both the great geological changes which the earth has undergone and the transformations in the insect kingdom, such as of caterpillars into butterflies, etc. See NEW BIRTH: RESURRECTION.

Palingenius, Marcullus, an Italian poet of the 16th century, was a native of Stellata, in Ferrara. He is chiefly known by his Zodiaca Vitis, which brought him into trouble, as it contains many sacrilegious attacks on monks and Church abuses. His name is therefore in the Index Librorum Prohibitorum as a Lutheran heretic. The book is entitled Zodiaca Vitis, sit de hominum vita, studio ac moribus optime spectata; libri xii non decem ad exemplaria primitiva sedulius custodi (Lott. 1722, small 8vo).

Palissy, Bernard, a Huguenot artisan, noted for his faithful adherence to the Reformation movement, and also one of the most illustrious of the Gospellers (q.v.), was eminent as a natural philosopher, chemist, geologist, and artist. He is generally known as "Palissy, the great Potter," as of his about 1561 Lerm Chapelle Biron, a poor village in Périgord, where his father brought him up to his own trade of a glazier. The boy was by nature quick and ingenious, with a taste for drawing, designing, and decoration, and he made himself master of the art of the glazier. He was called to the churches of his neighborhood whenever such skill was required. When his term of apprenticeship was past he set out upon his "wanderings," and travelled extensively, as is the custom of Continental European artisans. Spanish, French, Swiss, Dutch, and German territory he thus visited at a time when the arts of art were most deeply moving the general revolts of Luther from Rome. Of course, the thoughtful young man belonging to a class of mechanics somewhat cultured, and besides by nature a shrewd observer and independent thinker, he could not fail to be influenced by the popular agitation. A Bible which fell into his hands he read, notwithstanding the papal ban against this liberty in a layman. It did not fail to make a deep impression upon the inquiring and thoughtful Palissy; and at thirty he was a convert to the side which advocated the free circulation of the Scriptures, and justified the Bible under the agencies of St. Bartholomew. He was now in his native country; but aware of the danger those were subject to who advocated these views, he shunned Paris, and resided at Saintenge, in the west of France. Palissy was born to lead others. He had not lived long here before the townspeople were but too inclined religiously, as if their pastor. At first a little congregation had formed, and to these he dispensed spiritual food not only on Sundays but weekdays. They came to be specially designated as "the Religionists," and were known throughout the town to be "innocent, harmless, peaceful, well-disposed, and industrious. As their number rapidly increased the Romanists felt impelled to a like devotion and holy profession, and soon, to use the words of Palissy, "there were prayers daily in this town, both on one side and the other." That both were in earnest was evidenced by the charitable feeling which governed all. They used the same churches by turns, and there was no disposition to persecution. But though Palissy devoted so large a share of his time to religion, he did not fail to make progress too as an artisan. Indeed, in many respects the period of his life is one of the most memorable. In 1572, one of his first attempts in this direction, he undertook the prouder series, which we are told came about as follows: "An enamelled cup of 'Fineness,' which he saw by chance, inspired him with the resolution to discover the mode of producing white enamel. Neglecting all other labors, he threw himself into his investigations. In some months he had perfected the art of long period of sixteen years. He at last exhausted all his resources, and for want of money to buy fuel was reduced to the necessity of burning his household furniture piece by piece; his neighbors laughed at him, his wife overwhelmed him with reproaches, and his starving family surrounded him crying for food; but in spite of all these discouragements he persisted in the search, and was in the end rewarded by success." A few vessels adorned with figures of animals, colored to represent nature, sold for high prices, and he was then enabled to complete those investigations by which he became famous; and, though a Huguenot, he was protected and encouraged, in 1599, by the king and the nobility, who employed him to embellish their mansions with specimens of his art. In 1600 he was lodged in the Tuileries, and was specially exempted by Queen Catherine de’ Medici from the ordinances of St. Bartholomew, both as to regard to her own benefit than from kindness. In March, 1575, he began a course of lectures on natural history and physics, and was the first in France to substitute positive facts and rigorous demonstrations for the fanciful dissertation of philosophers. In the course of these lectures he gave (1584) the first right notice of
exercise them by his command. If, however, any archbishop in the Romish Church, before he receives the pallium, perform those offices which result immediately from the possession of it, such as, for instance, those relating to orders and to the clergy, etc., the acts themselves are valid, but the archbishop offends against the canons and laws of the Church.

The pall was part of the imperial habit, and was originally granted by the emperors to the patriarchs. Thus Constantine, on the use of the pall to the bishop of Rome, probably Linus or Sylvester, and Aquinas, patriarch of Constantinople, when expelled from his see, is said to have returned the pall to the emperor Justinian. In 386 it was for the first time given to a bishop of the see of Ostia, who was then officiating at the consecration of the Baptistery, the archbishop then being not a bishop at the time of his election. The bishopric of Arles had the pall from a very early period. The bishopric of Aosta was given it about A.D. 600. Isidore of Seville says that it was once common to all bishops, but in time it certainly was given to bishops only as an exceptional honor, as when St. Blaise, bishop from pope Gregory II, the bishop of Bamberg in 1046, and the bishop of Lucca from Alexander II in 1057. Pelagius or Damasus required all metropolitans to fetch their pall within three months after consecration; pope Gregory I forbade the reception of money by any one for the delivery of it at its delivery, but the journey and fees in time became a sort of tax, which cost the archbishop of Mayence 30,000 gold pieces. Pope Gregory sent a pall to St. Augustine of Canterbury, and in 734 Eglfrith of York, after great difficulty, procured the same distinction, which had been withheld since 644. In 1472 the archbishops of St. Andrews' became independent of York and metropolitans of Scotland in right of the pall. Four palls were given for the first time at the Council of Kiel, 1132, to the Irish archbishops by the papal legates, this being their earliest acknowledgment of the pope's supremacy. When the see of Rome had carried its authority to the highest pitch, under Innocent III, that pontiff decreed the pall to be a mark of such distinction as is attached to it to this day. Neither the functions or title of archbishop, as we have seen above, can be assumed without it: and in order to make it a source of profit to the papal exchequer, every archbishop is buried in his pall, so that his successor may be obliged to apply to the pope for another and pay for the privilege.

The pall represents the lamb borne on the Good Shepherd's shoulders, and also humility, zeal, a chain of honor, and pastoral vigilance. Its other names were anephorion, superhameraie, and—in Theodoret and St. Gregory Nazianzen—epi stola. Before the 8th century it was ornamented with two or four red or purple, but now with six black crosses, fastened with gold pins, which superseded an earlier ornament, the Good Shepherd, or one cross, of the 4th century. It has been supposed to be the last relic of an abbreviated toga, reduced to its latice by degrees. In the time of Gregory the Great it was made of white linen cloth without seam or needlework, hanging down from the shoulders. It has pendants hanging down behind and before to represent the double burden of the pope.

2. Pall (Gr. ιεντινιν, ραττενοτοφινα, arkwna) is also the name of the cloth hanging in front of an altar: the modern antependium, like the blue cloth of the golden altar (Numb. ii. 11). In 1630, at Worcester cathedral, the upper and lower fronts, and the pall or middle covering, are mentioned. There is one with the acts of saints of the 15th century at Steeple Aston, Oxford; besides wall hangings, according to Rupert, betokening the future glory of the Church triumphant.

3. In a strictly liturgical sense the word pall is applied to the linen cloth covering the table or slab of the altar used in the celebration of the mass. It was ordered by the councils of Lateran and Rheims, and by pope Boniface III. In the Greek Church, on the four
corners of the holy table are fixed four pieces of cloth called the Evangelists, because they represent their effigies closing the Church, which calls the faithful to Christ from every quarter of the world. Over these are laid the linen cloth, called the Body cloth, representing the winding-sheet of the Lord in the tomb (John xx, 7); a second of finer material, symbolizing the grave of the Church, was presented to the Pope by the Emperor as a gift, and a third the corporal proper. The use of three cloths in the Latin Church is said to have existed in the time of Pius I. St. Opistatus of Milevi mentions an altar cloth. In the 6th century silk and precious stoles were used, as St. Gregory of Tours informs us. Constantine gave his daughter, Ethelgiva, an altar cloth of gold to St. Zachary Puxet. He also presented one wrought with the Nativity and studded with pearls. The modern Roman pall is a square piece of linen cloth—sometimes limber, sometimes made stiff by inserting pasteboard—sufficiently large to cover the mouth of the chalice. The upper service is often of silk embroidered, or of cloth of gold. The surface in contact with the chalice must always be of linen. A fair white linen cloth and a carpet of silk or decent stuff are required in the English Church. The form is the ancient pall, and should be fair, that is damasked or ornamented, and so beautiful (Iaa, iv, 2; Ezek, xxvi, 17); it is white (Rev, xvi, 6; xix, 14), like Christ's raiment, exceeding white as snow (Mark ix, 8). It ought to hang slightly over the front of the altar, but at the end nearly to the ground (Walcott, Sacred Archaeology, 

4. Besides all these there is the funeral pall, an ample covering of black velvet or other stuff, which is cast over the coffin while borne to burial. The ends of the pall are held during the funeral procession by the most distinguished among the friends of the deceased, generally selected from among those not connected by blood. See Siegel, Christl. Alterthumer, iii, 48 sq.; Bingham, Orig. Eccle.; Walcott, Sacred Archaeol. & v.; Riddle, Christian Antiquities (see Index); Hefele, Concilienregister, vol. i, ii, and iv; Elliott, Delineation of Ro-

Palladino, Filippo, an Italian painter, was born in Florence about 1544. It is not known by whom he was instructed, but Lanzi says he seems to have studied the Lombard more than the native artists, and to have been acquainted with Barocci. After acquiring considerable reputation by his picture of the Decollation of St. John in the church of that saint at Florence, generally selected from among those not connected by blood. See Siegel, Christl. Alterthumer, iii, 48 sq.; Bingham, Orig. Eccle.; Walcott, Sacred Archaeol. & v.; Riddle, Christian Antiquities (see Index); Hefele, Concilienregister, vol. i, ii, and iv; Elliott, Delineation of Ro-

Palladino, Andrea, a famous Italian architect, was born at Vicenza Nov. 30, 1516. After having critically studied the writings of Vitruvius, and the monuments of antiquity at Rome, he settled in his native city, and first acquired a reputation by his restoration of the Basilica of Vicenza. Pope Paul III next invited him to Rome, designing to intrust him with the execution of the works then going on at St. Peter's, but unfortunately Paul died before Palladio's arrival. He was employed for many years in the construction of numerous buildings in Vicenza and the neighborhood, in all of which he displayed the most exquisite taste combined with the most ingenious and imaginative ornamentation. His style, known as "the Palladian," is composi-

Palladium, a name among the ancient Greeks and Romans of an image of Pallus (q. v.), upon the careful keeping of which in a sanctuary the public welfare was believed to depend. The Palladium of Troy is peculiarly celebrated. According to the current myth, it was thrown down from heaven by Zeus, and fell on the plain of Troy, where it was picked up by Ilus, the founder of that city, as a favorable omen. In the course of time the belief spread that the loss of it would be followed by the fall of the city; it was therefore stolen by Ulysses and Diomede. Several cities afterwards boasted of possessing it, particularly Argos and Athens. Other accounts, however, affirm that it was not stolen by the Greek chiefs, but carried to Italy by Enea, and the Romans said that it was preserved in the temple of Vesta, so secret was the manner in which the Pontifex Maximus might not behold it. All images of this name were somewhat coarsely hewn out of wood.

Palladino, Filippo, an Italian painter, was born in Florence about 1544. It is not known by whom he was instructed, but Lanzi says he seems to have studied the Lombard more than the native artists, and to have been acquainted with Barocci. Palladino, Andrea, a famous Italian architect, was born at Vicenza Nov. 30, 1516. After having critically studied the writings of Vitruvius, and the monuments of antiquity at Rome, he settled in his native city, and first acquired a reputation by his restoration of the Basilica of Vicenza. Pope Paul III next invited him to Rome, designing to intrust him with the execution of the works then going on at St. Peter's, but unfortunately Paul died before Palladio's arrival. He was employed for many years in the construction of numerous buildings in Vicenza and the neighborhood, in all of which he displayed the most exquisite taste combined with the most ingenious and imaginative ornamentation. His style, known as "the Palladian," is composi-
men of eminent holiness, and his history bears incident-
al testimony to the extent of his travels. The The-
bead, Upper Egypt, Arabia, Lebanon, and Syria; Taurus, and Taurus, and Libya, Syria, Palestine, Mesopotamia, and even Rome and Comandia, and, as he vaguely and boastfully states, the whole Roman empire, were visited by him, and that almost entirely on foot. In consequence of severe ill-
ness, which was not healing, he was sent the following spring to Alexandria; and from that city, by the advice of his phys-
icans, he went to Palestine, and thence to Bithynia, where he was ordained bishop. He gives neither the date of his appointment nor the name of his bishopric, but intimates that it was the occasion of great trouble to him. In this way he deduces from the elevation of the "angloamy cell," he remembered a prophecy of Joanis of Lyco-
yrus, who, three years before Palladius was taken
ill and sent to Alexandria, had foretold his elevation to the episcopacy and his consequent troubles. As he
was present with Evagrius of Pontus about the time
of the latter's death, which probably occurred in 399, he
could not have left Egypt till that year, nor can we
place his ordination as bishop before 400, when he
was present in a synod held by Chrysostom at Con-
stantinople, and was sent into Proconsular Asia to pro-
cure and deliver to the bishop of that see, a cal matrix of letters against the Eph-
hesians. The deposition of Chrysostom (s. v.) involved Palladius in troubles, as we learn from his Lausiac His-
tory. Chrysostom, in his exile, frequently wrote to "Palladius the bishop," exhorting him to continue in prayer, for which his seclusion gave him opportunity. All the foregoing particulars relate to the author of the
Lausiac History, from the pages of which the notices of him are gleaned. We learn from Photius that in the
"Synod of the Oak," at which Joanis or John Chry-
sostom was condemned, and which was held in 408, one of the charges against him related to the ordination of a Palladius, bishop of Helenopolis, in Bithynia, a fol-
lower of the opinions of Origen. The province in
which the diocese was situated, the Origenistic opinions (imbibed or cherished by Evagrius of Pontus),
and the intimidation of something open to objection in his ordination, compared with the ambiguous manner
in which the author of the Lausiac History speaks of
his elevation, seem conclusive as to the identity of the
historian with Palladius of Helenopolis. He is, doubt-
less, the Palladius charged by Epiphanius, and by Je-
rome himself, with Origenism. Tillemont, however, at-
ttempts to show that Palladius the Origenist was not
the bishop of Helenopolis. Through fear of his en-
emies, Palladius of Helenopolis fled to Rome in 405, where he probably received the letter of encouragement ad-
dressed to him and the other fugitive bishops. Cyrillicus of Alexandria, cited by Jerome, and the Arians of the time, the
Apaneia, and Demetrius of Pessinus. At this time
Palladius probably became acquainted with the monks of Rome and Campania. When some bishops and presbyters of Italy were delegated by the Western em-
peror Honorius and pope Innocent I, and the bishops of the Western Church generally, to protest to the
Eastern emperor Arcadius against the banishment of Chrysostom, and to demand the assembling of a new
council for the consideration of his case, Palladius and his fellow-exiles returned into the East, apparently as
members of the delegation. But their return was ill-
timed and unfortunate: they were both arrested on
approaching Constantinople, and both delegates and exiles were confined at Athyra, in Thrace; and then the
four returning fugitives were banished to separate and distant places. Palladius to the extremity of Upper Egypt was sent by the other solitaries to Alexandria— the great enemy of Chrysostom—in 412, Pal-
dadius obtained some relaxation of his punishment, though he was not allowed to return to Helenopolis or to
reside at Antinoe. It was not until 419, however, that the interval between 412 and 420 the Lausiac History
was written. Palladius resided for four years at Antinoe, or
Antinopia, in the Thebaid, and three years in the
Mount of Olives, near Jerusalem, and then also mad
an effort to visit the holy parts of the Holy Land. After the time he was restored to the bishopric of Helenopolis, from which he was transferred to that of Aspoma or Aspuma, in Ga-
latia; but the dates of his restoration and his trans-
fer cannot be fixed: they probably took place after the death of his brother or complement, in 417, and probably after the composition of the Laus-
iac History, in 419 or 420. Palladius probably died before
431, when in the third general (first Ephesian) council the see of Aspoma was held by another person.
He appears to have been bishop of Aspoma only a short time, and is not distinctly designated by Jerome.
Palladius' principal, if not his only work, is entitled
"Harx Laiwsma tov prpavpntov istoron prp-
ouvea bovou xaiatov patwv."—Ad Lastum Proopostum
Historia, qua Sanctorum Putrum vitae complificent—
ausus est ut Palladius Lastuce, the Lausiac His-
tory. This work, Palladius says, was composed in his
fifty-third year, in the thirty-third year of his monas-
tic life, and the twentieth of his episcopate, which last
date furnishes the means of determining several others in his personal history. The work contains biographi-
cal notices of cities, especially of places that Palladius knew personally, or of whom he received in-
formation through others who knew them. The value
of the work is diminished by the author's credulity (characteristic, however, of his age and class) concern-
ing miracles and other marvels; but it exhibits the pre-
culating religious tendencies of the age, and is valuable as recording various facts relating to eminent men.
The Lausius, or Lausus, to whom the work is addressed,
was chamberlain apparently to the emperor Theodosius
the younger. The first edition of the Greek text, but
a very imperfect one, was that of Neusium (Leyden, 1616). The Greek text and version were reprinted from the Actarum of Duceus, in the editions of the Biblioteca Patrum (Paris, 1644 and 1654). It is
probably that the printed text is still very defective.

Another work ascribed to Palladius is entitled Dial-
ologos istoron Palladi istoron Elenopolitou evagri
kreon teodwv dikanov ounv apoigwv Kwnaiot-
okoloumho o Xristovmou—Dialogus Historicus Pal-
dadius episcopi Helenopoliei cum Theodoro ecclesi Romana
diacono, de vita et conversatione Jesu Ioannis Christos-
omi, episcopi Constantinopolitani. The title of the work
missed many into the belief that it was written by Pal-
dadius of Helenopolis; but a more attentive examina-
tion proves the author of the Dialogus to have been a
different person, several years his junior, though Pall-
adius and his fellow-exiles returned into the East from the Western emperor and Church on behalf of Chrysostom, which occasioned the imprisonment and exile of the bishop. Tillemont, assuming that the au-
tor of the Dialogus was called Palladius, thinks he
even may have been the person to whom Athanasius wrote in 371 or 375.

Πιν της της ινδικών άδων και των Βραγμάνω-
De Gentibus Indi et Brahmantibus,—whose authorship
is also ascribed to Palladius, is by Oudin and Cave
regarded as the work of another writer of that period.

The above work ascribes the work to Palladius of Methone. All that can be gathered from the work itself is that the author was a Christian, and lived while the Roman empire was still in existence; but this mark of time is of little value, as the Byzantine empire retained to the last the name of Roman. The supposed work of St.
Ambrose is in ... is described by Chrysostom i, col. 908, etc.; Tillemont, Mémoires, x, 500, etc.;

Celier, Hist. des Autres ecclésiast., vii, 484-498; Vos-
sicius, De Historica Graecia, lib. ii, c. 19; Smith, Dict. of Greek and Roman Relig. and Mythol., s. v.

Some authors have noted a Irish prelate of the early Church, flourished probably near the middle of the 5th century. In the Chronicon of Prosper Aquitanus, under the consolatio of Bassus and Antiochus (A.D. 431), this passage occurs: "Ad Scotos in Christiana sedes ordinatur a papae Colomino, Papali, Paladius." The name appears in other works of the same writer (Contra Collatorum, c. xxi, sec. 2), speaking of Celticine's exerits to repress the doc-
tines of Pelagius, he says, "Ordinavit Scottos episcopum, dum Romanae insulam studet servare Catholicae, fac-
t etiam barbarum Christianam." (Opus, co. 368, ed. Paris, 1711). To these meagre notices, the only ones found in contemporary writers (unless, with some, we refer to the conversion of the Scoti the lines of Pros-
per, De Ingratia, vs. 390-392), the chroniclers and his-
torians of the Middle Ages have added so variety of contradictory particulars, so that it is difficult, indeed impossible, to extract the real facts of Palladius's his-
tory. It has been a matter of fierce dispute between the Irish and the Scots as to which of them were the objects of Palladius's mission; but the usage of the word "Scotti" in Irish literature, and the distinction of the be-
tween "insulam Romanam" and "insulam barbaram," seem to determine the question in favor of the Irish. This solution leads, however, to another difficulty. Ac-
cording to Prosper, Palladius converted the Irish "— fecit barbarorum insulam insulam Christianam," while the unbi-
tested testimony of ecclesiastical antiquity ascribes the con-
version of Ireland to Patricius (St. Patrick), who was a
little later than Palladius. But possibly the success of Palladius, though far from bearing out the statement of Prosper, may have been greater than subsequent writers, zealous for the cause of St. Patrick, and seeking to exag-
terate his success by extenuating that of his predecessors, were willing to allow. There is another difficulty, arising from an apparent contradiction be-
tween the two passages in Prosper, one of which as-
cribes to Palladius the conversion of the island, while the other describes him as being sent "ad Scottos in Christo credentem;" but this seeming contradiction may be reconciled by the supposition that Palladius had vis-
ted the island and made some converts, before being
consecrated and again sent out as their bishop. This
supposition accounts for a circumstance recorded by
Prosper, that (Florentio et Dionysio Cosso, i. e. in A.D.
429) Palladius, while yet only a deacon, prevailed on
to pope Celestine to send out Germanus of Auxerre to stop the progress of Pelagianism in Britain, which in-
dicates the weight of the religious opinions of the Brit-
ish islands, and an interest in them, such as a previous visit would be likely to impart. The various
statements of the medieavil writers have been collected by
Usner in his Britannicarc. Ecclesiar. Antiq. c. xvi,
p. 799 sq. See also Sallertus, De St. Palladio, in the
Acta Sanctar. Jul. ii, 286 sq. Palladius is commemo-
rated as a saint by the Irish Romanists on Jan. 27, by
those of Scotland on July 6. His shrine, or reputed
shrine, at Fordun, in the Meins, in Scotland, was
regarded before the Reformation with the greatest rever-
ce, and various localities in the neighborhood are still
pointed out as connected with his history. Jocelin of
Furness, a monkish writer of the 12th century, states
in his life of St. Patrick (Acta Sanctar. Martii, ii, 546;
Julii, ii, 289), that Palladius, disheartened by his little
success in Ireland, crossed over into Great Britain, and
died in the territory of the Picts—a statement which, sup-
ported as it is by the local traditions of Fordun, may
be received as containing a portion of truth. The me-
dieval writers have in some instances strangely con-
founded Palladius, the apostle of the Scoti, with Pall-
adius, the Christian of Christianus (De Scriptor. Eco-
cles. c. 133), and even Baronius (Annal. Eccles. ad ann.
d, 429, sec. 8), who is followed by Possevina, make
the former to be the author of the Dialogus de Vita Chry-

PALLADIUS

592

PALLADIUS

A Siricius, ecclesiastical writer of whose personal history we know only that he flourished
at Suedra, in Pamphylia. Prefixed to the Anco-
ratus of Epiphanius of Salamis, or Contantia [see Ep-
iphanius], is a letter of Palladius to that father. It is
headed "Epistolae graeciae para Paulus in Christo
aetatis ab ac postulatiu—I, e. in which he seconds the request
made by certain presbyters of Suedra (whose letter
precedes that of Palladius) that Epiphanius would
answer certain questions respecting the identity of
which the Ancoaratus contains the solution. See
Epiphanius, Opera, ii, 8 (ed. Petav. Paris, 1622, fol.); Fab-
ricius, Bibl. Grac. x, 114.

Palladius, Petrus, a Danish prelate of note, was the
first bishop of Zealand, in Denmark, after the Luth-
erian Reformation, and distinguished as one of the
most learned theologians and most eminent Bishops
of his time. He was of a married profession, and was
the first class of heretic authors. His original name was Feber
Flode, but this was, according to the fashion of those
days, Latinized into Petrus Palladius. He was
born at Ribe in 1504, and was for a short time schoolmaster
in Odense; but when twenty-seven years old he re-
paired to Wittenberg in search of the truth, under the
guidance of Luther and Melanchthon. He
remained there six years, and won the respect and confidence of his teachers to such an extent that his king, Christian
III, at their request, appointed him bishop of Zealand
and professor of theology in the University of Copen-
hagen in 1537, notwithstanding his youth. He
was ordained by Bugenhagen; and after the departure of
the latter from Denmark, Palladius was the most influ-
ential man in Denmark, and his voice had the greatest
weight among all Christian states in the general
arrangement of Church affairs, not only in his
own diocese, but also in other parts of the Danish
realm of that time, especially in Norway and Iceland; and
he is also entitled to great credit for the part he took in
the reorganization of the Copenhagen University.
He was a very active man. He made frequent visits to
each Church in his large diocese; and when his health
broke down and did not permit him to travel, he spent
his time in writing a series of books, partly learned
and partly popular, by which he aimed to strengthen
the foundation of the Reformation, and to give a
sense of piety, and to combat immorality and drunk-
eness. He was one of the leading disputants against
the Catholic canons of Copenhagen, Lund, and Ros-
kilde (1533-1534). He preached zealously against the
worship of saints, pilgrimages, and other superstitious
remnants of Romanism that were still lingering in various
parts of the country. Yet he was very clement in his dealings with his opponents; and it is believed that he did not give his consent to the ill treatment of the re-
formed fugitives who came to Denmark, headed by John
à Lasco. Palladius assisted in the translation of the so-called Christian III's Bible, translated Luther's Cat-
ehism and Exegetirion, and in 1566 published the first
Danish ritual. On account of his many other duties
PALLANT
593
PALLOR

he resigned his theological professorship in 1545, but
was prevailed on to resume it again in 1550, the uni-
versity not being able to get on without him. He re-
signed again in 1558, and died in 1569. See Helvig,
Demon deuse, Kirch electrode, Reformations, 2d
ed.; Nordisk Convensionslexicon, s. v. Palladius; Bar-
fod, Fortrefflignier, p. 494. (R. B.A.)

Pallant is the ecclesiastical term for an independ-
tent episcopal jurisdiction, like the archbishop of Can-
terbury's peculiar at Chichester.

Pallas, a surname of Athen (Minerva), is always
joined with her name in the writings of Homer, but by
later writers is used independently.

Pallavicini, Batista, a learned Italian prelate,
was born at Venice towards the close of the 14th cen-
tury. He was archdeacon of Turin until 1444, when he
was made bishop of Reggio. He died in 1466. He
wrote Historia fienda eurt a et funeria Domini nostri
Jesu Christi, ad Eugenius IV popum (Parma, 1477,

Pallavicini, Niccolo-Maria, an Italian theo-
logian, was born at Genoa in 1621, and was related
to the preceding. In 1638 he joined the Order of the
Jesuits, and was finally made a professor of theology by
queen Christina of Sweden. He was a great favorite at
Rome, and was employed by the popes in several im-
portant negotiations. In 1653 he was summoned to the
cur of Rome upon Pallavicini, and otherwise favored him.
He died Dec. 15, 1672, at Rome. Among his numerous
writings the following are noteworthy: Difesa della
Presenza divina contra i nemici di ogni religione
(Rome, 1799); — Difesa del pontificato Romano e della
Chiesa Catholica (ibid. 1686, 3 vols. fol.), both able de-
fences, especially the latter, which is by many consid-
ered the most consistent and skillful advocacy of papal
supremacy. It is freely quoted by modern Romish
apologists. See Sottwel, De Script., Sac. Jes.; Stein-

Pallavicino, Ferrante, an Italian monastic of
questionable repute, was born at Parma in 1615. He
entered at an early age the Order of the Canons of St.
Augustine, and made his vows; but after a few years
he found that he had acted rashly, and that he was to-
tally unsuited for the life which he had embraced.
With his superior's permission he then travelled. He
first repaired to Venice, where he led a life of licentious-
ness and wrote obscene books. He afterwards went to
Germany as chaplain to a nobleman, and returned to
Venice just at the time when war broke out between
Edouardo Farnese, duke of Parma, and pope Urban VIII.
On the death of the duke of Castro, Pallavicino
wrote in favor of his sovereign the duke, using violent
expressions against the pope and his nephews the Bar-
berini. One of his pamphlets was entitled Il Dizionario
Celeste, by which he intimate that a divorce had taken
place between the Church and its divine founder.
Pallavicino, now thinking he was no longer safe in Italy,
resolved to go to France; but, unfortunately for him,
he was accompanied by a young Frenchman of insinuating
address, who proved to be a spy of the Barberini, and
who led him unwares into the papal territory of Avig-
non, where he was immediately seized and led to prison.
He was tried for apostasy and high-treason, and was
condemned and beheaded on March 5, 1644, at the early
age of twenty-nine years. See Poggiali, Memorie per
la Storia Letteraria di Piemonte.

Pallavicino, Pietro Sforza, an Italian prelate
of great note, distinguished especially as a historical
work, was born at Genoa. His maternal uncle, Alessio
and Francesca Sforza, was born at Rome Nov. 20, 1607.

Much to the disgust of his father he chose the ecclesiastical
life. Pietro's conduct was so exemplary that he was
early appointed one of those prelates who assist in the
assemblies called "congregations" at Rome. He was
also received into the famous academy of humanists,
among whom he often occupied the position of president.
He was likewise governor of Jesi, and afterwards of Or-
vieto and Camerino, under pope Urban VIII. But all
these advantages did not hinder him, when the papal
power was displeased with him, from renouncing the world
and entering, in 1637, the Society of the Jesuits. As
soon as he had completed his novitiate he taught phi-
losophy, and then theology. Innocent X, who felt
kindly disposed towards Pallavicino, and considered it
politic for the pontificate to recognize eminently
named Pallavicino to examine into divers matters rela-
ting to the pontificate, among others into the Jansenist
controversy (1632-1658), and Alexander VII created
him a cardinal in 1657. This pontiff was an old friend
of Pallavicino, who had been serviceable to him when he
first appeared at Rome as simply Fabio Chigi. Pallavi-
cino had even contributed to advance his temporal
fortune, and had received him into the academy of the
humanists, in gratitude for which Chigi had addressed to
him some verses, printed in his book, entitled "Philoso-
pathi Musae Juveniles." At the same time Pallavi-
cino obtained a place in the sacred college, which was
not until 1659, for he hesitated to accept the proffered
honor, he was also appointed examiner of the bishops,
and afterwards a member of the congregation of the
Holy Office, i. e. the Inquisition, and of that of the
Council of Trent, whose history he wrote in a most
mammoner manner. He died at Rome June 5, 1667.
The best-known of all his writings is his Istoria del Convegno
4to), intended as a reply to the still more celebrated and
liberal, which he deeply admired, La Sacra e Dépura del
Paolo Sarpi. Pallavicino wrote, of course, as a Jesuit
should write, in defence of the papacy, and with an
ultramontane coloring. Hence the classical value of
his work is limited, but its style is excellent, and his
learning no one has called in question. Comp. Ranke,
Gesch. der röm. Päpste, ii, 237 note; iii, Appendix; Brit-
sch, Beurtheilung der Contravent Sarpi's, u. Palla-
vicino's (Tubin, 1844); Buckley, Hist. of the Council of
Trent (Lonond, 1852, Preface; Danz, Gesch. des Tridenti-
numischen Concils (Jena, 1846, 8vo), Preface. Among
his other works may be mentioned Vindications Sac. Jes.
(Rome, 1649); — Del Bene, a philosophical treatise: —
Arte della Perfezione Cristiana. — I Fusi Sacri (the
unpublished MS. is in the library of Parma); — Erem-
grad, a tragedy (ibid. 1644); — Gli Aversamenti Gram-
naticali (ibid. 1661); — Trattato dello Stillo e del Di-Alexis
lo (ibid. 1662); — Le Lezioni letterarie (ibid. 1668).

bach, Hist. of Doctrines (see Index).

Palleni, a surname of Athene (Minerva), under
which she was worshipped between Athens and Marath-
on.

Pallére, Louis Vincent Léon, a French painter,
was born at Bordeaux in 1787. He went to Paris and
studied under Vincent, under whom he evinced uncom-
mon talents. In 1812 he gained the first prize of the
Academy for his picture of Ülysses Slaying the Suitors of
Penelope, which entitled him to go to Rome on a pension
from the government. At Rome he painted several clas-
sical subjects, and the Flagellation of Christ, which was
especially commended. After his return to Paris, he
exhibited, in 1819, in the Louvre, St. Peter Curing the
Lame Man; Tobit Restoring Sight to his Son; A
Shepherd in Repose; Preaching at Night in Rome, and
other subjects, and obtained the gold medal of the first
class. He died in 1820, in the strength of his manhood,
deeply regretted as an artist of great prom-
ise.

Pallor, a divine personification of paleness or fear,
which was regarded by the ancient Romans as a com-
paign of Mars.
PALLORII 594 PALMA

Pallorii, a title of the priests of the deity of pallor (q.v.).

Pallu (Heb. Pallu, נַפְלָע, distinguished; Sept. Παλλάς, Φάλλας), a son of Reuben, the head of a family (Palluites) in his tribe (Gen. xlix, 9 ["Phallu"); Exod. xvi, 14; Numb. xxvi, 5, 6; 1 Chron. vi, 3). B.C.

Pallu, François, a French ecclesiastic, was born at Tours in 1629, and after entering holy orders was called to places of much importance in the Church. He resigned the canonicate of the church at St. Martin to enter to foreign missions. The Church recognized his fitness for such labors by making him bishop of Heliopolis, and vicar-apostolic of Fo-Kien, in China. As he opposed the Jesuits, he encountered much persecution, and was twice obliged to return home. He died in the midst of his work, Oct. 29, 1684, holding the position of general administrator of missions. He left a number of works on the Missions and des Voyages des Évêques Français envoyés aux Royaumes de la Chine, Cochinchine, Tonking, et Sioum (Paris, 1862, 8vo).

Pallu, Martin, cousin of the preceding, was a noted member of the Order of the Jesuits, which so rigorously opposed the Reformed Spaniards, which was born at Tours in 1661. He took his first vows in 1679, and then began preaching. So successful were his ecclesiastical labors that in 1711 he was made director of the congregation of the Virgin. He died May 20, 1742, at Paris. He wrote, Le Quer Quelle est l'Homme (Paris, 1783, 1829, 12mo) and Du fréquent Usage des Sacrements de Pénitence et d'Eucharistie (1789, 1846, 12mo); besides his Sermons (144, 1750, 6 vols. 12mo).

Palluite (Heb. Pallui), נֵפַלִּית, gentle from Pallu [q.v.]; Sept. ὁ δήμος τοῦ Φαλλαι, a member of the family in the tribe of Reuben, descendants of Pallu (Numb. xxvi, 5).

Palm is a frequent rendering of the Hebrew בִּקְשָׁ, properly something curved or hollowed, and hence a hollow of the hand. It is used as a general word for the hand, both in literal and figurative expressions, e.g., Ezra xxxi, 16; 1 Sam. iv, 8, as well as for the palmate only, Lev. xvi, 26; Dan. x, 10. It is also applied, like the Latin palm, to the branches of the palm-tree, from their curved form; as Lev. xxxix, 40. But the palm-tree is denoted in Hebrew by the word tamod, תָּמֹר, from a root meaning to stand erect (Job i, 12; Cant. vii, 9; Exod. xv, 27), and by the word ꝧַמּ, בָּתַר, from the same root. See HAND; PALM-TREE.

Palm, J. H. Van Der, D.D., one of the most famous of modern Dutch theologians, was born at Rotterdam, July 17, 1873. He was educated at the university in Leyden, where he was noted for purity of morals as well as for diligence in study. He was a particular favorite of the learned Schultens. After the completion of his studies he preached for some time, and gained great celebrity in the Low Countries as a pulpit orator. He possessed the Ciceronian polish, and for many years he was the Dutch orator par excellence; men of all professions acknowledged him as at the head of the art. He was also a professor of Oriental languages and antiquities at his alma mater, and as such likewise excelled his fellow-countrymen. He died Sept. 18, 1840. Van der Palm wrote much; but none of his works have been translated into English, and they are now but in limited circulation even in his own country. His biography, with ten of his sermons, has been given an English dress by one of our most valued contributors, the Rev. J. F. Wettervelt, D.D., under the title Life and Labors of Van der Palm, D.D., sketched by Nicholas Betts, D.D. (N. Y. 1865, 12mo). The sermons in this volume exhibit an accuracy of thought and expression rarely met with, and also contain passages of poetic beauty which one would scarcely expect to find in sermons written amid the fogis of Holland. The style of thought is so thorough English that the work of translation has been done with remarkable skill, or else the character of the Dutch mind must resemble the English much more closely than is generally believed to be the case. (J. H. W.)

Palma, Giacopo (called Il Vecchio, "the elder"), was born near his great-nephew, a celebrated Italian painter of the 16th century, was a native of Sermoneta, in the Valle Brembana, in the Bergamase territory. There is uncertainty as to the exact time when this artist flourished. Lanzi, in his last edition, says, "Jacopo Palma Vecchio was inconsiderably the companion and rival of Lorenzo Lotto, who was born about 1490, and died in 1550, until M. La Combe, in his Dictionnaire Portatif, confused the historical dates relating to him. By Ridolfi we are told that Palma was employed in completing a picture left unfinished by Titian at his death in 1576. Upon this and other similar authorities, Combe takes occasion to postpone the birth of Palma until 1540, adding to which the forty-eight years assigned him by Vasari, he places the time of his death in 1594. Other authorities give 1540 and 1638. In such cases the critics seem neither to have paid attention to the style of Jacopo, still retaining some traces of the antique, nor to the authority of Ridolfi, who makes him the master of Bonifazio Veneziano, who died in 1538; nor to the authority of Vasari, who, in his edition published in 1558, declares that Palma died at Venice several years before that period, aged forty-eight." Lanzi still further settles the matter by the date 1514, which he read on one of his pictures at Milan, representing the Sacrifice with several Saints, which he pronounces a juvenile production. Palma's manner, at first, according to Ridolfi, partook of the formality and dryness of Giovanni Bellini. He afterwards attached himself to the method of Giorgiones, and aimed at attaining his clearness of expression and rich and harmonious coloring, visible in his celebrated picture of St. Barbera, in the church of St. Maria Formosa at Venice. In some of his other pieces he more nearly approaches Titian in the tenderness and impacto of his carnations, and the peculiar grace which he acquired from studying the earlier productions of that great master. Of this kind is his Last Supper, in the church of St. Maria Mater Domini at Venice, and a Holy Family in S. Stefano at Vicenza, esteemed one of his happiest productions. Lanzi says, "The distinguishing character of his pieces is diligence and a harmony of tints so great as to leave no trace of a cancell; and he has been charged by none of his historians that he long occupied himself in the production of each piece, and frequently retouched it. In the mixture of his colors, as in other respects, he often resembles Lotto, and if he is less animated and sublime, he is, perhaps, generally more beautiful in the forms of his heads, especially of those of women and boys. It is the opinion of some that in several of his countenances he expressed the likeness of his daughter Violante, very nearly related to Titian, a portrait of whom, by the hand of her father, was to be seen in the gallery of Sera, a Florentine gentleman. A variety of pictures intended for private rooms, met with in different places in Italy, are attributed to Palma, besides portraits, one of which was commended by Vasari as truly astonishing for its beauty; and Madonnas, chiefly drawn along with other saints on oblong canvases, a practice in common use by many of the artificers of that age. Usually genuine pictures of Palma are exceedingly scarce, and highly prized. They are found in all the principal collections of the Continent, particularly at Paris, Dresden, Munich, Berlin, and St. Petersburg. But, above all, England is richest in works of his that are considered genuine; and they are not only to be found in the royal collections, but in many of those belonging to the nobility. It is evident that many of these are spurious, for he
never could have executed half of them, even had his process been less tedious. Lanzi explains this: ‘The leaders in among many people of taste, being ignorant of his contemporary artists, the moment they behold a picture between the dryness of Giovanni Bellini and the softness of Titian, pronounce it to be a Palma; and this is more particularly the case when they find the countenances well rounded and colored, the landscape exhibits the same bright colors, while the figures occur more frequently than those of a more2

sharply dyed. In this way Palma is in the mouths of all, while other artists, also very numerous, are only mentioned when their names are attached to their productions.’ Vasari describes in high terms of commendation a picture of his in the church of S. Marco at Venice, representing the ship in which the body of St. Mark was brought from Alexandria to Venice exposed to a frightful tempest. ‘The picture is designed with great judgment; the vessel is seen struggling against the impetuous tempest, the waves burst with violence against the sides of the ship, the horrid gloom is only

enlightened by flashes of lightning, and every part of the scene is filled up with images of terror, so strongly and naturally that it seems impossible for the power of man to rise to the pitch of truth and perfection.’ Lanzi says Palma is to be7

credited with the most beautiful picture preserved at the Servi. It represents the Virgin, with a group of beautiful spirits and a choir of angels, and other angels at her feet engaged in playing in concert upon their harps. ‘It is an exceedingly graceful production, delightfully ornamented with landscape and figures in the distance, very tasteful in its design, which are blended in an admirable manner, equal to the most studied productions of the contemporary artists of Bergamo.’ Another admirable picture is the ‘Adoration of the Magi,’ formerly in the Isola di S. Elmo, now in the I. R. Pinacoteca of Milan.

Palma, Giacopo (2), called Il Giocin (i.e. “the younger”), to distinguish him from the preceding artist, his great-uncle, was born at Venice, according to Ridolfi, in 1544. There is as much contradiction about this artist as about his great-uncle, and we therefore depend solely on Lanzi. He was the son of Antonio Palma, an artist of confined genius, who instructed him in the rudiments of his art. He early exercised himself in copying the works of Titian and other Venetian painters. Ridolfi says that he studied with Titian, and others say that he was the scholar of Tintoretto; the last assertion is highly improbable. At the age of fifteen he was taken under the protection of the duke of Urbino, and accompanied him to his capital. The duke afterwards sent him to Rome, where he remained for eight years, and laid a good foundation for designing from the antique, by copying from the works of Michael Angelo and Raphael, and particularly by studying the chiaroscuros of Polidoro da Caravaggio. The last was his great model, and next to him came Tintoretto, Palma being naturally more like him in his treatment of figures, and with a certain freedom of action and a spirit peculiarly his own. His abilities were noted by the pope, and Giacoco junior was employed to decorate an apartment in the Vatican. On his return to Venice he distinguished himself by several works conducted with extraordinary care and diligence, which gained him much reputation. Lanzi says, ‘There are not wanting professors who have bestowed upon him a very high degree of praise for displaying the excellent maxims of the Roman school, united to what was best of the Venetian. He was, however, like every other artist, limited to the third rank; and even this chiefly through the means of Vittorin, a distinguished sculptor and architect, who was considered an excellent judge and arbiter of works of art. Palma, by Vittoria’s aid, soon came into general notice, and on more than one occasion was employed in the composition of such large and important works, as was the custom of the quattrocentisti, or artists of the 14th century. In his second his composition is more copious, and of greater proportions, his outline bolder, and he dispensed with the gilded ornaments, and more attention was paid to the masses, and to the others unconnected with it, as in his picture of the Crucifixion, in the church of S. Agostino di Forlì, in which

the good age and the first of the bad. When he found his reputation established, and himself almost without a despot, he began to complain of the great rapidity of execution that Lanzi says many of his works may be pronounced rough drafts. ‘In order to prevail upon him to produce a picture worthy of his name, it became requisite not only to allow him the full time he pleased, but the full price he chose to ask.’ Upon such terms Titian received the fine picture of the Descent for the church of SS. Cosmo and Damiano for the noble family of Mora. Such is his Santa Apollonia at Cremona, his St. Ubaldo, and his Annunciation at Pesara; his Finding of the Cross at Urbino, and other valuable productions that elsewhere we are too brief to mention. They are fresh, sweet, and clear; less splendid than those of Veronese, but more pleasing than in Tintoretto. Among his best works at Venice are the Deposition from the Cross, in the church of St. Nicolo dei Frari; the Martyrdom of St. James, in S. Giacomo del Ovo; Christ taken in the Garden, in La Trinita; the Veiled.

ation of the Virgin to St. Elizabeth, in S. Elzabella; and the Plague of the Serpents, at S. Bartolomeo. The last, though a revolting subject, which strikes horror in the beholder, is one of his masterly productions, and equal to Titian’s. Palma died in 1626. We have quite a number of etchings by his disciple and are executed in a spirited and masterly style. Bartsch gives a list of twenty-seven. They are sometimes marked with his name in full, and sometimes with a monogram composed of a P crossed with a palm-branch. The following are the principal: Sansone and Delilah; Judith cutting off the head of Holofernes into a Stalk; held by an attendant; the Nativity; the Holy Family, with St. Jerome and St. Francis; St. John in the Wilderness; the Decollation of St. John; the Tribute Money; the Adoration before Christ; Christ answering the Pharisees who said unto him, ‘Art thou a prince of the house of David?; St. Thomas; St. Jerome in Conference with Pope Damasus—scarce; an ecclesiastic and a naked figure, with two boys.

Palmaroli, Pietro, an Italian painter, is celebrated especially as a picture restorer. He flourished near the opening of this century, and was the first to transfer frescoes from the wall to canvass. The first work so transferred was the Descent from the Cross, by Daniela da Volterra, in the church of Trinità de’ Monti, in 1811: it is still in that church, but not in the chapel in which it was originally painted. The successful transfer of this picture caused a great sensation at Rome and in other cities, and the method of which transferred by the Italian artists and were repeatedly practiced with success. Palmaroli transferred and restored many celebrated works in Rome and in Dresden. As a restorer, his services to art are almost inestimable. At Dresden is Raffaelle’s celebrated Madonna di Sora Sisto, restored by him. In 1816 Palmaroli freed the celebrated fresco of the Stylites, painted by Raffaelle for Agostino Chigi in the church of Santa Maria della Pace, from the destructive restoration in oil which were made by order of Alexander VII. He died at Rome in 1826. See Palmaroli, Beschreibung der Stadt Rom, III. p. 3; Kunstedler und Kunstgeschichte, Neues Allgemeines Künstler-Lexikon, s. v.; Spooner, Biog. Hist. of the Fine Arts, ii. 647.

Palmeigiani, Marco, called Marco da Forlì, an Italian painter of much merit, scarcely known till the researches of Lanzi brought him before the world, was a native of Forlì, and the favorite disciple of Francesco Melozzo. He had two manners: the first dry and formal, extremely simple, and the composition of his figures, no doubt, was the custom of the quattrocentisti, or artists of the 14th century. In his second his composition is more copious, and of greater proportions, his outline bolder, and he dispensed with the gilded ornaments, and more attention was paid to the masses, and to the others unconnected with it, as in his picture of the Crucifixion, in the church of S. Agostino di Forlì, in which
he inserted two or three groups on different grounds, one of which represents St. Paul visited by St. Anthony, and another represents St. Augustine convinced by the angel on the subject of the Immaculate Conception of the Virgin. Lanzi says that "in these diminutive figures, which he inserted either in the altar-piece or on the steps, he displayed an art extremely refined and pleasing." He often enriched his backgrounds with animated landscapes and beautiful architecture. His works are numerous in Homages, and are to be found in the Venetian states. In the Palazzo Vicentini, at Vicenza, is one of his most beautiful pictures, representing a Dead Christ, between Nicodemus and Joseph. He excelled in painting Madonnas and saints, and was a favorite of the Venetian nobility. He generally signed his name "Marcus Pictor Forolivinius," or "Marcus Palmezanus P. Forolivinius Pinxit." He seldom adds the date, but there are two pictures in the collection of prince Ercolani dated 1513 and 1517. Vasari calls this artist Pannegierno. Others call him Palmezzano. On a basis of his signed pictures Marcus Palmezanus, Palmezzanus, or Palmezanus, Forolivinius, etc. Kugler says there are several pictures by Marco Palmezzano in the museum at Berlin.

Palmer (Lat. palmera, "a palm-bearer"), the name of a number of numerous classes of pilgrims (q.v.), whose origin and history form one of the chief topics of the history of the social life of mediæval Europe. Properly the Palmer designated a pilgrim who had performed the pilgrimage to the Holy Sepulchre at Jerusalem, and had returned or was returning home after the fulfillment of his vow. Modern travelers obtain that peculiar name from their custom of carrying branches of the Oriental palm, in token of their accomplished expedition. On arriving at their home they repaired to the church to return thanks to God, and offered the palm to the priest, to be placed upon the altar. The palms so offered were frequently used in the procession of Palm-Sunday (q.v.). Even after the time of his return the religious character of the Palmer still continued; and although his office might be supposed to have ceased with the fulfillment of his vow, many Palmers continued their religious pergrinations in their own native country. They thus became a class of itinerant monks, without a fixed residence, professing voluntary poverty, observing celibacy, and visiting at stated times the most remarkable sanctuaries of the several countries of the West. Their costume was commonly the same as that of the ordinary pilgrim, although modified in different countries.

Palmer, Anthony, an English divine of some note, flourished near the middle of the 17th century. He was educated at Oxford, became fellow of Balliol College, and obtained the living of Bourton, Gloucestershire. In 1662 he was ejected for nonconformity. He afterwards had charge of a congregation in London. Palmer died in 1678. He wrote The Gospel New Creature, wherein the Work of the Spirit in awakening the Soul is plainly opened [on Ps. xxv, 11, etc.]; to which is annexed, The Temperance Soul colored by Jesus Christ [2 Cor. Mat. viii., 22-27] (2d ed. Lond. 1743, 8vo).

Palmer, Benjamin Morgan, D.D., an American Presbyterian minister, was born in the city of Philadelphia in 1787. After ordination he became pastor of the Presbyterian Church at Beaufort, S. C., and was subsequently connected as co-pastor with the congregation at Circular and Archdale churches in Charleston. He died in 1847. He published a number of occasional Sermons (1809-1836), and The Family Companion, etc. (1835). See Sprague, Annals of the Amer. Pulpit, iv. 341-348.

Palmer, Christian David Friedrich von, a celebrated German Protestant theologian in the department of practical theology, was born Jan. 21, 1811, at Witteneden, near Stuttgart, in Württemberg. He received his early education at Schöntal, and then entered the theological school at Tübingen, attending the lectures of Bischoff, Baur, and Schmids. In 1833 he passed a brilliant examination; in 1836 he was admitted as repente into the Tübingen Stift; in 1839 he was appointed deacon at Marbach; in 1843, second deacon at Tübingen, five years later archdeacon; and in 1851 dean of the Tübingen diocese, and minister at St. Peter, Tübingen. In connection with his theological studies, Palmer had also to lecture on pedagogy and national education, which lectures he continued until his death. In 1852 he was appointed professor in ordinary of homiletics, catechetics, morals, and pedagogy, and lectured besides on the history of German church history and on New-Testament exegesis. In 1852 he was honored with the degree of D.D., and ennobled by his monarch. In 1869 he was elected vice-president of the synod, and in 1870 the city of Tübingen elected him as its representative in the diet. Palmer died May 29, 1873. As to his theology, it belonged to the so-called Vermittlungstheologie, i.e. to that evangelical branch of the Church which, though in a moderate sense conservative, yet favors progress and really represents in Germany the truly living theology of the age. His works, which have found a large circulation, are: Hamburgische Homilien (Leipzig, 1839; 2d ed. 1842; 5th ed. 1867) — Evangelische Katechetik (ibid. 1844; 5th ed. 1864) — Evangelische Pädagogik (1852; 4th ed. 1869) — Evangelische Pastoralltheologie (ibid. 1860; 2d ed. 1863) — Evangelische Hymnologie (ibid. 1865) — Die Moral des Christenthums (ibid. 1864) — Predigten (ibid. 1867) — Evangelisch Conziliarden (4th ed. 1864-1865, 4 vols.) — Geistliches u. Weltliches (ibid. 1873) — Predigten aus neuerer Zeit (ibid. 1874). Besides these scientific works, he wrote a number of essays and articles for the Jahrbücher für deutsche Theologie, of which review he was one of the editors since 1856; for the Encyclopädie der gesamten Erziehungswesen und Unterrichtswesen, of which also he was one of the editors since 1859; and for Herzog’s Real-Encyclopädie. The Württemberg Landes-Choralbuch, published in 1843, also owes to him a great deal. See Augusburger Allgemeine Zeitung, June 6, 1843; Theologisches Universal-Lexikon, s. v.; Kurfürst, Lehrbuch der Kirchengeschichte (7th ed. Milan, 1874), ii. 316; Weissäcker, Zur Erinnerung an Dr. Palmer, in the Jahrbücher für deutsche Theologie (1875), p. 555 sq.; Worte der Erinnerung an Dr. Palmer (Tübingen, 1875); Liberarischer Untersuchungen für das katholische Deutschland (1875), p. 255. (B. F.)

Palmer, Elrhu, an American Nationalist, who flourished near the close of the century, was born in New Hampshire, and educated at Dartmouth College in 1787. He was the head of the Columbian Illuminists, a deistical company at New York, established about 1801, consisting of ninety-five members. Its professed aim was to promote "moral science," against religious and political impostures. The Temple of Tarson was a weekly paper, of which the principal editor was one Driscoll, an Irishman, who had been a Roman priest, and who removed with his paper to Philadelphia. Mr. Palmer delivered lectures on deism, or preached against Christianity. But, according to Mr. C. C. Eberhard, in "the small circle of the Church, more pious, more holy, more fulfilling," than Laud and Gardiner of England; "professing to adore reason, he was in a rage if anybody reasoned with him." He was blind from his youth. He died at Philadelphia in March, 1806. He published an Oration, July 4, 1797; The Principles of Nature (New York, 1801); and Old New England (New York, 1808), p. 134-137; see Allen, Biog. Dict. s. v.

Palmer, Henderson D., a minister of the Methodist Episcopal Church, South, was born Jan. 12, 1812, and united with the Church Nov. 29, 1829. He was soon appointed class leader, but feeling called to the more responsible work of the ministry, he studied for some time at La Grange College. He next emigrated to Texas, then an infant republic. After teaching a
few months in the town of Nacogdoches, where Roman Catholicism was the only form of religion organized, the love of Christ constrained him to appoint meetings for exhortation and prayer, until the 7th of July, 1858, when he was licensed to preach at Box's Fort, Nacogdoches County. In 1839 he was admitted to the Mississippi Conference, and kept in the district in which he had been laboring. In 1841 he travelled the Jasper Circuit, where his labors were crowned with a glorious revival of religion. In 1842 he travelled the Montgomery Circuit; in 1843, the Egypt Circuit; in 1844, the Cherokee Circuit. In 1845 his appointment is unknown to us. In 1846-47 he was a supernumary. In the year 1848 he travelled a considerable circuit in the Sabine River Circuit. In 1851 and 1853 he was local. In the year 1854 he was reappointed and appointed to the San Augustine Circuit. In 1855 his appointment is unknown to us; in 1856 he travelled the Shelbyville Circuit; in 1857-58, the Coffeeville Circuit; in 1859, the Shelbyville Circuit; in 1860, Dangerfield Circuit; in 1861 he was supernumerary; in 1862, the Linden Circuit; in 1863, the Coffeeville Circuit; in 1864-65, unknown to us; in 1866-68, he was again supernumerary. He died Feb. 17, 1869, at his home in Upshur County, Texas. For more than thirty years he was a faithful, zealous, and useful preacher.

Palmer, Herbert, B.D., a learned English divine, was born in Buckingham, England, in 1817. He was educated at St. John's College, Cambridge, but afterwards chosen fellow of Queen's. After taking holy orders, he became preacher at St. Alphage's Church, Canterbury, in 1826. Three years afterwards he was silenced for nonconformity. In 1832 he was made vicar of Ashwell, Herts, and was chosen one of the Assembly of Divines in 1843, on the triumph of dissent over Anglicanism. He preached also at various places in London until the earl of Manchester appointed him master of Queen's College, Cambridge, in 1844. He died in 1847. Palmer had a considerable share in the Substantia Realism with Cawdrey. His own principal work is entitled Memorials of Godliness and Christianity (13th ed. Lond. 1708, 12mo). See Darling, Cyclop. Bibliog. a. v.; Allibone, Dict. of British and American Authors, vol. ii, a. v.

Palmer, John, a noted English Presbyterian divine, who forsook the Calvinistic doctrines and embraced Socinianism, was born in London in 1729. After the completion of his education, he became assistant pastor of a Presbyterian congregation in New Broad Street, London, in 1755. In 1759 he became their sole pastor. He died in 1790. He published, King David's Lay Sermon and Socinian's Sacrifice to the Deity (Amsterdam, 1684, 8vo);—Reasons for the Iaconformity of Conforming to any Religious Test, as a Condition of Toleration, with the true Principle of Protestant Dissent (ibid. 1779, 8vo);—Sermon, 2 Cor. i, 12, on the Death of the Rev. Caleb Fleming, D.D.; with the Oration delivered at the Interment by Joseph Tonnaer (ibid. 1779, 8vo)—An Appendix to the Observations in Defence of the Liberty of Man as a Moral Agent; in Answer to Dr. Priestly's Illustrations of Philosophical Necessity: occasioned by the Dr.'s Letter to the Author (ibid. 1780, 8vo). See Darling, Cyclop. Bibliog. a. v.

Palmer, Julius, a martyr to the Protestant cause in England, flourished under (bloody) queen Mary. In 1555 he was a fellow of Magdalen College. He was especially noted at that time as an offensive attendant of Bishops' Principles. The brave manner in which the Protestants presented their cause, and fought and died for its support, struck him, notwithstanding his unyielding prejudice, and he was led to inquire carefully into their doctrines, which resulted in his conversion after the torture of Latimer and Ridley, whom he had learned to esteem as good Christian men. He lost his fellowship, and taught awhile. In 1556 he was imprisoned as a heretic and burned. See Soanes, Hist. of the Reformation, iv. 47, 76.

PALMER-WORM

‘This one thing I do,’ was her perpetual motto—a life of intense industry in a life of all-absorbing love—one that makes the grandest secret of success known to intelligent minds.

Palmer, Samuel, an English divine, flourished in the second half of the 17th century, first at London as minister at the Weigh-house, and later, from 1677, at Hackney. He died near the opening of this century. He published, The Nonconformists' Memorial, being an Account of the Lives, Sufferings, and Principles of the Two Thousand Ministers ejected Apr. 24, 1666 [1669]; originally written by E. Calamy, D.D., abridged, corrected, and modified, with many additional Anecdotes and several New Lives (2d ed. Lond. 1802, 3 vols. 8vo). This edition contains many important additions and corrections. The first was published in 1774.—The Protestant Dissenter's Catechism, containing, I, A Brief History of the Nonconformists; II, The Reasons of the Dissent from the National Church (8th ed. Lond. 1782, 12mo):—Sermon on 2 Tim. 1, 12, The Dying Believer's Confidence and Joy in Christ [Funeral]; to which is added an Oration, by Samuel Morton Savage, D.D. (ibid. 1778, 8vo). See Darling, Cyclop. Bibliog. vol. ii, s. v.; Allibone, Dict. of Brit. and Amer. Authors, vol. ii, s. v.

Palmer, William, an English theologian of our times, was educated at Oxford University, and became fellow of Worcester College, Oxford. After taking holy orders, he was made presbyterian of Saxon, and then rural dean, and finally vicar of Whitechurch, at Dorset. He is especially noted as a student of literature (q. v.). His masterly work on this branch of ecclesiastical research is entitled Origines Literarum, or Antiquities of the English Ritual, and a Dissertation on Primitive Liturgies (3d ed. Oxf. 1859, 2 vols. 8vo). A fourth edition (1846) contains a notice of those rites of the English Church which are not comprised in the Book of Common Prayer, also of the origin and history of the canonical hours of prayer. The additions were published separately. Palmer also published, The Apocryphal Jurisdiction and Succession of the Episcopacy in the British Churches in opposition against the Objections of Dr. Wiseman in the Dublin Review (Lond. 1840):—A Treatise on the Church of Christ; designed chiefly for the Use of Students in Theology (4th ed. rev. and enl. ibid. 1842, 8vo):—A Compendium of Ecclesiastical Historical Observations, relative to the Present Time (new ed. enl. ibid. 1841, sm. 8vo):—Letters to N. Wiseman, D.D., on the Errors of Romanism, in respect to the Worship of Saints, Satisfactions, Purgatory, Indulgences, and the Worship of Images and Relics; to which is added an Examen of Mr. See Thorp's Reasons for his Seccession from the Church (Oxf. 1842; 3d ed. Lond. 1851, 8vo). In this edition "some discussions of minor importance have been omitted," and an introductory letter has been added on the titular hierarchy:—A Narrative of Events connected with the Publication of the Treats of the Times, with Reflections on existing Tendencies to Romanism, and on the Present Duties and Prospects of Members of the Church (2d ed. Oxf. 1845) (comp. a review [Recent Developments of Puseyism, by H. Rogers] in Edinb. Rev., xxxv, 809):—The Doctrine of Development and Continuity was defined in Relation to the Evidences of Christianity and of the Catholic System (Lond. 1846, 8vo) (see review [On the Study of the Christian Evidences] in Edinb. Rev., xxxvi, 397):—Sermon on 1 John v, 4, The Victory of Faith [Church Societies]; with an Appendix (ibid. 1850, 8vo):—A Statement of a Circumstances connected with the Study of Resolutions at Special General Meeting of the Bristol Church Union, Oct. 1, 1850 (ibid. 1850). See Darling, Cyclop. Bibliog. vol. ii, s. v.; Allibone, Dict. of Brit. and Amer. Authors, vol. ii, s. v.

Palmer, William H., a minister of the Methodist Episcopal Church, was born Aug. 15, 1821, in Wisconsin. In early life he devoted himself to study, and practiced several years at the bar. In 1838 he was converted, and in less than one year from that time joined the West Wisconsin Conference. His first appointment was Point Bluff, and he was next stationed at Lancaster. The outbreak of the war, however, broke up his pastorate, for he felt it his duty to serve his country. On leaving the army he was readmitted to conference, and stationed at Dodgeville. Here he remained two years, at Darlington two, Monroe two, Providence two, and Plateville two, where, like the faithful soldier, he fell at his post. For months his health had been gradually failing, but he was ever cheerful, happy, and hopeful. At his last quarterly conference he was granted leave of absence, in the hope that rest would recruit his health, but he gradually grew worse, and died Sept. 23, 1874. He led a pure and holy life, and his memory is dearly cherished by those who knew him. See Minutes of Conference, 1875, p. 149.

Palmer. See Palmer.

Palmer-Worm (27), gazâd; Sept. ekôrû; Vulg. erucé) occurs Joel i, 4; ii, 25; Amos iv, 9. Bochart (Hieroz. iii, 253) has endeavored to show that gazâm denotes some species of locust; but the ten Hebrew names to which Bochart assigns the meaning of different kinds of locusts can hardly apply to so many, as not more than two or three destructive species of locust are known in Biblical lands. The derivation of the Hebrew word from a root which means "to cut off," is as applicable to several kinds of insects, whether in their perfect or larva conditions, as it is to a locust, the action of the jaws being nearly the same in both cases. Both insects, when in numbers, shear away the leaves, slice after slice, and leaf after leaf, until the plant is completely shorn of its verdure, when it either dies, or becomes at least incapable of bearing fruit for that season. Hence most interpreters prefer to follow the Sept. and Vulg., which are consistent with each other in the rendering of the Hebrew word in the three passages where it is found. The ekôrû of Aristotle (Hist. Anim. ii, 17, 4, 5, 6) evidently denotes a caterpillar, so called from its "bending itself" up (ekôrûre) to move, as the caterpillars called geometric, or else from the habit some caterpillars have of "coiling" themselves up when handled. The erucé of the Vulg. is the ekôrû of the Greeks, as is evident from the express assertion of Columella (De Re Rust. i, 5, 6, ed. Schneider). The Chaldeans and Syrians understand some locust larvae by the Hebrew word. Oedmann (Ver. Sumal. fasc. ii, c. vi, p. 116) is of the same opinion. Tychsen (Comment. de locustis, etc., p. 88) identifies the gazâm with the Gryllus cristatus, Lin., a South African species. Michaelsia (Supp. p. 250) follows the Sept. and Vulg. See Cart. Brit.-Gard.

The English word palmer-worm is primarily used for the hairy muff-like caterpillar of the great tiger-moth (Arctia coja). This is a very indiscriminate and voracious feeder, but we never heard of its attacking cultivated plants in such numbers as to produce the slightest alarm. Indeed, we much doubt whether any

Palmer-worm Moth (Piusia gamma), with its Caterpillar.
single species would devour indiscriminately plants with qualities so different as the olive, the fig, the vine, such as would be rare in the natural world. Other species, some other varieties of the larger moths, however, which are very destructive to vegetables, especially that very common one in the latter part of summer, called the *gamma moth* (*Platalea gamma*), easily recognised by its bearing on each wing a Greek γ, in silver on a dark brown. Perhaps, therefore, we need not look for any precise species, as represented by the *gażm*; but may understand the word to bear a sense as wide and general as its Greek or English equivalent; and to include several species of caterpillars, all having this in common, a greedy devouring of cultivated produce, and a pestiferous multiplication of their numbers. See LOCUST.

Palmieri, Giuseppe, an Italian painter, was born in 1674. He studied at Florence, but it is not known under whom. Orlandi extols him as one of the first painters of his age. Lanzi thinks Orlandi too extravagant in his praise. He adds, however, that in the human figure Palmieri is a painter of spirit, and has a magisterial and beautiful style of color, very harmonious and pleasing when the shades do not predominate. In Palmieri's *Resurrection*, in the church of St. Domenico at Genoa, and in other works of his carefully painted, judicious of the art find little to reproach. He died in 1746.

Palmistry or Chiroiomy is a species of divination by interpreting the lines in the palm of the human hand; often practiced by travelling fortune-tellers, especially Gypsies (q. v.). It has even been thought by some to be alluded to  in Job xxxvii. 7 (see Walter, *Vernum*). See CHIROMANCY PROBES*, qeud, *Rim. 1720*. See DIVINATION.

Palm-Sunday (Lat. Dominica Palmariarum, or Dom. in Palmis) is the name usually given to the last Sunday of Lent, after the custom of blessing branches of the palm-tree, or of other trees substituted in those countries in which palm cannot be procured, and of carrying the blessed branches in procession, in commemoration of Christ's triumphal entry into Jerusalem (John xii. 12-16; Matt. xii. 1-11; Mark xi. 1-11). Palms and the branches of palms were used in this important historic entry because they were then regarded as an emblem of victory, and the carrying and waving of them was an emblem of rejoicing and in honor of royalty. At the time of this triumphal entry a psalm of rejoicing was chanted by the thousands who recognised the royalty of Christ. No sooner did he enter the city than he proceeded to the Temple, and there he used the rod for scourging as for binding and for punishing. Some have maintained and blind who came to him. These things were done on the day when the lamb was separated and devoted for the Paschal service, and other preparations were made for the Passover.

The date of the first observance of Palm-Sunday by the Church is uncertain. The name is old as the time of Amalarius. In the Greek Church Palm-Sunday was apparently observed as early as the 4th century. The writings of the Greek fathers contain allusions to the celebration of this day. In the Western Church there are no signs of the observance of it during the first six centuries. The first writer in the West who expressly refers to it is St. Ambrose; but according to Venerable Bede the usage certainly existed in the 7th century. A special service is found in the Roman missal, and also in the Greek euchologies, for the observance of "branches of palms and olives," but in many countries other trees, as in England the yew or the willow, and in Brittany the box, are blessed instead. A procession is formed, the members of which issue from the church carrying branches in their hands, and sing the psalms suited to the occasion, and the ancient origin. In the Greek Church the book of the Gospels is borne in front. In some of the Catholic countries of the West, a priest, or occasionally a lay figure, was led at the head, mounted upon an ass, in the manner of our Lord Jesus Christ in the triumphal entry which still exists in some parts of Spain and Spanish America. Before the party returns to the church the doors have been closed, and certain strophes of the hymn are sung alternately by a choir within the church and by the procession without, when, on the subdeacon's knocking at the door, it is again thrown open, and the procession re-enters. During the singing of the *Pasion* in the solemn mass which ensues, the congregation hold the palm branches in their hands, and at the conclusion of the service they are carried to their respective homes, where they are preserved during the year. At Rome the procession of the Palmea and the pope has his place, is among the most striking of the picturesque ceremonies of the Holy Week. In the "Capelle Pontificile," the only authorized rubric of the mode in which these high ceremonies are to be conducted, is the following account of the ceremony of the palm: "Before describing the blessing of the palms, it is necessary to remember that the festival, the blessing and the procession of palms, was instituted for the solemn entrance of Jesus Christ into the city of Jerusalem, that by the faithful united it might not only be represented, but that everyone of the faithful might take part in it, but might also be renewed in some other mode. Besides this the Church wished to signify by this solemn ceremony the glorious entrance into heaven which the divine Redeemer will make with the elect after the final judgment. Seymour thus describes the ceremony: "The pope, as the vicar of Jesus Christ, and therefore his most suitable representative, is carried into St. Peter's, not indeed 'meek and lowly, riding upon an ass,' but seated in his chair, and carried on the shoulders of eight men. He is arrayed in all possible magnificence, preceded by the long line of bishops and cardinals in their robes of splendor, accompanied by all the high officers of state, and surrounded by the naked swords of his guardsmen. After he descends from the litter, and takes his place upon the throne, and has received the homage of each cardinal, as usual on those state occasions, the ceremonies peculiar to the day commence. Three priests, each carrying aloft a palm, descend from the high-altar, and slowly approach the throne. The pope receives them, reading over them a prescribed form of prayer, sprinkling them with holy water, and giving them blessing; then he appoints the bishop, bishop, prelate, ambassador, etc., then approaches the throne, and on his knees receives a palm from the pope, which he accepts with the usual forms of kissing the hand, or knee, or foot of the pope, according to the rank of the person in question. Every person in thus supplied, the procession of palms is formed; the pope leaving his throne again, mounts his chair on the men's shoulders, and preceded by candles lighted, the choir singing, the incense burning—the whole column in their magnificent and many-colored robes moves on to the side he one side of the high-altar, and returns by the other. Borne above all by the height of the litter, his holiness moves, the conspicuous representation of 'the meek and lowly One.' As the procession moves slowly along, the splendor of the costumes, their brilliant colors, and their gold and silver brocade—the long array of mitres, and many branches of palms moving among them—the strains of sacred music from the choir, mingling with the heavy tramp of the guardsmen—the long and brilliant lines of military extending the whole length of the church, and then the procession itself, with the pope on high above all, and all this in the most magnificent temple in the world, presents to the eye a scene of pageantry most striking and beautiful, but wholly ineffective, because unsuitable as representing the entrance of Jesus Christ into Jerusalem. With the establishment of the procession of the palms attended, and the pope has returned to the throne, and the cardinals, archbishops, bishops, etc., have retired to
their places, the high mass is celebrated, and an indulgence granted to all present, a special indulgence being used on this occasion." Each member of the congregation carries home his branch, which is regarded as a charm against diseases. Some of these branches are reserved to burn to ashes for the next Ash-Wednesday. In England, Palm Sunday is a great religious ceremony; but the blessing and procession of the palms was discontinued in the Church of England, together with the other ceremonies abolished in the reign of Edward VI. (For the different ceremonies anciently observed on Palm-Sunday in England, see Wakefield, Sacred Archaeology; Bannister, Popular Antiquities of Great Britains [see Index in vol. iii]. See also Collier, Eccles. Hist. ii, 241; Wheatley, Commentary on Book of Common Prayer, p. 222.) At a recent observance of Palm-Sunday by Romish churches in the diocese of New York, palms supplied from Charleston, S.C., were used. See Rishle, Christian Antiquities; Wetzer u. Welte, Kirchen-Lex. S. v. Palmsonntag.

The ordinary reckoning of the events of Passion-week places this event, as its name imports, on Sunday; but a more careful examination of the Gospel narratives indicates that the Palm-Sunday event in the Passion-week, in the main, is date most explicit in the Gospel of John, which states (xii, 1) that the final arrival of Jesus at Bethany was "six days before the Passover." That this term is inclusive of both extremes is clear not only from the unbroken chain of references such as the one now under consideration in the Gospels (esp. especially John xx, 26; Matt. xxvi, 1), but also from the fact that as Jericho was about one day's journey distant, Jesus would otherwise have been obliged to travel the entire Sabbath, instead of spending that sacred day, as he naturally would and actually seems to have done, at Zacheeau's house (Luke xix, 5). The Passover-day that year was Friday—as all admit—the 15th of Nisan (Num. xxviii, 3): the Paschal lamb was slain on the afternoon of the 14th (Exod. xii, 6), and it was eaten in the evening immediately after (Lev. xxiii, 5), i.e. Thursday. And, in his Life of our Lord, p. 397, mistates this position, as well as the "three days after," day, and y "including both extremes in the six days referred to; which would not "make the arrival on Sunday, the 10th," but on the 9th, which we compute to have been Saturday," But it is most natural to regard the evening only when the Passover-meal was eaten—in this case Thursday evening, or that beginning the 15th—as the included terminus ad quem, or the sixth day, and the afternoon of the day when our Lord arrived at Bethany as the included terminus a quo, or the third day, he having been with the disciples more than three days in the interval (precisely as the "three days—and three nights") of Christ's remaining in the tomb, Matt. xii, 40, are known, to have been but one whole day and fractions of the preceding and following days), and brings the arrival at Bethany on Sunday. The triumphal entry into Jerusalem certainly took place the very next morning (John xii, 12), i.e. on Monday.

Those who place this last event on Sunday must not only reckon the Passover as having fallen that year on Thursday, but they must also exclude both extremes in the reckoning of the six days in which they will bring—as in fact they do—the arrival at Bethany on either Saturday or Friday afternoon. Either of these days is extremely improbable; Saturday, as requiring the whole Sabbath to have been spent in travelling, and Friday as bringing the feast—narrated by John as occurring the same evening (xii, 2 sq.)—with all its hustle and special preparation, on the beginning of the same sacred day (i.e. from sunset; for the diēmōn cannot have been any other than an evening supper).

This view is confirmed almost to certainty by the order of subsequent events during Passion-week as narrated by each of the evangelists. They all allow a space of five days only for all these transactions, beginning with the entry into Jerusalem, and ending with the crucifixion. As the latter is almost universally conceded to have taken place on Friday, the former must have occurred on Monday. Thus Matthew assigns the first day to the triumphal entry and the cleansing of the Temple (xxi, 1-17, ending with the lodging at Bethany); Mark has the same arrangement (xi, 1-11); Luke also, but not so explicitly; John is much briefer, but still less definitely (xii, 12-19). The second day was occupied with cursing the barren fig-tree ("in the morning as he returned from Bethany," Matt. xxii, 18; Mark xi, 12), and various teachings, closing again at Bethany (Mark xi, 19), and the third with witnessing the withering of the tree ("in the second day," Mark xi, 20), and still other teachings. Luke vaguely joins both these two days' proceedings together ("daily," xix, 47; "on one of those days," xx, 1); while John passes them over with but one intimation of time ("at the feast," xii, 20), although we know from all the evangelists that they embraced an extensive series of discourses to various classes, concluding with the remarkable prediction of the destruction of Jerusalem, etc. That this closed Christ's public teachings is directly stated (Matt. xxiv, 1; Mark xiii, 1; John xii, 36). But they were not all consumed up to this time. It was now two days prior to the Passover (Matt. xxvi, 1, 2; Mark xiv, 1). These "two days" at the utmost can only make five, when added to the preceding three. They are to be understood as consisting of the comparison of the two extremes, namely, one day for that immediately following the previous discourses, or, on our reckoning, from Wednesday afternoon to Thursday afternoon, and the other from Thursday afternoon onward into the ensuing evening of the Paschal meal with which the Passover was introduced. In this way every note of time is consistently observed. The single intermediate or apparently vacant day (Thursday) was spent by our Lord in private preparation for the coming solemnities, and by Judas in bargaining for the betrayal of his Master. To take two entire days for these purposes is opposed to the requirements of the case, as well as the whole tenor of the Scripture narrative. It was in fact that Thursday morning that remained unoccupied, for in the afternoon the disciples were despatched to prepare the Passover meal (Matt. xxvii, 17; Mark xiv, 12; Luke xxii, 7). The phrase "after two days," used by both evangelists here, can only mean, as we would say, day after to-morrow; for it obviously cannot be the same as simply "to-morrow," nor yet the "second day after to-morrow." And that it dates from Wednesday is certain from the expression used by Luke (xii, 45), who had finished all these sayings." That its terminus ad quem, "the feast of the Passover" (τῷ στάχυς χιντίλλα), includes the proper Passover-day on Friday, seems clear from the added clause, "When the Son of Man is betrayed to be crucified," The betrayal itself must have occurred considerably past midnight on Friday morning. It is only by neglecting or violating some element of the evangelical history that Palm-day can be brought on Sunday. Even the accurate Dr. Robinson acknowledges in his later edition of his Harmony that he was unable to explain this, and other evident and explicit, but too implicitly the authority of the learned Lightfoot.

Palm-Synod (Palmaris Synodus), an important ecclesiastical council, so called after the building in which it was held ("A porticus besti Petri Apostoli quassata appellatur ad Palmaram," so Anastasius, v.), was convened by Theodoric in A.D. 501 (Gieseler and Zahn eras it in A.D. 503) to consider the charges of simony and adultery brought against Symmachus (q.v.) by his rival Laurentius (q.v.). The verdict of the synod and of the king, was in favor of the former. He was acquitted without investigation, on the presumption that it did not behove the council to pass judgment respecting the successor of St. Peter. See PaPACT. Of course the opposition was not satisfied with this decision, and the ecclesiastical strife continued for some time. Among
the abietest defenders of the synodical decision is the deacon Eunodius, afterwards bishop of Pavia (died 521), who in his work *Liber apologeticus pro Synodo IV Romana* (in Mansi, viii. 274) favored the absolutism of the papacy, and claimed that the incumbent of St. Peter’s chair should be regarded as above every human tribunal, and as responsible only to God himself. See Hefele, *Concilia* ii, 615 sq.; Schaff, *Ch. Hist.* ii. 324, 325; Gieseler, *Eccles. Hist.* i. 638; Nitzsch, *De Synodo Palmari* (Wittenb. 1778).

Palm-tree (プム, "tamar", so called doubtless from its tall, straight, and slender stem; Arab. "tamar" likewise; Gr. "soma"). Under this generic term many species are botanically included; but we have here only to do with the date-palm, the *Phoenix dactylifera* of Linneus. Travellers, and even Biblical writers, however, not unfrequently figure in its stead the *dōm-palm* of Egypt, which is distinguished by its branching stem and hard, single drupe.

1. Description.—The palms are the princes of the vegetable kingdom. With the cylindrical stem, unbroken by branches, springing high into the air and unfurling a canopy of enormous leaves, fan-shaped or feathery, in the shadow of which are suspended great clusters of fruit, no tree can look more lordly or more beautiful. The areca of the West Indies shoots up to an altitude of one hundred and fifty feet, and a single leaf of the talipot will give shelter to fifteen or twenty people. On the farinaceous pith of the raphia and sagusa (sago) the Sumatrans and other inhabitants of the Indian Archipelago have long relied for a chief part of their subsistence, just as the cocoa-nut has sustained for centuries the islanders of the Pacific Ocean; and, more inexhaustible than the petroleum springs of the New World, palm-oil promises to supply light to Europe and wealth to Africa through all the coming ages.

The date-palm in height is from 30 or 40 feet to 70 or 80. It seldom bears fruit till six, eight, or even ten years after it has been planted; but it will continue to be productive for one hundred years (Ps. xxiii, 14). If we say sixty or seventy, and assign to it an average crop of 100 lbs. a year, each fruit-bearing tree will have yielded twice or three tons of dates as tribute to its owners in the course of its lifetime. “The palm grows slowly but steadily, uninfluenced by those alternations of the seasons which affect other trees. It does not rejoice overmuch in winter’s copious rain, nor does it droop under the heat of the burning sun of summer. Neither heavy weights, which press down upon its head, nor the importunate urgency of the wind, can sway it aside from perfect uprightness. There it stands, looking calmly down upon the world below, and patiently yielding its large clusters of golden fruit from generation to generation. Nearly every palace and mosque and convent in the country has such trees in the courts, and, being well protected there, they flourish exceedingly” (Thomson, *Land and Book*, i, 65 sq.). It is remarkable for its erect and cylindrical stem, crowned with a cluster of long and feather-like leaves, and is as much esteemed for its fruit, the “date,” as for its juice, whether fermented or not, known as “palm wine,” and for the numerous uses to which every part of the plant is applied. The peculiarities of the palm-tree are such that they could not fail to attract the attention of the writers of any country where it is indigenous, and especially from its being an indication of the vicinity of water even in the midst of the most desert country. Its roots, though not penetrating very deep or spreading very wide, yet support a stem of considerable height, which is remarkable for its uniformity of thickness throughout. The centre of this lofty stem, instead of being the hardest part, as in other trees, is soft and spongy, and the bundles of woody fibres successively produced in the interior are regularly pushed outwards, until the outer part becomes the most dense and hard, and is hence most fitted to answer the purposes of wood. The outside, though devoid of branches, is marked with a number of protuberances, which are the points of insertion of former leaves. The leaves are from four to six or eight feet in length, ranged in a bunch around the top of the stem, the younger and softer being in the centre, and the older and outer series hanging down. They are employed for covering the roofs or sides of houses, for fences, framework, mats, and baskets. The male and female flowers being on different trees, the latter require to be fecundated by the pollen of the former before the fruit can ripen. The tender part of the spathes of the flowers being pierced, a bland and sweet juice exudes, which, being evaporated, yields sugar, and is no doubt what is alluded to in some passages of Scripture; if it be fermented and distilled a strong spirit or arak is yielded. The fruit, however, which is

---

Date-palm (*Phoenis dactylifera*),

1. Cluster of dates; 2. Flower; 3. A date; 4. Section of the same.
yearly produced in numerous clusters and in the utmost abundance, is its chief value; for whole tribes of Arabs and Amazons find their chief sustenance in the date, of which even the stony seeds, being ground down, yield nourishment to the camel of the desert.

With an imagination and a vocabulary equally copious, the Arabs are said to have hundred and sixty or eighty species of the palm-tree, and to be able to enumerate three hundred and fifty, of which different portions are applied. Certainly it would be difficult to name a more serviceable tree. Not only is its fruit a daily article of diet, but various preparations from it are used as medicines and tonics. "On the shores of the Euphrates, as the date-palm and date-house, as the bread of all nations are fed. From the leaves they make couches, baskets, bags, mats, brushes, and fly-traps; from the trunk cages for their poultry and fences for their gardens; and other parts of the tree furnish fuel. From the fibrous webs at the bases of the leaves thread is procured, which is twisted into ropes and rigging; and from the sap, which is collected by cutting off the head of the palm, and scooping out a hollow in its stem, a spirituous liquor is prepared" (Burnett, Outlines of Botany, p. 400).

No wonder that to the present day in the provinces of the East, the date-palm is constantly reappearing. Says Mohammed, "Honor your maternal aunt, the date-palm; for she was created in paradise, of the same earth from which Adam was made." In the same spirit we are told by a later Moslem tradition, "Adam was permitted to bring with him out of paradise three things—the myrrh, which is the chief of sweet-scented flowers in the world; an ear of wheat, the chief of all kinds of food; and dates, the chief of all the fruits of the world." These dates were conveyed to the Hejaz, where they grew up, and became the progenitors of all the other date-palms in Asia, Africa, and Europe; and it is the decree of Allah that all the countries where they grow shall belong to the faithful! (see Quarterly Review, cxiv, 214).

The later Hebrews have a proverb, alluding to the mixture of evil with the best possessions, "In two cabs of dates there is a cab of stones and more," and referring to the uselessness of little things, the Arabs say, "A small date-stone props up the water-jar." In their own ironical fashion, when the modern Egyptians would describe a great booster, they say, "He paid a derhem for some dates, and now he has his palm-trees in the village." For the date-palm is the tree of the ancient families, and to possess them is a sign of wealth and high lineage; but this magniloquent fellow passes off his soror purchase as the fruit of his own plantation. Beyond its substantial uses, the palm is endowed by many associations with special meanings: as a sacred object, plant, and columnar trunk, so regularly notched and indented, supplied to Solomon a chief means of ornamentation in the construction of the Temple (1 Kings vi, 29, 32, 35; vii, 36, and copies in brick of palm-tree logs survive in the rude architecture of Chaldia (see Loftus, Chaldaea and Susiana, p. 175). The branch or plaited leaf— mid-rib with its taper, sharp-pointed leaflets, alternately diverging, and forming a long and glossy plume of polished verdure—is itself a graceful object, and was doubly welcome, as its far-seen signal announced to the desert-ranger a halting-place, with food and cool shadow overhead, and wells of water underneath.

11. Locality.—The family of palms is characteristic of tropical countries, and but few of them extend into northern latitudes. In the Old World the species Phasus dactylifera is that found farthest north. It occurs along the course of the Euphrates and Tigris rivers, and is found also across to Palmyra and the Syrian coast of the Mediterranean. It has been introduced into the south of Spain, and thrives well at Malaga; and is also cultivated at Bonaria, in the south of France, chiefly on account of its fruit. The dates are sold variously the year—in spring for Palm-Sunday, and in autumn at the Jewish Passover. In the south of Italy and Sicily, lady Calcutt states that "near Genoa there is a narrow, warm, sandy valley full of palms, but they are dimmly remembered as having fruit and unfruitful trunks," and add "mostly the palm grew very abundantly (more abundantly than now) in many parts of the Levant. On this subject generally it is enough to refer to Ritter's monograph ("Über die geographische Verbreitung der Dattelpalme") in his Erdkunde, and also published in separate.

See also Exotica, by Escurial and C. H. Erbort, 444—579; Moody, The Palm-Tree (London, 1869). While this tree was abundant generally in the Levant, it was regarded by the ancients as peculiarly characteristic of Palestine and the neighboring regions (Σώπα, Πάλμα, Παλμος, Phusos, Philo, p. 2; § 22; "Judea inclyta est palmis," Pliny, Nat. Hist. xiii, 4; "Palmetis [Judeis] proceritas et decor," Tacit. Hist. v, 6; comp. Strabo, xvii, 800, 818; Theophrast. Hist. Plant, ii, 8; Pausan. ix, 19, § 5). It is curious that this tree, once so abundant in Judea, is now comparatively rare, except in the Philistia plain, and in the old Phoenicia (so named from it) about Beirit. Old trunks are washed up in the Dead Sea. It is abundant in Egypt, and is occasionally found near springs in the Desert. It nowhere flourishes without a perenial supply of water. The weeping palm of Yemen representing the palm-tree with the legend "Judea capta" is figured in vol. vi, p. 486.

III. Scripture Notices.—1. As to the industrial and domestic uses of the palm, it is well known that they are very numerous; but there is no clear allusion to them in the Bible. That the ancient Orientals, however, made use of wine and honey obtained from the palm-tree is evident from Herodotus (i, 193; ii, 86), Strabo (xvi, ch. xiv, ed. Kram.), and Pliny (Nat. Hist. xiii, 4). It is indeed probable that the honey mentioned in some places may be palm-sugar. (In 2 Chron. xxxi, 5 the margin has "dates").

2. The following places may be enumerated from the Bible as having some connection with the palm-tree, either in the derivation of the name, or in the mention of the tree as growing on the spot.

(1) At Elion, one of the stations of the Israelites between Egypt and Sinai, it is expressly stated that there were "twelve wells (fountains) of water, and threescore and ten palm-trees" (Exod. xv, 27; Numb. xxxii, 9). The word "fountains" of the latter passage is more correct than the "wells" of the former. It is not without some meaning, too, with the habits of the tree; for, as Theophylactus says (L. c.), the palm ἵππητη μὲλλόν το θυματιάν εἴπερ. There are still palm-trees and fountains in Wady Ghuründel, which is generally identified with Elion (Robinson, Bib. Res. iv, 60).

(2) Next, it should be observed that Elath (Deut. ii, 8; 1 Kings ix, 26; 2 Kings xiv, 22; xvi, 6; 2 Chron. viii, 17; xxvii, 2) is another plural form of the same word, and may likewise mean "the palm-trees." See Prof. Stanley's remarks (Sin. and Pal. p. 20, 184, 519), and compare Belzoni (BELZONI, p. 259). This place was in Edom (probably Aksab); and we are reminded here of the "Idumæan palms" of Virgil (Georg. iii, 12) and Martial (x, 50).

(3) No place in Scripture is so closely associated with the subject before us as Jamnia. Its rich palm-groves are connected with two very different periods—when that of Moses and Joshua on the one hand, and that of the evangelists on the other. As to the former, the mention of "Jericho, the city of palm-trees" (Deut. xxxiv, 5), gives a peculiar vividness to the Lawgiver's last view and address on the borders of Canaan; and the conquest we have the children of the Kenite, Moses's father-in-law, again associated with "the city of palm-trees" (Judg. i, 16). So Jericho is described in the account of the Moabitish invasion after the death of Othniel (Judg. iii, 13), and the same phrase is used in it in the reign of Abaz (2 Chron. xxviii, 15). What the extent of these palm-groves
may have been in the desolate period of Jericho we cannot tell; but they were renowned in the time of the Gospel and Josephus. The Jewish historian mentions the palm-trees that he saw there, and speaks only in allusion to the time of Moses (Ant. iv, 6, 1), but in the account of the Roman campaign under Pompey (id. xiv, 4, 1; War, i, 6, 6), the proceeding of Antony and Cleopatra (Ant. xv, 4, 2), and the war of Vespasian (War, iv, 8, 2, 3), Herod the Great did much for Jericho, and took great interest in its palm-groves. Hence the Horace’s “Herodis palmeta pingula” (Ep. ii, 2, 184), which seems almost to have been a proverbial expression. Nor is this the only heathen testimony to the same fact. Strabo describes this immediate neighbourhood, “παλμακα ἡ παλμακα, ἦς παλμακα στάδιου ἑκάστος” (xvi, 768). Pausanias (ii, 5, 1) says: “παλμακα πάντα βλέπομεν κατάστασιν” (Hist. Nat. v, 14), and adds elsewhere that, while palm-trees grow well in other parts of Judea, “Hiericiante maxime” (xiii, 4). See also Galen, De Aument. facul. ii, and Justin. xxxvi, 5. Shaw (Trav., p. 571 fol.) speaks of several of these trees still remaining at Jericho in his time, but later travellers have seen but slight vestiges of them.

(4.) The name of HAEZEKON-TAMAR, “the falling of the palm-tree,” is clear in its derivation. This place is mentioned in the history both of Abraham (Gen. xiv, 7) and of Jacob (Gen. xxxii, 12). In the same chapter (vii, 12) of these passages it is expressly identified with Engedi, which was on the western edge of the Dead Sea; and here we can adduce, as a valuable illustration of what is here before us, the language of the Apocalypse, “I was exiled unto the wilderness among palm-trees” (Rev. xii, 12).

Here again, too, we can quote alike Josephus (γινεῖται ἐν αὐτῷ φοινίκι ὁ κάλλοςτα, Ant. ix, 1, 2) and Pliny (“Engaddal opium secundum ab Hierosolyma, fertilitate palmotumorum numinosum,” Hist. Nat. v, 17).

(5.) Another place having the same element in its name, and doubtless the same characteristic in its scenery, was BAAL-TAMAR (Judg. xx, 33), the Baššāμa of Euæbious. Its position was near Gibeah of Benjamin; and it could not be far from Deborah’s famous palm-tree (Judg. iv, 5), if indeed it was not identical with it, as is suggested by Stanley (Sin. and Pal., p. 146).

(6.) We must next mention the TAMAR, “the palm,” which is set before us in the vision of Ezekiel (xlvi, 19; xlviii, 28) as a point from which the southern border of the land is to be measured eastward and westward. Robinson identifies it with the Ḫīmāt of Pennsylvania (Mag. p. 152) which lies between Hebron and Wady Musa (Bib. Rep., ii, 198, 292). It seems from Jerome to have been in his day a Roman fortress.

(7.) There is little doubt that Solomon’s Tadmor, after the famous Palmira, upon another desert frontier to the north-east of Tamar, is primarily the same word; and that, as Gibson says (Decline and Fall, ii, 38), “the name, by its significance in the Syriac as well as in the Latin language, denoted the multitude of palm-trees which afforded shade and ventilation to that temperate region. In fact, while the undoubted reading in 2 Chron. viii, 4 is “(steps, the best text in Kings ix, 16 is it. See Josephus, Ant. viii, 5, 1. The springs which he mentions here make the palm-trees almost a matter of course. Abulfeda, who flourished in the 14th century, expressly mentions the palm-tree as common at Palmira in his time; and it is still called by the Arabs by the ancient name of Tapur.

(8.) Nor, again, are the places of the N. T. without their associations with this characteristic tree of Palestine. The name “house of dates” and thus we are reminded that the palm grew in the neighborhood of the Mount of Olives. This helps our realization of our Saviour’s entry into Jerusalem, when the people “took branches of palm-trees and went forth to meet him” (John xii, 13).

This again, carries our thoughts backward the time when the Feast of Tabernacles was first kept after the Captivity, when the proclamation was given that they should “go forth unto the mount and fetch palm-branches;” (Neh. xiv, 4; ) those of the willow excepted, which are specified by name in the original institution of the festival (Lev. xxi, 40). From this Gospel incident comes Palm Sunday (Dominica in Ramis Palmariam), which is observed with much ceremony in some countries where true palm-trees can be had. Even in northern latitudes (in Yorkshire, for instance) the country people use a substitute which comes into flower just before Easter: “And willow-branches ballow. That they plaine do use to call.”

(9.) The word PHOENICEAN, which occurs twice in the N. T. (Acts xix, 14; xvi, 5), is in all probability derived from the Greek word (φοινίκη) for a palm. Sidonius mentions palms as a product of Phoenicia (Pis. Maj. xvi, 44). See also Pliny, Hist. Nat. xiii, 4; Athen. i, 21. Thus we may imagine the same natural objects in connection with Paul’s journeys along the coast to the north of Palestine, as with the wanderings of the Israelites through the desert on the south.

(10.) Lastly, PHIENICE (Φινική), in the island of Crete, the harbor which Paul was prevented by the storm from reaching (Acts xxvii, 12), has doubtless the same derivation. Both Theophrastus and Pliny say that palm-trees are indigenous in this island. See Höck’s Kreta, i, 88, 388.

3. From the passages where there is a literal reference to the palm-tree we may pass to the emblematical use of it in our Scripture. Under this head may be classed the following:

(1.) The striking appearance of the tree, its uprightness and beauty, would naturally suggest the giving of its name occasionally to women. As we find in the Odyssey (vi, 163) Nausicaa, the daughter of Alcinous, compared the ship, in so Cant. vii, 2 we have the same comparison, “Thy stature is like to a palm-tree.” In the O. T. three women named Tamar are mentioned: Judah’s daughter-in-law (Gen. xxxviii, 6), Absalom’s sister (2 Sam. xiii, 1), and Absalom’s daughter (xiv, 27). The beauty of the last two is expressly mentioned.

(2.) We have notices of the employment of this form in decorative art, both in the real temple of Solomon and in the visionary temple of Ezekiel. In the former case we are told (2 Chron. iii, 5) of this decoration in general terms, and elsewhere more specifically that it is to be “brought up” (ver. 32, 35) and the “bases” (ver. 36). So in the prophet’s vision we find palm-trees on the posts of the gates (Ezek. xl, 16, 22, 26, 31, 34, 37), and also on the walls and the doors (xii, 18-29, 25, 26). This work seems to be in relief. We know no instance of whether it had any symbolical meanings. It was a natural and doubtless customary kind of ornamentation in Eastern architecture. Thus we are told by Herodotus (ii, 163) of the hall of a temple at Sais, in Egypt, which was ἑσπερινη στέλλα φοινίκας ὁ δικάθημα μμομμονυται; and we are familiar now with the same sort of decoration in Assyrian buildings (Layard’s Nineveh and its Remains, ii, 137, 396, 401). The image of such rigid and motionless forms may possibly have been before the mind of Jeremiah when he said of the idols of the heathen (x, 4, 5), “They fasten it with nails and with hammers, that it move not: they are upright as the palm-tree, but speak not.”

(3.) With a tree so abundant in Judea, and so marked in its growth and appearance, as the palm, it seems rather remarkable that it does not appear more frequently in the imagery of the O. T. There is, however, in the Psalms (xlvii, 12) the familiar comparison, “The righteous shall flourish like the palm-tree,” which suggests a world of illustration, whether respect be had to the orderly and regular aspect of the tree, its fruitfulness, the perpetual greenness of its foliage, or the height at which the foliages grow—as far as possible.
from earth, and as near as possible to heaven. Perhaps no point is more worthy of mention, if we wish to pursue the comparison, than the elasticiuty of the fibre of this palm, and its considerable growth upwards, even when loaded with weights ("nütur in pondus palmas"). Such particulars of resemblance to the righteous man were variously dwelt on by the early Christian writers. Some instances are given by Celsius in his Hierobotanici (Upper, p. 247). One which does not give, is worthy of quotation: "Well is the life of the righteous likened to a palm, in that the palm below is rough to the touch, and in a manner enveloped in dry bark, but above it is adorned with fruit, fair even to the eye; below it is compressed by the enfolding of its branches, but on top it stands out, in a manner, as a greenness. For so is the life of the elect—despised below, beautiful above. Down below it is, as it were, enfolded in many barks, in that it is straitened by innomerable afflictions; but on high it is expanded into a foliage, as it were, of beautiful greenness by the amplitude of the rewarding" (Gregory, Mor. on Job xii., 49). There may also in Cant. vii., 8, "I will go up to the palm-tree, I will take hold of the boughs thereof," be a reference to climbing for the fruit. The Sept. has ἀναγεννήσας ἐμεῖς τοὺς φίλους, κρατήσας τῶν φίλων αὐτὸν. So in John 14:3, "He is the Way, the truth, and the life: no one cometh unto the Father, but by me." It is from the Greek names, the victors in which carried palms in their hands. But we seem to trace here a Jewish element also, when we consider three passages in the Apocalypse. In 1 Mac. xxxii., 51 Simon Macabæus, after the surrender of the tower at Jerusalem, is described as entering it with music and thanksgiving, and branches of palm-trees. In 2 Mac. x., 7 it is said that when Judas Macabæus had recovered the Temple and the city "they bare branches and palms, and sang psalms also unto Him that had given them good success." In 2 Mac. xiv., 4 Demetrius is presented "with a crown of gold and a palm." Here we see the palm-branches used by Jews in token of victory and peace. (Such indeed is the case in the Gospel narrative, John xii., 13.) There is a fourth passage in the Apocalypse, as commonly published in English, which approximates closely to the imagery of the apocalyptic: "I asked the angel, What are these? He answered and said unto me, These be they which have put off the mortal clothing, and now they are crowned and receive palms. Then said I unto the angel, What young person is it that crowneth them and giveth them palms in their hands? So he answered and said unto me, Be it known unto thee, O Son of God, whom they have confessed in the world." (2 Esdr. ii., 44-47). See Date.

PALM-TREE, CHRISTIAN SYMBOLISM OF. 1. The palm has been among all nations a symbol of victory: "What is signified by the palm," says St. Gregory the Great (Homily on Exech. ii., 17), "except the reward of victory?" The primitive Church used it to express the triumph of the Christian over death through the resurrection. "The just shall flourish as the palm" (Psalm xcvi., 13), over the world, the flesh, and the devil, by the generative, or new Southamptonian Virtues. The palm is the symbol of those conflicts which are carried on between the flesh and the spirit (Origin, in Joann. xxi.; Ambrose, in loc. vii.); On the tombs the palm is generally accompanied by the monogram of Christ, signifying that every victory of the Christian is due to this divine name and sign, "by this conquer." This intention appears very evident when, as in the present instance (Bosio, p. 460), the monogram is surrounded by palm branches, it being intended that the inscription should be given to the palm joined to the figure of the Good Shepherd, or to the crook which is its hieroglyphic sign, to the fish (Perret, IV. xvi., 3, 10, 49), or emblem of victory (Perrot, V. xiii., 3): When engraved upon portable articles, as upon jewels (Perret, Ibl. and 13, 25, etc.), the palm seems to express, not only victory already gained, but victory in anticipation; it should therefore serve to encourage the Christian yet battling with the world, as it places before his eyes the reward of victory. 2. But the palm is especially the symbol of martyrdom; for to the early Christian death was victory; therefore we conquer when we fall, says Tertullian (Apol. 1); and as St. Gregory appositely remarks (L.c.), "it is concerning those who have vanquished the old enemy, and have shed their blood in a more precious fluid, as he saith, joice at their victory over the world, that it is written, They have palms in their hands" (Rev. vii., 9). The palm of martyrdom has also become, in the language of the Church, a classical and sacramental expression. In the dyptichs, the acts of the martyrs, and the martyrlogies, we read: He has received the palm of martyrdom—he has been crowned with the palm of the martyr's (Cassiodorus, De Persecut. Vandal. apud Ruin, xv., 73). St. Agatha replied to the tyrant, "If you do not rend my body upon the rack, my soul cannot enter the possession of Him with which I am acquainted, and for whom it has become the custom to paint martyrs with a palm in their hands; and the symbol is so common that no one can misunderstand it. To the people the palm signifies that the valiant athletes have gained the victory" (Casiodorus, De Præcept. Vandal. apud Ruin, xii., 10); in the Eccl. Triumph. xii., 10), is represented with the special instrument of his torture; the attribute common to all is the palm. In the mosaic of St. Præxedrus (Cianini, Vet. Mon. t. xi., tabl. xiv.), on every side of the great arch are seen, exactly according to the Apocalypse viii., 9, a vast multitude of persons, the great multitude whom no man can number, having palms in their hands. Other mosaics have two palm-trees spanning the whole picture, and bearing fruits which are the emblem of the martyr's rewards. This symbol had previously been used in the Catacombs. On all the monuments representing our Lord between St. Peter and St. Paul, the palm-tree is generally surrounded by a phœnix, a double symbol of the resurrection given to the apostle to the Gentiles, because he was the first and most zealous preacher of this consoling doctrine.

3. The backbone clothless often found upon the tombs of faithful ones who were not martyrs; some of these bear dates earlier than those of the persecutions (Aringhi, ii, 639). It has become such a common ornament that moulds were made of it in baked clay (D'Agincourt, Portes cuites, xxxiv., 5), which was then cast as an expedient means of stamping the form of a palm upon the fresh lime of the bœcchi, a very useful expedient in the extreme haste which, in times of persecution, was necessary in such clandestine burials. Be this as it may, it was none the less certain that the palm was frequently used as a symbol of martyrdom. There were palms upon the tomb of Caius, both a pope and a martyr. They were also on those of the martyr Tiburtius, Valerianus, Maximianus, found in the confession of Cecil (Aringhi, ii, 642); the titulus of the young martyr FILUMENA shows a palm among the inscriptions of tombs (P. Van. V.); several other examples found in Bobbetti (p. 238). It seems difficult to mistake the indications of martyrdom on one sepulchral stone (Perret, V., xcvii., xcviii., xcvii., 129), where the deceased is represented as standing with a palm in the left hand, the flagellum in the right, bearing the inscription, (1)NOCENTINA DVLClS FI(LIA). A similar intention may be found in the palms which are traced upon the stucco enveloping vases of blood (Bottari, tab. ceii sq.), and in those which decorate the disk of some lamps which were burned before the walls, to the tombs of martyrs (Bartoli, Aut, lucern. pt. iii., xxii).
Palm-trees, City of

But while it is established that the palm is common to all Christian sepulchres, it follows that it is not a certain symbol of martyrdom, at least when it is joined to other symbols which are recognized as certain, such as inscriptions expressing a violent death, the instruments of martyrdom, or vases or cloths stained with blood. Papebroch and Mabillon were of the opinion that these two symbols should be taken together, so that when the palm is alone, without the vase or cloth, it is not a sufficient proof of martyrdom. Boldetti holds that they should be taken separately, as having the same value. Notwithstanding this declaration, Fabrecci excludes the palm, and affirms that, in the recognition of holy tombs, it is not founded on any historical proof. After this, Muratori (Antiq. mol. xxv. dissert. lvi) shows that the palm alone is not sufficient proof of martyrdom. Lastly, Benedict XIV (De Beati, et Can. IV, ii, 28), while he cites the degree, declares nevertheless that "in the practice of those who superintended the excavation of cemeteries, the only ground on which it rests, is not the palm, but the vase stained with blood."

Palm-trees, City of (Dent. xxxiv, 8; Judg. i, 16; iii, 18; 2 Chron. xxviii, 15). See JERicho; PALM-VELL.

Palmyra. See Tadmor.

Palombo, Bartolomeo, an Italian painter, was born at Rome about 1610, and studied under Pietro da Cortona. Palombo is highly commended by Orlandi; and Lanzi says he was one of Cortona's best scholars. There are only two pictures by him at Rome—an altarpiece in the church of S. Giuseppe, and another of S. Maria Maddalena de' Pazzi, now placed in the church of S. Martino a' Monti. These works are well designed, strong in coloring, excellent in chiaroscuro, and the figures are extremely graceful. He probably painted much for the collections. He was living in 1666.

Palsy (Gr. παλάπτωσις, which, however, only occurs in the New Testament in the adjective form παλαπτητικός, etc., one smitten with palsy) is properly a disorder which deprives the limbs of sensation or motion, or both; and it is usually attended with impotency of mind—nor is this to be wondered at, since its immediate cause is a compression on the brain. The palsy of the New Testament is a disease of very wide import. Many infirmities seem to have been comprehended under it. 1. The Apoplexy, a paralytic shock which affected the whole body. 2. The Hemiplegia, a paralytic disease of only one side of the body. 3. The Paraplegy, which paralyzes all the parts of the system below the neck. 4. The Cataracty is caused by a contraction of the muscles in the whole or part of the body (e.g. in the hands), and is very dangerous. The effects upon the parts seized are very violent and deadly. For instance, when a person is struck with it, if his hand happens to be extended, he is unable to draw it back. If the hand is not extended when he is struck with the disease, he is unable to extend it. It appears diminished in size and dried up. Hence the Hebrews were in the habit of placing it in a withered hand (1 Kings xii, 4, 6; Zech. xi, 17; Matt. xxii, 10-13; John v, 3). 5. The Cramp. This, in Oriental countries, is a fearful malady, and by no means infrequent. It is caused by the chills of the night. The limbs, when seized with it, remain immovable; sometimes turned in and sometimes bent out, in the same position as when they were first seized. The person afflicted resembles a man undergoing the torture, and experiences nearly the same exquisite sufferings (Matt. vii, 6; Luke vii, 2). Our Saviour is recorded to have miraculously cured several paralytics (Matt. iv, 24; viii, 13; ix, 2, 6; Mark ii, 3, 4; Luke xv, 18; John v, 5). See PALMATE.

Pal'ti (Heb. Paltî, 팔itre, my deliverance; Sept. Φαλρής, son of Raphu of the tribe of Benjamin, and one of the twelve spies sent out by Moses (Numb. xii, 9), B.C. 1607.

Paltî or Paltie (Heb. Paltî, 팔itre, deliverance of God; Sept. Φαλρής, son of Azaan, and chief of the tribe of Benjamin, one of those appointed to divide the Promised Land among the tribes on their entrance into it (Numb. xxxiv, 26). B.C. 1618. See PHALTIKI, which in the Hebrew is the same form.

Paltite (Heb. Paltî, 팔itre, same as Paltî (q.v.); Sept. Φαλρής, the Gentle name of Helez, one of David's captains (2 Sam. xxiii, 20); the same name, probably, as POLONIUS in (1 Chron. X, 17), and such seems to have been the reading followed by the Alex. MS. in 2 Sam. The Peshti-Syriac, however, supports the Hebrew, "Cholotes of Pelat." But in 1 Chron. xxiii, 10, "Helez the Pelonite," of the tribe of Ephraim, is again mentioned as captain of 24,000 men of David's army for the seventh month, and the balance of evidence therefore inclines to "Pelonite" as the true reading. The variation arose from a confusion between the letters ט and ש. In the Syriac of 1 Chron. both readings are combined, and Helez is described as "of Paltôn.

Pal'tus, Procuror de la (Paludana, or Petrus de Palude), a patriarch of Jerusalem, was born in Valabon, Bresse, about 1277. Son of Gerard de la Palu, a nobleman of Valabon, he entered the order of St. Dominic at Paris, taught with success in that university, and became in 1317 definor of the province of France. In the following year John XXII appointed him nuncio to Flanders to make a treaty of peace; but he did not succeed in this negotiation, which, on the contrary, created many enemies. In 1330 the same pope consecrated him patriarch of Jerusalem and administrator of the bishopric of Nicosia, in Cyprus. Pierre went immediately to Palestine and neglected nothing to engage the Sultan of Egypt to show himself more favorable to Christians. His efforts remaining without success he returned to France, and preached in 1331 a new crusade; but his appeal was not heard. He was at the same time appointed apostolic administrator of the bishopric of Conserans. He died in Paris Jan. 31, 1342. This prelate has left a great number of works; the principal ones are, Commentaires upon the third and fourth books of the Sentences of P. Lombard (Venice, 1493; Paris, 1514, 1517, fol., and 1580, 2 vols. fol.);—Conciliares sur la Somme des Lois (Paris, 1476); —Tous les secrets de l'art de la Legation (Antwerp, 1601, 2 vols. fol.).—Tractatus de Tempore et Sanctis (Antwerp, 1571, fol.).—Tractatus de la Puisance ecclesiastique (Paris, 1606, fol.). See Échard et Quéfèt, Script. ordinis Prædicatorum; Touron, Hist. des Hommes illustres de Saint-Dominique, ii, 238-285.

Paludanus (Jean van den Broek), a Belgian theologian, was born at Mechlin in 1655, and died at Louvain in 1680. In the latter city he taught theology and the holy Scriptures, and wrote several works of piety and controversy; among others, l'Indiciale theologica adversus verbi Dei corruptalas (Antwerp, 1620-22, 2 vols. 8vo).

Pammucia, a festival celebrated by all the inhabitants of Bœotia that they might engage in the worship of Athene Itonia. While this national festival lasted it was unlawful to carry on war; and accordingly, if it occurred in the course of a war, hostilities were forthwith interrupted. The solemn proclamation of truce between the contending parties.

Pamelius, Jacob, a Dutch divine of note, was born May 11, 1386, at Bruges. His father was an officer
under Charles V. Jacob studied at Bruges, Louvain, Paris, and Padua. After his return to Holland the Uni-
versity of Louvain conferred upon him the degree of D.D. and he was given the canonry in his native place.
He collected a large and valuable library for a criti-
cal edition of the fathers, but when the civil war broke
out he left his native country and went to St. Omer, where he was appointed archdeacon. He was next
proctor of St. Savour's at Utrecht. While about to
take possession of the bishopric of Maastricht, to which
position he was appointed by Philip II, he died at Menis,
Sept. 18, 1587. He wrote, Liturgicae Laiistorum (Col.
1571, 2 vols. to):—Catalogus commentariorum in uni-
versum Bibliam: —Commentarius in librum Judith, in
epistolas Pauli et Ioan. Epist. 2, 3, 4:—Phylologisches
Universals-Lexicon, s. v.;—Darling, Encyclopaedia Bib-
litog. s. v. (J. H. W.)

Pammachius, Sr., a friend and companion of St. Jerome (q. v.), was a senator at Rome, and stood high
in the esteem of his countrymen. Being persuaded of the value of a religious life, the death of his wife con-
strained him to turn aside from society, and he em-
braced an ascetic life. He died in a convent in 416.
Jerome, who was his intimate associate and friend from
youth up, carried on a correspondence with Pammachi-
us, which is of historical value to the ecclesiastical
student. Jerome in his letters, as also Augustine and
Paulinus of Nola in theirs, extols the virtuous life of
Pammachius, especially the philantropic labors in which
he abounded. See Zöckler, Leben des Hieronymus (Gotha,
1865).

Pampphilus, a Christian martyr, was an Eastern
prelate of such extensive learning that he was called a
second Origen. He was a native of Phoenicia, was born
probably at Berytus, and educated by Priorius, after
which he went to the city of Tyre, and then to the city
of Cesarea, where he established a library, and lived in
the practice of every Christian virtue. He was a man of
profound learning, and devoted himself chiefly to the
study of the Scriptures and the writings of the early Church fathers, and he undertook the publication of
most of the works of Origen with his own hand; and,
assisted by Eusebius, gave a correct copy of the Old
Testament, which had suffered greatly from the igno-
rance or negligence of former transcribers. He likewise
gave lectures on literary and religious subjects in an
academy established by him for that purpose, until
A.D. 307, when he was apprehended and carried before
Urban, the governor of Palestine. Urban, having in
vain endeavored to turn him to paganism, ordered him
to be tortured severely, and to be imprisoned; which
was accordingly done. He was beheaded in A.D. 309.
Pampphilus founded a library at Cesarea, chiefly consist-
ing of ecclesiastical works, which became celebrated
throughout the Christian world. It was destroyed be-
fore the middle of the 7th century. He constantly lent
gave away copies of the Scriptures. Both Eusebius and
Jerome speak in the highest terms of his piety and
benevolence. Jerome states that Pampophilus com-
piled an apology for Origen before Eusebius; but at a
later period, having discovered that the work which he
had taken for Pampophilus's was only the first book of
Pampophilus's apology, he decided that Pampophilus
wrote anything except short letters to his friends.
The truth seems to be that the first five books of the Apolo-
gy for Origen were composed by Eusebius and Pampphi-
lius jointly, and the sixth book by Eusebius alone, after
the death of Pampophilus. Another work which Pamp-
philus compiled in conjunction with Eusebius was an ed-
tion of the Septuagint, from the text in Origen's Hexa-
pla. This edition was generally used in the Eastern
Church. Montfaucon and Fabricius have published
Contents of the Acts of the Apostles as a work of Pamp-
philus; but this is in all probability the production of
a later writer. Eusebius wrote a Life of Pampophilus,
in three books, which is now entirely lost, with the excep-
tion of a few fragments, and even of these the genuine-
ness is extremely doubtful. We have, however, notices
of him in Eusebius (Hist. Eccles. vii, 32), and in the
Chap. 7 of Eusebius's De Poenitentia, and other writings.

Pampylia (Gr. Πάμπυλεία, of every race), a prov-
inence in the southern part of Asia Minor, having the
province of the Mediterranean on the south, Cilicia on the east, Pisidia on the north, and Ly西亚 on the west. It was nearly op-
posite the coast of Syra in the Mediterranean. The
coast and the island is called in Acts (xxvi, 5) the sea of Pampylia. The chief cities of this province were Perga and Attalia. It seems in early times to have been less considerable than either of the contiguous
districts of Lycia and Pisidia. The Phrygian, who con-
tributed a hundred ships and Lycia fifty, Pampylia sent only thirty (Herod. vii. 91, 92). The name prob-
ably then embraced little more than the crescent of comparatively level ground between Taurus and the sea.
To the north, along the heights of Taurus itself, was the region of Pisidia. The Roman organization of the
country, however, gave a wider range to the term Pam-
plilia. In St. Paul's time it was not only a regular
province, but the emperor Claudius had united Lycia
with it (Dio Cass. 1x, 17), and probably also a good part
of Pisidia. However, in the N. T. the three terms are
used as distinct. The greater part of it was wild and
mountainous, but intersected by beautiful vales. It pre-
sented a great variety of soil and climate, ranging from
the perpetual snow region on the summits of Taurus,
down to the orange-groves that to this day encircle
the town of Adana. The town of Perga was a place of
interest to the early Christians; the site of the modern
Troy is at a point in the situation of the coast give it a temperature higher than that of most parts of
Palestine. Among the most inter-
esting natural curiosities of Pamphylia may be reckoned the river Catarractae, which, taking its rise in the lake Tegea, a little south of the town
of Attalia, and its caustic waters down to the sea near Attalia, where they pour over the cliffs into the Levani; from this circumstance the river takes its name. Its bed, or rather its beds, near the termination of its course, are
continually changing, so that it becomes difficult to identify the position of many ancient sites in the vicinity of this river. The view from the sea of these waterfalls is very striking, and is not unlike that of the falls at
Hierapolis in Phrygia. The valleys are rich and fer-
tile, but towards the sea unhealthy; it is however prob-
able that their climate has deteriorated in modern times,
like that of the whole region from Egypt to the Euxine. At the mouth of the rivers respectively were situated
the important cities of Attalia, Perga, Aspendus, and
Side; so that Pampylia, though one of the smallest of
the provinces into which Asia Minor was divided, was
famed by no less number or magnificence of cities.

It was in Pamphylia that St. Paul first entered Asia
Minor, after preaching the Gospel in Cyprus. He and
Barnabas sailed up the river Cestrus to Perga (Acts xiii,
13). Here they were separated by their subordinate
region of Cilicia and Pamphilus: a circumstance which is alluded to again with much feeling, in the wish of
the apostles to see the place where the separation occurred (Acts xvi, 38).
PAMPHILIA

It might be the pain of this separation which induced Paul and Barnabas to leave Perga without delay. They did however preach the Gospel there on their return from the interior (Acts xiv, 24, 25). We may conclude, from Acts ii, 10, that there were many Jews in the province; and possibly Perga had a synagogue. The two missionaries finally left Pamphylia by its chief seaport, Attalia. We do not know that St. Paul was ever in this district again; but many years afterwards he sailed near its coast (Acts xxvii, 2). Pamphylia was "the land of Cilicia" in the old sense of the word, "the way to a town of Lycia (Acts xxvii, 8). We notice here the accurate order of these geographical terms, as in the above-mentioned land-journey we observe how Pisidia and Pamphylia occur in true relations, both in going and returning (Eis Πίσιδαν της Πισιδίας, διά της Πισιδίας την Πισιδίαν ελεύθερα, xiii, 13, 14; διαλύσται την Πισιδίαν ελεύθερα, xiv, 24). Pamphylia was then a flourishing commercial province; the rivers, now silted up, or rendered useless for ships by the formation of bars across their mouths, were navigable to a considerable extent. Cimon sailed up the river Eurymedon with his army as far as Appendus, and the Cestrus was navigable in the time of Strabo up to Perga for ships of heavy burden. The whole province is remarkable for its natural beauty, in the fertile plains and mountains, of which the researches of Tischendorf [Paris, 1853, vol. iii] show that in these respects it was surpassed by no province of Asia Minor. The climate, like that of Lycia and Cilicia, is highly favorable to this result; the mean temperature is higher than that of any other countries under the same parallels of latitude, and the summers approach those of the tropics: that portion of Europe which most nearly resembles it is the valley of the Guadalquivir. The inhabitants, like a portion of those in the neighboring provinces—Lycia and Cilicia—were mild and courteous in manners, and greatly addicted to commerce, to which indeed they were led by the peculiarly favorable situation of the country. Attalus built Attalia in order to command the trade of Syria and Egypt, and the result fully answered his expectations. At the same time this communication of the race inhabiting these provinces must be restricted within narrow limits. The Pisidians were famous robbers; the higher regions of Cilicia were infested by predatory tribes, and piracy was the profession of great numbers on the sea-coast. Even the Pamphylians themselves were not free from the like imputation as the inhabitants of the same mountains. St. Paul could not cross Mount Taurus without being "in peril of robbers." Compared, however, with the Cappadocians, the Lyconians, and the Pisidians, the inhabitants of Pamphylia may be regarded as a civilized and inoffensive race. Various accounts have been given of the origin of the Pamphylians. Some say they were a mixed race, composed of a number of amalgamated tribes, and hence their name Παμφύλιοι ("mingled tribes"). This appears to be the opinion of Herodotus (vii, 91) and Pausanias (vii, 8). Others maintain that they sprang from a Dorian chief called Pamphilus (Rawlinson's Herod. ii, 276, note); others from Pamphyle, the daughter of Rhacius (Steph. Byz. a.v.). The truth seems to be that there was an ancient tribe of this name, speaking a language of its own, and which in more recent times partly amalgamated with the Greeks who overran Asia Minor. It is this language to which Luke refers in Acts ii, 10. It was probably a barbarous patos, known only to the residents in the little province of Pamphylia (comp. Arrian, Anab. ii, 26); and hence the astonishment of those who heard the speech was great. The greater part of Pamphylia is now thinly populated, and its soil uncultivated. There are still a few little towns and villages near the coast, surrounded by fruitful fields and luxuriant orchards. Some of these occupy ancient sites, and contain the remains of former grandeur. See Conybeare and Howson, Life and Epistles of St. Paul, i, 245; Smith, Dict. of Class. Geog. s.v. See Asia Minor.

Pan is the rendering in the A. V. of the following words in the original. See Dish.

1. Kýgōr, Ἐρυπάν and Ἐρύπαν (from ἔρυσις, to cook), a basin of metal used for boiling or stewing (1 Sam. ii, 14; Sept. λύμφρας τοῦ μινούν; Vulg. lebetem); also as a layer (as generally rendered) or basin for washing (Exod. xxi, 3; 18; Sept. ρύμφρας; Vulg. labrum); 1 Kings vii, 49, 50, 43; Sept. νυμφαῖος; Alex. νυμφαῖος; Vulg. latere; and with (ἐρύμφαρον) a brazier for carrying fire (Zech. xii, 6; A. V. "hearth," Sept. ἐρύμφαρον; Vulg. comum ignis); finally a wooden platform from which to speak (2 Chron. vi, 13; A. V. "pulpit"), doubtless from its round form. See Laver.

2. Machabath, μαχαβάθ (from μαχαβάθ, prob. to cook; comp. Arab. khabaza, to prepare food), a shallow vessel or griddle used for baking cakes (Lev. ii, 5; vi, 14 [A. V. 21]; vii, 9; 1 Chron. xxiii, 29 ["flat plate," marg. A. V.]; Ezek. iv, 8; Sept. ῥύμφαρον; Vulg. ferro; apparently a shallow pan or plate, like that used by Bedawin and Syrians for baking or dressing rapidly their cakes of meal, such as were used in legal omissions. See Cake.

3. Marath, μαραθής, a flat vessel or plate for baking cakes (2 Sam. xiii, 9; Sept. ρύμφαρον). Gesenius says the etymology is uncertain, but suggests that the word may be derived from a root μαράθω ῶς Arab. haray, to shine, and was applied to the pan because it was kept bright. The distinction, therefore, between this and the preceding word may be that the marath was used dry, while the machabath was employed for cooking in oil. See Bake.

4. Sir, ςίρης, a deep vessel used for cooking food (Exod. xxviii, 3), properly a large (see 2 Kings iv, 38) pot (as usually rendered) or caldron (as rendered in Jer. i, 13; lii, 18, 19; Ezek. xi, 5, 7, 11); especially for boiling meat, placed during the process on three stones (Burckhardt, Notes on Bed. i, 58; Niebuhr, Deor. de L'Arabe, p. 46; Lane, Mod. Ed. ii, 181). See Caldron.

5. Purrūn, πυρρᾶ (Sept. ρῦμα; Vulg. ollo), a vessel used for baking the manna (Num. xi, 8), for holding soup (Judg. vii, 19; A. V. "pot"), and for boiling flesh (1 Sam. i, 14, "pot"). Gesenius says it is for μυρράς, heat, from μῦρρος Arab. mār, to boil. First questions this, and derives it from μῆρα, to excavate, to deepen. See Pot.

6. Tselaḥkēth, τσελαχκῆθ (pl. of τσελαχ, large dishes or platters (2 Chron. xxxxi, 18; Sept. λύμφρας; Vulg. olis). The cognate τσελαχ, tselaḵeh, denotes a dish which may be held in the hand and turned over for the purpose of wiping it (2 Kings xxi, 18); in Prov. xix, 24; xxvi, 18, it is used tropically of the bosom. See Plate.

7. Marshakēth, μαρσαχκῆθ (from marshē, to bubble over), a kettle for boiling meat (Lev. ii, 7; vii, 9; "frying-pan"). See Frying-Pan.

8. Greek λῆψη, a pot (1 Esdr. i, 12; 2 Mac. vii, 8); but ryngwssw, to broil (2 Mac. vii, 5; "fry in the pan"). See Roast.

Pan is the name of the chief god of pastures, forests, and flocks among the ancient Greeks. The later rationalizing mythologists, misconceiving the meaning of his name (Πάν), which they confounded with the "the whole," or "the universe," whereas it is more probably connected with πᾶν (Lat. pannus), to feed, to pasture, represented him as a personification of the universe; but there is absolutely nothing in the myth to warrant such a notion. Pan neither in his genius nor his history figures as one of the great principal deities, and his worship became general only at a comparatively late period. He was, according to the most common
belief, a son of Hermes (Mercury) by the daughter of Dryops; or by Penelope, the wife of Ulysses; while other accounts make Penelope the mother, but Ulysses himself the father—though the identification of the god is also transferred to the numerous woebeg of Arcadia in common. The original seat of his worship was the wild, hilly, and wooded solitudes of Arcadia, whence it gradually spread over the rest of Greece, but was not introduced into Athens until after the battle of Marathon. Homer does not mention him. His personal appearance is variously described. After the age of Praxiteles he is represented with horns, a goat’s beard, a crooked nose, pointed ears, a tail, and goat’s feet. The legend goes that his strange appearance so frightened his mother that she ran off for fear; but his spirited Hermes Maddened him to Olympus, where all his gods, especially Dionysus (Bacchus), were charmed with the little monster. When he grew up he had a grim, shaggy aspect, and a terrible voice, which bursting abruptly on the ear of the traveller in solitary places—for Pan was fond of making a great noise—intimidated him with a sudden fear (whence the word panic). It is even related that the alarm excited by his blowing upon a shell decided the victory of the gods over the Titans. Previous to the age of Praxiteles Pan was usually represented in a human form, and was characterized by the shepherd’s pipe, the pastoral crook, the disordered hair, and also sometimes by horns. Pan was the patron of all persons occupied in the care of cattle and of bees, in hunting and in fishing. During the heat of the day he used to take a nap in the deep woods or on the lonely hill-side. He was proceeding smoothly if his trombone was disturbed by the hallow of the hunters. He is also represented as fond of music, and of dancing with the forest nymphs, and as the inventor of the syrinx or shepherd’s flute, also called Pan’s pipe. Cows, goats, lambs, milk, honey, and new wine were all devoted to him. The first man was said to have been hired in the temple and had sanctuaries and temples in various parts of Arcadia—at Trozene, at Sicyon, at Athens, etc. The Romans identified the Greek Pan with their own Italian god Iaunos, and sometimes also with Flora. His festivals, called by the Greeks Leuca, were brought to Italy by Evander, and they were well known at Rome by the name of the Lupercalia. The worship and the different functions of Pan are derived from the mythology of the ancient Egyptians. This god was one of the eight great gods of the Egyptians, who ranked before the other twelve gods, with whom the Romans called him. He was worshipped with the greatest solemnity all over Egypt. His statues represented him as a goat, not because he was really such, but this was done for mysterious reasons. He was the emblem of fecundity, and they looked upon him as the principle of all things. His horns, as some observe, represented the rays of the sun, and the brightness of the heavens was expressed by the vivacity and the ruggedness of his complexion. The star which he wore on his breast was the symbol of the firmament, and his hairy legs and feet denoted the inferior parts of the earth, such as the forests and the deserts. Some suppose that he appeared as a goat because when the gods fled into Egypt, in their war against the giants, Pan transformed himself into a goat, an example which was immediately followed by all the deities. Also, when, after the establishment of Christianity, the heathen deities were degraded by the Church into fallen angels, the characteristics of Pan—viz. the horns, the goat’s beard, the pointed ears, the crooked nose, the tail, and the goat’s feet—were transferred to the devil himself, and thus the “Auld Hornie” or superstitious notion is simply Pan in disguise. See Chambers’ Cyclopaedia s. v.; Smith, Dict. of Gr. and Rom. Biog. and Mythol. s. v.; Vollmer, Mythol. Worterbuch, p. 1288, 1284; Westcott, Handbook of Archaeology, p. 196.

Panabaker, John, a minister of the Methodist Episcopal Church, was born in Berkeley County, Va., March 21, 1798; was converted in 1821; joined the Baltimore Conference in 1824, and the same year was transferred to the Virginia Conference; after much sickness his health failed, and he superannuated in 1829, and died April 30, 1830. He was a man of great simplicity and useful talents, and his labors were productive of much good. See Minutes of Conferences, ii. 76.

Panacea, the goddess of all the Achaeans, a surname of Minerva, and also of Aphrodite. The name of a daughter of Asclepius worshipped at Oropus.

Panachna, the goddess of all the Achaeans, a surname of Demeter, and also of Athena.

Panathenaeus of Rhodes, a celebrated ancient philosopher, the principal propagator of stoicism (q. v.) at Rome, was a native of Rhodes, and was born about 180 B.C. He studied at Athens under Diogenes the Stoic, went to Rome about 140 B.C., and there gave lessons in philosophy. He became intimately associated with Scipio Amilus, the younger Lelius, and Polybius, and made all these converts to stoicism. He also modified stoicism somewhat, suffering himself to be influenced in his philosophical opinions by his Latin surroundings. Hence Panataeus is spoken of as the first harbinger of the ethics of Cicero. He is the author of Panathenaeus’ Stoic doctrine,” says Ueberweg, “and aimed at a less rugged and more brilliant rhetorical style, and, in addition to the authority of the earlier Stoics, appealed also to that of Plato, Aristotle, Xenocrates, Theophrastus, and Dicæarchus. Inclined more to doubt than to inflexible dogmatism, and the possibility of astrological prognostications, combated all forms of divination, abandoned the doctrine of the destruction of the world by fire, on which other Stoics had already had doubts, and with Socratics modestly confessed that he was still far from having the ‘esser’ (History of Philosophy, i. 189; comp. Cicero, De Fin. 1, 29). Panatetus died about B.C. 111 at Athens. His principal work was περὶ τοῦ κατανοητοῦ, which is A Treatise on the Theory of Moral Obligation, divided into three parts: the first treats of those cases in which men deliberate between what is honest and what is dishonest; the second, concerning what is useful and what is disadvantageous; and the third, of those cases in which the useful is opposed to the honest. The third part, as far as supplied by his disciple Posidonius, is inferior to the other two parts. The work was prefixed to Cicero’s De Officiis, iii. 2, and Epist. ad Att. xvi. 11. Panatetus wrote also a treatise On Divination, of which Cicero probably made use in his own work on the same subject. In bk. ii. 42, Cicero quotes Panatetus as one among the Stoics who rejected the predictions of the sacred instrument. Scylax of Halicarnassus, an astrologer himself, and also a distinguished statesman in his native town, as one who despised all the Chaldean arts of fortune-telling.” Another work by Panatetus treats On Tranquility of Mind, which some suppose may have been made use of by Lucretius in his work bearing the same title. He wrote also a book On Providence, mentioned by Cicero (Ad Atticum, xiii. 8), another On Magistrates, and one On Heresies, or sects of philosophers. His book On Socrates, quoted by Diogenes Laertius, and by Plutarch in his Life of Socrates, was prefixed to the last-mentioned work. Laertius and Seneca quote several opinions of Panatetus concerning ethics and metaphysics, and also physics. He argued that the territ zone was inhabited, contrary to the common opinion of his time. Seneca (Epist. 116) relates his having been a student of Zeno, who had asked his advice on the passion of love. For further information concerning tis distinguished philosopher of antiquity, see Disputatum Historico-Criticum de Panateo Rhodo, by F. G. van Luyden (Leiden, 1802); and Chardon de la Rozzani, La langue et l’âge de l’Éclectisme (Paris, 1812), vol. i.; Ritter, Gesch. der Philosophie.

Panagia (Gr. all holy) is a name for the bread cut
PANATHENÆA spread and distributed to Greek monks in the refec-
tory after every meal.

Panathenaic the most famous of all the Attican festivals celebrated in Athens in honor of Athene (Mo-
nera) Polias, the guardian of the city. At first it was called Athenaea, being limited in its observance to the
inhabitants of Athens, but when it was extended to all
Attica, in the reign of Theseus, who combined the whole of
the Attican territory into one body, it was called Panathenaea.
All writers who mention the Panathenaea distinguish a greater and a lesser one; the former was
carried every fourth year, the latter annually. On
the year in which the greater occurred, the lesser Pan-
athenaea were wholly omitted. Both these festivals con-
tinued for nine days, which number is as good a
measure of other ancient festivals lasted. The greater was distin-
guished from the lesser festival by being more solemn and
magnificent. The Panathenaea took place in the month
Hecatombeion (July), and were observed with solemnities
of a train kind. Bulls were sacrificed to Athene, each
town of Attica, as well as each colony of Athens, by
supplying a bull. Races on foot, on horses, and in chariots
were indulged in; contests were held in wrestling,
in music, and in recitation; amusements, in short,
of every kind were practiced on this festive occasion.
The victors in the various contests consisted of a
vase supplied with oil from the olive-tree sacred to
Athene which was planted on the Acropolis; and nu-
umerous vases of this kind have been discovered in dif-
erent parts of Greece and Italy. In the case of the
victors in the musical contests, a chalitet of olive-
branches was given in addition to a vase. Dancing
was one of the amusements in which the people
indulged at this festival, and particularly the pyrrhic
dance in armor. Both philosophers and orators also
displayed their skill in debate. Herodotus is even said
to have read his history to the Athenians at the Pan-
athenaea. Another entertainment on the occasion of
this festival was the Lampadephoria, or torch festival. A
representation of the solemnities of the great pro-
cession in the Panathenaea is found on the sculptures of
the Parthenon in the British Museum. This proces-
sion took place in April, the festival of Athene.

Pancotto, Pietro, an Italian painter, educated in
the school of the Caracci, flourished about 1590.
According to Malvasia, he was an eccentric genius.
His principal work is a grand fresco representing The
Last Judgment, in the church of the Madonnina di S. Colombo at Bologna. In it he revenged himself
on the parish priest by introducing his portrait in cari-
cature, which excited the indignation of the clergy,
and probably lost him any further employment from
them. Lanzi places him in the third rank, among the
Bolognese painters, Domenichino and Guido holding
the first.

Panocrates, St. (Ital. San Pancrazio; Fr. St. Pan-
creas), a noted Italian ecclesiastic who suffered martyr-
dom for the Christian cause, flourished near the opening of
the 4th century. When only a boy of fourteen he
bodily offered himself as a martyr, and most valiantly
defended the Christian faith before the Emperor Deci-
tian, who punished Pancras's audacity by executing him.
His remains were buried by Christian women. French
kings formerly confirmed their treaties in his name, for
he was regarded as the avenger of false swearing, and it
was believed Pancra was the only God whose name was
immediately and visibly punished. A church dedicated to
this saint was built at Rome in A.D. 500. He is com-
memorated by the Roman Catholic Church May 12.
See Butler, Lives of the Saints, vol. i.

Pandava, or the descendants of Pandu, is the name of
the five princes whose contest for regal supremacy with
their cousins, the Kuru, the sons of Dhrishtakara,
forms the foundation of the narrative of the detailed
epic poem, the Mahabharata (q. v.). Their names are Yud-
ishthira, Bhima, Arjuna, Nakula, and Sahadeva—the
former three being the sons of Pandu by one of his
wives, Pritha, the last two by his other wife, Madri.
But though Pandu is thus the recognised fa-
ther of these princes, the legend of the Mahabharata
looks upon him in truth merely as their father by cour-
tesy; for it relates that Yudhishtira was the son of
Dharma, the god of justice; Bhima, of Vayu, the god of
wind; Arjuna, of Indra, the god of the firmament; and
Nakula and Sahadeva, of the Asvina, the twins-sons of
the sun.

Pandects. This word, which properly means a work
containing all subjects (πανδεκτός), an encyclopa-
dia, is principally applied to the general code of law
drawn up by order of the emperor Justinian (q. v.). It
acquired the name of Pandects from the universality of
its comprehension. It is called also by the name Di-
cretum, or Digest. It was an attempt to form a com-
plete system of law from the authoritative commenta-
ries of the jurists upon the laws of Rome. The com-
pilation of the Pandects was undertaken towards that
collection of the laws themselves which is known as the
Codex Justinianus. It was intrusted to the celebrated
Triphonianus, who had already distinguished himself in
the preparation of the Codex. Triphonianus formed a
new commission of seven notables, who were occupied
from the year 530 till 533 in examining, select-
ing, compressing, and systematizing the authorities, con-
sisting of upwards of two thousand treaties, whose
in

work does not speak of his having brought his tales
into the shape of a work. The arrangement of the
Panchatantra is quite similar to that of the Hitopades
. The fables are narrated in prose, and the morals drawn
from or connected with them are interwoven with the
narrative in verse; many such verses, if not all, be-
coming quotes from other works. On the history of the
Panchatantra and its relation to the Hitopades and fables of
other nations, see the excellent work of professor Theodor Benfey, Panchatantra: Fünf
Bücher indischer Fabeln, Märchen, und Erzählungen
(Leips 1859, 2 vols.). The first volume contains
his historical and critical researches, and the latter
his literal translation of the Panchatantra into Ger-
man.

Panchatantra, literally, the five books, is the name of
the celebrated Sanscrit fable-book of the Hindu
whence the Hitopadesa was compiled and enlarged.
Its authorship is ascribed to a Brahmin of the name
of Vishnuvarman, who, as its introduction in a later
reception relates, had undertaken to instruct, within
six months, the unruly sons of Amaraskti, a king of
Mahilaprapya or Mihilaprapya, in all branches of knowl-
edge required by a king, and for this purpose composed
this work. If the latter part of this story be true, it is
more than probable by the time the work was
published, that Vishnuvarman was merely the teacher of the
princes, and that the existing work itself was composed
by some other personage; for an older recension of the
VII. 20
terpretation of the ancient laws of Rome was from that
time forward to be adopted with the authority of law.
A period of ten years had been allowed them for the comple-
tion of their work; but so diligently did they prosecute it that
it was completed in less than one third of the allotted
time; and some idea of its extent may be formed from the fact
that it contains no less than nine thousand separate extracts,
selected according to sub-
jects from the two thousand treatises referred to above.
The Pandects are divided into 50 books, and also into 7
parts, which correspond respectively with books 1–4, 5–11,
12–19, 20–27, 28–35, 36–44, and 45–50. Of these
seven parts (in Lat. partes) is seldom at-
tended to in citations. Each book is subdivided into
titles, under which are arranged the extracts from the
various jurists, who are thirty-nine in number, and are by
some called the classical jurists, although other writers
on Roman law confine that appellation to five of the
number, Papinian, Paulus, Ulpian, Gaius, and Modestinus.
The extracts from these indeed constitute the bulk of
the collection; those from Ulpian alone making one
third of the whole work, those from Paulus one sixth,
and those from Papinian one twelfth. Other writers
besides these thirty-nine are cited, but only indirectly,
i.e. when cited by the jurists whose works form the ba-
sis of the collection. The principle upon which the in-
ternal arrangement of the extracts from individual writ-
ers was made had long been a subject of controversy.
The reason for this has now to be satisfied here; be-
cause the details of the discussion would carry us beyond
the prescribed limits. Of the execution of the work, it may
be said that although not free from repetition (the same
extracts occurring under different heads), and from occa-
sional inaptness of citation, and other inconsistencies,
yet it deserves the very highest commendation. In its
relations to the history and literature of ancient Rome
it is invaluable; and taken along with its necessary com-
plement the Codex, it may justly be regarded (having been
the basis of all the medieval legislation) as of the
utmost value in the study of the principles not alone of
Roman, but of all European law," including the ecclesi-
asical. The word Pædecta was used by Papia (q. v.)
to designate the Scriptures.

Pandemos, a surname of Aphrodite (Venus), under
which she was worshipped at Athens from the time
when Theseus united the scattered tribes of Attica into
one united body. White goats were sacrificed to the
goddess. The surname of Pandemos was also applied
to Eros (Cupid).

Pander, EUGÈNE VAN, a Dutch engraver,
was born at Haarlem, according to Nagler, in the year
1792. He died in the middle of the 19th century. Nagler
gives a list of thirty-three prints by him. They are executed
with the graver in a formal style, with little
effect, and the drawing is incorrect. Some
of them are interesting from the subjects. The follow-
ing are the best: The Virgin interceding with Christ
for the Salvation of Mankind (after Rubens);—The Four
Evangelists (after Peter de Jode):—St. Louis,
with a border representing his miracles (after the same
master).

Pandia is said to have been a goddess of the moon
worshipped by the ancient Greeks.

Pandia, an Attic festival, the precise nature of
which is somewhat doubtful, some supposing it to have
been instituted in honor of the goddess of the same
name, and others alleging that it had been a festival in
honor of Zeus (Jupiter), and celebrated by all the Attic
tribes just like the Panathenea (q. v.). It was held on
the 14th of the Greek month Elaphebolion, and it ap-
pears to have been celebrated at Athens in the time of
Demosthenes.

Pandíkos was a daughter of Cercopes Agraulos,
worshipped at Athens along with Thallo. She had
a sanctuary near the temple of Athene Pallas.

Pandolfi, GIACOMO GIACOMO, an Italian painter,
flourished at Posaoro about 1630. He was a scholar of
Frederigo Zuccaro. Lanzi says, "His works are cele-
brated in his native city, and do not yield the palm to
those of Zuccaro, as seen in his pictures of S. Giorgio
and S. Carlo in the cathedral." He also decorated the
whole chapel in the Rome di Dio with various subjects in
fresco from the Old and New Testa-
ments.

Pandora (i.e. the All-endowed), according to Gre-
cian myths, was the first woman on the earth. When
Prometheus had stolen fire from heaven, Zeus instigated
Heracles to make the girl work out of her own free will
the destruction of her creator by releasing her dan-
gers upon her with the gift necessary for this purpose, beauty, bold-
ness, cunning, etc.; and Zeus sent her to Epimetheus, the brother of
Prometheus, who forgot his brother's warning against receiving any gift from Zeus. A later
form of the myth represents Pandora as possessing a
vessel or box filled with winged blessings, which man-
kind would have continued to enjoy if curiosity had not
prompted her to open it, when all the blessings flew out,
except Hope.

Pandora, see Scrivians.

Pandu (literally, white) is the name in Hindi
mythology of the father of the Pandavas (q. v.),
and the brother of Dhritarashtra. Although the elder of
the two princes, he was rendered by his "pallor"—im-
plying, perhaps, a kind of disease—incapable of suc-
ceeding, and he is obliged to relinquish his claim to his
brother. He retired to the Himalaya Mountains, where
his sons were born, and where he died. His renuncia-
tion of the throne became thus the cause of contest be-
tween the Pandavas, his sons, and the Ksitras, or the sons
of Dhritarashtra.

Pandulphus, a Roman cardinal, flourished in the
first half of the 13th century. He was an Italian
by birth, and is spoken of as a man of consummate ability.
Pandulph was high in the confidence of pope Innocent
III, and was employed by the pontiff as legate to king
John of England to bring about a reconciliation of that
unhappy monarch with irenicizable Rome. The success-
ful termination of Pandulph's mission has been spoken
of in our article John (q. v.). Of Pandulph's general
personal history but little is accessible. Milman
says that he was not cardinal at all (Hist. of Lat. Ch. v., 35,
foot-note 2), but there is evidence to the contrary.
The schismatic pope Anacletus II in 1299 made Pandulph
a cardinal-deacon of S. Cosmas and Damianus (comp.
Wattenbach, Deutschlands Geschichtsquellen, p. 417).
In 1225 Pandulph had been made bishop of Norwich by the
king at the request of pope Honorius. Pandulph died in
the year 1242. He is the subject of a biographical work,
"The Life of Pandulph Mauclerc" (in Latin) by the
physician "Gervase," who was contemporary with
vexation, lived a life of prayer and study. He was
married twice, and had children. He was a
moralist, and was noted for his eloquence. He
was a powerful pen. His imagination was lively, his eye
appreciated beauty, and his heart was kindly disposed to-
wards any of the men whom the Roman priesthood
called to preside over their spiritual dominion, and he
was therefore well fitted for the task he mapped out for
himself. See also, Monum. Theol. iv. 59, 146; Mil-
man, Hist. of Lat. Ch. v., 25–26, 35–36, 41, 50, 53, 816;
Riddle, Hist. of the Popes, ii. 215–217.

Panae is the name, in ecclesiastical architecture, for
a bay in a cloister; the side of a tower; a panel or com-
partment of wainscoting or ceilings. See Panel.

Panas. See EABAN, PHILIPPUS.

Pangeyricus (Lat. pangeyricus orationes) is the name
of the discourses pronounced upon the graves of the early
Christian martyrs. They were especially a labor of
love with the Church fathers, who thus came to compose
some of their most praised homilies (q. v.). Among
the ablest were those by Chrysostom, Basil the Great, the
Gregories of Nazianzum and of Nyssa, Ambrose, Augustine, Leo, Chrysologus, and others. These panegyrics contained partly thanksgivings to God for the mercy shown the martyrs, partly encouragement to like action for remaining faithful if the occasion should arise, partly intercessory prayers for the whole Church, and encouraging reminders of the approaching resurrection of the dead. See Siegel, *Christliche Alterthümer*, iii, 281.

**Panegyric** (πανευγυρίαν, *flattering*) is the title of an Eastern Church collection of sermons by the most approved authors of the Christian Church on different festivals. Almost every province in the East has a separate collection, and the consequence is that the book remains in Ms. form. Sometimes on very high festivals the sermon for the day is transcribed into the *Menaia*, an Eastern office-book corresponding to the *Breviary* (q.v.), or other office-books, as was that of St. Chrysostom into the *Pentecostarion* (q.v.) for Easter-day. See Neale, *Intro. to the Hist. of the East. Ch.* vol. ii, ch. iii, esp. p. 889.

**Panegyric**, a term used by the ancient Greeks to denote a meeting of an entire nation or people for the purpose of uniting together in worship. It was a religious festival, in which the people engaged in prayer, sacrifices, and processions, besides games, musical contests, and other entertainments. At these meetings poems recited their verses, authors read their productions, orators delivered their speeches, and philosophers conducted grave debates in the midst of assembled multitudes. At a later period the panegyric seems to have degenerated into a mere market or fair for the sale of all kinds of merchandise, and to have almost entirely lost its religious character.

**Panel** (through Fr. from Lat. panneus, a piece of cloth) is probably in its English form only a diminutive of pane; it was formerly often used for the lights of windows, but is now almost exclusively confined to the sunken compartments of wainscotting, ceilings, etc., and the corresponding features in stone-work, which are so abundantly employed in Gothic architecture as ornaments on walls, ceilings, screens, tombs, etc.

![Simple Panels.](Image)

Of the *Norman* style no wooden panels remain; in stone-work, shallow recesses, to which this term may be applied, are frequently to be found; they are sometimes single, but often in ranges, and are commonly arched, and not unusually serve as niches to hold statues, etc.

In the *Early English* style the panelling in stone-work are more varied; circles, trefoils, quatrefoils, cinquefoils, etc., and the pointed oval called the vesica piscis, are common forms; they are also frequently used in ranges, like shallow arcades, divided by small shafts or mullions, the heads being either plain arches, trefoils, or cinquefoils, and panels similar to these are often used singly; the backs are sometimes enriched with foliage, diaper-work, or other carvings.

In the *Decorated* style wood panelling is frequently enriched with tracery, and sometimes with foliage also, or with shields and heraldic devices: stone panelling varies considerably; it is very commonly arched, and filled with tracery like windows, or arranged in squares, circles, etc., and feathered, or filled with tracery and other ornaments in different ways; shields are often introduced, and the backs of the panels are sometimes diapered.

![Lincoln Cathedral.](Image)

In the *Perpendicular* style the walls and vaulted ceilings of buildings are sometimes almost entirely covered with panelling, formed by mullions and tracery resembling the windows; and a variety of other panels of different forms, such as circles, squares, quatrefoils, etc., are profusely used in the subordinate parts, which are enriched with tracery, featherings, foliage, shields, etc., in different ways: in wood panelling the tracery and ornaments are more minute than was usual at an earlier period; and towards the end of the style these enrichments, instead of being attached to the panels, are usually carved upon it, and are sometimes very small and delicate. There is one kind of ornament which was introduced towards the end of the *Perpendicular* style, and prevailed for a considerable time, which deserves to be particularly mentioned; it consists of a series of straight moldings worked upon the panel, so arranged and with the ends so formed as to represent the folds of linen; it is usually called the *limp pattern*. Many churches have wooden ceilings of the *Perpendicular*.
Genitori, gentioque
Lanet et jubilatio.
Salus, honor, Gloria, quaque
Sist et benedictio:
Procedente ut ueroque
Compar at iudicium.

"This hymn," says Mr. Neal, "contests the second place among the works of the Western Church with the Vestigia Regis, the Statut Muter, the Jesus dulces Memoria, the Ad Regnum Aga Dopes, the Ad Supremum, and one or two others, leaving the Dies Irae (q.v.) in its unapproachable glory. It has been a bow of Ulysses to troops." How true this remark is may be seen from the following specimens both in English and German: Neale (Of the glorious Body telling); Benedict (Sing, my tongue, the theme undying); Schaff (Sing, my tongue, the mystery telling); Palmer (Sing, and the mystery declare); Caswall (Sing, my tongue, the Savior’s glory); "Hymns Ancient and Modern" (Now, my tongue, the mystery telling); Rummel (Freinet Lippen das Geheinsame); Simrock (Kündet Lippen allen des Hehren); Daniel (Freinet ein Wunder ohne Gleichien); Fortlage (Zung, king im Wunderwörten); Königsfeld (Singet, Hochgenug des Grosses).

Trench, in his collection of sacred Latin poetry, has preserved it, because it strongly savors of transubstantiation. For the various translations, comp. Schaff, Christ in Song; Neale, Mediceal Hymns; Benedict, Hymns of Hildesbert; Caswall, Hymns and Poems; Hymns Ancient and Modern; Rambach, Anthology, vol. i.; Simrock, Coroa Sacra; G. Reisingh, Latinische Hymnen und Gesänge; Büsseler, Auswahl christlicher Lieder; Fortlage, Gesänge christlicher Vorträge; Daniel, Hymnologischer Blüthenatursus (Halle, 1840).

Pange lingua gloriosi prelium certaminis.
"This world-famous hymn, one of the grandest in the treasury of the Church of Rome," was composed by Fortunatus (q.v.) on occasion of the reception of certain relics by St. Gregory of Tours and St. Radeugund, previously to the consecration of a church at Poitiers. It is therefore strictly and primarily a processional hymn, though very naturally afterwards adapted to Passion-tide (Neale).

The following is the form of the hymn in the Roman Breviary:

Pange lingua gloriosi lauream certaminis,
Et super crucis tropeo die triumphant nobilium,
Qualiter redemptor orbis immolatus vicit.

De parentis protoplasti fravde factor condonatum
Quoniam sanctae matris in necem morae natus
Ipsi lignum tunc notavit damni ligni ut soleret.

Hoc opus nostrum salutis ordo depersecutavit;
Mortuusque prodicator "Libera me a sinis, Redemptor.
Et medelam ferret inde hostis unde ineret.

Quando venti ergo sacri plentudo temporis
Missa est ab arce patris orbis condition
Atque veire virginial carne amitas profluit.

Vagit Infans Inter aetra conditos praepelea,
Membra panni involuta virgo mater alligat,
Et Dei manus pedesque stricta cincta fasicit.

Lastra sex qui tam peregrini tempus impellet corporis
Sponte libera redemptor passioci deditis.
Agnus in crucea levant immolandas stipte.

Felix putas ece languep spina, clavi, lancea,
Mite corpore terminata manic manat non terrae,
Polnus, austri, austria, mundus quo lavant famina.

Cruor fidellum inter omnes arbor annis nobilis
Silva telesacula profundo flori, flore, gemine.
Dulce furcum, dulce lignum, dulce pondus sustinet.

Flecto ramos arbor alta, tena laxa viserca,
Et rigor lentosac tille quem dedit nativitas,
Et superni membrana reque tende mili stulti.

Sola digna in futili ferre mundi victimam,
Atque portum preparare arca mundo nautage,
Quem aequo curor pernuxt fusa aquis corporis.

(Sampiermo sit beatit Trinitati gloria.
Aequa patri dillique, per decus parvis;
Utis trinitque nonum landet universitas.)

Of this hymn, which the hymnologist Daniel pronounced "in pulcherrimorum numero recensenum," we give a part of Mrs. Charles’s fine rendering:

ULTRA STYLE, AND SOME PERHAPS OF EARLIER DATE, WHICH ARE DIVIDED INTO PANELS, EITHER BY THE TIMBERS OF THE ROOF OR BY RIBS FIXED ON THE BOARDING; SOME OF THESE ARE HIGHLY ORNAMENTED, AND PROBABLY MOST HAVE BEEN ENRICHED BY PAINTING. AFTER THE EXORBITANCE OF GOTHIC ARCHITECTURE PANELLING IN GREAT MEASURE CEASED TO BE USED, THIS EXTRAVAGANCE WAS OFTEN EMPLOYED IN WAINSCOTING AND PLASTER-WORK; IT WAS SOMETIMES FOUND IN COMPLICATED GEOMETRICAL PATTERNS, AND WAS OFTEN VERY HIGHLY ENRICHED WITH A VARIETY OF ORNAMENT.

PANETTI. DOMENICO, AN ITALIAN PAINTER, WAS BORN IN 1460 AT FERRARA. IT IS NOT KNOWN UNDER WHOM HE STUDIED; BUT, ACCORDING TO BARUFFALDI, HE PAINTED IN THE DRY, FORMAL STYLE OF THE TIME, TO HIS PUPIL, BENVENUTO DA GAROFALO, RETURNED FROM ROME AFTER ACQUIRING THE NEW STYLE UNDER RAPHAEL. THE INSTRUCTOR NOW BECAME THE PUPIL OF HIS FORMER DISCIPLE, AND, ALTHOUGH SOMEWHAT ADVANCED IN YEARS, PANETTI SO ENTIRELY CHANGED HIS MANNER THAT HE BECAME ONE OF THE BEST ARTISTS OF HIS TIME. HE EXECUTED MANY WORKS FOR THE CHURCHES OF FERRARA WHICH LANZI SAYS ARE WORTHY OF COMPETITION WITH THE BEST MASTERS OF THE 14TH CENTURY. AMONG HIS BEST WORKS ARE THE DESCENT FROM THE CROSS, IN THE CHURCH OF S. NICCOLA; THE VISITATION OF THE VIRGIN TO ST. ELIZABETH, IN S. FRANCESCO; AND A PICTURE OF S. ANDREA AT THE AGOSTINIANI. THERE IS ONE OF HIS PICTURES IN THE DRESDEN GALLERY, AND KUGLER MENTIONS IT AS ONE OF HIS MOST BEAUTIFUL PIECE OF THE ENTOMBMENT IN THE MUSEUM AT BERLIN. HE USUALLY INSCRIBED HIS NAME IN FULL UPON HIS PICTURES, WHICH LANZI SAYS BEARS EVIDENCE OF CHANGE IN PICTORIAL CHARACTER WITHOUT AN EXAMPLE. HE DIED IN 1580.

PANIELLENIA 619 PANINI

"Spred, my tongue, the wondrous story of the glorious bat-
tle; for
What the trophies and the triumphs of the cross of Jesus are—
How the Vicem, immortal, vanished in that mighty war.
Plunging, old the Great Hibernian Adam's fall and ruin see.
Sentenced then to death by tasting fruit of the forbidden tree,
As he marked that wood the weapon of redeeming love to be.
Thus the scheme of our redemption was of old in order laid.
Thus the wily arts were baffled of the foe who man betrayed.
And from the dishonour Death's armor was made."

Like the preceding it has been translated into English and German. theatraus, p. 14, 101; th. Theatraraus Hymnologica, p. 163-165; Wackernagel, Das deutsche Kirchenlied, i, 61 sq.; Koch, Geschichte des Kirchenliedes (Stuttgart, 1896), i, 57 sq. (B. P.)

Panellenia, a festival of all the Greeks, as the name implies. Its first institution is ascribed to the emperor Hadrian.

Panellenius, a surname of Dodomeion Zeus Ju-
pisius, who was, according to Zosimus, the first to write in Greek. There was a sanctuary built for his worship in Ægina, where a festival was also held in his honor.

Pancile, Masolino da, an eminent Italian sculpt-
ror and painter, born at Piacenza, in the Florentine ter-
ritory. In 1788, he first studied modelling and sculpture under Lorenzo Ghiberti, who at that time was untried in composition and design, and in giving ani-
mation to his figures. Being already a distinguished artist, he studied coloring under Gherardo Starnina. Thus uniting in himself the excellence of two schools, and diligently cultivating the art of chiaroscuro, he produced a new style, not wholly exempt from dry-
ness, but grand, determined, and harmonious beyond any former example; and that was carried to higher perfection by his scholar, Masaccio.
The chapel of S. Pietro al Carmine is a monument of his genius. He there painted the Four Evangelists, the Virgin, and St. Peter to the right of God's armament, Christ, Curing the Lame Man at the Gate of the Temple, and the Preaching to the Multitude. Pancile died in 1415, before the completion of the chapel, and the rest of the Acts of St. Peter. These were afterwards painted by Masaccio. Some of his works have been engraved.

Panico, Antonio Maria, a Bolognese painter, who, according to Bellora, was a disciple of Annibale Carracci, whom he accompanied to Rome at an early age, and whose manner he emulated. He was much employed by Mario Farnese in decorating his country-seats at Castro and Latera. His most esteemed work is a picture of the mass in the cathedral of Farnese, in which Lanzi says, he was assisted by Annibale, who even con-
ducted some of the figures. This, however, seems doubt-
ful, as Caracci died in 1609, and Panico in 1662. It is not probable that the latter would have been intrusted with any merit of reputation attributed to that mighty work, which must have been the case were such an association true.

Panier, Ferdinando, an Italian theologian, was born at Pistoia Nov. 24, 1759. He was for some time professor of dogmatic theology in the seminary of his native town. He was favorable to Jansenism (q. v.), and assisted in the synod of 1786, where the principles of the "Bodmer" and "Purinas" sect were defended. He was sus-
ger of persecution for his liberal stand, he afterwards addressed to the holy chair a complete retraction of his conduct. And a canonicate was then given him, and the direction of the ecclesiastical conferences of the diocese in which he held the professorship. See Cat. Pistoia Jan. 27, 1822. His principal writing is Esquisses sur les pechés qui se commettent dans les fêtes et les plaisirs du siècle (Pistoia, 1808-1813, 4 tols.). See Catalogue des Saites de Pistoia (ibid. 1818, 2 vols.); Mahul, Annuaire médiol. 1823; Hoeffer, Nouv. Bldg. Générale, xxxiv., 1854.

Panigraho, Francois, a celebrated Italian Romanist, was, especially as a pulpit orator, was born of noble descent at Milan Jan. 6, 1648. He was educated by Noël Conti and Aonio Palaeiro, and early gave proof of great vivacity of mind and a wonderful memory. He studied for several years at Pavia and Bologna, at the same time leading a very disorderly life. Recalled to other sentiments by the death of his father, he enter-
red the Order of Cordelliers in 1657, and soon distinguished himself by his talent for preaching. In 1571 he went to Paris to finish his theological studies, where he preached before Catharine de Medicis. After having stopped at Lyons and Aix-en-Provence, he returned in 1573 to his own country, and for several years taught theology in different convents of his order. His sermons, which in the opinion of Tiraboschi, display the richest imagina-
tion, great force of thought, and energetic style, are full of gravity, although a little redundant. They gained him the favor of all the most powerful and most illustrious personages of his country's contemporaries. After having passed two years near San Carlo Borromeo, who highly es-
teemed Panigraho, he was promoted to the bishopric of Asti in 1567. Two years after he was sent to Paris, to sustain there by his eloquence the party of the Lorrains. In 1590 he returned to his diocese, which he administered till his death with great zeal. He died May 31, 1594. Among his eighty and more works, printed or in MS., we will quote, Lezioni xx contro Colino (Venice, 1600, 4to.); Prediche spezzate (Asti, 1652, 4to.); Tre predicenze italiane (Milan, 1652, 3 vols.); Compendio degli Amali Ecclesiastici del Buronio (Venice, 1590, 4to.); Sei sermonsii fatti in Roma (Rome, 1566, 2 vols.); Specchio di guerra (Bergamo, 1567, 4to.); Concesiones Latina (Cologne, 1600, 8vo.); Homiliae Romae habiata annno 1590 (Venice, 1604, 8vo.);—Rhetorica ecclesiastica libri iii. (Cologne, 1605, 8vo.);—La quaresima in sonetti con le figure (Bergamo, 1606, 4to.);—Il predicatoro, o sia commentario al libro dell' Elo-
genuesa de Demetrio Philerus (Venice, 1609, 4to.);—Sagri concetti (Milan, 1628, 4to.);—Carmina Latina, in vol. (Rome, 1637, 4vo.);—Théorie de Bullar.): Ugelli, Italicu sacra, t. iv; Arge-
lati, Scriptores mediolanenses; Tiraboschi, Storia della letter. Italiana.

Panini, the most celebrated of the Sanscrit gram-
marians, is said to have been the grandson of the in-
spired legislator Dévala, and lived at so remote an age that he is recorded among the fabulous ages men-
tioned by the Puránas (see Colebrooke, Indian Antiq., vii., 202). With regard to his death we have the following tradition in the Hitopadépa:—"It is related that the valuable life of Panini was destroyed by a lion." The Indians consider him as their most ancient grammarian, but his work is confoundingly derived from others. Various treatises on the same subject: he often quotes his pre-
decessors Sâkalya, Gârgya, and others; and it appears from a passage in the Bhagavata-Gita (unless the fol-
lowing line is an interpolation of a later age) that the nomenclature of grammar existed when the epic li-
cendaries were composed. According to his grammar, Panini's gramar consists of 8996 short aosphoras, or sutras, divided into eight books, in which the rules of gram-
mar are delivered with such oracular brevity and ob-

Digitized by Google
security that they need a commentary to render them intelligible even to the learned Indians. Besides the Cāndogya of Bhartrihari, a brother of king Vicramādiya, there were the following treatises, written expressly to illustrate it: 1. the Bhūtikāyika, which was nominally a poem describing the adventures of Rāma, but really a collection of all the defective and anomalous forms of Vedas; 2. the Śatapatha Brahmana; 3. the Mhā-Bhidāya, or "great commentary," by Patañjali. A new edition of Pāṇini has been published with the following title: Pāṇini's acht Bücher grammatischer Regeln (Saussure, with Commentary by Dr. Otto Babinger [ Bonn, 1893 ]; 2 vols., 8vo). The first of the above manuscripts is the Pāṇini-Sūtras with the native scholia; the second volume contains an introduction, a German commentary, and indexes.

Pāṇini, the great national festival of the Ionians, in honor of Poseidon (Neptune), the god whom they specially revered. On this occasion a bull was sacrificed, and if the animal roared during the process of killing it was regarded as pleasing to the deity. The sacrifices were performed by a young man of Priene, who was chosen for the purpose with the title of king. The festival was held on Mount Mycale, where stood the Pāṇiniion, or temple of Pāṇini Heliconius.

Pānīs Benedicteus (blessed bread), a portion of bread of blessed bread. The ancient Athenians when seasoned with salt, was given with milk and honey at baptism. See HONEY; MILK. The expression in the patristic writings first occurs in Augustine's work on Baptism. It has given rise to a perplexing controversy respecting the sacrament of the catechumens (q.v.). Inanson, Pannage, and Bingham contend that the pannis benedictus of Augustine was not the sacramental bread at all, but bread seasoned with salt; and that the baptism so administered was regarded by the early Christians as the emblem of purity and incorruption. The blessed bread of the Greek Church is the Antidoros (q.v.).

Pānīs Conjuratio (exorcism of the bread) was the technical term which designated the ordeal of consecrated bread or cheese practiced in the Middle Ages. It was administered by presenting to the accused a piece of bread (generally of barley) or of cheese, about an ounce in weight, over which a priest adjourned the accused. After appropriate religious ceremonies, including the communion, the morsel was eaten, the event being determined by the ability of the accused to swallow it. This depended on course of the imagination, and we can readily understand how, in those times of fasting and religious observances, the abuse of the ordeal would affect the criminal who, conscious of guilt, stood up at the altar, took the sacrament, and pledged his salvation on the truth of his oath. The mode by which a conviction was expected may be gathered from the forms of the exorcism employed, of which a number have been preserved:

"O Lord Jesus Christ, ... grant, we pray thee, by thy holy name, that he who is guilty of this crime in thought or deed, when this creature of sanctified bread is presented to him for the proving of the truth, let his throat be narrowed, and in thy name let it be rejected rather than devoured. And let not the spirit of the devil prevail in this to subvert the judgment by false appearances. But he who is guilty of this crime, let him, chiefly by virtue of the body and blood of our Lord which he has received in communion, when he takes the consecrated bread of the Christian church, may be wounded and shake in all his limbs; and let the innocent quietly and healthfully, with all ease, chew and swallow this morsel of consecrated bread or cheese. He then, let his name, that all may know that thou art the Just Judge," etc.,

Even more whimsical in its devout impurity is the following:

"O God most High, who dwellst in the heaven, who through thy Trinity and majesty hast justly angels, send blessed abode to the angel Gabriel to stick in the throat of those who have committed this theft, that they may neither chew nor swallow this bread and cheese created by thee. I invoke the patriarchs, Abraham, Isaac, and Jacob, with twelve thousand angels and archangels: I invoke the evangelists, Matthew, Mark, Luke, and John: I invoke Moses and Aaron, who divided the sea, that they may blind their throat and tongue the thieves of men who have committed this theft, for all eternity. If they taste this bread and cheese created by thee, may they tremble like a tumbling tree, and have no rest, nor keep their eyes open, and let them not know thou art the Lord, and there is none other beside thee.

Pan-Movements for the union of the different Christian bodies of the world are of recent origin, and so largely at work at the present time that it is hardly possible to say more here than simply call the attention to the Pan-Anglican Synods held in recent years (see SYNODS; ECUMENICAL COUNCILS); and the Pan-Presbyterian Synods for the purpose of effecting a Presbyterian union. See PRESbyterians.

A Pan-MethoDistic organization has been suggested, and is likely to secure the hearty co-operation of all MethoDists of every branch and every country (comp. MethoDist Quar. Rev. Jan. 7, 1875; Apr. 172). See Ecumenical Alliance Conference, 1878 (New York, 1874, 8vo).

Pan'nam (29B, pannag) occurs only once in Scripture, but so much uncertainty exists respecting the meaning of the word, that in many translations, as for instance, in the Authorized English Version, the original is retained. Thus in the account of the commerce of Tyre, it is stated in Ezek. xxvii, 17, "Judah and the land of Israel— that is, the products of their country as an agricultural people— as articles of traffic to the merchants and mankind of many nations; and this is the wisdom of Pharaoh, king of Egypt, which from their insular position, have obtained their chief articles of diet from the neighboring land of Syria. It is probable, therefore, that pannag, whatever it may have been, was the produce of Palestine, or at least of Syria. In comparing the passage in Ezekiel with Gen. xlix, 11, where the most valued productions of Palestine are enumerated, the omission of tragacanth and laudanum (A. V. "spices and myrrh") in the former is very observable, and leads to the supposition that pannag represents some of the spices grown in that country. The Sept., in rendering it, errat, but the opinion is strong and not improbable that it is eqvivalent to cunnus cannot be the particular spice intended (see ver. 19). Hitzig observes that a similar term occurs in Sanscrit (panmagro) for an aromatic plant. Some of the rabbins have also thought that it was a district near Minniinh, like the district of Minniinh, like the best wheat (Fünst, Ḡeb. Lex. s. v.); others, as Junius and Tremellius, from the similarity in the name, have thought it might be the original of the name of Phoenicia. But Hiller (Herophylogia, i, 51) thinks it to be the same with the μώσαα of the Greeks, the Roman panax, whence comes "panacea," the universal remedy. The name panax occurs as early as the time of Theophrastus (ix, 10), and several kinds are described by him, as well as by Dioscorides; one kind is called especially Syrian panax. Of one of these plants, now supposed to belong to Aconitum Ferox, the root is bruised, and the juice was called oppanaux. It is curious, however, that the plant yielding the opopanax of commerce is still unknown, as well as the exact locality where it is produced, whether in Syria, or in some part of the Persian empire. The name panax is said to be derived from the Greek words pan—a whole, and axon—a thorn, from the opinion of Calcutt has supposed (Supp. Herb., p. 971 sq.) the panax of the ancients to refer to Panax quinquefolium, or ginseng of the Chinese, which they also suppose to be a universal remedy, though not possessed of any active properties. But the name panax was not applied to this plant until the time of Linnaeus, and the opinion of Calcutt, or indeed of any other, is probably not a satisfactory one to make proof, nor indeed is it probable, that it found its way from China at any such early period: at all events the Israelites were not likely to convey it to Tyre. The
PANNINI

Syrian version, however, translates pannag by the word dookum, which signifies "millet," or Panicum milletum. Bishop Newcome, therefore, translates pannag by the word panicum, signifying the species of millet which was employed by the ancients as an article of diet, and which is still in use in many parts of the native. The application of this term appears to be favored by the expression in the book of Sohar, quoted by Gesenius (Theeaur, s. v.), which speaks of "bread of pannag:" though this again is not decisive, for the pannag may equally well have been some flavoring substance, as seems to be implied in the doubtful equivalent (Μανακας) given in the Targum. Some objection to its being millet is that this grain has a name, doookum, which is used by the same prophet in Ezek. iv. 9. See Millet. From the context it would seem most likely that this pannag was a produce of the country, and probably an article of diet (Kitto; Smith). Perhaps the best explanation of this uncertain word which can now be given is that which refers it to a kind of "pastry or sweet cake" (from an obsolete root, θαγε, to be savory; so Gesenius and Fürst). See Tyke.

Pannini, Cav. Giovanni Paolo, an eminent Italian painter of perspective architecture, was born at Pincenza in 1691. He went early to Rome, where he studied under Pietro Lucatelli. He had a passion for painting, and applied himself with great assiduity in designing the remaining monuments of antiquity wherever he found them. He was especially distinguished at Half Moon in 1708. He was a master of the art and style on Giovanni Gisolfi, and became a perfect master of the art of perspective, surpassing all his contemporaries. He sketched every vestige of ancient magnificence—the ruins of superb edifices, cenotaphs, columns, arches, obelisks, and some of the most ancient buildings which ornamented Rome. His composition is rich, and his perspective critically correct. His works are universally admired for the grandeur of his architecture, the clearness of his coloring, the neatness and freedom of his touch, the beauty of his figures, and the elegant taste with which he disposed them, although he sometimes designed his figures of too large a size for his architecture, which injures the effect that would otherwise be produced by the immensity of the buildings. This fault, however, is only occasional in Pannini's works. He generally painted his pictures of a large easel size, but sometimes he worked on a grander scale. Lanzi highly commends a picture of this class in the church of the Signora della Missione, representing Christ driving the Money-changers from the Temple, in which the architecture is truly magnificent. It is one of the principal figures of the great spirit and variety of character, and of much larger size than he usually painted. His works are numerous, and are not only to be found in the principal collections of Italy, but in other countries of Europe. At Bologna, in the picturesque house of the king of Sardinia, and in the pontifical palace of Monte Cavallo, are some of his choicest works. Many of his pictures have been engraved. He died in 1758.

Pannormia is the title of a canonical collection by bishop Ivo of Chartres (q. v.), consisting of eight books, and counted among the most valuable ecclesiastical labors of the pre-Galan period. They were freely used by Gratian. See, on the relation of the Pannornium to the Decretum, Theiner, Ueber Ivo s vermuthliehten Decret.: Savigny, Gesch. des röm. Rechts in M. A.: Waserschleben, Zur Gesch. der vorgalischen kirchenrechtlichen Deutungen: Bruns, Gesch. des röm. Rechts in M. A. sq. The Pannormium was approved by Sebastian Brandt (Basle, 1499) and by M. A. Vosmedian (Louvain, 1557). It has also been printed in Migne's Patrol. vol. clx.

Panodórus, an Egyptian monk who flourished in the reign of the emperor Arcadius, is noted as the author of a Chronography (Τοιχογραφία), in which he found great fault with Eusebius, from whom, however, he took many of his statements. Panodorus is frequently mentioned by Syncellus. See Voss, De Hist. Graec. p. 308; Fabricius, Bibl. Graec., vii, 444.

Panophea, a surname of Zeus (Jupiter), as being the author of all omens and signs of every kind.

Panormitanus, a surname of Nicolas Tudesco (or de Tudesco, de Tudesche), a noted Italian Prelate, who was so generally known under his surname that we immediately think of him in this place. He was born in 1386 at Catania, in Sicily; in 1400 he entered the Benedictine Order; and in 1414 he became canon in his native city. Later he studied canon law at Bologna, and then taught at the high schools of Na, Pisa, and Bologna. In 1425 he received from pope Martin V the abbey Manicarm, near Messina; afterwards he became auditor of the Rota and apostolical referendar at Rome. Alphonso V of Aragon secured his services, and was so well pleased that he caused him to be elevated to the archbishopric of Palermo, and sent as legate to the council at Basle. In this celebrated ecclesiastical gathering Panormitanus was at first a devoted advocate of pope Eugenius IV; but when, in 1447, the council was moved to Ferrara for the obvious purpose of strengthening the papal interest, Panormitanus, ever mindful of the right of power, forsok the papal side, and advocated the superiority of the council over the pope. In 1440 the antipope Felix II conferred on Panormitanus the cardinal's hat, and employed him as legatus a latere at Mayence in 1441, and Frankfurt-on-the-Main in 1442. In 1444, when king Alphonsus made peace with pope Eugenius, Panormitanus was recalled from the council. He died shortly after at Palermo, in 1443 or 1445. He wrote a Commentary to the Decretals of Gregory IX and the Clementines, which is highly prized; also a justification of the Basle Council, which (Derbeis translated into Dutch in 1567, in the interest of Galluscianism.)

Panestus, a Christian philosopher of the Stoic sect, flourished in the 2nd century. He is supposed to have been a native of Alexandria, and to have taught philosophy and religion there about A.D. 180. He went on a mission to Ethiopia, from whence he is said to have brought back the apostle to Ethiopia. Matt. xviii. 7 sq. He is known in Hebrew (Eusebius, Hist. Eccles., v. 10). But little else is known of his personal history. With the persecutions under Septimius Severus all trace of Panestus is lost. He is reported to have died in 215. He left several treatises, but only a few scanty remains of them are now extant. Some of them are collected in Eusebius, Hist. Eccles., iv. 389 sq. See Redepenning, Origines, vol. i.; Grueteric, De Schola Alexandr. vol. i.; Philo Judaicus, Opera, iv. 94; Alzog, Kirchengesch., i. 194; Bitter, Gesch. der christl. Philosophie, i. 421 sq.; Smith, Dict. of Class. Biogr. s. v. (J. H. W.)

Pantaleon, St. (Ital. San Pantaleone; Gr. "Ay. Ἑναδρόνιος), a noted Christian martyr under Galerius, was born (according to tradition) at Nicomedia, in Bithynia. His father, from whom he received his education, was a pagan; his mother was a Christian. Having applied himself to the study of medicine, he became eminent in his profession, and was appointed physician to the emperor Galerius. He was one of the most benevolent of men and successful of practitioners. His reputation roused the jealousy of the pagan physicians, who accused him to the emperor. He was accused as a Christian, ordered him to be tortured, and then beheaded, which was done, A.D. 305. Pantaleon is much venerated in the Italian Church, especially at Venice. There have been some who doubted his existence, and believed his name to have been derived from the war cry of the Venetians, Pantaleone. But Pantaleone was a pagan! But Justinian erected a church in his honor in Constantinople, and he was celebrated in the Greek Church at a time when Venice would have been more likely to introduce his worship from the East than to have origi-
II. Scriptural Doctrine.—Some attempts have been made to maintain that the germs of pantheism are to be found in the Bible, as in such declarations as that of 1 Cor. xv. 28, "That God may be all in all;" but it is evident that this holds not an ontological relationship to that of nature and belief in an impersonal God identical with nature are widely different. Not to press the language of Scripture unfairly into questions which it only touches incidentally, we think the following clearly bears against the pantheistic theory of the relation of God to the universe: "All that was made by God, and without him was not anything made which was made" (John i, 3). This surely is deism, not pantheism. The first clause states that all things came out of nothing into being by the will of the Logos; the second clause comes out of nothing into being by the will of the Logos; the second clause. The idea that the things ever came into being either of itself or by any other will than that of the Word. The writer of the Epistle to the Hebrews in the same way speaks of creation having both a beginning and an end: "They shall perish, but thou endur'st; and they all shall wax old as a garment, and as a vestment shall they fold them up, and they shall be changed; but thou art the same, and thy years shall not change." Here the contrast is emphatically marked between a perishable universe and its unchanging and unchangeable Author. It rests on the theory that there is a distinction between the notion of things or the unity of things." To the critical student of the history of philosophy pantheism presents itself in six different forms. These are, (1) mechanical or materialistic—God the mechanical unity of existence; (2) ontological (abstract) unity pantheism—the one substance in all (Spinoza); (3) dynamic pantheism; (4) syncretic pantheism—God is the soul of the world; (5) ethical pantheism—God is the universal moral order (Fichte); (6) logical pantheism (Hegel). But, though pantheism has exhibited these varieties, the generally prevailing pantheistic notions may suit us better when there remains only one phase that is generally understood to be referred to as pantheistic. That doctrine which is unconditionally called the purely pantheistic, and which teaches that pantheism means absorption of God in nature, is atheistic in fact, and should be treated under atheism (q.v.). That form of pantheism which teaches the absorption of nature in God—of the finite in the infinite—amounts to an exaggeration of theism (q.v.). Those forms above spoken of as ethical and logical pantheism, and now seen in their culmination in Strauss's work, are the most characteristic of them all, denying a personal God and a historical Christ, and regarding the dogma of otiun (q.v.), because they are not strictly philosophical but semi-religious, seeking to supplant Christianity as a religion, and not as a philosophical system. Pantheism, then, strictly speaking, is the doctrine of the necessary and eternal co-existence of the finite and the infinite—of the absolute consubstantiality of God and nature—considered as two different but inseparable aspects of universal existence. True, this doctrine conducts to the same result as atheism, yet theoretically it is widely different, and stands in exactly the opposite premise. The Atheist begins with nature, premises and recognises the material universe, but denies that there is any God; the Pantheist starts with the assumption of the existence of a Divine Being as a truth which the soul cannot deny, and maintains that he is identical with nature—in other words, denies that there is any nature except God. Quite differently, the Christian maintains the existence of both God and nature. He accepts the doctrine of Scripture, which is that God existed before the universe, and is ever apart from it and above it; for he regards the supernatural as real, and in infinite wisdom and power still upholds it. It is a revelation of him, but no part of him; not God, but the voluntary manifestation of God. It is not what he is, but what he has willed to be. In other words, God is the Being present everywhere in and controlling nature, as the soul the body, but distinct from it.

PANTHEISM

PANTHEISM

PANTHEISM

teaches us how far philosophy can go, and what it must end in without the lamp of revelation. The unknown God of philosophy ends in the no-God of the Positivist, or the all-God of the Pantheist. Nor are the two so far apart as some imagine. Impassive of the anthropomorphism of the scriptures, or blind to it at all, the father of our spirits is not far from every one of us, those who are unable to rest in materialistic atheism profess a spiritualistic pantheism which is curiously like and unlike the old dreary negation from which it is a recoil. The dynamical philosophy has replaced the mechanical; the mind is true to the body, and vice versa. 

But force is no more God than matter. When the spiritual desires of humanity are really kindled, it can no more rest in the one than in the other. What we crave is a living person, not an abstract principle—a hand to direct our eye, to look up, and a heart to love and pity us. Philosophy shrinks from anthropomorphism of this kind, and its pride of intellect depays the vulgar for making to themselves a magnified man as God. But the genuine needs of human nature are not to be reason away with a sneer; divine philosophy, unlike human, sees the felt necessity, and meets it. In the words of a modern writer:

"Pantehism expresses the astonishment of reason to see nature separate from God. It is the speculation of the soul which ought to be one with the Eternal, but is realized by science, and is therefore the less... But it is vain to sigh for a speculative unity, which is a fiction, while the actual unity is buried in the mystery of change, because we cannot see how it is to be reconciled with the existence of the Unchangeable. It is a mystery, not by means of evidence, of the origin of the Creator and his universe as one absolute, weightless, space, or spaceless, unconfused, unspaceless. There is, indeed, an ocean of being, and the soul which sighs and reasons may think itself a wave upon the surface. But in one sense the separation falls to, it is not at the mercy of the winds, nor wholly determined by the vast waves which support it. It has a unity and a mov- ing life in its own place, not in another. In other words, the universe holds good. The war of elements, the confusion we see everywhere, belongs only to the surface. The ocean is deep, hidden by the waves. We have not power to behold it, and therefore, as the properties of light exist before there was the organ to observe it, that organ was accommodated to the laws of light—not the laws of light to the organs of seeing. The stress of Paley's argument lies in this. And the Scriptures, rightly interpreted, tell the same story. The transcendental, not immanent thought of creation is, as we have seen, the keynote of Hebrew inspiration. There is an advance in the N.T. writings. The governmental character of God sinks a little into the background, and the Fatherhood of God is more prominently before us. In the N.T. never oversteps itself or falls into the language of mysticism, confounding the Creator with his works. True, it is. If it is true, it is 10,000 times true. The nature of God is to be in all in the sense that he shall become the supreme truth of the universe—a truth which is true in the unconscious and love (or, at least, submission) in the conscious class of his creatures. The reign of right will then be unbroken, not only from pole to pole of the universe, but also throughout all the ranks and degrees of agents endowed with free will.

III. History.—The origin of pantheistic doctrine is as obscure as the dogma itself. The name Pantheists was first employed by the English Deist Toland in A.D. 1725. It is sometimes thought that the word is derived from the Greek "pan" or all, and "the" as a substantive, and that the doctrine was that of Pan, the ancient Greek god of nature. This is not so. The word is derived from the Greek "Panthia" or all, and "the" as an adjective, and that the doctrine was that of Pantheism, or the doctrine that all things are united in God. The word is commonly used to designate a religious movement that seeks to reconcile the Christian faith with the natural world.
PANTHEISM

To his Orthodox Friend. In A.D. 1720 he published an exposition of the society's doctrines, and he entitled that work *Pantheistic.* Toland then said expressly that he had borrowed his notion from Linus, who he stated taught that every thing was born out of nothing; thus *omnipotens in omnibus* is "of necessity.* But though Toland may have framed the doctrines of his society, after Linus, we are sure that the antiquity of pantheism is far beyond any such modern period. We find that it has its origin at a very remote period in the East, for it is prevalent in the oldest known civilization in the world—the Hindō. Yet it is a later development of thought than polytheism (q.v.), the natural instinctive creed of polytheistic people, probably the most ancient in the world, an attempt to divest the popular system of its grosser features, and to give it a form that would satisfy the requirements of philosophical speculation. We have said above that the notion of the immanence of God in nature lies at the root of all pantheistic modes of thought. The student of Eastern religions will confirm this in this, at least as far as these ancient religious of Asia are concerned. The Oriental mind is saturated with the emonation notion. The doctrine reappears in a thousand shapes; it exhales alike in poetry and philosophy, it pervades the sunshine and shadow of every thing to which the divine fire was ministered. Emanation is a mere modification of that which is; it maintains the same self-same existence, though under other forms and other conditions; it is the developed fruit of the quickened germ. It supposes an infinite eternal substance which arouses itself into action by a self-energy, and clothes itself with a multiplicity of forms that in the aggregate make up the universe. Thus the idea of the divine is that the whole is all things, and all things are whole, and in the end all things will return once more into the incorruptible substance which is the foundation of the whole system was the groundwork of the Brahminical system. It is taught in the Vīpasā (q.v.), the Vedanta (q.v.), and Yoga (q.v.) philosophies, in the cosmogony of the most ancient Indian writing, the Institutes of Men (q.v.), and in those poetical books which embody the doctrines of the Hindō philosophies, e. g. the Bhaga

2. Egyptian Pantheism. As in the Hindō, so again in the Egyptian system, one ineradicable Being gives a first impulse to creation by the evolution of intelligence, Kneoph (q.v.), the conception Demiurge; and next to Phtha (q.v.), the organizer of the world, the vital principle of fire and warmth. The various succeeding emanations in ugo. deades and decades are by pairs or saezys, whereby the secondary principle is one of the lesser advantages to the whole, representing the various phenomena of nature; such too, are the Aria and the Pēnēs of Pythagoras and Empedocles. Thus Osiris (q.v.), radiant with light white, was combined with Isis (q.v.) in the many-tinted robe of nature; and Typhon (q.v.), the principle of evil, by union with Nephthys (q.v.), the ideal of consummate beauty, produced the chequered state of good and evil which is the world of man. Life, as the spirit that pervades all nature, could never again be extinguished; its consecration is read clearly in deciphered hieroglyphics, and in the perpetual resurrection and the eternal life of perpetual youth. In all this we see the remote elements of Gnosticism (q.v.). In the Egyptian therefore, as in the Indian system, the world of matter, whether real or phantasmal, emanates from and is, in fact, one with the Deity. The antagonism of the Egyptian theology became a dualistic system in Chaldaea and Palestine, where Bel and Nebo, or Nergal, Matter, were made to proceed from the preeminent Ur-Light; and in Persia, as seen in the antagonism of Ormuzd (q.v.) and Ahirnun. The sect of Lipari, adorers, claiming to return to preerosloth truth, profounder and profounder, was a prolongation of the old Zabism which was wholly pantheistic. The Doebani (School of Morals), a work on all the Oriental forms of religious belief—Magianism, Brahminism, Judaism, Islam, Christianity, and that which the author, Moslaun-Fairi, terms the "religion of philosophers"—names other pantheistical sects (Doubtian, Oriental Fr. Comm. i, 203) but they had nothing to do with the origin of similar principles in Europe.
