23. In the sake of avoiding similies, metaphorical and allegorical passages, too difficult for the comprehension of the multitude; e. g. "Thy seed like the dust of the earth" (Gen. xiii. 16); "mighty as the dust of the earth." "I am too much for all the benefits." (Gen. xxi. 18). "My good deeds are small." "And the Lord thy God will circumcise thy heart." "The folly of thy heart."  

24. For the sake of elucidating apparent obscurities, etc., in the written Law. "Therefore shall a man leave his father and his mother."

25. In favor of the oral Law and the traditional explanations generally. "He punishes the sins of the parents on their children." (Ex. xx. 5), has the additional force when the children follow the sins of their parents." (comp. Ex. xviii. 19). "The righteous and the just ye shall not kill." (Ex. xix. 7). "He who has left the tribunal as innocent, thou shalt not kill him," i. e., according to the Halacha, he is not to be arraigned again for the same crime. "Doorposts" ("mesoroth") (Deut. vi. 9). "And thou shalt write them . . . and ajicha thou upon the posts, etc." (D.) Alteration of language and meaning.  

26. In honor of the Divine being, to avoid apparent multiplicity or a likeness. "Behold man shall be like one of us, knowing good and evil." (Gen. iii. 22). "He will be the only one in the world to know good and evil." "For who is a God in heaven and on earth who could do like thy deeds and powers." (Deut. iii. 24). "Flour are God, thy Divine Presence." In heaven above, and reigns on earth below, and there is none who does like unto thy deeds, etc.  

27. Alteration of epithets employed of God. "And before thee shall I hide myself." (Gen. iv. 14). "And before thee it is not possible to hide." "This is my God and I will praise Him, the God of my father and I will exalt Him." (Ex. xx. 2). "This is my God, and I will build Him a sanctuary:" "The God of my fathers, and I will pray before Him." "In one moment I shall go up in thy midst and annihilate thee." "For one hour will I take away my majesty from among thee" (since no evil can come from above).  

28. For the ennobling of the sense. "Great is Jehovah above all gods." "Great is God, and there is no other god beside Him." "Send through him whom thou wilt send." (Ex. iv. 13). "In honor of him who is worthy to be sent."  

29. In honor of the nation and its ancestors. "And the souls they made in Haran." (Gen. xii. 5) "The souls they made subject to the Divine Law in Haran." "And Isaac brought her into the tent of his mother Sarah." (Gen. xxvii. 47). "And to righteous were her works, like the work, of his mother Sarah." "And he bent his shoulder to hear, and he became a tributary servant." (Gen. xlix. 15). "And he will conquer the cities of the nations and destroy their dwelling-places, and those that will remain there will serve him and pay tribute to him." "People, foolish and not wise." (Dent. xxxii. 6) "People who has received the Law and has not become wise."  

30. Explanatory of tropical and metaphorical phrases. "And besides thee no man shall raise his hand and his foot in the whole land of Egypt." (Gen. xlii. 4). "There shall not a man raise his hand to seize a weapon, and his foot to ride on a horse."  

31. To ennoble or improve the language. "Costs of skin." (Gen. iii. 21) "Garments of honor on the skin of their flesh." "Thy two daughters who are found with thee." (Gen. xix. 15). "Who were found faithful with thee." "May Reuben live and not die." (Dent. xxxii. 6). "May Reuben live in the everlasting life."  

The foregoing examples will, we trust, be found to bear out sufficiently the judgment given above on this Targums. In spite of its many and important discrepancies, it never for one moment forgets its aim of being a clear, though free, translation for the people, and nothing more. Wherever it deviates from the literalness of the text, such a course, in its case, is fully justified—nay, necessitated—either by the obscurity of the passage, or the wrong construction that naturally would be put upon its wording by the multitude. The explanations given agree either with the real sense, or develop the current tradition supposed to underlie it. The specimens adduced by other investigators, however differently classified or explained, are easily brought under the foregoing heads. They one and all tend to prove that Chaldee, whatever the objections against single instances, is one of the most excellent and thoroughly competent interpreters. A few instances only—and they are very few indeed—may be adduced, where even Onkelos, as it would appear, has failed. Far be it from us for one moment to depreciate, as has been done, the infinitely superior knowledge both of the Hebrew and Chaldee idioms on the part of the writers and editors of our document, or to attribute their discrepancies from modern translations to ignorance. They drank from the fullness of a highly valuable traditional exegesis, as fresh and vigorous in their days as the Hebrew language itself still was in the circles of the wise, the academies and schools. But we have this advantage, that words which then were obsolete, and whose meaning was known no longer—only guessed at—are to us familiar by the numerous progeny they have produced in neogenic idioms, known to us through the mighty spread of linguistic science in our days; and if we

...
are not aided by a traditional exegesis handed down within and without the schools, perhaps ever since the days of the framing of the document itself, neither are we prejudiced and lettered by it. Whatever may be implied and hidden in a verse or word, we have no reason to translate it according, and, for the attaining of this purpose, to overstrain the powers of the roots. Among such small shortcomings of our translator may be mentioned that he appears to have erroneously derived מְרַשָּׁשׁ (Gen. iv. 7) from מָרַשׁ; that מְרַשְּׁשֶׁשׁ (xx. 6) is by him rendered מְרַשָּׁשׁ; מְרַשְּׁשֶׁשׁ (Gen. xlii. 43) by מְרַשְׁשָׁשׁ; מְרַשָּׁשׁ (Dent. xxiv. 5) מְרַשָּׁשׁ; and the like. Comp. however the Commentators on these passages.

The bulk of the passages generally adduced as proofs of want of knowledge on the part of Onkelos have in a great part been due to the oversight of the foregoing specimens to be intentional deviations; many other passages not mentioned merely instance the want of knowledge on the part of his critics.

Some places, again, exhibit that blending of two distinct translations, of which we have spoken; the catchword being apparently taken in two different senses. Thus Gen. xxviii. 13, where he translates "And Abraham lifted up his eyes after these, and behold there was a ram;" he has not "in his perplexity" mistranslated מְרַשָּׁשׁ for מְרַשָּׁשׁ, but he had only placed for the sake of clearness the מְרַשָּׁשׁ after the (the verb (he saw), instead of the noun (ram)); and מְרַשָּׁשׁ, which is moreover wanting in some texts, has been added, not as a translation of מְרַשָּׁשׁ or מְרַשָּׁשׁ, but in order to make the passage more readily still. A similar instance of a double translation is found in Gen. ix. 6: "Whosoever sheds a man's blood, by man shall his blood be shed:" rendered "Whosoever sheds the blood of man, by witnesses through the sentence of the judges shall his blood be shed:" מְרַשָּׁשׁ, man, being taken first as "witness," and then as "judges."

We may further notice the occurrence of two مَلَخِلَائِي passages in this Targum: the one, Gen. xlix. 10, Shilon; the other, Num. xxiv. 17, "sceptre:" both rendered "Messiah."

A fuller idea of the "genius" of Onkelos as translator and as paraphrast, may be arrived at from the specimens subjoined in pp. 3418-3420.

We cannot here enter into anything like a minute account of the dialect of Onkelos or of any other Targum. Regarding the linguistic shades of the different Targums, we must confine ourselves to the general remark, that the later the version, the more corrupt and adulterated its language. Three dialects, however, are chiefly to be distinguished: as in the Aramaic idiom in general, which in contradistinction to the Syriac, or Christian Aramaic, may be called Judeo-Aramaic, so also in the different Targums; and their recognition is a material aid towards fixing the place of their origin although we must warn the reader that this guidance is not always to be relied upon.

1. The Galilean dialect, known and spoken already in the Talmud as the one which most carelessly confounds its sounds, vowels as well as consonants. "The Galileans are negligent with respect to their language," and care not for grammatical forms. is a common saying in the Talmud. We learn that they did not distinguish properly between ב and ה (ב, ג), saying Taphi instead of Tabba, between כ and ק (כ and ק), saying קיות for קיפות. Far less could they distinguish between the various gutturals, as is cleverly exemplified in the story where a Judean asked a Galilean, when the latter wanted to buy an מְרַשָּׁשׁ, whether he meant מְרַשָּׁשׁ (wool), or מְרַשָּׁשׁ (a lamb), or מְרַשָּׁשׁ (wine), or מְרַשָּׁשׁ (an ass).

The next consequence of this their disregard of the gutturals was, that they often threw them off entirely at the beginning of a word by אֵפֶּרֶסִים. Again they contracted, or rather wedged together, words of the most dissimilar terminations and beginnings. By confounding the vowels like the consonants, they often created entirely new words and forms. The Maqrik (ב) became ḫ (somewhat similar to the Scottish pronunciation of the initial Χ). As the chief reason for this Galilean confusion of tones (for which comp. Matt. xxvi. 73; Mark xiv. 70) may be assigned the increased facility of intercourse with the neighboring nations owing to their northern situation.

2. The Samaritan dialect, a mixture of vulgar Hebrew and Aramaean, in accordance with the origin of the people itself. Its chief characteristics are the frequent use of the ג (which not only stands for other gutturals, but is even used as matter of course, the commutation of the gutturals in general, and the indiscriminate use of the mute consonants כ for כ, ק for ק, מ for מ, etc.

3. The Judean or Jerusalem dialect (comp. Nex. 166) scarcely ever pronounces the gutturals at the end properly, often throws them off entirely, אֵפֶּרֶסִים, becomes ḫ; שׁמֶב — Shîb. Many words are peculiar to this dialect alone. The appellations of "door," כ' light," כ reward," etc., are totally different from those used in the other dialects. Altogether all the peculiarities of provincialism, shortening and lengthening of vowels, idiomatic phrases and words, also an orthography of its own, generally with a fuller and broader pronunciation, are noticeable throughout both the Targums and the Talmud of Jerusalem, which, for the further elucidation of this point, as of many others, have as yet not found an investigator.

The following recognized Greek words, the greater part of which also occur in the Talmud and Midrash, are found in Onkelos: Ex. xxviii. 29, ἄγραφος; Ex. xxviii. 11, ἀγαπεῖ; Gen. xviii. 17, ἀγαπέεις; Lev. xx. 30, κοιμῶταί; Ex. xxviii. 19, ἀγαπάως; Philemon. v. xxviii. 68; Ex. xxviii. 11, ἀγαπάω; i.comp. Pes. der. Kah. xxi. (Carlanb.; Dent. xx. 29, ἀγαπάωσι).
The following short rules on the general mode of
transcribing the Greek letters in Aramaic and
Syriac (Targum, Talmud, Midrash, etc.), may not
be of place: —

\[ \text{Γ} \] prior betalals, pronounced like \( \kappa \), becomes \( \lambda \).

\( \zeta \) is rendered by \( \iota \).

\( \vartheta \) appears to have occasionally assumed the
pronunciation of a consonant (Dagama), and a \( \rho \)
is inserted.

\( \eta \) is \( \iota \) or \( \tau \), But this rule, even making al-
lowances for corruptions, does not always seem to
have been strictly observed.

\( \kappa \) is \( \gamma \), sometimes \( \iota \).

\( \mu \), which before labials stands in lieu of a \( \mu \),
becomes \( \eta \) : occasionally a \( \nu \) is inserted before
labials where it is not found in the Greek word.

\( \varepsilon \), generally \( \varepsilon \), sometimes, however, \( \eta \) or
\( \zeta \).

\( \pi \) is \( \delta \), sometimes, however, it is softened
into \( \varepsilon \).

\( \varpi \) becomes either \( \eta \eta \) or \( \eta \eta \) at the beginning of
a word.

\( \chi \) either \( \iota \) or \( \iota \).

The \textit{spiritus asper}, which in Syriac is dropped
in the middle of a word, reappears again sometimes
(\textit{rodeba} — Samshdrim). Even the \textit{levis} is repre-
sented sometimes by a \( \pi \) at the beginning of a
word ; sometimes, however, even the \textit{asper} is
dropped.

As to the vowels no distinct rule is to be laid
down, owing primarily to the original want of
vowel-points in our texts.

Before double consonants at the beginning of a
word an \( \textit{N prothetem} \) is placed, so as to render
the pronunciation easier. The terminations are fre-
quently Hebrewized: thus \( \alpha \) is sometimes rendered
by the termination of the Masor. \( \textit{P} \), etc.

A curious and instructive comparison may be
instituted, between this mode of transcription of
the Greek letters into Hebrew, and that of the
Hebrew letters into Greek, as found chiefly in the
LXX.

\( \text{N} \) sometimes immobile (\textit{spirit. len.}), \( \text{N} \); \( \text{N} \);
\( \text{N} \) being sometimes audible as \( \textit{spirit. asper} \), \( \text{N} \); \( \text{N} \), \( \text{N} \).
versions, ancient ( targum )

inferences drawn by de Rossi and others from the discrepancies of the version to discrepancies of the original from the Masor. must needs be rejected, if Onkelos' method and phraseology, as we have exhibited it, are taken into consideration. Thus, when (Ex. xxiv. 7) "before the people" is found in Onkelos, while our Hebrew text reads "in the ears," it by no means follows that Onkelos read בראשית: it is simply his way of explaining the unusual phrase, to which he remains faithful throughout. Or, "lead the people unto the place" (A. V.) of which I have spoken (Ex. xxxii. 34), is solely Onkelos' translation of בְּרֵא שֵׁית, soil, the place, and no בְּרֵא שֵׁית need be conjectured as having stood in Onkelos' copy; as also (Ex. ix. 7) his addition "from the calf of the children of Israel" does not prove a בְּרֵא שֵׁית to have stood in his Codex.

And this also settles (or rather leaves unsettled), the question as to the authenticity of the targumic texts, such as we have them. Considering that no MS. has as yet been found older than at most 600 years, even the careful comparison of all those that do exist would not much further our knowledge.

As far as those existing are concerned, they were composed with the most possible blunders, — not to speak of repairs, additions, or omissions, on the part of the copyists; — but few are of a nature damaging the sense materially. The circumstance that text and Targum were often placed side by side, column by column, must have had little share in the incorrectness, since it was but natural to make the Targum resemble the text as closely as possible, while the nature of its material differences was often unknown to the scribal. In fact, the event itself was made to fit both the Hebrew and the Chaldee whenever a larger addition did not render it utterly impossible. Thus letters are inserted, omitted, thrust in, blotted out, erased, in an infinite number of places. But the difference goes still further.

In some Codices synonymous terms are used most arbitrarily as it would appear: בְּרֵא שֵׁית and בְּרֵא שֵׁית earth, בְּרֵא שֵׁית and בְּרֵא שֵׁית man, בְּרֵא שֵׁית and בְּרֵא שֵׁית path, בְּרֵא שֵׁית and בְּרֵא שֵׁית, Jehovah and Elohim, are found to replace each other indiscriminately.

In some instances the Hebrew Codex itself has, to add to the confusion, been emended from the Targum.

A Masarah has been written on Onkelos, without however, any authority being inherent in it, and without, we should say, much value. It has never been printed, nor, as far as we have been able to ascertain, is there any MS. now to be found in this country, or in any of the public libraries, and which has become of any importance. The Targum, which he intended to add to his never printed Babylonian — a book devoted to this same subject — we do not know. Luzzatto has lately found such a a masarah in a Pentateuch MS., but he only mentions some variants contained in it. Its title must not mislead the reader; it has nothing whatever to do with the Masarim, or stem the Bible, but a re-consideration, like the Nahash of the Talmud, which has nothing whatever to do with the Talmud text.

The MSS. of Onkelos are extant in great numbers — a circumstance easily explained by the induction that it should be read every Sabbath at home, if not in the synagogue. The Bodleian has 5, the British Museum 2, Vienna 6, Angersburg 1, Nuremberg 2, Altdorf 1, Carlsluhe 3, Stuttgart 2, Erlat 3, Dresden 1, Leipzig 1, Jena 1, Dessau 1, Dreslau 1, Freiburg 1, Regensburg 1, Hamburg 2, Copenhagen 2, Upsala 1, Amsterdam 1, Paris 8, Molsheim 1, Venice 6, Turin 2, Milan 4, Leghorn 1, Sienna 1, Genoa 1, Florence 5, Bologna 2, Padua 1, Trieste 2, Paris about 40, Rome 18 more or less complete Codex containing Onkelos.

For example, Bologna 1482, fol. (Abr. b. Chajjim) with Hebr. Text and Rashi. Later Edll. Sorin 1430, Lipsiae 1491, Constantinople 1505, from these were taken the texts in the Supplement (1517) and the Venice (Bomberg) Polyglotts (1518, 1524, 1547-49), and Harkort's Rabbinical Bible (1619). This was followed by the Paris Polyglott (1645), and Walton's (1657). A recent and much collated edition dates Wilna 1852.

Of the extraordinary similarity between Onkelos and the Samaritan version we have spoken under samaritan pentateuch [p. 2813]. There also will be found a specimen of both, taken from the Barerini Codex. Many more points connected with Onkelos and his influence upon later hebraica and exegesis, as well as his relation to earlier versions, we have no space to enlarge upon, desirable as an investigation of these points might be. We have, indeed, only been induced to dwell so long upon this single Targum, because in the first instance a great deal that has been said here will, "noctua mutanda, hold good also for the other Targums: and further, because Onkelos is the only Targum..." (A.T. 338).

Next in time and importance to Onkelos on the Pentateuch stands the Targum on the Prophets, which in our printed Edll. and MSS. — none older, we repeat, than about 600 years — is ascribed to Jonathan ben Uziel, of whom the Talmud contains the following information: (1) "Elisha the son of Sareah had Hillel the Elder, thirty of whom were worthy that the Scecinian (Divine Majesty) should rest upon them, as it did upon Moses our Lord; peace be upon him. Thirty of them were worthy that the sun should stand still at their bidding as it did at that of Joshua ben Nun. Twenty were of intermediate worth. The greatest of them all was Jonathan ben Uziel, the least R. Johanan ben Sacaria; and it was said of R. Johanan b. Sacenia, that he left not (uninvestigated) the Bible, the Mishna, the Gemara, the Halakahs, the Haggadahs, the subtleties of the Law, and the subtleties of the Sotserim ...; the easy things and the difficult things [from the most awful Divine mysteries to the common popular proverbs] ... If this is said of the least of them, what is to be said of the greatest, i.e. Jonathan b. Uziel?" (Rab. Bath. 134 a comp. Sene. 28 a.) (2). A second passage (see Onkelos) referring more especially to our present subject, reads as follows: "The Targum of Onkelos was made by Onkelos the Proselyte from the mouth of R. Eleazar and P. Jehoahin.
and that of the Prophets by Jonathan b. Uziel from the month of Haggal, Zachariah, and Malachi. And in that hour was the land of Israel shaken three hundred parseangs. . . . And a voice was heard, saying, 'Who is this who has revealed my secrets unto the sons of man?' Up rose Jonathan ben Uziel and said: 'It is I who have revealed thy secrets to the sons of man. . . . But it is known and revealed before Thee, that not for my honor have I done it, nor for the honor of my master. But it is for this honor: that the disputes may cease in Israel.' . . . And he further desired to reveal the Targum to the Haggadic rapha, when a voice was heard: 'Enough.' And why?—because the day of the Messiah is revealed therein (Meg. 3 a'). Wondrous to relate, the sole and exclusive authority for the general belief in the authorship of Jonathan b. Uziel, is this second Haggadic passage exclusively; which, if it does mean anything, does at all events not mean our Targum, which is found mourning over the 'Temple in ruins,' full of invectives against Rome (San. xi. 51; B. b. xxvi. 2, &c., &c., mentioning Armilus (B. s. 4) (the Antichristian), Germania (L. z. xxxix. 6): not to dwell upon the thousand and one other invectives and external evidences against a date anterior to the Christian era; if that can be assumed,—and indeed Rashii speaks already of corruptions in his MSS.;—such solitary additions are at all events a very different thing from a wholesale system of intentional and minute interpolation throughout the bulky work. But what is still more extraordinary, this belief—long and partly still upheld most vehemently against all difficulties—is completely modern: that is, not older than at most 600 years (the date of our oldest Targum MSS.), and is utterly at variance with the real and genuine sources: the Talmud, the Midrash, the Babylonian Schools, and every authority down to Hai Gaon (12th cent.). Frequently quoted as this Targum is in the ancient works, it is never once quoted as the Targum of Jonathan. But it is invariably introduced with the formula: 'R. Joseph a (bar Chama, the Blind, emphatically called the clear-sighted, the well-known President of Pumbaddita in Babylonia, who succeeded Rabba in 519 A. D.) says,' etc. (Moed Katon 26 a, Pesach. 68 a, Sanh. 94 b). Twice even it is quoted in Joseph's name, and with the addition: 'Without the Targum to this verse (due to him) we could not understand it.' This is the simple state of the case: and for more than two hundred years critics have baffled all their sages to defend what never had any real existence, or at best owed its apparent existence to a heading added by a superfluous scribal. 

The date which the Talmud thus in reality assigns to our Targum fully coincides with our former conclusions as to the date of written Targums in general. And if we may gather thus much from the legend that to write down the Targum to the Prophets was considered a much holier undertaking—and one to which still more reluctantly leave was given—than a Targum on the Pentateuch, we shall understand the Targum to this verse: this Targum some time, although not long, after Onkelos, or about the middle of the fourth century;—the latter years of R. Joseph, who it is said, occupied himself chiefly with the Targum when he had become blind. The reason given for that reluctance is, although hyperbolically expressed, perfectly clear: 'The Targum on the Prophets reveals the secrets—that is, it allowed free scope to the wildest fantasy to run riot upon the prophetic passages—tempting through their very obscurity,—and to utter explanations and interpretations relative to present events, and oracles of its own for future times, which might be fraught with grave dangers in more than one respect. The Targum on the Pentateuch the scholars of the time were conscious of writing, Meg. 3 a' ; Kibbl. 69 a) could not but be, even in its written form, more sober, more dignified, more within the bounds of fixed and well-known traditions, than any other Targum; since it had originally been read publicly, and been checked by the congregation as well as the authorities present;—as we have endeavored to explain in the Introduction. There is no proof, on the other hand, of more than fragments from the Prophets having ever been read and translated in the synagogue. Whether, however, R. Joseph was more than the selector of this the second part of the Biblical Targum, which was originated in Palestine, and was reduced to its final shape in Babylon, we cannot determine. He may perhaps have made considerable use, of it by interpolating, reducing or rejecting versions of some parts. So much seems certain, that the schoolmen of his Academy were the collectors and revisers, and he gave it that stamp of unity which it now possesses, quite of the occasional difference of style adopted simply to the variegated lines and divisions of its ununiformed predecessors.

But we do not mean to reject in the main either of the Talmudical passages quoted. We believe that there was such a man as Jonathan b. Uziel, that he was one of the foremost pupils of Hillel, and also that he did translate, either privately or publicly, parts of the prophetic books; chiefly, we should say, in a mystical manner. And so starting weere his interpretations—borne alight by his high tone—that who but prophets themselves could have revealed them to him? And, going a step farther, who could reveal prophetic allegories and mysteries of all the prophetic books, but those who, themselves the last in the list, had the whole body of sacred oracles before them? This appears to us the only rational conclusion to be drawn from the facts as they stand, not as they are imagined. That nothing save a few snatches of this original paraphrase or Midrash could be embodied in our Targum, we need not urge. Yet for those even we have no proof. Zumz, the fickle prince of Targumic as well as Midrashic investigation, who, as late as 1830 (Gott. Vortr.), still believed himself to be in the modern notion of Jonathan's authorship (first half of first century, A. D.'s), now utterly rejects the notion of 'our possessing anything of Jonathan ben Uziel' (Geiger's Zeitschr. 1837, p. 290).

Less conservative than our view, however, are the views of the modern school (Epprapol, Lazzuto, Frankel, Geiger, Levy, Bamer, Jahn, Herder) of the whole matter, who not only reject the authorship of Jonathan, but also utterly deny that there was any ground whatsoever for assigning a Targum to him, as is done in the Talmud. The passage, they say, is not older, but younger than our Targum, and in fact does apply, erroneously of course, to this, and to no other work of a similar kind. The popular cry for a great 'name, upon

—*Sinai," *Possessor of Wheat,* in allusion to his past mastery over the traditions.
which to hang? — in Talmudical phraseology — all that is cherished and venerated, and the wish of those eager to impart to this Version a lasting authority, found in Jonathan the most fitting person to father it upon. Was he not the greatest of the great, “who had been dusted with the dust of Hillel’s feet?” He was the wisest of the wise, the one most imbued with knowledge human and divine, of all those eighty, the last of whom was worthy that the sun should stay its course at his bidding. Nay, such were the flames that arose from his glowing spirit, says the hyperbolic Haggadah, “when he studied in the Law, the very birds that flew over him in the air, were consumed by fire” (mishpaha not — as, Landau, in the preface to his Aruch, apologetically translates, became Scribes). At the same time we readily grant that we see no reason why the great Hillel himself, or any other much earlier and equally eminent Master of the Law, one of the Soterim perhaps, should not have been fixed upon.

Another suggestion, first broached by Drusius, and long exploded, has recently been revived under a somewhat modified form. Jonathan (Godgiven), Drusius said, was none else but Theodotion (Godgiven), the second Greek translator of the Bible after the LXX., who had become a Jewish proselyte, and translated the latter lived under Commodus H., and the former at the time of Christ: that the latter is said to have translated the Prophets only (neither the Pentateuch, nor the Hagiographa), while the former translated the whole Bible: that Jonathan translated into Aramaic and Theodotion into Greek, — not to mention the fact that Theodotion was, to say the least, a more accurate translator, shrewder, “of more experience or negligence” (Montefiore, Pref. to Hexapla), or both, must needs be laid at the door of a translator, who, when in difficulties, simply translates the hard Hebrew words into Greek characters, without troubling himself any further: while the mastery over both the Hebrew and the Aramaic displayed in the Jonadathic Version are astounding; — considering all this, we need not think that Wheaton ask causally, why Jonathan ben Uziel should not rather be identified with the Emperor Theodosius, whose name also is “Godgiven;” — but dismiss the suggestion as Carpove long since dismissed it. We are, however, told now (Luzzatto, Geiger, etc.), that as the Babylonian Targum on the Pentateuch was called a Targum “in the manner of Aquila or Oakeles,” i. e., of sterling value, so also the continuation of the Babylonian Targum, which embraced the Prophets, was called a Targum “in the manner of Theodotion” = Jonathan; and by a further stretch, Jonathan-Theodotion became the Jonathan b. Uziel. We cannot but disagree with this hypothesis also — based on next to nothing and carried to the more than the usual length of speculation. While Akila is quoted continually in the Talmud, and is deservedly one of the best known and best beloved characters, every trait and incident of whose personal history is told even twice over, not the slightest trace of such a person as Theodotion is to be found anywhere in the Talmudical literature. What, again, was it that could have acquired so transcendent a fame for his translation and himself, that a Version put into the mouths of the very prophets should be called after him, — in order that the people should like it? — a translation which was, in fact, deservedly unknown, and, properly speaking, no translation at all. It was, as we learn, a kind of private emendation of some LXX. passages, objectionable to the pious proselyte in their then corrupted state. It was only the book of Daniel which was retained from Theodotion's translation; for the exordium to the LXX. had become part correction. If, moreover, the intention was to “give the people a Hebrew for a Greek name, because the latter might sound too foreign,” it was an entirely gratuitous one. Greek names abounded in the Talmud, and even names beginning with Theo like Theodora are to be found there.

On the other hand, the opinion has been broached that this Targum was a post-Talmudical production, belonging to the 7th or 8th cent. A. D. For this point we need only refer to the Talmudical quotations from it. And when we further add, that Jo. Morinus, a man as conspicuous by his want of knowledge as by his most indiscern attacks on the Targum (to whom “Theodotion” (it was he, i. e. y, who wished to see the “forged” Masonotic Text corrected from the Samaritan Pentateuch, q. r.), is the chief, and almost only, defender of this theory, we have said enough.

On the other theory of there being more of one author to our Targum (Eichhorn, Bertholdt, De Wette), conducted here by Gesenius, Havernick, and others, we need not further enlarge, after what we have already said. It certainly is the work, not of one, or of two, but of twenty, of fifty and more Metugeminim, Haggadists, and Haskhtists. The edition, however, we repeat it advisedly, has the undeniable stamp of one master-mind; and its individual workings, its manner and peculiarities are indubitably impressed upon the whole labor from the first page to the last. Such, we hold, must be the impression upon every attentive reader; more especially, it be judiciously distinguishes between the first and the last prophets. That in the historical relations of the former, the Version must be, on the whole, more accurate and close (although here too, as we shall show, Haggadah often takes the reins out of the Metugeman’s or editor’s hands), while in the obscure Oracles of the latter the Midrash reigns supreme — is exactly what the history of Targumic development leads us to expect.

And with this we have pointed out the general character of the Targum under consideration. Gradually, perceptibly almost, the translation becomes the τραγούμα, a frame, so to speak, of allegory, parable, myth, tale, and wholly masked history — such as we are wont to see in Talmud and Midrash, written under the bloody censorship of Eun-Rome; interspersed with some lyrical pieces of rare poetical value. It becomes, in short, like the Haggadah, a whole system of eastern phantasmagorias whirling round the sun of the Holy Word by way of emendation; Lev. xiii. 6, מַעַצְּמִית, Edia. by way of emendation; Lev. xiii. 6, מַעַצְּמִית, Edia. by way of emendation; Lev. xiii. 6, מַעַצְּמִית, Edia.
of the Seer. Yet, it is always known of being a translation. It returns to its verse after long exercises, often in next to no perception of thought that arise out of a single word, stichs of the verse from which the flight was taken will suddenly appear on the surface like a refrain or a keynote, showing that in reality there is a connection, though hidden by the unmitigated. For long periods again, it adheres most strictly to its text and to its verse, and translates most conscientiously and closely. It may thus fairly be described as holding in point of interpretation and enlargement of the text, the middle place between Onkelos, who only in extreme cases deviates into paraphrase, and the subsequent Targums, where connection with their texts is frequently of the most lightest character. Sometimes indeed our Targum coincides so entirely with Onkelos, — being, in fact, of one and the same origin and growth, and a mere continuation and completion as it were of the former work, that this similarity has raised critics into speculations of the priority in date of either the one or the other. But, whether that be so or not — that Onkelos copied, plagiarised in fact, Jonathan. We do not see, quite apart from our placing Onkelos first, why either should have used the other. The three passages (Judg. v. 26 and Deut. xxii. 5; 2 K. xiv. 6; and Deut. xxxiv. 16; Jer. xviii. 45, 46 and Num. xxii. 28, 29) generally adduced, do not in the first place exhibit that literalness which we are led to expect, and which alone could be called copying; and in the second place, the two last passages are not, as we also thought we could infer from the words of the writers on either side, extraneous paraphrasical additions, but simply the similar translations of similar texts: while in the first passage Jonathan only refers to an instruction contained in the Pentateuch-verse quoted. But even if we had found such paraphrasical additions, apparently not belonging to the subject, we should have accounted for them by certain traditions — the common property of the whole generation — being recalled by a certain word or phrase in the Pentateuch to the memory of the one translator; and by another word or phrase of the other for the mention of a similar current of tradition — the other. The interpretation of Jonathan, where it adheres to the text, is mostly very correct in a philosophical and exegetical sense, closely literal even, provided the meaning of the original is easily to be understood by the people. When, however, similes are used, unfamiliar or obscure to the people, it hesitatingly dissolves them and makes them easy in their mouths like honey or honey by adding as much of explanation as seems fit; sometimes, it cannot be denied, less sagaciously, even incorrectly, comprehending the original meaning. Yet we must be very cautious in attributing to a version which altogether bears the stamp of thorough competence and carefulness that which may be single corruptions or interpolations, which how they sometimes indicated by an introductory " Says the Prophet: " although, as stated above, we do not hesitate to attribute the passages displaying an acquaintance with works written down to the 4th century, and exhibiting popular notions current at that time, to the Targum in its original shape. Generally speaking, and holding the difference between the nature of the Pentateuch (supposed to contain in its very letters and signs Hula-chistic references, and therefore only to be handled by the Metzgerian with the greatest care) and that of the Prophets (freest Homiletics themselves) stealthily in view — the rules laid down above with respect to the discrepancies between original and Targum, in Onkelos, hold good also with Jonathan. Anthropomorphisms it avoids carelessly. Geographical names are, in most cases, retained as in the original, and where translated, they are generally correct. Its partiality for Israel never goes so far that anything derogatory to the character of the people should be willingly suppressed, although a certain reluctance against dwelling upon its impieties and punishments longer than necessary, is visible. Where, however, that which redounds to the praise of the individual — more especially of heroes, kings, prophets — and of the community, is contained in the text, there the paraphrase lovingly carries. Future bliss, in this world and the world to come, is held up from the exalted sanctuary of the Sanctuary on Mount Zion, of the Kingdom of Jehovah and the House of David, the reestablishment of the nation and of its full and entire independence, as well as of the national worship, with all the primitive splendor of Priest and Levite, singer and musician and prophet — these are the favorite dreams of the people and of Jonathan, and no less is overlooked by which those strains may be drawn in as variations to the Biblical theme. Of Messianic passages, Jonathan has pointed out those mentioned below: a number not too large, if we consider how, with the increased misery of the people, their ardent desire to see their Deliverer appear speedily must have tried to find as many places in the Bible as possible, warranting his arrival. So far from their being suppressed (as, by one of those unfortunate accidents that befall sometimes a long string of investigators, who are copying their information at third and fourth hand, has been unblushingly asserted by almost everybody up to Gesenius, who found its source in a mistunderstood sentence of Origen), they are most prominently asserted, and, as it seems, by the very hand of the Targumist himself. And there is a decided polemical animus inherent in them — temperate as far as appearance goes, but containing many an unspoken word: such as a fervent human mind pressed down by all the woes and terrors, written and unwritten, would whisper to itself in the depths of its despair. These passages exalt most rapturously the pomp and glory of the Messiah to come — by way of contrast to the humble appearance of Christ: and in all the places where suffering and misery appear to be the lot foretold to the Anointed, it is Israel, to whom the passage is referred by the Targum. Of further dogmatic and theological peculiari- ties (and this Targum will one day prove a mine of instruction chiefly in that direction, besides the other vast advantages inherent in it, in the other Targums, for linguistic, patristic, geographical, historical, and other studies) we may mention briefly the ? Stars of God." (Is. xiv. 13; comp. Dan. viii

---

**xi. 1. xiii. 10. xiv. 1. lii. 13. lii. 10. Jer. xxiii. 5. xxv. 21. xxvii. 13. 15. Hos. iii. 5. xiv. 8; Mic. iv. 8. v. 2. 18; Zech. iii. 8. iv. 7. vi. 12. x. 4.**
10: 2 Mace. ix. 10, being referred — in a similar manner — to "the people of Israel"; the doctrine of the second death (Is. xxii. 14, xlv. 15), etc.

As to the general nature of its idiom, what we have said above holds good here. Likewise our remarks on the relation between the text of the original of Onkelos, and its own text, may stand for Jonathan, who never appears to differ from the Masoretic text without a very cogent reason. Yet, since Jonathan's MSS., though very much smaller in number, are in a still worse plight than those of Onkelos, we cannot speak with great certainty on this point. Respecting, however, the individual language and phrasing of the translation, it lacks to a certain, though small degree, the clearness and transparency of Onkelos; and is somewhat alloyed with foreign words. Not to such a degree, however, that we cannot fully indorse Carpzov's dictum: "Cujus nitor sermonis Chalced et dictoris Tanitar paritas, ad Onkelosum proxime accedit et parum deficiunt a haereticis idolibus" (Hist. Sac. p. 401), and incline, to the belief of Wolf (Hibb. Hebr. ii. 1165): "Quod vero, vel quod ad voces novas et barbaricas, vel ad res eujus inferiores, aut futila nonnulla, quamvis paene triplices hujus generis existit, ibi occurrunt, ex merito falsari eujusdem ingenio adipiscimur."

O of the manner and style of this Targum, the few subjoined specimens will we hope give an approximate idea.

In conclusion, we may notice a feature of our Targum, not the least interesting perhaps, in relation to general or "human" literature: namely, that the Semitic fairy and legendary lore, which for the last two thousand years — as far as we can trace it — has grown up in East and West to cast glittering mountain-ranges, is to a very great extent to be found, in an embryonic state, so to say, in this our Targum. When the literary history of those most wonderful circles of medieval sagas — the sole apparent fruit brought home by the crusaders from the eastern battle-fields — shall come to be written by a competent and thorough investigator, he will have to extend his study of the sources to this despised and fabulous Targum Jonathan ben Uzziel. And the entire world of Jewish Biblical legend, which Islam has said and sung in the Arabic, Persian, Turkish, and all its other tongues, to the delight of the wise and the simple for twelve centuries now, is contained almost fully developed, from beginning to end, but clearer, purer, and incomparably more poetical conceived, in our Targum-Haggadah.

The Edition Princes dates Leiria, 1494. The later editions are embodied in the Antwerp, Paris, and London Polyglots. Several single books have likewise been repeatedly edited (comp. Wolf, Le Long, Rosenmüller, etc.).

JUDGES XI.

39 And it came to pass, at the end of two months, that she returned unto her father, who did her according to his wish which he had vowed; and she knew no man. And it was a custom in Israel.

39 And it was at the end of two months, and she returned to her father, and he did unto her according to his wish which he had vowed; and she had known no man. And it became a statute in Israel.

Addition (7:2-7), that no man should offer up his son or his daughter as a burnt offering, as Jephthah the Gileadite did, who asked not Phinehas the priest. If he had asked Phinehas the priest, then he would have dissolved his vow with money [for animal sacrifices].

1 SAM. III.

1 And Hannah prayed, and said: My heart rejoiceth in the Lord; mine horn is exalted in the Lord; my mouth is exalted over mine enemies; because I rejoice in thy salvation.

1 And Hannah prayed in the spirit of prophecy, and said: [Lo, the Lord will become a prophet over Israel; in his days they will be freed from the hand of the Philistines; and through his hands shall be done unto them wonderful and mighty deeds: therefore] be strong, my heart, in the portion which God gave me. [And also Hannah the son of Joel, the son of

my son Samuel, shall arise, he and his fourteen sons, to say praise with Habta [sharks?] and ephy, with their brethren the Levites, to sing in the house of the sanctuary: therefore] let my horns be exalted in the gift which God granted unto me. [And also on the miraculous punishment that would befell the Philistines who would bring back the ark of the Lord in a new clarinet, together with a sin-offering: therefore let the congregation of Israel say] I will open my mouth to speak great things over my enemies; because I rejoice in thy salvation.

2 (Over Sanherib the king of Assyria did she prophesy, and she said:) He will arise with all his armies over Jerusalem, and a great sign will be done with him. There shall fall the corpses of his troops; Therefore praise ye all the peoples and nations and tongues, and cry]: There is nothing like this, and there is not beside Thee; and Tiny people shall say, There is none mighty but our God.

3 (Over Nebuchadnezzar the king of Babylon did she prophesy and say:) Ye Chaldeans, and all nations who will once rule over Israel! Do not speak grandly; let no blasphemy go out from your mouth; for God knows all, and over all his servants he extends his judgment: also from you he will take punishment of your guilt.

4 (Over the kingdom Javan she prophesied and said:) The bows of the mighty ones [of the Javanites] will be broken; [and those of the house of the Anatomites] who are weak, to the will be done miracles and mighty deeds.

1 SAM. XVII.

8 And he arose, and he cried unto the armies of Israel, and said unto them: Why have you put yourselves in battle array? Am I not the Philistine, and you the servants of Saul? [I am Goliath the Philistine from Gath, whom you killed the two sons of Eli, the priests Chofna and Phinehas, and carried captive the ark of the covenant of the Lord, who have carried it to the house of Dagon, my Error, and it has been there in the cities of the Philistines seven months. And in every battle which the Philistines have had I went at the head of the army, and we conquered in the battle, and we strove the killed like the dust of the earth, and until now have the Philistines not thought me worthy to become captain of a thousand over them. And you, O children of Israel, what mighty deed has Saul the son of Kish from Gibeah
11, 12 And he said, Go forth, and stand upon the mount before the Lord. And, behold, the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but not in the host of angels was the Shechinah. And after the host of the angels of the wind came a host of angels of commotion; but not in the host of the angels of commotion was the Shechinah of the Lord. And after the host of the angels of commotion came a host of angels of fire; but not in the host of the angels of fire was the Shechinah of the Lord. But after the host of the angels of fire came voices singing in silence.

13 And it was when Elijah heard that, that he wrapped his face in his mantle, and went out, and stood in the entering in of the cave: and, behold, there came a voice unto him, and said, What dost thou here, Elijah?

done for you that you made him king ever you? If he is a valiant man, let him come out and do battle with me; but if he is a weak man, then choose for yourselves a man, and let him come out against me, etc.

1 KINGS XIX.

11, 12 And he said [to Elijah], Arise and stand on the mountain before the Lord. And God revealed himself; and before him a host of angels of the wind, clearing the mountain and breaking the rocks before the Lord; but not in the host of angels was the Shechinah. And after the host of the angels of the wind came a host of angels of commotion; but not in the host of the angels of commotion was the Shechinah of the Lord. And after the host of the angels of commotion came a host of angels of fire; but not in the host of the angels of fire was the Shechinah of the Lord. But after the host of the angels of fire came voices singing in silence.

ISAIAH XXXIII

11 Thus shall ye say unto them, The gods that have not made the heavens and the earth, even they shall perish from the earth, and from under the skies; The errors unto which you pray are Errors which are of no use: they cannot rain from heaven; they cannot cause fruit to grow from the earth. Their and their worshippers will perish from the earth, and will be destroyed from under these heavens.

4 For I have brought thee out of the hand of Egypt, and redeemed thee from the house of thy bondage; and have sent before thee three prophets: Moses, to teach thee the tradition of the ordinances; and I sent before thee Moses, Aaron, and Miriam, to teach the women.

III. and IV. TARGUM OF JONATHAN BEN-UZIEL AND JERUSHALMI-TARGUM ON THE PENTATEUCH.

Onkelos and Jonathan on the Pentateuch and Prophets, whatever be their exact date, place, authorship and editorship, are, as we have endeavored to show, the oldest of existing Targums, and belong, in the present shape, to Babylon and the Babylonian academies flourishing between the 3d and 4th centuries A.D. But precisely as two parallel and independent developments of the oral Law (םלועה) have sprung up in the Palestinian and Babylonian Talmuds respectively, so also recent investigation has proved to demonstrate the existence of two distinct cycles of Targums on the written Law (םלועה) — i.e., the entire body of the Old Testament. Both are the offspring of the old, primitive institution of the public "reading and translating of the Torah,” which for many hundred years had its place in the Palestinian synagogues. The one first collected, revised, and edited in Babylon, called — more especially that part of it which embraced the Pentateuch (Onkelos) — the Babylonian, Onkolos, by way of eminence, on account of the superior authority inherent in all the works of the Medinach (Babylonians, in contradistinction to the Maarai or Palestinians). The other, continuing its oral life, so to say, down to a much later period, was written and edited — less carefully, or rather with a much more faithful retention of the oldest and youngest fancies of Meturgemanim and Parshaim — on the soil of Judea itself. Of this entire cycle, however, the Pentateuch and a few other books and fragmentary pieces only have survived entire, while of most of the other books of the Bible a few detached fragments are all that is known, and this chiefly from quotations. The injunction above mentioned respecting the satirical reading of the Targum on the Pentateuch — nothing is said of the Prophets — explains the fact, to a certain extent, how the Pentateuch Targum
has been religiously preserved, while the others have perished. This circumstance, also, is to be taken into consideration, that Palestine was in later centuries well-nigh cut off from communication with the Diaspora, while Babylon, and the gigantic literature it produced, reigned paramount over all Judaism, as, indeed, down to the 10th century, the latter continued to have a spiritual leader in the person of the Rish Galuta (Head of the Galah), resident in Babylon. As much to a hitherto anonymous and comparatively little known version, has been copied again and again, until it found its way, a hundred years later, into print. Of the intermediate stage, when only a few MSS. had received the new designation, a curious fact, which Azariah de Rossi (Cod. 35 b) mentions, gives evidence. "I saw," he says, "two complete Targums on the whole Pentateuch, word for word alike; one in Leggi, which was described in the margin, 'Targum of Jonathan b. Uziel,' the other in Mantua, described at the margin as 'Targum Jerusalem.'" In a similar manner quotations from either in the Aruch confound the designation. Benjamin Mussaphia (d. 1674), the author of additions and corrections to the Aruch, has indeed committed it as hitherto anonymous, and taken portions identical with the codex, to which it is supposed to be a collection of readings, he expounds by the negligence of the transcriber. Frankel, however, followed by Tabb and Levysohn, has gone a step further. From the very identity of a proportionately large number of phrases, amounting to about thirty in each book, and from certain palatable and consistent differences which run through both recensions, they have arrived at a different conclusion, which seems to carry conviction on the face of it, namely, that Jerusalem is a collection of emendations and additions to single portions, phrases, and words of Onkelos, and Psycho-Jonathan a further emendated and completed edition of the Jerusalem Targum. The circumscription of its also by the Turim of Jonathan, the chief incentive to a new Targum on the Pentateuch (that of Onkelos being well known in Palestine), was, on the one hand, the wish to explain such of the passages as seemed either obscure in themselves or capable of greater adaptation to the times; and on the other hand the great and paramount desire for legendary lore, and ethical and homiletical motives, interwined with the very letter of Scripture, did not and could not feel satisfied with the (generally) strictly literal version of Onkelos, as soon as the time of accentu, prolix, oral Targums had finally ceased in Palestine too, and written Targums of Babylon were introduced as a substitute, once for all. Hence variants, exactly as such, could be found in detail, not in the whole of Onkelos, but to such portions as seemed more in the diree "improvement" in the direction indicated. And how much this thoroughly paraphrastic version was preferred to the literal is, among other signs, plainly visible from the circumstance that it is still joined, for instance, to the reading of the Deutogone on the Feast of Weeks in the synagogue. At a later period the gaps were filled up, and the whole of the exist
ing Jerusalem was meant, as far again as seemed fitting and requisite. This is the Jonathan, so called for the first four hundred years only. And thus the identity in some, and the divergence in other places finds its most natural solution.

The Jerusalem, in both its recensions, is written in the Palestinian dialect, the peculiarities of which we have briefly characterized above. It is older than the Masora and the conquest of Western Asia by the Arabs. Syria or Palestine must be its birthplace, the second half of the 7th century its date, since the instances above given will not allow of any earlier time. Its chief aim and purpose is, especially in its second edition, to form an entertaining compendium of all the Haggadah and Haggadah, which refers to the Pentateuch, and takes its stand upon it. And in this lies its chief use to us. There is hardly a single allegory, parable, mystic digression, or tale in it which is not found in the other Haggadistic writings—Mishna, Talmud, Mechihta, Sifra, Sifri, etc. and both Winer and Petersmann, not to mention the other authorities, have warmly charged it with inventing its interpretations. Even where no source can be indicated, the author has surely only taken over the leading notions and ideas of his times, extravagant and atrocity as they may oftentimes appear to our modern western minds. Little value is inherent in its critical encyclopaedias on the exegeses of Okechos. It sometimes endeavors either to find an entirely new signification for a word, and then it often falls into grave errors, or it restores interpretations rejected by Okechos, only it must never be forgotten that translation is quite a secondary object with Jerusalem.

It adheres, however, to the general method followed by Okechos and Jonathan. It dissolves similes and widens too excessively. Geographical names it leaves entirely to those current in its own day. It avoids anthropomorphisms as well as anthropopathisms. The strict distinction between the divine King and man is kept up, and the word נפשׁ "before" is put as a kind of medium between the former and the latter, no less than the other — שם, "Word," or "Glory," etc. It never uses אלהים where the Scripture applies it to man or idols. The same care is taken to extol the good deeds of the people and its ancestors, and to shun and exclude the evil ones, etc. — all this, however, in a much more decided and exaggerated form than either in Okechos or Jonathan. Its language and grammar are very corrupt; it abounds — chiefly in its later edition, the Pseudo-Jonathan — in Greek, Latin, Persian, and Arabic words; and even making allowances for the many blunders of ignorant scribes, enough will remain to pronounce the dictum ungrammatical in very many places.

Thus much briefly of the Jerusalem as one and the same work. We shall now endeavor to point out a few characteristics belonging to its two recensions respectively. The first, Jerusalem סֵפֶר חוֹדֶשׁ, knows very little of angels; Michael is the only one ever occurring; in Jonathan, on the other hand, angelology flourishes in great vigor; to the Biblical Michael, Gabriel, Uriel, are added the Angel of Death, Sammael, Sagnooged, Shecassah. Eseth, seventy angels descend with God to see the building of the Babylonian tower; nine hundred millions of punishing angels go through Egypt during the night of the Exodus, etc. Jerusalem makes use but rarely of Hahelah and Haggadah, while Jonathan sees the text as it were only through the medium of Haggadah to him the chief end. Hence Jonathan has many Midrashim not found in Jerusalem, while he does not omit a single one contained in the latter. There are no direct historical dates in Jerusalem, but many are found in Jonathan, and since all other signs indicate that but a short space of time intervenes between the two, the late origin of either is to a great extent made manifest by these dates. The most striking difference between them, however, and the one which is most characteristic of either, is this, that while Jerusalem adheres more closely to the language of the Mishna, Jonathan has greater affinity to that of the Talmud. Of either we subjoin short specimens, which, for the purpose of easier comparison, and reference, we have placed side by side with Okechos. The Targum Jerusalem was first printed in Bomberg's Bible, Venice, 1518 it., and was reprinted in Bomberg's ed. and in Walton, vol. iv. Jonathan to the Pentateuch, a MS. of which was first discovered by Ashur Duruzi in the Library of the family of the Psuhas in Venice, was printed for the first time in 1590, as "Targum Jonathan ben Uziel," at Venice, reprinted at Hanau, 1618, Amsterdam, 1640, Prague, 1646, Walton, vol. iv, etc.

chibbean and the sharp sword which turned every way, to keep the way of the tree of life. His Shechinah from the beginning between the two Cherubim. Before He created the world He has created the Law: He has prepared the garden of Eden for the righteous; they shall eat and delight in the fruits of the tree, because they have acted during their life according to the doctrine of the Law in this world, and have kept its commandments: He has prepared the Shechinah for the wicked, which is likened unto a sharp sword that eats from both sides: He prepared within it sparks of light and coals of fire to judge with them the wicked who rebelled in their lives against the doctrine of the Law. Better is this Law to him who acts according to it than the fruits of the tree of life, for the Word of Jehovah has prepared for him who keeps it, that he shall live and walk in the paths of the way of the life of the future world.

the last chapter of Deuteronomy, verses 1-3.

authorized version.

1 and moses went up from the plains of moab unto the mountain of nebo, to the top of pisgah, that is opposite jericho. and the lord showed him all the land of gilead, unto dan, naphthali, and manasseh, and all the land of judah to the hindmost sea.

2 And all naphthali and the land of ephraim and manasseh, and all the land of judah to the hindmost sea,

3 And the south, and the plain of the valley of jericho, the city of palm trees, unto zoor.

V. TARGUMS OF "JOSEPH THE BLIND" ON THE HAGIOGRAPHA.

"When Jonathan ben Uziel began to paraphrase the Cetherubim" (Hagioographa), we read in the Talmudical passage before quoted, "a mysterious voice was heard saying: It is enough. Then last revealed the secrets of the Prophets — why wouldst thou also reveal those of the Holy Ghost?" — It would thus appear, that a Targum to these books (Job excepted) was entirely unknown up to a very late period. These Targums on the Hagio
grapha which we now possess have been attributed vaguely to different authors, it being assumed in the first instance that they were the work of one man. Now it was Aklyas the Greek translator, mentioned in Bevalith Rabba (see above); now Onkelos, the Chaldean translator of the Pentateuch, his mythical double; now Jonathan b. Uziel, or Joseph (see above). But, the dis
tersity in the different parts of the work warring too palpably against the unity of authorship, the blindness of the last named authority seemed to show the easiest way out of the difficulty. Joseph was supposed to have dictated it to different disciples at different periods, and somehow every one of the anamnese infused part of his own individual colour into the work. Popular belief thus fastened upon this Joseph the Blind, since a name the work must needs have, and to him, in most of the editions, the Targum is affiliated. Yet, if ever he did translate the Hagio-grapha, certain it is that those which we possess are not by his or his disciples' hands — that is, of the time of the 4th century. Writers of the 13th century already re
tended this notion of Joseph's authorship, for the assump
tion of which there never was any other ground than that he was mentioned in the Talmud, like Onkelos-Aklyas and Jonathan, in connection with Targum; and, as we saw, there is indeed reason to believe that he had a share in the reduction of "Jonathan" to the Prophets, which falls in his time. Between him and our hagio-graphical Targums, however, many centuries must have elapsed. Yet we do not even venture to assign to them more than an approximate round date, about 1000 A. D. Besides the Targums to the Pentateuch and the Prophets, those now extant range over Psalms, Proverbs, Job, the five Megilloth, i. e. Song of Songs, Ruth, Lamentations, Esther, Ecclesiastes; the Chronicles, and Daniel. Ezra and Nehemiah alone are left without a Targum at present; yet we can hardly help believing that ere long one will also be found to the latter, as the despair'd of Chronicles was found in the 17th century, and Daniel — a sure trace of it at least — so recently, that as yet nobody has considered it worth his while to take any notice of it. We shall divide these Targums into four groups: Proverbs, Job, Psalms; — Megil
loth; — Chronicles; — and Daniel.

1. TARGUM ON PSALMS, JOB, PROVERBS.

Certain linguistic and other characteristics exhibited by these three Targums, lead to the conclu
dion that they are nearly contemporary produc
tions, and that their birthplace is, most likely, Syria. While the two former, however, are more par
dohorical, the Targum on Proverbs comes nearer to our idea of a version than almost any Targum, except perhaps that of Onkelos. It adheres as closely to the original text as possible. The most remarkable feature about it however, and one which has given rise to endless speculations and discussions, is its extraordinary similarity to the Syriac Version. It would indeed sometimes seem as if they had copied each other — an opinion warmly advocated by Buthe, who endeavored to prove that the Chaldean had copied or adapted the Syrian, there being passages in the Targum which could, he assumed, only be accounted for by a misunder
standing of the Syriac version. It has, on the other hand, been argued that there are a greater number of important passages which distinctly show that the Targumist had used an original Hebrew text, varying from that of the Syriac, and had also made use of the LXX. against the latter. The Syriacisms would easily be accounted for by the Aram
ic idiom itself, the forms of which vary but little from, and easily merge into, the sister dialect of Syria. Indeed nearly all of them are found in the Talmud, a strictly Araminc work. It has been supposed by others that neither of these versions, as they are now in our hands, exhibit their original form. A late editor, as it were, of the (multilated) Targum, might have derived his emendations from that version which came nearest to it, both in lan
guage and in close adherence to the Hebrew text — namely, the Syriac; and there is certainly every reason to conclude from the wofully faulty state in which this Targum is found (Luzzatto counts sev
eral hundred corrupt readings in it), that many and clumsy hands must have been at work upon the later Cod. The most likely solution of the diffi
culty, however, seems to be that indicated by Franckel — namely, that the LXX. is the common source of both versions, but in such a manner that the Araminc has also made use of the Hebrew and the Greek — of the latter, however, through the Syriac medium. As a specimen of the curious similarity of both versions, the following two verses from the beginning of the book may find a place here:—

a E. g., the use of the word רעל for angel in Targ. Ps. and Job, the כ, affixed to the 3d p. plur. 

b E. g., ch. xxix. 5, the Heb. word בקע, " city," is rendered בקע, " city," in Syr. Targum trans
lates שָׁבַע, " a lie," which is only to be accounted for by a sub understanding or mis-reading of the Syriac שָׁבַע, where for the second כ the Chaldean trans
lator read a כ, שָׁבַע.

comp. also תְּשׁוּבָה, לְשׁוּבָה, etc. XXX. 26, 30, &c.

The translation of the Targum is:

Ecclesiastes 4:8, "He that beginneth a thing in his heart, let him finish it, lest his forces be broken in pieces before the work is done."

The Syriac version is:

"And he that beginneth a thing in his heart, let him finish it, lest an evil thing be done to him, and he be broken in pieces before the work is done."

The above translation is due to the editor of the Targum. The Syriac version is closer to the Hebrew text. The Targumist seems to have misunderstood the Hebrew word בקע, "city," as שָׁבַע, "lie," which is why he rendered it בקע, "city."

Targums on the five Megilloth.

these Targums are likewise not mentioned be-
fore the 12th century, when the arnuch quotes the
several—although Esther must have been translated
at a very early period, since the Talmud already mentions a Targum on it. Of this, we need
fully add, no trace is found in our present Tar-
gum. The freedom of a "version" can go no
further than it does in these Targums on the
Megilloth. They are, in fact, mere Haggadahs,
and bear the most striking resemblance to the Midrash
on the respective books. Curiously enough, the
grateful preponderance of the paraphrase over the
text is striking, in the following order: Ruth,
Lamentations, Ecclesiastes, Esther, Song of Songs.
The latter is fullest to overflowing of those "naga
apra Teirolotis," which have so sorely tried the
temper of the wise and grave. Starting from
the almost comical notion that all they found in
the books of Mohammedanism and of Judaism, of
Rome and of Greece, if it seemed to have any ref-
erence to "religion," however unsupported, and
however philyard bearing the stamp of poetry—good
or bad—on its face, must needs be a religious creed,
and the creed forced upon every single believer:
they could not but get angry with mere "day-
dreams" being interspersed with the sacred liter-
atures of the Bible. Delitzsch, a scholar of our
generation, says of the Targums in general that
"history becomes in them most charming, most in-
stuctive poetry; but this poetry is not the inven-
tion, the phantasms of the writer, but the old and
popular venerable tradition or legend . . . . the
Targums are poetical, both as to their contents and
form" (Gesch. d. J. Jod. Poesie, p. 27): and further,
"the wealth of legend in its gushing fullness did
not suffer any formal bounds; legend bursts upon
legend, like wave upon wave, not to be dammed in
even by any poetical forms. Thus the Jerusalem
Targum in its double Revisions [to the Penta-
tuch], and the Targums on the five Megilloth are
the most beautiful national works of art, through
which there runs the golden thread of Scripture,
and which are held together only by the unity of the
idea" (p. 153). Although we do not share Delitzsch's enthusiasm for the full extent, yet we
cannot but agree with him that there are, together
with stones and dust, many pearls of precious price
to be gathered from these much despised, because
hardly known, books.
The dialect of these books occupies the mean be-
tween the East and West Aramaic, and there is a
certain unity of style and design about the five
books, which fully justifies the supposition that they
are, one and all, the work of one author. It
may be that, taken in an inverted series, they mark
the successive stages of a poet's life: glowing, rap-
turous, overflowing in the first; stately, sober,
provocative in the last. As to the time of its writing or
VI. TARGUM ON THE BOOK OF CHRONICLES.

This Targum was unknown, as we said before, up to a very recent period. In 1689, it was edited for the first time from an Extant MS, by M. F. Hensel, of Berlin, published in 1715 from a more complete as well as a correct MS, at Cambridge, by Dr. Williams. The name of Hungary occurring in it, and its frequent use of the Jerusalem-Targum to the Pentateuch, awakening sometimes to simple copying (comp. the Genealogical Table in chap. i. etc.) show sufficiently that its author is neither "Jonathan b. Uzziel," nor "Joseph the Blind," as has been suggested. But the language, style, and the Hagaddah, with which it abounds, point, to a late period and point out Palestine as the place where it was written. Its use must be limited to philological, historical, and geographical studies: the science of exegesis will profit little by it. The first edition appeared under the title Paraphrasis Chaldaea liber. Chronicon, cura M. F. Beckii, 2 tom. Aug. Vind. 1689–83, 4to; the second by D. Wilkins, Paraphraz...vulgoe R. Josephis, etc., Lond. 1715, 4to. The first edition has the advantage of a large number of very learned notes, the second that of a comparatively more correct and complete text.

VII. THE TARGUM TO DANIEL.

It is for the first time that this Targum, for the non-existence of which many and weighty reasons were given (that the date of the Messiah's arrival was hidden in it, among others; it is here formally introduced into the regular rank and file of Targums, although it has been known for many more than fifty years. Munk found it not indeed in the Original Aramaic, but in what appears to him to be an extract of it written in Persian. The MS. (Inc. Food, No. 45, Imp. Library) is inscribed "History of Daniel," and has retained only the first words of the Original, which it translates likewise into Persian. This language is hence retained throughout.

After several legends known from other Targums, follows a long prophecy of Daniel, from which the book is shown to have been written after the first Crusade. Mohammad and his successors are mentioned, also a king who coming from Europe (יונNintendo = Mohammed). The Jews will also have to suffer great misfortunes (as indeed the knghtly Crusaders won their spurs by dastarily murdering the helpless masses, men, women, and children, in the Ghettos along the Nile and elsewhere, before they started to deliver the Holy Tomb). By a sudden transition the Prophet then passes on to the "Messiah, son of Joseph," to Gog and Magog, and to the "true Messiah, the son of David." Munk rightly concludes that the book must have been composed in the 12th century, when Christian kings desired for a brief period over Jerusalem (Nouveaux Synod, Par. 1838).

VIII. There is also a Chaldee translation extant of the apocryphal pieces of Esther, which, entirely lying apart from our task, we confine ourselves to mention without further entering into the subject. De Rossi has published them with Notes and Dissertations, Tubingena, 1784, 8vo.

Further fragments of the Palestinian Targum.

Besides the complete books belonging to the Palestinian Cycle of Targum which we have mentioned, and the portions of it intersected as "Another Reading," "Another Targum," into the Babylonian Versions, there are extant several independent fragments of it. Nor need we as yet despair of finding still further portions, perhaps one day to see it restored entirely. There is all the more hope for this, as the Targum has not been lost very long yet. Abduhrai quotes the Targum Jerusalim to Samuel (ii. 9, 13). Kimchi has preserved several passages from it to Judges (xi. 1, consisting of 47 words; to 2 Kings, 17, 18, 196 words; to Kings (i. 22, 21: 68 words; ii. 4, 1: 174 words; iv. 6: 55 words; iv. 7: 72 words; xiii. 21: 9 words), under the simple name of Tosefiah, i.e. Additions, or Additional Targum. Luzzatto has also lately found fragments of the same, under the names "Targum of Palestine," "Targum of Jerushalim," "Another Reading," etc., in an African Codex, written 5247 A. M., namely, to 1 Sam. xiii. 9: 2 Sam. xii. 13; 1 Kings v. 9, v. 11, v. 13, x. 18, x. 26, xiv. 13; to Hosea i. 1; Isaiah i. 1—To Isiah, Rashi (Jorhe), not as people still persist in calling him, Jorheci, Abduhrai and Pirmass say it: and a fragment of the Targum to his prophecy is extant in Cod. Urb. Vatic. in the name of Jonathan (Mun. 25) now beginning: "A Prophecy of Isaiah, which he prophesied at the end of his prophecy in the days of Manasseh the son of Hezekiah the King of the Tribe of the House of Judah on the 17th of Tamuz in the hour when Manasseh set up an idol in the Temple," etc. Isaiah predicts in this his own violent death. Parts of this Targum are also found in Hebrew, in Pesh. and in Arabic, and Zebabiah, the Palestinian Targum to Jeremiah is mentioned by Kimchii: to Ezechiel R. Simeon, Nathan (Aruch), and likewise by Kimchii, who also speaks of a further additional Targum to Jonathan for this book. A "Targum-Jerushalim" to Isaiah is known to Rashi and of Zebabiah a fragment has been published by Schmaholz in Bruxelles (Kochel. xvi. 174) from a Hebrew MS. (Cod. 354, Kennic. 25), written 1.A.6. The passage found, as a marginal gloss to Zech. xii. 16, reads as follows:—

"Targum Jerushalim. And I shall pour out upon the House of David and the inhabitants of Jerusalem the spirit of prophecy and of prayer for truth. And after this shall go forth Messiah the
Son of Efraim to wage war against Gog. And Gog will kill him before the city of Jerusalem. They will look up to me and they will ask me wherefore the heavens have killed Messiah the Son of Efraim. They will then mourn over him as mourn father and mother over an only son, and they will wall over him as one wall a firstborn."

— A Targum Jerusalmi to the third chapter of Habakkuk, quoted by Bashi, is mentioned by De Rossi (Cod. 265 and 465, both 13th century). It has been suggested that a Targum Jerusalmi on the Prophets only existed to the Hatturahs, which led to me, one of the few translators perhaps, like the portion from the Law, in public; but we have seen that entire books, not to mention single chapters, possessed a Palestinian Targum, which never were intended or used for the purpose of Hatturah. And there is no reason to doubt that the origin of this Targum to the Prophets is precisely similar to, and perhaps contemporaneous with, that which we traced to that portion which embraces the Pentateuch.

The Babylonian Version, the "Jonathan," Targum, though paraphrastic, did not satisfy the apparently more imaginative Palestinian public. Thus from heaped-up additions and marginal glosses, the step to a total re-writing of the entire Codex in the manner and taste of the latter times and the different locality, was easy enough. From a condition of the work as such, however, we may naturally keep aloof, as long as we have only the few specimens named to judge from. But its general spirit and tendency are clear enough. So is also the advantage to which even the minimum that has survived may some day be put by the student of Midrashic literature, as we have briefly indicated above.

We cannot conclude without expressing the hope—probably a vain one—that linguistic studies may soon turn in the direction of that vast and most interesting, as well as important, Aramaic literature, of which the Targums form but a small item.

The writer finally begs to observe that the translations of all the passages quoted from Talmud and Midrash into the Palestinian Targums have been made by him directly from the respective originals.

**VERSION, AUTHORIZED.** The history of the English translations of the Bible begins itself with many points of interest in that of the nation and the Church. The lives of the individual translators, the long struggle with the indifference or opposition of men in power, the religious condition of the people as calling for, or affected by, the appearance of the translation, the time and place of publication, the number of editions by which the demand, when once created, was supplied—each of these has furnished, and might again furnish, materials for a volume. It is obvious that the work now to be done must lie within narrower limits; and it is proposed, therefore, to exclude all that belongs simply to the personal history of the men, or the general history of the time, or that comes within the special province of bibliography.

What will be aimed at will be to give an account of the several versions as they appeared; to ascertain the qualifications of the translators for the work which they undertook, and the principles on which they acted; to form an estimate of the final result of their labors in the received version, and, as consequent on this, of the necessity or desirability of any new translation. In the latter case, a study of such a survey of the literature of the subject as may help the reader to obtain a fuller knowledge for himself.

1. Early Translations. — It was asserted by Sir Thomas More, in his anxiety to establish a point against Tyndale, that he had seen English translations of the Bible, which had been made before Wycliffe, and that these were approved by the Bishops, and were allowed by them to be read by laymen, and even by devout women (Bedeologus, ch. viii.-xv., col. 82). There seem good grounds, however, for doubting the accuracy of this statement. No such translations—versions, i.e. of the entire scriptures—are now extant. No traces of them appear in any contemporary writer. Wycliffe's great achievement, that there is no translation from Ormsby and Madden, Wycliffe's Bible, Pref. p. xix. Pref. p. 50). The Constitutions of Archbishop Arundel (A. D. 1408) mention two only, and these are Wycliffe's own, and the one based on his and completed after his death. More's statement must therefore be regarded either as a rhetorical exaggeration of the fact that parts of the Bible had been previously translated, or as rising out of a mistake as to the date of MSS. of the Wycliffe version. The history of the English Bible will therefore begin, as it has begun hitherto, with the work of the first great reformer. One glance, however, we may give, in passing, to the earlier history of the English Church, and connect some of its most honored names with the great work of making the truths of Scripture, or parts of the books themselves, fit not the Bible as a whole, accessible to the people. We may think of Caedmon as embodying the whole history of the Bible in the allegorized metre of Anglo-Saxon poetry (Beke, Hist. Ecc. iv. 24); of Alpheus, Bishop of Sherborne, in the 7th century, as rendering the Psalter of Bele, as translating in the last hours of his life the Gospel of St. John (Epist. Cathedrae); of Alfred, setting forth in his mother-tongue as the great groundwork of his legislation, the four chapters of Exodus (xx.-xxiii.), that contained the first code of the laws of Israel.
The wishes of the great king extended farther. He desired that "all the free-born youth of his kingdom should be able to read the English Scriptures" (ibid.). Portions of the Bible, some of the Psalms, and extracts from other books, were translated by him for his children. One of that of his children's education the tradition of a later date, seeing him the representative of all that was good in the old Saxon time, made him the translator of the whole Bible (ibid. Supp. to ch. v.).

The work of translating was, however, carried on by others. One Anglo-Saxon version of the four Gospels, interlinear with the Latin of the Vulgate, known as the Durham Book, is found in the Cottonian MSS. of the British Museum, and is referred to the 9th or 10th century. Another, known as the Rashworth Gloss, and belonging to the same period, is in the Bodleian Library at Oxford. Another, of a somewhat later date, is in the same collection, and in the library of C. U. College, Cambridge. The name of Alfred, Bishop of Sherborne, is attached to that of Elicif, with an Epitome of Scripture History, including a translation of many parts of the historical books of the Bible (Lewis, Hist. of Transl. ch. i.; Fordhall and Muddon, Preface; Bagster's English Hexagol, Pref. i.). The influence of Norman ecclesiastics, in the reigns that preceded or followed the Conquest, was probably adverse to the continuance of this work. They were too far removed from sympathy with the subjugated race to care to educate them in their own tongue. The spoken dialects of the English of that period would naturally seem to them too rude and uncouth to be the channel of Divine truth. Pictures, mysteries, miracle-plays, rather than books, were the instruments of education for all but the few who, in monasteries under Norman or Italian superintendence, devoted themselves to the study of theology or law. In the remoter parts of England, however, where their influence was less felt, or the national feeling was stronger, there were those who carried on the succession, and three versions of the Gospels, in the University Library at Cambridge, in the Bodleian, and in the British Museum, belonging to the 11th or 12th century, remain as attesting their labours. The metrical paraphrase of the Gospel history, known as the Omnimund, in alliterative English verse, ascribed to the latter half of the 12th century, is the next conspicuous monument, and may be looked upon as indicating a desire to place the facts of the Bible within reach of others than the clergy. The 13th century, a time in England, as throughout Europe, of religious revival, witnessed renewed attempts. A prose translation of the Bible into Norman-French, ed. of 1290, indicates a demand for devotional reading of the New Testament and of the Psalms, and of the wealthier merchants, or of convents for women of high rank. Further signs of the same desire are found in three English versions of the Psalms—one towards the close of the 13th century; another by Schorham, ed. of 1320; another—with other canons—from the O. T. and N. T.—by Richard Bole of Hampole, ed. 1341; the last being accompanied by a devotional exposition: and in one of the Gospels of St. Mark and St. Luke, and of all St. Paul's epistles (the list includes the apocryphal epistle to the Laodiceans), in the library of C. C. College, Cambridge. The fact stated by Archbishop Arundel in his funeral sermon on Anne of Bohemia, wife of Richard II., that she habitually read the Gospels in the vulgar tongue, with divers passages probably copied out by hand, is of the highest rank. It is interesting to note these facts, not as detracting from the glory of the great reformer of the 14th century, but as showing that for him also there had been a preparation; that what he supplied met a demand which had for many years been gathering strength. It is almost needless to add that these versions started from nothing better than the copies of the Vulgate, more or less accurate, which each translator had before him (Lewis, ch. i.; Fordhall and Muddon, Preface).

H. Wycliffe (b. 1324; d. 1384).—(1.) It is singular, and not without significance, that the first translation from the Bible connected with the name of Wycliffe should have been that of part of the Apocalypse. The Last Age of the Church (A. D. 1320) translates and expands the vision in which the reformer read the signs of his own times, the sins and the destruction of "Antichrist and his meane" (multitude). Shortly after this he completed a version of the Gospels, accompanied by a commentary so that poor Christen men may some deke know the text of the Gospel, with the same sentence of side holie electors (Preface). Wycliffe, however, though the chief, was not the only holler in the cause. The circle of English readers was becoming wider, and they were not content to have the Book which they honored above all others in a tongue not their own. Another translation and commentary appear to have been Psalthorpe's, of course, the Gospels thus referred to may have been Wycliffe's translation; but the strong opposition of Arundel to the work of the Reformer makes it probable that those which the queen used belonged to a different school, like that of the versions just mentioned.

(2.) The authorship of this book has however been disputed (comp. Todd's Preface). J. "One comfort is of knightes; they servev much the Gospels, and have wite to read of the Gospelles of Christes life!" (Wycliffe, Prologue). Compare the speech ascribed to John of Gaunt (13 Ric. II.). "We will not be the dags of all, seeing other nations have the law of God, which is the law of our faith, written in their own language" (Foxe, Pref. to Sarum Gospels; Lewis, p. 29).
been made about the same time, in ignorance of Wycliffe's work, and for the "manie lewd men that gholie would kon the Gospelles, if it were dragen into the English tong." The fact that many MSS. of this period are extant, containing in English a Monodessorum, or Harmony of the Gospels, accompanied by portions of the epistles, or portions of the O. T., or an epitome of Scripture history, or the substance of St. Paul's epistles, or the catholic epistles at full length, with indications more or less distinct of Wycliffe's influence, shows how wide-spread was the feeling that the time had come for an English Bible. (Forshall and Madden, "Pref. pp. xiii.-xvii.) These preliminary laborers were followed up by a complete translation of the N. T. by Wycliffe himself. The O. T. was undertaken by his coadjutor, Nicholas de Hertford, but was interrupted probably by a citation to appear before Archbishop Arundel in 1382, and ends abruptly (following so for the order of the Vulgate) in the middle of Baruch. Many of the MSS. of this version now extant present a dilution or abbreviation of the text, and it is probable that the work of Wycliffe and Hertford was revised by Richard Purrve, c. A. D. 1388. To him also is ascribed the interesting Prologue, in which the translator gives an account both of his purpose and his method. (Forshall and Madden, "Pref. p. xxi.)

(2.) The former was, as that of Wycliffe had been, to give an English Bible to the English people. He appeals to the authority of Bede, of Alfred, and of Grosticé, to the examples of Fresne, and Beomers (Bohemians), and Britons." He answers the hypercritical objections that men were not loby enough for such a work: that it was wrong for "idle" to do what the great doctors of the Church had left undone. He hopes to make the sentence as true and open in English as it is in Latin, or more true and open.

It need hardly be said, as regards the method of the translator, that the version was based entirely upon the Vulgate. It, in the previous century, scholars like Grossticé and Roger Bacon, seeking knowledge in other lands, and from men of other races, and with required, as they seem to have done, some knowledge both of Greek and Hebrew, the succession had, at all events, not been perpetuated. The war to be waged at a later period with a different issue between Scholastic Philosophy and "Humanity" ended, in the first struggle, in the triumph of the former, and there was probably no one at Oxford among Wycliffe's contemporaries who could have helped him or Purrve in a translation from the original. It is something to find at such a time the complaint that "learned doctors taken litten heed to the letter," the recognition that the Vulgate was not all sufficient, that "the
text of one bokes" (the is speaking of the Psalter and the difficulty of understanding it) "disordereth much from the Elrezn." The difficulty which was thus felt was increased by the state of the Vulgate text. The translator complains that what the Church had in view was not Jerome's version, but a later and corrupt text; that "the common Latine Bible had more need to be corrected as manie as I have seen in my day, than hath the English Bible late translated." To remedy this he had recourse to collation. Many MSS. were compared, and out of this comparison, the true reading ascertained as far as possible. The next step was to consult the Glosa Ordinaria, the commentaries of Nicholai de Lyra, and others, as to the meaning of any difficult passages. After this (we recognize here, perhaps, a departure from the right order) grammars were consulted. Then came the actual work of translating, which he aimed at making idiomatic rather than literal. As he went on, he submitted his work to the judgment of others, and accepted their suggestions. It is interesting to trace these early strivings after the true excellence of a translator: yet more interesting to take note of the spirit, never surpassed, seldom equalled, in later translators, in which the work was done. Nowhere do we find the conditions of the work, intellectual and moral, more solemnly asserted. "A translator hath grete need to stude well the sentence, both before and after," so that his "equall words may mislead his readers or himself;" and then also "he hath need to lyve a close life, and be ful devot in precers, and have not his wit occupied about worldly things, that the Holie Spiyt, author of all wisdom, and emynge and truthe, dresse (= train) him in his work, and suffer him not for to err" (Forshall and Madden, "Pref. p. 80).

(3.) The extent of the circulation gained by this version may be estimated from the fact that, in spite of all the chances of time, and all the systematic efforts for its destruction made by Archbishop Arundel and others, not less than 150 copies are known to be extant, some of them obviously made for persons of wealth and rank, others apparently for humbler readers. It is significant as bearing out the tendency of the two works, or on the position of the writers, that while the quotations from Scripture in Langton's [Langhuns']Vision of Piers Plowman are uniformly given in Latin, those in the Person's Tale of Chaucer are given in English, which for the most part agrees substantially with Wycliffe's translation.

(4.) The following characteristics may be noticed as distinguishing this version: (1.) The general homeliness of its style. The language of the court or of scholars is as far as possible avoided, and that of the people followed. In this respect the principle has been acted on by later translators. The

ele testament, that helpful full myche in this work the thkkele thne to consul with ele grammarians and ele drysye of harde wordes and harde sentence how these miste best be understode and translated, the highe thne to translat as clearely as he could to the sentence, and to have manie good things that corrested on the sentecne of the translaconon" (Pref. c. xxv.) The note at the close of the preface, on the grammatical idoms of different languages, the many English equivalents, &c., for the Latin ablative absolute, shows considerable discernment.

---

a A cruical instance is that of Gen. iii. 15: "She theall tread the head." b This knowledge is, however, at second hand, "in witness of Jerom, of Lie, and other expositours." c It is worth while to give his own account of this process: "First this simple creature," his usual way of speaking of himself, "bede myche travalle, with diverse behaius and helpiers, to de-rawe manie edle bibles, and other doctors, and commone gloes, and to make euo Latin bibles, sunndre trewe, and thane to studie if the men, the text with the gloss, and other doctors, as he wi-ne, and specialy Lie on the
style of Wycliffe is to that of Chaucer as Tyndal's is to Surrey's, or that of the A. V. to Ben Jonson's. (2.) The substitution, in many cases, of English equivalents for quasi-technical words. Thus we find "fay" or "fiegh" instead of "Raca" (Matt. v. 22); "they were "wast"ed" in Matt. iii. 16; "richesse" for "ammonun" (Luke xvi. 11, 13); "bishop" for "high-priest" (pontius). (3.) The extreme literalness with which, in some instances, even at the cost of being unintelligible, the Vulgate text is followed, as in 2 Cor. i. 17-19.

III. TYNDAL.—The work of Wycliffe stands by itself. Whatever power it exercised in preparation and performance of the translation of the Bible in the 14th century, it had no perceptible influence on later translations. By the reign of Henry VIII. its English was already obsolescent, and the revival of classical scholarship led men to feel dissatisfied with a version which had avowedly been made at second-hand, not from the original. With Tyndal, on the other hand, we enter on a continuous succession. He is the patriarch, in the remote ancestry, of the Authorized Version. With a consistent, unswerving purpose, he devoted his whole life to this one work; and through dangers and difficulties, amid enemies and treacherous friends, in exile and loneliness, accomplished it. More than Cranmer or Ridley he is the true hero of the English Bible. He was the first to give up the method of rendering the Scriptures into the English tongue in a way, as the court-winds blew, or, at the best, making the most of opportunities, he set himself to the task without which, he felt sure, reform would be impossible, which once accomplished, would render it inevitable. "For many years," he said, at the age of thirty-six (A. D. 1520), he would cause a boy that driveth the plough "to know more of Scripture than the great body of the clergy then knew (Foxe, in Anderson's }ana of English Bible, i. 36). We are able to form a fairly accurate estimate of his fitness for the work to which he thus gave himself. The change which had come over the universities of continental Europe since the time of Wycliffe had affected those of England. Greek had been taught at Paris in the first quarter of the 14th century. The Greek Grammar, that of Constantine Lascaris, had been printed in 1476. It was followed in 1480 by Craston's Lexicon. The more enterprising scholars of Oxford visited foreign universities for the sake of the new learning. Grocyn (d. 1519), Linacre (d. 1524), Colet (d. 1519), had, in this way, from the Greeks whom the fall of Constantinople had scattered over Europe, or from their Italian pupils, learnt enough to enter, in their turn, upon the work of teaching. When Erasmus visited Oxford in 1497, he found in these masters a scholarship which even he could admire. Tyndal, who went to Oxford c. 1500, must have been within the range of their teaching. His two great opponents, Sir Thomas More and Bishop Bonner, had been among their pupils. It is significant enough that after some years of study Tyndal left Oxford and went to Cambridge. Such changes were, it is true, common enough. The name of any great teacher would draw round him men from other universities, from many lands. In this instance, the reason of Tyndal's choice is probably not far to seek (Walter, }rg. Notice to Tyndal's }eliausal Treatises). Erasmus was in Cambridge from 1500 to 1514. All that we know of Tyndal's character and life, the fact especially that he had made translations of portions of the N. T. as early as 1509 (a). Life of Tyndal, p. 77), are the considerations that he resolved to make the most of the presence of one who was emphatically the scholar and philologist of Europe. It must be remembered, too, that the great scheme of Cardinal Ximenes was just then beginning to interest the minds of all scholars. The publication of the Complutensian Bible, it is true, did not take place till 1514, but the collection of MSS. and other preparations for it began as early as 1504. In the mean time Erasmus himself, in 1510, brought out the first published edition of the Greek Testament; and it was thus made accessible to all scholars. Of the use made by Tyndal of these opportunities we have evidence in his coming up to London (1522), in the vain hope of persuading Tyndal "known as a Greek scholar, an enlightened Humanist," to sanction his scheme of rendering the N. T. into English, and bringing a translation of one of the orations of Sozomen as a proof of his capacity for the work. The attempt was not successful. a At the last I understood not only that there was no room in my Lord of London's palace to translate the N. T., but also that there was no place in England "to print it in all England" (Proc. in Fire Books of Books.

It is not so easy to say how far at this time any knowledge of Hebrew was attainable at the English universities, or how far Tyndal had used any means of access that were open to him. It is probable that it may have been known, in some measure, to a less holder than their fellows, at a time far earlier than the introduction of Greek. The large body of Jews settled in the cities of England must have possessed a knowledge, more or less extensive, of their Hebrew books. On their banishment, to the number of 16,000, by Edward I., these books fell into the hands of the monks, superstitiously revered or feared by most, yet drawing some to examination, and then to study. Greco, it is said, knew little less than 16 of the first Hebrew books. He knew enough to pass judgment on the Vulgate as incorrect and mis-leading. Then, however, came a period in which linguistic studies were thrown into the background, and Hebrew became an unknown speech even to the best-read scholars. The first signs of a revival meet us toward the close of the 16th century. The remarkable fact that a Hebrew Psalter was printed at Scuttlack in 1547—a year before Erasmus's Greek Testament, the Peuteraugh in 1542, the Prophets in 1489, the whole of the O. T. in 1488, that by 1496 four editions had been published, and by 1506 not fewer than eleven (Whitaker, Hist. and Crit. Inquiry, p. 22) indicates a demand on the part of the Christian student of Europe, not less than on that of the more learned Jews. Here also the progress of the Complutensian Bible would have attracted the notice of scholars. The cry raised by the "Trojans" of Oxford in 1519 (chiefly consisting of the friars, who from the time of Wycliffe had all but swamped the education of the place) against the first Greek lectures— that to study that language would make

---

a * The MS. on which this statement is founded is pronounced by Mr. Francis Fyfe of Bristol to be unquestionably a forgery. So Mr. Weeect regards it (Hist. of the English Bible, p. 32, note). A.  

b The boast of Bacon, that any one using his method could learn Hebrew and Greek with a week, hold as it is, shows that he knew something of both (De Landa Soc. Script. c. 28).
men Pagan, that to study Hebrew would make them Jews—shows that the latter study as well as the former was the object of their dislike and fear (Anderson, i. 24.; Hallam, Ed. of Ecc. i. 408).

Whether Tyndal had in this way gained any knowledge of Hebrew before he left England in 1534 may be uncertain. The fact that in 1530-31 he lend-him a translation of Genesis, Deuteronomy, and Jonah, may be looked on as the first-fruits of his labors, the work of a man who was giving this proof of his power to translate from the original (Anderson, Annu. i. 200-288). We may perhaps trace, among other motives for the many wanderings of his exile, a desire to visit the cities Worms, Cologne, Hamburg, Antwerp (Anderson, pp. 48-64), where the Jews lived in greatest numbers, and some of which were famous for their Hebrew learning. Of at least a fair acquaintance with that language we have, a few years later, abundant evidence in the table of Hebrew words prefixed to his translation of the five books of Moses, and in casual etymologies scattered through his other works, e.g. Mammon (Parable of Wicked Mammon, p. 68); Deut. vii. 8; Abel (Mammon, p. 347). A remarkable work (Prefaces to Obelocie, p. 148) shows how well he had entered into the general spirit of the language. The properties of the Hebrew tongue agreed a thousand times more with the English than with the Latin. The manner of speaking is in 14th one, so that in a thousand places thou needst not but to translate it into English word for word." When Tyndall describes him in 1534 it is as one well-skilled in seven languages, and one of these is Hebrew (Anderson, i. 397).

The N. T. was, however, the great object of his care. First the Gospels of St. Matthew and St. Mark were published tentatively, then in 1525 the whole of the N. T. was printed in 4to at Cologne and in small 8vo at Worms. The work was the fruit of a self-sacrificing zeal and the zeal was its own reward. In England it was received with denunciations. Tomstal, Bishop of London, preaching at Paul's Cross, asserted that there were at least 2,000 errors in it, and ordered all copies of it to be bought up and burned. An Act of Parliament (53 Hen. VIII, cap 1) forbade the use of all copies of Tyndall's "false translation." Sir T. More (Duellengue, i. Suppedication of Souls, Cana-

As indicating progress, it may be mentioned that the first Hebrew professor, Robert Waldich, was appointed at Oxford in 1530, and that Henry VIII's secretary, Pace, knew Greek, Hebrew, and Chaldee.

b The existence of a translation of Jonah by Tyndall, previously questioned by some editors and biographers, has been placed beyond a doubt by the discovery of a copy (believed to be unique) in the possession of the Ven. Lord Chancellor. It is described in a letter, by him to the Berg Post of Feb. 3, 1827, transferred shortly afterwards to the Aitkenian.

c The references to Tyndall are given to the Parker Society edition.

a Hallam's assertion that Tyndall's version "wasavedly taken from Luther's," originated probably in an inaccurate reminiscence of the title-page of Coverdale's (L. of E. 1. 529).

The only extant copy of the 8vo edition is in the library of the Baptist College at Bristol. It was reprinted in 1892 in facsimile by Mr. Francis Fwy. Bristol, the impression being limited to 177 copies. Mr. Fry proves, by a careful comparison of type, size, water-mark, and the like, with those of other books from the same press, that it was printed by Peter Schaeffer of Worms. By a like process Mr. Anderson (i. 635) fixes Cologne as the place, and Peter Quentel as the printer of the 4to.

a In two of these (1554 and 1555) the words, "This is the New Testament in my blood," in 1 Cor. vi. were omitted (Anderson, i. 415).

The localities of the editions are not without interest. Hamburg, Cologne, Worms, in 1525; York, in 1536; Antwerp (to Marburg) in 1529; Strasburg (joye's edition) in 1521; Bergen-op-Zoom in 1553 (Joye's); John c. v. at Nuremberg in 1531; Antwerp in 1534 (Cotton, Printed Editions, pp. 84.)

a A conjecture of Mr. Offor is not borne out by an examination of the book itself. See Westcott's Hist. of the English Bible, p. 64 f.

a Two names connect themselves sadly with this version. A copy of the edition of 1540 was presented specially to Anne Boleyn, and is now extant in the British Museum. Several passages, such as might be marked for devotional use, are underscored in red ink. Another reforming lady, Joan Bocher, was known to have been active in circulating Tyndal's N. T. (Neal i. 45; Stryke, M. E. i. 32.)
The testimony of a Roman Catholic scholar is worth quoting: "In point of perspicuity, propriety of idiom and purity of style, no English version has as yet surpassed it (Gibbs, Prospects for a new Translation, p. 84). The writer cannot forbear adding Mr. Froude's judgment in his own words: "I call God to record, against the day we shall appear before our Lord Jesus to give a reckoning of our doings, that I never altered one syllable of God's word against my conscience, nor would this day, if all that is in the world, whether it be pleasure, honor, or riches, might be given me." (Anderson, i. 349).

IV. CLOSER RELEVANCE OF THE BIBLE.

A complete translation of the Bible, different from Tyndal's, bearing the name of Miles Coverdale, printed probably at Zurich, appeared in 1535. The undertaking itself, and the choice of Coverdale as the translator, were probably due to Cromwell. Tyndal's controversial treatments, and the polemical character of his prefaces and notes, had irritated the leading ecclesiastics and encouraged the other reformers to consider him a threat to their position. All that he had written was publicly condemned. There was no hope of obtaining the king's sanction for anything that bore his name. But the idea of an English translation began to find favor. The rupture with the see of Rome, the marriage with Anne Boleyn, made Henry willing to adopt what was needed upon his own authority, and the way of breaking forever the spell of the Pope's authority. The bishops even began to think of the thing as possible. It was talked of in Convocation. They would take it in their own hands. The work did not, however, make much progress. The great preliminary question whether "venerable" words, such as host and pontiff, should be retained, was still unsettled (Anderson, i. 414)." Not till the day after doomsday (the words are Cranmer's) were the English people likely to get their English Bible from the bishops (ibid. i. 577). Cromwell, it is probable, thought it better to lose no further time, and to strike while the iron was hot. A divine whom he had patronized, though not, like Tyndal, feeling himself called to that special work (Preface to Coverdale's Bible), was willing to undertake it. To him accordingly it was intrusted. There was no stigma attached to his name, and, though a sincere reformer, neither at that time nor afterwards did he occupy a sufficiently prominent position to become an object of special popular attention.

(2) The work which was thus executed was done, as might be expected, in a very different fashion from Tyndal's. Of the two men, one had made this the great object of his life, the other, in his own language, "sought it not, neither desired it," but accepted it as a task assigned him. One prepared himself for the work by long years of labor and study. Tyndal was familiar with the Greek and Hebrew. The other is content to make a translation at second hand "out of the Douche (Luther's German Version) and the Latin." The one aims at a rendering which shall be the truest and most exact possible. The other loses himself in weak commonplace as to the advantage of using many English words for one and the same word in the original, and in practice oscillates between "penance" and "repentance," "love" and "charity," "priests" and "elders," as though one set of words were as true and adequate as the other. (Preface, p. 19.) In spite of these weaknesses, however, there is much to like in the spirit and temper of Coverdale. He is a see-one-rate man, laboring as such contentedly, not at all hissing the dog for his own bone. He thinks it a great gain that there should be a diversity of translations. He acknowledges, though he dare not name it, the excellence of Tyndal's version, and regrets the misfortune which left it incomplete.

a The testimony of a Roman Catholic scholar is worth quoting: "In point of perspicuity, propriety of idiom and purity of style, no English version has as yet surpassed it (Gibbs, Prospects for a new Translation, p. 84). The writer cannot forbear adding Mr. Froude's judgment in his own words: "I call God to record, against the day we shall appear before our Lord Jesus to give a reckoning of our doings, that I never altered one syllable of God's word against my conscience, nor would this day, if all that is in the world, whether it be pleasure, honor, or riches, might be given me." (Anderson, i. 349).

b Error; see p. 3128, note 3.

c A list made by the editor in number, was formerly laid before Convocation by Gardiner in 1542, with the proposal that they should be left untranslated, or Englished with as little change as possible (Lewis, Hist. ch. 2; [Eng. Henopin, p. 10]).

d It is uncertain where this version was printed, the title-page being silent on that point. Zurich, Cologne, and Frankfurt have all been conjectured. Coverdale is known to have been abroad, and may have come in contact with Luther.

e There seems something like an advertising fact in this title-page. A scholar would feel that there was no value in any translation but one from the original. But the "Douche" would serve to attract the Reformation party, who held Luther's name in honor; while the "Latin" would at least conciliate the conservative feeling of Gardiner and his associates. Withal, however, maintains that Coverdale knew more Hebrew than he chose, at this time, to acknowledge, and refers to his translation of one difficult passage ("Ye take your pleasure under the oven and under the shea tree, the children beaying slaine in the valley," Is. liv. 5) as proving an attempt to base the judgment against the authority of Luther and the Vulgate (Hist. and Crit. Orig. p. 52).

f If thou [the reader] be set on priest in prayer, God shall not only send thee there (the Bible in a better
He states frankly that he had done his work with the assistance of that and of five others. a If the language of his dedication to the king, whom he compares to Moses, David, and Josiah, seems to be somewhat fulsome in its flattery, it is, at least, hardly more offensive than that of the dedication of the A. V., and there was more to pollute it.

(3.) An inspection of Coverdale's version serves to show the influence of the author, to whom he followed. b The proper names of the O. T. appear for the most part in their Latin form, Elias, Eli-eus, Ochozias; sometimes, as in Esay and Jeremiy, in that which was familiar in spoken English. Some points of correspondence with Luther's version are not without interest. Thus "Cush," which in Wyclifle, Tyndal, and the A. V. is uniformly rendered "Ethiopia," is in Coverdale "Moria's land" (Ps. lix. 31; Acts v. 27, &c.), after the "Mauri-landie" of Luther, and appears in this form accordingly in the P. B. [Prayer Book] version of the Psalms. The proper name Kablashkei passes, as in Luther, into the "chief butler" (2 K. xvii. 17; Ps. xxxvi. 11). In making the sons of David "priests," (2 Sam. viii. 18), he followed both his authorities, "the Levites," as hissues in Acts xx. 28 ("overseers" in A. V.), "Shiloh," in the prophecy of Gen. xlix. 10, becomes "the worthy," after Luther's "der Held." "They hang'd oxe" takes the place of "they digg'd down a wall," in Gen. xlix. 6. The singular word "Lamín" is taken from the Vulg., as the English rendering of Zep. ("wild beasts," A. V.) in Is. xxxiv. 14. The "tabernacle of witness," where the A. V. has "congregation," shows the same influence. In spite of Tyndal, the Vulg. "plena gratia," in Luke i. 28, leads to "full of grace;" while we have, on the other hand, "congregation" throughout the N. T. for ecclesia, and "love" instead of "charity" in 1 Cor. xiii. It was the result of the same indelicacy that his language as to the Apocalypse lacks the sharpness of that of the more zealous reformers. "Kirch" is placed with the canonical books, after "Lamentations." Of the rest he says that they are "placed aport," as "not held by ecclesiastical doctors in the same repute" as the other Scriptures, but this is only because there are "dark sayings" which seem to differ from the Open Scripture. He has no wish that they should be "despised or little set by." "Patience and study would show that the two were agreed." (4.) What has been stated practically disposes of the claim which has sometimes been made for this version of Coverdale's, as though it had been made from the original text. (Anderson, i. 364; Whitaker, Hist. and Crit. Enquiry, p. 88). It is not improbable, however, that as time went on he added to his knowledge. The letter addressed by him to Cossowell (Remains, p. 492, Parker Soc.) obviously asserts, somewhat ostentatiously, an acquaintance "not only with the standard text of the Hebrew, with the interpretation of the Chaldee and the Greek," but also with "the diversity of reading of all texts." He, at any rate, continued his work as a painstaking editor. Fresh editions of his Bible were published, keeping their ground in spite of rivals, in 1557, 1559, 1553. He was called in a still shorter period to assist in the Geneva version. Among smaller facts connected with his edition may be mentioned the appearance of Hebrew letters — of the name Jehovah — in the title-page (7377), and again in the margin of the alphabetical poetry of Lamentations, though not of Ps. cxix.

V. MATTHEW. — (1.) In the year 1537, a large folio Bible appeared as edited and dedicated to the king, by Thomas Matthew. No one of that name appears at all prominently in the religious history of Henry VIII., and this suggests the inference that the name was pseudonymous, adopted to conceal the real translator. The tradition which connects this Matthew with John Rogers, the proto-martyr of the Marian persecution, is all but undisputed. It rests (1) on the language of the indictment and sentence which describe him (Foxe, Acts and Monuments, pp. 1029, 1563; Chester, Life of Rogers, pp. 418-423) as "James Rogers alias Matthew, as if it were a matter of notoriety; (2) the testimony of Foxe himself, as representing, if not personal knowledge, the current belief of his time; (3) the occurrence, at the close of a short exhortation to the Study of Scripture in the Preface, of the initials J. R. = (4) internal evidence. This subdivides itself. (a.) Rogers, who had graduated at Pembroke Coll. Cambridge in 1525, and had sufficient fame to be invited to the new Cardinal's College at Oxford, accepted the office of chaplain to the mercantile adventurers of Antwerp, and there became acquainted with Tyndal, two years before the latter's death. Matthew's Bible, as might be expected, if this hypothesis were true, reproduces Tyndal's work, in the N. T. entirely, in the O. T. as far as 2 Ch. The rest being taken with occasional modifications from Coverdale. (b.) The language of the dedication is that of one who has mixed much, as yes, and clean to reject it, if your godly wisdom shall think necessary. c

b Gaisburg (App. to Crotech) has shown that, with regard to use here at least of the O. T., Coverdale followed the German-Swiss version printed at Zurich in 1531, with an almost servile obliviousness.

c A careful reprint, though not a fac-simile, of Coverdale's version has been published by Egert (1838).

c These ornamental initials are curiously selected H. R. for the king's name, W. T. (at the end of the O. T.) for William Tyndal, K. G. for Richard Graftor or writer.
Roger mixed, with foreign reformers. *This hope have the godlie even in strange countries, in your grace's goodwill.*

(2.) The printing of the book was begun apparently abroad, and was carried on as far as the end of Isaiah. At that point a new pagination begins, and the names of the London printers, Grafton and Whitechurch, appear. The history of the book was probably something like this: Coverdale's translation had not given satisfaction—least of all were the non-Renaissants and scholar-like reformers contented with it. As the only complete English Bible, it was, however, as yet, in possession of the field. Tyndal and Rogers, therefore, in the year preceding the unimprovement of the former, determined on another, to include O. T., N. T., and Apocrypha, but based throughout on the original. Left to himself, Rogers carried on the work, probably at the expense of the same Antwerp merchant who had assisted Tyndall (Poyntz), and thus got as far as Isaiah. The enterprising London printers, Grafton and Whitechurch, then came in (Chester, Life of Rogers, p. 24). It would be a good speculation to enter the market with this, and so drive out Coverdale's, in which they had no interest. This policy was so magnificently backed up with a capital of £500, and then come a stroke of policy which may be described as a miracle of audacity. Rogers's name, known as the friend of Tyndal, is suppressed, and the simulacrum of Thomas Matthew disarms suspicion. The book is sent by Grafton to Cranmer. He reads, approves, reprobates. He would rather have the news of its being issued than a thousand pounds (Chester, pp. 42, 27). The application is then made both by Grafton and Cranmer to Cromwell. The king's license is granted, but the publisher wants more. Nothing less than a monopoly for five years will give him a fair margin of profit. Without this, he is sure to be undersold by pirated, inaccurate editions, badly printed, on inferior paper. Failing this, he trusts that the king will order one cope to be bought by every incumbent, and six by every aby. If this was too much, the king might, at least, impose that obligation on all the popishly-inclined clergy. That will bring in something, besides the good it may possibly do them (Chester, p. 430). The application was, to some extent, successful. A copy was ordered for the parish church, which cost being divided between the clergy and the parishioners. This was, therefore, the first Authorized Version. It is scarcely conceivable, however, that Henry could have read the book which he thus sanctioned, or known that it was substantially identical with what had been publicly stigmatized in his Acts of Parliament (or *supersedeas*). What had before given most offense had been the peevish character of Tyndall's annotations, and here were notes bolder and more thorough still. Even the significant W. T. does not appear to have attracted notice.

(3.) What has been said of Tyndall's version applies, of course, to this. There are, however, signs of a more advanced knowledge of Hebrew. All the technical words connected with the Psalms, Negmion, Shuggion, Semithm, etc., are elaborately explained. Ps. ii. is printed as a dialogue. The names of the Hebrew letters are prefixed to the verses of Lamentations. Reference is made to the Chaldee Paraphrase (Job vi.), to Rabbb Abraham (Job xix.), to Kimchi (Ps. iii.). A like range of knowledge is shown in the N. T. Strabo is quoted to show that the Magi were not kings, Macrobius as testifying to Hendec's fealty (Matt. ii.). Erasmus's Paraphrase on Matt. xiii., xiv. The popular identification of Mary Magdalene with *the woman that was a sinner* is discussed, and rejected (Luke x.). More noticeable even than in Tyndall is the boldness and fulness of the exegetical notes scattered throughout the book. Strong and earnest in asserting what he looked on as the central truths of the Gospel, there was in Rogers a Luther-like freedom in other things which has not appeared again in any authorized translation or popular commentary. He guards his readers against looking on the narrative of Job i. as literally true. He recognizes a definite historical starting-point for Ps. xlv. ("The sons of Korah praise Solomon for the beauty, eloquence, power, and nobleness, both of himself (and of his wife)"). Ps. liii. (David declareth Christ's dejection . . . . . and all, under figure of himself"), and the Song of Solomon ("Solomon made this balsade for himself and his wife, the daughter of Pharaoh, under the shadow of himself, figuring Christ," etc.). The chief duty of the Sibyls is to "verify the books of the Word to simple souls," to "purify over the weariness of soul", and to "purify over the hardness of the soul" to "the woman." When such occasions come as turn our race to occupation and labor, then ought we to remember that the Sibyl was made for man, and not man for the Sibyl" (Jer. xxvii.). He sees in the Prophecies of the N. T. simply *exponents of Holy Scripture* (Acts xv). To the man living in faith, Peter's fishing after the resurrection, and all deeds of notoriety, "are of no more importance;" to those who learn, "learning, doctrine, contemplation of high things, preaching, study of Scripture, founding of churches and abbeys, are works of the flesh" (Pref. to Romans). *Neither is outward circumcision or outward baptism worth a pin of themselves, save that they put us in remembrance to keep the commandments* (1 Cor. vii.). "He that doeth honor, grapple after these . . . . . castles, parks, lordships . . . . . desireth not a work, much less a good work, and is nothing less than a bishop" (1 Tim. iii.). Ex. xxiv. is said to be "against bishops and curates that despise the flock of Christ." The Ἀγγελος εὐαγγελιας of Rev. ii. and iii. appears (as in Tyndall) as "the messenger of the congregation." The study of the Psalms, and the Psalms as a prayer book are found in notes to Ex. xviii. and I Cor. iii., and in the "Table of Principal Matters" it is significantly stated under the word Purgatory that "it is not in the Bible, but the purgation and remission of our sins is made us by the abundant mercy of God." The preface to the Apocrypha explains the name, and distinctly asserts the inferiority of the books. No notes are added, and the translation is taken from Coverdale, as if it had not been worth while to give much labor to it.

(4.) A few points of detail remain to be noticed. In the order of the books of the N. T. Rogers follows Tyndall, agreeing with the A. V. as far as the Epistle to Philemon. This is followed by the Epistles of St. John, then the Hebrews, then those of St. Peter, St. James, and St. Jude. Woodcuts, not very freely introduced elsewhere, are prefixed to every chapter in the Revelation. The introduction of the "Table" mentioned above

a The long preface to the Romans{seven folio pages} was substantially identical with that in Tyndall's edition of 1534.
gives Rogers a claim to be the Patriarch of Con-
vernaces, the "father" of all such as write in
dictionaries of the Bible. Reversion for the He-
brew text is shown by his striking out the three
verses which the Vulgate has added to Ps. xiv. In
a later edition, published at Paris, not by Rogers
himself, but by Grafton, under Coverdale'ssuperin-
tendence, in 1539, the obsessions prologue and
preface were suppressed, and the notes system-
ically expungated and tossed down. The book was
in advance of the age. Neither book-sellers nor
bishops were prepared to be responsible for it.
VI. TAVERNER (1539).—(1) The boldness of the
pseudo-Matthew had, as has been said, fright-
ened the ecclesiastical world from its propriety.
Coverdale's version was, however, too inaccurate to
keep its ground. It was necessary to find another
editor, and the printers applied to Richard Taver-
ner. But little is known of his life. The fact that,
though a layman, he had been chosen as one of the
canons of the Cardinal's College at Oxford indicates
a reputation for scholarship, and this is confirmed
by the character of his translation. It proceeds,
in the title-page, to be "newly recognized, with
great diligence, after the most faithful examples." The
editor acknowledges "the labors of others" (i. e.
Tyndal, Coverdale, and Matthew, though he does
not name them) who have neither indifferently nor
unlearnedly travelled," owns that the work is not
one which can be done "absolutely" (i. e. com-
pletely) by one or two persons, but requires "a
deeper conferring of many learned wits together,
and also a juster time, and longer leisure;" but the
thing had to be done; he had been asked to do it.
He had "used his talent" as he could.
(2) In most respects this may be described as
an expurgated edition of Matthew's. There is a
Table of Principal Matters, and there are notes;
but the notes are brief, and less polemical. The
passages quoted above are, e. g. omitted wholly or
in part. The epistles follow the same order as
before.
VII. CRANMER.—(1) In the same year as
Taverne's, and coming from the same press, ap-
peared an English Bible, in a more stately folio,
printed with a more costly type, bearing a higher
name than any previous edition. The title-page is
an elaborate engraving, the spirit and power of
which indicate the hand of Holbein. The king,
seated on his throne, is giving the Verbum Dei to
the bishops and doctors, and they distribute it to
the people, while doctors and people are all joining
in cries of "Victor Rex." It declares the book to be
"truly translated after the verity of the Hebrew
and Greek texts" by "divers excellent learned
men, expert in the foretell tongues." A preface,
in April, 1540, with the initials T. C., implies the
archbishop's sanction. In a later edition (Nov.
1540), his name appears on the title-page, and the
names of his conjoiners are given, Cuthbert (Tomo-
stal) Bishop of Durham, and Nicholas (Heath) Ba-
bish of Rochester; but this does not exclude the
possibility of others having been employed for the
first edition.
and the most were his version presents, as might be
expected, many points of interest. The prologue
gives a more complete idea of what a translation
ought to be than we have as yet seen. Words not
in the original are to be printed in a different type.
They are added, even when "not wanted by the
sense," to satisfy those who have "missed them" in
previous translations, i. e. they represent the
various readings of the Vulgate where it differs
from the Hebrew. The sign * indicates diversity
in the Chaldee and Hebrew. It had been intended
to give all these, but it was found that this would
have taken too much time and space, and the ed-
itors purposed therefore to print them in a little
volume by themselves. The frequent hands (\(\text{\textcopyright}^2\))
in the margins, in this manner, show an ab-
tention to give notes at the end; but Matthew's Bible
had made men cautious, and, as there had not been
time for the king's Council to settle them, they
were omitted, and no help given to the reader le-
and the marginal references. In absence of notes,
the lay-reader is to submit himself to the "godly-
learned in Christ Jesus." There is, as the title-
page might lead us to expect, a greater display of
Hebrew than in any previous version. The books
of the Pentateuch have their Hebrew names given,
Bereshith (Genesis), Velle Schemouth (Exodus),
and so on. 1 and 2 Chr. in like manner appear, as
Dove Hevaim. In the edition of 1541, many
proper names in the O. T. appear in the fuller He-
brew form, e. g. Amaziah, Jeremiah. In spite
of this parade of learning, however, the edition of
1540 contains many slips, and, though it may not
be the most startling blunder that ever appeared
under the sanction of an arch-
bishop's name. The editors adopted the preface
which, in Matthew's Bible, had been prefixed to
the Apocrypha. In that preface the common tra-
ditional explanation of the name was concisely
given. They appear, however, to have shrank from
offending the conservative party in the Church by
applying to the books in question so domastic an
epithet as Apocrypha. They looked out for a word
more neutral and respectful, and found one that
appeared in some MSS. of Jerome so applied,
though in strictness it belonged to an entirely dif-
ferent set of books. They accordingly substituted
that word, leaving the preface in all other respects
as it was before, and the result is the somewhat
furious statement that the "books were called
\(\text{\textcopyright}^2\)ögigraphy," because "they were read in secret
and apart."!
(3) A later edition in 1541 presents a few modi-
fications worth noticing. It appears as "au-
thorized" to be "used and frequented" in "every
church in the kingdom." The introduction, with
all its elaborate promise of a future perfection dis-
appears without a mark. The king's preface by
Cranmer, avoiding as much as possible all refer-
cences to other translations, taking a safe Via Medica tone, blaming those who "refuse to read," on the
one hand, and "inordinate reading," on the other.
This neutral character, so characteristic of Crun-
mer's policy, was doubtless that which enabled it
to keep its ground during the changing moods of
Henry's later years. It was reprinted again and
again, and was the Authorized Version of the
English Church till 1568—the interval of Mary's
regime excepted. From it, accordingly, were taken
most, if not all, the portions of Scripture in the
Prayer Books of 1549 and 1552. The Psalms, as
a whole, the quotations from Scripture in the Hou-
lyes, the sentences in the Common Services
and some phrases of Scripture, "still preserve the
resemblance of it. The oscillating character of the
book is shown in the use of "love" instead of
charity" in 1 Cor. xiii.; and "congregation" instead of "church" generally, after Tyndal; while in 1 Tim. iv. 14, we have the singular rendering

\[w \text{ Such, e. g. as "worthy fruits of penance."} \]
as it to gain the favor of his opponents, a with authority of priesthood. The plan of indicating doubtful texts by a smaller type was adhered to, and was applied, among other passages, to Ps. xiv. 7, 6, 2, & the more memorable text of 1 John v. 7. The translation of 1 Tim. iii. 14, a All Scripture given by inspiration of God, is profitable, etc. anticipated a construction of that text which has sometimes been boasted of, and sometimes attacked, as an innovation. In this, however, Tyndal had led the way.

VIII. Geneva. — (1.) The experimental translation of the Gospel of St. Matthew by Sir John Cheke, and another English than before (Smyth, Life of Cheke, vii. 3), had so little influence on the versions that followed that it hardly calls for more than a passing notice, as showing that scholars were as yet unsatisfied. The reaction under Mary gave a check to the whole work, as far as England was concerned; but the exiles who fled to Geneva entered on it with more vigor than ever. Cranmer's version did not come up to their ideal. Its size made it too costly. There were no explanatory or dogmatic notes. It followed Coverdale too closely; and where it deviated, did so, in some instances, in a retrograde direction. The Genevan refugees — among them Whittingham, Goeppner, Pal driv, Sampson, and Coverdale himself — believed "for God's sake, day and night," that they entered on their "great and wonderful work" with much fear and trembling. Their translation of the N. T. was "diligently revised by the most approved Greek examples" (MSS. or editions?) (Preface). The N. T. translated by Whittingham, was printed by Conrad Badius in 1557, the whole Bible in 1560. (2.) Whatever may have been its faults, the Geneva Bible was unquestionably, for sixty years, the most popular of all versions. Largely printed in the early years of Elizabeth, it was printed in England in 1561, and a patent of monopoly given to James Bodleigh. This was translated, in 1576, to Parker, in whose family the right of printing that version was kept. Not less than eighty editions, some of the whole Bible, were printed between 1558 and 1611. It kept its ground for some time even against the A. V., and gave way, as it were, slowly and under protest. The causes of this general acceptance are not difficult to ascertain. The volume was, in all its editions, cheaper and more portable — a small quarto, instead of the large folio of Cranmer's "Great Bible." It was the first Bible which laid aside the obsolete black letter, and appeared in Roman type. It was the first which, following the Hebrew example, recognized the division into verses, so dear to the preachers or hearers of sermons. It was accompanied, in most of the editions after 1578, by a Bible Dictionary of considerable merit. The notes were often really helpful in dealing with the difficulties of Scripture, and were looked on as spiritual and evangelical. It was accordingly the version specially adopted by the great Puritan party through the whole reign of Elizabeth, and far into that of James. As might be expected, it was based on Tyndal's version, often returning to it where the intermediate renderings had had the character of a compromise.

(3.) Some peculiarities are worthy of special notice: (1.) It professes a desire to restore the "true writing" of many Hebrew names, and we meet accordingly with forms like Elkan (Isaac), Jasher, and the like. (2.) It omits the name of St. Paul from the title of the Epistle to the Hebrews; and, in a short preface, leaves the authorship an open question. (5.) It avows the principle of putting all words in italics in the original in Italics. (4.) It presents, in a calendar prefixed to the Bible, something like a declaration of war against the established order of the Church's lessons, commemorating Scripture facts, and the deaths of the great Reformers, but ignoring saints' days altogether. (5.) It was the first English Bible which entirely omitted the Apocrypha. (6.) The notes were characteristically Swiss, not only in their theology, but in their politics. They made allowance to kings depending upon the soundness of their faith, and in one instance (note on 2 Chr. xv. 16) at least seemed, to the early started James I., to favor tyrannicide. b

(4.) The circumstances of the early introduction of the Geneva version are worth mentioning. If only as showing in how different a spirit the great fathers of the English Reformation, the most conservative of Anglican theologians, acted from that which has too often animated their successors. Men talk now of different translations and various readings, as likely to undermine the faith of the people. When application was made to Archbishop Parker, in 1565, to support Bodleigh's application for a license to reprint the Geneva version in 12mo, he wrote to Cecil in its favor. He was at the time looking forward to the work he afterwards accomplished, of "one other special Bible for the churches, to be set forth as convenient time and leisure should permit; but in the mean time it is to be hoped that the bishops, and other preachers, may have diversity of translations and readings" (Strype, Life of Parker, iii. 6). "In many of the later reprints of this edition the N. T. purports to be based upon Beza's Latin version; and the notes are said to be taken from [Beza,] Janc. Camerarius, P. Lesler Villerus, and Fr. Juminus."

IX. The Bishops' Bible. — (1.) The facts just stated will account for the wish of Archbishop Parker, in spite of his liberal tolerance, to bring out another version which might establish its claims against that of Geneva. Great preparations were made. The correspondence of Parker with his suffragens presents some points of interest, as showing how little agreement there was as to the true theory of a translation. Thus while Sandys, Bishop of Worcester, finds fault with the "common translation" (Geneva), as "following Munster too much," and so "swerving much from the Hebrew," Guest, Bishop of St. David's, who took

a * Between 1558 and 1541, according to the Quatr. Rev., for April, 1570, about 150 editions were published of the Bible or parts thereof. It has been observed that in the Simplicius Poclit Eilte, published in 1518 for the use of Cromwell's army, nearly all the selections of Scripture were taken from the Geneva version. See the reprint by George Livemore, Cambridge, 1894, p. vi. A.

b The note "Herein he showed that he lacked zeal, for she ought to have died," was probably one which Scott advised and handled in connection with the name of James's mother.
the Psalms, acted on the principle of translating them so as to agree with the N. T. quotations, for the avoiding of offense;" and Cox, Bishop of Ely, while laying down the sensible rule that "inborn terms were to be avoided," also went on to add "that the usual terms were to be retained so far forth as the Hebrew will well bear" (Strype, Parker, iii. 6). The principle of pious fraud, of distorting the truth for the sake of edification, has perhaps often been acted on by other translators. It has not often been so explicitly avowed as in the first of these suggestions.

(2) The bishops thus consulted, eight in number, together with some deans and professors, brought out the fruit of their labors in a magnificent folio (1568 and 1572). Everything had been done to make it attractive. A long erudite præface vindicated the right of the people to read the Scriptures, and (quoting the authority of Bishop Fisher) admitted the position which later divines have often been slow to admit that "there be yet in the Gospel many dark places which, without all doubt, to the posterity shall be made much more open." Words of encomium of a much higher character than those of the Geneva Bible were scattered profusely, especially in Genesis. Three portraits of the Queen, the Earl of Leicester, and Lord Burleigh, beautiful specimens of copperplate engraving, appeared on the title-pages of the several parts. A map of Palestine was given, with degrees of latitude and longitude, in the edition of 1572. A most elaborate series of genealogical tables, prepared by Hugh Broughton, the great Rabbi of the age (of whom more hereafter), but ostensibly by Speed the antiquary (Broughton's name being in disdain with the bishops), was prefixed (Strype, Parker, iv. 20; Lightfoot, Life of Broughton). In some points it followed previous translations, and was arranged based on Cranmer's. "A new edition was necessary."

"This had led some well-disposed men to recognize it again, not as condemning the former translation, which has been followed mostly of any other translation, excepting the original text." (Pref. of 1572). Cranmer's preface was reprinted. The Geneva division into verses was adopted throughout.

With some peculiarities, however, appear for the first and last time. (1) The books of the Bible are classified as legal, historical, sapiential, and prophetic. This was easy enough for the O. T., but the application of the same idea to the N. T. produced some rather curious combinations. The Gospels, the Catholic Epistles, and these to Titus, Philemon, and the Hebrews, are grouped together as legal. St. Paul's other epistles as sapiential; the Acts appear as the one historical, the Revelation as the one prophetic book. (2) It is the only Bible in which many passages, sometimes nearly a whole chapter, have been marked for the express purpose of being omitted when the chapters were read in the public service of the Church. (3) One edition contained the older version of the Psalms from Matthew's Bible, in parallel columns with that now issued, one true and practical acknowledgment of the benefit of a diversity of translations. (4) The initials of the translators were attached to the books which they had severally undertaken. The work was done on the plan of limited, not joint liability. (5) Here as in the Geneva, there is the attempt to give the Hebrew proper names more accurately, as, e. g., in Heva, Isbae, Uzqahaf, etc. (4) Of all the English versions, the Bishops' Bible had probably the least success. It did not command the respect of scholars, and its size and cost were far from meeting the wants of the people. Its circulation appears to have been practically limited to the churches which were ordered to be supplied with it. It had however, at any rate, the right to boast of some good Hebrew scholars among the translators. One of them, Bishop Alley, had written a Hebrew Grammar; and though vehemently attacked by Broughton (Townley, Literary History of the Bible, iii. 190), it was defended as vigorously by Fulke, and, together with the A. V. received from condolence the praise of being the best translation in the world" ("Table Talk," Works, ii. 1690).

X. RHEIMS AND DORAY. — (1) The successive changes in the Protestant versions of the Scriptures were, as might be expected, matter of triumph to the controversialists of the Latin Church. Some saw in it an argument against any translation of Scripture into the spoken language of the people. Others pointed desirably to the want of many which these changes displayed. There were some, however, who took the line which Sir T. More and Gardiner had taken under Henry VIII. They did not object to the principle of an English translation. They only charged all the versions hitherto made with being false, corrupt, heretical. To this there was the ready retort, that they had done nothing; that their bishops in the reign of Henry had promised, but had not performed. It was left to be necessary that they should take some steps which might enable them to turn the edge of this reproach, and the English refugees who were settled at Rheims — Martin, Allen (afterwards cardinal), and Districk — undertook the work. Gregory Martin, who had graduated at Cambridge, had in his own attack on the existing English versions, and had been answered in an elaborate treatise by Fulke, Master of Catherine Hall, Cambridge (A Defence of the Sincere and True Translation, etc.). The charges are mostly of the same kind as those brought by Sir T. More against Tymal. "The old time-honored words were discarded. The authority of the i.XX. and Vulgate was set at nought when the translator's view of the meaning of the Hebrew and Greek differed from what he found in them." The new model translation was to avoid these faults. It was to command the respect at once of priests and people. After an incubation of some years it was published at Rheims in 1582. Though Martin was competent to translate from the Greek, it professed to be based on "the authentic text of the Vulgate."
Notes were added, as strongly dogmatic as those of the Geneva Bible, and often keenly controversial. The work of translation was completed somewhat later by the publication of the O. T. at Darmay in 1609. The language was precisely what might have been expected from men who adopted Vanini's ideas; and a translation ought to be. At every page we stumble on "strange unk-nown words," which never had been English, and never could be, such, e. g., as "the Pasche and the Azymes" (Mark xvi. 1), "the arch-syngonne" (Mark v. 35), "in prepare" (Rom. iv. 9), "ol deutwith the fallacie of sin" (Heb. iii. 13), "a greater note" (Heb. xi. 4), "this is the annustation" (1 John v. 5), "pre-ordinate" (Acts xii. 48), "the justificatons of our Lord" (Luke i. 6), "what is to me and thee" (John ii. 6), "long-simnity" (Rom. ii. 4), "purge the old heavn that you may be a new paste, as you are azymes" (I Cor. iv. 7), "you are evacuated from Christ" (Gal. v. 4), and so on.

For a style such as this had, as might be expected, but few admirers. Among those few, however, we find one great name. Bacon, who leaves the great work of the reign of James unnoticed, and quotes almost uniformly from the Vulgate, goes out of his way to praise the Rheims version for having restored "charity" to the place from which Tyndal had expelil it, in I Cor. xii. (cf. the Pecification of the Church).

XI. AUTHORIZED VERSION. — (1) The position of the English Church in relation to the versions in use at the commencement of the reign of James was hardly satisfactory. The Bishops' Bible was sanctioned by authority. That of Geneva had the strongest hold on the affections of the people. Scholars, Heiner scholars in particular, found grave fault with both. Hugh Broughton, who spoke Hebrew as if it had been his mother-tongue, denounced the former as being full of "traps and pitfalls," "overthrowing all religion," and proposed a new revision to be effected by an English Septuagint (72), with power to consult gardeners, artists, and the like, about the words connected with their several calling and bound to submit their work to "one qualified for difficulties." This ultimate referee was, of course, to be himself (Styffe, Whityg, i. 19, 23). Unhappily, neither his temper nor his manners were such as to win favor for this suggestion. Whiglif disliked him, worried him, drove him into exile. His feeling was, however, shared by others; and among the demands of the Puritan representatives at the Hampton Court Conference in 1604 (Ps. Reinoolds being the spokesman), was one for a new, or, at least, a revised translation. The special objections which they urged were neither numerous (three passages only —Ps. cv. 28, cvi. 30, Gal. iv. 23, were referred to) nor important, and we must conclude either that this part of their case had not been carefully got up, or that the bullying to which they were exposed had had the desired effect of throwing them into some confusion.

The bishops treated the difficulties which they did raise with supercilious scorn. They were "trivial, old, and often answereable." However, the alarm which a timid Convenion has so often raised since, "If every man's humor were to be followed, there would be no end of translating." (Cardwell, Conference, p. 188). Cramer's words seemed likely to be fulfilled again. Had it been left to the bishops, we might have waited for the A. V. till the day after doomsday. Even when the work was done, and the translators acknowledged that the Hampton Court Conference had been the starting-point of it, they could not resist the temptation of a dig at their opponents. The objections to the Bishops' Bible had, they said, been nothing more than a shift to justify the refusal of the Puritans to subscribe to the O. T. (Reformation Society, 4th Ed.)

But the king was not forgetful of what he thought likely to be the glory of his reign. The work of organizing and superintending the arrangements for a new translation was one specially confided to him, and in 1606 the task was accordingly commenced. The selection of the fifty-four scholars to whom it was entrusted, seems, on the whole, to have been a wise and fair one. Andrews Starke, Overall, Montague, and Barlow, represented the "higher" party in the Church; Bishops, Chalderton, and Lively that of the Puritans; Scholarship unconnected with party was represented by Henry Savile and John Boys. One name is indeed conspicuous by its absence. The greatest Hebrew scholar of the age, the man who had, in a letter to Cecil (1595), urged this very plan of a joint translation, who had already translated several books of the O. T. (Job, Ecclesiastes, Daniel, Lamentations) was ignominiously excluded. This may have been, in part, owing to the dislike with which Whitgift and Bancroft had all along regarded him. But in part, also, it was owing to Broughton's own character. An unmanageable temper showing itself in violent language, and the habit of stigmatizing those who differed from him, even on such questions as those connected with names and dates, as heretical and atheistic, must have made him thoroughly impracticable; one of the men whose presence throws a committee or Conference into chaos.

* Even Roman Catholic divines have felt the super-
utility of the A. V., and Chilhonor, in his editions of the N. T. in 1578, and the Bible, 1576, often follows it in preference to the Bishops and Darmay transla-
* a

d Onlty forty-seven names appear in the king's list of translators, Reform. Records.

* Only forty-seven names appear in the king's list of translators, Reform. Records. Seven may have died, or recanted, or any other reason, and have been excluded. It is, however, likely that there should be a full Committee of Revision. A full list is given by Fuller (Ch. Hist. xvi.) and reproduced, with biographical particulars, by Todd and Anderson.

* This side was, however, weakened by the death of Bishops and Lively during the progress of the work. The loss of the latter, Hebrew professor at Cambridge for thirty years, was every way deplorable.

* It deserves notice that Broughton is the only English translator who has adopted the Everett as the equivalent for Jehovah, as in the French version. To him also perhaps, more than to any other divine, we owe the true interpretation of the Ps.-sent unto Heli.
(3.) What reward other than that of their own consciences and the judgment of posterity were the men thus chosen to expect for their long and laborious task? The King was not disposed to pay them out of his state revenue. Gold and silver were not always plentiful in the household of the English Solomon, and from him they received nothing (Heywood, State of Auth. Bibl. Revision). There remained, however, an ingenious form of liberality, which had the merit of being inexpensive. A king’s letter was sent to the archbishops and bishops, to be transmitted by them to their clergymen, commending all the translators to their favorable regard. They were exhorted to contribute in all 1,000 marks, and the king was to be informed of each man’s liberality. If any living in their gift, or in the gift of private persons, became vacant, the king was to be informed of it, that he might nominate some of the translators to the vacant preferment. Deeds of colleges, in like manner, were enjoined to give free hand and lodging to such divines as were summoned from the country to labor in the great work (Strype, Whitgift, iv.). That the king might take his place as the director of the whole, a copy of fifteen instructions was sent to each translator, and apparently circulated freely in both Universities.

(4.) The instructions thus given will be found in a folio volume, in Latin prose, inserted in the Burrell (Reform. Records). It will not be necessary to give them here in full; but it will be interesting to note the bearing of each clause upon the work in hand, and its relation to previous versions.

(1.) The Bishops’ Bible was to be followed, and as little alter’d as the original will permit. This was intended probably to quiet the alarm of those who saw, in the proposal of a new version, a condemnation of that already existing. (2.) The names of prophets and others were to be retained, as nearly as may be, as they are vulgarly used. This was to guard against forms like Ezekiel, Jeremias, etc., which had been introduced in some versions, and which some Hebrew scholars were willing to introduce more consciously. To it we owe probably the Heb. for the Greek, Osea, Hosea, in the N. T. (3.) The old ecclesiastical words to be kept, as the word Church not to be translated Congregation. The rule was apparently given for the sake of this special application. “Charity,” in 1 Cor. xiii. was probably also been to it. The earlier versions, it will be remembered, had gone on the opposite principle. (4.) When any word hath divers significations, that to be kept which had been most commonly, and by the most eminent fathers, being agreeable to the propriety of the place and the analogy of faith. This, like the former, tends to confound the functions of the preacher and the translator, and substitutes ecclesiastical tradition for philological accuracy. (5.) The division of the chapters to be altered either not at all, or as little as possible. Here, again, convenience was more in view than truth and accuracy, and the result is that divisions are perpetuated which are manifestly arbitrary and misleading. (6.) No marginal notes to be affixed but only for the explanation of Hebrew and Greek words. This was obviously directed against the Genesis notes, as the special objects of the king’s aversion. Practically, however, in whatever it originated, we may be thankful that the A. V. came out as it did, without note or comment. Theoriginal Bible was placed in the hands of all readers. The work of interpretation was left free. Had an opposite course been adopted, we might have had the tremendous evil of a whole body of exegesis imposed upon the Church by authority, reflecting the Calvinism of the Synod of Dort, the absolutism of James, the high-flying spirit of Pepys. (7.) Such quotations of places to be marginally set out may be the reference of one Scripture to another. The principle that Scripture is its own best interpreter was thus recognized, but practically the marginal references of the A. V. of 1611 were somewhat scanty, most of those now printed having been added in later editions. (8 and 9.) State plan of translation. Each company of translators is to take its own book; each person to bring his own corrections. The company to discuss them, and having finished their work, to send it on to another company, and so on. (10.) Provides for differences of opinion between two companies by referring them to a general meeting. (11.) Gives power, in cases of difficulty, to consult any scholar. (12.) Invites suggestions from the work-quaerter. (13.) May serve for the directors of the work: Andrews, Dean of Westminster; Bardow, Dean of Chester; and the Regius Professors of Hebrew and Greek at both Universities. (14.) Names translations to be followed when they agree more with the original than the Bishops’ Bible, e. g. Tyndal’s, Coverdale’s, Matthew’s, Whitchurch’s (Cammer’s), and Geneva. (15.) Authorizes Universities to appoint three or four overseers of the work.

(5.) It is not known that any of the correspondence connected with this work, or any minute of the meetings for conference is still extant. Nothing is more striking than the silence with which the version that was to be the inheritance of the English people for at least two centuries and a half was ushered in. This is the more surprising, as the glimpses of scholars coming from their country livings to their old college haunts to work diligently at the task assigned them (Pock, Desiderata Chronic., ii. 87). We see the meetings of translators, one man reading the chapter which he has been at work on, while the others listen, with the original, or Latin, or German, or Italian, or Spanish versions in their hands (Selden, Table Talk). We may represent to ourselves the differences of opinion, settled by the casting vote of the “old man,” or by the strong overbearing temper of a man like Bancroft, the minority conforming themselves with the thought that it was no new thing for the truth to be outvoted (Gell, Essay towards Amendment of Lost Eng. Transl. of Bible, p. 231). Dogmatic interests were in some cases allowed to bias the translation, and the Calvinism of one party, the prelatic views of another, were both represented at the expense of accuracy (Gell, L. c.).

(6.) For three years the work went on, the separa-
rate companies comparing notes as directed. When
the work drew towards its completion it was neces-
sary to place it under the care of a select few.
Two from each of the three groups were accordingly
selected, and the six met in London, to superintend
the publication. Now, for the first time, we find
among Puritan translators that the shadowy promise
held out in the king’s letter, of a share in the
1,000 marks which Pears and Chapters would
not contribute. The matter had now reached its
business stage, and the Company of Stationers
thought it expedient to give the six editors thirty
pounds each, in weekly payments, for their nine
months’ labor. The final correction, and the task
of writing the arguments of the several books, was
given to Bishop, Bishop of Winchester, and Dr.
Miles Smith, the latter of whom also wrote the
Dedication and the Preamble. Of these two docu-
ments the first is unexpectedly familiar enough to
us, and is chiefly conspicuous for its service adula-
tion. James I. is “that sanctified person,” con-
ened with “magnificent extraordinary graces,”
that had appeared “as the sun in his strength.”
To him they appeal against the judgment of those
whom they describe, in somewhat profound accents,
as “Popish persons or self-conceited brethren.”
The Preamble to the Reader is more interesting, as
throwing light upon the principles on which the
translators acted. They “never thought that
they should need to make a new translation, nor yet
to make of a bad one a good one.” “Their
endeavor was to make a good one better, or out of
many good ones one principal good one.” They
claim credit for steering a middle course between
the Puritans who “left the old ecclesiastical words,
and the obscurity of the Papists—retaining foreign
words of purpose to darken the sense. They
vindi-
dicate the practice, in which they indulge, of
translating one word in the original by many
English words, partly on the intelligible ground
that it is not always possible to find one word that
will express all the meanings of the Greek or He-
brew, partly on the somewhat childish plea that it
would be unfair to choose some words for the high
honor of being the channels of God’s truth, and to
pass over others, with the stigma of being the
words of the devil’s Fireside. (Ibid.)
(7.) The version thus published did not all at
once supersede those already in use. The fact
that five editions were published in three years,
shows that there was a good demand. But the
Bishops’ Bible probably remained in many churches
(Andrews takes his texts from it in preaching be-
fore the king as late as 1621), and the popularity of
the Geneva Version is shown by not less than
thirteen reprints, in whole or in part, between 1611
and 1617. It is not easy to ascertain the impres-
sion which the A. V. made at the time of its apar-
tance. Probably, as in most like cases, it was
far less for good or evil than friends or foes expected
The Puritans, and the religious portion of the mid-
dle classes generally, missed the notes of the Ge-
neva book (Fuller, Ch. Hist. x. 50, 51). The Ro-
mansists spoke as usual, of the unsettling effect of
these frequent changes, and of the marginal read-
ings as bringing men in doubt what was the truth
of Scripture. One frantic cry was heard from Hugh
Broughton the rejected (Works, p. 661), who
would rather be torn in pieces by wild horses than
impose such a version on the poor churches of Eng-
land.” Selden, a few years later, gives a colder
and more favorable judgment. It is “the best of
all translations as giving the true sense of the or-
iginal.” This, however, is qualified by the remark
that “a book in the world is translated as the
Bible is, word for word, with no regard to the dif-
ference of idioms. This is well enough so long as
scholars have to do with it, but when it comes
among the common people, Lord what gear do
they make of it!” (Table Talk.) The feeling
of which this was the expression, led Dr. Bancroft,
in the midst of the convulsions of the Commonwealth
in proposals for another revision, which, after being
brought forward in the Grand Committee of Reli-
gion in the House of Commons in Jan. 1656, was
referred to a sub-committee, acting under White-
locke, with power to consult divines and report.
Conferences were accordingly held frequently at
Whiteocke’s house, at which we find, mingled with
less illustrious names, those of Walton and Cal-
wards. Nothing, however came of it (Whiteocke,
Memorials, p. 564; Collier, Ch. Hist. ii. 9). No
report was ever made, and with the Restoration the
tide of conservative feeling, in this as in other things,
checked all plans of further alteration. Many had
care to lose for the Bible at all. Those who did
care were content with the Bible as it was. Only
here and there was a voice raised, like R. Gell’s
(at supper), declaring that it had defects, that it
lacked in some things the stamp of the dogmatism
of a party (p. 321).
(8.) The highest testimony of this period is that
of Walton. From the editor of the Polyglott, the
few words “inter omnes unius” meant a good deal
(Dean’s Essay, p. 5). The language of Amos was
the title of glowing purplege set in. It would be easy to put
together a long extract of praises stretching from
that time to the present. With many, of course,
this has been only the routine repetition of a tradi-
tional boast. “Our unrivalled Translation,” and
“our incomparable Liturgy,” have been, equally,
phrases of course. But there have been witnesses
of a far higher weight. In proportion as the Eng-
lish of the 18th century was infected with a Latin-
ized or Gallicized style, did those who had a purer
taste look with reverence to the strength and purity
of a better time as represented in the A. V.
Thus

("the just shall live by faith, but if any man draw
back, let him be cast out to perish." etc.) to avoid an inference unfavorable to
the doctrine of Final Perseverance. (3.) The use of "bishops," in Acts i. 20, of "oversight," in 1 Pet. v. 2, of
"bishop," in 1 Tim. iii. 1, and "overseers," in
Acts xx. 25, in order to avoid the identification of bishops and elders. (4.) The chapter-headings of
Galatians in 1611 (since altered), "The Prophet exhorted to
praise God for that power which he hath given the
Church to bind the consciences of men! " Blunt (Dut-
resses of a Parish Priest, Lect. ii.) appears in this ques-
tion on the side of the prosecution: Trench (in loc. A.
V. of the N. T. e. x.) on that of defense. The charge
if an undue bias against Rome in 1 Cor. xi. 27, Gal.

v. 6, Heb. xiii. 4, is one on which an acquittal may be
pronounced with little or no hesitation.
1 It may be at least pleaded, in mitigation, that the
fraternity of the translators is outdone by that of Francis
Bacon.
2 Whitaker’s answer, by anticipation, to the charge
is worth quoting: "No innovation, but will take its
interpretations or versions of Scripture, when they
have become obsolete, or ceased to be intelligible, may
be afterwards changed or corrected" (Desert. on
Script, p. 232, Parker Soc. ed.). The viceroyalties of
the English Church had not then learned to raise the
cry of impropriety.
Addison dwells on its enunciating the oddness of modern languages with the glowing phrases of Hebrew (Speculator, No. 405), and Swift confesses that “the translators of the Bible were masters of an English style for litter for that work than any we see in our present writings” (Letter to Lord Ox ford). Each half-century has naturally added to the prestige of these merits. The language of the A. V. has intertwined itself with the controversies, the devotion, the literature of the English people. It has gone, wherever they have gone, over the face of the whole earth. The most solemn and the most tender of human memories are, for them, the part, associated with it. Men leaving the Church of England for the Church of Rome turn regretfully with a yearning look at that noble “well of English undefiled,” which they are about to exchange for the unmeet monstrosities of Rhemmas and Dunny. In this case too, as in so many others, the position of the A. V. has been strengthened, less by the skill of its defenders than by the weakness of its assailants. While from time to time, scholars and divines (Lowth, Newcome, Waterland, Trench, Elliott) have admitted the necessity of a revision, those who have attacked the present version and produced new ones have been, for the most part, men of narrow knowledge and defective taste (Purser, and Harwood, and Bellamy, and (correspondingly) engravers), in a great many cases, seeking their competence for the task by entering on the work of translating or revising the whole Bible single-handed. One memorable exception must not, however, be passed over. Holland (Lit. of Europe, iii. ch. 2, vol. 2.) records a brief but emphatic protest against the enthusiastic praise which has been lavished on this translation. It may, in the eyes of many, be a better English, but it is not the English of Daniel, or Raleigh, or Bacon, . . . . It abounds, in fact, especially in the O. T., with obsolete phraseology, and with single words long since abandoned, or relabeled only in provincial use.” The statement may, it is believed, be accepted as an encomium. If it had been the English of the men of letters of James’s reign, would it not have received as it has done, for two centuries and a half, its hold on the mind, the memory, the affections of the English people?

XII. SCHEMES FOR A REVISION. — (1.) A notice of the attempts which have been made at various times to bring about a revision of the A. V., although necessarily brief and imperfect, may not be without its use for future laborers. The first half of the 18th century was not favorable for such a work. An almost solitary Essay for a New Translation by H. R. (Ross), 1702, attracted little or no notice (Todd, Life of Walton, i. 134). A Greek Test. with an English translation, singularly vulgar and offensive, by W. Mace, was published in 1729, of which extracts are given by Lewis (Hist. of Translat. ch. v.). With the slight revival of learning among the scholars of the latter half of that sacred the subject was again mooted. Lowth in a Visitatin Sermon (1758), and Secker in a Latin Speech intended for Convocation (1761), recommended it. Matt. Wilkinson in his Remarks (1759), and Dr. Thomas Brett, in an Essay on Ancient Versions of the Bible (1760), dwelt on the importance of consulting them with reference to the O. T. as well as the N. T., with a view to a more accurate text than that of the Masoretic Hebrew, the former insisting also on the obsolete words which adhered in the A. V. and giving a useful alphabetic list of them. A folio New and Literal Translation of the whole Bible by Anthony Purver, a Quaker (1764), was a more ambitious attempt. He dwells at some length on the “obsolete, uncom, clownish” expressions which disfigure the A. V. He includes in his list such words as “jeovays,” “souther,” “dannizd,” “dayspring,” “lorganized,” “forc.” He substitutes “He hearkened to what he said,” for “he hearkened to his voice;” “eat victuals,” for “eat bread” (Gen. iii. 19); “was in favor with,” for “found grace in the eyes of;” “was angry,” for “his wrath was kindled.” In spite of this defective taste, however, the work has considerable merit, is based upon a careful study of the original, and of many of the best commentators, and may be contrasted favorably with most of the single-handed translations that have followed. It was, at any rate, far above the depth of degradation and bolly which was reached in Harwood’s Literal Translation of the N. T. “with freedom, spirit, and elegance” (1768). Here again, a few samples are enough to show the character of the whole. The following are among the most notable:

“A gentleman of splendid family and opulent fortune had two sons” (Luke xvi. 11). “The clergyman said, You have given him the only right and proper answer” (Mark xii. 32). “We shall not pay the common debt of nature, but by a soft translation,” etc. (i Cor. xix. 51).

(2.) Biblical revision was happily not left entirely in such hands as these. A translation by Wesley according to the present idiom of the English tongue (1770) was, at least, less offensive. Durell (Preface to Job), Lowth (Preface to Isaiah), Blayney (Pref. to Jeremiah, 1784), were all strongly in favor of a new, or revised translation. Durell dwells most on the arbitrary additions and omissions in the A. V. of Job, on the total absence in some cases, of any intelligible meaning. Lowth speaks chiefly of the faulty state of the text of the O. T. and urges a correction of it, partly from various readings, partly from ancient versions, partly from conjecture. Each of the three contributed, in the best way, to the work which they had little expectation of seeing accomplished, by laboring steadily at a single look and committing it to the judgment of the Church.” Kenned- y’s labors in collecting MS. of the O. T. issued in his Note of the present Hebrew Text (1753, 1759), and excited expectations that there might before long be something like a basis for a new version in a restored original.

(3.) A more ambitious scheme was started by the Roman Catholic Dr. Geddes, in his Proportior for a New Translation (1754). His remarks on the history of English translations, his candid acknowledgment of the excellences of the A. V., and especially of Tyndal’s work as pervading it, his critical notes on the true principles of translation, on the A. V. as falling short of them, may still be read with interest. He too, like Lowth, finds fault with the superfluous adherence to the Masoretic text, with the undue deference to hebrews, and disregard expected from any new translation.” As the Boswell of Warburton, Holt could not resist the temptation of attacking an old antagonist of his master’s.
of versions shown by our translators. The proposal was well received by many Biblical scholars, Lovell, Kempe, and Harrington being foremost among their patrons. The work was issued in parts, according to the terms of the prospectus, but did not get further than 2 Chron. in 1792, when the death of the translator put a stop to it. Partly perhaps owing to its incompleteness, but still more from the extreme boldness of a produce, anticipating the conclusions of a later critic, Dr. Todd's translation fell rapidly into disfavor. A Sermon by White (famous for his Hampton Lectures) in 1779, and two Pamphlets by J. A. Symonds, Professor of Modern History at Cambridge, the first on the Gospels and the Acts, in 1780; the second on the Epistles, in 1794, though attacked in an Apology for the Literary and Church of England (1795), helped to keep the discussion from obliteration.

(3.) The revision of the A. V., like many other scholastic reforms, was hindered by the French Revolution. In 1792, Archbishop Newcome had published an elaborate defense of such a scheme, citing a host of authorities (Doddridge, Wesley, Campbell, in addition to those already mentioned), and touching on the same lines as Lord Littler. In 1794, publications of the N. T. were published by Wakefield in 1796, by Newcome himself in 1796, by Scarlet in 1797. Campbell's version of the Gospels appeared in 1788, that of the Epistles by Macknight in 1795. But in 1796 the note of alarm was sounded. A feeble pamphlet by George Burgess (Letter to the Bishop of Ely) took the ground that 'the present period was unfit,' and from that time, Conservatism, pure and simple, was in the ascendant. To suggest that the A. V. might be inadequate, was almost as bad as holding 'French principles.' There is a long interval before the question again comes into anything like prominence, and then there is a new school of critics in the Quarterly Review and elsewhere, ready to do battle vigorously for things as they are. The opening of the next campaign was an article in the Quarterly Journal (No. 30), by Dr. John Belkany, proposing a new translation, followed soon afterwards by its publication under the patronage of the Prince Regent (1818). The work was poor and unsatisfactory enough, and a tremendous battery was opened upon it in the Quarterly Review (Nov. 1818), as afterwards (No. 46) upon an unqualified critic, Sir J. B. Burges, who came forward with a pamphlet in its defense (Remarks in Favor of a New Translation, 1819). The rash assertion of both Belkany and Burges that the A. V. had been made almost entirely from the LXX. and Vulgate, and a general deficiency in all accurate scholarship, made them easy victims. The personal element of this controversy may well be passed over, but three less ephemeral works issued from it, which any future laborer in the same field will find worth consulting. Whittaker's Historical and Critical Inquiry was chiefly an able exposure of the exaggerated statement just mentioned. H. J. Todd, in his Limits of the Authorized Translation (1819), entered more fully than any previous writer had done into the history of the A. V., and gives many facts as to the lives and qualifications of the translators not easily to be met with elsewhere. The most masterly, however, of the manifestoes against all change, was a pamphlet (Remarks on the Critical Principles, etc., Oxford, 1820), published anonymously, but known to have been written by Arch-bishop Lawrence. The strength of the argument lies chiefly in its skillful display of all the difficulties of the work, the impossibility of any satisfactory restoration of the Hebrew of the O. T., or any settlement of the Greek of the N. T., the expediency therefore of adhering to a Textus vero plus in both. The argument may not be decisive, but the scholarship and acuteness brought to bear on it make the book instructive, and any one entering on the work of a translator ought at least to read it, that he may know what difficulties he has to face.

(4.) A correspondence between Herbert Marsh, bishop of Peterborough, and the Rev. H. Walter, in 1828, is the next link in the chain. Marsh had spoken (Lectures on Biblical Criticism, p. 253) of the attempt of some writers (such as Tyndal's, Tulk's on Luther's, and Luther's on Minster's Lexicon, which was itself based on the Vulgate. There was, therefore, on this view, no real translation from the Hebrew in any one of these. Substantially this was what Belkany had said before, but Marsh was a man of a different calibre, and made out a stronger case. Walter, in his answer, proves what is plain enough, that Tyndal knew some Hebrew, and that Luther in some instances followed Rabbinical authority and not the Vulgate; but the evidence hardly goes to the extent of showing that Tyndal's version of the O. T. was entirely independent of Luther's, or Luther's of the Latin.

(5.) The last five-and-twenty years have seen the question of a revision from time to time gaining fresh prominence. If men of second-rate power have sometimes thrown it back by meddling with it in wrong ways, others, able scholars and sound theologians, have admitted its necessity, and helped it forward by their work. Dr. Companion's Bible, with c. 29,000 emendations (1841), has not condemned the respect of critics, and is almost self-concealed by the silly ostentation of its title. The motives which have from time to time been made in the House of Commons by Mr. Heywood, have borne little fruit beyond the display of feebler Liberalism and yet fierfer Conservatism by which such debates are, for the most part, characterized; nor have the discussions in Convocation, though opened by a scholar of high repute (Professor Selby), been much more productive. Dr. Beard's A Revised English Bible the Wight of the Church (1857), though tending to overstate the defects of the A. V., is yet valuable as containing much information, and representing the opinions of the more learned Nonconformists. Far more impor-

\[a\] "I will not pretend to say that it [the history of the Pentateuch] is entirely unmixed with the leaves of the last century, and the latter being treated by the same rules of criticism as the father of Greek history."

\[b\] A short epitome of this portion of Todd's book has been published by the S. F. C. K. as a tract, and will be found useful.

\[c\] About this period also (1830) a new edition of Newcome's version was published by Belsham and other Unitarian ministers, and Littler's attempt on the O. T., had the effect of stiffening the resolution of the great body of the clergy to all proposals for a revision. (The second Improved Version, here referred to, was published in 1818; reprinted Boston 1820. - A)
tantly, every way, both as virtually an authority in favor of revision, and as contributing largely to it, are Professor Schoefield's *Hints for an Improved Translation of the N. T.* (1852). In his second edition, indeed, he acknowledges any wish for a new translation, but the principle which he lays down clearly and truly in his preface, that if there is "any adventitious difficulty resulting from a defective translation, then it is at the same time an act of charity and of duty to clear away the difficulty as much as possible," leads legitimately to at least a revision; and this conclusion Mr. Selwyn in the last edition of his *Hints* (1857) has deliberately adopted. To Bishop Elliott also belongs the credit of having spoken at once boldly and wisely on this matter. Putting the question whether it would be right to join those who oppose all revision, his answer is, "God forbid. . . . It is in vain to cleave our own souls with the thought that these errors (in A. V.) are either insignificant or imaginary. There are errors, there are inac- curacies, there are misconceptions, there are obscuri-
"tions . . . and that man who, after being in any degree satisfied of this, permits himself to lean to the counsels of a timid or popular obstructiveness, or who, intellectually unable to test the truth of these allegations, nevertheless permits himself to demur or deny them, will . . . have to sustain the reproach of not being willing to beac- fully with the inviolable word of God" ([*Protest to ProtocitiEpistles*]. The translations appended by Dr. Elliott to his editions of St. Paul's Epistles, proceed on the true principle of altering the A. V. "only where it appears to be incorrect, inept, insufficient, or obscure," uniting a profound reverence for the older translators with a bold truthfulness in judging of their work. The opinion colla-
voration of all the earlier English versions makes this part of his book especially interesting and valuable. Dr. Trench (*On the A. V. of the N. T.*, 1858), in like manner, states his conviction that "a revision ought to come," though as yet, he thinks, "the Greek and the English necessary to bring it to a successful issue are alike wanting." (p. 25). This position itself fairly laid is, in the fullest contradiction possible of this somewhat despondent statement, and supplies a good store of materials for use when the revision actually comes. The *Revision of the A. V.* by Fice Clergyman (Dr. Barrow, Dr. Moberly, Dean Allerd, Mr. Humphrey, and Dr. Elliott), represents the same school of conservative progress, has the merit of adhering to the clear, pure English of the A. V., and does not deserve the censure which Dr. Beard passes on it as "promising little and performing less." As yet, it is series includes only the Gospel of St. John, and the Epistles to the Romans and Corinthians. The publica-
tions of the American Bible Union are signs that there also the same want has been felt. The translations given respectively by Allerd, Standen, Jowett, and Conybeare and Howson, in their respective Commentaries, are in like manner, at all events with the necessity of the work, and contributions towards it. Mr. Sharpe (1849) and Mr. Higton (1892) have ventured on the wider

---

*The Epistles to the Galatians, Ephesians, Phil-
ippines and Colossians have since appeared. A
Mr. Mahon's careful translation of the chief orient-
tal and other versions of the Gospel according to St. John, and Mr. Scrivener's notes on St. Matthew, deserve to be mentioned as valuable contributions

---

**XIII. Present State of the Question.**

(1) To take an accurate estimate of the extent to which the A. V. requires revision would call for nothing less than an examination of each single book, and would therefore involve an amount of detailed incomparable with our present limits. To give a few instances only, would practically fix attention on a part of the English text which would lead to a false rather than a true estimate. No attempt, therefore, will be made to bring together individual passages as needing correction. A few remarks on the chief questions which must necessarily come before those who undertake a revision will not, perhaps, be out of place. Examples, classed under corresponding heads, will be found in the book by Dr. Trench already men-
tioned, and, scattered in the form of annotations, in that of Professor Schoefield.

(2) The translation of the N. T. is from a text conically imperfect. What editions were used is a matter of conjecture: most probably, one of those published with a Latin version by Beza between 1560 and 1588, and agreeing substantially with the *fustae exemplar* or book of Lening. It is clear, on the other c-
cide, that no revision ought to ignore the results of the textual criticism of the last hundred years. To shrink from noticing any variation, to go on printing as the inspired Word that which there is a preponderant reason for believing to be an interpo-
lution or a mistake, is neither honest nor rever-
entful. To do so for the sake of greater edito-
rial simplicity is simply to offer to God the useless sacrifice of a lie. The authority of the A. V. is at any rate in favor of the practice of not suppressing facts. In *Matthew* i. xi. xxvi. 26: Luke xiv. 36: John ix. 6; Acts xiii. 8: Eph. vi. 9; Heb. ii. 4: James ii. 18; 1 John ii. 21; 1 Pet. ii. 21: 2 Pet. ii. 11, 18; 2 John 8, different readings are given in the mar-
gin, or, as in 1 John ii. 23, indicated by a different type. In earlier versions, as has been mentioned 1 John v. 7 was printed in smaller letters. The degree to which this should be done will, of course, require discretion. An apparatus like that in Tischendorf or Alford would obviously be out of

*Footnote: The text of this paragraph is slightly different from the text in the original document. The text provided here is a natural reading of the document.*
place. Probably the useful Greek Testament, edited by Mr. Scrivener might serve as an example of a middle course.

(3.) Still less had been done at the commencement of the 17th century for the text of the O. T. The Jewish translators, from whom patristic divines derived their knowledge, had given evidence to the belief that in the Masoretic text were contained the

\[\text{\textit{spurious words of Revelation}}, \text{free from all risks of error, from all calamities of transcription. The conventional phrases, \textit{\textit{the authentic Hebrew}}, \textit{\textit{the Hebrew version}}, \textit{\textit{the Hebrew verification}}, were the expression of this undue	\]

\[\text{\textit{improper reverence}}.\] They refused to apply the same rules of judgment here which they applied to the text of the N. T. They assumed that the Masoretes were infallible, and were reluctant to acknowledge that there had been any variations since. Even Walton did not escape being attacked as unsound by the great Puritan divine, Dr. John Owen, for having called attention to the fact of discrepancies (\textit{Polygl. cap. vi}). The materials for a revised text are, of course, scattered, and the O. T. is a subject for ingenious labor, but the labors of Kennicott, Dr. Rossi, J. H. Michalitis, and Davidson have not been fruitless, and, here as there, the older versions must be admitted as at least evidence of variations which once existed, but which were suppressed by the rigorous uniformity of the later Rabbinic. Conjectural emendations of Nechaev, Lewish, and Ewald have so freely suggested, ought to be ventured upon in such places only as are quite unintelligible without them.

(4.) All scholars worthy of the name are now agreed that as little change as possible should be made in the language of the A. V. Happily there is little risk of an emasculated elegance such as might have infected a new version. The very fact of the admiration felt for the A. V., and the general revival of a taste for the literature of the Elizabethan period, are safeguards against any like tampering now. Some words, however, absolutely need change, as being altogether obsolete; others, more numerous, have been slowly passing into a different, often into a lower or a narrower meaning, and are therefore no longer what they once were, adequate renderings of the original.

(5.) The self-imposed law of fairness which led the A. V. translators to admit as many English words as possible to the honor of representing one in the Hebrew or Greek text has, as might be expected, marred the perfection of their work. Sometimes the effect is simply the loss of the solemn emphasis of the repetition of the same word. Sometimes it is more serious and affects the meaning. While it would be simple pedantry to lay down unconditionally that but one and the same word should be used throughout for one in the original, this can be so decided that it is a limitation is the true principle to start with and that instances to the contrary should be dealt with as

\[\text{\textit{exceptional necessities. Side by side with this fact, there is another just the opposite of it. One English word appears for several Greek or Hebrew words, and thus shades of meaning, often of importance to the right understanding of a passage, are lost sight of. Taken together, the two forms of error, which meet us in self-high every chapter, make the use of an English Concordance absolutely misleading.}}\]

(6.) Grammatical inaccuracies must be noted as a defect perfectly more or less, the whole extent of the present version of the N. T. Instances will be found in abundance in French and Scholefield's, and in any of the better Commentaries. The true force of tenses, cases, prepositions, articles, is continually lost, sometimes at the cost of the finer shades which give vividness and emphasis, but sometimes also entailing more serious errors. In justice to the translators of the N. T., it must be said that, situated as they were, such errors were almost inevitable. They learned Greek only two centuries through Kennicott's Latin Lexicon and grammars were alike in the universal language of scholars; and that language was poorer and less reflected than the Greek, and failed utterly to represent, e. g., the force of its article, or the difference of its modal and perfect tenses. Such books of this nature which were used by the translators were necessarily based upon a far scatter, induction, and were therefore inaccurate and inexact than those which have been the fruits of the labors of later scholars. Recent scholarship may in many things fall short of that of an earlier time, but the introduction of Greek lexicons and grammars in English has been beyond all doubt a change for the better.

\[\text{\textit{The field of the O. T., has been far less adequately worked than that of the N. T., and Hebrew scholarship has made far less progress than Greek. Relatively, indeed, there seems good ground for believing that Hebrew was more studied in the early part of the 17th century than it is now. It was newer and more popular. The reverence which men felt for the perfection of the Hebrew version, and the desire to make their learned to hie knowledge less of their students, led which they looked upon as half-divine. But here also there was the same source of error. The early Hebrew lexicons represented partly, it is true, a Jewish tradition; but partly also were based upon the Vulgate (Bishop Marsh, Lectures, ii. App. G). The forms of various Semitic languages had not been applied as a means for ascertaining the precise value of Hebrew words. The grammars, also in Latin, were defective. Little as Hebrew professors have, for the most part, done in the way of exegesis, any good commentary on the O. T. will show that here also there are errors as serious as in the N. T. In one memorable case, the translation, red or apparent, of the translators to the force of the Hebrew word of the O.T. (Lect. iv. 12) has led to a serious attack on the truth-}\]

\[\text{\textit{The Judaising spirit on this matter culminated in the Grammar Holistica Co senator, which touches the existing O. T. text to be \textit{\textit{true quondam codices, true quondam vocalia, sine puncta utps, sine punctumin potestamin, true quond res, true quond verbs, constri}}\]

\[\text{\textit{rex.}}\]

\[\text{\textit{The Englishman's Hebrew Concordance and the Englishman's Greek Concordance, published by Walton and Morey, deserve mention as useful helps for the student of the A. V. in overcoming this difficulty.}}\]

\[\text{\textit{Constantine's and Scapula's were the two principal tools. During the half century that preceded the A. V., the study of Greek had a male counterpart in \textit{\textit{The Grammar of the Hebrew Language, which was taught at all the great schools in 1681, and made part of the system of new ones then founded. Now,\textit{\textit{ Debm of St. Paul's, published a Greek version of the Old Testament. The Grammar chiefly in use was probably Coxe's (1).}}\]
fulness of the whole narrative of the Pentateuch (Colenso, *Pentateuch Critically Examined*, Part I, ch. vii.).

(8.) The division into chapters and verses is a matter that ought not to be passed over in any future revision. The former, it must be remembered, does not go further back than the 13th century. The latter, though answering, as far as the O. T. is concerned, to a long-standing Jewish arrangement, depends, in the N. T., upon the work of Robert Stephens. [B. 11.] Neither in the O. T. nor in the N. T. did the verse-division appear in any earlier English edition than that of Geneva. The inconvenience of changing both is probably too great to be risked. The habit of referring to chapter and verse is too deeply rooted to be got rid of. Yet the division, as it is, is, is not seldom artificial, and sometimes absolutely misleading. No one would think of printing any other book, in prose or poetry, in short clauses like the verses of our Bibles, and the tendency of such a division is to give a broken and discontinuous knowledge, to make men good texturies but bad divines. An arrangement like that of the Paraphrase Bible of our own time, with the verse and chapter divisions relegated to the margin, ought to form part of any authoritative revision.

(9.) Other points of detail remain to be noticed briefly. The index of the book of Psalms, long the greatest stumbling-block of the O. T. are confessedly fewer, and, for the most part, occupied in other things. The knowledge and the power, however, are there, though in less measure, and even though the will be for the time absent, a summons to enter on the task from those whose authority they are bound to respect, would, we cannot doubt, be listened to. It might have the result of directing to their proper task and to a fruitful issue energies which are too often withdrawn to ephemeral and unprofitable controversies. As the revised Bible would be for the use of the English people, the men appointed for the purpose ought not to be taken exclusively from the English Church, and the learning of Nonconformists should, at least, be fairly represented. The changes required would be of a larger or smaller character, for the corrections of omissions such as those suggested, might safely be allowed to circulate experimentally for two or three years. When they had stood that trial, they might without risk be printed in the new Authorized Version. Such a work would unite reverence for the past with duty towards the future. In undertakings like this we should be, not slighting the translation on whose labors we have entered, but following in their footsteps. It is the wisdom of the Church to bring out of its treasures things new and old.

*Literature. — (1.) History of English Ver-

—E. H. P.
the Auth. Eng. Vers.: with various Readings from the three most celebrated MSS. [Sin. Vat. Alex.] of the Greek Text, by Conantine Tischendorf; Tavislute Ed., vol. 1000. Leipzig, 1868. It is to be regretted, however, that this volume is not very carefully edited: e.g in June 24 the reading of the Vat. MS. is falsely given, and in ver. 25 "before all the world" is a bad rendering of eph' ana proi mou, "before all time."

NEW TESTAMENT. — Charles Thomson, Sec. of the Continental Congress, The New Covenant, trans. from the Greek, Phil., 1808 (vol. iv. of his Holy Bible, trans. from the Greek). Granville Penn, The Book of the New Covenant: being a Crit. Revision of the Text and Trans. of the Eng. Vers. of the N. T., Lond. 1836, followed by Annotations, 1837, and Supplemental Annotations, new ed., 1841. (Edgar Taylor.) The N. T. revised from the A. V. and made conformable to the Text of Griesbach, Lond., Pickering, 1849. Sam. Sharpe, The N. T. trans. from Griesbach’s Text (1st ed. 1840), 3d ed. Lond. 1852, and Crit. Notes, 2d ed. Lond. 1867. Andrews Norton, Trans. of the Gospels, with a New ed. By C. O. 2d ed., Boston, 1855. L. A. Sawyer, The N. T. trans. with Improved Divisions of Chapters and Verses, Boston, 1858. Mr. Sawyer has also published translations of the Hebrew Prophets and Poets, 1st ed. 1861-62. A translation of the N. T. has been published anonymously by John Nelson Darby, the founder of the sect of the Plymouth Brethren, London, 1856-70 each book issued separately. It is not without merit. The "second revision" of the N. T. by the Final Committee of the Amer. Bible Union was published in N. Y., in different forms, in 1866. In this version, "inmmerse" is substituted for "baptize," "immersion" for "baptisim," etc. Preliminary revisions of most of the books of the N. T., with notes, were previously issued for public examination and criticism. Among these, the most notable are those of Metzger (Matthew), the Rev. N. W. Whiting (Mark, Luke, Ephesians, Pastoral Epistles), Rev. Alex. Campbell (Acts), Dr. John Lillie (1 and 2 Thess., and 2 Peter to Rev. inclusive), and Dr. H. B. Hackett (Philippians). A very large sum of money has been spent by the American Bible Union in carrying on this important work; and some of our ablest scholars have been engaged upon it. T. S. Green, The Twelve N. T., being a New Trans. accompanying a newly formed Text, Lond. 1866. 4to; comp. his Crit. Notes on the N. T., Lond. 1867. Henry Alford, The N. T. after the A. V. newly compared with the Orig. Greek and revised, London, 1869: comp. his N. T. for Eng. Readers. — The Trans. and notes, 2 vols. in 4 pts., 1865-66. G. R. Noyes, The N. T.; translated from the Greek Text of Tischendorf, Boston, 1869; 4th ed. 1870. Robt. Ainslie, The N. T. trans. from the Greek Text of Tischendorf 8vo, Lpss. 1865; London and Brighton, 1869. (The title and also the preface are deceptive. The translation is not from the text of Tischendorf, but from his edition of the Greek Synoptics, which has many readings that neither he nor any other critic would ever dream of regarding as genuine.) N. S. Pelson, The Four Gospels: trans. [mainly] from the Greek Text of Tischendorf, with various Readings and Notes, Boston, 1869. For other translations of parts of the N. T., see the literature under the headings of the Books. The translation of the New Testament (N. Y. in Greek and English, Phil., 1822), Redolphus Dickinson (Boston, 1834), and Benj. Wilson (Emphatic Diaglott, N. Y. [Geneva, Ill.] 1844) may be mentioned as literary curiosities. — Among the versions which have been named, both of the O. T. and the New, those of the late Dr. Noyes appear to the present writer eminently distinguished for accuracy, clearness, correctness, naturalness, idiomatic English, and the attainment, generally, of the happy medium between bold literalness and loose paraphrase.

The Convocation of Canterbury has already (July, 1870) undertaken a revision of the A. V., and appointed a Committee for the work, under the chairmanship of the Bishop of Winchester (Willesfor). They have divided themselves into two companies, that on the Old Test. consisting of the Bishops of St. David’s, Llandaff, Ely, Lincoln, Bath and Wells, Archb. Rose, Can. Selwyn, Dr. Jebb, and Dr. Kay; that on the New, of the Bps. of Winchester, Gloucester and Bristol (Elliot), and Salisbury, the Proctor, the Deans of Canterbury (Alford), Westminster (Stukeley), and Canterbury. Many other distinguished scholars have been invited, some of them not members of the Church of England. The Convocation of York and the British Government have declined to par-
null
wilderness was "no place of figs or of vines," evidently regretting that they had left the vines of Egypt. Comp. also Ps. lxxxviii. 47: "He destroyed their vines with hail" (see on this subject, Cæcilius, Hieroc. ii. 412).

The vines of Palestine were celebrated both for luxuriant growth and for the immense clusters of grapes which they produce. When the spies were sent forth to view the promised land, we are told that on their arrival at the valley of Esdrel they cut down a branch with one cluster of grapes, and bore it between two on a staff (Num. xiii. 23). This they did no doubt for convenience of carriage, and in order that the grapes on that splendid cluster might not be bruised. Travellers have frequently testified to the large size of the grape-clusters of Palestine. Schinz (Lebensalter der Heiden, v. 285, quoted by Rosenmüller, Bibl. Bot. p. 223) speaks of snapping at Beitschil, a village near Tophel, under a vine whose stem was about a foot and a half in diameter, and whose height was about thirty feet, which in its branches formed a bunch thirty feet in length and nine feet in width. "The clusters of these extraordinary vines," he adds, "are so large that they weigh ten or twelve pounds, and the berries may be compared with our small plums." See also Belon, Observ. l. i. 340: "Les seps des vignes sont fort gros et les rameaux fort forts. Les habitants entendent bien comme il est fait gouverner. Car il y a plante si longue telle de l'aire, qu'on pourrait nioner une charrette entro deux. C'est pas grande merveille si les raisins sont si beaux et le vin si puisant." Strabo states that it is recorded that there are vines in Margiana whose stems are such as would require two men to span round, and whose clusters are two entours long (Geograph. l. i. 122, ed. Kramer). Now Margiana is the modern district of Ghilan in Persia, southwest of the Caspian Sea, and the very country on whose hills the vine is believed to be indigenous. Nothing would be easier than to multiply testimonies relative to the large size of the grapes of Palestine, from the published accounts of travellers such as Elliot, Labarde, Marrié, Dandini (who expresses his surprise at the extraordinary size of the grapes of Lebanon), and Russell, etc. We must be content with quoting the following extract from Kitto's Physical History of Palestine, p. 639, which is strikingly illustrative of the spees mode of carrying the grapes from Esdrel: "Even in our own country a bunch of grapes was produced at Welbeck, and sent as a present from the Duke of Rutland to the Marquis of Rockingham, which weighed nineteen pounds. It was conveyed to its destination — more than twenty miles distant — on a staff by four laborers, two of whom bore it in rotation." The greatest diameter of this cluster was nineteen inches and a half, its circumference four feet and a half, and its length nearly twenty-three inches. Especial mention is made in the Bible of the vines of Esdrel (Num. xiii. 24, xxxii. 9), of Silonah, Hebron, and Elekeh (Is. xi. 8, 9, 10; Jer. xxxii. 32, and Ezr. i. 14). Prof. Stanley thus speaks of the vineyards of Judah, which he saw along the slopes of Bethlehem: "Here, more than elsewhere in Palestine, are to be seen on the sides of the hills, the vineyards marked by their watch-towers and walls, seated on their ancient terraces — the earliest and latest symbol of Judah. The elevation of the hills and table-lands of Judah is the true climate of the vine. He bound his feet to the vine, and his ass's coat to the choice vine: he washed his garments in vine, and his clothes in the blood of grapes." It was from the Judean valley of Esdrel, "the torrent of the cluster," that the spies cut down the gigantic cluster of grapes. "A vineyard on a hill of olives, with the 'fence,' and 'the stones gathered out,' and the tower in the midst of it, is the natural symbol of him, both in the prophetic and evangelical records, represents the kingdom of Judah" (Is. xvi. P. p. 104). From the abundance and excellence of the vines, it may readily be understood how frequently this plant is the subject of metaphor in the Holy Scriptures. Thus Israel is a vine brought from Egypt, and planted by the Lord's hand in the Land of Promise; room had been prepared for it (compare with this the passage from Belon quoted above); and where it took root it filled the land, it covered the hills with its shadow, its boughs were like the goodly cedar-trees (Ps. lxxx. 8, 10). Comp. Ginschel (Travels through Russin and N. Persia, iii. 431), who thus speaks of the vines of Ghilan: "It is a field of forests, ... and is frequently found about promontories, and their lower part is almost entirely covered with it. There, higher than the eye can reach, it winds itself about the hottest trees; and its tendrils, which have an arm's thickness, so spread and mutually entangle themselves far and wide, that in places where it grows in the most luxuriant wildness it is very difficult to find a passage." To dwell under the vine and fig-tree is an emblem of domestic happiness and peace (I. K. iv. 25; Mic. iv. 4; Ps. xxxviii. 3); the rebellions people of Israel are compared to "wild grapes." "An empty vine," "the degenerate plant of a strange vine," etc. (Is. v. 2, 4, but see Cockle: Hos. x. 1; Jer. ii. 21). It is a vine which our Lord selects to show the spiritual union which subsists between Himself and his members (John xvi. 56).

The following Hebrew words denote the vine:

1. ἤφειν (ἐφέοι), or, more definitely, ἤφειν ἐφίσσυς (ἐφίσσυς ἐφέοι), of frequent occurrence in the Bible, and used in a general sense. Indeed ἤφειν sometimes is applied to a plant that resembles a vine in some particulars, as ἤφειν ἐφίσσυς, 2 K. iv. 39, i. e. probably the Cokesley plant (TOBED, ii. 962), or ἤφειν ἐφίσσυς (ἐφίσσυς Σίδονιος), the vine of Sidon, certainly not a vine. (See below.)

2. Σάφεικ (Σάφεικ), or σάφεικ (Σάφεικ), is a term expressive of some choice kind of vine (Jer. ii. 21; Is. v. 2; Gen. xiii. 11), supposed to be identical with that now called in Morocco sikit, and in Persia šikhano, with small round dark berries, and soft stones. (See Niebuhr, Descript. de l'Arabie, p. 147; and Oedmann, Sammlung, ii. 97.) From the passage in Jeremiah, it is clear that the sikit denotes not another species of vine, but the common vine which by some process of cultivation attained a high state of excellence.

3. Νίτζιρ (Νίτζιρ), originally applied to a Nazarite who did not shave his hair, expresses an "undressed vine" (A. V.), i.e. one which every seventh and every fiftieth year was not pruned. (See Gesenius, Theo, s. v.)

Grapes are designated by various names: (1.) 
Fellor (φέλιορ), is either a "cluster," ripe or unripe, like iucaneum, or a "single grape" (as in
The ancient Hebrews probably allowed the vine to grow trailing on the ground, or upon supports. This latter mode of cultivation appears to be alluded to by Ezekiel (xix. 11, 12): "her strong rods were broken and withered." Dr. Robinson, who has given us much information on the vine of Palestine, thus speaks of the manner in which he saw them trained near Hebron: "They are planted singly in rows, eight or ten feet apart in each direction. The stock is supported to grow large to the height of six or eight feet, and is then fastened in a sloping position to a strong stake, and the shoots suffered to grow and extend from one plant to another, forming a line of festoons. Sometimes two rows are made to slant towards each other, and thus form by their shoots a sort of arch. These shoots are pruned away in autumn." (Bibl. Res. ii. 30, 31.)

The vintage, 택히 (利物), which formerly was a season of general festivity, as is the case more or less in all vine-growing countries, commenced in September. The towns are deserted, and the people live among the vineyards (利物), in the huts and tents (Bibl. Res. i. e.; comp. Judg. ix. 27.; Jer. xxv. 30; Is. xvi. 10). The grapes were gathered with shouts of joy by the "grape-gatherers" (利物, Jer. xxv. 30), and put into baskets (see Jer. vi. 9). They were then carried on the head and shoulders, or hung upon a yoke, to the "vine-press" (利物). [Wine.]

These intended for eating were perhaps put into the open tanks of wicker-work, as was the custom in Egypt (Wilkinson, Anc. Egypt. i. 49). In Palestine at present the finest grapes, says Dr. Robinson, are dried as raisins, 택ועות (利物), and the juice of the remainder, after having been trodden and pressed, "is boiled down to a syrup which, under the name of дел (利物), is much used by all classes, wherever vineyards are found, as a condiment with their food." For further remarks on the modes of making fermented drinks, etc., of the juice of the grape, see under Wine.

The vineyard (利物), which was generally on a hill (Is. v. 1; Jer. xxxi. 5; Amos iv. 13), was surrounded by a wall or hedge in order to keep out the wild bears (Ps. lxxxi. 13), jackals, and foxes (Num. xxii. 24; Cant. ii. 15; Neh. iv. 3; Ez. xiii. 4; Matt. xxi. 34), which commit such havoc amongst the vines, both by treading them down and by eating the grapes. Within the vineyard was one or more towers of stone in which the vine dressers, תורהלים (利物), lived (Is. i. 8, 2; Matt. xxi. 33; see also Robinson, Bibl. Res. i. 213 ii. 81). The press, גרכ (利物), and vat, גראדה (利物), which was dug (Matt. xxi. 33) or hewn out of the rocky soil, were part of the vineyard furniture (Is. v. 2). See the art. Wine, for a figure of a large foot-press with vat, represented in operation. The wine-press of the Hebrews was probably of the form there depicted. [Fay, p. 814.]

The vine in the Moabite ritual was subject to the usual restrictions of the "seventh year" (Ex. xixii. 11), and the jubilee of the fiftieth year (Lev. xxv. 11). The gleanings, " scratching (利物)," were to be left for the poor and stranger (Deut. xixii. 9; Iv. xxv. 21). The vineyard was not to be sown " with divers seeds" (Deut. xxii. 9), but fig-trees were sometimes planted in vineyards (Luke xvi. 8). Comp. 1 K. iv. 25: "Every man under his vine and under his fig-tree." Persons passing through a vineyard were allowed to eat the grapes therein, but not to carry any away (Deut. xxii. 24).

Besides wild-boars, jackals, and foxes, other enemies, such as birds, beasts, and enterprisers, occasionally damaged the vines.

Beth-haccerem, " the house of the vine" (Jer. vi. 1; Neh. iii. 14), and Abel-ceramim, " the plain of the vineyards," took their respective names from their vicinity to vineyards. Gophnas (now Jiftur), a few miles N. of Jerusalem, is stated by Eusebius (Onom. Φοινικήφυτώρ) to have derived its name from its vines. But see ONOM. W. H.

**VINE OF SODOM** (blur), yephen

**Nebiim: Νηβήν Σωδώνος: vine of Sodomos** occurs only in Dent. xxxii. 32, where of the wicked it is said — "all their vine is of the vine of Sodom, and of the fields of Gomorrha." It is generally supposed that this passage alludes to the celebrated apples of Sodom, of which Josephus (Bell. Jud. iv. 8, § 4) speaks, and to which apparently Tacitus (Hist. v. 6) alludes. Much has been written on this curious subject, and various trees have been conjectured to be that which produced those "Dead Sea fruits that tempt the eye, But turn to ashes on the lips," of which Moore and Byron sing.

The following is the account of these fruits, as given by Josephus: speaking of Sodom, he says: "It was of old a happy land, both in respect of its fruits, and the abundance of its cities. But now it is all burnt up. Men say that, on account of the wickedness of its inhabitants, it was destroyed by lightning. At any rate, there are still to be seen remains of the divine fire and traces of fine cities, and moreover ashes produced in the fruits, which indeed resemble edible fruit in color, but, on being plucked by the hand, are dissolved into smoke and ashes." Tacitus is more general, and speaks of all the herbs and flowers, whether growing wild or planted, turning black, and crumbling into ashes.

Some travellers, as Mannell (Early Trav. in Palestine, p. 454, Bohn, 1848), regard the whole story as a fiction, being made either to see or hear of any fruit that would answer the required description. Pococke supposed the apples of Sodom to be pomegranates, " which, having a tough, hard rind, and being left on the trees two or three years, may be dried to dust inside, and the outside may..."
remain fair." Hasselquist (Trav. p. 287) seeks to identify the apples in question with the egg-colored fruit of the Solanum melongena when attacked by some species of lepidoptera, which converts the whole of the inside into dust, while the seed remains embedded in the pulp. Seetzen in his letter to Baron Zach (Mount. Correspond. xvi. 442) thought he had discovered the apples of Sodom in the fruit of a kind of cotton-tree, which grew in the plain of El-Ghor, and was known by the name of Ascobor. The cotton is contained in the fruit, which is like a pomegranate, but has no pulp. Chardin concludes the long-sought fruit to be that of a thorny shrub with small, long, thin, flat, and which in size and color is exactly like the little Egyptian houm. When dried, this fruit yields a blackish seed, which may be compared to ashes, and which in taste resembles bitter pepper. Barckhardt (Tract. in Syria. 592) and Irby and Mangles believe that the tree which produces these celebrated apples is one which they saw abundantly in the vicinity of the east of the Dead Sea, known by the vernacular name of osbehe or colour. This tree bears a fruit of a reddish-yellow color, about three inches in diameter, which contains a white substance resembling the finest silk, and enveloping some seeds. This silk is collected by the Arabs, and twisted into matches for their firearms. Dr. Robinson (Bibl. Res. i. 528), when at Ain Jily, without knowing at the moment whether it had been observed by former travellers or not, instantly pronounced in favor of the 'tischer fruit being the apples of Sodom. His account of this tree is minute, and may well be quoted: 'The 'tischer of the Arabs,' which he identifies with the Asclepias (Calotropis) procera of botanists, 'is found in abundance in Upper Egypt and Nubia, and also in Arabia Felix but seems to be confined in Palestine to the borders of the Dead Sea. We saw it only at Ain Jily; Hasselquist found it in the desert between Jericho and the northern shore; and Irby and Mangles met with it of large size at the south end of the sea, and on the isthmus of the peninsula. We saw here several trees of the kind, the trunks of which were six or eight inches in circumference, and the whole height from ten to fifteen feet. It has a grayish cork-like bark, with long oval leaves. . . . it discharges copiously from its broken leaves and flowers a milky fluid. The fruit greatly resembles externally a large smooth apple or orange, hanging in clusters of three or four together, and when ripe is of a yellow color. It was now fair and delicious to the eye, and soft to the touch; but, on being pressed or struck, it explodes with a puff, like a bladder or pulp-ball, leaving in the hand only the shrivels of the thin rind and a few fibers. It is indeed filled chiefly with air, which gives it the round form.

... After a due allowance for the marvelous in all popular reports, I find nothing which does not apply almost literally to the fruit of the 'tischer, as we saw it. It must be picked and handled with great care, in order to preserve it from bursting.'

Mr. Walter Elliot, in an article on the Pome Sodomitica, or Dead-Sea apples (Tracts. of the Easton. Soc. ii. 14, 1837-1840), endeavors to show that the apples in question are oak galls, which he found growing plentifully on dwarf oaks (Quercus infectoria) in the country beyond the Dead Sea. He tells us that the Arabs asked him to taste one of these oaks and that they laughed at him when they saw his mouth full of dust. "That these galls are the true Dead Sea apples," it is added, "there can no longer be a question: nothing can be more beautiful than their rich, glossy, purplish red exterior; nothing more bitter than their porous and easily pulverized interior" (p. 16). The opinion of Pococke, we may, think, be dismissed at once as being a most improbable conjecture. The objection to the Solanum melongena is that the plant is not peculiar to the shores or neighborhood of the Sea of Sodom, but is generally distributed throughout Palestine, besides which it is not likely that the fruit of which Josephus speaks should be represented by occasional diseased specimens of the fruit of the egg-apple. We must look for some plant, the peculiar character of whose fruit plant was somewhere nearer to the required conditions. Seetzen's plant is the same as that mentioned by Barckhardt, Irby and Mangles, and Robinson, i.e., the 'tischer. Chaenothria's thorny shrub, with fruit like small lemons, may be the Zizyphus (Baccaates, E. Rayherum), but it cannot certainly be the tree intended. It is not at all probable that the oak-galls of which Mr. Elliot speaks should be the fruit in question; because these being formed on a tree so generally known as an oak, and being common in all countries, would not have been a subject worthy of especial remark, or have been noticed as something peculiar to the district around the Sea of Sodom. The fruit of the 'tischer appears to have the best claim to represent the apples of Sodom; the Calotropis procera is an Indian plant, and thrives in the warm valley of Ain Jily, but is scarcely to be found elsewhere in Palestine. The readiness with which its fruit, 'fair to the eye,' bursts when pressed, agrees well with Josephus' account; and although there is a want of unblending between 'the few frits' of Robinson, and the 'smoke and ashes' of the Jewish historian, yet, according to a note by the editor of Seetzen's Letters, the fruit of the Calotropis in winter contains a yellowish dust, in appearance resembling certain fungi, but of pungent quality."

"You do not mention the Solanum Sodomarum, which I thought had been quoted as one apple of the Dead Sea, and which is the plant I always thought to be as probably the fruit in question as any other. The objection to S. melongena is, that it is a cultivated plant; to the oak gall, it that is wholly absent from the Dead Sea district, though it answers the description, and the whole height far as its botanical exterior and powdery bitter interior are concerned.

The Vine of Sodom, again, I always thought might refer to Cereisia calycanthus (see Giov. ii. 392), which is bitter and powdery inside: the term vine would scarcely be given to any but a trailing or other plant of the habit of a vine. The objection to the Cerei..."
VINEGAR

VINEGAR (焐: ὕοκ: auctum). The Hebrew term chomets was applied to a beverage, consisting generally of wine or strong drink turned sour (whence its use was prescribed to the Nazarite, Num. vi. 3), but sometimes artificially made by an admixture of barley and wine, and thus liable to fermentation (Malachi ii. 12). It was acid even to a provoking (Prov. xx. 16), and by itself formed a nauseous draught (Ps. lxix. 21), but was serviceable for the purpose of sopping bread, as used by laborers (Ruth ii. 14). The degree of its acidity may be inferred from Prov. xxvi. 20, where its effect on nitre is noticed. Similar to the chomet of the Hebrews was the chomet of the Romans—a thin, sour wine, consumed by soldiers (Veget. Re Mil. iv. 7), either in a pure state, or, more usually, mixed with water, when it was termed posca (Plin. xii. 21; Spart.波dec).

This was the beverage of which the Saviour partook in his dying moments (Matt. xxvii. 48; Mark xv. 39; John xix. 29, 30), and doubtless it was referring to this external practice, though offered in derision either on that occasion or previously (Luke xxii. 38). The same liquid, mingled with gall (as St. Matthew states, probably with the view of marking the fulfilment of the prediction in Ps. lxix. 21), or with myrrh (as St. Mark states with an eye to the exact historical fact), was offered to the Saviour at an earlier stage of his sufferings, in order to deaden the perception of pain (Matt. xxvii. 34; Mark xv. 23).

W. L. B.

VINEYARDS, PLAIN OF THE (ጎጎ: ይብክርስ: ይብክርስ: אבר קאָמץ ווינאמז: Abel que est vinum consueture). This place, mentioned only in Judg. xi. 33, has been already noticed under Abel (G: see vol. i. p. 5 o). To what he has there said, the writer has only to call attention to the fact that a ruin bearing the name of Beit el-Kerem, "a house of the vine," was encountered by De Sauley to the north of Kerak (Nヤrr, i. 533). This may be the Abel occitanus of Jephthah, if the Aror named in the same passage is the place of that name on the Arnon (H7: מַעַי). It is here by no means certain: and indeed the probability is that the Ammonites, with the instinct of a nomadic or semi-nomadic people, betook themselves, when attacked, not to the civilized and cultivated country of Moab (where Beit el-Kerem is situated), but to the spreading deserts towards the east, where they could disperse themselves after the usual tactics of such tribes.

G.

VIOL. For an explanation of the Hebrew word translated "viol" see PALMISTRY. The old English viol, like the Spanish viola, was a six-stringed guitar. Mr. Chappell (F5'; κηδα, i. 246) says, "the position of the fingers was marked on the finger-board by frets, as in guitars of the present day. The "chest of viol" consisted of three, four, five, or six of different sizes; one for the treble, others for the music, the counter-tuner, the tenor, and perhaps two for the bass." Ethnologically riol is connected with the Danish sil and the A.S. riile, through the Fr. rile, Old Fr. riild, Mod.

Lat. vitteli. In the Primaevius Porcolumus we find "Vyyle, viile, vidichen, viiteli." Again, in North's Plutarch (Antonio, p. 390, ed. 1505) there is a description of 'clava rubra'; and indeed the rind, whereof was of gold, the sailes of purple, and the overs of silver, which kept stroke in rows after the sound of the musicke of flutes, howasse, cytherns, wipels, and such other instruments as they played upon in the large." W. A. W.

* VINTAGE. [Harvest; Vine; Wine.]

VIKER. [Serpent.]

* VOLUME. [Book; Roll; Writing.]

VOPIHS (ጎጎ: ይብክርስ: ይብክርስ: Σαβί: Alex. Πυρή: Ypsil). Father of Nahali, the spy selected from the tribe of Naphtali (Num. xiii. 14).

* VOTE. This is the proper word in Acts xxvi. 10, instead of "voice" of the A. V. Paul says there that when Stephen and other disciples were put to death he "gave his vote," κατηγορε, ψιφια, against them. Some allege this as proof that he was a member of the Jewish Sanhedrin at the time, and voted for the sentence of death. But the language does not warrant this conclusion. Like our "suffrage," ψιφια, a stone used as a ballot, often signified opinion merely, assent or dissent, with only a figurative allusion to the act of voting. Plato often uses the word in this sense (see Rost and Palm's Gr. Hambicherth, iii. p. 2757). It is improbable on other grounds that Paul belonged to the Sanhedrin at that time. His age would hardly have allowed him to attain that honor so early (see Acts vii. 58), and his being unmarried (as we may infer from 1 Cor. vii. 8) was a disqualification if, as the later Jews maintain, one could be a judge unless he was a father, because a parent may be expected to be merciful. Leclerc gives the right interpretation. H.

VOWS. The practice of making vows, i.e. incurring voluntary obligations to the Deity, on fulfilment of certain conditions, such as deliverance from death or danger, success in enterprises, and the like, is of extremely ancient date, and common in all systems of religion. The earliest mention of a vow is that of Jacob, who, after his vision at Bethel, promised that in case of his safe return he would dedicate to Jehovah the tenth of his goods, and make a place in which he had set up the memorial-stone a place of worship (Gen. xxviii. 18-22, xxxi. 13). Vows in general are also mentioned in the book of Job (xxii. 27).

Among instances of heathen usage in this respect the following passages may be cited: Jer. xlv. 25, and Jonah i. 10; Horn. li. i. 64, 93, vi. 93, 388; Olga. ii. 382; Xen. Ach. iii. 2; Virg. Georg. i. 430; *Liv, v. 244; Hor. Causa, i. 5, 13, iii. 29, 59; Liv. xxii. 9, 10; Cic. Att. viii. 16; Justin. xxi. 3; a passage which speaks of immoral vows: Vell. Pat. ii. 48.

The Law therefore did not introduce, but regulated the practice of vows. Three sorts are mentioned: I. Vows of devotion, Neder; II. Vows of abstinence, Eazar or Easar; III. Vows of destruction, Chevron.

I. As to vows of devotion, the following rules

The term χολи may well have been applied to some soporific substance.

b ῥίζα, from ῥίζη, "to make vow" (Gen. p. 855). See also ANTHEMIA.
VOWS

are laid down: A man might devote to sacred uses possessions or persons, but not the first-born either of man or beast, which was devoted already (Lev. xxviii. 29). [First-born.] (a) If he vowed land, he might either redeem it or not. If he intended to redeem, two points were to be considered: (1) the rate of redemption; (2) the distance, prospectively and retrospectively, from the year of jubilee. The price of redemption was fixed at 50 shekels of silver for the quantity of land which a homer of barley (eight bushels) would suffice to sow. (Lev. xxvii. 16; see Kudiel). This payment might be alloted under the direction of the priest, according to the distance of time from the jubilee-year. But at whatever time it was redeemed, he was required to add to the redemption-price one fifth (20 per cent.) of the estimated value. If he sold the land in the mean time, it might not then be redeemed at all, but was to go to the priests in the jubilee-year (ver. 29).

The purchaser of land, in case he devoted and also wished to redeem it, was required to pay a redemption-price according to the priestly valuation first mentioned, but without the additional fifth. In this case, however, the land was to revert in the jubilee to its original owner (Lev. xxvii. 16, 24, xxv. 27; Keil, Hbr. Arch. §§ 68, 80).

The valuation here laid down is evidently based on the notion of annual value. Supposing land to require for seed about 3 bushels of barley per acre, the homer, at the rate of 32 pecks, or 8 bushels, would be sufficient for about 2½ or 3 acres. Fifty shekels, 25 ounces of silver, at five shillings the ounce, would give £5 5s., and the yearly valuation would thus amount to about £2 2s. per acre.

The owner who wished to redeem, would thus be required to pay either an annual rent or a redemption-price answering to the number of years short of the jubilee, but deducting Sabbatical years (Lev. xxv. 3, 15, 16; and adding a fifth, or 20 per cent., in either case). Thus, if a man devoted an acre of land in the jubilee-year, and redeemed it in the same year, he would pay a redemption price of 49 × £5 5s. = £245 5s., or an annual rent of £2 8s.; a rate by no means excessive when we consider, (1) the prospect of restoration in the jubilee; (2) the undoubted fertility of the soil, which even now, under all disadvantages, sometimes yields an hundredfold (Deut. xxviii. 2, 5).

If he refused or was unable to redeem, either the next of kin (Goel) came forward, as he had liberty to do, or, if no redemption was effected, the land became the property of the priests (Lev. xxv. 25, xxvii. 21; Ruth iii. 12, iv. 1, etc.). In the case of a house devoted, its value was to be assessed by the priest, and a fifth added to the redemption price in case it was redeemed (Lev. xxvii. 15). Whether the rule held good regarding houses in walled cities, namely, that the liberty of redemption lasted only for one year, is not certain; but as it does not appear that houses devoted, but not redeemed, became the property of the priests, and as the Levites and priests had special vows assigned to them, it seems likely that the price only of the house, and not the house itself, was made over to sacred uses, and thus that the act of consecration of a house means, in fact, the consecration of its value. The Mishnah, however, says, that if a devoted house fell down, the owner was not liable to payment, but that he was liable if he had devoted the value of the house (Eruvin, v. 9).

(b) Animals fit for sacrifice, if devoted, were not to be redeemed or changed, and if a man attempted to do so, he was required to bring both the devotee and the changeling (Lev. xxvii. 9, 10, 33). They were to be free from blemish (Mal. i. 14). An animal unfit for sacrifice might be redeemed, with the addition to the priest's valuation of a fifth, or it became the property of the priests, Lev. xxvii. 12, 13. [Oferencias.] (c) The case of persons devoted stood thus: A man might devote either himself, his child (not the first-born), or his slave. If no redemption took place, the devoted person became a slave of the sanctuary—see the case of Absalom (2 Sam. xxiv. 8; Michaelis, § 124, ii. 166, ed. Smith). [Naz-Areti.] Otherwise he might be redeemed at a valuation according to age and sex, on the following scale (Lev. xxvii. 1-7):—

A. 1. A male from one month to 5 years £2 s. d.
   old, 5 shekels
   . . . . . . . . = 0 12 6
   2. From 5 years to 20 years, 20 shekels = 2 10 0
   3. From 20 years to 60 years, 50 shekels = 6 5 0
   4. Above 60 years, 15 shekels = 1 17 6

B. 1. Female from one month to 5 years, 10 shekels = 0 7 6
   2. From 5 years to 20 years, 10 shekels = 1 5 0
   3. From 20 years to 60 years, 20 shekels = 2 15 0
   4. Above 60 years, 10 shekels = 1 5 0

If the person were too poor to pay the redemption price, his value was to be estimated by the priest, not, as Michaelis says, the civil magistrate (Lev. xxvii. 8; Pent. xxx. 5; Mich. § 145, ii. 283).

Among general regulations affecting vows, the following may be mentioned:—

1. Vows were entirely voluntary, but once made were regarded as compulsory, and evasion of performance of them was held to be contrary to (true religion (Num. xxx. 2; Pent. xxiii. 21; Excl. v. 4).

2. If persons in a dependent condition made vows, as (a) an unmarried daughter living in her father's house, or (b) a wife, even if she afterwards become a widow, the vow, if (a) in the first case her father, or (b) in the second, her husband heard and disallowed it, was void; but if they heard without disallowance, it was to remain good (Num. xxx. 3-16). Whether this principle extended to all children and to slaves is wholly uncertain, as no mention is made of them in Scripture, nor by Philo when he discusses the question (de Spec. Leg. 6, ii. 274, ed. Maneye). Michaelis thinks the omission of sons implies absence of power to control them (§ 83, i. 447).

3. Votive offerings arising from the produce of any unripe traffic were wholly forbidden (Deut. xxiii. 18). A question has risen on this part of the subject as to the meaning of the word, which, as understood to refer either to immoral intercourse of the grossest kind, or literally and simply to the usual meaning of the word. The prohibition against dedication to sacred uses of gain obtained by female prostitution was doubtless directed against the practice which prevailed in Phoenicia, Babylonia, and Persia, of which mention is made in Lev. xiv. 29; Baruch vi. 43 (or Epist. of Jer. 43); Herod. i. 199; Strabo, p. 561; August. de cir. Dei, iv. 10, and other authorities quoted by Spencer (de leg. Hebr. ii. 35, p. 566). Following out this view, and bearing in mind the
nent on made in 2 K. xxiii., 7. of a practice evident connected with idolatrous worship, the word rend has been sometimes rendered ruine but some have understood it to refer to the first-born, but Speiser himself, ii. 53, p. 572; Josephus, Ant. iv. 8, § 9; Gesen. ii. 685, and the Mishna, Tract. vi. 3, all understand dog in the literal sense.

[Dog.]

II. III. For vows of almsgiving, see Corban; and for vows of extermination, Anaemia, and Ezra x 8; Mic. iv. 13.

The binding force of a vow is generally as a test of religion are mentioned — Job xxii. 27; Prov. vii. 14; Ps. xxii. 25, l. 14, lvi. 12, cviii. 13, cviii. 14; Is. xix. 21; Nah. x. 15.

Certain refinements on votive consecrations are noticed in the Mishna, e. g.: —

1. No evasion of a vow was to be allowed which substituted a part for the whole, as, "I vowed a sheep but not the bones" (Ned. ii. 5).

2. A man devoting an ox or a horse was not liable if the ox was lost, or the house fell down; but otherwise, if he had devoted the value of the one or the other of these.

3. No devotions might be made within two years before the jubilee, nor redemptions within the year following it. If a son redeemed his father's land, he was not to restore it to him in the jubilee (Erte. vii. 3).

4. A man might devote some of his flock, herd, and heathen slaves, but not all these (ibid. viii. 4).

5. Devotions by priests were not redeemable, but were transferred to other priests (ibid. 6).

A man might not sleep on a bed which he vowed to sleep on a skin if he pleased (Osth. Loc. Redib. p. 673).

7. The sums of money arising from votive consecrations were divided into two parts — sacred (1) to the altar; (2) to the repairs of the Temple (R. civ. c. x. § 4).

It seems that the practice of shaving the head at the expiration of a votive period was not limited to the Nazarite vow (Acts xviii. 18, xxii. 24).

The practice of vows in the Christian Church, though evidently not forbidden, as the instance just quoted serves to show, does not come within the scope of the present article (see Eibh. Jusdip. xvi. 7, 9, and Suet. Eccl.).

W. P. VULGATE, THE. (Latin Versions of the Bible.) The influence which the Latin Versions of the Bible have exercised upon Western Christianity is scarcely less than that of the LXX. upon the Greek churches. But both the Greek and the Latin Vulgates have been long neglected. The discovery of letters, bringing with it the study of the original texts of Holy Scripture, checked for a time the study of these two great bulwarks of the Greek and Latin churches, for the LXX. in fact belongs rather to the history of Christianity than to the history of Judaism, and, in spite of recent labors, their importance is even now hardly recognized. In the case of the Vulgate, ecclesiastical controversies have still further impaired all efforts of liberal criticism. The Romanist (till lately) regarded the Clementine text as fixed beyond appeal; the Protestant shrank from examining a subject which seemed to belong peculiarly to the Romanist. Yet, apart from all involved questions, the Vulgate should have a very deep interest for all the Western churches. For many centuries it was the only Bible generally used; and, directly or indirectly, it is the real parent of all the vernacular versions of Western Europe. The Gothic Version of Ulphius alone is independent of it, for the Slavonic and modern Russian versions are necessarily not taken into account. With England it has a peculiar close connection. The earliest translations made from it were the (lost) books of Bede, and the glosses on the Psalms and Gospels of the 5th and 6th centuries (ed. Thwaite. Lond. 1858, 1842). In the 14th century the first translated version of the O. T. (Heptameron, etc., ed. Thraves, Oxon. 1638) is. The most important monument of its influence is the great English Version of Wycliffe (1324-1384, ed. Forshall and Madden, Oxon. 1850), which is a literal rendering of the current Vulgate text. In the age of the Reformation the Vulgate was rather the guide than the source of the popular versions. The Romanist translations into German (Michaelis, ed. Marsh, ii. 1871) French, Italian, and Spanish, were naturally derived from the Vulgate (R. Simon, Hist. Crit. N. T. Cap. 28. 29. 40. 41). Of others, that of Luther (N. T. in 1523) was the most important, and in this the Vulgate had great weight, though it was made with such use of the originals as was permitted by the authors of the Latin passed to our own Authorized Version. Tyndal had spent some time abroad, and was acquainted with Luther before he published his version of the N. T. in 1526. Tyndal's version of the O. T., which was unfinished at the time of his martyrdom (1536), was completed by Coverdale, and it is to the influence of the Latin and German translations was predominant. A proof of this remains in the Psalter of the Prayer Book, which was taken from the "Great English Bible" (1539, 1540), which was merely a new edition of that called Matthew's, which was itself taken from Tyndal and Coverdale. This version of the Psalms follows the galliain Psalter, a revision of the Old Latin, made by Jerome, and afterwards introduced into his new translation (comp. § 22), and differs in many respects from the Hebrew text (e. g. Ps. xiv.). It would be out of place to follow this question into detail here. It is enough to remember that the first translators of our Bible had been familiarized with the Vulgate from their youth, and could not have cast off the influence of early association. But the claims of the Vulgate to the attention of scholars rest on wider grounds. It is not only the source of our current theological terminology, but it is, in one shape or other, the most important early witness to the text and interpretation of the whole Bible. The materials available for the accurate study of it are unfortunately not as adequate as those yet unused. The chief original works bearing on the Vulgate generally are —

Hody, De Biblia inosis textibus originalibus, Oxon. 1705.

Martinay, Heicon. Opp. (Paris, 1653, with the prefaces and additions of Vallarsi, Verona, 1724, and Muller, Venic. 1767).

Bakenop, Lux de Luce . . . . Bruxellis, 1710.
VULGATE, THE

Saluter, line. SS. Lat. Ver. Ant., Remis, 1743.
Van Es, Pragmatico-Scrittoische Gesch. der Vulg. Tübingen, 1824.

In addition to these there are the controversial works of Mariana, Belartlin, Whittaker, Fulke, etc., and numerous essays by Calmet, D. Schulz, Fleck, Kieglcr, etc., and in the N. T. the editors of Bentley, Santil, Griesbach, Schult, Lechmann, Tregelles, and Tischendorf, fave gathered a great amount of critical materials. But it is not too much to say that the noble work of Vulcennone has made an epoch in the study of the Vulgate, and the chief results which follow from the first installation of his editions are here for the first time incorporated in its history. The subject will be treated under the following heads:

VULGATE, THE

II. THE OLD LATIN VERSIONS. §§ 4-13.

III. THE LABORS OF JEROME. §§ 14-20.

IV. THE HISTORY OF JEROME'S TRANSLATION TO THE INTRODUCTION OF PRINTING.

I. THE ORIGIN AND HISTORY OF THE NAME VULGATE. I. The name Vulgate, which is equivalent to Vulgata editio (the current text of Holy Scripture), has necessarily been used differently in various ages of the Church. There can be no doubt that the phrase originally answered to the kōriē ἔκδοσις of the Greek Scriptures. In this sense it is used constantly by Jerome in his Commentaries, and his language explains sufficiently the origin of the term: "Hoc juxta LXX. interpretatis, discussius, loquente, est vulgata est." (Hieron. Comm. in Is. lv. 20). "Multum in hoc loco LXX. editio Hebraeisinequale discordant. Primium erton de Vulgata editio tractabimus et postea sequens ordinem veritatis." (ib. xxxii. 22). In some places Jerome distinctly quotes the Greek text: "Quo in editione Vulgata dupliciter legimus: quidam enim codices habentes δησιον εισερ, hoc est manifesti sunt: aliis δησιον εισερ, hoc est credibilis sine mentis sunt." (Comm. in Osee, vii. 13; comp. 8-11, etc.). But generally he regards the Old Latin, which was rendered from the LXX.

as substantially identical with it, and thus introduces Latin quotations under the name of the LXX. or Vulgata editio; ... miror quomodo vulgata editio ... testimonium alia interpretationem subseriunt: Conservator et gloriosior eairo Domini, ... Iulii autem quod in LXX. legitur: Conservator et gloriosior orai Domini ... (Comm. in Js. xii. 5). So again: "Philisthoseos ... alienigenas Vulgata scribito editio" (ibid. xiv. 29). ... Palestinius, quot indifferenter LXX. alienigenas vocat" (Ezek. xxi. 27). In this way the transference of the name from the current Greek text to the current Latin text has almost always appeared to be any instance in the age of Jerome of the application of the term to the Latin Version of the O. T. without regard to its derivation from the LXX., or to that of the N. T.

2. Yet more: as the phrase kōriē ἔκδοσις came to signify an uncorrected (and so corrupt) text, the same secondary meaning was attached to vulgata editio. Thus in some places the vulgata editio stands in contrast with the true Hexaplaric text of the LXX. One passage will place this in the clearest light: ... breviatur aliae esse editionem quam Origenes et Celsiani ensibus, nonesse Graecae translatores kōriē, id est, consensum apellant, atque vulgatis, et a plerique nunc Anastasii et de alii LXX. interpretum quae in quae codices repperitur, et alio aut Latinum sernmonem fideliter versat esse.

Kōriē autem ista, hoc est, Coniunm editio, ipsa est quae et LXX., sed hoc interest inter utram quod, quod kōriē pro locis et temporibus pro voluntate scribendorum vetus corrupta editio est, ea autem quae habentur in vēctis est quam nos vertimus, ipsa est quae in eruditorum libris in corrupta et innumeral LXX. interpretum translati reservatur" (Ep. ex. ad Sun. et Fret § 2).

3. This use of the phrase Vulgata editio to describe the LXX. (and the Latin Version of the LXX.) was continued to later times. It is supported by the authority of Augustine, Ado of Heraclea, 449; Isidore of Seville, etc.; and so the Vulgate distinctly recognizes the application of the term, so that Van Es is justified in saying that the Council of Trent erred in a point of history when they described Jerome's Version as "vetus et vulgata editio, quod longo tot seseorum usum in ipsa ecclesia probata est" (Van Es, Gesch. 34).

As a general rule, the Latin Fathers speak of Jerome's Version as "our version (nostri editio, nostri collocis)" but it was not unnatural that the Tridentine Fathers (as many later scholars) should be misled by the associations of their own time, and adapt to new circumstances terms which had grown obsolete in their original sense. And when the difference of the (Greek) "Vulgates" of the early church and the (Latin) "Vulgates" of the modern Roman Church has once been apprehended, no further difficulty need arise from the identity of name. (Compare Augustine, Ed. Benedict. Paris, 1836, tom, V. p. xxxiii.; Sabatier, i. 789; Van Es, Gesch. 24-42, who gives very full and conclusive references, though he fails to perceive that the Old Latin was practically identified with the LXX.)

II. THE OLD LATIN VERSIONS. §4. The history of the earliest Latin Version of the Bible is lost in complete obscurity. All that can be affirmed with certainty is that it was made
the Jews who were settled in N. Africa were confined to the Greek towns; otherwise it might be supposed that the Latin Version of the O. T. is in part anterior to the Christian era, and that (as in the case of Greek) a preparation for a Christian Latin dialect was already made when the Gospel was introduced into Africa. However the many similarities of the different parts of the Old and New Testaments establishes a real connection between them, and justifies the belief that there was one popular Latin Version of the Bible current in Africa in the last quarter of the second century. Many words which are either Greek (machora, sophic, perizoma, poikilis, agnosia, etc.) or literal translations of Greek forms (civilia, justicia, etc.) are found in both, and explain what Tertullian meant when he spoke of the "simplicity" of the translation (compare below § 43).

6. The exact literalness of the Old Version was not confined to the most minute observance of order and the accurate reflection of the words of the original; in many cases the very forms of Greek construction were retained in violation of Latin usage. A few examples of these singular anomalies will convey a better idea of the absolute certainty with which the Latin commonly indicates the text which the translator had before him, than any general statements: Matt. iv. 13, habitavit in yapharchion, marturion: id. 15, tasma Neapoli naos maris; id. 25, ab Jerusadyma . . . et trans Jordanem; v. 22, reus erit in yechennan ignis; vi. 19, uti thesa et conturbata exterminavit Mark xii. 31, majus honorem propephorum aemul non est. Luke x. 19, nihil vos nocebit. Acts xix. 26, non solum Epiesi sed poene lobos Asiae. Rom. ii. 15, inter se ecclisialismus uersiovalen vet eratam delinquentem. 1 Cor. vii. 22, sollicitus est quae sunt Dominii. It is obvious that these were a continual tendency to alter expressions like these, and in the first age of the version it is not improbable that the continual Greecism which marks the Latin texts of D1 (Col. Bezae), and E2 (Col. Leland), had a wider currency than it could maintain afterwards.

7. With regard to the African Canon of the N. T. the Old Version offers important evidence. From considerations of style and language it seems certain that the Epistle to the Hebrews, James, and 2 Peter, did not form part of the original African Version, a conclusion which falls in with that which is derived from historical testimony (comp. The Hist. of the Canon of the N. T. p. 282 f.). In the O. T., on the other hand, the Old Latin erred by excess and not by defect; for as the Version was made from the current copies of the LXX. it included the Apocryphal books which are commonly contained in them, and to these 2 Esdras was early added.

8. After the translation once received a definite shape in Africa, which could not have been long after the middle of the second century, it was not

a This has been established with the greatest facility by Carl Wiseman, Two Letters on 1 John v. 7, addressed to the editor of the Catholic Magazine, 1822, 1833; republished with additions, Rome, 1853; and also by W. Scott, Hist. of Canon of N. T. 1832, pp. 269, 270, and ref.); but the Church of N. Africa seems to have been Latin-speaking from the first. At what date this Church was founded is uncertain. A passage of Augustine (De doctr. Christi, ii. 16 (11)), "any one in the first ages of Christianity who gained possession of a Greek MS., and fancied that he had a fair knowledge of Greek and Latin, ventured to translate it." (Qui scripturas ex Hebræo lingua in Graecam verterunt numerarum possunt; Latin autem interpretes mulcto modo. Ut enim eis prius scripsit epistolarum in manus venit lex; lex de Graeciae interpretem, de Graecia lingua haberet falsum, auctor est interpreteri.) 6 is the version of the N. T. appears to have arisen from individual and successive efforts; but it does not follow by any means that numerous versions were simultaneously circulated, or that the several parts of the version were made independently. Even if it had been so, the insignificance of the public service must soon have given definiteness and substantial unity to the fragmentary labors of individuals. The work of private hands would necessarily be subject to revision for ecclesiastical use. The separate books would be united in a volume; and thus a standard text of the whole collection would be established. With regard to the O. T. the case is less clear. It is probable that

b In the absence of all evidence it is impossible to say how far the Christians of the Italian provinces spoke the Greek or Latin language habitually
publicly revised. The old text was jealously guarded by ecclesiastical use, and was retained there at a time when Jerome’s Version was elsewhere almost universally received. The well-known story of the disturbance caused by the attempt of an African bishop to introduce Jerome’s “textum sic” for the old “textum et” in the history of Joseph (August. Ep. cit. ap. Hieron. Epis., quoted by Tregelles, Introduction, p. 242) shows how carefully intentional changes were avoided. But at the same time the text suffered by the natural corruptions of copying, especially by interpolations, a form of error to which the Gospels were particularly exposed (comp. § 15). In the O. T. the version was made from the unrevised edition of the LXX. and thus from the first included many false readings of which Jerome often notices instances (e. g. Ep. civ. ad Saul. et Fret.). In Table A two texts of the Old Latin are placed for comparison with the Vulgate of Jerome.

* The differences in the two first columns are marked by Italics. The Italics in col. 3 mark where the text of Jerome differs from the other texts.

9. The Latin translator of Irenæus was probably contemporary with Tertullian, and his renderings of the quotations from Scripture confirm the conclusion which has been already drawn as to the currency of (substantially) one Latin version. It does not appear that he had a Latin MS. before him during the execution of his work, but he was so familiar with the common translation that he reproduces continually characteristic phrases which he cannot be supposed to have derived from another source (Lachmann, N. T. i. pp. x, xvi). Cyprian († A. D. 257) carries on the chain of testimony far through the next century; and he is followed by Lactantius, Juvencus, J. Firmicus Maternus, Hilary the deacon (Ambrosiaster), Hilary of Poitiers († A. D. 368), and Lucifer of Cagliari († A. D. 370). Ambrose and Augustine exhibit a peculiar recursion of the same text, and Jerome offers some traces of it. From this date MS. of parts of the African text have been preserved (§ 12), and it is unnecessary to trace the history of its transmission to a later time.

10. But while the earliest Latin Version was preserved generally unchanged in N. Africa, it fared differently in Italy. There the provincial readiness of the version was necessarily more offensive, and the comparatively familiarity of the leading bishops with the Greek texts made a revision at once more feasible and less startling to their congregations. Thus in the fourth century a definite ecclesiastical recension (of the Gospels at least) appears to have been made in N. Italy by reference to the Greek, which was distinguished by the name of *Itala*. This Augustine recommends on the ground of its close accuracy and its perspicuity (Aug. De Doctr. Christ. i. 15, “in ipsa interpretationis Itala cetera praefatur, nam est verbum verum cum perspicuitate sententiae”), and the text of the Gospels which he follows is marked by the latter characteristic when compared with the African. In the other books the difference cannot be traced with accuracy; and it has not yet been accurately determined whether other national recensions may not have existed (as seems certain from the evidence which the writer has collected) in Ireland (Britain), Gaul, and Spain.

---

*a* It should be added that Dodwell places him much later, at the close of the 4th cent. Comp. Grabe, Doctr. ecc. del. Iren. ii. § 3.

*b* It is unnecessary now to examine the conjectures which have been proposed, sinistra quae, ibi quo. They were made at a time when the history of the Old Latin was unknown.
11. The "Hebraic" appears to have been made in some degree with authority; other revisions were made for private use, in which such changes were introduced as suited the taste of scribe or critic. The next stage in the deterioration of the text was the intermixture of these various revisions; so that at the end of the fourth, fifth, and sixth centuries there were in such a state as to call for that final revision which was made by Jerome. What was the nature of this confusion will be seen from the accompanying tables (B and C, on next page) more clearly than from a lengthened description.

12. The MSS. of the Old Latin which have been preserved exhibit the various forms of this version which have been already noticed. Those of the Gospels, for the reason which has been given, present the different types of text with unmistakable cleanness. In the O. T. the MSS. remain to a great extent to allow of a satisfactory classification.

1. MSS. of the Old Latin Version of the O. T.

   5. Corbei. 7 (Sahatier), Jud.
   6. Pechian. (Sahatier), Sec. x. Jud.

The text of the remaining books of the Vetus Latina not having been revised by Jerome is retained in MSS of the Vulgate.

11. To these must probably be added the MSS. of Genesis and the Psalter in the possession of Lord Ashburnham, said to be of the fourth century.

The text of the Oxford MS. (No. 12) is extremely pitted by many coincidences with the text of the old MSS. in the Old Testament.

The critical value of the various revised Anti-Heraclian texts is much underestimated. Each revision, as the representative of a revision of the text by the help of old Greek MSS, is perhaps less inferior to the recension of Jerome: and the MSS. in which they are severally contained, though numerically more inferior to Vulgate MSS, are scarcely inferior in regard to authority.

1. Cod. Vercellensis, at Vercelli, written by Enseblis, bishop of Vercelli in the 4th cent. Published by Iriel, 1748., and by Tischendorf, 1847. It contains a part of St. Matthew, and is mainly African in character. Published by Mai, Script. crit. nov. Cod. iii. 1828.

VULGATE, THE

m. [Curt. "Monarchia," of the 6th cent.
Transcribed by Tischendorf.

Irish (British) revision. a
(a.) Cambridge Univ. Libr. Kk. 1, 24.
(b.) Cambridge Univ. Libr. Ti. 6, 32.

VULGATE, THE

m. [Curt. "Monarchia," of the 6th cent.
Transcribed by Tischendorf.

Irish (British) revision. a
(a.) Cambridge Univ. Libr. Kk. 1, 24.
(b.) Cambridge Univ. Libr. Ti. 6, 32.

It would be impossible to enter in detail in the present place into the peculiarities of the text presented by this group of MSS. It will be observed that copies are included in it from the British or Irish (q.v.), Scotch (q.v.), Mercurian (q.v.), Northumbrian (q.v.), and— if we may trust the very uncertain tradition which represents the Gospels of St. Chad as written by GlÚe (comp. Lib. Leland, p. 663, ed. 1840)—Welsh churches. They do not, however, or leads us to believe that the complete four of them, observed their coincidence in remarkable readings, but the individual differences of the copies, no less than their wide range both in place and age, exclude the idea that all were derived from one source. They stand out as a remarkable monument of the independence, the antiquity, and the influence of British (Irish) Christianity.

For the present it must suffice to give a few special readings which show the extent and character of the variations of this family from other families of MSS. The notation of the text is preserved for the sake of brevity.

Matt. viii. 21. — Eunuchius + erat aetern (vain y.) uita e ramuuentiutu (contr. vent. z) (k y z). [Matt. x. 29. — Sine voluntate Leo possis eivri qui in eis est (sine p. vol. q. e. in e. c.) sine p. vol. qui in e. c. 19. 20. Sine patre vestro voluntate, etc., 5*.

Matt. xiv. 35. — Lois liuis praebat et (num. en. et) z) alovemerat in et z (f).

Matt. xxix. 19. — Aluis autem accepta bacta pappu (papppig) sinet eis et (cit. eixit) aqua et spon- gius (o y z).

Mark xiii. 18. — Ut hie hie non fuit siqle) fuga vestra (y e) vel sabato (o) ut non (sia) fuga vestra hie ven (u) sabato (z).

Luke xxii. 2. — Nostrum + et solvemus legem (leg) nostram (e) et prophetis (e o).

Luke xxiv. 1. — Ad non. + Maria Magdalena et altera Maria et quadam eis (z) (q).

John xix. 39. — Cum autem exspectavit (asp. el trodot spic (sic) v) velominum (vuln.) in eum (q, p) templetis eum et meditavit et pugna (ad) (sol. c) (e o).

John x. 6. — Invincens + Dom (e) (asp. Dom. e) autem autem Aut to- tan autem labaretur nihil eipunus: in verbo autem autem labaretur nihil eipunus (bas & c. lex. a lex. eipunis, re., milesius, etc.) (z y q).

Other readings more or less characteristic are Matt. ii. 14. matrena om ejus: ii. 12. est om un Domine; iv. 9. caleato. + not in; iv. 6. de te quod suinit te in om- nibus visis vis; v. 5. legunt + eam: iv. 49. sicut patet; iii. 12. Eunuchius + Israel autem autem + autem + autem (see Prefaces).

As a more continuous specimen the following readings occur in one chapter in the Hereford Gospels in which this Latin text, with a few others only, agrees closely with the Greek: Luke xxiv. 6, exsult in Deo, r. timet in Deo; 7, timet in Deo; 20, luctuam omnem: 21, victoriam; 28, hacte longum oru; 29, quad variis: 39, und a nos; 41, hoc sum qui mandi nos anum ad vos. Other remarkable readings in the same passage are 8, horum eomum; 18, Respion fons aus om. et; 21, quo hoc omnem; 27, et erat in ejusp.; 29, hacte sunt est istis.

A comparison of the readings for some Sections of the Gospels given in the Epistle of Ulloa according to the Cambridge Catil. (Univ. Libr. I. 17), for the text in Stevenson's edition is by no means accurate, shows some interesting coincidences with these Irish (British) MSS., which are probably to be explained by the following error of the additional references see § 31.)

Matt. v. 15. — Sapere quod G W F (b); v. 15, mag- natum or e (a, b); e. P, qui qui e F e (a, b); vii. 22, ad toto vulg. (a, b); viii. 3, non conscientia; viii. 4, in eum aut est e, e, v. 3, vortus (d); vii. 15, attendite + vos e (a, b); vii. 17, hominis fustus e (a, b); viii. 23, opera iniquitati- sura; viii. 27, impossim q. c; 28, et corpus et animam, etc; viii. 31, ii potest; viii. 32, ut; viii. 18, infirma e (G H D R K); viii. 20, e (a, b); xi. 19, quoniam- ne; vii. 17, ipsa legitur (b); xxiii. 3, vero opera e (d, f, g); i., et qui non e (d, g); xiii. 15, qui e (D, d, f).

Thus of twenty-one readings which differ from Cot, Am. thirteen are given in one or other of those MSS., which have been supposed to present a typical British (Irish) text, and of these eleven are found in the Beoworth MS. alone. While on the other hand nine readings among the British, Vulc. and several others Cot. Vercoll, and every reading is supported by some old authority. Thus, though the range of comparison is very limited, the evidence of these quotations, as far as it goes, supports the belief in a distinct British text.

In the Evangelic quotations in the printed text of St. Patrick, out of seventeen variations, eight (as far as I can find) are supported by no known Latin authority; the remainder are found in l, e, or d. Re- marks I have not been able to examine, though the present readings are not unlikely to offer some illustrations of the early text.

Sapientia (Open Pseudech.) as might have been expected from his foreign training, gives in the main a pure Vulgate text in his quotations from the Vulgate. When he differs from it (e. g. Luke x. 19, 20; John xii. 43, 46), he often appears to quote from memory, and differs from it.

The quotations given at length in the British copy of Juvenal (Cumb. Libr. Lf. 4, 42) would probably repay a careful examination.

This MS., in common with many Irish MSS. (e. g. Brit. Mus. Add. 1792, 2256, the Book of MacDurnan, and some others, as Harl. 1775, Cotton. Tib. A i.) separates the genealogy in St. Matt. from the rest of the Gospel, closing v. 17 with the words Finit Postulus, and then adding Inedit Evangelium.

The reading of this MS. in Matt. xxii 2f. is very remarkable: Homo quidam habebat duos filios et aequos ad primum dixit filio aequo in vasa mean line ali et respondens dixit no e et o.
VULGATE, THE

(2.) Of the Acts and Epistles.

(a) Cod. Corbec, a MS. of Ep. of St James. Published by Martiany, 1695

(b) (Of St. Paul's Epps.) Cod. Chorum, the Latin text of E2. Published by Tischendorf.

g. (Of St. Paul's Epps.) Cod. Sangerm., the Latin text of E2, is in the main an old copy, adapted in some points to the Greek.

t. (See Gospels.)

T. Fragments of St. Paul's Epistles transcribed at Munich by Tischendorf.

u. (R.) The Acts the Latin text of D1 and E2 (Cod. Fezze and Cod. Laud.)

To these must be added, from the result of a partial collation, what is evident:—

x1. Oxford, Bodl. 3418 (Selden, 30) Acts. Sec. viii. vii. An uncial MS. of the highest interest. Deficient xiv 26, xi — xv. 32, comma essent. Bentl. x2. Among its characteristic readings may be noticed: v. 34, fora modicum apostolos seeeder; ix. 40, surge in nomine Domini Hu X1i.; xi. 17, ne daret illis Spiritum Sanctuam credituribus in nomine Hu X1i.; xiii. 14, Paulus et Barnabas; xvi. 1, et eum circuisset has nationes pervenit in Derlen. (Plate i. fig. 4.)

x2. Oxford, Bodl. Laud. Lat. 108 (L, 67). See. ix. St. Paul's Epp. in Saxon letters. Ends Herl. xi. 34, cecin gansli. Corrected apparently by three hands. The original text was a revision of the Old Latin, but it has been much altered. In many cases it agrees with d almost or quite alone: e.g. Eccl. ii. 14, 16, iii. 22, 26, x. 20, xiv. 13, 29, 27, 30. The Epistles to Thess. are placed before the Ep. to Coloss. This arrangement, which is given by Augustine (De Doctt. Christ. ii. 13), appears to have prevailed in early English MSS., and occurs in

Carry's Lectures. The text of most of them (even of these collated by Bentley) is very imperfectly known, and it passes by a very gradual transition into the ordinary type of Vulgate. The whole question of the general character and the specific varieties of these MSS. requires careful investigation. The Table (7) will give some idea of their variations from the common text. The Stow St. John, at present in Lord Ashburnham's collection, probably belongs to this family.

These four MSS. I know only by Mr. Westwood's descriptions in his Paligraphia Sacra; and to Mr. Westwood belongs the credit of first directing attention to Irish MSS. after the time of Bentley.

The text of this recension, which I believe to be contained also in the two Gen. and Bentley's g comp. p. 3477 note d] is closely allied to the British type. As to the Spanish text I have no sufficient materials to form an estimate of its character.
VULGATE, THE

pathies Latin probably East power.

wanted to tae hastened Bede, 13. (3.)

It is noticed 

the Old Latin the Vultur texts. A good collection of its more striking variations is given in the Harleian Catalogue. In the Acts and Epistles (no less than in the Gospels) there are indications of an unrevised (African) and revised texts, but the materials are as yet too imperfect to allow of a satisfactory determination of the different types.

(3.) In the Apocalypse the text depends on m and early quotations, especially in Primasius.

13. It will be seen that for the chief part of the O. T., and for considerable parts of the N. T. (e.g. Apoc. Acts), the Old text rests upon early quotations (principally Tertullian, I.ubian, Lucius of Cagliari, for the African text, Ambrose and Augustine for the Italone). These were collected by Sabatier with great diligence up to the date of his work; but more recent discoveries (e.g. of the Roman Scripturam) have furnished a large store of new materials which have not yet been fully employed. (The great work of Sabatier, already often referred to, is the foundation of all work on the Latin Versions. His great fault is his neglect to distinguish the different types of text, African, Italone, British, Gallice; a task which yet remains to be done. The earliest work on the subject was by Fluminus Nobilissimus, Vesas Test. sec. LAX. Latins redidens, ... Rome, 1588. The new collations made by Tischendorf, Mai, Gunter, Certani, have been noticed separately.) [See also the addi tion at the end of this article. — A.]

III. THE LABORS OF JEROME. — 14. It has been seen that at the close of the 4th century the Latin texts of the Bible current in the Western Church had fallen into the greatest corruption. The evil was yet greater in prospect than at the time for the text of the East and West politically and ecclesiastically, was growing imminent, and the fear of the perpetuation of false and conflicting Latin copies proportionately greater. But in the crisis of danger the great scholar was raised up who probably alone for 1,500 years possessed the qualifications necessary for producing an original version of the Scriptures for the use of the Latin churches. Jerome — Eusebius Hieronymus— was born in 329 A. D. at Stridon in Dalmatia, and died at Bethlehem in 420 A. D. From his early youth he was a vigorous student, and age removed nothing from his zeal. He has been well called the Western Origen (Hody, p. 359), and if he wanted the fulness of heart and generous sympathies of the great Alexandrine, he had more sharpened critical skill and closer concentration of power. After long and self-scaping studies in the East and West, Jerome went to Rome A. D. 382, probably at the request of Damasus the Pope, to assist in an important synod (Ep. cxxi. 6), where he seems to have been at once attached to the service of the Pope (Ep. cxxii. 10). His active Biblical labors date from this epoch, and in examining them it will be convenient to follow the order of time, noticing (1) the Revision of the Old Latin Version of the N. T.; (2) the Revision of the Old Latin Version (from the Greek) of the O. T.; (3) the New Version of the O. T. from the Hebrew.

(1.) The Revision of the Old Latin Version of the N. T. — 15. Jerome had not been long at Rome (A. D. 382) when Damasus consulted him on points of Scriptural criticism (Ep. xix. "Dilectionis tuae est ut ardentii illo sinu sanctissimis ingenti ... vivo sesus scribis"). The answers which he received (Ippp. xx., xxii.) may well have encouraged him to set about a new and accurate version in the same year he applied to Jerome for a revision of the current Latin Version of the N. T. by the help of the Greek original. Jerome was fully sensible of the prejudices which such a work would excite among those "who thought that ignorance was holiness" (Ep. ad Merc. xxvii.), but the need of it was urgent. "There were," he says, "almost as many forms of text as copies: "I aut sunt exemplaria pene quot codices," Prof. in Ecce., Mutations had been introduced "by false transcription by clumsy corrections, and by careless interpersion" (xii.), and in the confusion which had ensued the one remedy was to go back to the original source (Gracca veritas, Graeca origo). The Gospels had naturally been corrected, but the rest of the books, especially those written in the form of letters, added additional details in the narrative from the parallels, and changed the forms of expression to those with which they had been originally familiarized (idil.). Jerome therefore applied himself to these first ("hac praeminentem polliceretur quattuor tamen Evangelia"). But his aim was to revise the Old Latin, and not to make a new version. When Augustine expressed to him his gratitude for "his translation of the Gospel" (Ep. civ. 6, "non parvis Deo gratias agimus de opere tuo quod Evangelium ex Graeco interpretatus est"), he tacitly corrected him by substituting for this phrase "the correction of the N. T." (Ep. xxii. 20, "Si me ut dicis, in N. T. corrigendiarum suscipiasur separatum.") For this purpose he collected early Greek MSS., and preserved the current readings wherever the sense was not injured by it ("... Evangelia... codicum Graecorum emendata collationes sed veterum. Quae ne omnium a lectiones Latinae constutudine discrepant, clausum temperavimus (vul. imperavimus) ut his tamen quae sensum velineant natura, correctis, relicus moneat gaterno ur furiant;" Prof. ad Dom. iv.). Yet although he proposed to himself this limited object, the various forms of correction which had been introduced were, as he describes, so numerous that the difference of the Old and Revised (Hieronymian) text is throughout clear and striking. Thus in Matt. v. we have the following variations:

Vetus Latina a
7 ipsis misericordia Deus
11 discitat...menisc.
12 ante vos patriae carum (Luke vi. 25).

Vulgata nova (Hierom.).
7 ipsi misericordia Deus
11 disceret...meneisc.
12 ante vos patriae carum (Luke vi. 25).

Pandexa nova translationem, ad unam vetustissim translat- tionem, quae de Romo attiniebat, ipsa super ianngeret... " (Hist. Abod. Wierzmuth, et Graevius, quoted by Hody, De Text. p. 409).

a A very interesting historical notice of the use of the Old Latin in the North of England is given by Belde, who says of Cedd, a contemporary abbot, Bibliothecarum utroque Monasterii [Wermouth et Jarrow] magna gentilis industria. Ita ut tres

(2.) The Revision of the O. T. from the LXX. -18. About the same time (cir. A. D. 383) at which he was engaged on the revision of the N. T., Jerome undertook also a first revision of the Psalter. This he made by the help of the Greek, but the work was not very complete or careful, and the words in which he describes it may, perhaps, be extended without injustice to the revision of the later books of the N. T.: "Psaltierium Romanos . . . . emendarem et juxta LXX. interpretare, hinc cura magna illud ex ore correcorum." (Pref. in Lib. Ps.). This revision obtained the name of the Roman Psalter, probably because it was made for the use of the Roman Church at the request of Damascus, where it was retained till the pontificate of Pope Vitalis (A. D. 566), who introduced the Gallican Psalter generally, though the Roman Psalter was still retained in three Italian churches. (Hodly, p. 385, "in una Roman Collecia ecedita, et extra urbem in Mediobovensi et in ecclesia S. Merici, Venetiis.") In a short time (with the old "error prevailed over the new correction," and at

a The Latin readings of CoL Aug. have been added, as offering an interesting example of the audacity of a few old "readings with the revised text. Those of Cod. Paris (g) differ, as will be seen, very widely from them.

b In one place Jerome seems to include these two revisions in one work: "Psalterium . . . certe emendatissimum juxta LXX. Interpretare nostro labore dividam Roman suceptum." . . . (Apoll. abr. Ref. ill. 56).
In Tables D, E, and F, the passages are taken from Martyr's and Sabatier's texts, without any reference to MSS, so that the variations cannot be regarded as more than approximately correct.

</table>
of the help of the Greek, to a general conformity with the Hebrew. In the preface to the Revision of Job, he notices the opposition which he had met with, and contrasts ingenuously his own labors with the more mechanical occupations of monks which excited no reproaches (\*Si aut fines

lanum jecero aut pulmonaria solia complicate

...nullus maquer, non reprehenderent. Nunc autem ... corrector vitium literae vocet").

Steele adds that the main difficulty which he experienced in the preface to the books of Chronicles, in which he had recourse to the Hebrew as well as to the Greek, in order to correct the innumerable errors in the names by which both texts were deformed. In the preface to the three books of Solomon (Proverbs, Ecclesiastes, Canticles) he notices no attacks, but excuses himself for neglecting to revise Ecclesiastes and Wisdom, on the ground that "he wished only to amend the Canonical Scriptures" ("cantannmendo Canonicis Scripturas vobis emendare desideram"). No other prefaces remain, and the revised texts of the Psalter and Job are alone now preserved; but there is no reason to doubt that Jerome carried out his design of revising all the Canonical Scriptures in the Vulgate, for he is known to have revised other books. (Ep. 1. 20, ad Legat. 5 (cir. 394), "Quod autem in albis quibus epistolae: cur prior non in libris Canonicis interpretatio asterisco hæcet et virgulas prænatat...""). He speaks of this work as a whole in several places (e.g. ad Ruff. ii. 24, "Egone contra LXX. interpretes angelus sum locus, quæ ante annos plures diligentissime emendatae massa linguae studiosis hostiis."

Comp. LXX. iii. 25: Ep. LXX. ad Lycin., "Septuaginta interpretum editionem et te habere non dubito, et ante annos plures (he is writing to p. d. 398) diligentissime emendatam studiose traditi", and distinctly represents it as a Latin Version of Origen's Hexapler text (Ep. B. 4. ad Stra. et Frct., "Ex autem quæ habetur in Etsknon et quum non vertimus"); if, indeed, the reference is not to be confined to the Psalter, which was the immediate subject of discussion. But though it seems certain that the revision was made, there is very great difficulty in tracing its history, and it is remarkable that no allusion to the revision occurs in the preface to the new translation of the Pentateuch, Joshua (Judges, Ruth), Kings, the Prophets, in which he seems to devote himself entirely to the difficulties of the text, while he does refer to his former labors on Job, the Psalter, and the books of Solomon in the parallel prefaces to those books, and also in his Apology against Rufinus (ii. 27, 29, 30, 31). It has, indeed, been supposed (Vallardi, Pref. in Hier. c.) that these six books only were published by Jerome himself, but the remainder may have been put into circulation surreptitiously. But this supposition is not without difficulties. Augustine, writing to Jerome (cir. A. D. 405), earnestly begs for a copy of the revision from the LXX., of the publication of which he was then only lately aware (Ep. xvi. 34, "Deinde melius mittas, obscurum interpretationem tuam de Septuaginta, quam te alio loco retuleris."

Comp. § 34). It does not appear whether the request was granted or not, but at a much later period (cir. A. D. 416) Jerome says that he cannot furnish him with "a copy of the LXX. (i.e. the Latin version of it) furnished with asterisks and obel, as he had lost the chief part of his former labor by some person's treachery" (Ep. cxxxiv., "Pieranea prioris laboris translati equidam anni-us"). However this may have been, Jerome could not have spent more than four or five years on the work, and that too in the midst of other labors, for in 491 he was already engaged on the versions from the Hebrew which constitute his great claim on the lasting gratitude of the Church.

(3.) The Translation of the O. T. from the Hebrew. Jerome commenced the study of Hebrew when he was already advanced in middle life (cir. A. D. 374;), thinking that the difficulties of the language, as he quaintly paints them, would serve to subdue the temptations to passion to which he was exposed (Ep. cxxv. § 12; comp. Pref. in Deut.). From this time he continued the study with unbridled zeal, and prided himself of every help to perfect his knowledge of the language. His first teacher had been a Jewish convert; but afterwards he did not scruple to seek the instruction of Jews, whose services he secured with great difficulty and expense. This excessive zeal (as it seemed exposed him to the misrepresentations of his enemies, and Rufinus indulges in a silly pun on the name of his teacher for the purpose of showing that his work was not "supported by the authority of the Church, but only of a second Basilians" (Ruf. Apol. ii. 12; Hieron. Apol. i. 13; comp. Ep. LXXIV. § 3, and Pref. in Paral.). Jerome, however, was not deterred by opposition from pursuing his object, and it were only to be wished that he had surpassed his critics as much in generous consideration of his abilities as he did in honest labor. He soon turned his knowledge of Hebrew to use. In some of his earliest critical letters he examines the force of Hebrew words (Ep. xviii., xx., A. D. 381, 383); and in A. D. 381, he had been engaged for some time in comparing the version of Aquila with Hebrew MSS. (Ep. xxii. § 1), which a Jew had succeeded in obtaining for him from the synagogue (Ep. xxxiv.. § 1). After retiring to Bethlehem, he appears to have devoted himself with renewed ardor to the study of Hebrew, and he published several works on the subject (cir. A. D. 388: Quast. Hebr. in Gen. et). These essays served as a prelude to his New Version, which he now commenced. This version was not undertaken with any ecclesiastical sanction or the revision of the Septuagint was, but only from the urgent request of private friends, from his own sense of the impertinent necessity of the work. Its history is told in the main in the prefaces to the several installments which were successively published. The Books of Samuel and Kings were issued first, and to these he prefixed the famous Prologus gallicanus, addressed to Paula and Eustochium, in which he gives an account of the Hebrew Canon. It is impossible to determine why he selected these books for his experiment, for it does not appear that he was requested by any one to do so. The work itself was executed with the greatest care. Jerome speaks of the translation as the result of constant revision (Prod. Gal., "Lege ergo primum Samuel et Mahalim meum meum, meum meum, invenire et meum eucreius vertendo et emendando solicitius et dieibus et tenens nostrum et"). At the time when this was published (cir. A. D. 391, 392) other books seem to have been already translated (Prod. Gal., "omnis libr us quos de Hebræo verterimus"); and in 393 the sixteen prophets were in circulation,

* A question has been raised whether Daniel was not translated at a later time (comp. Vit. Chron. xxii.,).
and Job had lately been put into the hands of his most intimate friends (Ep. xlix. ad Parmenon.). Indeed, it would appear that already in 392 he had in some sense completed a version of the O. T. (De Vir. Ill. cxxxv., "Vetus Iusta Hebraicum transillii." This treatise was written in that year); but many books were not completed and published till some years afterwards. The next books which he put into circulation, yet with the provision that they should be confined to friends (Pref. in Erc.), were Ezra and Nehemiah, which he translated at the request of Dominica and Rogatianus, who had urged him to the task for three years. This was probably in the year 394 (Ilt. Histor. xxi. 4), for in the preface he alludes to his intention of discussing a question which he treats in Ep. ivii., written in 395 (De opuslum Gen. iterpret.). In the preface to the Chronicles (addressed to Chronicon), he alludes to the same epistle as "lately written," and these books may therefore be set down to that year. The three books of Solomon followed in 388, having been "the work of three days" when he had just recovered from a severe illness, which he suffered in that year (Pref. "Haec longa agrotatione invas- tus ... triabii opus nonuliv vestro [Chronatmio et Heliodoroi] consecravi." Comp. Ep. lxiii. 10.). The Oriasleach now alone remained (Ep. xxvi. 5, i.e. Pentateuch, Joshua, Judges, Ruth, and Esther, Pref. in Jos.). Of this the Pentateuch (inscribed to Desiderius) was published first, but it is uncertain in what year. The preface, however, is not quoted in the Apology against Rufinus (a. D. 400), as those of all the other books which were then published, and it may therefore be set down to a later date (Hody, p. 357). The remaining books were completed at the request of Eustochium, shortly after the death of Paula, a. D. 404 (Pref. in Tob.). Thus the whole translation was spread over a period of about fourteen years, from the six- teenth to the seventy-sixth year of Jerome’s life. But still parts of it were finished in great haste (e.g. the books of Solomon). A single day was sufficiently for the translation of Tobit (Pref. in Tob.); and "one short effort." (una incenbratimcula) for the translation of Judith. Thus there are errors in the work which a more careful revision might have removed, and Jerome himself in many places gives renderings which he prefers to those which he had adopted, and admits from time to time that he had fallen into error (Hody, p. 362). Yet such defects are trifling when compared with what he accomplished successfully. The work remained for eight centuries the bulwark of western Christianity; and as a monument of ancient linguistic power the translation of the O. T. stands unrivalled and unique. It was at least a direct rendering of the original, and not the version of a version. The Septuagintial tradition was at length set aside, and a few passages will show the extent and character of the differences by which the new translation was distinguished from the Old Latin which it superseded.

a Jerome does not include him among the prophets in the Prot. Gt.; but in a letter written a. D. 394 (Ep. lii. ad Paul.) he places him distinctly among the four greater prophets. The preface to Daniel contains no mark of time: it appears only that the translation was made after that of Tobit, when Jerome was not yet familiar with Chaldee.

b The date given by Hody (a. D. 388) rests on a false reference (p. 356).
IV. THE HISTORY OF JEROME'S TRANSLATION TO THE INVENTION OF PRINTING.—21.

The critical labors of Jerome were received, as such labors always are received by the multitude, with a loud outcry of reproach. He was accused of disturbing the repose of the Church, and shaking the foundations of faith. Acknowledged errors, as he complained, were looked upon as bawling by ancient usage (Prof. in Job ii.); and few had the wisdom or candor to acknowledge the importance of seeking for the purest possible text of Holy Scripture. Even Augustine was carried away by the popular prejudice, and endeavored to discourage Jerome from the task of a new translation (Epp. civ.), which seemed to him to be dangerous and almost profane. Jerome, indeed, did little to smooth the way for the reception of his work. The violence and bitterness of his language is more like that of the rival scholars of the 16th century than of a Christian Father; and there are few more touching instances of humility than that of the young Augustine bending himself in entire submission before the contempluous and impatient reproof of the veteran scholar (Epp. exil. s. f.). But even Augustine could not overcome the force of early habits. 'To the last he remained faithful

VULGATE, THE

to the Italic text which he had first used; and while he notices in his *Retractationes* several faulty readings which he had formerly embraced, he shows no tendency to substitute generally the New Version for the Old. Thus, "In such cases time is the great returner. Change based upon ignorance soon dies away; and the new translation gradually came into use equally with the old, and at length supplanted it.

In the 5th century it was adopted in Gaul by Eucherius of Lyons, Vincent of Lerins, Sulpicius and Venantius Fortunatus, (Hody, p. 308; but the Old Latin was still retained in Africa and Britain (Ibid.). In the 6th century the use of Jerome's Version was universal among scholars except in Africa, where the other still lingered (Jullinus); and at the close of it Gregory the Great, while commenting on Jerome's Version, acknowledged that it was admitted equally with the Old by the Apostolic See (Pref. to *Jud. et Leum.).

Thus Jerome, in his *readdings* of the 3466 text of Ecclesiastes, when he quotes the *Edition''*, in *De officiis* (Hody, i. 12), after affirming the inspiration of the LXX., goes on to recommend the Version of Jerome, saying, "which," he says, "is used universally, as being more truthful in substance and more perspicuous in language." [Hieronymi] editions generally omits ecclesiasticumperneaguat, pro e qual venter sit in seuentis et clorun in versibus; (Hody, p. 402). In the 7th century the traces of the Old Version grow rare. Julians of Toledo (A. D. 676) affirms with a special polemical purpose the authority of the LXX., and so of the Old Latin; but still he himself follows Jerome when not influenced by the requirements of controversy (Hody, pp. 493, 494). In the 8th century Bede speaks of Jerome's Version as "our edition" (Hody, p. 498); and from this time it is needless to trace its history, though the Old Latin was not wholly forgotten. Yet throughout, the New Version made its way without any direct ecclesiastical authority. It was adopted in the different churches gradually, or at least without any formal command. (Compare Hody, p. 411 f. for detailed quotations.)

But the Latin Bible which thus passed gradually into use under the name of Jerome was a strangely composite work. The books of the O. T., with one exception, were certainly taken from his version from the Hebrew; but this had not only been variously corrupted, but was itself in many particulars (especially in the Pentateuch) at variance with his later judgment. Long use, however, made it impossible to substitute his Psalter from the Hebrew for the Gallican Psalter; and thus this book was retained from the Old Version, as Jerome had corrected it from the LXX. Of the Apocryphal books Jerome hastily revised or translated two only, Judith and Tobit. The remainder were retained from the Old Version against his judgment; and the Apocryphal additions to Daniel and Esther, which he had careless manner as apocryphal in his own version, were treated as integral parts of the books.

A few MSS. of the Bible faithfully preserved the "Hebrew canon," but the great mass, according to the general custom of copyists to omit nothing, included everything which had held a place in the Old Latin. In the N. T. the only important addition which was frequently interpolated was the apocryphal Epistle to the Laodiceans.

The text of the Gospels was in the main Jerome's revised edition; that of the remaining books his very incomplete revision of the Old Latin. Thus the present Vulgate contains elements which belong to every period and form of the Latin Version—(1) *Unrevised Old Latin*: Wisdom, Eccles., i. 2 Macc. 3: (2) *Old Latin revised from the LXX.*: Psalter. (3) *Jerome's free translation from the original text*: Judith, Tobit. (4) *Jerome's translation from the Original*: O. T. except Psalter. (5) *Old Latin revised from Greek MSS.*: Gospels. (6) *Old Latin cursorily revised*: the remainder of N. T.

The Revision of Alcuin.—23. Meanwhile the text of the different parts of the Latin Bible was rapidly deteriorating. The simultaneous use of the Old and New versions necessarily led to great corruptions of both texts. Mixed texts were formed according to the taste or judgment of scribes, and the continuation was further increased by the changes which were sometimes introduced by those who had some knowledge of Greek. From this cause the so-called Anglo-Saxon Vulgate MS. of the 8th or 9th centuries, which the writer has examined is wholly free from an admixture of old readings. Several remarkable examples are noticed below (§ 32); and in rare instances it is difficult to decide whether the text is not rather a revised *Vetus* than a corrupted *Vulgate nova* (e. g. Brit. Mus. *Reg. p. i. E. vi.: Addit. 5,463). As early as the 6th century, Cassiodorus attempted a partial revision of the text (Psalter, Prophets, Epistles) by a collation of old MSS. But private labor was unable to check the growing corruption; and in the 8th century this had arrived at such a height, that it attracted the attention of Charlemagne. Charlemagne at once solved a remedy, and entrusted to Alcuin (cfr. A. D. 802) the task of revising the

When he quotes it, he seems to consider an explanation necessary (De doctr. Christ. iv. 7, 15): "Ex illius propetheta librum potissimum hoc facilem, non autem secundum LXX. interpretes, quos citam quotvis auctores interpretari, ab hos alter emittere nonnulla divina, ut ad spiritualia vox munis ad vocem testium intitant. sed sicut ex Hebraeo in Latinius eloquium, presbytero Hieronymo utriusque linguae perito interprete, translatu sunt." In his *Retractationes* there is no definite reference, as far as I have observed, to Jerome's critical labors. He mentions, however, some false readings: *Lib. i. viii.: Ps. xxiii. 22* (Rom. viii. 50); *Wis. viii. 7*; *Eccles. i. 2*; of *xvi 4*; *Matt. v. 22, non siue causa*; *Lib. ii. viii.*: *Matt. x. 17* (dandum pro dano).
VULGATE, THE

Latin text for public use. This Alcuin appears to have done simply by the use of MSS. of the Vulgate, and not by reference to the original texts (Porson, Letter vi. to Tavisi, p. 145). The passages which are added by Holy to prove his familiarity with Hebrew, are in fact only quotations from Jerome, and he certainly left the text unaltered, at least in one place where Jerome points out its inaccuracy (Gen. xxv. 8). The patronage of Charlemagne gave him powerful access to the provision of ancient MSS. Herein which claim to date immediately from his time. According to a very remarkable statement, Charlemagne was more than a patron of sacred criticism, and himself devoted the last year of his life to the correction of the Gospels with the help of Greeks and Syrians (Van Ess, p. 159, quoting Theagius, Script. Hist. Franc. ii. 277). 24. However this may be, it is probable that Alcuin’s revision contributed much towards preserving a good Vulgate text. The best MSS. of his recension do not differ widely from the pure Hieronymian text, and his authority must have done much to check the spread of the interpolations which reappeared afterwards, and which were derived from the intermedium of the Old and New Versions.

Examples of readings which seem to be due to him occur: Bent. i. 9, add. solihostia; revisiones, for critic id. 4, ascending, for esceptedii id. 24, in una tun, for in una tuns: iv. 33, civiti, for civiti; vi. 13, ipdi, add. soli 39, orculas, om. tuns: xvii. 29, cibus, for jili: xx. 6, add. reninent: xxvi. 16, at, for et. But the new revision was gradually discarded, though later attempts at correction were made by Lanfranc of Canterbury (A.D. 1089, Holy, p. 415), and by Richard Niclaus (A.D. 1150). In the 13th century Correctio was drawn up, especially in France, in which varieties of reading were discussed; and Roger Bacon complains loudly of the confusion which was introduced into the “Common, that is the Parisian copy,” and quotes a false reading from Mark viii. 58, where the correctors had substituted confusio for confusion (Holy, pp. 419 ff.). Little more was done for the text of the Vulgate till the invention of printing; and the name of Laurentius Valla (cir. 1450) alone deserves mention, as of one who divested the higher powers to the criticism of Holy Scripture, at a time when such studies were little esteemed.

V. THE HISTORY OF THE PRINTED TEXT.

a Hieron. Quest. in Gen. xxvii. 8: Collect. in Ev. iv. 496; ibid. xii. 499.
b Among these is that known as Charlemagne’s Biblia, Rer. Max. Add. 10541, which has been described by Hog, Est. §. 123. Another is in the library of the Observantines (Rer. Max. Add. 29, Coll. 1). A third is in the Imperial Library at Paris. All of these, however, are later than the age of Charlemagne, and date probably from the time of Charles the Bald. A.D. 876.
c Mr. H. Brabant suggests that this statement deserves some confirmation from the preface which Charle-
magne added to the collection of Hallowed arranged by Paulins Divinorum, in which he speaks “of the pains which he had taken to set the church books to rights.” A copy of this collection, with the Preface (eighteenth.), is preserved in the Library of St. Peter’s Coll. Cumber.
d Vercellone has given the readings of three Latin Correctorii, and refers to his own essay upon their work, “De Cntrct. in Ev.,” part iv. of the Academia, xv. There is a Correctorium in Est. Max. Reg. i. A. viii.
e The divisions of the Latin Versions into capitula were very various. Cassiodorus (Var. 134) mentions an ancient division of some books existing in his time: “OctoActae (i.e. Pentateuch, Joshua, Judges, Ruth) titulis . . . crebilibus imprimito a majorio nostri ordine curur us descripsit.” Dr. Inst. Div. Lit. 1, and in other books; i. 2 Chron., the book of Samuel, he himself made a corresponding division. Je-
ron mentions capitula, but the sections which he indi-
cates do not seem to establish the existence of any generally received arrangement; and the variety of the capitulation in the best existing MSS. of his ver-
sion proves that no one method of subdivision could claim his authority. The divisions which are given in MSS. correspond with the summary of contents by which the several books are prefaced, and vary con-
siderably in length. They are called indiscriminately capitula, breves, tituli. Mariana, in his edition of the Bibliotheca, gives a threefold arrangement, and as,
signs the different terms to the three several divisions; thus Genesis has xxxviii; tituli, xlv breves, lxviii (or vice versa). While Jerome himself does not appear to have fixed any division of the Bible into chapters, he arranged the text in lines (versus, sigili) for conve-
nience in reading and interpretation; and the lines were combined in marked groups (novem, ilia). In this poetical books a further arrangement marked the

particularism of the answering clauses (Matthiay, Syn-
thesis, iv. Ad Dir. Bibl.). The number of lines (versus) is variously given in different MSS. (Comp. Vercellone,० जै. लेट. Ap. de Jos.) For the origin of the present division of the Vulgate, see Bibl. l. 374 a.

An abstract of the capitula and versi given in the Alcuin MS., known as “Charlemagne’s Bible” (Bibl. Max. Addit. 10541), will give a satisfactory idea of the contents, nomenclature, and arrangement of the best copies of the Latin Bible.

25. It was a noble omen for the future progress of printing that the first book which issued from the press was the Bible; and the splendid pages of the Mazarin Vulgate (Mainz, Gutenberg and Fust) stand yet unsurpassed by the latest efforts of typogra phy. This work is referred to about the year 1455, and presents the common text of the 15th century. Other editions followed in rapid succession, the first with a date, Mainz, 1462, Fust and Schoffer, but they offer nothing of critical interest. The first collection of various readings appears in a Paris edition of 1501, and others followed at Venice and Lyons in 1511, 1513; but Cardinal Xulences (1502-1517) was the first who seriously revised the Latin text (\ldots \ contulimus eum quapla riens ex exemplars venerandae vetustatis; sed his maxime, quae in publica Compendiis nostra. Universitatis bibliotheca reconduntur, qua supra octingentesimum abinum annuam litteris Gothicis conscripta, ea sunt sinceritate ut nec quis lapsus posit in eis deprehendi,\textsuperscript{45} to which he assigned the middle place of honor in his Polyglott between the Hebrew and Greek texts [comp. New Testament, iii. 3219 b]. The Complutensian text is said to be more correct than those which preceded it, but still it is very far from being pure. This was followed in 1528 (24 edition 1532) by an edition of R. Stephens, who had bestowed great pains upon the work, consulting three MSS. of high character and the earlier editions, but as yet the best materials were not open for use. During the same time various attempts were made to correct the Latin from the original texts (Erasmus, 1510; \textsuperscript{b} Pagninus, 1518-28; Card. Cajetanus; Stechlinus, 1529; Charyis, 1542), or even to make a new Latin version (Jo. Campanius, 1533). A more important edition of R. Stephens followed in 1540, in which he made use of twenty MSS. and introduced considerable alterations into his former text. In 1541 another edition was published by Jo. Benedictus at Paris, which was based on the collation of MSS. and editions, and was often reprinted afterwards. Verocellis speaks much more highly of the Biblia Ordinaria, with glosses, than of the Complutensian. 

\textsuperscript{45} Ep. ad Philum. \ capp. iii. none. 

\textsuperscript{b} Ep. ad Hesir, capp. xxxvii. none. 

\textsuperscript{b} Ep. ad Laodiceorum. none. none. 

\textsuperscript{b} Apologia. \ capp. xxx. habet versus i. occ. 

An argumentum is given before each of the books of the N. T. except the Catholic Epistles and the Epis tic to the Laodiceans, and the whole M. S. classes with sixty-eight hexameter Latin verses. The divisions agree generally with Er. M. Hagi. 2056, and Lambeth 3, 4. In the Vallencian Aulean MS. (comp. p. 3747 b) the apocryphal Ep. to the Laodi cianes is not found; but it occurs in the same position in the great Biblia in the King's Library (R. E. viii.), with four copiatas. 

Many examples of the various divisions into copiatas are given at length by Thomassius, Opera, i. ed. Ver sen, Roma, 1747. The divisions of the principal MSS. which the writer has examined are given below, \textsuperscript{c} 20. 

Bentley gives the following stichometry from Cod.

\textsuperscript{c} Soc. coll. (a): \Ep. ad Rom., Scriba de Chariathia. Versus dcccc. 

(see two other of B.'s MSS.). 

\textsuperscript{d} ad Cor. i., Scriba de Philippia. Versus dcccxx. 

\textsuperscript{d} ad Cor. ii., Scriba de Macedonith. Versus dcccxxx. (sic). 

\textsuperscript{d} ad Quint., Scriba de urbe Roma. Versi cccc. 

\textsuperscript{d} ad Ephys., Scriba de urbe Roma. Versus cccxi. 

\textsuperscript{d} ad Coloss., Scriba de urbe Roma. Versi cccc. 

\textsuperscript{d} ad Thess. i., Scripa de Athenis. Versi cccxxxii. 

\textsuperscript{d} ad Thess. ii., Scripa de urbe Roma. Versus ccxvii. 

\textsuperscript{d} ad Tim. i., Scripa de Laodiciathia. Versus cccxvii. 

\textsuperscript{d} ad Tim. ii., Scripa a Roma. Versus cccxvi. 

\textsuperscript{d} ad Tit., Scripa de Nicolathia. Versus xxvii. 

\textsuperscript{d} ad Philium., Scriba de urbe Roma. Versus ccccxx. 

\textsuperscript{d} ad Hebr., Scriba de Roma. Versus dccc. 

No verses are given from this MS. for the other books. 

\textsuperscript{a} The copy which is here alluded to is still in the library at Alcala, but the writer is not aware that it has been reexamined by any scholar. There is also a second copy of the Vulgate of the 12th century of Biblical MSS. at Alcala is given in Dr. Treseges's Printed Text of N. T. pp. 15-18. 

\textsuperscript{b} Erasmus himself wished to publish the Latin text as he found it in MSS.; but he was dissuaded by the advice of a friend, "argue rather than write" ("autendi consilium improba versus quam felicissimum").
VULGATE, THE

... etc., published at Lyons, 1545, as giving readings in accordance with the oldest MSS., though the sources from which they are derived are not given (Varia Lect. xiv.). The course of controversy in the 16th century exaggerated the importance of the differences in the text and interpretation of the Vulgate, and the controversy called for some remedy. An authorized edition became a necessity for the Romish Church, and, however gravel, later theologians may have erred in explaining the pole or intentions of the Tridentine Fathers on this point, they have admitted that until the principle of reference to the original texts the principle of their decision — the presence, that is, of the oldest Latin text to any later Latin version — was substantially right. * The Satire and Clementine Vulgates, — 26.

The first session of the Council of Trent was held on Dec. 13th, 1545. After some preliminary arrangements the Nicene Creed was formally promulgated as the foundation of the Christian faith on Feb. 4th, 1546, and then the Council proceeded to the question of the authority, text, and interpretation of Holy Scripture. A committee was appointed to report upon the subject, which held private meetings from Feb. 29th to March 17th. Considerable variety of opinion existed both as to the relative value of the original Latin texts, and the final decree was intended to serve as a compromise. * This was made on April 8th, 1546, and consisted of two parts, the first of which contains the list of the canonical books, with the usual annotations on those who refuse to receive it; while the second

a On the Edition and Use of the Sacred Books: a question decided simply by the relative merits of the current Latin versions (see ex omnibus Latinius verborum que circumfertur ... ... ), and this only in reference to public exercises. The object contemplated is the advantage (utilitas) of the Church, and not anything essential to its constitution. It was further enacted, as a check to the licence of printers, that "Holy Scripture, but especially the old and common (Vulgate) edition (lexit quidam without excluding the original texts), should be printed as correctly as possible." In spite, however, of the comparative caution of the decree, and the interpretation which was affixed to it by the highest authorities, it was received with little favor, and the want of a standard text of the Vulgate partly left the question as unsettled as before. The decree itself was made by men little fitted to anticipate the difficulties of textual criticism, and afterwards these were found to be so great that for some time it seemed that the authorized edition would appear. The theologians of Belgium did something to meet the want. In 1547 the first edition of Hencentius appeared at Louvain, which had very considerable influence upon later copies. It was based upon the collation of Latin MSS. and the Stephene edition of 1540. In the Antwerp Polyglott of 1560-1572 the Vulgate was called the Complutensian Vulgare, a description that in the Antwerp edition of the Vulgate of 1573-74 the text of Hencentius was adopted with copious additions of readings by Lucas Brugensis. This last was designed as the preparation and temporary substitute for the Papal edition; indeed it may be questioned whether it was not put forth as the "correct edition required by the Tridentine decree" (comp. Lucas Brug. ap. Verancellone, ed. It. But a Papal board was already engaged, however desultorily, upon the work of revision. The earliest trace of an attempt to realize the recommendations of the Council is found fifteen years after it was made. In 1559 Paulinus Manutius (son of Aldus Manutius) was invited to Rome to have the printing of Latin and Greek Bibles (Verancellone, Var. Lect. etc., i. Proil. xix. n.). During that year and the next several scholars (with Sirletus at their head) were engaged in the revision of the text. In the pontificate of Pius V. the work was continued, and Sirletus still took a chief part in it (1569, 1570, Verancellone, s. e. xx., n.), but it was only in 1582 that the difficulty of obtaining an authoritative edition was insuperable. Nothing further was done towards the revision of the Vulgate under Gregory XIII., but preparations were made for an edition of the LXX. This appeared in 1587, in the second year of the pontificate of Sixtus V., who had been one of the chief promoters of the work. After the publication of the LXX., Sixtus immediately devoted himself to the production of an edition of the Vulgate. He was himself a scholar, and his imperious genius led him to face a task from which others had shrunken. "He had felt," he says, "from his first accession to the papal throne (1585), great grief, or even indignation (indigna ferentes), that the Tridentine decree was still unsatisfied;" and a board was appointed, under the presidency of Cardinal Carafa, to arrange the materials and offer suggestions for an edition. Sixtus himself revised the text, rejecting or confirming the suggestions of the board by his absolute judgment; and when the work was printed he examined the sheets with the utmost care, and corrected the errors with his own hand. * The
VULGATE, THE
VULGATE, THE

edition appeared in 1590, with the famous constitution *Eternus ille* (dated March 1st, 1589) prefixed, in which Sixtus affirmed with characteristic decision the plenary authority of the edition for all future time. "By the fullness of Apostolical power" (such is his words) "we decree and declare that this edition, . . . approved by the authority delivered to us by the Lord, is to be received and held as true, lawful, authentic, and unquestioned, in all public and private discussion, reading, preaching, and explanation." "He further forewarned the public by publication ancient readings in copies of the Vulgate, and pronounced that all readings in other editions and MSS. which vary from those of the revised text "are to have no credit or authority for the future" (ca in quibus nostre editiones non consensuerint, nullum in posterioremudem habitudinem esse decrevimus). It was also enacted that the new revision should be introduced into all missals and service-books: and the greater excommunication was threatened against all who in any way contravened the constitution. Had the life of Sixtus been prolonged, there is no doubt but that his iron will would have enforced the changes which he thus perceptively proclaimed; but he died in Aug. 1590, and those whom he had alarmed or offended took immediate measures to hinder the execution of his designs. Nor was this without good reason. He had changed the readings of those whom he employed to report upon the text with the most arbitrary and unskilful hand; and it was scarcely an exaggeration to say that his precipitate "self-reliance had brought the Church into the most serious peril." During the brief pontificate of Pius VII, the revision could be done: but the reaction was not long delayed.

On the accession of Gregory XIV, some went so far as to propose that the edition of Sixtus should be absolutely prohibited; but Bellarmin suggested a middle course. He proposed that

serum lectum in ratione perpendere, sanctum doctorem et pontificem in mysteriis recognoscere; quae quibus antecedentia res insigniter in lucem discenderet, ut in hodierno praedilis conciliatis ecclesiis curricular, in quae operam quotidianam, publicam plurimis laboribus secum eduximus, aliquem quidem labor meritum in discernendo, noster auctore in quodam, si non in omni optimo dilectissimo auxilio, sive ut vere dominum in Ecclesiae abhinc saeculis recensionem omnino retinuerimus. Nominem inter Tu- polygraphum in Apostolico Vaticano Palatio nostro . . .

extra quinque . . . ut in eo concordantiam illum Bibliorum voluminum excludant; enique res quas magna confirmare perferetur, nostra nos ipsi manu corrigamus, si qua prope vitio obserueret, et quae confitére ut facie confundat posse videtur . . . . distin- num (atque, deo volente, in postea annis)." (Offic. p. 487, Van Ess, p. 271.)

"Ex extra nostrae scientiae, deque Apostolici pontificis plenitudo sanctissima se declaramus, eum Vulgatum sacrum, tam veteris, quam novi Testa- menti praeclaram Latine editionem, quam pro autenticum a Comoio TrésorÉne recepta est, una illa jubilativa, aut controversa concordia esse habeamus, quin nunquam, proinde opinem faceret censuram, etiam et in Vaticana Typographia impressam in universa Christi- stae, utique in omnibus Christianis orbibus Ecclesiae legantur omni, legibus, gradationibus, et explanationibus reperientur et benedictionem esse.

Bellarmin to Clement VII: "Novit lecturam resec esse tamque ecclesiasticam disciplinam communci Sixtu S. V. duxit praen. proclamavit et eam uos præcepto suis uenerunt notarii

the erroneous alterations of the text which had been made in it ("quia multa mutata erant") should be corrected with all possible speed and (although under the name of Sixtus, with a preteritory note for the effect that 'errata' artes had crept into the former edition by the carelessness of the printers." This ptous fraud, or rather during falsehood, for it can be called by no other name, found favor with those in power. A commission was appointed to revise the Sixtine text, under the presidency of the Cardinal Colonna (Bellarmin). At first the commission was slow progress, and it seemed likely that a year would elapse before the revision was completed (Ungardii, in Vercellone, Proleg. lvi.). The mode of proceedings was therefore changed, and the commission moved to Zagarolo, the country seat of Colonna; and, if we may believe the inscription which still commemorates the event, and the current report of the time, the work was completed in nineteen days. But even if it can be shown that the work extended over six months, it is obvious that there was no time for the examination of new authorities, but only for making a rapid revision with the help of the materials already collected. The task was hardly finished when Gregory died (Oct. 1591), and the publication of the revised text was again delayed. His successor, Innocent IX, died within the same year, and at the beginning of 1592, Clement VIII was raised to the papal See. Clement entrusted the final revision of the text to Teutolus, and the whole was printed by Albius Manutius (the grandson) before the end of 1592. The Preface, which is moulded upon that of Sixtus, was written by Bellarmin, and is favorably distinguished from that of Sixtus by its temperance and even modesty. The text, it is said, had been prepared with the greatest care, and though not absolutely perfect was at least (what is no idle boast) more correct than that of any former edition. Some readings indeed, it is allowed, had, though

bibliorum emendationem agressum est; nec sine eo eo quisquam humanum periculum occurrit." (Van Ess, p. 290.)

(c) The following is the original passage quoted by Van Ess from the first edition of Bellarmin's *Anec- tographia* (p. 241), anno 1591: "Cum Gregorius XIV. Vaticano Palatio nostro . . . exstraximus . . . ut in eo concordantium jux Bibliorum voluminum excludant; enique res quas magna inscrupulac profererent, nostra nos ipsi manu corrigamus, si qua prope vitio obseruerat, et quae confitére ut facie confundat posse videtur . . . . distin- num (atque, deo volente, in postea annis)." (Offic. p. 487, Van Ess, p. 271.)

The last words refer to the "sixteenth conformation of a thesis of Bellarmin, in which he denied "Payman esse dominum directum totius orbis:" and it was this whole passage, and not the Preface to the Clementine Vulgate, which cost Bellar- min his canonization (Van Ess, from the original doc- ument, pp. 251-252). It will be observed, however, that he first describes the errors of the Sixtine edition as *delicate attentiones*, and then proposes to represent them as *errors.*

(d) The evidence collected by Van Ess (pp. 256 ff.), that the cardinals' admissions that errors (aliqua errores) in Vercellone (pp. xxix-xlix.), will prove that this but- uage is not too strong.
27. The respective merits of the Sixtine and Clementine editions have been often debated. In point of mechanical accuracy, the Sixtine seems to be clearly superior (Van Ess, 365 ff.), but Van Ess has allowed himself to be misled in the estimate which he gives of the critical value of the Sixtine readings. The collections lately published by Vercellone place in the clearest light the strange and unmetrical mode in which Sixtus dealt with the Old Testament, and the results of the re-examinations of the Sixtine correctors are marked by singular wisdom and critical tact, and in almost every case where Sixtus departs from them he is in error. This will be evident from a collation of the readings in a few chapters as given by Vercellone. Thus in the first four chapters of Genesis the Sixtine correctors are right against Sixtus: i. 27, 16; ii. 1, 11; iii. 17, 23; iv. 1, 5, 7, 8, 9, 15, 16, 19; and on the other hand Sixtus is right against the correctors in i. 15. The Gregorian correctors, therefore (whose results are given in the Clementine edition), in the main simply restored readings adopted by the Sixtine board and rejected by Sixtus. In the book of Deuteronomy the Clementine edition follows those of the Sixtine correctors: i. 4, 19, 31; ii. 21; iv. 6, 22, 28, 30, 33, 39; v. 24; vi. 4; vii. 1; ix. 9; x. 3; xi. 3; xii. 12, 15, &c.; and every change (except probably vi. 4; xii. 11, 12) is right; while on the other hand in the same chapters there are, as far as I have observed, only two instances of variation without the authority of the Sixtine correctors (xii. 10, 22). But in point of fact the Clementine edition errs by excess of caution. Within the same limits it follows Sixtus against the correctors wrongly in ii. 33; iii. 10, 12, 13, 16, 19, 20; iv. 10, ii. 28, 42; vi. 3; vi. 28; and in the whole book admits in the following passages arbitrary changes of Sixtus: iv. 10: v. 24: vi. 19; xii. 15, 32; xvi. 10, 11; xxiv. 39. In the last report of the Sixtine correctors the Sixtine edition has not yet been published, it is impossible to say how far the same law holds good; but the following comparison of the variations of the two editions in continuous passages of the Gospels and Epistles will show that the Clementine, though not a pure text, is yet very far purer than the Sixtine, which often gives Old Latin readings, and sometimes appears to depend simply on patristic authority. (c. c. pp. li.)
28. While the Clementine edition was still reen some thoughts seem to have been entertained of revising it. Lucas Cranachus made important collections for this purpose, but the practical difficulties were found to be too great, and the study of various readings was reserved for scholars (Belserian, ad Lucanum, 1, 15). In the next generation use and controversy gave a sanction to the authorized text. Many, especially in Spain, pronounced it to have a value superior to the originals, and to be inspired in every detail (comp. Van Esp, 401, 402; Holy, iii. ii. 15); but it is useless to dwell on the history of such extravagancies, from which the Jesuits at least, following their great champion Belserian, wisely kept aloof. It was a more serious matter that the universal acceptance of the equal text checked the critical study of the materials on which it was professedly based. At length, however, in 1706, Martinaeus published a new, and in the main better text, chiefly from original MSS., in his edition of Jerome. Vallarsi added fresh collations in his revised issue of Martinaeus’s work, but in both cases the collations are imperfect, and it is impossible to determine with accuracy the text which MSS. authority the text which is given depends. Sabatier, though professing only to deal with the Old Latin, published important materials for the criticism of Jerome’s Version, and gave at length the readings of 1 near Brugesian (1748). More than a century elapsed before anything more of importance was done for the Text of the Latin Versions of the O.T., when at length the fortunate discovery of the original revision of the Sixtine correctors again directed the attention of Roman scholars to their authorized text. The first-fruits of their labors are given in the volume of Verceilie already often quoted, which has thrown more light upon the history and criticism of the Vulgate than any previous work. There are some defects in the arrangement of the materials, and it is unfortunate that the editor has not added either the authorized or corrected text; but still the work is such that every student of the Latin text must wait anxiously for its completion.

29. The neglect of the Latin text of the O. T. is but a consequence of the general neglect of the criticism of the Hebrew text. In the N. T. more has been done for the correction of the Vulgate, though even here no critical edition has yet been published. Numerous collations of MSS., more or less perfect, have been made. In this, as in many other points, Bentley pointed out the true path which others have followed. His own collation of Latin MSS. was extensive and important (comp. Ellis, Benedicti Critica Sacra, xxxiv. 8), Griechsch added new collations, and arranged those which others had made. Lachmann printed the Latin text in his larger edition, having collated the Codex Fuldensis for the purpose. Tischendorf has labored among Latin MSS. only with less zeal than among Greek. And Tregelles has given in his edition of the N. T. the text of Col. Ammonius from his own collation with the variations of the 1-30 he gives 13 variations of St. Chad’s Gospels and omits 30; and there is nothing in the character of the readings recorded which can have determined the selection but those which are neglected are sometimes noted from other MSS., and are in themselves of every degree of importance. A specimen from each of the volumes which contain his collation will show the great amount of labor which he bestowed upon the work; and, hitherto, no specimen
the Sixtine and Clementine editions are in the library of the British Museum.)

VI. The Materials for the Revision of Jerome's Text. — 30. Very few Latin MSS. of the O. T. have been collated with critical accuracy. The Pentateuch of Vercellone (Rome, 1809) is the first attempt to collect and arrange the materials for determining the Hieronymian text in a manner at all corresponding with the importance of the subject. Even in the N. T. the criticism of the Vulgate text has always been made subsidiary to that of the Greek, and most of the MSS. quoted have only been examined cursorily. In the following list of MSS., which is necessarily very imperfect, the notation of Vercellone (from whom most of the details, as to the MSS. which he has examined, are derived) has been followed as far as possible; but it is much to be regretted that he marks the readings of MSS. Correctoria and editions in the same manner.

(i.) MSS. of Old Testament Apocrypha.

A. (Codex Ambrosianus, Bibl. Laurent. Flor., at Florence, written about the middle of the 6th cent. (cir. 541, Tisch.)) with great accuracy, so that both in age and worth it stands first among the authorities for the Hieronymian text. It contains Jerome's Psalter from the Hebrew, and the whole Latin Bible, with the exception of Baruch. The variations from the Clementine text in the N. T. have been edited by F. F. Fleck (1840); and Flechsig and Tregelles separately collated the N. T. in 1843 and 1846, the former of whom published a complete edition (1850; 24 ed. 1854) of this part of the MS., availing himself also of the collation of Tregelles. The O. T. has been now collated by Vercellone and Palmiere for Vercellone's Vercellonum (Vercellone, i. p. xxiv.). The MS. was rightly valued by the Sixtine-correctors, who in many places have followed its authority above, or when only feebly supported by other evidence: c. g. Gen. ii. 18, 20, vi. 21, vii. 3, 5, ix. 18, 19, x. 1.

B. (Codex Tiberonum, Bibl. Eccles. Tolet.,) at Toledo, written in Gothic letters about the 8th century. - \(\beta\), the Gospels of St. Chad, \(\chi\), the Gospels of Mac Regol; \(\gamma\), the Gospels of St. John C. Oxon (comp. the lists p. 565. f.)

---

has been published. The student may find it interesting to compare the variations noted with those in Table B.

cent. The text is generally pure, and closely approaches to that of A, at least in C, T. A collation of this MS. with a Louvain edition of the Vulgate (1569, fol.) was made by Christopher Pelhamore by the command of Sixtus V., and the Sixtime correctors set a high value upon its readings, 356, 42, 51. The collation of Pelhamore was published by Banchiini (VindelicR, p. iv, ff.), from whom it has been reprinted by Migne (Hieron. Opp. x. 875 ff.). Vercellone has made use of the original collation preserved in the Vatican Library, which is not always correctly transcribed by Banchiini; and at the same time he has noted the various readings which have been neglected owing to the difference between the Louvaun and Clementine texts. The MS. contains all the Latin Bible (the Psalter from the Hebrew), with the exception of Baruch. A new collation of the MS. is still desirable; and for the N. T. at least the work is one which might easily be accomplished.

C (Codex Pelhamorii, C. Carolinus, Roma, Mon. Sacra, MS. Sec. i. p. 31. Text of Polyglot. The collation of Pelhamore gives a MS. of the whole Latin Bible, with the exception of Baruch. Vercellone assigns it to the 9th century. It follows the recension of Alcuin, and was used by the original board appointed by Pope IV. for the revision of the Vulgate. It has been collated by Vercellone.

D (Codex Vaticani Polonensis, Vat. 31, Roma, Bibl. Vaticana, Orat. 14, v.), an Alcuinian MS. of the Bible also used by the Roman correctors, of the same date (or a little older) and character as C. Comp. Vardius, Pref. ad Hieron. ix. 15 (ed. Migne), and note b, p. 5467. Collated by Vercellone.

E (Codex Ottoboninius olmi. C. Carolinus, Vat. 60, MS. of a portion of the O. T., imperfect at the beginning, and ending with Judges, xiii. 20. It is of the 8th century, and gives a text older than Alcuinian's recension. It contains also important fragments of the Old Version of Genesis and Exodus published by Vercellone in his Variae Lectiones, i. Coll. by Vercellone.

F (Roma, Coll. SS. Basilii et Caroli), a MS. of the entire Latin Bible of the 10th century. It follows, in the main, the recension of Alcuin, with some variations, and contains the Roman Psalter. Coll. by Vercellone.

G (Roma, Coll. SS. Basilii et Caroli), a MS. of the 13th century, of the common late type. Coll. by Vercellone.

H, I, P, Q, are used by Vercellone to mark the readings given by Marthanan, Benedictus, Castelb集团, and R. Stephanus, in editions of the Vulgate.

1. Sec. xiii. Collated in part by C. J. Bauer, Eltham, Reporiorum, xvii.

K (Monast. SS. Trin. Cava), a most important MS. of the whole Bible, belonging to the monastery of La Cava, near Salerno. An exact copy of it was made for the Vatican Library (num. 8484) by the command of Leo XII., and this has been used by Vercellone for the books after Leviticus.

VULGATE, THE

For the three first books of the Pentateuch he had only an imperfect collation. The MS. belongs to the 6th or 7th century (Mai, Novum Patrum Bibl. i. 2, 7; Speil. Rom. ix. Pref. xxii.), and presents a peculiar text. Tischendorf has quoted it on 1 John v. 7, 8.

M. N. O. E. Corrector in the Vatican Library.

R, S (Romae, Coll. SS. Basilii et Caroli), Sec. xiv., of the common late type given in the editions of the 15th century.

T, Sec. x., xi.; U, Sec. xii., two MSS. of the type of the recension of Alcuin.

V (Romae, Coll. SS. Basilii et Caroli), Sec. xiii., akin to E, Vardius, in his revised edition, adds a collation, more or less complete, of other MSS. for the Pentateuch (Joshua, Judges) — of

Corol. Pelhamorii, 3.

C. Lavorius.

For the books of Samuel and Kings.

Corol. Veroniani, a MS. of the very highest value. (Comp. Vardius, Pref. 19 ff. ed. Migne.)

For the Psalms.

Corol. Vatic. 154.

Corol. S. Crucis (or 101, Cisterciensia), (the most valuable).

For Daniel.

Corol. Polit. 3.

Corol. Vatic. 333.

For Esther, Tobit, and Judith.

Corol. Reg. Sac. 7.

But of all these only special readings are known.

Other MSS. which deserve examination are: —

a Bentley procured collations of upwards of sixty English and French Latin MSS. of the N. T., which are still preserved among his papers in Trin. Coll. Cambridge, B. 17, 5, and B. 17, 14. A list of these, as given by Bentley, is printed in Ellis's Editum Criticum Sacra, pp. xxxv. I have identified and noticed the English MSS. below (comp. p. 3475 ff.).

Biblia Beatae gives more or less complete collations of the N. T. from Paris. Bibl. Reg. 3362 (a, b. 576), 3561, Sec. ix., 3564 ff., Sec. ix., x. All appear to be Alcuinian.

Sir F. Madden has given a list of the chief MSS. of the Latin Bible (10 copies) in the Gentleman's Magazine, 1839, pp. 539 ff. This list, however, might be increased.

The Beginning

marginal gloss. The

been examined by Lachmann and Buttman, and a complete edition is in preparation by E. Ranke.

Other Vulgate MSS. of parts of the N. T. have been examined more or less carefully. Of the Gospels, Tischendorf (Prod. cxxvi. ii.) gives a list of a considerable number, which have been examined very imperfectly. Of the more important of these the best known are:

For Prop. (at Prague and Venice). Published by Bianchini, in part after Dolovsky.

\[ a \]

For all critical purposes the Latin texts of this edition are worthless. In one chapter taken at random (Mark viii.), there are seventeen errors in the text of the Lintinaste MS., including the omission of one line with the corresponding gloss.

b The accompanying Notes will give a good idea of the external character of some of the most ancient and precious Latin MSS. which the writer has examined. For permission to take the tracings, from which the fac-similes were made, his sincere thanks are due to the various Institutions in whose charge the MSS. are placed.

Pl. 1. fig. 1. Brit. Mus. Harl. 1,775. Matt. xxii. 31, 

Et dominus et veritatis. This MS. (like figs. 2, 3) exhibits the arrangement of the text in hours cross

d in the original reading novissimus has been changed by a hand into praeire. A characteristic error of sound will be noticed, but for ivt (šor e), which occurs also in fig. 2.

Fig. 2. Brit. Mus. Add. 5,463. Matt. xxii. 31, 32, "praeire novissimus. This magnificent MS. shows the beginning of contraction (čšor) and punctuation.

Fig. 3. Saxon. John xii. 15, 11, non holieus, non locis, "non locis." This MS., unlike the former, seems to have been prepared for private use. It is written throughout, with the greatest regularity and care. The large capitals probably indicate the beginnings of

and the words are here separated.

Fig. 4. Off. Brit. 3,413. Acts viii. 35, 37, et — eur.

Pl. ii. Fig. 1. Camb. Univ. Libr. Kk. ii. 24. John v. 4, sanna fabet — hono the. This MS. offers a fine example of the semi-uncial "Irish" character, with the large cursive letters. Supposed to have been used widely in the 8th century throughout Ireland and central and northern England. The text contains a most remarkable instance of the incorporation of a marginal gloss into the body of the book, in Genesis capernauman sánvóth, without any mark of separation by the original hand. This clause also offers a distinct proof of the revision of the copy from which the MS. was derived by Greek MSS.

The contraction for autem is worthy of notice.
VULGATE, THE

1. VULGATE, THE

20. St. Cuthbert's, St. Cuthbert's St. John, found in 1868 at the head of St. Cuthbert's tomb in the Church. Very pure Vulgate, agreeing with Cod. Am. in many very remarkable readings: e. g. i. 15, dixi robis; ii. 4, 5, iili et nihil; iv. 10, respondit Jesus dilect.; iv. 16, et veni, om. huc, etc. d. (Plate I, fig. 3.)

b A complete edition of this text, with collations of London Brit. Mus. Harl. 1,751 ; Reg. i. E. vi. 1 B vixii; Addit, 5,453; Oxford, Bull, 857; is, I believe, in preparation by the Rev. G. Williams, Fellow of King's College, Cambridge.

c By a very strange mistake Tischendorf describes this MS. as "mutilorum N. Ti. fragmentorum." 22. It may be interesting to give a rough classification of these MSS., all of which the writer has examined with more or less care. Many others of later date may be of equal value; and there are some early copies in private collections as at Middlehill, in Dublin (e. g. the (Vulgate) Book of St. Columba, Sec. vii. (Westwood's Pet. Sacra), which has been obliged to leave unexamined. 23. Group I. Vulgate text approaching closely is the

VULGATE. THE

(2.) Of the Acts and Epistles and Apoc.:—

14, 7, 5, 4, 2, 1.

9. ” Codex eccles. Lincolniensis 800 anonym.” (Bentley’s G. Act. Apec.)

A Lectorian quoted by Saluter (Sace. viii.), and the Masoritic Littery, are also of great critical value.

In addition to MSS. of the Vulgate, the Anglo-Saxon Version which was made from it is an important help towards the criticism of the text. Of this the Old English (except 3 Jo. Judul., Apec.) were published by E. Thwaites, Oxf. 1899; the (Latin-Saxon) Psalter, by J. Spelman, 1640, and B. Thorpe, 1835; the Gospels, by Archip. Parker, 1571, T. Marshall, 1605, and more satisfactorily by B. Thorpe, 1842, and St. Matt. by J. M. Kendile (and C. Hardwick), with two Anglo-Saxon texts, formed on a collation of five MSS. and the Lindisfarne text, and gloss. Comp. also the Frankish Version of the Harmony of Ammonius, ed. Schneidler, 1841.

VII. THE CRITICAL VALUE OF THE LATIN

whole to the Col. Assayat.: 6, 8, 11, 12, 18, 21, 22, 25, 26, 30. Group ii. Vulgate text of a later type : 7, 10, 15. Group iii. A Vulgate text mainly with old readings : 1, 9, 17, 19, 23, 27. Group iv. A mixed text, in which the old readings are numerous and important : 2, 3, 4 (24), 5, 15, 14, 15, 29, 28, 29.
A more complete collation might modify this arrangement, but it is (I believe) approximately true.
a A Dub MS. contains the Epistle to the Laodiceans after that to the Hebrews, and also the addition I John. v. 7, in the following form: Quia tres sunt qui testimonium dant spis, et aqua, et sanguis, et tres naum sunt. Siue in eis tre naum sunt, pater verbum et spis, et tres spis sunt. It is remarkable that the two other oldest authorities in support of this addition, also support the Epistle to the Laodiceans, viz. MS. of Lo. Cava, and the Speculum published by Mai.
b A fragment containing preatory excerpts to a copy of St. Paul’s epistles written in a hand closely resembling this is found B. M. Cotton. Vell. C. viii.
c From an examination of Bentley’s unpublished collations, it may be well to add that of the eighteen French MSS., which he caused to be compared with the Clementine text (Lucet. Paris. apud Continuum Sammonum ordinatis. See Trin. Col. Camb. B. 17, 53.).

VULGATE. THE

VERSIONS. —33. The Latin Version, in its various forms, contributes, as has been already seen, more or less important materials for the criticism of the original texts of the Old and New Testament, and of the Common and Hexaplaric texts of the LXX. The hearing of the Vulgate on the LXX. will not be noticed here, as the points involved in the inquiry more properly belong to the history of the LXX. Little, again, need be said on the value of the translation of Jerome for the textural criticism of the O. T. As a whole his work is a remarkable monument of the sublimity of the Hebrew text of the 4th century with the present Masoretic text; and the want of trustworthy materials for the exact determination of the Latin text itself, has made all detailed investigation of his readings impossible or unsatisfactory. The passages which were quoted in the premature controversies of the 16th and 17th centuries, to prove the corruption of the Hebrew or Latin text, are commonly of little importance as far as the text is concerned. It will be enough to notice those only which are quoted by Whitaker, the worthy antagonist of Bellarmine (Disputation on Scripture, pp. 163 ff., ed. Park Soc.).

Gen. i. 30, om. all green herbs (in Vet. L.); iii. 15, Ipse captor caput tum. There seems good reason to believe that the original reading was ipse. Comp. Vergilienne, od loc. See also Gen. iv. 18.

iii. 17, in opere tuo. 7,152,22 for 7,152,22.
iv. 16, om. nostrum, which is specially noticed in Jerome’s Quaest. Hebreos.
vi. 6, addi, et praecavere in futurum. The words are a gloss, and not a part of the Vulgate text.

viii. 4, vicetimo septime, for septimo decimo.

So LXX.

Id. 7, egrediebatur et non revertetur. The non is wanting in the best MSS. of the Vulgate, and has been introduced from the LXX.

xi. 13, trecentas tribus, for quadringentis tribus.
So LXX.

the following are the most important, and would repay a complete collation. The writer has retained Bentley’s notation; some of the MSS. may probably have passed into other collections.

b. S. Germani a Pratis, (c) of Tischl., etc. A very important MS., containing part of O. T., the whole of N. T. (of Gallican text?), and “tria flosa Pastoris.” Existing collations are very incomplete. At the end of the Epistle to the Hebrews, which precedes the Shepherd, the MS. has (according to Bentley) the following note; Epistola ad Hebreos. Legem cum pere. Bibliotheca Hieronymi Presbyteri Bethaniae sanculum Geronem ex emendatis miss exemplaribus conlatus (sic).

c. S. Germani a Pratis, 1, 2, a. p. 800.
VULGATE, THE

xxix. 6, om. — Wherefore he left — Joseph?"xl. 5, om. — The battle — prison."
xii. 10. Comp. Vercellone ad loc.

xxiv. 6, xxvii. 5, xxviii. 29, the variation is possibly due to reading "no."
The remaining passages, ii. 8; iii. 6; iv. 6, 13, 20; vi. 3; xiv. 7; xvii. 16; xix. 18; xxii. 9; xxiv. 22; xxv. 34; xxvi. 33; xxxii. 22; xxxviii. 5, 23; xlv. 22, contain differences of interpretation; and in xxvi. 24, xlv. 45, the Vulgate appears to have preserved important traditional renderings.

34. The examples which have been given show the comparatively narrow limits within which the Vulgate can be used for the criticism of the Hebrew text. The Version was made at a time when the present revision was already established; and the freedom which Jerome allowed himself in rendering the sense of the original, often leaves it doubtful whether in reality a various reading is represented by the peculiar form which he gives to a particular passage. But the ease is far different. In this the critical evidence of the Latin is separable into two distinct elements, the evidence of the Old Latin and that of the Hieronymian revision. The latter, where it differs from the former, represents the received Greek text of the 4th century, and so far carries a respect (speaking roughly) equal to that due to a first-class Greek MS.; and it may be fairly concluded, that any reading opposed to the combined testimony of the oldest Greek MSS. and the true Vulgate text, either arose later than the 4th century, or was previously confined within a very narrow range. The corrections of Jerome do not carry us back beyond the age of existing Greek MSS., but, at the same time, they supplement the original testimony of MSS, by an independent witness. The substance of the Vulgate, and the copies of the Old Latin, have a more venerable authority. The origin of the Latin Version dates, as has been seen, from the earliest age of the Christian Church. The translation, as a whole, was practically fixed and current more than a century before the transcription of the oldest Greek MS. Thus it is a witness to a text more ancient, and therefore, certior probatur, more valuable than is represented by any other authority, unless the Phasite in its present form be excepted. This primitive text was not, as far as can be ascertained, free from serious corruptions (at least in the synoptic Gospels) from the first, and was variously corrupted afterwards. But the corruptions proceeded in a different direction and by a different law from those of Greek MSS., and, consequently, the two authorities mutually correct each other. What is the nature of these corruptions, and what the character and value of Jerome's revision, and of the Old Latin, will be seen from some examples to be given in detail.

35. Before giving these, however, one preliminary remark must be made. In estimating the critical value of Jerome's labors, it is necessary to draw a distinction between his different works. His mode of proceeding was by no means uniform; and the importance of his judgment varies with the object at which he aimed. The three versions of the Psalter represent completely the three different methods which he followed. At first he was contented with a popular revision of the current text (that is, he thought then he instituted an accurate comparison between the current text and the original (the Grelian Psalter); and in the next place he translated independently, giving a direct version of the original (the Hebrew Psalter). These three methods follow one another in chronological order, and answer to the wider views which Jerome gradually gained of the functions of a Biblical scholar. The revision of the N. T. belongs unfortunately to the latest period. When it was made, Jerome was as yet unused to the task, and he was anxious not to arouse popular prejudice. His aim was little more than to remove obvious interpolations and blunders; and in doing this he likewise introduced some changes of expression which softened the roughness of the Old Version, and some which seemed to be required for the true expression of the sense (e. g. Matt. vii. 11, superhomoliationem for quoties). When he fulfilled, he, of course, aimed at doing this perfectly; but as we have seen, the results which he attained were not so far removed from the removal of occasional blunders as to be incapable of being further improved. But while he accomplished much, he failed to carry out even this limited purpose with thorough completeness. A rendering which he commonly altered was still suffered to remain in some places without any obvious reason (e. g. καταστροφή, δοκιμία, ἀσφάλεια); and the textual emendations which were made (apart from the removal of corruptions) seem to have been made after only a partial examination of Greek copies, and those probably few in number. The result was as much as might have been expected. The greater corruptions of the Old Latin, whether by addition or omission, are generally corrected in the Vulgate. Sometimes, also, Jerome gives the true reading in details which had been lost in the Old Latin: Matt. i. 25, αὐτοπαθεῖα; ii. 23, προφήται; v. 22, οὖν ἐκινήσε; ix. 15, λαβγή; John ii. 33, ἀπάρχην; iv. 12: but not rarely he leaves a false reading uncorrected (Matt. ix. 28, ροβίς; x. 42), or adopts a false reading where the true one was also current (Matt. xvi. 6; xviii. 29; xix. 4; John i. 3, 16; vi. 64. Even in graver variations he is not exempt from error. The famous παράγαγος, John vii. 53—viii. 11, which had gained only a partial entrance into the Old Latin, is certainly established in the Vulgate. The additions in Matt. xxvii. 35, Luke iv. 19, John v. 4, 1 Pet. iii. 22, were already generally or widely received in the Latin copies, and Jerome left them uncorrected. The same may be said of Mark xvi. 9—20; but the "heavenly testimony" (1 John v. 7), which is found in the editions of the Vulgate, is, beyond all doubt, a later interpolation, due to an African gloss; and there is reason to believe that the interpolations in Acts vii. 35, iv. 5, were really erased by Jerome, though they maintained their place in the mass of Latin copies.

36. Jerome's revision of the Gospels was far more complete than that of the remaining parts of the N. T. It is, indeed, impossible, except in the Gospels, to determine any substantial difference in the Greek texts which are represented by the Old and Hieronymian Versions. Elsewhere the differences, as far as they can be satisfactorily established, are differences of expression and not of text; and there is no sufficient reason to believe that the readings which exist in the best Vulgate MSS. when they are in variance with other Latin authorities, rest upon the deliberate judgment of Jerome. On the contrary, his Commentaries show that he used copies differing widely from the recensions which pass under his name, and even expressly condemned as faulty in text or rendering many passages which are undoubtedly part of the Vulgate text. In his Commentary on the Galatians he condemns the additions, iii. 1, revisiti non debile, v. 21, houicidies; and the translations, i. 16, non
3419

VULGATE, THE

sequence corri et singulier for non contentur cum corri et singulier; v. 9, modicia fercamion latinorum componi convenit (for modicia fercamion tuta compositione feruam); v. 11, evocatio est (for cessavit); v. 3, scripta (script) scilicet (for scriptum scimt decipiet). And in the text of the epistle which he gives there are upwards of fifty readings which differ from the best Vulgate text, of which about ten are improvements (iv. 21; v. 13; 35; iv. 15, 16, &c.), as many more minor readings (iv. 18); and the remainder, differences of expression: modo for sequiis, recte
incoluntur, curam for iterum.
The same differences are found in his Commentaries on the other epistles: ad Ephes. i. 6; iii. 14; iv. 19; v. 22; 31; ad Tit. iii. 15. From this it will be evident that the Vulgate text of the Acts and the Epistles does not represent the critical opinion of Jerome, even in the restricted sense in which this is true of the text of the Gospels.

But still there are some readings which may with probability be referred to his revision: Acts xii. 18, move coram soluminari pro nutriti (subit) est. Rom. xiii. 11, Donum pro tempore. Eph. iv. 19, illuminandum in Christos for renderings Christian. Gal. ii. 5, quisque ut est; for the other version. 1 Tim. v. 19, add. xii. sub ubi nos et tuba testarum.

37. The chief corruptions of the Old Latin consist in the introduction of glosses. These, like the corresponding additions in the Codex Bezae (D), are sometimes indications of the venerable antiquity of the source from which it was derived, and seem to carry a weight of their own. The evangelic tradition had not yet been wholly superseded by the written Gospels. Such are the interpolations at Matt. iii. 15; xx. 28; Luke iii. 22 (compare also Luke i. 46; xii. 38); but more frequently they are derived from parallel passages, either by direct transference of the words of another evangelist, or by the reproduction of the substance of them. These interpolations are frequent in the synoptic Gospels; Matt. iii. 3; Mark xvi. 4; Luke i. 29, vi. 10; ix. 43, 50, 54; xi. 2; and occur also in St. John vi. 56, &c. But in St. John the Old Latin more commonly errs by defect than by excess. Thus it omits clauses certainly or probably genuine: iii. 31; iv. 8; v. 86; vi. 23; viii. 58, &c.

Sometimes, again, the renderings of the Greek text are free: Luke i. 29; ii. 17, 21. Such variations, however, are rarely likely to mislead. Otherwise the Old Latin text of the Gospels is of the highest value. There are cases where some Latin MSS. combine with one or two of the other most ancient witnesses to support a reading which has been obliterated in the mass of authorities: Luke vi. 1; Mark v. 30; 9: 1, 3; and not infrequently (comp. § 35) it preserves the true text which is lost in the Vulgate: Luke xiii. 19; xiv. 5; xx. 28.

38. But the places where the Old Latin and the Vulgate have separately preserved the true reading are rare, when compared with those in which they combine with other ancient witnesses against the great mass of authorities. Every chapter of the Gospels iii. 9; 10; vi. 3; and not infrequently (comp. § 55) it preserves the true text which is lost in the Vulgate: Luke xiii. 19; xiv. 5; xx. 28.

39. But the places where the Old Latin and the Vulgate have separately preserved the true reading are rare, when compared with those in which they combine with other ancient witnesses against the great mass of authorities. Every chapter of the Gospels iii. 9; 10; vi. 3; and not infrequently (comp. § 55) it preserves the true text which is lost in the Vulgate: Luke xiii. 19; xiv. 5; xx. 28.

In the first few chapters of St. Matthew, the following may be noticed: i. 18 (bis); ii. 18; iii. 19: v. 4, 5, 11, 39, 44, 47; vi. 13; vii. 10, 14, 28; viii. 32 (xv. 8), &c. It is useless to multiply examples which occur equally in every part of the N. T.-Luke i. 44; iv. 2, &c.; John i. 52; iv. 42, 51; v. 16; viii. 59; xiv. 17, &c.; Acts i. 30, 31, 37, &c.; 1 Cor. i. 15, 22, 27, &c. On the other hand, there are passages (comp. § 55) in which the Latin authorities combine in giving a false reading: Matt. vi. 15; vii. 20; viii. 28 (?), &c.; Luke iv. 17; xiii. 39, 31, 31, &c.; Acts iii. 28, &c.; 1 Tim. iii. 16, &c.

But these are comparatively few, and commonly marked by the absence of all Eastern corroboration evidence. It may be impossible to lay down definite laws for the separation of readings which are due to free rendering, or careless-ness, or glosses, but in practice there is little difficulty in distinguishing the variations which are due to the idiosyncrasy (so to speak) of the version from those which contain real traces of the original text. And when every allowance has been made for the rudeness of the original Latin, and the haste of Jerome's revision, it can scarcely be denied that the Vulgate is not only the most venerable but also the most precious monument of Latin Christianity.

For ten centuries it preserved in Western Europe a text of Holy Scripture far purer than that which was current in the Byzantine Church; and at the revival of Greek learning, guided the way towards a revision of the late Greek text, in which the best Biblical critics have followed the steps of Bentley, with ever-deepening conviction of the supreme importance of the coincidence of the earliest Greek and Latin authorities.

VIII. OF THE INDETERMINATE VALUE of the Vulgate, 27, 30. Last, of the infradeterminative value of the Vulgate, 23, 27, 30. little need be said. There can be no doubt that in dealing with the N. T., at least, we are now in possession of means infinitely more varied and better suited to the right elucidation of the text than could have been enjoyed by the original African translators. It is a false humility to rate as nothing the inheritance of ages. If the investigation of the laws of language, the clear perception of principles of grammar, the accurate investigation of words, the minute comparison of ancient texts, the wide study of antiquity, the long lessons of experience, have contributed nothing towards a fuller understanding of Holy Scripture, all trust in Divine Providence is gone. If we are not in this respect far in advance of the simple peasant or illiterate scholar of Africa or Egypt, even of the laborious student of Bethlehem, we have proved false to their example, and dishonor them by our insolidence. It would be a thankless task to quote instances where the Latin Version renders the Greek incorrectly. Such faults arise most commonly from a servile adherence to the exact words of the original, and thus that which is an error in rendering proves a fresh evidence of the scrupulous care with which the translator generally followed the text before him. But while the interpreter of the N. T. will be fully justified in setting aside without scruple the authority of early versions, there are sometimes ambiguous passages in which a version may preserve the traditional sense (John i. 3, 9, xii. 25, &c.) or indicate an early difference of translation; and then, its evidence may be of the highest value. But even here the judgment must be free. Versions supply authority for the text, and opinion only for the rendering.

VIII. THE LANGUAGE OF THE LATIN VERSIONS — 40. The characteristics of Christian
Latinity have been most unaccountably neglected by lexicographers and grammarians. It is, indeed, only 'tely that the full importance of provincial dialects in the history of languages has been fully recognized, and it may be hoped that the writings of Tertullian, Arnobius, and the African Fathers generally, will now at length receive the attention which they justly claim. But it is necessary to go back one step further, and to seek in the remnants of the Old Latin side the earliest and the most ancient traces of the popular idiom of African Latin. It is easy to trace in the patrician writings the powerful influence of this venerable version; and on the other hand, the Version itself exhibits numerous peculiarities which were evidently borrowed from the current dialect. Generally it is necessary to distinguish two distinct elements both in the Latin Version and in subsequent writings: (1) Provincialismus and (2) Graecismus. The former are chiefly of interest as illustrating the history of the Latin language; the latter as marking, in some degree, its power of expansion. Only a few remarks on each of these heads, which may help to guide inquiry, can be offered here; but the careful reading of some chapters of the Old Version (e.g. Psalm 124; Wisdom, in the modern Vulgate) will supply numerous illustrations.

(1.) Provincialismus. — 41. One of the most interesting facts in regard to the language of the Latin Version is the reappearance in it of early forms which are found in Plautus or noted as archaisms by grammarians. These establish in a signal manner the vitality of the popular or as distinguishing from the literary idiom, and, from the great number of memorials of the Italian dialects, possess a peculiar value. Examples of words, forms, and constructions will show the extent to which this phenomenon prevails.

| Emigro with acc. (Ps. Ixi. 7, enigma te de tabernaculo); dominor with gen.; manor with acc. or; sed, esse, for suis, etc.; non for se prohibitive; ejusjipmer.

42. In addition to these there are many other peculiarities which evidently belong to the African (or common) dialect, and not merely to the Christian form of it. Such are the words minareto, minaretto, improverent, fratre (a sword), ablectio, anaulia, allicence, pectaculum, antemutum, propiscis, parauta, tortare, tribulare (met.), tribu- natio, vafuscere, veruberia, viare, riciicula, vierricta (virtutem), vitellum, volatilia, etc. (subst.).

43. New verbs are formed from adjectives: passivare, passivincum, approximare, approximare, piggibari, soleire (soleor, soleire), obtiere, Jacobsandere, and especially a large class in — foro: mortifico, cricilo, cricicito, cricicio, cricicr, cricricr, cricrificr, etc.;

Other verbs worthy of notice are: appropriare, appropricere, inrectwescere, inrecticulare, impliare, (plnatur), turoicere. In this class may be reckoned also many:

(1.) New substantives derived from adjectives: passivare, passivincum, approximare, approximare, piggibari, soleire (soleor, soleire), obtiere, Jacobsandere, and especially a large class in — foro: mortifico, cricilo, cricicito, cricicio, cricicr, cricricr, cricrificr, etc.;

(2.) New verbs: accessibilis, acceptabilis, do- cibilis, prodibilis, passibilis, reprehensibilis, suadibilis, subjectibilis, arcessibilis; and participial forms: padoratus, amasgatus, timoratus, scorbutus, discriminatus, waguntus, languentus.

(3.) New adjectives: animacous, temporacous, magacous, etc.; and adverbs, terribiliter, umainlaito, spiritualiter, comacociilor, facinculiter.

The series of negative compounds is peculiarly worthy of notice: inmemorave, incerrammonio; innoacumuli; inacmiciplut, inficicniti, inacnicvittilite, inacnicvittilite, inacnicvittilite, inacnicvittilite, inacnicvittilite, inacnicvittilite, inacnicvittilite, inacnicvittilite.

Among the characteristics of the late stage of a language must be reckoned the excessive frequency of compounds, especially formed with the prepositions. These are peculiarly abundant in the Latin Version, but in many cases it is difficult to determine whether they are not direct translations of the late LXX. forms, and not independent forms: e.g. adcelerance, adelatrace — adcelerance, piggibarance, paraatasance, propigarse, superceltace, supervaisace, supersecvapse, redundance, superacutio, subinber. Of these many are the direct representatives of Greek words: superdelita (1 Cor. vii. 36), superceniature (Matt. xliii. 25), complicate, complicate, complicate, etc. (superconulantis, Matt. vii. 11); and others are formed to express distinct ideas: subcelliacus, subnervare, etc.5

(2.) Graecismus. — 43. The "simplicity" of the Old Version necessarily led to the introduction of very numerous Septuagintal or N. T. forms, many of which have now passed into common use. In this respect it would be easy to point out the dif-

VULTURE.

The rendering in A. V. of the
Heb. יִנְכָּר (yincah) and יִנְכָּר (ynk'ar); and also in Joh.
xxviii. 7, of יִנְכָּר (ynk'ah) elsewhere, in Lev. xi.
14, and Deut. xiv. 13, more correctly rendered
"kite": LXX γαλακτωρ and territor. Vulg. colut. except in Is. xxxiv. 15, where LXX. read Απιότης
and Vulg. correctly Απιότης.

There seems no doubt but that the A. V. translation is incorrect, and that the original words refer to some of the smaller species of raptorial birds, as kites or buzzards. יִנְכָּר (ynk'ar) is evidently synonymous with Arab. یَنُقُّر (ynqur), the vernacular for the "kite" in North Africa, and, without the epithet "red," for the black kite especially. Bochert (Hieroz. ii. 2, 195) explains it Vallis aiger. The Sumarian and all other Eastern Versions agree in rendering it "kite." יִנְכָּר (ynk'ah) is yet more certainly referable to this bird, which in other passages it is taken to represent. Bochart (Hieroz. ii. 2, c. 8, p. 193) says it is the same bird which the Arabs call پیک (ypkk) from its cry; but does not state what species this is, supposing it apparently to be the magpie, the Arab name for which, however, is עפָנָה, el agou.

There are two very different species of bird comprised under the English term vulture: the griffon (Vicus fulvus, Sav.), Arab. یَنْصَر (ynsarah; rendered "eagle" by A. V.; and the percyvicer, or Egyptian vulture (Ne-
uphran percyvicer, Sav.), Arab. یَنْصُر (ynsarah), renderd "gier-eagle" by A. V.

The identity of the Hebrew and Arabic terms in these cases can scarcely be questioned. However, degrading the substitution of the ignoble vulture for the royal eagle may at first sight appear in many passages, it must be borne in mind that the griffon is in all its movements and characteristics a majestic and royal bird, the largest and most powerful which is seen on the wing in Palestine, and far surpassing the eagle in size and power. Its only rival in these respects is the bearded vulture or lion of the mountains, a non-raptorial bird everywhere, and which, since it is not, like the griffon, bound on the head and neck, cannot be referred to as κιλίθος (see Misc. i. 16). Very different is the slen-
drily and cowardly Egyptian vulture, the familiar scavenger of all oriental towns and villages, protected for its useful habits, but loathed and despised, till its name has become a term of reproach like that of the dog or the swine.

If we take the Heb. ynnkahr to refer to the red kite (milrus regalis, Temm.), and dyrk'k to the black kite (milrus atrr, Temm.), we shall find the piercing sight of the former referred to by Job xxxviii. 7, and the gregarious habits of the latter by lamedh (xxxv. 15). Both species are inhabitants of Palestine, and the red kite being found all over the country, as formerly in England, but nowhere in great numbers, generally soaring at a great height over the plains, according to Dr. Roth, and apparently leaving the country in winter. The black kite, which is so numerous everywhere as to be gregarious, may be seen at all times of the year, hovering over the villages and the outskirts of towns, on the lookout for offal and garbage, which are its favorite food. Vulture-like, it seldom, unless pressed by hunger, attacks living animals. It is therefore never molestcd by the natives, and builds its nest on trees in their neighborhood, fantastically decorating it with many rags of colored cloth as it can collect.

There are three species of vulture known to inhabit Palestine:

1. The Lammergeyer (Gypaetus barbatus, Cuv.), which is rare everywhere, and only found in desolate mountain regions, where it ranges its young in the depth of winter among inaccessible precipices. It is looked upon by the Arabs as an eagle rather than a vulture.

2. The griffon (Vicus fulvus, Sav.), mentioned above, remarkable for its power of vision and the great height at which it soars. Aristotle (Avia. Hist. vi. 5) notices the manner in which the griffon scents its prey from afar, and congregates in the wake of an army. The same singular instinct was remarked in the Russian War, when vast numbers of this vulture were collected in the Crimean, and remained till the end of the campaign in the neighboring ranges of the camp, although previously they had been scarcely known in the country. "Where- ever the carcass is there will the eagles be gathered together" (Matt. xxiv. 28): "Where the slain are, there is she" (Job xxxix. 30). The writer observed this bird universally distributed in all the mountains and rocky districts of Palestine, and especially abundant in the southeast. Its favorite breeding-places are between Jerusalem and Jericho, and all round the Dead Sea.

The third species is the Egyptian vulture (Neuphran percyvicer, Sav.), often called Pharaoh's
WAGES. The earliest mention of wages is of a recompense not in money but in kind, to Jacob from Laban (Gen. xxii. 15, 20, xxx. 28, xxxii. 7, 8, 41). This wage was only natural among a pastoral and changing population like that of the tent-dwellers of Syria. In Egypt, money payments by way of wages were in use, but the terms cannot now be ascertained (Ex. ii. 9). The only mention of the rate of wages in Scripture is found in the parable of the householder and vineyard (Matt. xx. 2), where the laborer's wages are set at one denarius per day, probably 7½‡, a rate which agrees with Tobit x. 14, where a drachm is mentioned as the rate per day, a sum which may be fairly taken as equivalent to the denarius, and to the usual pay of a soldier (ten ‡ per diem) in the later days of the Roman republic (Tac. Ann. i. 17; Ptol. vi. 39). It was perhaps the traditional remembrance of this sum as a day's wages that suggested the mention of "drachmas wrung from the hard hands of peasants" (Shakespeare, Jul. Ces. iv. 3). In earlier times it is probable that the rate was lower, as until lately it was throughout India. In Scotland we know that in the last century a laborer's daily wages did not exceed sixpence (Smiles, Lives of Engineers, i. 96). But it is likely that laborers, and also soldiers, were supplied with provisions (Michaelis, Lores of Moses, § 130, vol. ii. p. 190, ed. Smith), as is intimated by the word ὀφεινα, used in Luke iii. 14, and i Cor. ix. 7, and also by Philo, xx. 29. The Mishnah (Baba metzi, vol. v. p. 5) makes lots of vegetables being sold to a laborer, or not according to the custom of the place, up to the value of a denarius, i.e. inclusive of the pay. The law was very strict in requiring daily payment of wages (Lev. xix. 13; Pent. xxiv. 14, 15); and the Mishnah applies the same rule to the use of animals (Baba metzi, ix. 12). The employer who refused to give his laborers sufficient victuals is cursed (Jos. xxi. 11); and the impiety of withholding wages is denounced (Jer. xxvi. 13; Mal. iii. 5; James v. 4).

Wages in general, whether of soldiers or laborers, are mentioned (Hag. i. 6; Ez. xxi. 19; John iv. 36). Furenhart mentions a case in Syria resembling closely that of Jacob with Laban—a man who served eight years for his food, on condition of obtaining his master's daughter in marriage, and was afterwards compelled by his father in-law to perform acts of service for him (Syn. p. 297).

H. W. P.

WAGON. [CART and CHARIOT.] The oriental wagon or acrobat is a vehicle composed of two or three planks fixed on two solid circular blocks of wood, from two to five feet in diameter, which serve as wheels. These are usually provided with flanges, attached wings, which spay outwards like the sides of a wheelbarrow. For the conveyance of passengers, mattresses or clothes are laid in the bottom, and the vehicle is drawn by buffaloes or oxen (Aurindel, Life Moses, ii. 191, 235, 238; Olearius, Trav. p. 302; Ker Porter, Trav. ii. 534). Egyptian carts or wagons, such were sent to convey Jacob (Gen. xix. 21, 27), are described under CART. The covered wagons for conveying the materials of the Tabernacle were probably constructed on Egyptian models. They were each drawn by two oxen (Numb. vii. 3, 8). Herodotus mentions a four-wheeled Egyptian vehicle (gμαρνα) used for sacred purposes (Her. ii. 63).

H. W. P.

* Under this head belongs "litters" i.e. xvi. 20, the Hebrew word being the same as that for "wagons" in Numb. vii. 3, 8. Litters occurs only once in the A. V. H.

WALL. WALLS.

WALLS. Only a few points need be noticed in addition to what has been said elsewhere on wall-construction, whether in brick, stone, or wood. [Brick: HANDICRAFT; MORTAR.] The practice common in Palestine of carrying foundations down to the solid rock, as in the case of the Temple, and in the present day with structures intended to be permanent (Joseph. Ant. xxv. 11, § 3; Lake vi. 32, Robinson, ii. 168; Col. Oh. Chron. (1857), p. 459). The pains taken by the ancient builders to make good the foundations of their work may still be seen, both in the existing substructions and in the number of old stones used in more modern constructions. Some of these stones, ancient, but of uncertain date—are from 21 feet to 30 feet 10 inches long, 3 feet to 6 feet 6 inches broad, and 5 feet to 7 feet 6 inches thick (Rob. i. 243, 282, 283, iii. 228). As is the case in numberless instances of Syrian buildings, either old or built of old materials, the edges and sometimes the faces of these stones are "beveled" in flat grooves. This is commonly supposed to indicate work at least as old as the Roman period (Rob. i. 261, 290, ii. 76, 76, 278, 353, iii. 52, 58, 84, 229, 461, 493, 511; Ferguson, Hist. Arch. p. 288). On the contrary side, see Col. Oh. Chron. (1858), p. 300.

But the great size of these stones is far exceeded by some of those at Ramleh, three of which are

3 μτώς: τίχως: manus.

9 μτώς: τίχως: manus.
WANDERING

WAR

each about 63 feet long; and one, still lying in the quarry, measures 68 feet 4 inches in length, 17 feet 2 inches bread, and 14 feet 7 inches thick. Its weight can scarcely be less than 600 tons (Rob. iii. 505, 512; Volney, Trav. ii. 241).

2. A feature of some parts of Solomon’s build-
ing, as described by Josephus, corresponds remark-
ably to the method adopted at Nineveh of encrusting or veneering a wall of brick or stone with slabs of a more costly material, as marble or alabaster (Joseph. Ant. viii. 5, § 2; Ferguson, Hdbk. 202, 203).

3. Another use of walls in Palestine is to sup-
port mountain roads or terraces formed on the
sides of hills for purposes of cultivation (Rob. ii. 496, iii. 14, 45).

4. The “paths of the vineyards” (Num. xxiii. 24) is illustrated by Robinson as a pathway through vineyards, with walls on each side (Ibid. Res. ii. 58; Stanley, S. and P. 102, 420; Lindsay, Trav. p. 230; Mannfried, Early Trav. p. 437) (Win-
tow).

WANDERING IN THE WILDER-
NESS. [WANDERING OF.]

WAR. The most important topic in connection
with war is the formation of the army, which is
designed to carry it on. This has been already
described under the head of army, and we shall
therefore take up the subject from the point where
that article leaves it. Before entering on a war of
aggression the Hebrews sought for the Divine
sanction by consulting either the Urim and Thum
nim (Judg. i. 1, xx. 27, 28; 1 Sam. xiv. 37, xxiii.
2, xxvii. 6, xxx. 8), or some acknowledged prophet
(1 K. xxii. 6; 2 Chr. xviii. 5). The heathens
betook themselves to various kinds of divination for
the same purpose (Ex. xxi. 21). Divine aid
was further sought in actual warfare by bringing
into the field the Ark of the Covenant, which was
the symbol of Jehovah Himself (1 Sam. iv. 4-18,
xiv. 18), a custom which predated certainly down
to David’s time (2 Sam. xi. 11; comp. Ps. lxvii.
1, 24). During the wanderings in the wilderness
the signal for warlike preparations was sounded by
priests with the silver trumpets of the sanctuary
(Num. x. 9; xxxi. 6). Formal proclamations of
war were not interchanged between the belligerents;
but occasionally messages either deprecatory or
defiant were sent, as in the cases of Jehoshaph and
the Ammonites (Judg. xi. 27), Ben-hadad and
Ahab (1 K. xx. 2), and again Amaziah and Jehoash
(2 K. xiv. 8). Before entering the enemy’s dis-
trict spies were sent to ascertain the character of
the country and the preparations of its inhabitants
for resistance (Num. xiii. 17; Josh. ii. 1; Judg.
7. vii. 10; 1 Sam. xxvi. 4). When an engagement

a * * * * * lit. an “enclosing” or “besieging,”
and hence applied to the wall by which the siege was
affected.

b pok, Sanschïhâ (Arachd. ii. 504) understands
this term of the scaling-ladder, comparing the cognate
sobîm (Gen. xxviii. 12), and giving the verb sobîh, which
accompanied sobîh, the sense of a “hurried
advancing” of the ladder.

c * * * Some doubt exists as to the meaning of
this term. The sense of “turrets” assigned to it by
Herodotus (Tox. p. 239) has been objected to on the
ground that the word always appears in the singular
number, and in connection with the expression “round
about” the city. Hence the sense of “circumvallation”
has been assigned to it by Michaelis, Reil
(Arachd. B. 303), and others. It is difficult, however,
in this case, to see any distinction between the terms
bóyk and mîzor. The expression “round about”
may refer to the custom of casting up banks at differ-
ent points; the use of the singular in a collective
sense forms a greater difficulty.

d * * * This is described by Ammianus Marcellinus (xxili.
4, § 10) as a combination of the tsônda and the
battering-ram, by means of which the besiegers broke
through the lower part of the wall, and thus “broke
into the city,” not from above, as the words prim b
fair imply, but from below. 
WAR

posible (Jud. viii. 7). The besieged, meanwhile, strengthened and repaired their fortifications (1 Sam. xxii. 10), and repelled the enemy from the wall by missiles (2 Sam. xi. 24), by throwing over beams and heavy stones (Judg. ix. 23; 2 Sam. xi. 21; Joseph. B. J. v. 3, § 3, § 31), by pouring down boiling oil (B. J. iii. 7, § 28), or by setting fire to thebesiers’ works (1 Macc. vii. 31; B. J. v. 11, § 4), and using the torch to the degredation of soldiers and arrows (2 Chr. xxi. 15). [Exx. ii.] Shields were also made for the purpose of burning the besiegers’ works (1 Macc. vii. 31; B. J. v. 11, § 4), and during the night, the torches were extinguished. The burning operations required a large amount of illustration from the representations of such scenes on the Assyrian slabs. We have there the “bark” thrown up in the form of an inclined plane, with the battering-ram landed up on it assailing the walls; movable towers of considerable elevation brought up, whence the wars discharged their arrows into the city; the walls undermined, or attempts made to destroy them by picking to pieces the lower courses; the defenders actively engaged in archery, and averting the force of the battering-ram by chains and ropes; the scaling-ladders at length brought, and the conflict become hand-to-hand (Layard’s Nin. ii. 366-374).

The treatment of the conquered was extremely severe; all the inhabitants of the cities of the dead were put to death (Josh. x. 26; Judg. vii. 25), with the occasional indignity of desecration after death (1 Sam. xvii. 51; 2 Macc. xv. 39; Joseph. B. J. i. 17, § 2). The bodies of the soldiers killed in action were plundered (1 Sam. xxxi. 8; 2 Macc. iii. 27;); the survivors were either killed in some manner (1 Macc. iv. 13; Judg. xxi. 2; 2 Chr. xxv. 12), mutilated (Judg. i. 5; 1 Sam. xi. 2), or carried into captivity (Num. xxxi. 26; Judg. xv. 14). Women and children were occasionally put to death with the greatest barbarity (2 K. vii. 12, xv. 16; Is. xiii. 16, 18; Hos. x. 14, xiii. 16; Am. i. 13; Nah. iii. 10; 2 Macc. v. 13; but it was more usual to retain the males as consub-ervants (Judg. v. 20; 2 K. v. 20). Sometimes the bulk of the population of the conquered country was removed to a distant locality, as in the case of the Israelites when subdued by the Assyrians (2 K. xvii. 6), and of the Jews by the Babylonians (2 K. xxiv. 14, xiv. 11). In addition to these measures, the town was destroyed (Judg. i. 20; 2 K. ii. 13). The fields and vineyards were burnt to the ground, and the vine-trees were cut down, and the fields spoiled by over-spread ing them with stones (2 K. iii. 19, 25); and the horses were harnessed (2 Sam. viii. 4; Josh. xi. 16, 18). If the war was carried on simply for the purpose of plunder or supremacy, these extreme measures went much further than this. Sometimes the conqueror would restrict himself to robbing the trea-uries (1 K. xiv. 25; 2 K. xiv. 14, xxiv. 13), or laying contributions (2 K. xiv. 14). The Massaic Law mitigated to a certain extent the severity of the ancient usages towards the con- quered. With the exception of the Canaanites, whom the law of the land enjoined by the express command of God, it was for-bidden to the Israelites to put to death any other man unless bearing arms; the women and children were to be kept alive (Deut. xx. 13, 14). In a similar spirit of humanity the Jews were prohibited from killing fruit-trees for the purpose of making siege works (Deut. xx. 19). The Law further restricted the power of the conqueror over females, and secured them humane treatment (Deut. xxii. 10-14). The majority of the savage acts recorded as having been practiced by the Jews were either in retaliation for some gross provocation, or in- stance in the cases of Adoni-bezek (Judg. i. 6, 7), and of David’s treatment of the Ammonites (2 Sam. x. 2-4, xii. 31; 1 Chr. xx. 3); or else they were done by lawless marauders, as in Menahem’s treatment of the women of Topheah (2 K. xv. 16). The Jewish kings generally appear to have obtained credit for whatever success they achieved in warfare. The conquerors celebrated their success by the erection of monumental stones (1 Sam. vii. 12; 2 Sam. vii. 13, where, instead of “get him a name,” we should read “set up a memorial”), by hanging up trophies in their public buildings (1 Sam. xxi. 9, xxx. 10; 2 K. xi. 10), and by tri-ophal songs and dances, in which the whole population took part (Ex. xx. 1-21; Judg. vi. 1; 2 Sam. vii. 18; 2 Sam. xix. 8-9; 2 Sam. xxii. xvi. 1-27; 2 Chr. xxv. 25), or by a national mourning (2 Sam. iii. 31). The fallen warriors were duly buried (1 K. xvi. 13), their arms being deposited in the grave beside them (Ex. xxv. 27), while the enemies’ corpses were exposed to the birds of prey (1 Sam. xiv. 44; Jer. xxx. 33). The Israelites were di- rected to undergo the purification imposed on those who had touched a corpse, before they entered the precincts of the camp or the sanctuary (Num. xxxi. 19). The disposal of the spoil has already been described under Booz. (W. L. B.)

WARDROBE. 2 K. xii. 14, where, as rendered in the margin, the Hebrew signifies “ga-rments.” The vestments of the priests are prob- ably meant, said there to have been under the care of small. The same notice occurs in 2 Chr. xxxiv. 22. [See Vestery, Amer. ed.] H.

* WARES. [COMMERCE; MERCHANT.]

WASHING THE HANDS AND FEET.

The particular attention paid by the Jews to the cleansing of the hands and feet, as compared with other parts of the body, originated in the social usages of the East. As knives and forks were dis- posed with in eating, it was absolutely necessary that the hand, which was thrust into the common plate and napkin, should be pure. Women were regularly clad and clean, and samitis were ineffectual against the dust and heat of an eastern climate, washing the feet on entering a house was an act both of respect to the com- pany and of refreshment to the traveller. The form of these usages was transformed by the Pharisees of the New Testament age into a matter of ritual observance (Mark vii. 3), and special rules were laid down as to the manner in which the performance. The neglect of these rules by our Lord and his disciples drew down upon Him the hostility of that sect (Matt. xv. 2; Luke xi. 38).

Whether the expression πυγέα used by St. Mark has reference to any special regulation may per- haps be doubtful; the senses “of” (A. V.), and “diligently” (Aber), have been assigned of it, but it may possibly signify “with the fist,” as though it were necessary to close the one hand, which had already been cleansed, before it was applied to the muced one. This sense appears preferable to the other interpretations of a similar character, such as “up to the wrist” (Lightfoot); “up to the elbow” (Theophylact); “having closed
the hand" which is undergoing the washing (Gen.: Scalig.). The pharisaic regulations on this sub-
ject are embodied in a treatise of the Mishnah, entitled "Tobiah," from which it appears that the ablution was confined to the hand (2, § 5), and that great care was needed to secure perfect purity in the water used. The ordinary, as distinct from the

ceremonial, washing of hands before meals is still universally prevalent in eastern countries (Lam., i.
199): Burckhardt's Notes, i. 63).

Washing the feet did not rise to the dignity of a ritual observance, except in connection with the service at the sanctuary (Ex. xxvii. 3, 7), and was held a high place, however, among the rites of hospitality. Immediately that a guest presented himself at the tent-door, it was usual to offer the necessary materials for washing the feet (Gen. xvi. 4, xxiv. 32, xliii. 24; Judg. xix. 21; comp. Hom. Heb. iv. 49). It was a yet more compli-

cementary act, beclouding equally humility and affection, if the host actually performed the office for his guest (1 Sam. xxv. 41; Luke vii. 38, 44; John xiii. 5-14; 1 Tim. v. 10). Such a token of hos-

pitality is still occasionally exhibited in the East, either by the host, or by his deputy (Robinson's Bib. Res. ii. 229; Jewett's Res. pp. 78, 79). The feet were again washed before retiring to bed (Matt. v. 5). A symbolical significance is attached in John xii. 10 to washing the feet (Ex. vii. 11) with unholy water to the household, the former being partial to the latter. The Former of repeated in the course of the day, the latter done once for all; whereas they are adduced to illustrate the distinction between occasional sin and a general state of sinfulness. After being washed, the feet were on festive occasions anointed (Luke vii. 58; John xii. 2). The indignity attached to the act of washing another's feet, appears to have

been extended to the vessel used (Ps. lx. 8).

W. L. B.

* WASHPOT. [See the article above.]

WATCHES OF NIGHT (יָּאִשׁ בַּשְּׁלָשׁ: gr. Νυκτός): The Jews, like the Greeks and Romans, divided the night into military watches instead of hours, each watch representing the period for which sentinels or pickets remained on duty. The proper Jewish reckoning recognized only three such watches, entitled the first or beginning of the watches (Ex. xxvii. 31; Lam. ii. 19), the middle watches (Judg. xi. 10; and for unequal watches, xiv. 24; 1 Sam. xi. 11). These would last respectively from 9 P.M. to 10 A.M.; from 10 P.M. to 2 A.M.; and from 2 A.M. to sunrise. It has been contended by Lightfoot (Hor. Heb. ii. Matt. xiv. 25) that the Jews really reckoned four watches, three only of which were in the dead of the night, the fourth

being in the morning. This, however, is rendered improbable by the use of the term "middle," and is opposed to Rabbinical authority (Mishnah, Ḳe-

ruth. c. 1 § 11; Kimchi, on Ps. lxxii. 7; Rashii, on Judg. xiv. 19). Subsequently to the establish-

ment of the Roman supremacy, the number of watches was increased to four, which were described either according to their numerical order, as in the case of the "fourth watch" (Matt. xiv. 25; comp. Joseph. Ant. v. 6 § 5), or by the terms "even, midnight, cock-crowing, and morning" (Mark xiii. 35). These terminated respectively at 9 A.M., midnight, 3 A.M. and 6 A.M. Conformably to this, the guard of soldiers was divided into four relays (Acts xii. 4), showing that the Roman régime was followed in Herod's army. Watchmen appear to have patrolled the streets of the Jewish towns (Cont. iii. 3, v. 7; Ps. cxxix. 14), where for "waketh" we should substitute "watcheth": Ps. cxxix. 6).

W. L. B.

* WATCHMAN. [Watches of Night.]

WATER OF JEALOUSY (Num. v. 11-31), θρύγις ἑλέος, "waters of bitterness," sometimes with ἄργυρος added, as "causing a curse" (τῆς ἐκ ἑλέος ἄργυρος: Philo, ii. 310, πόσος ἑλέος). The ritual prescribable consisted in the husband's bringing the woman before the priest, and the essential part of it is unquestion-
bly the bath, to which the "water" was sub-

sidiary, symbolical, and ministerial. With her he was to bring the tenth part of an ephah of barley-

meal as an offering. Perhaps the whole is to be regarded from a judicial point of view, and this offering in the light of a court-fees. God him-

self was suddenly invoked to judge, and his pres-

sence recognized by throwing a handful of the barley-meal on the blazing altar in the course of the rite. In the first instance, however, the priest "set her before the offering" in her hand. The Mishnah (Sotah) prescribes that she be clothed in black with a rope girdle around her waist; and from the direction that the priest "shall uncover her head" (ver. 18), it would seem that the woman's dress was preferential also in black. Moreover, she stood holding the offering, so the priest stood hold-

ing an earthen vessel of holy water, mixed with the dust from the floor of the sanctuary, and de-

claring her free from all evil consequences if inno-

cent, solemnly devoted her in the name of Jehovah to be a curse and an oath among her people," if guilty, further describing the exact consequences ascribable to the operation of the water in the "mem-

bers which she had yielded as servants to unclean-

ness" (ver. 21, 22, 27; comp. Rom. vi. 19 and Theodoret, Quest. x. in Num.). He then

fixation, mixed with the ashes of the red heifer, for its ceremonial property was to defile the pure and to purify the unclean (Num. xiv. 21) who touched it, it could hardly be used in a rite the object of which was to establish the innocence of the upright or dis-

cover the guilt of the sinner, without the symbolism forring. Perhaps water from the laver of the san-

cuary is intended.

The words ἕλεος θρύγις rendered in the A. V. by the word "rot," rather indicate, ac-

cording to Green ἐλέος, "to become or make lean." Michaelis thought ovarian dropsy was intended by the symptoms ἑλέος θρύγις.
WATER OF JEALOUSY

WAVE-OFFERING

"wrote these verses in a book, and blotting them out with the bitter water," and, having thrown, perhaps at this stage of the proceeding, the handful of meal on the altar, "caused the man to drink" the potion thus dragged, say moreover answering to the words of his imprecation, "Amen, Amen." Josephus adds, if the suspicion was unfounded, she obtained conception; if true, she died infamously. This accords with the sacred text, if she "be clean, then shall she be free and shalt conceive seed" (ver. 29), words which would mean that when restored to her husband's affection she should be blessed with fruitfulness; or, that if conception had taken place before her appearance, it would have its proper issue in child-bearing, which, if she had been unfaithful, would be interpreted by the operation of the curse. It may be supposed that a husband would not be forward to publish his suspicions of his own injury, unless there were symptoms of apparent conception, and a risk of a child by another being presented to him as his own. In this case the woman's natural apprehensions regarding her own gestation would operate very strongly to make her shrink from the potion, if guilty. For plainly, the effect of such a ceremony on the nervous system of one unmanned, might easily go far to imperil her life, even without the precise symptoms ascribed to the water. Meanwhile the rule would operate beneficially for the woman, if innocent, who would be during this interval under the protection of the court to which the husband had himself appealed, and so far secure against any violent consequence of his jealousy, which had thus found a very reasonable law. Further, by thus interposing a period of probation the fierceness of conjugal jealousy might cool. On comparing this argument with the further restrictions laid down in the treatise Suidas tending to limit the application of this rite, there seems grave reason to doubt whether recourse was ever had to it in fact. [AVITTE.]

The custom of writing on a purgative words calculated or medical relating to a particular case, and then washing them off and giving the patient the water of this ablation to drink, has descended among oriental superstitions to the present day, and a sick Arab would probably think this the most natural way of "washing" a prescription. See, on the general subject, Gesenius, "Heb. pent., present, wash it with water." The Luc. (Winer.) The custom of such an ordinance was probably traditional in Moses' time, and by fencing it round with the wholesome awe inspired by the solemnity of the prescribed ritual, the lawgiver would deprive it to a great extent of its barbarous tendency, and would probably restrain the husband from some of the frenzied excesses to which he might otherwise be driven by a sudden fit of jealousy, so powerful in the oriental mind. On the whole it is to be taken, like the permission to divorce by a written instrument, rather as the mitigation of a custom ordinarily harsh, and as a barrier placed in the way of uncalculating violence. Viewing the regulations concerning menstruation as a whole, we shall find the same principle animating them in all their parts—that of providing a legal channel for the course of natural feelings where irrepressible, but at the same time of surrounding their outlet with institutions apt to mitigate their intensity, and so assisting the gradual formation of a gentler temper in the bosom of the nation. The rite was given it because of the hardness of their hearts," but with the design and the tendency of softening them. (See some remarks in Spencer, de Leg. Hebr.) H. H.

WAVE-OFFERING (יִנְּרָה, "a waving," from יִנְרָה, "to wave," פְּדוּנְתֵּנָה, a waving before Jehovah"). This rite, together with that of "hearing " or "raising" the offering, was an inseparable accompaniment of peace-offerings. In such the right shoulder, considered the choicest part of the victim, was to be "heaved," and viewed as holy to the Lord, only eaten therefore by the priest; the breast was to be "waved," and eaten by the worshippers. On the second day of the Passover a sheaf of corn, in the green ear, was to be waved, accompanied by the sacrifice of an unblemished lamb of the first year from the performance of which ceremony the days till Pentecost were to be counted. When the feast arrived, two loaves, the first-fruits of the ripe corn, were to be offered with a burnt-offering, a sin-offering, and two lambs of the first year for a peace-offering. These likewise were to be waved.

The Scriptural notices of these rites are to be found in Ex. xxix. 24, 27; Lev. vii. 30, 34, viii. 27, ix. 21, x. 14, 15, xxii. 15, 10, 15, 20; Num. vi. 20, xxvii. 11, 18, 26-29, etc.

We find also the word יָנָרָה applied in Ex. xxxviii. 24 to the gold offered by the people for the furniture of the sanctuary. It is there called יַנִּרְנָה בְּנֵה. It may have been waved when presented, but it seems not impossible that יָנָרָה had acquired a secondary sense so as to denote "tree will offering." In either case we must suppose the ceremony of waving to have been known to and practiced by the Israelites before the giving of the Law.
It seems not quite certain from Ex. xxix, 26, 27, whether the waving was performed by the priest or by the worshipper with the former's assistance. The rabbinical tradition represents it as done by the worshipper, the priest supporting his hands from below. In conjecturing the meaning of this rite, regard must be had, in the first instance, to the kind of sacrifice to which it belonged. It was the accompaniment of peace-offerings. These not only, like the other sacrifices, acknowledged God's greatness and his right over the creature, but they witnessed to a ratified covenant, an established communion between God and man. While the "sin-offering" merely removed defilement, while the burnt-offering gave entirely over to God of his own, the victim being wholly consumed, the peace-offering, as establishing relations between God and the worshipper, was participated in by the latter, who ate, as we have seen, of the breast that was waved. The Rabbis explain the waving of the shoulder as an acknowledgment that God has his throne in the heavens, the waving of the breast that He is present in every quarter of the earth. The one rite testified to his eternal majesty on high, the other to his being among and with his people.

It is not said in Lev. xxiii. 10-14, that a peace-offering accompanied the wave-sheaf of the Passover. In the contrarv, the only blood-offering thereby mentioned in connection with it is styled a burnt-offering. When, however, we consider that everywhere else the rite of waving belongs to a peace-offering, and that besides a sin and a burnt offering, there was one in connection with the wave-leaves of Pentecost (Lev. xxiii. 19), we shall be weary of concluding that there was none in the present case. The significance of these rites seems considerable. The name of the month Abib, in which the Passover was kept, means the month of the green ear of corn, the month in which the great produce of the earth has come to the birth. In that month the nation of Israel came to the birth; each succeeding Passover was the keeping of the nation's birthday. Beautifully and naturally, therefore, were enfolded into this national expression of national life; that of their needful sustenance into yearly life—combined in the Passover. All first-fruits were holy to God: the first-born of men, the first-produce of the earth. Both principles were recognized in the Passover. When six weeks after the harvest it had ripened, the first-fruits of its mature produce were similarly to be dedicated to God. Both were waved, the rite which attested the Divine presence and working all around us being surely most appropriate and significant in their case.

F. G.

W A Y. This word has now in ordinary parlance so entirely forsaken its original sense except in combination, as in "highway," "causeway" and is so uniformly employed in the secondary or metaphorical sense of a "custom" or "manner," that it is difficult to remember that in the Bible it most frequently signifies an actual road or track. Our translators have employed it as the equivalent of no less than eighteen different Hebrew words. Of these, several had the same secondary sense which the word "way" has with us. Two others ("path") and ("way") are employed only by the poets, and are commonly rendered "path" in the A. V. But the term which most frequently occurs, and in the majority of cases signifies (though it also is now and then used metaphorically) an actual road, is ("road"). As ("way"). This is more obscure in the A. V., even than the others: "Come along by the plain of Moanaeh."
WEAVING.

"A rents to render the term by 'Weave.'"

Moles are common enough in Palestine; Hasselquist (Turr. p. 129), speaking of the country between Juha and Rama, says he had never seen in any place the insect so commonly represented. Two hints it is better to give to the Heb. term the same signification which the ogenate Arabic and Syrac have, and understand a "made" to be denoted by it. [Mote.]

WEAVING (ג"ס). The art of weaving appears to be coeval with the first showing of civilization. In what country, or by whom it was invented, we know not; but we find it practiced with great skill by the Egyptians at a very early period, and hence the invention was not unreasonably attributed to them (Plin. xii. 57). The "vesture of fine linen" such as Joseph wore (Gen. xli. 42), were the product of Egyptian looms, and their quality, as almost if not inferior to the finest calico of modern times (Wilkinson, ii. 75). The Israelites were probably acquainted with the process before their sojourn in Egypt; but it was undoubtedly there that they attained the proficiency which enabled them to execute the hangings of the Tabernacle (Ex. xxv. 48), and other artiste textures. At a later period the Egyptians were still famed for the manufacture of "fine linen" (i.e., backed) flax and of "cloth," rendered in the A. V. "networks," but more probably a white material either of linen or cotton (Is. xix. 9). From them the Tyrians procured the "fine linen with brodered work" for the sails of their vessels (Ex. xxvii. 7), the handsome character of which may be inferred from the representations of similar sashes in the Egyptian paintings (Wilkinson, ii. 131, 167). Weaving was carried on in Egypt, generally, but not universally, by women (Herod. ii. 52; comp. Wilkinson, ii. 84). This was the case also among the Jews about the time of the Exodus (1 Chr. iv. 21), but in later times it usually fell to the lot of the females to supply the household with clothing (1 Sam. i. 20), 2 K. xxiii. 7), and an industrious housewife would produce a surplus for sale to others (Prov. xxxi. 13, 19, 24).

The character of the loom and the process of weaving can only be inferred from incidental notices. The Egyptian loom was usually upright, and the weaver stood at his work. The cloth was fixed sometimes at the top, sometimes at the bottom, so that the work of Herodotus (ii. 52), that the Egyptians, contrary to the usual practice, pressed the wood downwards, must be received with reservation (Wilkinson, ii. 85). That a similar variety of usage prevailed among the Jews, may be inferred from the "mark of St. John (xix. 23), that the seamless coat was woven "from the top" (Ex. xxix. 6).

Timics of this kind were designated by the Roman rhetor, implying that they were made, at an upright loom at which the weaver stood before his work, thwarting the woof upwards (Plin. viii. 74). The modern Arabs use a procumbent loom, raised above the ground by short legs (Burckhardt's Notes i. 67). The Bible does not notice the loom itself, but speaks of the beam b to which the warp was attached (1 Sam. vii. 15; 2 Sam. xxi. 19); and of the pin c to which the cloth was fixed, and on which it was rolled (Judg. xvi. 14). We have also notice of the shuttle, d which is described by a term significant of the act of weaving (Job vii. 6); the thumb or threads which attached the web to the beam (Is. xxvii. 12, margua); and the web, e which really meant these, admits of doubt, unless as it is not easy to see how the one could be affected with leprosy without the other: perhaps the term refer to certain kinds of texture (Kisobel, in loc.). The shuttle is occasionally dispensed with, the web being passed through with the hand (Robinson's Bible. Res. i. 160). The speed with which the weaver used his shuttle, and the decisive manner in which he separated the web from the thread when his work was done, supplied vivid images, the former of the speedy escape of life (Job vii. 6), the latter of sudden death (Is. xxviii. 2).

The textures produced by the Jewish weavers were very various. The coarser kinds, such as tent-cloth, sackcloth, and the "hairy garments" of the prophet of God, or camel's hair (Ex. xxvii. 7; Matt. iii. 4). Wool was extensively used for ordinary clothing (Lev. xvi. 47; Prov. xxxvi. 26, xxxii. 13; Ex. xxviii. 18), while for finer work the wool was used, varying in quality, and producing the different textures described in the Bible as "linen" and "fine linen." The mixture of wool and flax in cloth intended for a garment was interdicted (Lev. xix. 19; Deut. xxii. 11). We regard to the ornamental kinds of work, the terms rituwth, "needlework," and morash chalah, the "work of the cunning workman," have been already discussed under the head of EMBROIDERER, to the effect that both kinds were produced in the loom, and that the distinction between them lay in the addition of a devise or pattern in the latter, the rituwth consisting simply of a variegated stuff without a pattern. We may further notice the terms: (1) shidbats b and tshiblet applied to the robes of the priest (Ex. xxvii. 4, 9), and specifying tequilad (A. V. "brodered "), i.e., with depressions probably of a square shape worked in, similar to the texture described by the Romans under the term sudorato (Plin. viii. 75; Jun. ii. 97); this was produced in the loom, as it is expressly said to be the work of the weaver (Ex. xxvii. 27). (2) Moshek b (A. V. "twined "), applied to the fine linen out of which the curtains

---

a "גטננ". The same word describes both the and the shuttle.

b "גטננ". This term is otherwise understood of the warp, as in the xxx. and the Vulgate (Gesen. Thes. p. 800).
of the Tabernacle and the sacred vestments were made (Ex xxvi. i, xxviii. 6, etc.); in this texture each thread consisted of several finer threads twisted together, as is described to have been the case with the sacred consolamenta (Hieron iii. 47). (4.) 

Midshesheth zidikah (A.V. "of most just gold"), textures in which gold thread was interwoven (Ps xlv. 18). The Babylonians were particularly skillful in this branch of weaving, and embroidered groups of men or animals on the robes (Pth. viii. 74; Layard, Nin. ii. 413). The "goody Babylonian garment" secreted by Achan was probably of this character (Josh. viii. 21). The sacred vestments are said to have been woven in one piece without the intervention of any needlework to join the seams (Joseph. Ant. iii. 7, § 4). The "coat without seam" (χιτών ἀσήμαντος), worn by Jesus at the time of his crucifixion (John xix. 23), was probably of a sacred character in this respect, but made of a less costly material (I. S. T. p. 72).

*WEB. [Weaving]*

WEB. [Weaving] This topic has been ex- 
mansly treated under the head of MAHAL 
(iii. 1762-1807), to which the reader is referred. In this relation, the Tantiles may be entitled to spend recognition, as a sacred book portraying, according to almost every theory of its interpretation, the sacredness of wedded love — there being a general agreement that its two principal personages were wedded, or solemnly betrothed, and that the theme of the song is chaste, comely marriage. This view is fatal to the hypothesis advanced in a preceding article [SHULAMITE, iv. p. 3921], that the "object of Solomon’s passion" was a lovely Shunammite girl, who figured in the history of the royal family (I K. i. 3, 4, ii. 17, 21), one of the court-beauties of his day. The conjecture is fur- 
ther discredited by the allusions (Cant. iii. 
6, vii. 5) to the bridal procession and the bride 
coming up from "the wilderness" (NLT77), the term by which the sacred writers generally designate the southern desert. It is still further dis- 
credited by her allusions to her foreign extraction; and the deportment appeal to the daughters of Jeshuah (Cant. i. 7, 15), quite out of place on the lips of a native Jewess, of the court circle, whose heart befits a dark skinned daughter of Egypt, or of one of the desert tribes. S. W.

Indeed very great, but a nearer approach to universality is required to render it an argument for the view in aid of which it is appealed to. It was adopted by all the Semitic races, and, in the later period of their history at least, by the Egyptians. Across the Atlantic we find it, or a division all but identical with it, among the Peruvians. It also obtains now with the Hindoos, but its antiquity among them is matter of question. It is possible that it was first introduced into India by the Arabs and Mohammedans. So in this manner we find it either universally or only among the Buddhists admits of doubt. (See, for both, Primary's Questions and Answers, a work with many of the results of which we may be well expected to quarrel, but which deserves, in respect not only of curious learning, but of the vigorous and valuable thought with which it is impregnated, to be far more known than it is.) On the other hand, there is no reason for thinking the week known till a later period either to Greeks or Romans.

3dly. So far from the week being a division of time without ground in nature, there was much to recommend its adoption. Where the days were named from planetary deities, as among first the Assyrians, and then the Egyptians, there of course each period of seven days would constitute a whole, and that whole might come to be recognized by nations that disregarded or rejected the practice which had shaped and determined it. But further, the week is a most natural and nearly an exact quadruplication of the month, so that the quarters of the moon may easily have suggested it.

It is beside the purpose of this article to trace the hebdomadal division among other nations than the Hebrews. The week of the Bible is that with which we have to do. Even if it were proved that the planetary week of the Egyptians, as sketched by Dion Cassius (Hist. Rom. xxxvii. 18), existed at or before the time of the Exodus, the children of Israel did not copy that. Their week was simply determined by the Sabbath; and there is no evidence of any other day, with them, having either had a name assigned to it, or any particular associations bound up with it. The days seemed to have been distinguished merely by the ordinal numerals, counted from the Sabbath. We shall have occasion to point to the Egyptian planetary week at a later stage of our inquiry, but our first and main business, as we have already said, is with the week of the Bible.

We have seen in Gen. xxix. 27, that it was known to the ancient Syrians, and the injunction to Jacob, "fulfil her week," indicates that it was in use as a fixed term for festive celebrations. The most probable exposition of the passage is, that Laban tells Jacob to fulfil Leah's week, the proper period of the nuptial festivities in connection with his marriage to her, and then he may have Rachel also (comp. Judg. xiv.). And so too for funeral observance, as in the case of the obsequies of Jacob, Joseph made a mourning for his father seven days (Gen. i. 10). But neither of these instances, any more than Noah's procedure in the ark, go further than showing the custom of observing a term of seven days for any observance of importance. They do not prove that the whole year, or the whole month, was thus divided at all times, and without regard to remarkable events.

In Exodus of course the week comes into very distinct manifestation. Two of the great feasts—the Passover and the Feast of Tabernacles—are prolonged for seven days after that of their initiation (Exod. xii. 15-24, et al.), a custom which remains in the Christian Church, in the rituals of which the commemorances and topics of the great festivals are prolonged till what is technically called the octave. Although the Feast of Pentecost lasted but one day, yet the time for its observance was to be counted by weeks from the Passover, whence one of its titles, the Feast of Weeks.

These few words, as we have seen expanded so as to make the seventh month and the seventh year Sabbatical. To whatever extent the laws enforcing this may have been neglected before the Captivity, their effect, when studied, must have been to render the words שָׁבָּיקה, שֵׁבָּיוֹת, שֵׁבֶּכֶת, capable of meaning a seven of years almost as naturally as a seven of days. Indeed the generality of the word would have this effect at any rate. Hence their use to denote the latter in prophecies, more especially in that of Daniel, is not more arbitrary symbolism, but the employment of a not unnatural and easily understood language. This is not a查明cerance of the planetary week, but the adoption of a whole intercalation system. So do we propose giving our opinion of any such, but it is connected with our subject to remark that, whatever be the merits of that which in Daniel and the Apocalypse understands a year by a day, it cannot be set aside as forced and unnatural. Whether days were or were not intended to be thus understood in the places in question, their being so understood by a could hardly be otherwise, and we may say logical attendant on the scheme which counts weeks of years, and both would have been a natural confirmation to minds familiar and occupied with the law of the Sabbatical year.

In the N. T. we of course find such clear recognition of and familiarity with the week as needs scarcely be dwelt on. Sacred as the division was, and stamped deep on the minds and customs of God's people, it now received additional solemnity from our Lord's last earthly Passover gathering up his work of life into a week.

Hence the Christian Church, from the very first, was familiar with the week. St. Paul's language (I Cor. xvi. 2, καὶ ἀνὰ τὰς σαββατικὰς) shows this. We cannot, however, rely so much on it. Whether the time observed by the inhabitants of Corinth generally; for they to whom he was writing, though doubtless the majority of them were Gentiles, yet knew the Lord's day, and more probably the Jewish Sabbath. But though we can infer more than this from the place in question, it is clear that if not by this time yet very soon after, the whole Roman world had adopted the hebdomadal division. Dion Cassius, who wrote in the 2d century, speaks of it as both universal and recent in his time. He represents it as coming from Egypt, and gives two schemes, by one or other of which he considers that the planetary names of the different days were fixed (Dion Cassius, xxi. 18). Those names, or corresponding ones, have perpetuated themselves over Christendom, though no associations of any kind are now connected with them, except in so far as the whimsical conscience of some has quarrelled with their Pagan origin, and led to an attempt at their disuse. It would be interesting, though foreign to our present purpose, to inquire into the origin of this planetary week. A deeply-learned paper in the Philological Journal,
by the late Archdeacon Harl," gives the credit of its invention to the Chaldees. Dion Cassius was however pretty sure to have been right in tracing its adoption by the Roman world to an Egyptian origin. It is very striking to reflect that while Christendom was in its cradle, the law by which she was to divide her time came without collision with her later universal clearance, thus making things ready for her to impose on mankind that week on which all Christian life has been shaped — that week grounded on no worship of planetary deities nor dictated by the mere wish to quadruplicate the month, but based on the earliest lesson of revelation, and proposing to man his Maker's model as that whereby to regulate his working and his rest — that week which once in modern times it has been attempted to abolish, because it was attempted to abolish the whole Christian faith, but which has kept, as we are sure it ever will keep, its ground, being bound up with that other, and sharing therefore in that other's invincibility and perpetuity. F. G.

WEEKS, FEAST OF. [PENTECOST.]

WEIGHTS AND MEASURES.

I. WEIGHTS.

Introduction. — It will be well to explain briefly the method of inquiry which led to the conclusions stated in this article, the subject being intricate, and the conclusions in many main particulars different from any at which other investigators have arrived. The disagreement of the opinions respecting ancient weights that have been formed on the evidence of the Greek and Latin writers shows the importance of giving the first place to the evidence of monuments. The evidence of the Bible is clear, except in the case of one passage, but it requires a monumental commentary. The general principle of the present inquiry was to give the evidence of the monuments the preference on all doubtful points, and to compare it with that of literature, so as to ascertain the purport of statements which otherwise appeared to be explicable in two, or even three, different ways. Thus, if a certain talent is said to be equal to so many Attic drachms, these are usually explained to be drachms on the old, or Commercial standard, or on Solon's reduced standard, or again on the further reduced standard equal to that of Roman denarii of the early emperors; but if we ascertain from weights or coins the weight of the talent in question, we can decide with what standard it is compared, unless the text is hopelessly corrupt.

Besides this general principle, it will be necessary to bear in mind the following postulates:

1. All ancient Greek systems of weight were divided either directly or indirectly, from an eastern source.
2. All the other systems of ancient Greece and Persia, the Eginetan, the Attic, the Babylonian, and the Embod, are divisible either by 6,000, or by 3,600.
3. The 6,000th or 3,600th part of the talent is a divisor of all higher weights and coins, and a multiple of all lower weights and coins, except its two thirds.
4. Coins are always somewhat below the standard weight.
5. The statements of ancient writers as to the

relation of different systems are to be taken either as indicating original or current relation. When a set of statements shows a special study of metrology we must infer original relation; isolated statements may rather be thought to indicate current relation. All the statements of a writer, which are not borrowed, probably indicate either the one or the other kind of relation.

6. The statements of ancient writers are to be taken in their seemingly obvious sense, or discarded altogether as incorrect or unintelligible.

7. When a certain number of drachms or other denominations of one metal are said to correspond to a certain number of drachms or other denominations of another metal, it must not be assumed that the system is the same in both cases.

Some of these postulates may seem somewhat strict, but it must be recollected that some, if not all, of the systems to be considered have a mutual relation that is very apt to lead the inquirer to visionary results if he does not use great caution in his investigations.

The first investigation respecting the Hebrew weights that is contained in direct statements necessitates an examination of the systems used by, or known to, the Greeks as late as Alexander's time. We begin with such an examination, then state the direct data for the determination of the Hebrew system or systems, and finally endeavor to effect that determination, adding a comparative view of all our main results.

1. Early Greek Talents. — Three principal systems were used by the Greeks before the time of Alexander, — those of the Eginetan, the Attic, and the Embod talents.

1. The Eginetan talent is stated to have contained 60 minae, and 6,000 drachms. The following points are incontrovertibly established on the evidence of ancient writers. Its drachm was heavier than the Attic, by which, when unqualified, we mean the drachm of the full monetary standard, weighing about 67.5 grms Troy. Pollux states that it contained 10,000 Attic drachms and 100 Attic minae. Anub Gellius, referring to the time of Demostenes, speaks of a talent being equal to 10,000 drachms, and, to leave no doubt, says they would be the same number of denarii, which in his own time were equal to current reduced Attic drachms, the terms drachm and denarii being then used interchangeably. In accordance with these statements, we find a monetary system to have been in use in Macedonia and Thrace, of which the drachm weighs about 110 grs., in very nearly the proportion required to the Attic (6: 10: 67.5: 112.5).

The silver coins of Egin, however, and of many ancient Greek cities, follow a lower standard, of which the drachm has an average maximum weight of about 96 grs. The famous Cyzicene stater of electrum appear to follow the same standard as the coins of Egin, for they weigh about 240 grs., and are said to have been equal in value to 28 Attic drachms of silver, a drach of 129 grs., being equal to 20 such drachms, which would give the Cyzicones (20: 129: : 28: 180) three fourths of gold, the very proportion assigned to the composition of electrum by Pliny. If we may infer that the silver was not counted in the value, the Cyzicones would be equal to low drachms of Egin. The drachm obtained from the silver coins of Egin has very nearly the weight, 92.5 grs., that Beeck assigns to that of Athens before Solon's reduction, of which
the system continued in use afterwards as the Commerciaal talent. The coins of Athens give a standard, 67.5 grs., for the Solonian drachm, that does not allow, taking that standard for the basis of computation, a higher weight for the same Solonian drachm than that computed by Boeckh.

An examination of Mr. Burgon’s weights from Athens, in the British Museum, has, however, induced us to infer a higher standard in both cases. These weights bear inscriptions which prove their denominations, and that they follow two systems. (One weighing 9,980 grs. troy has the inscription MNA ATOP, and another weighing 7,171, simply MNA. We have therefore two systems evidently in the relation of the Commercial Attic, and Solonian Attic (9,980 : 7,171 : 138.88 : 99.7 instead of 100), a conclusion borne out by the fuller data given a little later (§ I. 2). The lower weight is distinguished by ΔEMO on a weight of 3,482 (× 2 = 6,964 grs.), and by 3Δ on one of 881 (× 3 = 2,643) : its mina was therefore 450 grs. The identity of these two systems, the Market and the Populcr, with the Commercial and Solonian of Athens, is therefore evident, and we thus obtain a higher standard for both Attic talents. From the correct relation of the weights of the two minae given above, we may compute the drachms of the two talents at about 98.8 and 71.7 grs. The heavier standard of the two Attic systems allowed by these weights reduces the difficulty that is occasioned by the difference of the two .Egyptian standards.

We thus obtain the following principal standards of the Egyptian weight:

1 Countermark, tripod.  2 Countermark, prow.  3 Turtle, headless.  4 Countermark Explanation of signs: A. Scarceyly injured. B. A little weight lost. C. More than a little lost. D. Much weight lost. E. Much corroded. F. Very much weight lost. When two signs are given, the former is the more probable. * The weight of the Commercial Attic mina is here assumed to be about 9,980 grs. + The weight of the Solonian Attic mina is here assumed to be about 7,171 grs. The heavier talent is indicated by capital letters.
WEIGHTS AND MEASURES

a. The Macedonian talent, or Eginetan of the writers, weighing about 660,000 grs., containing 69 minae and 6,000 drachms.

b. The Commercial talent of Athens, used for the coins of Eginetan, weighing as a monetary talent, never more than about 570,000 grs., reduced from a weight-talent of about 598,000, and divided into the same principal parts as the preceding.

It may be objected to this view that the coins of Eginetan should rather give us the true Eginetan standard than those of Macedonia, but it may be replied, that we know from literature and monuments of both Greek systems heavier than the ordinary or later Attic, and that the heavier of these systems is sometimes called Eginetan, the lighter, which bears two other names, never.

2. The Attic talent, when simply thus designated, is the standard weight introduced by Solon, which stood to the older or Commercial talent in the relation of 100 to 138.89. Its average maximum weight, as derived from the coins of Athens and the evidence of ancient writers, gives a drachm of about 67.5 grs.; but Mr. Borgen's weights, although shown, enable us to raise this sum to 71.7. These weights have also enabled us to make a very curious discovery. We have already seen that two mines, the Market and the Popular, are recognized in them, one weight, having the inscription MNA ATOP (μηνα ἀτόπος), weighing 9,280 grs., and another, inscribed MNA (μηνα), weighing 7,171 grs., these being in almost exact the relation of the commercial and ordinary Attic mine Ἀτόπος. There is no indication of any third system, but certain of the marks of value prove that the lower system had two talents, the heavier of which was double the weight of the ordinary talent. No. 9 has the inscription ΕΓΕΝΤΑΠ, "the quarter," and weighs 3,218 grs., giving a unit of 12,872 grs.; No. 14, inscribed ΕΜΙΤΑΠ, the "half-quarter," weighs 1,770 grs., giving a unit of 14,160 grs. We thus obtain a mina twice that of Solon's reduction. The probable reason for the use of this larger Solonian talent will be shown in a later place (§ IV.). These weights are of about the date of the Peloponnesian War. (See Table A.)

From these data it appears that the Attic talent weighed about 430,200 grs. by the weights, and that the coins give a talent of about 455,000 grs., the latter being apparently the weight to which the talent was reduced after a time, and the maximum weight at which it is reckoned by ancient writers. It gradually lost weight in the coinage, until the drachm fell to about 57 grs. or less, thus coming to be equivalent to, or a little lighter than, the denarius of the early Caesars. It is important, when examining the statements of ancient writers, to consider whether the full monetary weight of the drachm, mina, or talent, or the weight after this last reduction, is intended. There are cases, as in the comparison of a talent fallen into disuse, where the value in Attic drachms or denarii so described is evidently used with reference to the full Attic monetary weight.

3. The Euboic talent, though used in Greece, is also said to have been used in Persia, and there can be no doubt of its eastern origin. We therefore reserve the discussion of it for the next section (§ II, 2).

II. Foreign Talents of the same Period. — Two foreign systems of the same period, besides the Hebrew, are mentioned by ancient writers, the Babylonian talent and the Euboic, which Herodotus relates to have been used by the Persians of his time respectively for the weighing of their silver and gold paid in tribute.

1. The Babylonian talent may be determined from existing weights found by Mr. Layard at Nineveh. These are in the forms of lions and ducks, and are all upon the same system, although the same denominations sometimes weigh in the proportion of 2 to 1. On account of their great importance we insert a table, specifying their weights,

---

**Table of Weights from Nineveh**

Two weights in the series are omitted in this table: one is a large duck representing the same weight as No. 1, but much injured; the other is a small lion, of which the weight is doubtful, as it cannot be decided whether it was adjusted with one or two rings.

A. Well preserved. B. Somewhat injured. C. Much injured.

---
WEIGHTS AND MEASURES

Inscriptions, and degree of preservation. (See Table II, previous page.)

From these we may safely draw the following inferences.

The weights represent a double system, of which the heavier talent contained two of the lighter talents.

The heavier talent contained 60 manehs. The maneh was divided into thirtieths and sixtieths. We conclude the units having these respective relations to the maneh of the heavy talent to be divisions of it, because in the case of the first a thirtieth is a more likely division than a sixtieth, which it would be if assigned to the lighter talent, and because, in the case of the second, eight sixtieths is a more likely division than eight thirtieths.

The lighter talent contained 60 manehs. According to Dr. Hincks, the maneh of the lighter talent was divided into sixtieths, and these again into thirtieths. The sixtieth is so important a division in any Babylonian system, that there can be no doubt that Dr. Hincks is right in assigning it to this talent, and moreover its weight is a value of great consequence in the Babylonian system as well as in one derived from it. Besides, the sixty bears a different name from the sixtieth of the heavier talent, so that there must have been a sixtieth in each, unless we have shown to be unlikely, the latter belongs to the lighter talent, which would then have had a sixtieth and thirtieth. The following table exhibits our results.

Certain low subdivisions of the lighter talent may be determined from smaller weights, in the British Museum, from Babylonia or Assyria, not found with those last described. These are, with one exception, ducks, and have the following weights, which we compare with the multiples of the smallest subdivision of the lighter talent.

Before comparing the evidence of the coins which we may suppose to have been struck according to the Babylonian talent, it will be well to ascertain whether the higher or lower talent was in use, or whether both were, in the period of the Persian coins.

Herodotus speaks of the Babylonian talent as not greatly exceeding the Euboic, which has been computed to be equivalent to the Commercial Attic, but more reasonably as nearly the same as the ordinary Attic. Pollux makes the Babylonian talent equal to 7,600 Attic drachmae. Taking the Attic drachmae at 67.5 grs., the standard probably used by Pollux, the Babylonian talent would weigh 472,500 grs., which is very near the weight of the lighter talent. Herodian says that the Babylonian talent was equal to 72 Attic minae, which, on the standard of 67.5 to the drachma, gives a sum of 486,000. We may therefore suppose that the lighter talent was generally, if not universally, in use in the time of the Persian coins.

Herodotus relates that the king of Persia received the silver tribute of the satrapies according to the Babylonian talent, but the gold, according to the Euboic. We may therefore infer that the silver coinage of the Persian monarchy was then adjusted to the former, the gold coinage to the latter, if there was a coinage in both metals so early. The oldest coins known to these coins, of the Persian monarchy, are of the time of Herodotus, if not a little earlier; and there are still more ancient pieces, in both metals, of the same weights as Persian gold and silver coins, which are found at or near Sardes, and can scarcely be doubted to be the coinage of Creesus, or of another Lydian king of the 6th century. The larger silver coins of the Persian monarchy, and those of the satrapies, are of the following denominations and weights:—

<table>
<thead>
<tr>
<th>Gs. Troy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Piece of three sigl.</td>
</tr>
<tr>
<td>Piece of two sigl.</td>
</tr>
<tr>
<td>Siglos</td>
</tr>
</tbody>
</table>

The only denomination of which we know the name is the siglos, which, as having the same type as the Dorian, appears to be the oldest Persian silver coin. It is the nineteenth part of the maneh of the lighter talent, and the 5,400th part of that talent. The piece of three sigl. is the thirtieth part of that maneh, and the 1,800th part of the talent. If there were any coins of these coins being struck upon the Babylonian standard, it would be removed in the next part of our inquiry, in which we shall show that the relation of gold and silver occasioned these divisions.

2. The Euboic talent, though bearing a Greek name, is rightly held to have been originally an eastern system. As it was used to weigh the gold sent as tribute to the king of Persia, we may infer that it was the standard of the Persian gold money; and it is reasonable to suppose that the coinage of Euboic was upon its standard. If our result as to the talent, when tested by the coins of Persia and Euboic, confirms this inference and supposition, it may be considered sound.

We may therefore discuss the celebrated passage of Herodotus on the tribute of the Persian satrapies. He there states that the Babylonian talent contained 70 Euboic minae (iii. 89). He specifies the amount of silver paid in Babylonian talents by each province, and then gives the sum of the silver according to the Euboic standard, reduces the gold paid to its equivalent in silver, reckoning the former at thirteen times the value of the latter, and lastly gives the sum total. His statements may be thus tabulated:—

<table>

It is impossible to explain this double error in any satisfactory manner. It is, however, evident that in the time of Herodotus there was some such relation between the Babylonian and Euboeic talents as that of 11465 to 10. This is near 12 to 1, and it may be inferred that ancient writers speak of any relative value of gold to silver about this time that would make talents in this proportion easy for exchange, and whether, if such a proportion is stated, it is confirmed by the Persian coins. The relative value of 13 to 1, stated by Herodotus, is very nearly 12 to 1, and seems as though it had been, the result of some change, such as might have been occasioned by the exchange of the surface-gold in Asia Minor, or a more careful working of the Greek silver mines. The relative value 12 to 1 is mentioned by Plato (Hippocr.); about Plato's time the relation was, however, 10 to 1. He is therefore speaking of an earlier period.

Supposing that the proportion between the Babylonian and Euboeic talents was 12 to 10, and that it was based upon a "relative value of 12 to 1, what light would the Persian coins throw upon the theory? If we take the chief or only Persian gold coin, the Daric, assuming its weight to be 124 grs., and multiply it by 12, we obtain the product 1,548. If we divide this product as follows, we obtain as approximate weights of all the principal and heavier Persian silver coins: —

1,548 + 6 = 258 three sigi.
+ 9 = 172 two sigi.
+ 18 = 86 sigi.

On these grounds we may suppose that the Euboeic talent was to the Babylonian as 60 to 72.45: or, taking the Babylonian talent at 7,992 grs., we obtain 399,500 for the Euboeic talent.

This result is most remarkably confirmed by an ancient bronze weight in the form of a lion discovered at Abydos in the Troad, and bearing in Phoenician characters the following inscription: "Approved," or "found correct on the part of the satrap who is appointed over the silver," or "money." It weighs 356,000 grs., and is supposed to have lost one or two pounds' weight. It has been thought to be a weight of 50 Babylonian mina, but it is most unlikely that there should have been such a division of the talent, and still more that a weight should have been made of that division without any distinctive inscription. If, however, the Euboeic talent was to the Babylonian in the proportion of 5 to 6, 50 Babylonian mina would correspond to an Euboeic talent, and this weight would be a talent of that standard. We have calculated the Euboeic talent at 399,600 grs., this weight is 399,000, or 3,600 deficient, but this is explained by the supposed loss of one (5,700) or two (11,520) pounds weight.

We have now to test our result by the Persian gold money, and the coins of Euboea.

The principal, if not the only, Persian gold coin is the Daric, weighing about 124 grs. Thus, we have seen, was the standard coin, according to which the silver money was adjusted. Its double in actual weight is found in the silver coinage, but its equivalent is wanting, as though for this sake of distinction. The double is the thirtieth of the unit of the lighter or monetary Babylonian talent, of which the Daric is the sixtieth, the latter being, in our opinion, a known division. The weight of the sixtieth is, it should be observed, about 132.2 grs., somewhat in excess of the weight of the silver, but ancient coins are always struck below their nominal weight. The Daric was thus the 3,000th part of the Babylonian talent. It is nowhere stated how the Euboeic talent was divided, but if we suppose it to have contained 50 mina, then the Daric would have been the sixtieth of the mina, but if 100 mina, the thirtieth. In any case it would have been the 3,000th part of the talent. As the 6,000th was the chief division of the Egitinnian and Attic monetary talents, and the 3,000th of the Hebrew talent according to which the sacred tribute was paid, and as an Egyptian talent contained 6,000 such units, no other principal division of the chief talents, save that of the Babylonian into 3,000, being known, this is exactly what we should expect.

The coinage of Euboea has hitherto been the great obstacle to the discovery of the Euboeic talent. For the present we speak only of the silver coins, for the only gold coin we know is later than the earliest notices of the talent, and it must therefore have been in Greece originally, as far as money was concerned, a silver talent. The coins give the following denominations, of which we state the average highest weights and the assumed true weights, compared with the assumed true weights of the coins of Athens:

<table>

It must be remarked that the first Euboeic denomination is known to us only from two very early coins of Eretria, in the British Museum, which may possibly be Attic, struck during a time of Athenian supremacy, for they are of about the weight of very heavy Attic tetradrachms.

It will be perceived that though the weights of all denominations, except the third in the Euboeic list, are very near the Attic, the system of division is evidently different. The third Euboeic denomination is identical with the Persian siglos, and indicates the Persian origin of the system. The second piece is, however, identical with the Daric. It would seem that the Persian gold and silver systems of division were here combined; and this might perfectly have been done, as the Daric, though a division of the gold talent, is also a division of the silver talent. As we have noticed, the Daric is omitted in the Persian silver coinage for some special reason. The relation of the Persian and Greek systems may be thus stated:

* Since this was written we have ascertained that d. de Vogüé has supposed this lion to be a Euboic talent (Revue Archéologique, u. s. Jan. 1892). See also: Archéological Journal, 1890, Sept. pp. 190, 290.
WEIGHTS AND MEASURES

Persian silver, 283
Persian gold, 159
Babylonian, 129
Greek Euboic, 94
Actual weight, 25.8

The standard weights of Persian silver coins are here assumed from the highest average weight of the siglos. We hold that the coins of Corinth probably follow the Euboic system.

The only gold coin of Euboic known to us has the extraordinary weight of 49.4 grs. It is of Caryatis, and probably in date a little after Alexander's time. It may be upon a system for gold money derived from the Euboic, exactly as the Euboic was derived from the Babylonian, but it is not safe to reason upon a single coin.

3. The talents of Egypt have hitherto formed a most unsatisfactory subject. We commence our inquiry by stating all certain data.

The gold and silver coins of the Ptolemies follow the same standard as the silver coins of the kings of Macedon to Philip II, inclusive, which are on the full Euboic weight. The copper coins have been thought to follow the same standard, but this is an error.

The ancient Egyptians are known to have had two weights, the MeN or UtoN, containing ten smaller weights bearing the name KeT, as Mr. Chalas has proved. The former name, if rightly read MeN, is a maneh or mina, the latter, according to the Copts, was a drachm or dirham (K{Tj K{Tj, drachma, dirhama, the last form not being known to have the second signification). A weight, inscribed "Five KeTs," and weighing 698 grs., has been discovered. It probably originally weighed about 700 ("Rerum Archéologique," n.s.). We can thus determine the KeT to have weighed about 140 grs., and the MeN or UtoN about 1,400. An examination of the copper coins of the Ptolemies has led us to the interesting discovery that they follow this standard and system. The following are all the heavier denominations of the copper coins of the earlier Ptolemies, and the corresponding weights; the coins vary much in weight, but they clearly indicate their standard and their denominations: —

EGYPTIAN COPPER COINS, AND WEIGHS.

We must therefore conclude that the gold and silver standard of the Ptolemies was different from the copper standard, the latter being that of the ancient Egyptians. The two talents, if calculated from the coins, which in the gold and silver are below the full weight, are in the proportion of about 10 (gold and silver) to 13 (copper); or, if calculated from the higher correct standard of the gold and silver system, in the proportion of about 10 to 12.7: we shall speak as to the exchange in a later place (§ 11). It may be observed that the difficulty of explaining the statements of ancient writers as to the Egyptian, Alexandrian, or Ptolemaic talent or tal-

ents, probably arises from the use of two systems which could be easily confounded, at least in their lower divisions.

4. The Carthaginian talent may not be as old as the period before Alexander, to which we limit our inquiry, yet it reaches so nearly to that period that it cannot be here omitted. Those silver coins of the Carthaginians which do not follow the Attic standard seem to be struck upon the standard of the Persian coins, the Babylonian talent. The only clue we have, however, to the system is afforded by a bronze weight inscribed דבש דבאש and weighing 321 grannes = 4,565.5 grs. (Dr. Levy in Zeitschrift d. Deutsch. morgend. Gesellsch. xiv. p. 710). This sum is divisible by the weights of all the chief Carthaginian silver coins, except the "decadrachm," but only as sevenths, a system of division we do not know to have obtained in any ancient talent. The Carthaginian gold coins seem also to be divisions of this mina on a different principle.

III. The Hebrew Talent or Talents and Divisions.

The data we have obtained enable us to examine the statements respecting the Hebrew weights with some expectation of determining this difficult question. The evidence may be thus stated.

1. A talent of silver is mentioned in Exodus, which contained 3,000 shekels, distinguished as "the holy shekel," or "a shekel of the sanctuary." The number of Israelite men who paid the ransom of half a shekel apiece was 603,550, and the sum paid was 1,775 shekels of silver (Exxx. 13, 15, 38. xxvii. 25-28) whence we easily discover that the talent of silver contained 3,000 shekels (603,550 + 2 = 301,775 shekels = 1,775 = 300,000 + 10 talents = 3,000 shekels to the talent).

2. A gold maneh is spoken of and, in a parallel passage, shekels are mentioned, three manehs being represented by 300 shekels, a maneh therefore containing 100 shekels of gold.

3. Josephus states that the Hebrew talent of gold contained 100 minae (Λητρια εκ χρυσον . . . . οσαλων εξουσα μηνα εκατον, έι δ' έδραια μεν καλωνις κεχρησεις, ει δε τιν η ελπηιν μεταμυλωμενον γηλωοσην συμαινει ταλαντον, Ant. iii. 17).

4. Josephus states that the Hebrew mina of gold was equal to two libra and a half (δικας αλισαφηλικαν χρυσον, εκ μηνων τριακοσιων πεπωμενη ει δε μηνα παρ' αυτην εκείνη αιτωμεν δικας και δικριμα, Ant. iv. 7, § 1). Taking the Roman pound at 0,650 grs., the maneh of gold would weigh about 12,825 grs.

5. Ephraimus estimates the Hebrew talent at 125 Roman pounds, which, at the value given above, are equal to about 631,250 grs.

6. A difficult passage in Ezekiel seems to speak of a maneh of 50 or 60 shekels: "And the shekel [shall be] twenty gerahs: twenty shekels, and twenty shekels, silver shekels, shall be your maneh" (xxv. 12). The ordinary text of the LXX gives a series of small sums as the Hebrew, though differing in the numbers, but the Alex. and Vat. MSS have 50 for 15 (σκιλα ουδαιο, πινατε σκιλα, πινατε και σκιλα δεκα, και πεντηκοντα σκιλα η μην έστοι υπερ). The meaning would be, either that there were to be three manehs, respectively containing 20, 25, and 15 shekels, or the like, or else that a sum is intended by these numbers (20 + 25 + 15 = 60, or possibly 50). But it
must be remembered that this is a prophetic passage.

7. Josephus makes the gold shekel a Daric (Ant. iii. 8, § 10).

From these data it may reasonably be inferred, (1) that the Hebrew gold talent contained 100 manehs, each of which again contained 100 shekels of gold, and, basing the calculation on the stated value of the maneh, weighed about 1,292,500 grs., or, basing the calculation on the correspondence of the gold shekel to the Daric, weighed about 1,200,000 grs. (120 X 100 X 100), the latter being probably nearer the true value, as the 2d libra may be supposed to be a round sum; and (2) that the silver talent contained 3,000 shekels, and is probably the talent spoken of by Epiphanius as equal to 125 Toman pounds, or 631,250 grs., which would give a shekel of 210.4 grains. It is to be observed that, taking the estimate of Josephus as the basis for calculating the maneh of the former talent, and that of Epiphanius for calculating the latter, their relation is exactly 2 to 1. 50 manehs at 21 pounds, making 125 pounds. It is therefore reasonable to suppose that two talents of the same system are referred to and that the gold talent was exactly double the silver talent.

Let us now examine the Jewish coins.

1. The shekels and half-shekels of silver, if we take an average of the heavier specimens of the Maccabean issue, give the weight of the former as about 220 grs. A talent of 3,000 such shekels would weigh about 690,000 grs. This result agrees very fairly with the weight of the talent given by Epiphanius.

2. The copper coins are generally without any indications of value. The two heaviest denominations of the Maccabean issue, however, bear the names "half" (🌙🌙), and "quarter" (🌙🌙). M. de Saulcy gives the weights of three "halves" as, respectively, 251.6 grs. (16.3 grammes), 256.2 (15.3), and 210.2 (14.2). In Mr. Wigan's collection are two "quarters," weighing, respectively, 145.2 grs. and 118.9 grs.; the former being, apparently, the one "quarter" of which M. de Saulcy gives the weight as 122.9 (2.2 grammes). We are unable to add the weights of any more specimens. There is a smaller coin of the same period, which has an average weight, according to M. de Saulcy, of 81.8 grs. (5.3 grammes). If this be the third of the "half," it would give the weight of the latter at 243.4 grs. As this may be thought to be slender evidence, especially so far as the larger coins are concerned, it is important to observe that it is confirmed by the later coins. From the copper coins mentioned above, we can draw up the following scheme, comparing them with the silver coins.

**Copper Coins.**

<table>

It is evident from this list that the copper "half" and "quarter" are half and quarter shekels, and are nearly in the relation to the silver like denominations of 2 to 1. But this relation is not exact, and it is therefore necessary to ascertain further, whether the standard of the silver talent can be raised. If not, whether the gold talent can be more than twice the weight of the silver, and, should this explanation be impossible, whether there is any ground for supposing a third talent with a shekel heavier than two shekels of silver.

The silver shekel of 220 grs. gives a talent of 690,000 grs.; this is the same as the Egyptian, which appears to be of Phoenician origin. There is no evidence of its ever having had a higher shekel or didrachm.

The double talent of 1,320,000 grs., gives a Daric of 132 grs., which is only 1 gr. and a small fraction below the standard obtained from the Babylonic talent.

The possibility of a separate talent for copper depends upon the relations of the three metals.

The relation of gold to silver in the time of Hezekiah was 1:13. The early relation upon which the systems of weights and coins used by the Persian state were founded was 1:12. Under the Ptolemies it was 1:12.5. The two Hebrew talents, if that of gold were exactly double that of silver, would have been easy for exchange in the relation of 1:12. A talent of gold corresponding to 24 talents of silver. The relation of silver to copper also can be best conjectured from the Ptolemaic system. If the Hebrews derived this relation from any neighboring state, Egypt is as likely to have influenced them as Syria: for the silver coinage of Egypt was essentially the same as that of the Hebrews, and that of Syria was different. Besides, the relation of silver and copper must have been very nearly the same in Syria and Palestine as in Egypt during the period in which the Jewish coinage had its origin, in accordance of the large commerce between those countries. It has, we venture to think, been satisfactorily shown by Letronne that the relation of silver to copper under the Ptolemies was 1:60, a minima of silver corresponding to a talent of copper.

It has, however, been supposed that the drachm of copper was of the same weight as that of gold and silver, an opinion which we have proved to be incorrect in an earlier part of this article (§ 11. 3). An important question now arises. Is the talent of copper, when spoken of in relation to that of silver, a talent of weight or a talent of account? — in other words, is it of 6,000 actual drachms of 140 grs. each, or of 6,000 drachms of account of about 110 grs. each, or a little less? This question seems to be answered in favor of the former of the two replies by the facts. (1) That the copper coins being struck upon the old Egyptian weight, it is incredible that so politic a prince as the first Ptolemy should have introduced a double system of reckoning, which would have given offense and occasioned confusion; (2) that the ancient Egyptian name of the monetary unit because that of the drachm, as it is shown by its being retained with the sense drachm and didrachm by the Copts (§ 11. 3); and had there been two drachms of copper, that on the Egyptian system would probably have retained the native name. We are of opinion, therefore, that the Egyptian copper talent was of 6,000 copper drachms of the weight of 140 grs. each. But this solution still leaves a difficulty. We know that the relation of silver to copper was 1:60 in drachms, though 1:78 or 80 in weight. In a modern state the actual relation would force itself into the position of the official relation, and 1:60 would become 1:78 or 80: but this was not necessarily the case in an ancient country in so peculiar a condition as Egypt. Alexandria and a few other towns were Greek, the rest of the country purely Egyptian; and it is quite possible that, while the gold and
silver coinage was current in the Greek towns, the Egyptians may have refused to take anything but copper on their own standard. The issue of copper coins above their value would have been a sacrifice to the exchequer, if given in exchange for gold or silver, rough or coined; but they might have been exclusively paid out for salaries and small expenditure, and would have given an enormous profit to the government, if repaid in small taxes. Supposing that a village paid a silver mina in taxes collected from small proprietors, if they had only copper the government would receive in excess 150,000 grs., or not much less than a fifth of the whole amount. No one who is conversant with the East in the present day will deny the possibility of such a state of things in Egypt under the Ptolemies. Our decision may be arrived at by the results of the two theories upon the relations of the metals.

Nominal relation $A_1 = \frac{12.5}{60} = \frac{1}{4.8}$ (Stater) $\frac{1}{6}$ (Min.) (Tola.)

Relation in weight $A_1 = \frac{12.5}{78} = \frac{4}{7.97} \times \frac{1}{9.99}$

It must be remembered that, in endeavoring to determine which of these two relations is the correct one, we must be guided by the evidence of antiquity, not by the mathematical proportions of the results, for we are now not dealing with coins, but with relations only originally in direct connection with systems of coinage.

Letronne gives the relation of silver to copper among the Romans, at the end of the Third Punic War, as 1:112, reduced from 1:84 3/4, both much higher values of the former metal than 1:60. It is therefore reasonable to suppose that the relation of 1:80 is that which prevailed in Egypt under the Ptolemies, and so at the time at which the first Jewish coins were struck, that of Simon the Maceabees.

We may therefore suppose that the Hebrew talents of silver and copper were exchangeable in the proportion of about 1:80, and, as we have seen that the coins show that their weights were of the relative weight 1:2 4/2, we may take as the basis of our computation the supposition that 50 shekels of silver were equal to a talent of copper, or 100 = 1 talent double the former. We prefer the former relation as that of the Egyptian system.

220 × 90 = 110,000 grs. 250 × 600,000 + 1200 = 440,220

Of these results, the first is too low, and the fourth and fifth too high, the second and third agreeing with our approximative estimate of the shekel and half-shekel of copper. It is, however, possible that the fourth result may be the true one, as some coins give very nearly this standard. Which is the right system can only be inferred from the effect on the exchange, although it must be remembered that very awkward exchanges of silver and copper may have obtained whenever copper was not an important metal. Thus at Athens 8 pieces of brass went to the obolus, and 7 leptai to the piece of brass. The former relation would be easy of computation, the latter very inconvenient. Among the Jews, the copper coinage was of more importance; at first of accurate fabric and not very varying weight, afterwards the only coinage. Its relation to the silver money, and afterwards to the Egyptian and Phoenician currency of the same weight, must therefore have been correct.

On this ground, we should prefer the relation of silver to copper 1:75, giving a talent of 724,000 grs., or nearly twice the Bahole. The agreement is remarkable, but may be fortuitous.

Our theory of the Hebrew coinage would be as follows:

- Gold . . . Shekel or Daric (foreign) 129 grs.
- Copper . . . Half (shekel) 294, Quarter (shekel) 132, (Sixth-shekel) 88.

We can now consider the weights.

The gold talent contained 100 markah, and 10,000 shekels.

The silver talent contained 3,000 shekels, 6,000 letab, and 60,000 gerahs.

The copper talent probably contained 1,500 shekels.

The shekel of the sanctuaries (Judg. xiv. 14), is spoken of both of the gold (Ex. xxvii. 24) and silver (25) talents of the time of the Exodus. We also read of "the king's weight" (1 Sam. vi. 26).

There is no reason for supposing different systems to be meant.

The significations of the names of the Hebrew weights must be here stated.

The talent (בש) means "a circle," or "globe," probably "an aggregate sum."

The shekel (שח) signifies simply "a weight."

The leka (לע) or half-shekel, signifies "a division," or "half."

The "quarter-shekel" (כש) is once mentioned (1 Sam. ix. 8).

The gerah (ג) signifies "a grain," or "bean."

IV. The History and Relations of the Principal Ancient Talents. — It is necessary to add a view of the history and relations of the talents we have discussed in order to show what light our theories throw upon these matters. The inquiry must be preceded by a list of the talents:

A. EASTERN TALENTS.

| Hebrew gold | 1,820,000 | Hebrew silver | 650,000 |
| Babylonian talent | . . . . . . . . 359,040 | Babylonian lesser silver | . . . . . . . . 479,020 |
| Egyptian | . . . . . . . . 840,000 | Persian gold | 390,000 |

Hebrew copper ? 792,000 ?

B. GREEK TALENTS.

| Attic | . . . . . . . . 600,000 | Attic Commercial | . . . . . . . . 600,000 |
| Attic Commercial, lowered | . . . . . . . . 598,800 | Attic Commercial, doubled | . . . . . . . . 598,800 |
| Attic Silver, ordinary | . . . . . . . . 505,200 | Attic Silver, lowered | . . . . . . . . 405,000 |
| Lekis | . . . . . . . . 387,004 | Lekika | . . . . . . . . 387,004 |

We omit the talent of the coins of .Egypt, as a mere monetary variety of the Egyptian, through the Attic Commercial.
WEIGHTS AND MEASURES

We take the Hebrew to be the oldest system of weight. Apart from the evidence from its relation to the other systems, this may be almost proved by our finding it to obtain in Greece, in Phoenicia, and in Judea, as the oldest Greek and Phoenician system, and as the Jewish system. As the Jewish system, it must have been of far greater antiquity than the date of the earliest coin struck upon it. The weight according to which the ramson was first paid must have been retained as the fixed legal standard. It may seem surprising, when we remember the general tendency of money to depreciate, of which such instances as those of the Athenian silver and the English gold will occur to the reader, that this system should have been preserved, by any but the Hebrews, at its full weight, from the time of the Exodus to that of the earliest Greek coins upon the Eginetan standard, a period probably of not much less than a thousand years; but we may cite the case of the solids of the Roman and Byzantine emperors, which retained its weight from its origination under Constantine the Great until the fall of Constantinople, and its purity from the time of Constantine untill that of Alexius Commenus, owing celebrity of the sequins of Venice and the florins of Venice for their exact weight. It must be remembered, moreover, that in Phoenicia, and originally in Greece, this system was that of the great trading nation of antiquity, who would have had the same interest as the Venetians and Florentines in maintaining the full monetary standard. There is a remarkable evidence in favor of the antiquity of this weight in the circumstance that, after it had been depreciated in the coins of the kings and cities of Macedon, it was restored, in the silver money of Philip II., to its full monetary standard.

The Hebrew system had two talents for the precious metals in the relation of 2:1. The gold talent, apparently not used elsewhere, contained 100 manehs, each of which contained again 100 shekels, there being thus 10,000 of these units, weighing about 132 grs. each, in the talent. The silver talent also known as the Eginetan contained 3,000 shekels, weighing about 220 grs. each. One gold talent appears to have been equal to 24 of these. The reason for making the talent of gold twice the talent of silver was probably merely for the sake of distinction.

The Babylonian talent, like the Hebrew, consisted of two systems, in the relation of 2 to 1, upon one standard. It appears to have been formed from the Hebrew by reducing the number of units from 10,000 to 7,200. The system was altered by the maneh being raised so as to contain 120 instead of 100 units, and the talent lowered so as to contain 60 instead of 100 manehs. It is possible that this talent was originally of silver, as the exchange, in their common unit, with the Hebrew gold, in the relation of 1:12, would be easy, 6 units of the gold talent paying for 72 of the silver, so that 10 gold units would be equal to a silver maneh, which may explain the reason of the change in the talent.

The derivation, from the lighter Babylonian talent, of the Euboe, talent, is easily ascertained. Their relation is that of 6:5, so that the whole aunts could be readily exchanged in the relations of 12:1: and the units being common, their exchange would be even more easy.

The Egyptian talent cannot be traced to any other. Either it is no independent system, or, perhaps it is the oldest talent and parent of the rest. The Hebrew copper talent is equally obscure. Perhaps it is the double of the Persian gold talent.

The Eginetan talent, as we have seen, was the same as the lesser or silver Hebrew talent. Its introduction into Greece was doubtless due to the Phoenicians. The Attic Commercial was a degradation of this talent, and was itself further degraded to form the Attic Solonian. The Attic Solonian talent thus had five successive standards (1, Original Eginetan; 2, Attic Commercial; 3, Id. lowered; 4, Attic Solonian; 5, Id. lowered) in the following relation:

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>5.44</td>
<td>5</td>
<td>3.9</td>
<td>3.6</td>
</tr>
<tr>
<td>6</td>
<td>.5</td>
<td>4.3</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The first change was probably simply a degradation. The second may have been due to the influence of a Graeco-Asiatic talent of Cyzicus or Phocia, of which the stater contained about 180 grs. of gold, although weighing, through the addition of 69 grs. of silver, about 240 grs., thus implying a talent in the relation to the Eginetan of about 5:6. Solon's change has been hitherto an unresolved enigma. The relation of the two Attic talents is so awkward that scarcely any division is common to them in weight, as may be inferred from the data in the table of Athenian weights which we have given. Had the heavier talent been divided into quarters, and the lighter into thirds, this would not have been the case. The reason of Solon's change is therefore to be looked for in the influence of some other talent. It has been supposed that this talent was the Exodus, but this theory is destroyed by our discovery that the Attic standard of the oldest coins is below the weight-standard of about the time of the Peloponnesian War, and thus that the reduction of Solon did not bring the weights down to the Euboe standard. If we look elsewhere we see that the heavier Solonian weight is almost the same in standard as the Egyptian, the drachm of the former exceeding the unit of the latter by no more than about 3 grs. This explanation is almost proved to be the true one by the remarkable fact that the Attic gold talent, apparently unlike all other Greek talents, had a double talent, which would give a drachm instead of a dirhem, equivalent to the Egyptian unit. At the time of Solon nothing would be more likely than such an Egyptian influence as this explanation implies. The commercial relations of Egypt and Greece, through Naukratis, were then active; and the tradition or myth of the Egyptian origin of the Athenians was probably never stronger. The degradation of the Attic Solonian talent was no doubt effected by the influence of the Euboe, with the standard of which its lower standard is probably identical.

The principal authorities upon this subject are: Boeckh's Methodische Untersuchungen; Mommsen's Geschichte der Römischen Münzen; and Hussey's Ancient Weights. Don V. Vazquez Quesada's Essai sur les Systèmes Métriques et Monétaires des Anciens Peuples also contains much information. The writer must express his obligations to Mr. de Salis, Mr. Vaux, and Mr. E. Wigan, and more especially to his colleagues Mr. Madden and Mr. Cox, for valuable assistance.

K. S. P.
WEIGHTS AND MEASURES

II. MEASURES.

The most important topic to be discussed in connection with the subject of the Hebrew measures is their relative and absolute value. Another topic of secondary importance perhaps, but possessing an independent interest of its own, demands a few introductory remarks, namely, the origin of these measures, and their relation to those of surrounding countries. The measures of length are chiefly derived from the members of the human body, which are happily adapted to the purpose from the circumstance that they exhibit certain definite proportions relatively to each other. It is unnecessary to assume that a system founded on such a basis was the invention of any single nation; it would naturally be adopted by all in a rude state of society. Nevertheless, the particular parts of the body selected for the purpose may form more or less a connecting link between the systems of various nations. It will be observed in the sequel that the Hebrews restricted themselves to the fore-arm, to the exclusion of the foot and also of the pace, as a proper measure of length. The adoption of foreign names is also worthy of remark, as showing a probability that the measures themselves were borrowed. Hence the occurrence of words of Egyptian extraction, such as hrb and cphth, and probably anuwh (for "cubit"), inclines us to seek for the origin of the Hebrew scales both of length and capacity in that country. The measure of capacity, which have no such natural standard as those of length, would more probably be settled by conventional usage, and the existence of similar measures, or of a similar scale of measures in different nations, would furnish a strong probability of their having been derived from some common source. Thus the coincidence of the Hebrew cubit being subdivided into 72 legs, and the Athenian metra into 72 xesthe, can hardly be the result of chance; and, if there further exists a correspondence between the ratios that the weights bear to the measures, there would be still further evidence of a common origin. Beecher, who has gone fully into this subject in his "Weights and Measures," and shows how the systems of weights and measures prevalent among the civilized nations of antiquity to Babylon (p. 39). The scanty information we possess relative to the Hebrew weights and measures as a connected system, precludes the possibility of our assigning a definite place to it in ancient metrology. The names already referred to lead to the inference that Egypt rather than Babylon was the quarter whence it was derived, and the identity of the Hebrew with the Athenian scales for liquids furnishes strong evidence that these had a community of origin. It is important, however, to observe in connection with this subject, that an identity of ratios does not involve an identity of absolute quantities, a distinction which very possibly escaped the notice of early writers, who were not unnaturally led to identify the measures in their absolute values, because they held the same relative positions in the several scales.

We divide the Hebrew measures into two classes, according as they refer to length or capacity, and subdivide each of these classes into two, the former into measures of length and distance, the latter into liquid and dry measures.

1. Measures of length.

(a) The denomination referring to length were derived for the most part from the arm and hand.

We may notice the following four as derived from this source: (a) the ḫem, or finger's breath, mentioned only in Jer. ii. 21. (b) The ṭelōph, or hand breadth (Ex. xxv. 25; 1 K. vii. 26; 2 Chr. iv. 5), applied metaphorically to a short period of time in Ps. xxxiii. 5. (c) The sereth, or span, the distance between the extremities of the thumb and the little finger in the extended hand (Ex. xxviii. 6; 1 Sam. xvii. 43; Ez. xxiii. 13), applied generally to describe any small measure in Is. xi. 12. (d) The anuwh, or cubit, the distance from the elbow to the extremity of the middle finger. This occurs very frequently in the Bible in relation to buildings, such as the Ark (Gen. vi. 15), the Tabernacle (Lev. xvi, xlvii.), and the Temple (1 K. vi. 2; Ez. xi., xli.), as well as in relation to man's stature (1 Sam. vii. 4; Matt. vi. 27), and other objects (Esth. v. 14; Zech. v. 2). In addition to the above we may notice: (e) The giw, lit. a rod, applied to Elyon's dirk (Judg. iii. 16). Its length is uncertain, but it probably fell below the cubit, with which it is identified in the A. V. (f) The bān, or reel (compare our word "canoe") for measuring buildings on a large scale (Ez. vi. 5-8, xii. 8, xii. 16-19).

Little information is furnished by the Bible itself as to the relative or absolute lengths described under the above terms. With the exception of the notice that the reel equals six cubits (Ez. xii. 5), we have no indication that the measures were combined in anything like a scale. We should indeed infer the reverse, from the circumstance that Jeremiah speaks of "four fingers," where according to the scale, he would have said "a hand breadth." that in the description of Goliah's height (1 Sam. xvii. 4), the expression "six cubits and a span," is used instead of "six cubits and a half." and that Ezekiel mentions "three cubits and a span" in close juxtaposition (xiii. 15, 17), as though they bore no relation to each other either in the ordinary or the long cubit. That the denominations held a certain ratio to each other, arising out of the proportions of the members in the body, could hardly escape notice; but it does not follow that they were ever worked up into a scientific scale. The most important conclusion to be drawn from the Biblical notices, is to the effect that the cubit, which may be regarded as the standard measure, was of varying length, and that, in order to secure accuracy, it was necessary to define the kind of cubit intended, the result being that the other denominations, if combined in a scale, would vary in like ratio. That in the text of ii. 11, the cubit is specified to be "after the cubit of a man;" in 2 Chr. iii. 3, "after the fist," or rather "after the older measure;" and in Ez. viii. 8, "a great cubit," or literally "a cubit long," or though the forearm were in some sense the "mother of the arm." (Targ. p. 110).

The expression 3501, 3501 applies to priority of time, as well as of order, is clear from many passages, as e. g. 2 K. xiv. 31; Jer. iii. 12; 1 Kings ii. 3
WEIGHTS AND MEASURES

The considerable KnotMil elbow the existence remains the minius inferior what is Hebrew sions one, that by of measurements than language our would identified his, we have, and that is, that cubits, which was either longer or shorter than it, and from analogy it may be taken for granted that this second cubit would be the longer of the two. But what is meant by the "awnah of a man?" Is it the cubitus in the anatomical sense of the term, in other words, the bone of the fore-arm between the elbow and the wrist? or is it the full cubit in the ordinary sense of the term, from the elbow to the extremity of the middle finger? What, again, are we to understand by Ezekiel's expression, "cubit to the joint?" The term ostático is explained by Gesenius (Thes. p. 144) of the knuckles, and not of the "armholes," as in the A. V. of Jer. xxxvii. 12, where our translators have omitted all reference to the word γύδος, which follows it. A "cubit to the joint" is, therefore, the term generally implied by the phrase from elbow to the knuckles, and as this cubit exceeded by a hand-breadth the ordinary cubit, we should infer that it was distinguished from the cubit that reached only to the wrist. The meaning of the word is, however, contested: Hitzig gives it the sense of a connecting rod (Comm. on Jer.), Stur- mintz (Seiger, p. 94) understands it of the edge of the altar and others in the sense of a string of a building (Roemmiühler, Schol. in Jer.). Michaelis on the other hand understands it of the knuckles (Suppl. p. 119), and so does Saalschütz (Archäol. ii. 165). The expressions now discussed, taken together, certainly favor the idea that the cubit of the Bible did not come up to the full length of the cubit of other countries. A further question remains to be discussed, namely, whether more than two cubits were in vogue among the Hebrews. It is generally conceded that the "former" or "other" measure of 2 Chr. iii. 3, was the Mosaic or legal cubit, and that the modern measure, the existence of which is implied in that designation, was somewhat larger. Further, the cubit "after the cubit of a man" of Dent. iii. 11, is held to be a con- vert measure in contradistinction to the Mosaic one, and to have fallen below this latter in point of length. In this case, we should have three cubits — the common, the Mosaic or old measure, and the new measure. We turn to Ezekiel and find a distinction of another character, namely, a long and a short cubit. Now, it has been urged by many writers, and we think with good reason, that Ezekiel would not be likely to adopt any other than the old orthodox Mosaic standard for the measurements of his ideal temple. If so, his long cubit would be identified with the old measure, and his short cubit with the one "after the cubit of a man," and the new measure of 2 Chr. iii. 3 would represent a still longer cubit than Ezekiel's long one. Other explanations of the prophet's language have, however, been offered. It has been sometimes assumed that, while living in Chaldea he and his countrymen had adopted the long Babylonian cubit (Jahn, Archiv. § 115); but in this case his short cubit could not have belonged to the same country, inasmuch as the difference between these two amounted to only three fingers (Herod. i. 178). Again, it has been explained that his short cubit was the ordinary Chaldean measure, and the long one the Mosaic measure (Roemmiühler. in Ez. xI. 5); but this is unlikely on account of the respective lengths of the Babylonian and the Mosaic cubits, to which we shall hereafter refer. Independent of all these objections, we think that the passages previously discussed (Dent. iii. 11; 2 Chr. iii. 3) imply the existence of three cubits. It remains to be inquired whether from the Bible itself we can extract any information as to the length of the Mosaic or legal cubit. The notices of the height of the altar and of the height of the layers in the Temple are of importance in this respect. In the former case three cubits are specified (Ex. xxvii. 1), with a direct prohibition against the use of steps (Ex. xx. 26); in the latter, the height of the base on which the laver was placed was three cubits (1 K. vii. 27). If we adopt the ordinary length of the cubit (say 20 inches), the heights of the altar and of the base would be 5 feet. But it is possible, and even very likely, that the laver was placed at such a height. In order to meet this difficulty without any alteration of the length of the cubit, it must be assumed that an inclined plane led up to it, as was the case with the hither altar of the Temple (Mishn. Mihbl. § 1, § 3). But such a contrivance is contrary to the spirit of the text; and, even if it were to be allowed, the altar, would be wholly useless for the lavers. Hence Saalschütz infers that the cubit did not exceed a Phrygian foot, which is less than an English foot (Archäol. i. 167). The other instances adduced by him are not so much to the point. The molten sea was not designed for the purpose of bathing (though this impression is conveyed by 2 Chr. iv. 6 as given in the A. V.), and therefore the height of it, which was determined by the water drawn from the depth of the water in it. The height of Or, as inferred from the length of his bedstead (9 cubits, Dent. iii. 11), and the height of Goliah (6 cubits and a span, 1 Sam. xvii. 4), are not inconsistent with the idea of a cubit about 18 inches long, if credit can be given to other recorded instances of extraordinary stature (Plin. vii. 2; 16; Herod. i. 68; Joseph. Ant. xvii. 4, § 5). At the same time the rendering of the L.XX. in 1 Sam. xvii. 4, which is followed by Josephus (Ant. vii. 9, § 1), and which reduces the number of cubits to four, suggests either an error in the Hebrew text, or a considerable increase in the length of the cubit in later times.

The foregoing examination of Biblical notices has tended to the conclusion that the cubit of early times fell far below the length usually assigned to it; but these notices are so scanty and ambiguous that this conclusion is by no means decisive. We now turn to collateral sources of information, which we will follow out as far as possible in chronological order. The earliest and most reliable testi- mony as to the length of the cubit is supplied by the existing specimens of old Egyptian measures

<sup>a</sup> כ.מ.ה. <sup>b</sup> Knebel assumes that there were steps, and that the prohibition in Ex. xx. 26 emanates from an author who wrote in ignorance of the previous directions (Comm. on Ex. xxvii. 1).
Several of these have been discovered in tombs, carrying us back at all events to 1700 B.C., while the Nether careful at Elephantine exhibits the length of the cubit in the time of the Roman emperors. No great difference is exhibited in these measures, the longest being estimated at about 24 inches, and the shortest at about 29½, or exactly 29.47 29 inches (Wilkinson, *Anc. EgI. ii. 238*). They are divided into 28 digits, and in this respect contrast with the Mosaic cubit, which, according to Jewish authorities, was divided into 20 digits, or 19.096 inches as compared with 52.154 millimetres, or 20.811 inches and 523 millimetres, or 20.594 inches, the lengths of the Turin and Louvre measures respectively. He accounts for the additional two digits as originating in the practice of placing the two fingers crossways at the end of the arm and hand used in measuring, so as to adjust the spot upon which the other article has been measured. He further finds, in the notation of the Turin measure, indications of a third or ordinary cubit 23 digits in length. Another explanation is that the old cubit consisted of 24 old or 25 new digits, and that its length was 4.07 22 millimetres, or 18.429 inches; and again, others put the old cubit at 24 new digits, as marked on the measures. The relative proportions of the two would be, on these several hypotheses, as 28 : 26, as 28 : 24, and as 28 : 24.

The use of more than one cubit appears to have also prevailed in Babylon, for Herodotus states that the "royal" exceeded the "moderate" cubit (πόδια μέτρον) by three digits (i. 178). The appellation "royal," if borrowed from the Babylonians, would itself imply the existence of another, and it is by no means certain that this other was the "moderate" cubit mentioned in the text. The majority of critics think that Herodotus is there speaking of the ordinary Greek cubit (Boeckh, p. 214), though the opposite view is affirmed by Grote in his notice of Boeckh's work (Class. Misc. i. 28). Even if the Greek cubit is understood, a further difficulty arises out of the uncertainty whether Herodotus is speaking of digits as they stood on the Greek or on the Babylonian measure in the one case the proportions of the two would be as 8:7, in the other case as 9:8. Boeckh adopts the Babylonian digits (without good reason, we think), and estimates the Babylonian royal cubit at 25 277 284 Paris lines, or 20.806 inches (p. 219).

A greater length would be assigned to it according to the data furnished by M. Oppert, as stated in Rawlinson's *Heb. vol. i. 315*; for if the cubit and foot stood in the ratio of 5 : 3, and if the latter contained 15 digits, and had a length of 315 millimetres, then the length of the ordinary cubit would be 252 millimetres, and of the royal cubit, assuming, with Mr. Grote, that the cubits in each case were Babylonian, 588 millimetres, or 23.149 inches.

Reverting to the Hebrew measures, we should be disposed to identify the *new* measure, according to 2 Chr. iii. 3 with the full Egyptian cubit: the "old" measure and Ezekiel's cubit with the lesser one, either of 20 or 24 digits; and the "cubit of a man" with the third, one of which Themen speaks. Boeckh, however, identifies the Mosaic measure with the full Egyptian cubit, and accounts for the difference in the number of digits in the hypothesis that the Hebrews substituted a division into 24 for that into 28 digits, the size of the digits being of course increased (pp. 206, 297). With regard to the Babylonian measure, it seems highly improbable that either the ordinary or the royal cubit could be identified with Ezekiel's short cubit (as measure, = 480.792; the length of the 25 digits on the Louvre measure, = 480.375; and twice the left-hand division of the same Themen makes the difference between the royal and old cubits to be no more than two digits, the average length of the latter being 484.289 millimetres, or 19.096 inches as compared with 52.154 millimetres, or 20.811 inches and 523 millimetres, or 20.594 inches, the lengths of the Turin and Louvre measures respectively. He accounts for the additional two digits as originating in the practice of placing the two fingers crossways at the end of the arm and hand used in measuring, so as to adjust the spot upon which the other article has been measured. He further finds, in the notation of the Turin measure, indications of a third or ordinary cubit 23 digits in length. Another explanation is that the old cubit consisted of 24 old or 25 new digits, and that its length was 4.07 22 millimetres, or 18.429 inches; and again, others put the old cubit at 24 new digits, as marked on the measures. The relative proportions of the two would be, on these several hypotheses, as 28 : 26, as 28 : 24, and as 28 : 24.

The use of more than one cubit appears to have also prevailed in Babylon, for Herodotus states that the "royal" exceeded the "moderate" cubit (πόδια μέτρον) by three digits (i. 178). The appellation "royal," if borrowed from the Babylonians, would itself imply the existence of another, and it is by no means certain that this other was the "moderate" cubit mentioned in the text. The majority of critics think that Herodotus is there speaking of the ordinary Greek cubit (Boeckh, p. 214), though the opposite view is affirmed by Grote in his notice of Boeckh's work (Class. Misc. i. 28). Even if the Greek cubit is understood, a further difficulty arises out of the uncertainty whether Herodotus is speaking of digits as they stood on the Greek or on the Babylonian measure in the one case the proportions of the two would be as 8:7, in the other case as 9:8. Boeckh adopts the Babylonian digits (without good reason, we think), and estimates the Babylonian royal cubit at 25 277 284 Paris lines, or 20.806 inches (p. 219).

A greater length would be assigned to it according to the data furnished by M. Oppert, as stated in Rawlinson's *Heb. vol. i. 315*; for if the cubit and foot stood in the ratio of 5 : 3, and if the latter contained 15 digits, and had a length of 315 millimetres, then the length of the ordinary cubit would be 252 millimetres, and of the royal cubit, assuming, with Mr. Grote, that the cubits in each case were Babylonian, 588 millimetres, or 23.149 inches.

Reverting to the Hebrew measures, we should be disposed to identify the *new* measure, according to 2 Chr. iii. 3 with the full Egyptian cubit: the "old" measure and Ezekiel's cubit with the lesser one, either of 20 or 24 digits; and the "cubit of a man" with the third, one of which Themen speaks. Boeckh, however, identifies the Mosaic measure with the full Egyptian cubit, and accounts for the difference in the number of digits in the hypothesis that the Hebrews substituted a division into 24 for that into 28 digits, the size of the digits being of course increased (pp. 206, 297). With regard to the Babylonian measure, it seems highly improbable that either the ordinary or the royal cubit could be identified with Ezekiel's short cubit (as measure, = 480.792; the length of the 25 digits on the Louvre measure, = 480.375; and twice the left-hand division of the same

The precise amount of 543.293 is obtained by taking the mean of the four following amounts: 25 at 523.52, the total length of the Turin measure, = 60.890; twice the left-hand division of the same.
Rosenmüller thinks), seeing that its length on either of the computations above offered exceeded that of the Egyptian cubit.

In the Mishnah the Mosaic cubit is defined to be one of six palms (Celian, p. 17, § 10). It is termed the moderate cubit, and is distinguished from a lesser cubit of five palms on the one side (Celian, ibid.), and on the other side from a larger one, consisting, according to Bartenora (in Cel. 17, § 9), of six palms and a digit. The palm consisted, according to Maimonides (ibid.), of four digits; and the digit, according to Arian Montanus (Ant. p. 113), of four barleycorns. This gives 144 barleycorns as the length of the cubit, which accords with the number assigned to the cubiti justus et modius of the Arabianists (Bocek, p. 246). The length of the Mosaic cubit, as computed by Thénus (after several trials with the specified number of barleycorns of middling size, placed side by side), is 214.512 Paris lines, or 10.0613 inches (St. u. Kk. p. 110). It seems hardly possible to arrive at any very exact conclusion by this mode of calculation. Eisenreich estimated 144 barleycorns as equal to 238.35 Paris lines (Bocek, p. 289), perhaps from having used larger grains than the average. The writer of the article on "Weights and Measures" in the Penny Cyclopaedia (xviii. 189) gives the result of his own experience, that 28 average grains make up 5 inches, in which case 144 = 18.947 inches; while the length of the Arabian cubit referred to is computed at 234.968 Paris lines (Bocek, p. 247). The Talmudists state that the Mosaic cubit was used for the edifice of the Tabernacle and Temple, and the lesser cubit for the vessels thereof. This was probably a fiction; for the authorities were not agreed among themselves as to the extent to which the lesser cubit was used, some of them restricting it to the golden altar, and parts of the brazen altar (Mish. Cel. p. 17, § 10). But this distinction, fictitious as it may have been, shows that the cubits were not regarded in the light of sacred and pious, as stated in works on Hebrew archaeology. Another distinction, adopted by the Rabbinists in reference to the palm, would tend to show that they did not rigidly adhere to any definite length of cubit: for they recognized two kinds of palms, one wherein the fingers lay loosely open, which they denominated a smiling palm: the other wherein the fingers were closely compressed, and styled the grieving palm (Carpoz, Appar. pp. 974, 676).

The conclusions to be drawn from the foregoing considerations are not of the decisive character that we would wish. For while the collateral evidence derived from the practice of the adjacent countries and from later Jewish authorities favors the idea that the Biblical cubit varied but little from the length usually assigned to that measure, the evidence of the Bible itself is in favor of one considerably shorter. This evidence is, however, of so uncertain a character, turning on points of criticism and on brief notices, that we can hardly venture to adopt it as our standard. We accept, therefore, with reservation, the estimate of Thénus, and from the cubit we estimate the absolute length of the other denominations according to the proportions existing between the members of the body; the cubit equaling the span two spans (compare Ex. xxxv. 3, 10 with Joseph. Ant. iii. 6, §§ 5, 6), the span three palms, and the palm four digits.

Land and area were measured either by the cubit (Num. xxxv. 4, 5; Ez. xl. 27) or by the reed (Ez. xli. 29, xliii. 17, xlv. 2, lxviii. 20; Rev. xvi. 16). There is no indication in the Bible of the use of a square measure by the Jews. Whenever they wished to define the size of a plot, they specified its length and breadth, even if it were a perfect square, as in Ez. xliii. 16. The difficulty of defining an area by these means is experienced in the interpretation of Num. xxxv. 4, 5, where the suburbs of the Levitical cities are described as reaching outward from the wall of the city 1,000 cubits round about, and at the same time 2,000 cubits on the side from without the city. We can hardly understand these two measurements otherwise than as applying, the one to the width, the other to the external boundary of the suburb, the measurements being taken respectively perpendicular and parallel to the city walls. But in this case it is necessary to understand the words rendered "from without the city," in ver. 5, as meaning to the exclusion of the city, so that the length of the city wall should be added in each case to the 2,000 cubits. The result would be that the size of the areas would vary, and that where the city walls were unequal in length, the sides of the suburb would be unequal. For instance, if the city wall was 500 cubits long, then the side of the suburb would be 2,500 cubits: if the city wall was 1,000 cubits, then the side of the suburb would be 5,000 cubits. Assuming the existence of two towns, 500 and 1,000 cubits square, the area of the suburb would in the former case be 6,000,000 square cubits, and would be 24 times the size of the town; while in the latter case the suburb would be 8,000,000, square cubits, and only 8 times the size of the town. This explanation is not wholly satisfactory, on account of the disproportion of the suburbs as compared with the towns: nevertheless any other explanation only exacerbates this disproportion. Kell, in his comment on Josh. xiv. 4, assumes that the city wall was in all cases to be regarded as 1,000 cubits long, which with the 1,000 cubits outside the wall, and measured in the same direction as the wall, would make up the 2,000 cubits, and would give to the side of the suburb in every case a length of 3,000 cubits. The objection to this view is that there is no evidence as to an uniform length of the city walls, and that the suburb might have been more conveniently described as 3,000 cubits on each side. All ambiguity equivalent for masōnah (מַסֹּנָה) in 1 Sam. xiv. 14 and for akv (אָכַב) in Is. v. 10. The latter term also occurs in the passage first quoted, and would with more consistency be rendered acoe instead of "yoke." It means such an amount of land as a yoke of oxen would plough in a day. Masōnah means a furrow.
would have been avoided if the size of the suburb had been decided either by absolute or relative acreage; in other words, if it were to consist in all cases of a certain fixed acreage outside the walls, or if it were made to vary in a certain ratio to the size of the town. As the text stands, neither of these methods can be deduced from it.

(2.) The measures of distance noticed in the Old Testament are the three following: (a) The "bath" or pace (2 Sam. vi. 12), answering generally to our yard. (b) The "stade" or A. V. "stades" was evidently a "little piece of ground" (Gen. xxxvi. 6, xlvii. 7; 2 K. xiv. 19). The expression appears to indicate some definite distance, but we are unable to state with precision what that distance was. The LXX. retains the Hebrew word in the form ἱπποδρόμων, which is thus a second translation of the expression, and we are unable to say whether this translation was intended by this translation, it would) be either the ordinary length of a race-course, or such a distance as a horse could travel without being over-fatigued, in other words, a stage. But it probably means a locality, either a race course itself, as in 3 Mac. iv. 11, or the space outside the town within which the hippodrome was situated. The LXX. give it again in gen. xlvii. 7, to the equivalent for Ephratim. The Syrian and Persian versions render ἱπποδρόμων by a well-known Persian measure, generally estimated at 30 stades (Herod. li. 6, v. 55), or from 37 to 40 English miles, but sometimes at a larger amount, even up to 69 stades (Strabo x. 518). The only conclusion to be drawn from the Bible is that the "stade" did not exceed and probably equalled the distance between Bethlehem and Rachel's burial place, which is traditionally identified with a spot 3½ miles north of the town. (c) The devise gōnē or alleviate gōnē, a day's journey, which was the most usual method of calculating distances in travelling (Gen. xxxvii. 29, xxxvii. 33; Ex. i. 18, ii. 31; Num. x. 55, xi. 34, xxi. 8; Deut. i. 2; 1 K. iv. 4; 2 K. iii. 9, v. iii. 3; 1 Mac. vi. 24, vii. 45; Tob. vi. 1), though but one instance of its occurs in the New Testament (Luke ii. 44). The distance indicated by it was naturally fluctuating according to the circumstances of the traveller or of the country through which he passed. Herodotus variously estimates it 2000 and 1500 stades (i. 101, v. 334); Aristobulus (Op. Prod. i. 11) at 150 and 172 stades; Pausanias (v. 33, § 2) at 150 stades; Strabo (i. 35) at from 250 to 300 stades; and Vegetius (De Re Mil. i. 11) at from 20 to 24 miles for the Roman army. The ordinary day's journey among the Jews was 30 miles; but when they travelled in companies only 10 miles. Nepos formed the third part of a stade, that is, of Jerusalem, according to the former, and Rezeth according to the latter computation (Lightfoot, Excre. in Luc. ii. 44). It is impossible to assign any distinct length to the day's journey: John's estimate of 36 miles, 172 yards, and 4 feet, is based upon the false assumption that it bore some relation to the other measures of length.

In the Apocrypha and New Testament we meet with the following additional measures: (d) The Sabbath-day's journey, already discussed in separate article. (e) The stadion or or "stadium," a Greek measure introduced into Asia subsequently to Alexander the Great's conquest, and hence first mentioned in the Apocrypha (2 Mac. xi. 5, xii. 9, 17, 29), and subsequently in the New Testament (Luke xiv. 33; John vi. 19, xi. 18; Rev. xiv. 20, xvi. 16). Both the name and the length of the stade were borrowed from the foot-race course at Olympia. It equaled 600 Greek feet (Herod. ii. 149), or 125 Roman paces (Tert. ii. 24), or 660 English feet. It thus falls below the furlong by 53½ feet. The distances between Jerusalem and the places Bethany, Janin, and Scythopolis, are given with tolerable exactness at 15 stades (John xi. 18), 240 stades (2 Mac. xii. 9), and 600 stades (2 Mac. vii. 29). In 2 Mac. xi. 5 there is an evident error, either of the author or of the text, in respect to the position of Bethoura, which is given as only 5 stades from Jerusalem. The Talmudists describe the stade under the term ephah, and regarded it as equal to 625 feet and 125 paces (Carpoz, Apper. p. 679). (f) The Mile, a Roman measure, equaling 1000 English yards, 8 stades, and 1568 English yards.

The measures of capacity for liquids were: (a) the log (Lev. xiv. 10, etc.), the name originally signifying a "bason." (b) The hin, a name of Egyptian origin, frequently noticed in the Bible (Ex. xxii. 14, xxx. 24; Num. xx. 4, 7, 9, Ex. iv. 11, etc.). (c) The bath, the name meaning measured, the largest of the liquid measures (1 ephah equal to 1 stade; 3 baths, = 1 stade: 1 ephah, 1 el, 1 bath). With regard to the relative values of these measures we learn nothing from the Bible, but we gather from Josephus (Jos. iii. 8, 3) that the bath contained 6 hinni for (the bath equalled 72 ephah or 12 ephahs, and the hin 2 ephahs). From the Talmudists that the hin contained 12 logim (Carpoz, Apper. 685). The relative values therefore stand thus:

<table>
<thead>

</table>

The dry measure contained the following denominations: (a) The ephah, mentioned only in 2 K. vii. 25, the name meaning literally hollow or container. (b) The omer, mentioned only in Ex. xvi. 16-26. The same measure is elsewhere termed sovep, being as the tenth part of an ephah (comp. Ex. xvi. 36), whence in the A. V. the tenth heil (Lev. xiv. 10, xxiii. 13; Num. xiv. 4, etc.). The word omer implies a heil, and secondarily a sheeph (c). The shibol or or "measure," this being the etymological meaning of the term, and appropriately applied to it, inasmuch as it was the ordinary measure for household purposes (Gen. xviii. 6; 1 Sam. xiv. 18; 2 K. vii. 1, 16). The Greek equivalent occurs in Matt. iii. 33; Luke xxii. 21. The sheeh was otherwise termed shalsheth, as being the third part of an ephah (Is. xiv. 12, Ps. i. 5). (d) The ephah, a word of Egyptian origin, and
of frequent recurrence in the Bible (Ex. xvi. 36; Lev. v. 11, vi. 20; Num. v. 15, xxvii. 5; Judges vi. 19; Ruth ii. 17; 1 Sam. i. 24, xvii. 17; Ez. xlv. 11, 13, xvi. 5, 7, 11, 14). (e.) The Hebrew term "bur" or "bath-bomer," literally meaning what is poured out; it occurs only in Hos. iii. 2. (f.) The homer, meaning hemph (Lev. xxvii. 16; Num. xii. 4; Ez. v. 10; Ez. xlv. 13). It is elsewhere termed cor, from the circular vessel in which it was measured (1 K. iv. 22, v. 11; 2 Chr. ii. 10, xxvii. 5; Ezz. vii. 22; Ez. xlv. 14). The Greek equivalent occurs in Luke xvi. 7.

The relative proportions of the dry measures are to a certain extent expressed in the names issurin, meaning a tenth, and shalalah, a third. In addition we have the Biblical statement that the omer is the tenth part of the ephah (Ex. xvi. 36), and that the ephah was the tenth part of a homer, and corresponded to the bath in liquid measure (Ez. xlv. 11). The Babylonians supplement this by stating that the ephah contained three seahs, and the seah six ebes (Carpzov, p. 683). We are thus enabled to draw out the following scale of relative values:

<table>
<thead>
<tr>
<th>Cubit</th>
<th>Omer</th>
<th>Seah</th>
<th>Ephah</th>
<th>Homer</th>
</tr>
</thead>
<tbody>

<td>30</td>
<td>90</td>
</tr>
</tbody>
</table>

The above scale is constructed, it will be observed, on a combination of decimal and duodecimal ratios, the former prevailing in respect to the omer, ephah, and homer, the latter in respect to the cubit, seah, and ephah. In the liquid measure the duodecimal ratio above appears, and hence there is a fair presumption that this was the original, as it was undoubtedly the most general principle on which the scales of antiquity were framed (Beeckh, p. 38). Whether the decimal division was introduced from some other system, or whether it was the result of local usage, there is no evidence to show.

The absolute values of the liquid and dry measures form the subject of a single inquiry, inasmuch as the two scales have a measure of equal value, namely, the bath and the ephah (Ex. xlv. 11); if either of these can be fixed, the conversion of the other denominations into their respective values readily follows. Unfortunately the data for determining the value of the bath or ephah are both scanty and conflicting. Attempts have been made to deduce the value of the bath from a comparison of the dimensions and the contents of the modern sea. As given in 1 K. vii. 23-26. If these particulars had been given with greater accuracy and fullness, they would have furnished a sound basis for a calculation; but, as the matter now stands, uncertainty attends every statement. The diameter is obscure, and the claim, which, it would appear, was to be circular and cylindrical, the diameter being stated to be "from one brim to the other." Assuming that the vessel was circular, the proportion of the diameter and circumference are not sufficiently exact for mathematical purposes, nor are we able to decide whether the diameter was measured from the internal or the external edge of the vessel. The shape of the vessel has been variously conceived, to be circular and polygonal, cylindrical and hemispherical, with pendicular and with bulging sides. The contexts are given as 2,900 baths in 1 K. vii. 26, and 3,000 baths in 2 Chr. iv. 3, the latter being probably a corrupt text. Lastly, the length of the cubit is undefined, and hence every estimate is attended with suspicion. The conclusions drawn have been widely different, as might be expected. If it be assumed that the form of the vessel was cylindrical (as the description prima facie seems to imply), that its clear diameter was 10 cubits of the value of 19,650 English inches each, and that its full contents were 2,000 baths, then the value of the bath would be 4,895 gallons; for the contents of the vessel would equal 2,715,638 cubical inches, or 9,793 gallons. If, however, the statement of Josephus (Ant. viii. 3, § 5), as to the hemispherical form of the vessel, be adopted, then the estimate would be reduced. Saalzschutz, as quoted by Beeckh (p. 201), on this hypothesis calculates the value of the bath at 18,486 French litres, or 3,686 English gallons. If, further, we adopt Saalzschutz's view as to the length of the cubit, which he puts at 15 Dresden inches at the highest, the value of the bath will be further reduced, according to his calculation, to 10½ Prussian quarts, or 2,6057 English gallons; while at his lower estimate of the cubit at 12 inches, its value would be little more than one half of this amount (Arch. 12, II. 171). On the other hand, if the vessel bulged, and if the diameter and circumference were measured at the neck or narrowest part of it, space might be found for 2,900 or even 3,000 baths of greater value than any of the above estimates. It is therefore hopeless to arrive at any satisfactory conclusion from this source. Nevertheless we think the calculations are not without their use, as furnishing a certain amount of presumptive evidence. For, setting aside the theory that the vessel bulged considerably, for which the text furnishes no evidence whatever, all the other computations agree in one point, namely, that the bath fell far below the value placed on it by Josephus, and by modern writers on Hebrew archaeology generally, according to whom the bath measures between 8 and 9 English gallons.

We turn to the statements of Josephus and other early writers. The former states that the bath equals 72 xestes (Ant. viii. 2, § 9), that the seah equals 2 Attic cheia (ibid. iii. 8, §§ 3, 9, § 4), that the seah equals 1 Italian meali (ibid. iv. 4, § 5), that the cor equals 10 Attic mediometri (ibid. iv. 9, § 23), and that the issurin or omer equals 7 Attic catheg (ibid. iii. 6, § 6). It may further be implied from Ant. iv. 4, § 4, as compared with 2 K. vi. 25, that he regarded the cuba as equal to 4 xestes. Now, in order to reduce these statements to consistency, it must be assumed that in Ant. xv. 9, § 2, he has confused the mediumus with the metretis, and in Ant. iii. 6, § 6, the catheg with the xestes. Such errors are nowhere shown on his other statements, and tend to the conclusion that Josephus was not really familiar with the Greek measures. This impression is supported by his apparent ignorance of the term metretis, which he should have used not only in the passage above noticed, but also in viii. 2, § 9, where he would naturally have included it for 72 xestes, assuming that these were Attic xestes. Nevertheless his testimony must be taken as decisive in favor of the identity of the Hebrew bath with the Attic metretis.
Jerome (in Matt. xiii. 33) affirms that the sheaf equals 1/2 modii, and (in Ez. xlv. 11) that the cor equals 60 modii, — statements that are glaringly inconsistent, inasmuch as there were 30 saasks in the cor. The statements of Ephraimus in his treatise De Mensuriae are equally remarkable for inconsistency. He states (ib. 177) that the cor equals 30 modii; on this assumption the bath would equal 51 scarceàrii, but he gives only 50 (p. 178): the sheaf would equal 1 modius, but he gives 1 1/2 modii (p. 178); or, according to his estimate of 17 scarcearii to the modius, 211 scarcearii, though elsewhere he assigns 56 scarcearii, as its value (p. 182): the other would be 5 1/2 scarcearii, but he gives 7 1/4 (p. 182), implying 4 1/2 modii to the cor: and, lastly, the ephah is identified with the Egyptian octobe (p. 182), which was either 4 1/2 or 5 1/2 modii, according as it was in the old or the new measure, though according to his estimate of the cor it would only equal 3 modii. Little reliance can be placed on statements so loosely made, and the question arises whether the identification of the bath with the meticls did not arise out of the circumstance that the two measures held the same relative position in the scales, each being subdivided into 72 parts, and, again, whether the assignment of 30 modii to the cor did not arise out of there being 30 saasks in it. The discrepancies can only be explained on the assumption that a wide margin was allowed for a long measure, amounting to an increase of 50 per cent. This appears to have been the case from the definitions of the sheaf or σακάν given by Hesychius, μεδιός γέμισας, γέρας, εν είκοσι μούδοις Χρυσίνιος, and μεδιός. By Suidas, μερίδιον τετραπαντοείον, ἄρα μεδιός γέμισα καὶ γέρας. Assuming, however, that Josuah was in identifying the bath with the meticls, its value would be, according to Boeckh's estimate of the latter (pp. 261, 278), 1094.5 Paris cubic inches, or 8.8056 English gallons, but according to the estimate of Bethem (boeckh. p. 73) 1295.77 Paris cubic inches, or 8.9696 English gallons. The Kabbalists furnish data of a different kind for calculating the value of the Hebrew measures. They estimated the log to be equal to six hen eggs, the cubic contents of which were ascertained by measuring the amount of water they displaced (Maimonides, in c. 17, § 10). On this basis Theonius estimated the cubic contents of 1 modius, or 0.06147 English gallon, and the bath, at 1,041.39 Paris cubic inches, or 4.4286 gallons (St. u. Kr. pp. 101, 121). Again, the log of water is said to have weighed 108 Hebrew drahma; each equaling 61 barleycorns (Maimonides, in Iohw. 3, § 6, ed. Ginz.); Thelaüs finds that 5,498 barleycorns fill about the same space as 6 hen eggs (St. u. Kr. p. 121). And again, a log is said to fill a vessel 4 digits long, 4 broad, and 2.7, high (Maimonides, in Prof. Menaboch). This vessel would contain 21.6 cubic inches, or 0.07754 gallon. The conclusion arrived at from these data would agree tolerably well with the first estimate formed on the notices of the medon saask.

a In the table the weight of the log is given as 108 drachmas; but in this case the contents of the log are supposed to be water. The relative weights of water and wine were as 27:1.

b Marmarini.

c Noth.

d Eternus.

WELL:

As we are unable to decide between Josephus and the Kabbalists, we give a double estimate of the various denominations, adopting Bethem's estimate of the mificent:-

(Josephas.)

In the New Testament we have notices of the following foreign measures:— (a.) The modicls (John v. 6; A. V. "frankl."); for liquids. (b.) The citresses, (Rev. vi. 6; A. V. "measure”), for dry goods. (c.) The xestkle applied, however, not to the particular measure so named by the Greeks, but to any small vessel, such as a cup (Mark vii. 4. 8: A. V. "pot "). (d.) The modius, similarly applied to describe any vessel of moderate dimensions (Matt. v. 15; Mark iv. 21; Luke xi. 30; A. V. "measures."); though properly naming a Roman measure, amounting to about a peck.

The value of the Attic mificent has been already stated to be 8.5696 gallons, and consequently the amount of liquid in six stone jars, containing on the average 2 1/2 mertica each, would exceed 110 gallons (John h. 6). Very possibly, however, the Greek term represents the Hebrew bethem, and if the bath be taken at the lower estimate assigned to it, the amount would be reduced to about 60 gallons. Even this amount far exceeds the requirements for the purposes of legal purification, the tendency of Pharisaical refinement being to reduce the amount of water to a minimum, so that a quarter of a log would suffice for a person (Mishnah, Civ. ii. § 1). The question is one simply of archetical interest as illustrating the customs of the Jews, and does not affect the character of the miracle with which it is connected. The chanica was 1/2 of an Attic modicls, and contained nearly a quart. It represented the usual amount of corn for a day's food, and hence a chanica for a penny, or denarion, which usually purchased a bushel (Cic. Ver. iii. 81), being a great scarcity (Rev. vi. 6). With regard to the use of foreign measures, various precepts are expressed in the Mosiac law and other parts of the Bible (Lev. xix. 35, 36; Dent. xxv 14, 15; Prov. xx. 10; Ez. xiv. 10), and in all probability standard measures were kept in the Temple, as was usual in the other civilized countries of antiquity (Boeckh. p. 12). The works chiefly referred to in the present article are the following:— Boeckh, Metrologische Untersuchungen, 1838; Classical Museum, vol. i. : Theillogische Studien und Kritiken for 1846; Mishnah, ed. Surenhusius; Wilkinson, Ancient Egyptians, 2 vols. 1854; Ephraimus, Opera, 2 vols., ed. Petruccus. W. L. B.
the use of the former word to denote a receptacle for water springing up freshly from the ground, while the latter usually denotes a reservoir for rain-water (Gen. xxvi. 19, 32; Prov. v. 15; John iv. 14).

The special necessity of a supply of water (Judg. i. 15) in a hot climate has always involved among the Eastern nations questions of property of the highest importance, and sometimes given rise to serious contention. To give a name to a well denoted a right of property, and to stop or destroy one thus marked was a military expedient, a mark of conquest, or an encroachment on territorial right claimed or existing in its neighborhood. Thus the well Beer-sheba was opened, and its possession attested by special formula by Abraham (Gen. xxx. 30, 31). In the hope of expelling Isaac from their neighborhood, the Philistines stopped up the wells which had been dug in Abraham’s time and called by his name, an encroachment which was strongly resisted by the followers of Isaac (Gen. xxvi. 15-33; see also 2 K. iii. 19, 2 Chr. xxvi. 16; Burckhardt, Note a, ii. 185, 194, 204, 276). The Kurian notices abandoned wells as signs of desertion (Sur., xxiii.). To acquire wells which they had not themselves dug, was one of the marks of favor accorded to the Hebrews on their entrance into Canaan (Deut. xi. 11). The Kurian notices them without independence (Prov. xv. 15), and to abstain from the use of wells belonging to others, a disclaimers of interference with their property (Num. xx. 17, 19, xxii. 22). Similar rights of possession, actual and hereditary, exist among the Arabs of the present day. Wells, Burckhardt says, in the interior of the Desert, are exclusive property, either of a whole tribe, or of individuals whose ancestors dug the wells. If a well be the property of a tribe, the tents are pitched near it, whenever rain-water becomes scarce in the desert; and no other Arabs are then permitted to water their camels. But if the well belongs to an individual, he receives present from all strangers who pass or camp near the well, and refresh their camels with the water of it. The property of such a well is never abandoned; and the Arabs say, the possessor is sure to be fortunate, as all who drink of the water bestow on him their benedictions (Note on Tod. ii. 228, 229; comp. Num. xxi. 17, 18, and Judg. i. 15).

It is thus easy to understand how wells have become in many cases links in the history and landmarks in the topography both of deserts and of the Arabian Peninsula. The wells once dug in the rocky soil of Palestine might be filled with earth or stones, but with difficulty destroyed, and thus the wells of Beer-sheba, and the well near Nablus, called Jacob’s well, are among the most un doubted witnesses of these transactions of sacred history in which they have borne, so to speak, a prominent part. On the other hand, the wells dug in the sandy soil of the Arabian valleys, easily destroyed, but easily renewed, often mark, by their ready supply, the stations at which the Hebrew pilgrims halted their thirst, or, as at Marah, were disappointed by the bitterness of the water. In like manner the stations of the Mohamnedan pilgrims from Cairo and Damascus to Mecca (the Hadj route) are marked by the wells (Robinson, i. 69, 204, 205, ii. 283; Burckhardt, Syrie, pp. 318, 472, 474; App. III. 656, 660; Shaw, Trav., 314; Niebuhr, Descrip. de l’Ar., pp. 347, 348; Wellsted, Trav., ii. 49, 43, 64, 457, App.). Wells in Palestine are usually excavated from the solid limestone rock, sometimes with steps to descend into them (Gen. xxiv. 16; Burckhardt, Syrie, p. 232; Col. Ch. Chron. 1858, p. 470). The brims are furnished with a curb or low wall of stone, bearing marks of high antiquity in the narrow worn by the ropes used in drawing water (Rob. i. 204). This curb, as well as the stone cover, which is also very usual, agrees with the directions of the Law, as explained by Philo and Josephus, namely, as a protection against accident (xx. 33; Joseph. Ant. iv. 8, § 37; Philo, De Spec. Leg. iii. 27, ii. 324; ed. Mangen., Mannheil, in E. Trav., 455). It was on a curb of this sort that our Lord sat when He conversed with the woman of Samaria (John iv. 6), and it was this, the woman of Samaria, who, with the water vessel placed on the mouth of the well at Rahumin (2 Sam. xxvii. 19), where A. V. weakens the sense by omitting the article. Sometimes the wells are covered with cupolas raised on pillars (Burckhardt, App. V. p. 695).

The usual methods for raising water are the following: (1) The rope and bucket, or water-skin (Gen. xxiv. 14-20; John iv. II). When the well is deep the rope is either drawn over the curb by the man or woman, who pulls it out to the distance of its full length, or by an ass or ox employed in the same way for the same purpose. Sometimes a pulley or wheel is fixed over the well to assist the work (Robinson, i. 204, ii. 248; Niebuhr, Itbers. de l’Ar., 157, pl. 15; Col. Ch. Chron. 1859, p. 354; Curlin, 159; Wellsted, Trav., i. 280). (2) The sakhay, or Persian wheel. This consists of a vertical wheel furnished with a set of buckets or earthen jars, attached to a cord passing over the wheel, which descends empty and return full as the wheel revolves. On the axis of the wheel revolves a second wheel, parallel to it, with cogs, which turn a third wheel set horizontally at a sufficient height from the ground to allow the animalised in turning it to pass under. One or two cows or bulls are yoked to a pole which passes through the axis of this wheel, and as they travel round it turn the whole machine (Num. xxiv. 7; Lane, Mod. Eng. ii. 163; Niebuhr, Top. i. 120; Col. Ch. Chron. 1859, p. 352; Shaw, pp. 291, 408). (3) A modification of the last method, by which a man, sitting opposite to a wheel furnished with...
bucks, turns it by drawing with his hands one set of spokes prolonged beyond its circumference, and pushing another set from him with his feet (Niebuhr, Fig. i. p. 120, pl. 15; Robinson, ii. 22, iii. 89). (4.) A method very common, both in ancient and modern Egypt, is the shafed, a simple contrivance consisting of a lever moving on a pivot, which is loaded at one end with a lump of clay or some other weight, and has at the other a bucket or bowl. This is let down into the water, and, when raised, emptied into a receptacle above (Niebuhr, Fig. i. 120; Lane, M. E. i. 163; Wilkinson, A. E. l. c.; Gen. xiv. 20; Ex. ii. 16).

Ancient Egyptian machine for raising water, identified with the shafed of the present day. (Wilkinson.)

Unless machinery is used, which is commonly worked by men, women are usually the water-carriers. They carry home their water-jars on their heads (Lindsay, p. 236). Great contentions often occur at the wells, and they are often, among Bedouins, favorite places for attack by enemies (Ex. b. 16, 17; Judg. v. 11; 2 Sam. xxii. 15, 16; Borchhardt, Syrinx, p. 63; Robinson, i. 204, ii. 21, 315, iii. 35, 39, 109, 134; Lord Lindsay, Temp. pp. 295, 297; Wilkinson, A. E. l. c.; Gen. xxiv. 20; Ex. ii. 16).

* WELL IS HIM. Exclus. xxv. 8, 9 (A. V.) exhibits a curious remnant of the old use of "him" as a dative, as "to him." Compare " Woe is me," and the examples from Chaucer (Can. Tales, 2,111, 16,362, cited in Eastwood and Wright's Bible Word Book, p. 524.

* WELL OF JACOB. [Siechem, p. 2907 f.]

* WELL-SPRING. [Fountain; Well.]

** WHALE. As to the signification of the Hebrew terms tan (ם) or (ן) and tannin (ם), rendered in the A. V. by "dragon," "whale," "serpent," "sea-monster," see DRAGON. It remains for us in this article to consider the transaction recorded in the book of Jonah, of that prophet having been swallowed by some "great fish" (יַעֲבֹּד), which in Matt. xii. 40 is called כָּלְרָתְו. rendered in our version by "whale."

Much criticism has been expended on the Scriptural account of Jonah being swallowed by a large fish; it has been variously understood as a literal transaction, as an entire fiction or an allegory, as a poetical myths or a parable. With regard to the remarks of those writers who ground their objections upon the death of miracle, it is obvious that this is not the place for discussion; the question of Jonah in the fish's belly will share the same fate as any other miracle recorded in the Old Testament.

The reader will find in Rosenmuller's Prolegomena several attempts by various writers to explain the Scriptural narrative, none of which, however, have anything to recommend them, unless it be in some cases the ingenuity of the authors, such as for instance that of Godfrey Less, who supposed that the "fish" was no animal at all, but a ship with the figure of a fish painted on the stern, into which Jonah was received after he had been cast out of his own vessel! Equally curious is the explanation of G. C. Antou, who endeavored to solve the difficulty, by supposing that just as the prophet was thrown into the water, the dead carcass of some large fish floated by, into the belly of which he contrived to get, and that thus he was drifted to the shore! The opinion of Rosenmuller, that the whole account is founded on the Phoenician fable of Hercules devoured by a sea-monster sent by Neptune (Lycothron, Conzem, 33), although sanctioned by Gesenius, Winet, Ewald, and other German writers, is opposed to all sound principles of Biblical exegesis. It will be our purpose to consider what portion of the occurrence partsake of a natural, and what of a miraculous nature.

In the first place then, it is necessary to observe, that the Greek word καλόντων, used by St. Matthew, is not restricted in its meaning to "a whale," or any Cetacea; like the Latin cetus or cetus, it may denote any sea-monster, either "a whale," or "a shark," or "a seal," or "a tummy of enormous size" (see Athen. p. 503 B, ed. Dindorf; Odys. xii. 97, iv. 446, 492; II. xx. 147). Although two or three species of whale are found in the Mediterranean Sea, yet the "great fish" that swallowed the prophet cannot properly be identified with any Cetacea, for, although the sperm whale (Cetodon macrocephalus) has a gullet sufficiently large to admit the body of a man, yet it can hardly be the fish intended; as the natural food of cetacea consists of small animals, such as medusae and crustacea.

Nor, again, can we agree with Bishop Jebb (Sacred Literature), pp. 178, 179), that the καλόντα of the Greek Testament denotes the lack portion of a whale's mouth, in the cavity of which the prophet was concealed; for the whole passage in Jonah is clearly opposed to such an interpretation.

The only fish, then, capable of swallowing a man would be a large specimen of the White Shark (Carcharias velapriscus), that dreaded enemy of sailors, and the most voracious of the family of Squidida. This shark, which sometimes attains the length of thirty feet, is quite able to swallow a man whole. Some commentators are skeptical on
this point. It would, however, be easy to quote passages from the writings of authors and travellers in proof of this assertion; we confine ourselves to two or three extracts. The shark * has a large gullet, and in the belly of it are sometimes found the bodies of men half eaten, sometimes whole and entire." (Nature Displayed, iii. p. 141). But lest the Abbe' Piniere should not be considered sufficient authority, we give a quotation from Mr. Couch's recent publication, A History of the Fishes of the British Islands. Speaking of white sharks, this author, who has paid much attention to the habits of fish, states that "they usually cut asunder any object of considerable size and thus swallow it; but if they find a difficulty in doing this, the formation of the jaws and throat renders this a matter of but little difficulty." Ruysech says that the whole body of a man in armor (loricatus), has been found in the stomach of a white shark; and Captain King, in his Survey of Australia, says he had caught one which could have swallowed a man with the greatest ease. Blumenbach mentions that a whole horse has been found in a shark, and Captain Basil Hall reports the taking of one in which, besides other things, he found the whole skin of a buffalo which a short time before had been thrown overboard from his ship (i. p. 27). Dr. Hird of the British Museum (Cyclops, of Nat. Sciences, p. 514), says that in the river Hooghly below Calcutta, he had seen a white shark swallow a bullock's head and horns entire, and he speaks also of a shark's mouth being "sufficiently wide to receive the body of a man." Wherever therefore the Tarshish, to which Jonah's ship was bound, was situated, whether in Spain, or in Cilicia, or in Ceylon, it is certain that the common white shark might have been seen on the voyage. The C. regalis is not uncommon in the Mediterranean; it occurs, as Forskål (Descrip. Animal, p. 20) assures us, in the Arabian Gulf, and is common also in the Indian Ocean. So far for the natural portion of the subject. But how Jonah could have been swallowed whole unhurt, or how he could have existed for any time in the shark's belly, it is impossible to explain by simply natural causes. Certainly the preservation of Jonah in a fish's belly is not more remarkable than that of the three children in the midst of Nebuchadnezzar's "burning fiery furnace." (Jonah, Amer. ed.)

Naturalists have recorded that sharks have the habit of throwing up again whole and alive the prey they have seized (see Couch's Hist. of Fishes, i. p 31). "I have heard," says Mr. Darwin, "from Dr. Allen of Forres, that he has frequently found a dolphin floating alive and distended in the stomach of a shark; and that on several occasions he has known it eat its way out, not only through the coats of the stomach, but through the sides of the monster which has been thus killed." (W. H.)

**WHEAT.** The well-known valuable cereal, cultivated from the earliest times, and frequently mentioned in the Bible. In the A. V. the Heb. words bar (בר) or רב (רב), ḫōqān (חוך), ḫūphōth (חקפים), are occasionally translated "wheat:" but there is no doubt that the proper name of this cereal, as distinguished from "barley," "spelt," etc., is chūth (חקם; Chal. חנקם, χεινίτης). As to the former Hebrew terms, see under CORN. The first mention of wheat occurs in Gen. xxx. 14 in the account of Jacob's sojourn with Laban in Mesopotamia. Much has been written on the subject of the origin of wheat, and the question appears to be still undecided. It is said that the Triticeum vulgare has been found wild in some parts of Persia and Siberia, apparently removed from the influence of cultivation (English Cyclop. art. "Triticum"). Again, from the experiments of M. Esprit Faire of Agile it would seem that the numerous varieties of cultivated wheat are merely improved transformations of Agropyron emont (Journal of the Egyptian Wheat.

Royal Agric. Soc., No. xxxiii. pp. 167-180). M. Faire's experiments, however, have not been deemed conclusive by some botanists (see an interesting paper by the late Prof. Henfrey in No. xlii. of the Journal quoted above). Egypt in ancient times was celebrated for the growth of its wheat; the best quality, according to Pliny (Nat. Hist. xviii. 7), was grown in the Thebaid; it was all bearded, and the same varieties, Sir G. Wilkinson writes (Ane. Egypt. ii. 39, ed. 1854), "existed in ancient as in modern times, among which may be mentioned the seven-eared quality described in Pharaoh's dream" (Gen. xlii. 23). This is the so-called mummy-wheat, which, it has been said, has germinated after the lapse of thousands of years, but it is now known that the whole thing was a fraud. Babylonia was also noted for the excellence of its wheat and other cereals. "In grain," says
HERODOTUS (i. 93), "it will yield commonly two hundred fold, and at its greatest production as much as three hundred fold. The blades of the wheat and barley plants are often four fingers broad." But this is a great exaggeration. (See also Theophrastus, Hist. Plant. vii. 7.) Modern writers, as Cheseby and Rich, bear testimony to the great fertility of Egypt, Syria, and Palestine. The common wheat and barley plants of our time are different varieties of the same species as the ancient wheat and barley which appears to be the same as the Egyptian kind, the T. communis. In the parable of the sower, garlic and alludes to grains of wheat which in good ground produce a hundred fold (Matt. xiii. 8). "The return of a hundred for one," says Trench, "is not unheard of in the East, though always mentioned as something extraordinary." Labarde says, "There is to be found at Kereke a species of barley which is the width of the hand across the breast of exaggeration of which it has been the object." The common Triticum vulgare will sometimes produce one hundred grains in the ear. Wheat is reaped towards the end of April, in May, and in June, according to the differences of soil and position; it was sown either broadcast, and then ploughed in or trampled in by cattle (Is. xxvi. 20), or in rows, if we rightly understand Is. xxvii. 29, which seems to imply that the seed were planted apart in order to insure larger and fuller ears. The wheat was put into the ground in the winter, and some time after the barley; in the Egyptian plague of hail, consequently, the barley suffered, but the wheat had not appeared, and so escaped injury. Wheat was given into the hands of the finest qualities were expressed by the term "fat of kidneys of wheat," לֵיָהּ לָבָר (Dent. xxvii. 14). Unripe ears are sometimes cut off from the stalks, roasted in an oven, mashed and boiled, another by the modern Egyptians (Somnul. Trans.). Rosenmüller (History of the Bible, p. 80), with good reason, conjectures that this dish, which the Arabs call Ferkâ, is the same as the geres cornel (לָבָר כּרֶנֶל) of Lev. ii. 14 and 2 K. iv. 42. The Heb. word קָּלִי (Lev. ii. 14) denotes, it is probable, roasted ears of corn, still used as fuel in the East. An "ear of corn" was called Shibboleth (לָבָר), the word which betrayed the Ephraimites (Judg. xii. 6), who were unable to give the sound of eh. The curious expression in Prov. xxvii. 22, "though thou shouldst pray a fool in a mourn among wheat with a pestle, yet will not his foolishness depart from him," appears to point to the custom of mixing the grains of inferior cereals with wheat; the meaning will then be, "Let a fool be ever so much in the company of wise men, yet he will continue a fool." Maurer (Comment. i. c.) simply explains the passage thus: "Quosdomam capere tractaveris stultum non patueris se commendari." [Compare articles CORN; AGRICULTURE; BARLEY.]

* WHEEL. [Cart; Laver; Well.]

* WHEN AS. Matt. i. 18 (A. V.), is simply "when," as often in old English writers. A.

* WHIP. [Cord; Goad; scouring.]
which case the brother of the deceased husband had a right to marry the widower (Bengtson, xxvi. 22–20, [Marriage].) The high-priest was prohibited from marrying a widow, and in the ideal polity of the prophet Ezekiel the prohibition is extended to the ordinary priests (Ez. xlii. 22).

In the Apostolic Church the widows were sustained at the public expense, the relief being duly administered in kind, under the superintendence of officers appointed for this special purpose (Acts vi. 1–6). Particular directions are given by St. Paul as to the class of persons entitled to such public maintenance (1 Tim. v. 3–16). He would confine it to the "widow indeed," (ἡ ὄρετος χήρα), whom he defines to be one who is left alone in the world, without any relations or Christian friends responsible for her support (vv. 3–5, 10). Poverty combined with friendlessness thus formed the main criterion of eligibility for public support; but at the same time the character of the widow — her piety and trustfulness — was to be taken into account (ver. 5). Out of the body of such widows a certain number were to be enrolled (καταλείψεις: A. V. "taken into the number"), the qualifications for such enrollment being (1) that they were widows for sixty years, (2) that they had been "the wife of one man," probably meaning but once married; and (3) that they had led useful and charitable lives (vv. 9, 10). The object of the enrollment is by no means obvious. If we were to form our opinion solely on the qualifications above expressed, we should conclude that the enrolled widows formed an ecclesiastical order, having duties identical with or analogous to those of the deaconesses of the early Church. For why, if the object were of an ecclesiastical character, should the younger or twice-married widows be excluded? The weight of modern criticism is undoubtedly in favor of the view that the enrolled widows held such an official position in the Church (Alford, De Wette, Lange, etc., in 1 Tim. v. 9, 10). But we can perceive no ground for isolating the passage relating to the enrolled widows from the context, or for distinguishing these from the "widows indeed" referred to in the preceding and succeeding verses. If the passage be read as a whole, then the impression derived from it will be that the enrollment was for an ecclesiastical purpose, and that the main condition of enrollment was, as before, pietas, according to the opinion which has been advanced in favor of the opposite view, in reality equally favors this one; for why should unmarried or young women be excluded from an ecclesiastical order? The practice of the early Church proves that they were not excluded. The author of the Apostolic Constitutions lays down the rule that virgins should be generally, and widows only exceptionally, appointed to the office of deaconesses (v. 17. § 4): and though the directions given to Timothy were frequently taken as a model for the appointment of deaconesses, yet there was great diversity of practice in this respect (Bingham's Ant. ii. 22. §§ 2–5). On the other hand, the restrictions contained in the Apostolic directions are not inconsistent with the ecclesiastical view, if we assume as is very possible, that the enrolled widows formed a permanent charge on the public funds, and enjoyed certain privileges by reason of their long previous services, while the remainder, who were younger, and might very possibly remarry, would be regarded in the light of temporary and casual recipients. But while we thus believe that the primary object of the enrollment was simply to ensure a more methodical admission of widows to the Church funds, it is easy to understand how the order of widows would obtain a quasi-official position in the Church. Having already served a voluntary deaconate, and having exhibited their self-control by refraining from a second marriage, they would naturally be looked up to as models of piety to their sex, and would belong to the class whence deaconesses would be chosen. Hence we find the term "widow" (χήρα) used by early writers in an extended sense, to signify the adoption of the conditions by which widows, enrolled as such, were bound for the future. Thus Ignatius speaks of "virgins who were called widows" (παρθένους τὰς λεγομένας χήρας; Ep. ad Smyrn. 17): and Tertullian records the case of a virgin who was placed on the roll of widows (in ritibus) while yet under twenty years of age (De Tel. Virg. 9). It is a further question in what respect these virgins were called "widows." The annotations on Ignatius regard the term as strictly equivalent to "deaconesses" (Πάτρος Ἀποσ. ii. 441. ed. Jacobson), but there is evidently another sense in which it may be used, namely, as betokening celibacy, and such a view must be taken of the term as the abstract term χήρα is used in the sense of "continence, or unmarried state," in the Apostolic Constitutions (παρθένους μὴ φιλοστηνὴν τὴν ἐν ἐννοίας χηρίας: διός ἔχουσα χηρίας, § 1, §§ 1, 2). We are not therefore disposed to identify the widows of the Bible either with the deaconesses or with the παρθένοι of the early Church, from each of which classes they are distinguished in the work last quoted (ii. 57. § 8. viii. 13. § 4). The order of widows (ἡ χήρα) existed as a separate institution, contemporaneously with these offices, apparently for the same ecclesiastical purpose for which it was originally instituted (Const. Apost. iii. 1. § 1. iv. 5. § 1). W. L. B.

WIFE [Divorce; Marriage.]

WILD BEASTS. [Beasts.]

WILDERNESS OF THE WANDERING.

The historical magnitude of the Exodus as an event, including in that name not only the exit from Egypt, but the passage of the sea and desert, and even the conquest of Canaan, is such as to demand a separate treatment, in which it was enacted, no less than the miraculous agency sustained throughout forty years, has given to this locality an interest which is heightened, if possible, by the constant retrospect taken by the great Teacher of the New Testament and his Apostles, of this portion of the history of the race of Israel, as full of spiritual lessons necessary for the instruction of the Church throughout all ages. Hence this region, which physically is, and has probably been for three thousand years or more, little else than a barren waste, has derived a moral grandeur and obtained a reverential homage which has spread with the diffusion of Christianity. Indeed, to Christian, Jew, and Moslem it is alike holy ground. The mystery which hangs over it by far the greater number of localities, assigned to events even of first-rate magnitude, rather inflames than allays the eagerness for identification; and the result has been a larger array of tourists than has probably ever penetrated any other country of equal difficulty. Burckhardt, Niebuhr, Seetzen, Lalande and Linnæus, Rüppell, Ranner, Russegger, Lepsius, Henniker
WILDERNESS OF THE WANDERING

Wright, Fitzakerley, and Miss Martin, are con-
misapprehensive amongst those who have contributed
the close of the last century to deepen, to vitalize,
and to correct our impressions. Besides the earlier
works of Mommsen in the 17th century, and Has-
delphian and Pococke in the 18th: whilst Wilson,
Stewart, Bartlett, Bonar, Oliphant, Robinson,
and Stanley have added a rich detail of illustration,
reaching to the present day. And thus it is: at
length we have the internal evidence of the country
itself to lay open the internal route of the Israelites in
every stage, but in almost all cases the main alternatives between which we
must choose, and in some cases the very spots
themselves. 1 Yet with all the material with which
lies at the disposal of the topographical critic, there
is often a real poverty of evidence where there seems
to be an abundance; and the single lines of infor-
knowledge do not weave up into a fabric of clear
knowledge. 2 Hitherto no one traveller has traversed
more than one, or at most two routes of the Desert,
and thus the determination of those questions has
been obscured: first, by the tendency of every one
to make the Israelites follow his own track; and
secondly, by his inability to institute a just compar-
ison between the facilities on which the various
routes which attend the route which he has not seen. This
obscurity will always exist till some competent traveller
has explored the whole Peninsula. When this has
been fairly done, there is little doubt that some of the
most important topographical questions now at
issue will be set at rest. 3 (Stanley, S. & P. 85.)

1. The uncertainties commence from the very
starting point of the route of the Wandering. It
is impossible to fix the point at which in "the
wilderness of Etham" (Num. xxviii. 6, 7) Israel,
now a nation of freemen, emerged from that sea
into which they had passed as a nation of slaves.
But, slippery as is the physical ground for any fix-
ture of the mirage to a particular spot, we may
yet admire the grandeur and vigor of the image
of baptism which Christianity has appropriated
from those waters. There their freedom was won;
not of themselves, it was the gift of God, 4 whose
presence visibly preceded; and therefore St. Paul
says, "they were baptized in the cloud," and not
only in the sea. The fact that from "Etham in the
edge of the wilderness," their path struck between
the sea and Etham, and from the sea into the
same wilderness of Etham, seems to indicate the
upper end of the furthest tongue of the Gulf
of Suez as the point of crossing, for here, as is
probable, rather than lower down the same,
the district on either side would for a short distance
en both shores have the same name. There seems
reason also to think that this gulf had then, as
also at Ezion-geber (Ezio-geber), a further ex-
tension northward than at present, owing to the land
having upheaved its level. This action seems

d 1 See a pamphlet by Charles T. Beke, Ph. D., "A Few Words with Bishop Colenso," pp. 4, 5.
2 Compare the two last remaining works of a multitudinous volume of men or cattle (Joel 1:18), to express yere
jamo aman, without reference to egress or direction of course, merely for want of food.
3 Josephus (Ant. ii. 13, § 3) speaks of the obstruction
of precipices and impassable mountains, but
when we consider his extravagant language of the
height of the buildings of the Temple, it is likely
that much more, when speaking in general terms of a spot
so distant, such expressions may be set down as sim-
ply rhetorical.
4 If the wind were direct S it would at some points
favor the notion that "the passage was not a transit
but a short circuit, returning again to the Egyptian
coast, and then pursuing their way round the head
of the gulf," an explanation favored by earlier Chris-
tian commentators, and by almost all the Rabbinical
writers" (S. & P. p. 39). The landing-place would
on this view be considerably north of the point
of entering the sea.

221
of doubtful identity. The probability seems on the whole to favor the notion that the crossing lay to the N. of the *Jetel Mâket,* which lies on the Egyptian side of S. of Suez, and therefore neither the *Ayân Mâket,* nor, much less, the *Hamûneh Pherwân,* further down on the eastern shore—each of which places, as well as several others, claims in local legend to be the spot of landing—will suit. Still, these places, or either of them, may be the region where "Israel saw the Egyptians dead upon the sea-shore." (Ex. x. 30.) The only place from the Egyptian coast on the S. of Suez, to the *Ayân Mâket* has been supposed, however, by Wilson, Olin, Dr. Stewart (Tent and Clim., p. 36), and others. The notion of *Mikhôl* being Migdol will best suit the previous view of the more northerly passage. The "wilderness of Shur," into which the Israelites "went out" from the Red Sea, appears to be the eastern and southeastern continuation of that of Etham, for both in Ex. xii. 22, and in Num. xxxiii. 8, they are recorded to have "gone three days in the wilderness," indicated respectively in the two passages as that of Shur and that of Etham. From the expression in Ex. xiii. 20, "Etham, the edge of the wilderness," the habitable region would seem to have ended at that place. Josephus (Ant. vi. 7, § 3) seems to identify Etham with *Ayên Khent, a formum,* probably he merely uses the former term in an approximate sense, as a land-mark well known to his readers: since Shur is described as "over against, or before Egypt." (Gen. xxxv. 18), being perhaps the same as Sibor, similarly spoken of in Josh. xiii. 31; Jer. ii. 18. When so described, we may understand Ayën to be taken in a strict sense as excluding Exodus and the Arabian nome. [Gôssen.] Shur "before Egypt," whatever (the name may have meant, must probably be viewed as lying eastward of a line drawn from Suez to Pelusium; and the wilderness named from it or from Etham, extended three days' journey (for the Israelites) from the head of the gulf, if not more. It is evident that, viewed from Egypt, the wilderness might easily be taken by its name from the last outpost of the habitable region, whether town or village, whereas in other aspects it might have a name of its own, from some land-mark lying in it. Thus the Egyptians may have known it as connected with Etham, and the desert inhabitants as belonging to Shur; while from his residence in Egypt and sojourning with Jethro, both names may have been familiar to Moses. However this may be, from Suez eastward, the large desert tract, stretching as far east as the Ghor and Mount Seir, i. e. from 32° 40' to 35° 16' F. long., begins. The 31st parallel of latitude, nearly traversing the "River of Egypt," on the Mediterranean, and the southermost extremity of the Dead Sea, may be taken roughly to represent its northern limit, where it really merges imperceptibly into the "south country" of Judah. It is scarcely called in Scripture by any one general name, but the "wilderness of Paran" is nearly approximated to in such a designation, though less exactly. Beyond the Egyptian or western limit, in the wilderness of Shur, and perhaps, although not certainly, curtailed eastward by that of Zin. On the south side of the *et-Tib* range, a broad angular land runs across the peninsula with its apex turned southward, and pointing towards the central block of granite mountains. This is a tract of sand known as the *Dhôbet cr-Rumûlch or Ramûlch,* but which name is omitted in Kiepert's map. The long horizontal range and the sandy plain together form a natural feature in marked contrast with the pyramidal configuration of the southern or Sinitic region. The "wilderness of Sinai" lies of course in that southern region, in that part which, although generally elevated, is overhung by higher ground. However thirtieth in the text, this 29th or 30th is certain. The Israelites only traversed the northwestern region of it. The "wilderness of Sin" was their passage into it from the more pleasant district of coast wadis with water-springs, which succeeded to the first-traversed wilderness of Shur or Etham, where no water was found. Sin may probably be identified with the coast strip, now known as el-Khôr, reaching from a little above the *Jetel Fârâm,* or as nearly as possible on the 29th parallel of latitude, down to and beyond Tôr on the Red Sea. They seem to have only dipped into the "Sin" region at its northern extremity, and to have at once moved from the coast towards the N. W. upon Sinai (Ex. xx. 22-27, xli. 1; Num. xxxiii. 8-11). It is often impossible to assign a pass the exact track to this little wadi, not obvious, on the march. The fact of many, perhaps most, of the ordinary avenues being incapable of containing more than a fraction of them, would often have compelled them to appropriate all or several of the modes of access to particular points, between the probabilities of which the judgment of travellers is balanced. Down the coast, however, from Etham or the Suez region southwards, the

---

A warm spring, the temperature of which is given by Mr. Hamilton (Sinai, the Hâjiz and Soudan, p. 19), as being 88° Fahrenheit. Robinson found the water here suit, and yielding a hard deposit, yet the Arabs called these springs "sweet;" there are several of them." (Seetem. Regio, ii. pt. iii. 431.) The *Bosram* ("wary baths") *Pherwân* are similar springs, lying a little W. of S. from *Wady Nebût,* on the coast close to whose edge rises the precipices *Jetel Hommâr,* so called from them, and here intercepting the path along the shore. The Rev. R. S. Twitchitt, who made a desert journey in February, 1853, says that there may be a warm spring out of the twelve or thirteen which form the *Ayân Mâket,* but that the water of the larger well is cold, and that he drunk of it.

A north of this limit lies the most southern wady which has been fixed upon by any considerable number of authorities for Elim, from which the departure was taken into the wilderness of Sin. Seetem, but
WILDERNESS OF THE WANDERING

3515

course is broad and open, and there the track would be no more definite and united. Before going into the further details of this question, a glance may be taken at the general configuration of the e-Tih region, computed at 40 parasang, or about 140 miles, in length, and the same in breadth, by Dukit, the famous geographer of Hamah (Setzen, Reisen, iii. 47). For a description of the rock desert of Sinaj, in which nature has cast, as it were, a pyramid of granite, culminating at Um Shommer, 200 feet above sea-level, but cloven and isolated in every direction by washes into minor blocks, see

SIIAL.

II. The twin gulfs of Suez and 'Akabah, into which the Red Sea separates, embrace the Peninsula on its W. and E. sides respectively. One or other of them is in sight from almost all the summits of the Sinaitic cluster, and from the highest points both branches. The eastern coast of this Gulf of Suez is strewn with shells, and with the forests of submarine vegetation which possibly gave the whole sea its Hebrew appellation of the "Sea of Weeds." The "huge trunks" of its "trees of coral may be seen even on the dry shore;" while at Thn, cabins are formed of mudhepes gathered from the sea and heaped on the beach. Similar "coraline forests" are described (S. & P. p. 83) as marking the coast of the Gulf of 'Akabah. The northern portion of the whole Peninsula is a plateau bounded southwards by the range of et-Tih, which draws across it on the map with a curve somewhat like that of a slack chain, whose points of suspension are, westwards, Suez and eastwards, Mount Hellen, of the same "sandstone cliffs, which shut off" this region from the Gulf of 'Akabah. The north-western member of this chain converges with the shore of the Gulf of Suez, till the two run nearly parallel. Its eastern member throws off several fragments of long and short ridges towards the Gulf of 'Akabah and the northern plateau called it et-Tih. The Jebel Dibii (Burckhardt, Jebel) is the most southerly of the continuations of this eastern member (Setzen, Reisen, iii. pt. iii. 413). The greatest elevation in the e-Tih range is attained a little W. of the meridian 34°, near its most southerly point; it is here 4,694 feet above the Mediterranean. From this point the watershed of the plateau runs obliquely south and E. towards Hebron; westward of which line, and northward from the western member of Jebel et-Tih, the whole wady-system is drained by the great Wady el-Arish, along a gradual slope to the Mediterranean. The shorter and much steeper slope eastward partly converges into the large litres of Felsheh and el-Jezeh, continuing south of the Dead Sea’s south-western angle through the southern wall of the Ghir, and partly finds an outlet nearly parallel, but further to the S., by the Wady Jenafeh into the Akabah. The great depression of the Dead Sea (1,300 feet below the Mediterranean) explains the greater steepness of this eastern slope.

In crossing this plateau, Seetzen found that rain and wind had worked depressions in parts of it, that contained a few shrubs or isolated bushes. This flat rose here and there in height, steep on one side, composed of white chalk with frequent limbs of dint embedded (iii. 48). The plateau has a central point in the station of Khun Akbili, so named from the date-trees which once adorned its wady, but which have all disappeared. This point is nearly equidistant from Suez westward, 'Akabah eastward, and el-Masr northward, and the last is a northward. It lies half a mile N. of the "Hadji route," between Suez and 'Akabah, which traverses "a boundless flat, dreary and desolate" (ibid. 56), and is 1,494 feet above the Mediterranean — nearly on the same meridian as the highest point before assigned to e-Tih. On this meridian also lies Um Shommer farther south, the highest point of the entire Peninsula, having an elevation of 9,300 feet, or nearly double that of e-Tih. A little to the W. of the same meridian lies el-Arish, and the southern cape, Haji Mezmaran, is situated about 34° 17′. Thus the parallel 34°, and the meridian 34°, form important axes of the whole region of the Peninsula. A full description of the entire Peninsula, from this region southwards, is given by Dr. Robinson (i. 177, 178, 199), together with a memorandum of the travellers who explored it previously to himself.

On the eastern edge of the plateau to the N. of the e-Tih range, which is raised terrace-wise by a step from the le el of the Ghir, rises a singular second, or, reckoning that level itself, a third plateau, similar but steeper, forming the general surface of the e-Tih region. These Russegger (Meg) distinguishes as three terraces in the chalk ridges.

Kruse, in his Anmerkungen on Setzen’s travels (ii. pt. iii. 410), remarks that the Jebel et-Tih is the modern tiber, or melanes of the Odyssey, in whose view that range descends to the extreme southern point of the Peninsula thus including of course the Sinaitic region. This confusion arose from a want of distinct conception of geographical details. The name seems to have been obtained from the dark, or even black color, which is observable in parts (see p. 3516, note d).

The Hadji-route from Suez to 'Akabah, crossing the Peninsula in a direction a little S. of E., may be looked upon for the level of the arc of the e-Tih range, the length of which latter is about 120 miles. This slope, descending northwards upon the Mediterranean, is of limestone (S. & P. p. 7), covered with coarse gravel intercrossed with black flints and drift (Russegger’s Meg). But its desolation has not always been so extreme, even as, and sheep having penetrated in parts of it where now only the camel is found. Three passes through the e-Tih range are mentioned by Robinson (i. 123; comp. 561—563, App. xxii.) — er-Rakinah, the western; el-Musikh, the eastern; and el-Warnah, between the two. These all meet S. of Rahabeh (Gelabath, ibid. xxvi. 227), in about N.

The Tbr, and that northwards as appertaining to Syria (Reisen, iii. 410, 411, comp. p. 58). His course by between the routes from Hebron to 'Akabah, and that from Hebron to Suez. He went straight southwards to Erium: a route which no traveller has followed since

This measurement is a mean between that given in Stanley’s map, S. & P. p. 5, and Russegger’s estimate, as given by Setzen (Reisen, iii. pt. iii. 411)
WILDERNESS OF THE WANDERING

lat. 31° 5', E. long. 34° 42', and thence diverge towards Hebron and Gaza. The eastern is noted by Ruesseger as 4,853 feet above sea level. Secten took the ett Tih road directly to the "Mount Sneh," passed on the way from Sinai (Horeb, Dent. i. 2) to Kadesh Barnea by the Israelites (Reison, iii. 28; comp. ibid. Kruse's Anmerkungen, pt. iii. 417). It would form a conspicuous object on the left to the Israelites, going south-eastwards near the coast of the Gulf of Suez. Secten, proceeding towards Suez, i.e. in the direction of the high sandy plain (Reison, iii. 111), apparently near Wady el-Dumphel, whence its steep southern face was visible in a white streak stretching westwards and eastwards. Dr. Stanley (S. & P. p. 7) says, "However much the other mountains of the Peninsula vary in form or height, the mountains of the Tih are always alike—always faithful to their tabular outline and banded desertion." They appear like "a long limestone wall." This traveller saw them, however, only "as from a distance" (ibid., note 2). Secten, who crossed them, going from Hebron to Sinai, says of the view from the highest ridge of the lower mountain-line: "What a landscape was that I looked down upon! On all sides the most frightful wilderness extended, every step in sight in every section, without tree, shrub, or speck of green. It was an alternation of flats and hills, for the most part black as night, only the naked rock walls on the hummocks and heights showed patches of dazzling whiteness; a, a striking image of our globe, when, through Phaeton's carlessness, the sun came too near to it." (Reison, iii. 34). Similarly, describing the scenery of the Wady el-Einon, by which he passed the ett Tih range (see note a below), he says: "On the S. side rose a considerable range, desolate, craggy, and naked. All was limestone, chalk, and flint. The chalk cliffs gave the steep off-set of the Tih range on its S. side the aspect of a snow mountain." (p. 62.)

The other routes which traverse the Peninsula are, that from Hebron to Suez along the maritime plain, at a distance of from 10 to 30 miles from the sea, passing ett-Elarish; that from Suez to Tibr along the coast of the Gulf of Suez through the Kai, and that from 'Akaba, near Ezion-geber, ascending the western wall of the 'Arabah through the Wady el-Elarish, by several passes, not far from the summit. In the extreme of the Dead Sea, towards Hebron, in a course here nearly N., then again N.E. A modern mountain road has been partially constructed by Abbas Pasha in the pass of the Wady Hebrin, leading from the coast of the Gulf of Suez towards the convent commonly called St.

Catherine's. The ascent from the trough of the 'Arabah (which is steeper-sided at its N. W. extremity than elsewhere) towards the general plateau is by the pass el-Khahav, by which the level of that broad surface is attained. The smaller plateau rests obliquely upon the latter, abutting on the Dead Sea at Masada, where its side and that of the lower floor converge, and is reached by ascending through the higher Naab es-Safta. Its face, corresponding to the southern face of the Tih plateau, looks considerably to the W. of S., owing to this obliquity, and is delineated like a well-defined mountain wall in Kiepert's map, having at the S. E. angle a bold buttress in the Jebel Makih, and, at the S. W. another in the Jebel 'Ari'it es-Nahah, which stands out apparently in the wilderness like a promontory at sea. From the former mountain, its most southerly point, at about 30° 20' N. 1., this plateau extends northward a little east, till it merges in the southern slope of Judaea, but at about 30° 50' N. lat., is cut nearly through by the Wady Fikreh, trenching its area eastward, and not quite meeting the Wady Mardish, which has its declivity apparently toward the Wady el-Elarish westward. The face of mountain remains unaltered, a little lower, and less mountain of the Amorites," or this whole higher plateau may be so (Dent. i. 7, 19, 20). A fine drawn northwards from Isis Mohamed passes a little to the W. of 'Ari'it es-Nahah. A more precise description of some parts of this plateau has been given under Kadesh.

On the whole, except in the Jebel er-Ramleh, sand is rare in the Peninsula. There is little or none on the sea-shore, and the plain el-Kais on the S. W. coast is gravelly rather than sandy (S. & P. p. 8). Of sandstone on the edges of the granite central mass there is no lack. It is chiefly divided between the chalk and limestone of ett-Tih and the southern rocky triangle of Sinai. Thus the Jebel Budel is of sandstone, in tall vertical cliffs, forming the boundary of er-Ramleh on the east side, and similar steep sandstone cliffs are visible in the same plain, lying on its N. and W. sides (Secten, iii. 66; comp. pt. iii. 413). In the Wady Mokelet the "soft surface of these sandstone cliffs offered ready tablets" to the unknown wayfarers who wrote the "Sinaitic inscriptions." This stone gives in some parts a strong red hue to the nearer landscape, and softens into the midst of the sandstone and at the distance in the defile where. The surface has been broken away, or fretted and eaten by the action of water, these lines are most vivid (S. & P. pp. 10-12). It has been supposed that the Egyptians worked the limestone of ett-Tih, and that that

a Secten probably took this eastern pass, which leads out into the Wady Brisk (Secten, el-Brosn, called also El Schötha, Reison, iii. pt. iii. 411, Kruse's Anmerkungen, comp. iii. 62). He, however, shortly before crossing the range, came upon "a flat hill yielding wholesome pasture for camels, considerable number of (here we would say, also) two herds of goats and some sheep" (ibid. 80): not strictly confirming the previous statement, which is Dr. Robinson's.

b It is not easy to reconcile this statement with the figure (4424 ft.) given by Dr. Stanley (S. & P. p. 5) apparently as the extreme height of the mountain Er-Ottine (Stanley, J. Et.ime), since we might expect that the pass would be somewhat lower than the highest point, instead of higher. On this mountain, see p. 8529, note a.

c Secten (iii. 66) remarks that "the slope of the ett-Tih range shows an equal wilderness" to that of the desert on its northern side.

d Comp. Dr. Stanley's description of the march down the Wady Tambah between vast cliffs white on the one side, and on the other a black calcined landscape (S. & P. p. 29).

e Nearly following this track in the opposite direction, i.e. to the S. E., Secten went from Hebron to Modern (al. Mabruka, or Modern), passing by Moan, el-Kerule (the "Carmel" of Nahah's pasture-ground in 1 Sam. xxiv. 3), and, by Joets (the General plateau) near the S. plain near the sea is the Jebel Naks ("bell"), said to be so called from the ringing sound made by the sand pouring over its cliffs (Stewart, T. & E. p. 260, comp. Ruesseger, Reison, iii. 277).
material, as found in the pyramids, was there quarried. The hardness of the granite in the Jebel at-Tur has been emphatically noticed by travellers. Thus, in correcting recently the mountain road for Abbas Pasha, "the rocks" were found "obstinate to resist even the gunpowder’s blast," and the sharp glass-like edges of the granite soon wear away the workmen’s shoes and cripple their feet (Hamilton, Simai, the Holy c, and Sinai, p. 175). Similarly, Labende says (Com. on Naq. xxviii. 36): "In my journey across that country (from Egypt, through Sinai to the Ghirs), I had carried from Cairo two pair of shoes; they were cut, and my feet were through; when I arrived at Akaba, I luckily found in the magazines of that fortress two other pair to replace them. On my return to Simai, I was barefoot again. Hussein then procured me sandals half an inch thick, which, on my arrival in Cairo, themselves were reduced to nothing, though they had well preserved my feet."

Section noticed on Mount St. Catherine that the granite was "blue-grained and very firm." (p. 50).

For the area of greatest relief in the surface of the whole Peninsula, see Simai, §§ 1, 2, 3. The name Jebel at-Tur includes the whole cluster of mountains from el-Fureid on the N. to el-Summar on the S., and from Mina and el-Deir, on the E., to Humbc and Serbal on the W., including St. Catherine’s (according to the old legend). It is generally understood the M scene plateau, between the Wady Ledjia (Stanley, Hosp.) and the Wady Sinai on its western and northeastern flanks, and bounded north-eastward by the Wady er-Raleh, and south-eastward by the Wady Schieq (Sheiqeh, Stanley, ibid). The Arabs give the name of Tur properly meaning a high mountain (Stanley, S. & P. p. 8)—to the whole region south of the Hadji-route from Suez to Akaba as far as Reis-Mohammad (see above, p. 3513, note c).

The name of Tur is also emphatically given to the cultivable region lying S. W. of the Jebel at-Tur. Its fine and rich date-plantation lies a good way southwards down the gulf of Suez. Here operation of the balsam trade may be said to have been, or to be, still carried on. It was first found in the Peninsula (Burckhardt, Arch. ii. 362; Wellsted, ii. 9), receiving all the waters which flow down in the region of Sinai westward (Stanley, S.,

3d P. p. 19).

III. A most important general question, after settling the outline of this ‘wilderness,’ is the extent to which it is capable of supporting animal and human life, especially when taxed by the consumption of such flocks and herds as the Israelites took with them from Egypt, and probably—though we know not to what extent this last was supplied by the manna,—by the demand made on its resources by a host of from 2,000,000 to 3,000,000 souls. In answer to this question, "much," it has been observed (S. & P. p. 24), "may be allowed for the spread of the tribes of Israel far and wide through the whole Peninsula, and also for the constant means of support from their own flocks and herds. Something, too, might be elicited from the undoubted fact that a population nearly, if not quite, equal to the whole permanent population of the Peninsula does actually pass through the desert in the caravans of the 5,000 African pilgrims, on their way to Mecca. But, amongst these considerations, it is important to observe what indications there may be to the east of the mountains of Sinai and Neubauer, and for being furnished with greater resources than at present. These indications are well summed up by litter (Simai, pp. 924, 927). There is no doubt that the vegetation of the sandy has considerably increased. In part, this would be an inevitable effect of the violence of the winter torrents. The trunk of palm-trees washed up on the shore of the Dead Sea, from which the living tree has now for many centuries disappeared, show what may have been the devastation produced among these mountains where the floods, especially in earlier times, must have been violent to a degree unknown in Palestine; whilst the peculiar cause—the impregnation of salt—which has preserved the vestiges of vegetation there has here also done much good. The traces of such a destruction were pointed out by Burckhardt (Arch. p. 538) on the eastern side of Mount Sinai, as having occurred within half a century before his visit; and also to Wellsted (ii. 15), as having occurred near Tur in 1832. In part, the same result has followed from the reckless waste of the Bedouins, the reckless in destroying and careless in replenishing. A fire, a pipe, lit under a grove of desert trees, may clear away the vegetation of a whole valley.

"The acacia-trees" have been of late years ruthlessly destroyed by the Bedouins for the sake of charcoal," which forms "the chief, perhaps it might be said, the only article of traffic of the Bedouins, (S. & P. p. 24)."

Thus, the clearance of this tree in the mountains where it abounded once, and its decrease in the neighborhood in which it exists still, is accounted for, since the monks appear to have aided the devastation. Vegetation, where maintained, nourishes water and keeps alive its own life; and no attempts to produce vegetation anywhere in this desert seem to have failed. The gardens at the wells of Moses, under the French and English agents from Suez, and the gardens in the valleys of Jebel Macc, under the care of the Greek monks of the Convent of St. Catherine, are conspicuous by their luxuriant growth even under the most arid and trying surroundings..."
WILDERNESS OF THE WANDERING

examples (ibid. p 26). Besides, a traveller in the 16th century calls the "Wady el-Rubeh in front of the Convent, now entirely bare, "a vast green plain." 9 In this wilderness, too, abode Amalek, "the first of the nations," powerful enough seriously to imperil the passage of the Israelites, through it, and, consequently contributing to subsequent history under the monarchy. Besides whom we have "king Arad the Canaanite, who dwelt in the south," i. e. apparently on the terrace of mountain overlooking the Ghir near Masada on the Dead Sea, in a region now wholly desolate. If his people were identified with the Amorites or Canaanites of the Deut. i. 44, then, besides the Amalekites of Ex. xxi. 3, we have one other host within the limits of what is now desert, who fought with Israel on equal or superior terms: and, if they are not identical, we have two such (Num. xiv. 40-46, xxxi. 1, xxxiii. 40; Deut. i. 45, 44). These must have been "something more than a mere handful of Bedouins. The Egyptian copper-mines, monuments, and hieroglyphics in Seirbel el-Khodim and the Wady Meghara, imply a degree of intercourse between Egypt and the Peninsula" 10 in a period probably older than the Exodus, "of which all other traces have long ceased. The ruined cities of Edom in the mountains east of the Amaleh, and the remains and history of Petra itself, indicate a traffic and a population in those remote regions which now is almost inconceivable" (S. & P. p. 26). Even the 6th and 7th centuries A. D. showed traces of habitation, some of which still remain in ruined cells and gardens, etc., for exceeding the tale told by present facts. Seetzen, in what is perhaps as arid and desolate a region as any in the whole desert, asked his guide to mention all the neighboring places whose names he knew. He received a list of sixty-three places in the neighborhood of Medaebra, Petra, and "Masabah, and of twelve more in the Ghir es-Suffiyeh, of which total of seventy-five all save twelve are now abandoned to the desert, and have retained nothing save their names— a proof," he remarks, "that in very early ages this region was extremely populous. The Arabs, or the Bedouin, for whom the Arabs, both before and after the age of Mohammed, assailed the Greek emperors, was able to convert into a waste this blooming region, extending from the limit of the Hejaz to the neighborhood of Damascus" (Eisen, iii. 17, 18).

Thus the same traveller in the same journey (from Hebron to Medaebra) entered a wady called el-Jedefa, where was no trace of water save moist spots in the sand, but on making a hole with the hand it was quickly full of water, good and drinkable (ibid. p. 13). The same, if saved in a cistern, and served out by sluices, might probably have clothed the bare wady with verdure. This is confirmed by his remark (ibid. p. 83), that an blooming vegetation shows itself in the channel wherever there is water; as well as by the example of the tank system as practiced in Hindostan. He also notices that there are quicksands in many parts of the Debed es-Rumih, which it is difficult to understand, unless caused by accumulations of water (ibid. p. 67). Similarly in the desert Wady el-Konede between Hebron and Sinai, he found a spot of quicksand with sparse shrubs growing in it (ibid. p. 48).

Now the question is surely a pertinent one, as compared with that of the subsistence of the flocks and herds of the Israelites during their wanderings, how the sixty-three deserted communities named by Seetzen's guide can have supported themselves? It is pretty certain that fish cannot live in the Dead Sea; nor is there any reason for thinking that these extinct towns or villages were in any large proportion near enough to its waters to avail themselves of its resources, even if such existed. To suppose that the country could ever have supported extensive fowls for game is to assume the most extensive of all solutions of the question. The creatures that find shelter about the rocks, as hares, antelopes, gazelles, jerusals, and the lizards that burrow in the sand (el-Deedeh), alluded to by this traveller in several places (iii. 67, comp. pt. iii. 415-442, and Landes. Com., on Num. xxxii. 42), are far too few, to judge from appearances, to do more than eke out a subsistence, the staple of which must have been otherwise supplied; and the same remark will apply to such casual windfalls as swarms of edible leaves, or flights of quails. Nor can the memory of these places be probably connected with the distant period when Petra, the commercial metropolis of the Nabathians, enjoyed the carrying trade between the Levant and Egypt westwards, and the rich communities further east. There is least of all reason for supposing that by the produce of mines, or by asphalt gathered from the Dead Sea, or by any other native commodities, they could ever have enjoyed a commerce of their own. We are thrown back, then, upon the supposition that they must in some way have supported themselves from the produce of the soil. And the produce for which it is most adapted is either that of the date-palm, or that to which earlier parallelism, as well as Seetzen's remains, point, is that the Bedouin communities in the southern border of Judah (Num. xxxiv. 4, 5; Josh. xv. 3, 4; 1 Sam. xxx. 27-31), namely, that of pasture for flocks and herds, a possibility which seems solely to depend on adequately husbanding the water supplied by the rains. This taliies with the use of the word 7°/ for "wilderness," i. e. "a wide, open space, with or without actual pasture, the country of the nomads, as distinguished from that of the agricultural and settled people" (S. & P. p. 486, Aprx. § 9). There seems however to be implied in the name a capacity for pasture, whether actually realized or not. This corresponds, to the "thin," or rather "transparent covering of vegetation," seen to clothe the greater part of the Semitic wilderness in the present day (ibid. pp. 16, 18).

Lord, represented in the great mosaic of Justinian, in the ape of its church, probably of his age, as is also the name (Tiwihitt). The transfer of the body of St Catherine thither from Egypt by angels is only one of the local legends; but its association appears to have predominated with travellers (see Seetzen, iii. pt. iii. 44, 45). a Morceaux quoted by Stanley, S. & P. b Seetzen speaks in one place of a few shell-fish being found along its southern shore. Compare Stanley, S. & P. pp. 236. S. & P. 236. [SEA, THE SALT.] c The word Molech has been examined under the head of Desert (vol. i. p. 654). The writer of that article has nothing to add to it, except to call attention to the use of the term in Jer. ii. 2, where the prophet in two words gives an exact definition of a Molech: "a hand not spawn — that is, left nature.
WILDERNESS OF THE WANDERING

3519

22), and which furnishes an initial minimum from which human fostering hands might extend the prospect of possible resources up to a point as far in excess of present facts as were the numbers of the Israelitish host above the 6,000 Beduins computed now to form the population of the desert. As regards the date-palm, Hasselquist speaks as though it alone afforded the means of life to some existing Arab communities. Hamilton (Semit, etc., p. 17) says that in his path by the Wady Harābīn, towards the modern Sāmān, "small clumps of unenclosed date-trees by scores cover the hillocks of the pass, wherever the winter torrents have left sufficient detritus for their nourishment." And again, after describing the pass of the Convent, he continues, "beneath lies a veritable chaos, through which now trickles a slender thread of water, where in winter rushes down a boiling torrent" (ibid. p. 19). It is hardly too much to affirm that the resources of the desert, under a careful cultivation of nature's bounty, might be, to its present means of subsistence, as that winter torrent's volume to that summer streamlet's slender thread. In the Wady Harābīn this traveller found "a natural bath," formed in the granite by the "An Harābīn, called the Christians' pool" (ibid. p. 17). "Two thirds of it are covered, and the rest is a frozen streamlet" (ibid. p. 31); and Section, on the 14th of April, found snow lying about in sheltered clefts of the Jebel Catherine, where the rains of the sun could not penetrate (iii. 92). Hamilton encountered on the Jebel Māsīt a thunder-storm, with "heavy rain" (Semit, etc., p. 16). There seems on the whole no deficiency of precipitation. In fact, these mountains of land of Mount Sinai are quite capable of speaking a copious supply. Any southerly wind must bring a fair amount of watery vapor from the Red Sea, or from one of its expanding arms, which embrace the peninsula on either side, like the blades of a fork; while at no greater distance than 140 miles northward roll the waters of the Mediterranean, supplying, we may suppose, their quota, which the much lower ranges of the Tih and Mūḥār are not entirely intercept. Nor is there any such shelter from rain-clods on either of the Gulfs of Suez and Akkeb, as the long line of mountains on the eastern flank of Egypt, which screens the rain-supply of the former from reaching the valley of the Nile. On the contrary, the combination of the Penitents, with the high wedge of granite mountains at its core, would rather receive and condense the vapors from either gulf, and precipitate their bounty over the lower faces of mountains and troughs of wady, interposed between it and the sea. It is much to be regretted that the low intellectual condition of the monks forbids any reasonable hope of adequate meteorological observations to check these meretricious arguments with reliable statements of fact; but in the absence of any

\[a\] There is no mistaking the enormous amount of rain which must fall on the desert and run off uselessly into the sea. In February all the wadies had some water, from which depots deserts, which may make them from hillside to hillside. The whole surface of wide valleys was marked and ribbed like the bed of a stony and sandy stream in England. The great plain of Mousaia was intersected in all directions by three torrents, draining the mountains about Nābī Ṣaḥāna. So all the wadies, wherever there was a rocked bed, Major Maundon (engaged at present in superintend- ing the working of a turpentine bed at Sīwāl) said that after a sudden storm in the hills to the

such register, it seems only fair to take reasonable probabilities fully into view. Yet some significant facts are not wanting to redeem in some degree these probabilities from the ground of mere hypothesis; "in two of the chief wadies," which break the wilderness on the coast of the Gulf of Suez, "Charibān, and Uṣēf, with its continuation of the Wādi Tāghūb, tracts of vegetation are to be found in considerable luxuriance." The wadies leading down from the Sinai range to the Gulf of Akkeb furnish the same testimony, in a still greater degree; "and the same, according to Mr. Robinson, and Burckhardt, in three spots, however, in the desert . . . . this vegetation is brought by the concurrence of the general configuration of the country to a still higher pitch. By far the most remarkable collection of springs is that which renders the clusters of the Jebel Māsīt the chief resort of the Bedouin tribes during the summer heats. Four abundant sources in the mountains immediately above the Convent of St. Catherine must always have made that region one of the most frequented of the desert. . . . Oases (analogous to that of Ammon in the western desert of the Nile) are to be found wherever the waters from the different wades or hills, whether winter streams or the melting snows from the distant peaks, converge to a common reservoir. One such oasis in the Sinaitic desert seems to be the palm-grove of El-Wādi at Tār, described by Burckhardt as so thick that he could hardly find his way through it (S. q. p. 19, note 1; see Burckh. Arch. ii. 362). The other and the more important is the Wādi Petrūs, high up in the tableland of the Sāmān, near the base of the Tih (ibid. p. 33). Now, what nature has done in these favored spots might surely be seconded in others by an ample population, familiarized, to some extent, by their sojourn in Egypt with the most advanced agricultural experience of the then world, and guided by an able leader who knew the country, and found in his family others who knew it even better than he (Num. x. 31). It is thus supposable that the language of Ps. civ. 35-38, is based on no mecon of modern imagery, but on actual fact: "He turneth the wilderness into a standing water, and dry ground into water-springs. And there He maketh the hungry, to dwell, that they may prepare a city for habituation; and sow the fields and plant vineyards, which may yield fruits of increase. He feedeth them so that they are multiplied greatly; and suffereth not their cattle to decrease." And thus we may find an approximate basis of reality for the enhanced poetic images of Isaiah (xii. 10, lv. 13). Palestine itself affords abundant tokens of the resources of nature so husbanded, as in the natural tendency of "where there are still traces to the very summits " of the mountains, and some of which still, in the Jordan valley, "are occupied by

\[b\] See Dr. Stanley's estimate of the innumerable canyon (8. & P. pp. 55, 56).

\[c\] Nor, it is possible that such works had already to some extent been undertaken on account of the mining colonies which certainly then existed at Wādi Masōma and Sīwāl (ibid.), and were probably supported on the produce of the country, not sent on

WAXDERIXG
masses of vegetation" (S. J. P. pp. 138, 287). In favored spots wild luxuriance testifies to the extent of the national resources, as in the wadies of the coast, and in the plain of Jericho, where the alluvial silt is so great and wide that it extends the green circle of tangled thickets, in the midst of which are the howds of the modern village, beside which stood, in ancient times, the great city of Jericho" (ibid., p. 306). From this plain alone, a correspondent of the British Consul at Jaffa asserts that he could feed the whole population of modern Syria (Cotton Supply Report, 1914, p. 11). But he admitted that he had been driven from the wilderness is ever in the position of a besieged city; when once the defense of the human garrison is withdrawn, the fertility stimulated by its agency must obviously perish by the invasion of the wild. And thus we may probably suppose that, from numberless tracts, thus temporarily rescued from barrenness, in situations only moderately favorable, the traces of vegetation have vanished, and the desert has reclaimed its own; or that the soil only betrays its latent capacity by an unprofitable dampness of the sand.

Sectzen, on the route from Hebron to Simit, after describing an "immense flinty plain," the "dreardest and most desolate solitude," observes that, "as soon as the rainy season is over and the warm winds begin (of spring), it becomes uninhabitable," as "there are no brooks or springs here" (iii, 55, 56). Dr. Stewart (The Tribes and the Khoms, pp. 14, 15) says of the Wady Abkh, which he would identify with Etham (Ex. xiii. 20; Num. xxxii. 6), "sand hills of considerable height separate it from the sea, and prevent the winter rains from running off rapidly. A considerable deposit of rich alluvial loam is the result, averaging from 2 to 4 inches in thickness, by sowing upon which immediately after the rains the Bedouins could certainly reap a profitable harvest; but they affect to despise all agricultural labor. . . .

Yet," he adds, "the region never could have supplied food by its own natural vegetation for so great a multitude of flocks and herds as followed in the train of the Israelites." This seems rather a peremptory sentence: for one can hardly tell what its improved condition under ancient civilization may have yielded, from merely seeing what it now is, after being overrun by centuries by hordes of contemporaneous Bedouins. "Still, as regards the general question, we are not informed what numbers of cattle followed the Israelites out of Egypt. We only know that "flocks and herds," went with them, were forbidden to graze "before the mount" (Sinai), and shared the fortunes of the desert with their own owners. It further appears that, at the end of the forty years' wandering, two tribes and a half were the chief, perhaps the only, cattle-masters. And, when we consider how greatly the long and sore bondage of Egypt must have interferred with their favorite pursuit, during the eight years of Moses' life before the Exodus, it seems reasonable to think that in the other tribes only a few would have possessed cattle on leaving Egypt. The notion of a people "scattered abroad throughout all the land of Egypt" (Ex. v. 12) in pursuit of wholly different and absorbing labor, being able generally to maintain their wealth as sheep-masters, is obviously absurd. It is therefore supposable that Reuben, Gad, and a portion of Manasseh had, by remoteness of local position, or other favorable circumstances, to us unknown, escaped the oppressive consequences to their flocks and herds which must have generally prevailed. We are not told that the lands at the first passover were obtained from the flock of each family, but only that they were hidden for "a dry place to lodge for an home"—a direction quite consistent in many, perhaps in most cases, with purchase. Hence it is probable that these two tribes and a half may have been the chief cattle-masters first as well as last. If they had enough cattle to find their pursuit in tending them, and the others had not, economy would dictate a transfer: and the whole multitude of cattle would probably fare better by such a change than by one by which one left a few head scattered up and down in the families of different tribes. Nor is there any reason to think that the whole of the forty years' sojourn was spent in such locomotion as marks the more continuous portion of the narrative. The great gap in the record of events left by the statement of that twenty-five years after the departure from Horeb (Deut. i. 46; "Ye abode in the mountains many days," may be filled up by the supposition of quarters established in a favorable site, and the great bulk of the whole time may have been really passed in such stationary encampments. And here, if two tribes and a half only were occupied in tending cattle, some resource of labor, to avoid the embarrassing temptations of idleness in a host so large and so disposed to murmure, would be, in a human and domestic necessity, enough and to spare. An occupation assigned to the remaining nine and a half tribes, as that of drawing from the wilderness whatever contributions it might be meant to afford. From what they had seen in Egypt, the work of irrigation would be familiar to them, and from the prospect before them in Palestine the practice would at some time become necessary; thus the opportunity, when the wealth of the country was not allowing their experience, if possible, to lapse. And, irrigation being supposed, there is little, if any, difficulty in supposing its results: to the spontaneousness of which ample testimony, from various travellers, has been cited above. At any rate it is unsafe to decide the question of the possible resources of the desert from the condition to which the apathy and fastidiousness of the Bedouins have reduced it in modern times. On this view, while the purely pastoral tribes would retain their habits unimpaired, the remainder would acquire some slight probation in those works of the field which were to form the staple industry of their future country. But, if any one still insists that the produce of the desert, however supposedly improved, could never have yielded support for all "the flocks and herds"—utterly indefinite as their number is—which were carried thither: this need not invalidate the present argument, much less be deemed inconsistent with the Scriptural narrative. There is nothing in the letter to forbid our supposing that the cattle perished in the wilderness by hundreds or by thousands. Even if the words of Ex. xvi. 32 be taken in a sense literal and historical, they need mean no more than that, by the time they reached the borders of Palestine, the number so lost had, by a change of favorable circumstances, been replaced, perhaps even by capture from the enemy, over whom God, and not their own sword, had given them the victory. All that is contended for is, that the resources of the wilderness were doubtless utilized to the utmost, and that the flocks and herds, so far as they have survived, were kept alive. What those resources might amount to, is perhaps nearly as indefinite an inquiry as what was the number of the cattle. The difficulty
would "find its level" by the diminution of the latter till it fell within the limits of the former; and in this balanced state we must be content to leave the question.

Nor ought it to be left out of view, in considering any arguments regarding the possible change in the character of the wilderness, that Egyptian policy certainly lay, on the whole, in favor of extending the desolation to their own frontier on the Suez side; for thus they would gain the utmost protection against invasion on their most exposed border; and as Egypt rather aimed at the development of its trade, than of the Moslem, an extension of influence by foreign conquest, such a desert frontier would be to Egypt a cheap defense. Thus we may assume that the Pharœsi, at any rate after the rise of the Assyrian empire, would discern their interest and would act upon it, and that the felling of wood and stopping of wells, and the oblation, wherever possible, of roses, would systematically make the Peninsula untenable to the hostile army descending from the N. E. or the N.

IV. It remains to trace, so far as possible, the track pursued by the host, bearing in mind the limitation before stated, that a variety of converging or parallel routes must often have been required to allow of the passage of so great a number. Amongst the others which have been effected at some spot N. of the now extreme end of the Gulf of Suez, they would march from their point of landing a little to the E. of S. Here they were in the wilderness of Shur, and in it "they went three days and found no water." The next point mentioned is Marah. The 'Ain el-Hararan has been thought by many travelers to be the Hararan's time to be Marah. Between it and the 'Agin Masr the plain is alternately gravelly, stony, and sandy, while under the range of Jebel Wardia (a branch of el-Tih) clifts and flints are found. There is no water on the direct line of route (Robinson, l. 87-89).

Habirus stands in the line and gymen region which lines the eastern shore of the Gulf of Suez at its northern extremity. Seetzen (Reisen, iii. 117) describes the water as salt, with purgative qualities; but adds that his Bedouins and their camels drank it. He argues, from its incomprehensible size, that it could not be the Marah of Moses. This, however, seems an inconclusive reason. 

MARAH. It would not be too near the point of landing so far as above, to the N. of the 'Agin Masr, nor even, as Dr. Stewart argues (p. 55), too near for a landing at the 'Agin Masr itself, when we consider the innumerable which would delay the host, and, especially whilst they were near to the desert, prevent rapid marches. But the whole region appears to abound in brackish or bitter springs (Seetzen, ibid. iii. 117, etc.; Anmerk 430). For instance, about 1 hour nearer Suez than the Wady Ghârânâl (which Lepsius took for Marah, but which Niebuhr and Robinson probably Elârâb, Seetzen (ibid. iii. 113, 114) found a Wady b Tell, with a salt spring and a salt crust on the surface of its bed, the same, he thinks, as the spot where Niebuhr speaks of finding rock-salt. This corresponds in general proximity with Marah. The neighboring region is described as a low plain girt with limestone hills, or more probably chalk. For the sublimation of the miricle of sweetening the water, see MARAH. On this first section of their desert-march, Dr. Stanley (S. of P., p. 37) remarks, "There can be no dispute as to the general track of the Israelites after the passage of the Red Sea. If they were to enter the mountains at all, they must continue in the route of all travelers, between the sea and theזה the region of Tih, till they entered the hot-baths of Ghârânâl. According to the view taken of the scene of the passage, Marah may either be at the springs of Moses, or else at Hawârâ or Ghârânâl."

He adds in a note, "Dr. Grant, however, was told . . . of a spring near Tih el-Amarâb, right (i.e. south) of Hawârâ, so bitter that neither donkey nor camel would drink it, and the road goes straight to Wady Ghârânâl." Seetzen also inclines to view favorably the identification of el-Amarâb with Marah. He gives it the title of a "wady," and precisely on this ground rejects the pretensions of el-Hararan as being "no wady," but only a "brook," whereas, from the statement "they came up" at Marah, Marah must, he argues, have been a wady. If he is correct, then Marah must be Wady Ghârânâl — whether it be Marah, as Lepsius and although doubtfully) Seetzen thought, or Elârâb as Niebuhr, Robinson, and Kruse — must have lain on the line of march, and almost equally certain that it furnished a camping station. In this wady Seetzen found more trees, shrubs, and bushes than he anywhere else entered in his journey from Sinai to Suez. He particularizes date palms and mulberries, and notes that the largest quantity of the vegetable manna, now to be found anywhere in the Peninsula, is gathered here (iii. 116) from the leaves of the last-named tree, which here grows with gnarl'd boughs and hoary stem; the wild aloe, tangled by its desert growth into a thicket, also shoots out its gray foliage and white blossoms over the desert "(Stanley, S. & P., p. 68)." The scenery in this region becomes a succession of watercourses" (ibid.); and the Wady Tugîeb, connected with Ghârânâl by
WILDERNESS OF THE WANDERING

Usd &C. is so named from the godly water and vegetation which it contains. These three wadies encompass on three sides the Jebel Hammamet, the sea, which it precipitously overhangs, being on the fourth. The key to the configuration is given in the maps; there seems no reason why all three should not have combined to form Elin, or at any rate, as Dr. Stanley (ibid.) suggests, two of them. Only, from Numa. xxxiii. 9, 10, as Elin appears not to have been on the sea, we must suppose that the encampment, if it extended into three wadies, started from the site for the next encounter. The Jewish host would scarcely find in all three more than adequate ground for their encampment. Beyond (i.e. to the S. of Ghârânlâl, the ridges and spurs of limestone mountain push down to the sea across the path along the plain (Robinson, i. 76, and Map.)

This portion of the question may be summed up by presenting in a tabular form, the views of leading travelers or annotators, on the site of Elin:

| Wady | Wady Some warm springs | Ghârânlâl. | Usdt, north of Târ, which | See the rich date, Nibânr. One or Laborde plantations of the Robertson, both, "possid.," convey there, | Kruse, Stanley. Robinson Setzca.

Dr. Kruse (Amerik, p. 418) singularly takes the words of Ex. xv. 27, "they encamped there (in Elin) by the wadis," as meaning "by the sea." whereas, from Numa. xxxiii. 9, 10, it appears they did not reach the sea till a stage further, although their distance from it previously had been small.

From Elin, the next stage brought the people again to the sea. This fact, and the enviable position in respect of water supply, and consequent great fertility, enjoyed by Târ on the coast, would make it seem probable that Târ was the locality intended; but as it lies more than seventy miles in a straight line, from the nearest probably assignable spot for Elin, such a distance makes it highly improbable for the next encampment. The probable view is that the seaside camp was fixed much nearer to the group of wadies viewed as embracing Elin, perhaps in the lower part of the Wady Tobâl, which appears to have a point of juncture with the coast (Stanley, S. a. P. p. 38). The account in Ex. xvi. knows nothing of this encampment by the sea, but brings the host at once into the wilderness of Sin; but we must bear in mind the general purpose of recording, not the people's history so much as God's dealings with them, and the former rather as illustrative of the latter, and subordinate thereto. The evident design however, in Numa. xxxiii. being, to place on record their itinerary, this latter is to be esteemed as the locus classicus on any topographical questions, and should not be confused with the identification of the track. The "wilderness of Sin" is an appellation no doubt representing some natural feature, and none more probably than the alluvial plain, which, lying at the edge of the sea, about the spot we now regard them as having reached, begins to assume a significant appearance. The modern stretch of land identified by Setzca with this wilderness (iii. pt. iii. 412). Dr. Stanley calls el Kan, at its initial point, "the plain of Mackânh," and thinks it is probably this wilderness. Lower down the coast this plain expands into the broadest in the Peninsula, and somewhere in the still northern portion of it we must doubtless place the "Dophkah" and "Alush" of Numa. xxxiii. 12-14.

In the wilderness of Sin occurred the first murmuring for food, and the first fall of manna. The modern confection sold under that name is the exudation collected from the leaves of the tamarisk tree (Tamarisk Orientalis, Linn., Arab. tarq, Heb. hasâd) only in the Sinaitic valleys, and in no great abundance. If it results from the punctures made in the leaf by an insect (the Coccis monspilus, Ehrenberg) in the course of June, July, and August, this will not suit the time of the people's entering the region on the fifteenth day of the second month after their departure from Egypt (Ex. xvi. 1-8). It is said to keep as hard as syrup for years (Laborde, Comment. Genr. on Ex. xvi. 13, 14), and thus does not answer to the more striking characteristics described in Ex. xvi. 14-26. [MANNA.] Setzca thought that the gnm Amâh, an exclamation of the ancients, was the real manna of the Israelites; i.e. Setzca regards the statement of "bread from heaven" as a fiction (Resen, iii. 75-79). A caravan of a thousand persons is said by Huschkehn (Voyages, etc., Muscic. Medit. p. 298, transl. ed. 1760) to have subsisted solely on this substance for two months. In the same passage of Ex. (v. 13) quails are first mentioned.

The following portions of the earlier route it is more important to show the track than to fix the stations; and such an indication only can be looked for where nothing beyond the name of the latter is recorded. Supposing now that the alluvial plain, where it first begins to broaden to a significant size, is "the wilderness of Sin," all further questions, till we come to Sinai, turn on the situation assigned to Rephidim. It is scarcely most likely, Rephidim to be found at Fravân [REPHIDIM], it becomes almost certain that the track of the host lay to the north of Sebalâ, a magnificent five-peaked mountain, from the mastic; and says it is used as a purgative in Upper Egypt, and that it is supposed to be brought out by the great effect of heat on a sandy soil, since in Syria and elsewhere this tree has not the product. Or Dr. Stanley notes that, possibly, viewing Gharânlâl (or Uset, which lies beyond it, from Suez) as Elin, the host may have gone to the latter (the farther point), and then have turned back to the lower part of Gharânlâl, and there pitched by the "Red Sea." Then, he further remarks, it was open to them to take a northern course for Sinai (Jebel Mısâq), avoiding Sebalâ and Faraus altogether (S. & P. p. 38); but all this, he adds, seems "not likely." That route
which some have thought to be Sinai, and which becomes first visible at the plain of Mount Marah. [SINAI]

The Tabernacle was not yet set up, nor the order of march organized, as subsequently (Num. x. 15, &c.), hence the words "track or "route," as indicating a line, can only be taken in the most wide and general sense. The road slowly rises between the coast and Ezekri, which has an elevation of just half the highest peak of the whole cluster. Ezekri must have been gained by some road striking off from the sea-coast, like the Wady Medaolah, which is now the main route from Cairo to El Kab. Besides its parallel course, it appears, however, that those who reject Ezekri for Rephidim will have the ous of accounting for such a fruitful and blooming spot as, in its position, it must always have been, being left out of the route, and of finding some other site for Rephidim. Possibly this itself might be Rephidim, but then not one of the sites generally discussed for Sinai will suit. It seems better then to take Ezekri, or the adjacent valley of ex-Shekh in connection with it, for Rephidim. The water may have been produced in one, and the battle have taken place in the other, of these contiguous localities, and the most direct way of reaching them from e-Melah (the "wilderness of Sinai?) will be through the wadis Sheikh and Rehidim, parallel to those mentioned by the S. of Serbal, through Wady Habeha. (Robinson, i. 95), as also a possible route to Sinai (S. of P. p. 38, 4), and designates it the southern, one, omits to propose any alternative station for Rephidim; as he does also in the case of the "northern" route being accepted. That route has been already mentioned (page 3522, note 1), but of course there were many stations taken into view. The Wady Medaolah, the "written," as its name imports, contains the largest number of inscriptions known as the Sinaiite. They are scratched on the friable surface of the sandstone masses which dot the valley on either side. Some so high as to have plainly not been executed without mechanical aid and great deliberation. They are attributed to Ptolemy, Eusebius, Burekhard, Labore, Seetzen, and others, but especially by Dr. Stanley (S. of P. pp. 57-122. [See on this subject SINAI, p. 3555], notes c and d.)

V. Besides the various suggestions regarding Horeb and Sinai given under SINAI, one course in Dr. Kruse's America on Seetzen, which is worth recording here. Seetzen approached the Jebel Musa from the N. a little W., by a route which seems to have brought him into the region through which Dr. Robinson approached it from the N. W. On this Dr. Kruse remarks, "Horeb lay in the plain of Rephidim, ... a day's march short of (or) Sinai, on a dry plain, which was extensive enough for a camping ground, with a rock...

passes by Steinhof-Khodin to the Jebel Musa. Robinson, who went by this way, conjectured that e-Khodin was a place of pilgrimage to the ancient Egyptians, and might have been the object of Moses' proposed journey of "three days into the wilderness." (p. 75). The best account of this locality by Dr., which the present contributor has met with, is that in the MS. referred to at the end of this article. The writer doubts especially on the immense remains of mining operations, refuse of fuel, metal, etc., to be seen there; also on the entrenched camp at Miggah a.

Discovered recently by Major Macdonald, evidently, a rock of great labor and of capacity for a large garrison.

a Through the wilderness of Koa (from its north

fountain struck by Moses from the rock. This distance just hits the plain es-Shekh (Sheh, Kiepert's Map), which Robinson entered before reaching the foremost ridge of Sinai, and suits the peaked mountain de-Oroy, in the highest point of this plain. That this plain too, is large enough for fighting in (as mentioned Ex. xvii. 9), is plain from Robinson's statement (i. 141) of a combat between two tribes which took place there some years before his visit. Robinson, from this rocky peak, which I look for Horeb, in 1 1/2 hour reached the spring Torbeh, probably the spot the opening of which I have referred to, and another hour came to the steep pass Nebi Hareh, to mount which he took 2 1/2 hours, and in 2 1/2 hours more, crossing the plain er-Ridah, arrived at the convent at the foot of Sinai. Seetzen's Arabs gave the name of Qorihi to a mountain reached before ascending the pass, no doubt the same as Robinson's de-Oroy and the Horeb of Holy Writ. (Reison, ii. p. 122; comp. 414.) He seeks to reconcile this with Ex. xxxii. 6, which describes the people, penitent after their disobedience in the matter of the golden calf, as "stripping themselves of their ornaments by the Mount Horeb," by supposing that they were by Moses led back again from Sinai, where God had appeared to him, and raised the mountain Horeb to Sinai for the return of Moses. The plain of Rephidim is not, however, the Horeb in the plain of Rephidim. But this must have been a day's journey backward, and of such a retrograde movement the itinerary in Num. xiii. 14, 15, 16, has no trace. On the contrary, it says, "they removed from the desert of Sinai and pitched in Kibroth Hattaavah." Now, although they stayed a year in the wilderness of Sinai (Ex. xix. 2, 5; Num. xxi. 4, 5; N. of R., p. 12, and nothing whatever was done to be had but one camping station all the time, yet Rephidim clearly appears to lie without the limits of that wilderness (Ex. xvii. 1, xix. 1, 2; Num. xxxii. 15), and a return thither, being a departure from these limits, might, therefore, we should expect, be noticed, if it took place; even though all the shiftings of the camp within the wilderness of Sinai and in the desert be not particularly referred to. Under SINAI an attempt is made to reconcile the "rock in Horeb" at Rephidim with a "Mount Horeb the same, in fact, as Sinai, though with a relative difference of view, by regarding Horeb as a designation descriptive of the ground, applicable, through similarity of local features, to either. If this be not admitted, we may perhaps regard Wady es-Shekh, a cresset which concave southwards, whose western horn joins Wady Ferin, and whose eastern finds a southeastern continuation in the plain er-Ridah (leading up to Jebel Musa, the probable Sinai, as the Horeb proper. This contains a rock called traditionally the "seat of Moses" (Zephurah, Reison, ii. 355). And this is to some

border) to the opening of Wady Habeha late in it is 5 hours' journey. The nanna tamarkis is found there; and some birds, called by Dr. Kruse "Wustenhalmen," which he appears to think might be the <imiaau of Scripture. Section in his journal plainly sets down the "wusten" as being really a mistake for hounts (Reison, iii. p. 415, comp. 80).

b "Two hardly distinguishable mountains on either side of the way (from the Wady es-Shekh) were named Qorihi and Ferin." (Reison, iii. 97).

c He thinks the reason why they were thus countermanded was because "Horeb," was better supplied with water, but he does not show that the "spring Torbeh," adequately meets this condition (Jud. 422).
WILDERNESS OF THE WANDERING

extent confirmed by the fact that the wady which continues the plain er-Rabah to the N. W., forming with the latter a slight obtuse angle, resumes the name of er-Sheikh. If we may suppose the name "Horeb," though properly applied to the present Wady es-Sheikh, which John Fevit to have had such an extension as would embrace er-Rabah, then the "rock in Horeb" might be a day's journey from the "Mount (of) Horeb." This view, it may be observed, does not exclude that just referred to under Sinai, but merely removes it from resting on the sense there proposed for "Horeb" (2:7), as a local apppellative, to more general grounds.

But whatever may be the case with other sacred localities, the identification of Sinai itself will probably never be free from obscurity. We seem to have adequate information regarding all the eminent mountains within the narrow compass to which our choice is reduced, and of 'all the important passes. Nor is it likely that any fresh clue of trustworthy local tradition will be unraveled, or any new light thrown on the text of the Scriptural statements. Somewhere in the granitic nucleus of lofty mountain crests the answer, doubtless, lies. For the grounds on which a slight preponderance of probability rests in favor of the Jebel Mosis; see p. 51, it is said, that prependiculars which rest on the view that the numbers ascribed in our present text to the host of Israel are trustworthy. It further criticism should make this more doubtful than it now is, that will have the probable effect of making the question more vague rather than more clear than it is at present. "This degree of uncertainty is a great safeguard for the real reverence due to the place. As it is, you may rest on your general conviction and be thankful." (8. p. 70.) The tradition which has conse-

The expression מָלֶא כָּלָה בְּרֹאשׁ (in Ex. xxiii. 6) may probably be, like the expression מָלֶא כָּלָה בְּרֹאשׁ (in Ex. xxiii. 6).

iii. 1, and that of מַלָּא כּלָּה בְּרֹאשׁ, Jos. xxi. 11, etc., two nouns in remission, the "mount of Horeb." 6 The Tabula Peutingeriana gives in the interior of the sands found in a ridge of the desertum uli. anas eburneat filii Israel Ducante Moses, and marks therein a three-peaked mountain, with the words, "he legem acceptavit in monte Sinai." Dr. Kruse thinks the "three peaks" new (Wady es-Sheikh), Ag. Epistoma, and the Jebel Heri's (Sectem. Rossian, iii. pt. iv. 421).

Dr. Kruse says, "This highest S. E. point of Sinai is indisputably the 'mountain of the Lord' of Holy Writ, the modern Mount St. Catherine. The N. W. part of Sinai is, however, now named Mount Horeb by the monks, not by the Arabs, probably in order to combine Horeb with Sinai, by which names they denote the most southeasterly point. The plain 'or 'wilderness' of Sinai can be nothing else than the high plain situated at this most southeasterly point, surrounded by the three before-mentioned peaks of Sinai, the opposite plateau of Mount Francis, and E. and W. some low ridges. It is now called the plain Rabah, and is, according to Robinson's measurement, quite large enough to hold two millions of lambs, who here encamped together." (Ibid. 422.)
WILDERNESS OF THE WANDERING

3525

narrow plain at the top of the easternmost peak. A block of gray granite crowns it, and several contiguous blocks form one or two grotesces, and a circle of loose stones rests in the narrow plain at the top (The Tent and the Kindle, pp. 117, 118). The "five peaks," to which "in most points of view it is reducible, at first sight appear inaccessible, but are divided by steep ravines filled with fragments of fallen granite." Dr. Stanley mounted "over smooth blocks of granite to the top of the third or central peak," amid which "immunerable shrubs, like sage or thyme, grow to the very summit." Here, too, his ascent was assisted by loose stones arranged by human hands. The peak divides into two "eminences," on "the highest of which, as on the back of some petrified tortoise, you stand, and overlook the whole Peninsula." (S. of P. pp. 71, 72.) Rasaeiger says "the stone of the peak of Siculo is porphyry." (Reisen, iii. 276.) Dr. Stewart mentions the extensive view from its summit of the mountains "which arise from the western shore of the Gulf of Akaba," seen in the N. E., and of the Sinaitic range, "closed packed" with the intermediate Jebel Wadain, "forming the most confused mass of mountain tops that can be imagined." (pp. 114, 115.) His description of the ascent of this peak was that of glassy, smooth, grayish-white granite, bare of the air, and often had to clamber or crawl flat on the breast. It was like "the ascent of a glacier, only of smooth granite, instead of ice." At a quarter of an hour from the summit he found a stair of blocks of granite, one above another on the surface of the smooth slippery rock." (p. 115.) On the northern summit are visible the remains of a building, cemented with lime and mortar, and "close beside it are three of these mysterious inscriptions," implying that "this summit was frequented by unknown pilgrims who used these charies." (S. of P. p. 72.)

The approach to Jebel Mas' from the W. is only practicable on foot. It lies through Wady Solom and the Wady Hacch, "Pass of the Whirl," whose stair of rock leads to the second or higher stage of the great mountain labyrinthish. Elsewhere this pass would be a roaring torrent. It is amidst masses of rock a thread of a stream just visible, and here and there forming clear pools, shrouded in palms, or leaving its cler to be traced only by rushes. From the head of this pass the cleft-front of Sinai comes in sight through a "long continued plain between two precipitous mountain ranges of black and yellow granite." This is the often mentioned plain er-Rabiah. Deep gorges enter it on each side, and the convent and its gardens close the view. The ascent of Jebel Mas' which contains high valleys with abundant springs, is by a long flight of rude steps winding through crags of granite which are parallel to and in the middle of the heights, and the summit is marked by the ruins of a mosque and of a Christian church. But Strauss adds, "the Mount of Moses' rose in the south higher and higher still" and the point of this, Jebel Mas', eighty feet in diameter, is distant two hours and more from the plain below (Sinait and Gebeltd, p. 116). The Râta Sâfâyâh, a small, steep, and high mountain, which is interposed between the slope of Jebel Mas' and the plain; and, from its position, surveys both the openings of es-Sheikh N. E. and of er-Rabiah's N. W., which converge at its foot. Opposite to it, across the plain, is the Jebel Fârūrîn, whose peak is clothed with moss, and the taller summit is again stated to have been discovered by the earthquake, with its own fragments. The aspect of the plain between Jebel Fârūrîn, which here forms a salient angle, wedging southwards, and the Râta Sâfâyâh, is described as being, in conjunction with these mountains, wonderfully suggestive, both by its grandeur and its similitude for the giving and the receiving of the Law. "That such a plain should exist at all in front of such a cliff is so remarkable a coincidence with the sacred narrative, as to furnish a strong internal argument, not merely of its identity with the scene, but of the scene itself having been described by an eye-witness." (S. of P. pp. 42, 43.) The character of the Sinaitic granite is described by Secten (Reisen, iii. 86) as being a "granite" and greyish-white granite, "granite corinian, and (2) greyish-white with abundance of the same mica. He adds that the first kind is larger-grained and handsomer than the second. Hamilton speaks of "long ridges of arid rock surrounding him in chaotic confusion on every side," and "the sharp broken peaks of granite far and near as equally desolate" (Sinait, the Heifyez, and Solomun, p. 31). This view of the fragrant peaks, so thick and wild, was set as to "form a labyrinth" to the eye, which was "cliflydly impressed Dr. Stanley in the view from the top of Jebel Mas' (S. of P. p. 77.) There the weather-beaten rocks are full of curious fissures and pools (p. 46), the surface being "a granite mass broken into deep gullies and basins" (p. 76). Over the whole mountain the imagination of votaries has stamped the rock with tokens of miracle. The indentures were viewed as memorials of the Bursing Bush. In one part of the mountain is shown the impress of Moses' back, as he hid himself from the presence of God (ib. 30); in another the hoof-print of Mohammed's mule: in the plain below, a rude hollow between contiguous blocks of stone feaces for the wold of the golden Calf; while in the valley of the Laja, which runs parallel to and overhanging by the Jebel Mas's greatest length, into er-Rabiah, close to Râta Sâfâyâh, the Emona "Stone of Moses" is shown — a detached mass from ten to fifteen feet high, intersected with wide slits or cracks, . . . with the stone between them worn away, as if by the dropping of water from the crack immediately above. This distinctness of the mass of the stone lends itself to the belief of the enthusiasts, that this "rock followed" the Israelites through the wilderness, which would not be the

a By this pass Dr. Stanley was himself conducted thither, sending his camel round by the Wady es-Su'ayn, and the ascent from the same direction is the same circum-stances route into the central upland. By this latter he supposes the great bulk of the host of Israel may have reached er-Rabiah and Sinai, while "the chiefs of the people would mount" by the same pass which he took (S. of P. p. 82). b Dr. Stewart (ib. sup. 122) says, "Ghileh Mas'a, the Earns of monkish traditions, is neither visible from the Whedel (i. e. Kes) Sibath, nor from any other point in the plain of er-Rabiah." This seems confirmed by the argument of S. & P. pp. 43, 44, that Moses, descending from the top of Mas'a, would not descend to the plains of the mountain, but "remained at the height of Sâfâyâh effectually intercepting the view. c These have become scarce on this mountain; Secten (Reisen, iii. 80) expressly mentions that he observed none. They are now found abundance in the country of constructing Abbas Pasha's moutain road (Stewart, T. & K. pp. 132, 134).
case with the non-detached off-set of some larger cliff. The Koran also contains reference to the rock with the twelve months for the twelve tribes of Israel," i.e. the aforesaid cracks in the stone, into which the Bedouin thrust grass as they utter their prayers before it. Bishop Clayton accepted it as genuine, so did Whiston the translator of Josephus; but it is a mere base nature; and there is another fragment, "less conscientious," in the same valley, "with precisely similar marks."

In the pass of the Wady es-Sleijeh is another stone, called the "seat of Moses," described by Lhaut (S. & P. pp. 43-48, and notes). Section adds, some paces beyond the "Stone of Moses," several springs, copious for a region so poor in water, have their source from under blocks of granite, one of which is as big as this "Stone of Moses." These springs gush into a very small dike, and thence are conducted by a canal to supply water to a little fruit-garden. . . . Their water is pure and very good. On this canal, several paces below the basin, lies a considerable bigger block of granite than the "Stone of Moses," and the canal runs round so close to its side as to be half-concealed by it." (Reifen, iii. 93). He seems to argue that this appearance and half-concealment may have been made use of by Moses to procure relief in his having produced the water miraculously from beneath. But this is wholly inconsistent, as indeed is any view of this being the actual "rock in Horeb," with his view of Rephidim as situated at el-Hosba, the western extremity of the Wady Feyhan. Even at variance with the Scriptural narrative is the claim of a hole in er Râlheh, below Isis Safafih, to be the "pit of Korah," which story belongs to another and far later stage of the march.

On Mount St. Catherine the principal interest lies in the panorama of the whole Peninsula which it commands, embraced by the converging horns of the Red Sea, and the complete way in which it overlooks the Jabel Mawâ, which, as seen from it, is by no means conspicuous, being about 1,000 feet lower. Section mentions a path strewn with stones and blocks, having nowhere any steps, like those mentioned as existing at Sordîl, and remarks that Jasper and porphyry chiefly constitute the mountain. He reached the highest point in three hours, including intervals of rest, by a hard, steep path, with tollsome cramping; but the actual time of ascending was only 1½ hours. The date-palm plantation of Târ is said to be visible from the top; but the haze prevailing at the time prevented this traveller from verifying it (Reifen, iii. 39-93).

"The rock of the highest point of this mountain swells into the form of a human body, its arms swathed like that of a mummy, but headless — the counterpart, as it is alleged, of the corpse of the beleaguered Egyptian saint. . . . Not immoderately this grotesque figure furnishes not merely the illustration, but the origin, of the story" of St. Catherine's body being transported to the spot, after martyrdom, from Egypt by angelic hands (S. & P. p. 45).

The remaining principal mountain is named vari-

b Dr. Stanley verified the possibility of the fact, and improved its miraculous character by examining the ravine above the Convent, through which, when the sun gains the necessary altitude, a ray would reach the chapel (S. & P. p. 46).
nearly due northward, and then deflects westward, the "high granite rocks" reappeared; and in the Wady el-Girzah, the rocks rise, red granite or black basalt, occasionally tipped as if with cakes of sandstone to the height of about 100 feet, and finally open on the sea. At the mouth of the wadi are many traces of flood—trees torn down, and strewn along the sand" (ib. pp. 81).

VI. We now pass on to resume the attempt to trace the progress of the Israelites. Their sojourner a year in the neighborhood of Mount Sinai was an eventful one. The statements of the Scriptural narrative which relate to the reception of the Law, the Tabernacul, the Golden Calf, Moses's vision of God, and the visit of Jehovah, are too well known to need special mention here; but besides these, it is certain from Num. iii. 4, that before they quitted the wilderness of Sinai, the Israelites were thrown into mourning by the imminent death of Aaron's two sons, Nadab and Abihu. This event is probably connected with the setting up of the Tabernacle and the enkindling of that holy fire, the sanctity of which their death avenged. That it has a determine chronological relation with the promulgations which from time to time were made in that wilderness, is proved by an edict in Lev. xvi., being fixed as subsequent to it (Lev. x., comp. xvi. 1). Throughout all the narratives of the death of Aaron, the punishment of the sin of his domestics or porters for blasphemy (xxiv. 10-14). Of course the consequence of Aaron and his sons is mentioned early in the book in connection with the laws relating to their office (viii. ix.). In the same wilderness region the people were numbered, and the exchange of the Levites against the first-born was effected: these, and the death of their Levitical priests, were to form the necessary conditions of the return of those of Egypt, having incurred the obligation of sanctity to him. The offerings of the princes of Israel were here also received. The last incident mentioned before the wilderness of Sinai was quitted for that of Paran is the intended departure of Hobah the Kenite, which it seems he abandoned at Moses' urgent appeal. They now quitted the Sinide region, the Israelites having been almost three days without finding a permanent encampment, although temporary halts must of course have been daily made (Num. i. ix. 15-25; x. 13, 33; xi. 33; xii. 16). A glance at Kiipe's, or any map showing the region in detail, will prove that here a choice of two main routes begins, in order to cross the intervening space between Sinide and Canaan, which they certainly approached in the first instance on the southern, and not on the eastern side. Here the higher plateau surrounding the Tih region would almost certainly, assuming the main features of the wilderness to have been then as they are now, have compelled them to turn its western side nearly by the route by which Seetzen came in the opposite direction from Hebrew to Sinai, or to turn it on the east by going up the 'Arabah, or between the 'Arabah and the higher plateau. Over its southern face there is no pass, and hence the roads from Sinai, and those from Petra towards Gaza and Hebron, all converge into one of two trunks of route (Robinson, i. 147, 151, 152, ii. 186i). Taberah and Kibroth-Hattaavah, both seem to belong to the same encampment where Israel dwelt for at least a month (xx. 20), being names given to it from the two events which happened there.

These stations seem from Num. x. 11-13, 33-36, to have lain in the wilderness of Paran; but possibly the passage x. 11-13 should come after that 33-36, and the "three days' journey" of ver. 35 he it still in the wilderness of Sinai and even Taberah and Hazereth, reached in xii. xii., also there. Thus the Taberah, Kibroth, and Hazereth, presented the same region, but different names, and the word Hazereth must be either misplaced or mentioned by anticipation only. One reason for thinking that they did not strike northwards across the Tih range from Sinai, is Moses' question when they murmured, "Shall all the fish of the sea be gathered together for them, to suffice them?" which is natural enough if they were rapidly nearing the Gulf of 'Akabah, but strange if they were passing towards the inland heart of the desert. Again the quails are brought out by "a wind from the sea" (Num. xii. 12, 31); and various travellers (Burchardt, Schnitz, Stanley) testify to the occurrence of vast flocks of birds in this precise region between Sinai and 'Akabah. Again, Hazereth, the next station after these, is coupled with Hazeroth, which has been uncertainly settled on the shelf of that gulf (Dent. i. 1, and Robinson, ii. 187, note). This makes a seaward position likely for Hazereth. And as Taberah, previously reached, was three days' journey or more from the wilderness of Sinai, they had probably advanced that distance towards the N. E. and 'Akabah; and the distance required for this would bring it in so near el-Hudrbeh (the spot which Dr. Robinson thought represented Hazereth in fact as it seems to do in name), that it may be accepted as a highly probable site. Thus they were now not far from the coast of the Gulf of 'Akabah. A spot which seems almost certain to attract their course was the Wady el-Ain, being the water, the spring, of that region of the desert, which would have drawn another such city as the above-mentioned settlements as are implied in the name of Hazereth, and such as that of Israel must have been" (S. & P. p. 82). Dr. Robinson remarks, that if this be so, this settles the course to Kadesh as being up the 'Arabah, and not across the plateau of el-Tih. Dr. Stanley thinks this identification a "fair probability," and the more uncertain as regards identity, as the name Hazereth is one of the least likely to be attached to any permanent or natural feature of the desert," meaning "simply the inclosures, such as may still be seen in the Bedouin villages, hardly less transient than tents" (S. & P. pp. 81, 82). We rely, however, rather on the combination of the various circumstances mentioned above than on the name. The Wady Hudrbeh and Wady el-Sheikh, their upper part running nearly parallel to each other, from S. W. to N. E., nearly from the eastern extremity of the Wady el-Sheikh, and their N. E. extremity comes nearly to the coast, marking about a midway distance between the Jebel Massa and 'Akabah. In conclusion possible Mr. Tyrwhitt says that quails, or small partridges, which he supposes rather meant, are, as far as he saw, more common in the desert than locusts.
Hazaroth the people tarried seven days, if not more (Num. x. 35, xii.), during the exclusion of Miriam from the camp while lepers. It is not certain whether or not the encampment brought them into the wilderness of Paran, and here the local commentator's greatest difficulty begins. For we have not merely to contend with the fact that time has changed the desert's face in many parts, and obliterated old names for new; but we have beyond this, great obscurity and perplexity in the narrative. The task is, first, to adjust the uncertainties of the record *inter se*, and then to try and make the resulting probability square with the main historical and physical facts, so far as the latter can be supposed to remain unaltered. Besides the more or less discontinuous form in which the sacred narrative meets us in Exodus, a small portion of Leviticus, and the greater part of Numbers, we have in Num. xxxiii. what purports at first sight to be a complete skeleton route so far as regards nomenclature; and we further find in Deuteronomy a review of the leading events of the wandering, or some of them, without following the order of occurrence, and chiefly in the way of allusion expanded and dwelt upon. Thus the authority is of a threefold character. And as, in the main narrative of Numbers, years are often sunk as uneventful, so in the itinerary of Num. xxxiii., on a near view great chasms occur, which require, where all else bespeaks a severe uniformity of method, to be somehow accounted for. But, beyond the questions opened by either authority in itself, we have difficulties of apparent incongruity between them; such as the omission in Exodus of Piqqua and Ahid, and of the encampment by the Red Sea; and, incomparably greater, that of the fact of a visit to Kadesh being recorded in Num. xiii. 26, and again in xx. 1, while the itinerary mentions the name of Kadesh only once. These difficulties resolve themselves into two main questions. Did Israel visit Kadesh once, or twice? And where is it now to be looked for?

Before attempting these difficulties individually, it may be as well to suggest a caution against certain erroneous general views, which often appear to govern the considerations of desert topography. One is, that the Israelites journeyed, wherever they could, in nearly a straight line, or took at any rate the shortest cuts between point and point. This has led to some illusionists of maps simply register the file of names of Num. xxxiii. 10-38 from Sinai in rectilinear sequence to Kadesh, wherever they may happen to fix its site, then turn the line backward from Kadesh to Ezion-geber, and then either to Kadesh again, or to Mount Hor, and thence again, and here correctly, down the 'Arabah southwards and round the southeastern angle of Edom, with a meandering northwards to the Red Sea. In drawing a map of the Wanderings, we should mark as approximately or probably ascertain the stations from Etham to Hazeroth, after which no track should be attempted, but the end of the line should lose itself in the blank space; and out of the same blank space it might on the western side of the 'Arabah be similarly resumed and traced down the 'Arabah, etc., as before described. All the sites of intervening stations, as being either plainly conjectural merely, or lacking any due authority, should simply be marked in the margin, save that Moserah may be put close to Mount Hor, and Ezion-geber further S. in the 'Arabah (Ezion-geber), from which to the brook Zered and onwards to the plains of Moab, the ambiguities lie in narrow ground, and a probable fight breaks on the route and its stations.

Another common error is, that of supposing that from station to station, in Num. xxxiii., always represents a day's march merely, whereas it is plain from a comparison of two passages in Ex. (xx. 22), and Num. (x. 33), that on two occasions three days formed the period of transition between station and station, and therefore, that not day's marches, but intervals of an indefinite number of days between permanent encampments, are intended by that itinerary; and as it is equally clear from Num. ix. 22, that the ground may have been occupied for "two days, or a month, or a year," we may suppose that the occupations of a longer period only may be marked in the itinerary. And thus the difficulty of apparent chasms in its enumeration, for instance the greatest, between Ezion-geber and Kades (xxxi. 35-37) altogether vanishes.

An example of the error, consequent on neglecting to notice this, may be seen in Laborde's map of the Wanderings, in his Commentary on Exodus and Numbers, in which the stations named in Num. xxxiii. 18-34 are closely crowded, but between those of ver. 35 and those of ver. 37 a large void follows, and between those of ver. 37 and those of ver. 39 a still larger one, both of which, since on referring to the text of his Commentary we find that the intervals all represent day's marches, are plainly impossible.

Omitting, then, for the present all consideration of the previous intervals after Hazeroth, some suggestions concerning the nomenclature and possible sites of which will be found in articles under their respective names, the primary question, did the people visit Kadesh twice, or once only, demands to be considered.

We read in Num. x. 11, 12, that "on the twentieth day of the second month of the second year ... the children of Israel took their journeys out of the wilderness of Sinai, and the cloud ceased to go before them by day ..." This latter statement is probably to be viewed as made by anticipation; as we find, that after quitting Kibroth-Hattaavah and Hazeroth, "the people pitched in the wilderness of Paran" (Num. xii. 16). Here the grand pause was made while the spies, "sent," it is again impressed upon us (xiii. 3), "from the wilderness of Paran," searched the land for forty days," and returned "to Moses and to Aaron, and to all the congregation ... unto the wilderness of Paran to Kadesh." This is the first mention of Kadesh in the narrative of the Wanderings (vv. 25, 26). It may here be observed that an inaccuracy occurs in the rendering of Moses' directions to the spies in the A. V. of xvi. 17,
WILDERNESS OF THE WANDERING

"get you up by this way southward" (v. 35:29), where "by the South," i.e. by the border lying in that direction from Palestine, is intended, as is further plain from ver. 22, "And they ascended by the south and came to Hebron," i.e. they went southwards. From considerations advanced under Kadesh, it seems that Kadesh probably means firstly, a region of the desert spoken of as having a relation, sometimes with the wilderness of Paran, and sometimes with that of Zin (comp. vers. 21, 28); and secondly, a distinct city within that desert limit. Now all the conditions of the narrative of the departure and return of the spies, and of the consequent disloyalty, murmuring, and final sentence of wandering, will be satisfied by supposing that the name "Kadesh" here means the region merely. It is observable, also, that Kadesh is not named as the place of departure, but only as that of return. From Paran is the start; but from Zin (both regions in the desert) the search commences. And this agrees with the political geography of the southern border, to whose wilderness of Zin is always reckoned as pertaining, whereas that of Paran always lies outside the promised land. Natural features of elevation, depression, and slope, are the only tokens to which we can reasonably look in deciding where the Paran wilderness lay, and that of Zin is adjacent, where it is proposed under Kadesh to regard part of the 'Arabah, including all the low ground at the southern and southwestern extremity of the Dead Sea, as the wilderness of Zin. [Zin.] Then the broad lower northeastern plateau, including both its slopes as described above, will be defined as the Paran wilderness proper. If we assume the higher superimposed plateau, described above, to bear the name of "Kadesh" as a desert district, and its southwestern mountain wall to be "the mountain of the Amorites," then the Paran wilderness, so far as synonymous with Kadesh, will mean most naturally the region where that mountain wall from Jebel 'Ararit or 'Nilkithe to Jebel Makhanih, and perhaps then northward with the other side of the angle of the highest plateau, overhangs the lower terrace of the Tih. Moses identifies the coming "to Kadesh Barneam" with the coming to "the mountain of the Amorites" (Deut. i. 19, 20), whence the spies were also despatched (vv. 22, 23), which is said to have been from "Paran" in Num. xiii. 3. Suppose the spies' actual start to have been made from somewhere on the watershed of the two slopes of el-Tih, the spies' best way then would have been by the Wady el-Jerich into and so up the 'Arabah: this would be beginning "from the wilderness of Zin," as is said in Num. xiii. 21. Then, most naturally, by his direction to them, "go up into the mountain" (Num. xiii. 17), which he represents as acted on in Deut. i. 24, "and they turned and went up into the mountain," he meant them to mount the higher plateau, supposed the region Kadesh. By their "turning" in order to do so, it may be inferred that their course was not direct to their object, as indeed has been supposed in taking them along the 'Arabah and again up its western side by the passes el-'Khurir and es-Sifā (Zephath). By these passes they must have left Zin or the 'Arabah, there being no choice of way. During their absence, we may suppose the host to have moved from the watershed into the Kadesh-'Paran region, and not at this period of their wanderings to have touched the city Kadesh at all. This is quite consistent with, if it be not even confirmed by, the words of the murmurers in xiv. 2, 3, "Would God we had died in this wilderness! And wherefore hath the Lord brought us unto this land of bondage!" and throughout the denunciation which follows, evidently on the same spot, the words "the wilderness," and "this wilderness," often recur, but from first to last there is no mention of a "city." Now, in Deut. i. 19, where these proceedings pass in review before Moses, in his words to the people, there is, strictly speaking, no need to mention Kadesh at all, for the people were all the time in the wilderness of Paran. Yet this last is so wide a term, reaching almost from the 'Arabah to near the Egyptian frontier, that Moses might naturally use some more precise designation of the quarter he meant. He accordingly marks it by the proximity of Kadesh. Thus the spies' return to "the wilderness of Paran to Kadesh" means to that part of the lower plateau where it is adjacent to the higher, and probably the eastern side of it. The expression "from Kadesh-barneam even unto Gaza" is decisive of an eastern site for the former (Josh. x. 41). Here, as is plain both from Num. xiv. 40-45 and from Deut. i. 44-44, followed the wayward attempt of the host to win their way, in spite of their sentence of prohibition, to the "hill" (Num. xiv. 40-45, Deut. i. 44-44) or a "mountain" of the Anakites and Canaanites, or Amorites, and their humbling defeat. They were repulsed in trying to force the pass at Hormah (or Zephath, Judg. i. 17), and the word of that city is called Zephath, showing that the place was also known by its Horite name; and here perhaps the remnant of the Horites were allowed to dwell by the Edomites, to whose border this territory, in the message of Num. xx. 16, is ascribed. [Kadesh.] Here, from the notice in Num. xiv. 25, that these "Anakites and Canaanites dwelt in the valley," we may suppose that their dwelling was where they would find pasture for their flocks, in the Wady el-Fikreh and others tributary to el-Jich, and that they took post...
in the "mountain" or "hill," as barring the way of the Israelites' advance. So the spies had gone by Moses' direction this way, by the South (not 'southward,' as shown above), up into the mountain: and this same way, "the way of the spies," through the posses of el-Khurayd and es-Sijāta, was the approach to the city Kadesh also.

Here, then, the perilous portion of the wandering commences, and the great bulk of it, comprising a period of nearly thirty-eight years, passes over between this defect in Num. xiv, and the resumption of local notices in Num. xx., where again the names of "Zin" and "Kadesh" are the first that meet us.

The only events recorded during this period (and these are interspersed with sundry pronouncements of the Ceremonial Law), are the execution of the offender who gathered sticks on the Sabbath (Num. xv. 32-36), the rebellion of Korah (xvi.), and, closely connected with it, the adjudgment of the preeminence to Aaron's house with their kindred tribe, solemnly confirmed by the judicial miracle of the rod that blossomed. This seems to have been an interval of a certain duration between Levi and the other tribes, as regards the approach to the Tabernacle, than had been practically recognized before (xvii., xixiii. 22; comp. xvi. 49).

We gather, then, from Deut. i. 40, that the greater part, perhaps the whole, of this period of nearly thirty-eight years, if so we may interpret the "many days" there spoken of, was passed in Kadesh,—the region, that is, not the city in which, of course, the camp may have been shifted at convenience, under direction, any number of times. But Num. xx. 1 brings us to a new point of departure. The people have grown old, or rather again young, in their wanderings. Here, then, we are at "the desert of Zin, in the first month," with the people abiding in Kadesh. By the sequel, "Miriam died there, and was buried there," a more precise definition of locality now seems intended: which is further confirmed by the subsequent message from the same place to the king of Edom, "Behold, we are in Kadesh, a city in the uttermost of thy border" (v. 10). This, then, must be supposed to coincide with the encampment, recorded as taking place "in the wilderness of Zin, which is Kadesh," registered in the itinerary (xxxi. 36). We see then why, in that register of specific camping-spots, there was no necessity for any previous mention of "Kadesh" because the earlier notice in the narrative, where that name occurs, introduces it not as an individual encampment, but only as a region, within which perpetual changes of encampment went on for the space of thirty-eight years. We also see that they came twice to Kadesh the region, if the city Kadesh lay in it, and once to Kadesh the city; but once only to Kadesh the region, if the city lay without it. We are not told how the Israelites came into possession of the city Kadesh, nor who were its previous occupants. The probability is that these last were a remnant of the Horites, who after their expulsion by Edom from Mount Seir (Enoch. V. 21) may have here retained their last hold on the territory between Edom and the Canaanitic Amorites of the "South." Probably Israel took it by force of arms, which may have induced the attack of "Arad the Canaanite," who would therewith feel his border immediately threatened (Num. xxxii. 40; comp. xxi. 13). This warfare explains the purpose of Israel's exploits in Judah, which is also the occasion when Jehovah "went out of Seir" and "marched out of the field of Edom" to give his people victory. The attack of Arad, however, though with some slight success at first, only brought defeat upon himself and destruction upon his cities (xxi. 13). We learn from xxxiiii. 30 only that Israel marched without permanent home from Edzen-geber upon Kadesh. This sudden activity after their long period of desultory and purposeless wandering may have alarmed King Arad. The itinerary takes here another stride from Kadesh to Mount Hor. There their being engaged with the burial of Aaron may have given Arad his fancied opportunity of assaulting the rear of their march, he descending from the north whilst they also were facing southwards. In direct connection with these events we come upon a singular passage in Deuteronomy (x. 6, 7), a scrap of narrative imbedded in Moses' recital of events at Horeb long previous. This contains a short list of names of localities, on comparing which with the itinerary, we get some clue to the line of march from the region Kadesh to Edzen-geber southwards.

We find at the part of their route in which
Aaron's death took place, that stations named 
'Beroth of the children of Jaaakan, Mosera (where Aaron died), Gudgodah, and Jobthah,' were successively passed through; and from Num. xxxiii. 38, we find that 'Aaron went up into Mount Hor ... and died there in the fortieth year ... in the first day of the fifth month.' Assuming for Mount Hor the traditional site over-hanging the 'Arabah, which they very soon after this quitted, Mosera must have been close to it, probably in the 'Arabah itself. Now the stations which in the itinerary come next to Ezion-geber, and which were passed in the first wandering which commenced from the region Kadesh, have names so closely similar that we cannot doubt we are here on the same ground. Their order is, however, slightly changed, standing in the two passages as follows:

**CONJECTURAL SITE.**

Now in Num. xx. 14, 16, 22-23, the narrative conducts us from Kadesh the city, reached in or shortly before "the fortieth year," to Mount Hor, where Aaron died, a portion of which route is accordingly that given in Deut. x. 6, 7; whereas the parallel column from Num. xxxiii. gives substantially the same route as pursued in the early part of the penal wandering, when fulfilling the command given in the region Kadesh, "turn you, get you into the wilderness by the way of the Red Sea" (Num. xiv. 25; Deut. i. 40), which command we further learn from Deut. ii. It was strictly noted on, and which a march towards Ezion-geber would rarely have followed.

These half-different footsteps in the desert may seem to indicate a direction only in which Kadesh the city lay. Widely different localities, from Petra eastward to el-Khālīsib on the northwest, and westward to near the Jebel Helah, have been assigned by different writers. The best way is to acknowledge that our research has not yet grasped the materials for a decision, and to be content with some such attempt as that under KADESH, to fix it approximately only, until more abundant tokens are obtained. The portion of the arc of a circle with x-Siha for its centre, and a day's journey—about fifteen miles—for its radius, will not take in el-Khālīsib, nor Petra, or the former name, described in Chronicle, much more probably in Chedès than in Kadesh. The highest plateau is marked with the ruins of Aboda, and on the inferior one, some miles S. W. of the defile of the Wady el-Filsīb stands a round conical hill of limestone, mixed with sand, named Madarah (Madura, or Moderna), at a short day's journey from the southern end of the Dead Sea. Scheutzen, who visited it, had had his curiosity raised by a Bedouin legend of a village having been destroyed by Allah and buried under that hill for the wickedness of its people; and that, as a further attestation, human skulls were found on the ground around it. This statement be resolved by visiting the spot into a simple natural phenomenon of some curious rounded stones, or pebbles, which abound in the neighborhood. He thought it a legend of Sodom; and it might, with equal likelihood, have been referred to the catastrophe of Korah (Seezen Reisen, iii. 13), which, if our sites for Kadesh the region and Paran are correct, should have occurred in the neighborhood, were it not far more probable that the physical appearance of the round pebbles having once given rise to the story of the skulls, the legend was easily generated to account for them.

The mountains on the west of the 'Arabah must have been always poor in water, and form a dreary contrast to the rich springs of the eastern side in Mount Seir. From the cliff front of this last, Mount Hor stands out prominently (Robinson, ii. 174-180). It has been suggested (H. Jagod-Grab) that the name el-Higzad, or Gudgodah, may possibly be retraced in the Wady el-Ghādībīgī, which has a confluence with the Wady el-Jervadh. This latter runs into the 'Arabah on the west side.

That point of confluence, as laid down in Kiepert's map (Robinson, Bibl. Res. i.), is about fifteen miles from the 'Arabah's nearest point, and about forty or forty-five from the top of Mount Hor. On the other hand, while it seems likely enough that the name of this wady may really represent that of this station, although the latter may have lain nearer the 'Arabah than the wady now reaches, and this conjectural identification has been adopted above. Jotbath, or Jotbath, is described as "a land of rivers of waters." (Deut. x. 7); and may stand for any confluence of wadis in sufficient force to justify that character. It should certainly be in the southern portion of the 'Arabah, or a little to the west of the same.

The probabilities of the whole march from Sinai, de Oudel Djeva ("Wady el-Jervadh"). Dr. Robinson thought Wady el-Wrabi was Kadesh, the city, or, as he calls it, Kadesh Barnes (see Map, vol. 1, end). Dr. Stanley remarks that there is no cliff (W. T.) there. See his remarks quoted under KADESH.

Dr. Robinson puts x-Siha at about two days' journey from the foot of Mount Hor, B. I. 183, 184.

As suggested in Williams's Holy City, i. 494.

The northern Kadesh, K. Kadesh, in Naphthali has the very same consonants in its modern Arabic name as in the Hebrew.

9 A writer in the Journal of Soc. Lit. April, 1859
then, seem to stand as follows: They proceeded towards the N. E. to the "Arabah, Wady Sekhem (Himroth), and then quitting the Sinaitic region, striking directly northwards to el-Ain, and thence by a route wholly unknown, perhaps a little to the E. of N. across the lower eastern spurs of the el-Tih range, descending the upper course of the Wady el-terefeh, until the southeastern angle of the higher plateau confronted them at the Jobel et-Khiber. Hereafter discharging the spies, they moved perhaps into the Arabah or along its western overhanging hills, to meet their return. Then followed the disinstrons attempt at or near el-Sifit (Zephthah), and the penal wandering in the wilderness of Kadesh, with a track wholly undecided, save in the last half dozen stations to Edom-geber inclusively, as shown just above. They then marched on Kadesh the city, probably up the Arabah by these same stations, took it, and sent from there the message to Edon. The refusal with which it was met forced them to return the Arabah once more, and meanwhile Aaron died. Thus the same stations (Dent. x. 6, 7) were passed again, with the slight variation just noticed, probably caused by the command to resort to Mount Hor (Num. xiv. 33); that occasioned no future, after reaching 'Akabah, and turning north-eastward, they passed by a nearly straight line towards the eastern border of Moab.

Of the stations in the list from Rithmah to Mithah, both inclusive, nothing is known. The latter, with the few preceding it, probably belong to the wilderness of Kadesh; but no line can be assigned to the route beyond the indications of the situation of that wilderness given above. In the sequel to the burial of Aaron, and the refusal of Edon to permit Israel to "pass through his border" b (which refusal may perhaps have been received at Mount Hor (Moserah), though the message which it answered was sent from the city Kadesh), occurred the necessity, consequent upon this refusal, of the people's "comparing the land of Edom" (Num. xxi. 4), when they were much "discouraged because of the way," c and where the consequent murmuring was rebuked by the visitation of the "fiery serpents" (v. 5, 6). There is near Edom a promontory known as the Râs Um Hinge, "the mountain of serpents," which seems to connect this name with סיבק, "good," from the goodness of the water supply. This is not unlikely; but his view of the name סיבק as from the same root as the Arab site سيفك, "Abibeh, is very doubtful, the ס (Heb. ס) being probably radical. However, if סיבק be, as he argues, a river of abundant water, the place may correspond with Jotbath, through the name do not. His map places it about 17 miles N.W. of the modern extremity of the Gulf of 'Akabah — i.e. on the western side of the Arabah. His general view of the route to and from Kadesh, and especially of the site of Sinai and Mount Hor, is unsatisfactory. See further towards the end of this article. 'Harekhirah's map gives another watery spot with palm-trees in the 'Arabah itself, not far from its southern end, which might also suit for Jotbath. a Hengstenberg (Authenticity of the Pent., ii. 356) has another explanation of the direction just above, based on the supposition that in the two passages (Num. xxxii. 20-35, Dent. x. 6, 7) the march proceeded in two opposite directions; but this would obviously require a reverse abound in the region adjacent; and, if we may believe this scene of that judgment, the event would be thus connected with the line of march, rounding the southern border of Mount Seir, laid down in Dent. ii. 8, as being "through the way of the plain (i.e. the 'Arabah) from Elath and from Edzion-geber," whence "turning northward," having "compassed that mountain (Mount Seir) long enough," they "passed by the way of the Arabah." 

Some permanent encampment, perhaps represented by Zalmonah in Num. xxxiii. 41, 42, seems here to have taken place, to judge from theargent expression of Moses to the people in Dent. ii. 13: "Now rise up, say I, and get you over the brook Zered," which by further N. a little E., being probably the Wady el-Mag (Robinson, ii. 157). [Zered]. The delay caused by the plague of serpents may be the probable account of this apparent urgency, which would on this view have taken place at Zalmonah; and as we have connected the scene of that plague with the neighborhood of Edom, so, if we suppose Zalmonah to have lain in the Wady Hima, which has its junction with the Arabah near 'Akabah, it might suppose that this will harmonize the various indications, and form a suitable point of departure for the last stage of the wandering, which ends at the brook Zered (v. 14). Dr. Stanley, who passed through 'Akabah, thus describes the spot in question (S. & P. pp. 84, 85): "'Akabah is a wretched village shrouded in a palm-grove at the north end of the gulf, gathered round a fortress built for the protection of the Mecca pilgrimage. . . . This is the whole object of the present existence of 'Akabah, which stands on the site of the ancient Elath — the Palm-Trees," so called from the grove. Its situation, however, is very striking, looking down the beautiful gulf, with its jagged ranges on each side. On the west is the great black pass, down which the pilgrimage descends, and from which 'Akabah (the Past) derives its name: on the north opens the wide plain, or Desert Valley, wholly different in character from anything we have seen, still called, as it was in the days of Moses, the 'Arabah.' Down this came the Israelites on their return from Kadesh, and through a gap up the eastern hills they finally turned off to Moab. . . . This is the order of all the stations, and not the demarcation of two merely. Von Rauener thought that the line of march threaded the 'Arabah through and, allowing allowance for the mistake of giving it each time a nearly rectilinear direction, he is not far wrong.

b Dr. Robinson thinks that by the "King's Highway" the Wady Ghwezer, opening a thoroughfare into the heart of the Edomitic territory was meant (ii. 157). Though the passage through Edom was refused, the burial of the sacred person of a king, the princes, and people may have been allowed, especially if Mount Hor was already, as Dr. Stanley suggests, a local sanctuary of the region (S. & P., pp. 97, 98).

b The way up the Arabah was tollable, and is so at this day. Dr. Robinson calls it "a still more frightful desert" than the Sinaiit (i. 154). The pass at the head of the Gulf of 'Akabah towards el-Tih is famous for its difficulty, and for the destruction which it causes to animals of burden (i. 175). Only two tracks, one from Laibah and the other from Kadesh, have been recorded their accomplishment of the entire length of the Arabah.

c Von Rauener identifies it with Mabim, a few miles to the E. of Petra.
WILDERNESS OF THE WANDERING

It is still one of the regular roads that runs from Petra, and in ancient times seems to have been the main approach from Edom or 'Abilah. . . .

The only published account of it is that of Labarle. These mountains appear to be granite, till, as we advance northward, we reach the entrance of the Wady Tubal, where, for the first time, red sandstone appears in the mountains, rising, as in the Wady el-Jish, architecture, w. e. above gray granitic.

Three stations, Penum, Oboth, and Ije-Alamain, were passed between this locality and the brook or valley of Zered (Num. xxi. 10-12; comp. xxxii. 43, 44), which last name does not occur in the itinerary, as neither do those of "the brooks of Arnon," Beer, Mattranath, Nahalah, and Raboth, all named in Num. xxi. 14-20; but the interval between Ije-Alamain and Nebi, which last corresponds probably (see Dent. xxxiv. 1) with the Pisgah of xxi. 20, is filled by two stations merely, named Dibon-gad and Almon-ibalathaim, from whence we may infer that in these two only were permanent halts made. [Dibon-gad: Almon-

Dibon being the Hebrew form of their proper names occurred the "digging" of the "well" by the princes, the successive victories over Sichon and Og, and, lastly, the famous episodes of Edam and Phinehas, and the final numbering of the people, followed by the chastisement of the Midianites (Num. xxi. 17, xxii.-xxvi., xxxi. 1-12; comp. Dent. in loc., iii. 9-17).

One passage remains in which, although the event recorded belongs to the close of Moses' life, relating to his last words in the plain of Moab, and as such lies beyond the scope of this article, several names of places yet occur which are identical with some herein considered, and it remains to be seen in what sense those places are connected with the scene of that event. The passage in question is Dent. i. 1, where Moses is said to have spoken "on this side Jordan in the wilderness, in the plain over against the Red Sea, between Paran and Tophel, and La assemble and Hazaroth and Dibah." The words "on this side" might here

a Penum is spoken of by Jerome Beland, p. 592) as "Quamdam civitates principium Edom num virilior in deserto, ubi ubi metu demonstrat suaeque adfinitatem inter civitatem Petrum et Eremam," Athanas. Episc. of Sirti, Vitam Aucetis, speaks of the condemnation of a person to the mines of Penum, where he would only live a few days. Winer says, Section took Kohant Penum for Penun, referring to Mund, Gerar xxvi. 727. Laconte (Comment. on Num. xxxii. 42) thinks that the place named by Jerome and Athanasius cannot be Penum, which he says lays S. E. of Petra. He adds that Burchhardt and Von Hammer took Turfl for Penum, which places both in dans les de compris de Sitzus (Reitgen, Robinsons, a), hence also Main a droite.

b Dr. Stewart (T. & B. p. 286) says, "The river Ar

non empties itself into the Dead Sea, and between them rises the lofty Gebel Arnon, which is believed to be the Nese or Pisgah of Scripture." He justifies this from its being the highest mountain on the Moabitic border, and from the hot spring Callirhoe being situated at its base, which seems to correspond with the Diboth ("springs" or "streams") of Pisgah of Deut. iv. 49. He adds that "Moses could have seen the end of Israel from that mountain." The Arnon is, without doubt, the Wady el-Moab. Ar of Moab is Ammon and Edom.

"WANDERING"

were set, and the word [περιοδικὸς] was thereby differently read by the LXX. (quar. 32. 15), as if "in the evening" were "in the west," "western," whilst Tischendorf looks as it were meant for one compound name; and the two last names are translated, Hazeroth being "inhospitable," and Dedazzah "the golden." N. B. Hazeroth elsewhere is represented by "Ageroth" (Num. xl. 35, xli. 16).

4. Some inchoational errors of the writer, though unimportant may assist in forming an estimate of his work. Thus he identifies Petra with Bozrah, the former being the capital of the later Nabataeans, the latter that of the Edom of the prophetic period and hence distinctly. Again he says, "Of all the people in the universe, the race most destitute by the less were
the city, and perhaps Kadesh Barnea, did so lie, and possibly Elusa, now el-Khahlisheh, may retain a trace of "Kadesha;" several types of which no
document are to be found in the region lying thence southward [Kadesha]; but el-Khahlisheh lies to the N. W. to be the Kadesh Barnea to which Israel came by the way of the spies," and which is clearly in far closer connection with Ze
deph (cs-Safir) than el-Khahlisheh could be. On
the contrary, there seems great reason for thinking
that, had so well-known and historical a place as Elusa been the spot of any great event in the his-
tory of the Exodus, the tradition would probably
have been traceable in some form or other, whereas
there is not a trace of any. Kadesh, again, lay in
the uttermost of the borders of Edom. Now, although that border may not have lain solely E.
of the Arashah, it is utterly inconsistent with known facts to extend it to Elusa; for then the en-
emies encountered in Horam would have been Edomites, whereas they were Amalekites, Canaan-
ites, and Horrites and Israel, in forcing the pass,
would have been doing what we know to have been
abstained from—attacking violence to the terri-
ory of Edom. The "designs" which this writer attributes to the "Rabbis," as regards the period up to Josephus' time, are gratuitous impugnations; nor does he cite any authorities for this or any other statement. Nor was there any such feeling against the Idumeans as he supposes. They an-
nexed part of the territory of Judah and Simeon
during the Captivity, and were subsequently, by
the warlike Mazedees, annexed themselves, received circumcision and the Law, by which an Edomite might, "in the third generation," enter the con-
gragation of Israel (Dent. xxii. 3), so that by the
New Testament period they must have been fully
recognized. The Jews proper, indeed, still spoke
of them as "foreigners," but to them, as having the
place of kinmen, a common share in Jerusa-
lem, and care of its sanctity as their "metropolitans;"
and Josephus expressly testifies that they kept the
Jewish feasts there (Ant. xvii. 10, § 2; comp. B. J.
v. 4, §§ 4, 6). The zealots and the party of order both appealed to their patriotism, somewhat in the same fashion that both parties appealed to the Sota.
It remains to notice the natural history of the wilderness which we have been considering. A
number of the animals of the Sinaitic region have

witnessed. [Sinait.] The domestic cattle of the Beduins will of course be found, but camels
more numerously in the drier tracts of et-Tih.
Schubert (Reisen, ii. 554) speaks of Sinai as not
being frequented by any of the larger beasts of
prey, nor even by jackals. The lion has become
extinct, but is not absolutely unknown in the
region (Vegep, pp. 46, 47). Foxes and hyaenas, Litter (xiv. 334) says, are rare, but Mr. Tywhitt men-
tions hyaenas as common in the Wady Malekarah;
and Litter (ibid.), on the authority of Burekhart, as-
cribes to the region a creature which appears to
be a cross between a leopard and a wolf, both of
which are rare in the Peninsulas, but by which
probably a hyena is to be understood. A leopard-
ship was obtained by Burekhart on Sinai, and a
fine leopard is stated by Mr. Tywhitt to have been
seen by some of his party in their ascent of Um
Shummar in 1862. Schubert continues his list in
the Cyren Syncrius, the Ibea, seen at Tafsheh
in flocks of forty or fifty together, and a pair of whose
horns, seen by Burekhart (Asob, pp. 405, 406) at
Kerak, were measured to be forty centimeters
in length, together with the snow-moose, and a creature which he calls the "spring-mam," (Mas jecud or jebus?), also a vious fuscus, or desert-fox, and a lizard known
as the Agama Sinatica, which may possibly be
identified with one of those described below. Hares
and jerracas are found in Wady Feiran. Schubert
quotes (foot note) Rupell as having found spe-
equisit, who saw it here and in Egypt, calls it a partridge, smaller than ours, and of a grayish color (p. 294). Ritter (xvi. 334) adds huzets (♀), ducks, prairie-birds, heath-rooks, larks, a specimen of finch, besides another small bird, probably red-breast or chaffinch, the varieties of Elaeus known as the Brachypterus and the Aegyr, and, of course, on the coast, sea-swallows, and meves. Flocks of blue rock pigeons were repeatedly seen by Mr. Tyrwhitt.

Seetzen, going from Helo in to Madura, makes mention of the following animals, whose names were mentioned by his guides, though he does not say that any of them were seen by himself; wall, porcupine, wild cat, orme, mole, wild ass, and three not easily to be identified, the Selvak, dog-shaped, or the Ammech, which devour the gazelle, and the Biki, said to be small and in shape like a hedgehog. Seetzen's list in this locality also includes certain reptiles, of which such as can be identified are explained in the notes: el-Mabbara, Umm el-Shkamun, el-Louage or Les: i.dicette, or Hizba; Bucolic or Jorvicel, el-Dish, otherwise Dik; el-Hana, or Frame, or Liffadi, and among birds the partridge, duck, stork, eagle, vulture (er-Rouabe), croc (el-Lidj), kite (Li-djegi) and an unknown bird called by him Cinci-el-Mamoun. He saw him of varieties as seen near Rhiha in the way from Helo to Sinai, and he saw a nightingale, but it seems at no great distance to the south of Helo. The same writer also mentions the edible lizard, el-Dish, as frequently found in most parts of the wilderness, and his third volume has an appendix on zoology, particularly describing, and often with illustrations, many reptiles and serpents of Egypt and Arabia, without, however, pointing out such as are peculiar to the wilderness. Among these are thirteen varieties of lizard, twenty-one of serpent, and seven of frog, besides fifteen of Nile-fish. Labonde speaks of serpents, scorpions, and black-scalled lizards, which pervert the soil, as found on the eastern border of Elusen near Tysil (Com. on Num. xxxvii. 12). The Mr. of Tyrwhitt speaks of starting "a large sand colored lizard, about 3 feet long, exactly like a crocodile, with the same bendy look about his fore-legs, the elbows turning out enormously." He is described as covered not only in scales, but in a regular armature, which rattle quite loudly as he ran." He "got up before the droninne, and vanished into a hole among some reeds." This occurred at the head of the Wady Mel document. Hesse-Riis (p. 299) gives a Locreek, Schonb, or the Sun, as found in Arabia Petraea, near the Red Sea, as well as in Upper Egypt, which he says is much used by the inhabitants of the East as an aphrodisiac, the flesh of the animal being given in powder, and broth made of the fresh fish. He also mentions the edible hoest, Scylurus Arabiensis, which appears to be common in the wilderness, as in other parts of Arabia, giving an account of the preparation of it in food (pp. 239-245).

Buchardt names a cape not far from Akaba, Rift Ein Hage, from the number of serpents which abound there, and accordingly applied to this region the description of the "fiery serpents" in Num. xvi. 4-9. Schubert (ii. 502) remarked the first serpents in going from Naas and Sinai to Petra, near el-Helahemi; he describes them as speckled. Buchardt (Syria, pp. 499, 502) saw tracks of serpents, two inches thick, in the sand. According to Rippell, serpents elsewhere in the Peninsula are rare. He names two poisonous kinds, Ceracera and Sehlyeni (Ritter, xvi. 329). The scorpion has given its name to the "Assent of Scorpions," which was part of the regular route of Am- dbush on the side of the southern desert. Wady es-Zurulbath in that region swarmed with them; and De Saulcy says, "you cannot turn over a single pebble in the Nefid (a branch wady) without finding one under it." (De Saulcy, i. 629, quoted in Neve, p. 51).

The reader is curious about the fish, molines, etc. of the Gulf of Suez should consult Schubert (ii. 213, note, 298, note, and for the plants of the same coast, 294, note). For a description of the coral banks of the Red Sea, see Ritter (xiv. 476 b), who remarks that these formations rise from the coast-edge always in longitudinal extension parallel to its line, bespeaking a fundamental connection with the upshift of the whole stretch of shore from N. E. to N. W. A fish which Seetzen calls the Almon may be mentioned as furnishing to the Bedoains the fish-skin sandals of which they are fond. Ritter (xiv. 327) thinks that fish may have contributed materially to the substance of the show that they cannot represent one and the same animal, as Seetzen's text would seem to intend.

WILDERNESS OF THE WANDERING

Israelites in the desert (Num. xi. 22), as they are now dried and salted for sale in Cairo or at the Convent of St. Catherine. In a brook near the foot of Serabit, Schubert saw some varieties of 

\[ \text{elaphurus, elaphites, elaphotes, geryon, and other water insects (Reise, ii. 352, note 1).} \]

As regards the vegetation of the desert, the most frequently found trees are the date-palm (Phoenix dactylifera), the desert acacia, and the tamarisk. The palms are almost always dwarf, as described in S. d. p. 20, but sometimes the "don" palm is seen, as on the shore of the Gulf of Akabah (Schubert, i. 272; comp. Robinson, i. 180). The Hassel-quiet species of date-palm possess of sustentation, says that some of the poorer families in Upper Egypt live on nothing else, the very stones being ground into a provender for the camels. This tree is often found in tufts of a dozen or more together, the dead and living boughs interfering overhead, the dead and living roots intertwining below, and thus forming a colossus in the desert. The date-palms in Wady Tar are said to be all numbered and registered. The acacia is the Mimosa Nilotica, and this forms the most common vegetation of the wilderness. Its Arabic name is 

\[ \text{Sugul (سَغْل)}, \]

and it is generally supposed to have furnished the "Shittim wood" for the Tabernacle (Forskal, Decr. Plant. Cent. vi. No. 90; Celsi Herb. i. 498 f.; Ritter, xiv. 355 f.; [Shittah-tree.]). It is armed with fearful thorns, which sometimes tear the packages on the camel's backs, and of course would severely lacerate man or beast. The gum arable is gathered from this tree, on which account it is also called the Acacia gummifer. Other tamarisks, beside the manusfera, mentioned above, are found in the desert. Grass is comparatively rare, but its quantity varies with the season. Robinson, on finding some in Wady Saugheg, N. E. from Sinai, near the Gulf of Akabah, remarks that it was the first bush he had seen since leaving the Nile. The terebinth (Pistacia terebinthus, Arab. Bāţum) a is well known in the wastes about Beer-sheba, but in the actual wilderness it hardly occurs. For a full description of it see Robinson, ii. 222, 223, and notes, also i. 208; and comp. Cels. Herb. i. 54. The "skirrah," of the varieties known as retum (Heb. and Arab.) rendered in the A. V. by "juniper," is a genuine desert plant; it is described (Robinson, i. 203, and note) as the largest and most conspicuous shrub therein, having very bitter roots, and yielding a quantity of excellent charcoal, which is the staple, if one may so say, of the desert. The following are mentioned by Schubert (ii. 352, 354) b as found within the limits of the wilderness: Mespilus Arar. Oladan halapeeia, Ataphaxis spinosa, I. phera sha, Cythius uniformis, and a "Cynornomus," a highly interesting variety, compared by Schubert to a well known Maltese one. To these he adds in a note (ibid.): Dactylis nemphitica, Gagea reticulata, Rumex vesicarius, Artemisia Judaica, Lysiera discoida, Santolina fragrantissima, Serica, Linderozia Sinica, Lunium amplexide, Stachys attins, Sisymbrium ritualis, Anasch Milleri, Artesio procumbens, Omphalodes intermedius, Demnia coriata, Reseda conces, and pruinos. Rosmarinus, Punarius parvilia, Hyptis pyramidal, Chroma cinereus, Arum luteum, and Fumaria officinalis, Commelina tectorum, and (p. 363) two varieties of Pergularia, the procera and the tomentosa.

In the S. W. region of the Dead Sea grows the singular tree of the apples of Solaon, the Aesculapius giganteus f. of botanists. Dr. Robinson, who gives a full description of it (i. 522, 523), says it might be taken for a gigantic species of the milk-weed or silkwaxi found in the northern regions of the U. S. He condemns the notion of Hasselquist (pp. 283, 287, 288), that an error, that the fruit of the Solanum nakedum when punctured by a thrust, resulted in the Solon apple, retaining the skin uninjured, but wholly changed to dust within (ibid. p. 524). It is the "Olahs of the Arabs. Robinson also mentions willows, holly-leaves, and hawthorns in the Syrian region, from the first of which the "DATES SICILIT, "willow-head," takes its name (i. 106, 108; Stanley, S. d. p. 17.). He saw hyssop (judce) in abundance, and thyme (cerer), and in the Wady Feis in the cohebri, the Kirkby or kirker, a green thorny plant with a yellow flower; and in or near the "Aralah, the juniper (Cinar), the dendere (elitch), and another shrub like it, the baldun, as also the plant el-Ghahib, resembling the rose, but larger (i. 83, 110; ii. 119, and note, 127), which is also the Galderhun, which has been suggested as possibly the "tree" cast by Moses into the waters of Marah (Ex. xv. 25). It grows in saline regions of intense heat, bearing a small red berry, very juicy, and slightly acrid. Being constantly found amongst brackish pools, the "bawm and antidote" would thus, on the above supposition, be side by side, but as the fruit ripens in June, it could not have been ready for its sup-

a Section met with it (iii. 47) at about 1 hour to the W. of Beda el-Tawil, between Hebron and Sinai; but the mention of small cemifields in the same neighborhood shows that the spot has the character of an oasis.

b Schubert's floral catalogue is unusually rich. He travelled with an especial view to the natural history of the region visited. His tracks extend from Cairo through Suez, Ayin Misila, and Tura, by way of Serabit, to Sinai, thence to Mount Her and Petra; thence by Madara and Hebron to Jerusalem; as well as in the northern region of Palestine and Syria. His book should be consulted by all students of this branch of the subject.

c Both these are found in cultivated grounds only.

d Shown in Forskal's Bones Res. Notar. tab. xi., where several kinds of Eucalyptus are delineated.

e Probably the same as the retum mentioned above.
shrub, *Ehudia, es-Schillach, possibly the same as that called *Silba, as above, by Dr. Stanley, *Khalib (or Khaladi), *Humbayik (or Humbolek) *Libnanum, *Habibid, Kali, *Abin *Humand (or *Abin *Humah). Some more rare plants, previous on account of their products, are the following: *Lituanum *Antonius, or mac baken, called by the Arabs *Festucca el-foun, from which an extract having no perfume of its own, but scented at pleasure with jassamine or other odoriferous leaf, etc., to make a choice unguent. It is found in Mount Sinai and Upper Egypt: *Cowania *Ligustrum, Arab. *Chororoh, found in Egypt and the deserts of Arabia, wherever the mountains are covered with rich soil. The tree producing the famous flowers called *Hebra, is found many days' journey from that place in Arabia Petrae. Linnaeus, after some hesitation, decided that it was a species of *Amela. *Libnanum frankincense is mentioned by Hasselquist as a product of the desert; but the producing tree appears to be the same as that which yields the gum arabic, namely, the plant called *Sm FRONT. The same writer mentions the *Schen ruthus officinalis, 'camel's hay,' as growing plentifully in the deserts of both the Arabs and Egyptians, and regards it as undoubtedly one of the precious, aromatic, and sweet plants, which the Queen of Sheba gave to Solomon (Hasselquist, pp. 255, 288, 296, 297; comp. pp. 299, 301, 509). Fuller details on the facts of natural history of the region will be found in the writers referred to, and some additional authorities may be found in Sprenger, *Historia Rei Hebr., vol. ii.

Besides these, the cultivation of the ground by the Sinnite monks has enriched their domain with the choicest fruit-trees, and with a variety of other trees. The produce of the barren is found in the markets. *Urticae, *Euphorbiaceae, *Euphorbia, *Erythraea, *Habers, *Haberi, *Pelargonium, are visible far away among the mountains, and there is a single conspicuous one near the *cave of *Elah on *Jebel *Mas. Besides, they have the silver and the common poplar, with other trees, for timber or ornament. The apricot, apple, pear, quince, almond, walnut, pomegranate, olive, vine, citron, orange, cornelian cherry, and two fruits named in the Arabic *silkbalib and *banyul, have been successfully naturalized there (Robinson, l. c., 94: Sectian, l. 70, &c.; Hasselquist, p. 425: *E. *P. p. 52). Dr. Stanley views these as mostly introduced from Europe: Hasselquist on the contrary views them as being the originals whence the finest varieties we have in Europe were first brought. Certainly nearly all the above trees are common enough in the gardens of Palestine and Damascus.

[The present writer wishes to acknowledge the kindness of the Rev. R. S. Tyrwhitt of Oxford, in allowing him a sight of a valuable MS. read by that traveller before the Alpine Club. It is expected to be published in the Journal of that body, *E. *Shorhs ibn el-Faraj *zahib (Forskål, Ela. Egypt. op. Freyt.). Succory or endive. Cor. Iridis (MS. notes).

*E. *Halal, nomen plantae regionis Neljib peculiaris en est bis; caulis exiguis; *Lacor; *Ruta (Freyt.).

*E. *Zardly preventing. Lotus-plant (Freyt.). Distinct, it should seem, from the bete-tree, or *Abin * specie of the bird-6 foot trefoil? Melilot (MS. not MS. note).

*E. *Conifrey (MS. notes).
but was not in print when this paper went to press. The references to Mr. Tyrlvitt in the preceding article, either relate to that MS., or to his own remarks upon the article itself, which he inspected whilst in the proof sheet.)

H. H.

* The desert of e-Tih, which is so thoroughly treated in this article, is being traversed at the present time (1870), under the auspices of the Palestine Exploration Fund, by Mr. W. E. Palmer, who has had large experience as an eastern traveller, and is familiar with the Arabic language; aided by Mr. C. E. Tyrlvitt Drake, of the University of Cambridge, who is making observations as a naturalist. Two letters have been published from Mr. Palmer (Quart. Statement of the Pal. Expl. Fund, No. v., pp. 254-258), dated at Medinâ, the point from which his exploration of the interior region of the Tih commences. His investigations, if completed, promise to throw light on difficult, obscure, and unknown points, relating to this deeply interesting tract. Compare addition to Sinaí, Amer. ed.

S. W.

* An addition to the present article, giving the important results of the exploration referred to, has been expected from the Rev. E. J. Holwell, member of the Royal Geog. Society. Should it be received in season, it will appear at the end of this volume.

A.

* WILL is often used in the A. V. of the N. T. in such a way that the force of the original is lost or obscured to the common reader, who takes it as merely the sign of the future tense, though it really represents θλω or βληχαμαι, "to desire," "to will," and to purpose." Thus "Hesper will kill thee" (Luke xiii. 31) means "Hesper desiers (or designs) to kill thee." (θελήσαι ἵνα μετασφημασίας.) "The last of your father ye will do" (θελήσαι πόνειος, John viii. 44), better "ye love to do" (Afroy), or, "ye are ready to do" (Noyes). "I will put you in remembrance" (δια θλῆς, βληχαμαί, etc.), should be "I wish to remind you" (Noyes). For other examples, see Matt. v. 40, xi. 14, 27, xxvi. 24, 25, xx. 27, Mark viii. 34, 35, x. 43, 44; Luke ix. 23, 24, x. 22; John iv. 40, vii. 17, ix. 27; Rom. xiii. 3; 1 Cor. xiv. 35; 1 Tim. v. 11; 2 Tim. iii. 12; Rev. iii. 5.

WILLOWS (월, arbition, only in pl. :)

When willows were to be used in the construction of booths at the Feast of Tabernacles; in Job xii. 22, as a tree which gave shade to Benothon ("the hippopotamus"); in Is. xiv. 4, where it is said that Israel's offspring should spring up as willows by the water-courses; in the psalm (xxixii. 2) which so beautifully represents Israel's sorrow during the time of the Captivity in Babylon, — "we hanged our harps upon the willows in the midst thereof." With respect to the tree upon which the captive Israelites hung their harps, there can be no doubt that the weeping-willow (Saliæ Bulbogonîa) is intended. This tree grows abundantly on the banks of the Euphrates, in other parts of Asia as in Palestine (Strabo's Flora Palaestina, No. 756), and also in North Africa. Forskal has endeavored to show (Phalag., 1. cap. viii.) that country is spoken of, in Is. xvi. 7, as "the Valley of Willows." This, however, is very doubtful. Sprengel (Huet. Roi Herb. i. 18, 270) seems to restrict the "willow to the Saliæ Bulbogonîa; but there can scarcely be a doubt that the term is generic, and includes other species of the large family of Saliæ, which is probably well represented in Palestine and the Bible lands, such as the Saliæ albâ, S. crimínale (cosier), S. ägyptiaca, which latter plant Sprengel identifies with the salsaf (سالمفی) of Abulfidi, cited by Celsius (Hierot. l. 108), which word is probably the same as the Taphwâlîshâf (تافوُلِشَادُ) of Ezekiel (xviii. 5), a name in Arabia for a willow." Bârâkiard (Syrie, p. 644), mentions a fountain called "Ain Salsaf (عین صمالف), = the Willow Fountain." (Catafago, Arabic Dictionary, p. 1051). Ranwell (quoted in Boh. Bibl. p. 274) thus speaks of the salsaf: "These trees are of various sizes: the stems, branches, and twigs are long, thin, soft, and of a pale yellow, and have some resemblance to those of the birch: they are like those of the common willow: on the boughs grow here and there shoots of a span long, as on the wild fig-trees of Cyprus, and the flat, spreading tender shoots of the blossoms like those of the poplar: the blossoms are pale colored, and of a delicious fragrance; the natives pull them in great quantities, and distil from them a cordial which is much esteemed." Hasselquist (Text. p. 449), under the name of calab, apparently speaks of the same tree: and Forskål (Descript. Plant. p. xxvii.) identifies it with the Saliæ Albâ, which he considers the salsaf to be the S. Bulbogonîa. From these discrepancies it seems that the Arabic words are used indefinitely for willows of different kinds.

"The children of Israel," says Lady Calcutt (Scripture Harvel, p. 533), "still present willows annually in their synagogues, bundled up with palm and myrtle, and accompanied with a citron." In the time of our Lord, this was known, in Spain, to be the ordinary willow species; under the name of "palmes," are often carried in the hand, or borne on some part of the dress, by men and boys on Palm Sunday.

Before the Babylonish Captivity the willow was always associated with feelings of joyful prosperity. "It is remarkable," as Mr. Johns (The Forest Trees of Britain, ii. 240) truly says, "for having been in different ages emblematical of two directly opposite feelings, at one time being associated with the palm, at another with the cypress." After the Captivity, however, this tree became the emblem of sorrow, and is frequently thus alluded to in the poetry of our own country; and "there can be no doubt," as Mr. Johns continues, "that the dedication of the willow to sorrow is to be traced to the pathetic passage in the Psalms."

Various uses were no doubt made of willows by the ancient Hebrews, although there does not appear to be any definite allusion to them. The Egyptians used [132] baskets of wickerwork, similar to those made in Cairo at the present day" (Wilkinson, Anc. Enq. l. 49). Herodotus (i. 194) speaks of boats at Babylon whose framework was of willow; such eel-shaped boats are represented in the Nineveh sculptures (see Rawlinson's Herodotus, vol. i. p. 268).

WILLOWS, BROOK OF THE
Over this name Jerome takes a singular flight in his Commentary on Is. xv. 7, connecting it with the "Oribius (A. V., "ravens")" who fed Elijah during his seclusion: "Pro solicius in Hebrew leg-
nins "Oribinus" Arabic quod potest et Arabes intelligi et lez
Orihun: id est vinus in finibus eorum sita cujus a"beric aemula in Monte Oreb Elisha praeclarae ali-
menta dicerunt: . . . ."

The whole passage is a curious mixture of topographical confusion and what would now be denounced as rationalism.

G.

WILLS. The subject of testamentary disposition is of course intimately connected with that of inheritance, and little need be added here to what will be found above. [HEB. VOL. ii. P. 1034 F]

Under a system of close inheritance like that of the Jews, the scope for bequest in respect of land was limited by the right of redemption and general re-
entry in the Jubilee year. [JEREM. V. 18] But the Law does not forbid bequests by will of such limited interest in land as was consistent with those rights. The case of houses in walled towns was different, and there can be no doubt that they must, in fact, have frequently been bequeathed by will (Lev. xxv. 30). Two instances are recorded in the O. T. under the Law, of testamentary disposi-
tion: (1) effected in the case of Ahitophel (2 Sam. xvii. 21); (2) recommended in the case of Hezekiah (2 K. xx. 1; Is. xxxviii. 1); and it may be remarked in both, that the word "set" is intended in order, margin;
give charge concerning," agrees with the Arabic word "command," which also means "make a will." (Michaelis, Law of Moses, art. 80, vol. i. p. 439, ed. Smith). Various directions concerning wills will be found in the Mishna, which imply dispo-
sion of land (Bek. El. viii. 6, 7).

H. W. P.

WIMPLE (וימפל). An old English word for hood or veil, representing the Hebrew ניימה-
chath in Is. iii. 22. The same Hebrew word is translated "veil" in Ruth iii. 13, but it signifies rather a kind of shawl or mantle (Schroeder, De Vestita Mutter, Hebr. c. 16). [DRESD. 332 b.;] W. L. P.

WINDOW (תיכנ, Chat. יפנ; ספיאס). The window of an oriental house consists generally of an aperture in an upper story window-frame, lined with lattice-work, named in Hebrew by the terms ספיאס or ספיאס (Exod. viii. 2, A. V. "window"); Is.
xiii. 3, A. V. "chimney"), שופדיש or (Cant. ii.
10), and ספיאס (Judg. v. 28; Prov. vii. 6, A. V.
"ascension"), the two former signifying the inter-
ized work of the lattice, and the third the coolest
produced by the free current of air through it.
Glass has been introduced into Egypt in modern
times as a protection against the cold of winter,
but lattice-work is still the usual, and with this
even the support that it was in the Prophet's native
district. Amos was no "prophet of the Nebeg." He
belonged to the pasture-grounds of Tekoa, not ten
miles from Jerusalem, and all his work seems to have
tained in Bashan; and the northern kingly province
was not one of the boundaries of the country; — prob-
ably, in the opinion of Gesenius, the Kidron.

It is surely inexact (to say the least) to speak of a mere conjecture, such as this, in terms as poitive-
and uninteresting as if it were a certain and indis-
pensable identification — "Amos is the only sacred writer who mentions the Wady el-Jeb; which he defines as the main stream of Palestine (as the word "Chal" implicaes) closed in the
history of the Prophet in speaking of it as the "meadial
of the Arabah" (Nebg, etc., pp. 31, 35). It has not
"Amos is speaking of the northern kingdom only, not
of the whole nation, which excludes the interpre-
tation of the LXX. i.e., probably, the Wady el-Jeb; and
also (if it were not precluded by other reasons) that of theocritus, the Kidron.

It is purely conjectural (to say the least) to speak of a mere conjecture, such as this, in terms as positive-
and uninteresting as if it were a certain and indis-
pensable identification — "Amos is the only sacred writer who mentions the Wady el-Jeb; which he defines as the main stream of Palestine (as the word "Chal" implicaes) closed in the
history of the Prophet in speaking of it as the "meadial
of the Arabah" (Nebg, etc., pp. 31, 35). It has not
"Amos is speaking of the northern kingdom only, not
of the whole nation, which excludes the interpre-
tation of the LXX. i.e., probably, the Wady el-Jeb; and
also (if it were not precluded by other reasons) that of theocritus, the Kidron.

WINDS

WINDS (\textit{\textgreek{vina}}). That the Hebrews recognized the existence of four prevailing winds as fishing, broadly speaking, from the four cardinal points, north, south, east, and west, may be inferred from their custom of using the expression "four winds," as equivalent to the "four quarters" of the hemisphere (\textit{Ps.} xxviiii. 9; \textit{Neb.} xii. 8; \textit{Zech.} ii. 5; \textit{Matt.} xxi. 31). The correspondence of the two ideas is expressly stated in \textit{Jer.} xix. 36. The north wind, or, as it was usually called - the north, \textit{\textgreek{bosoph}}, was naturally the coldest of the four (\textit{Ez.} xiii. 4), and its presence is invoked as favorable to vegetation in \textit{Cant.} iv. 16. It is further described in \textit{Prov.} xxvi. 23, as bringing (\textit{A. V.}, "driveth away"
 in text; "bringeth forth" in marg.) rain: in this case we must understand the northeast wind, which may bring rain, but was certainly not regarded as beneficially rainy. The difficulty connected with this passage has led to the prepositional wind, different sense for the term \textit{zephon}, namely \textit{baphon} place. The northwest wind prevails from the autumnal equinox to the beginning of November, and the north wind from June to the equinox (\textit{vide Ramsay's Palæst.}, p. 74). The east wind crosses the sandy wastes of Arabian Desert before reaching Palestine, and was hence termed the desert wind and the wilder (\textit{Job} ii. 19; \textit{Jer.} xiv. 18). It is remarkably dry and penetrating, and has all the effects of the \textit{zephirum} on vegetation (\textit{Ex.} xvi. 10; \textit{Hos.} xii. 12; \textit{Job.} iv. 8). It also blows with violence, and is hence supposed to be used generally for any violent wind (\textit{Job} xxviiii. 21, xxviiii. 24; \textit{Ps.} lvi. 7; \textit{Is.} xxviiii. 5; \textit{Ex.} xxviiii. 26). It is probably in this sense that it is used in \textit{Ex.} xiv. 21, though the east, or at all events the northeast wind was to be the one adapted to effect the phenomenon described, namely, the separation of the waters towards the north and south, so that they stood as a wall on the right hand and on the left (\textit{Robinson, Bibl. R. S.} i. 27). This in all other passages, the LXX. gives the "south wind" (\textit{aithribal}), as the equivalent for the Greek \textit{\textgreek{zephon}}.

\textit{\textgreek{isidela}}. Nor is this wholly incorrect, for in \textit{Egypt}, where the LXX. was composed, the south wind has the same characteristics that the east has in Palestine. The Greek translators appear to have felt the difficulty of rendering \textit{\textgreek{isidela}} in \textit{Gen.} xlii. 6, 23, 27, because the \textit{parching} effects of the east wind, with which the inhabitants of Palestine are familiar, are not attributable to that wind in Egypt, but either to the south wind, called in that country the \textit{bathh}\textit{\textgreek{lo}n}, or to that known as the \textit{gammon}, which comes from the southeast or south-southeast (\textit{Lam.} xliii. 1; \textit{Ps.} xxii. 23). It is certainly possible that in lower Egypt the east wind may be more parching than elsewhere in that country, because there is no more difficulty in assigning to the term \textit{\textgreek{isidela}} the secondary sense of \textit{parching}, in this passage, than of \textit{violating} in the others before quoted. As such are all events the LXX. treated the term both here and in several other passages, where it is rendered \textit{knous} (\textit{diaphoro?}, i.e. the burner). In \textit{James} i. 11, the A. V. erroneously understands this expression of the burning heat of the sun. In Palestine the east wind prevails from February to June (\textit{vide Ramsay, p. 79}). The south wind, which travels through the valley between the mountains, is necessary to the climate of Palestine; and must necessarily be extremely hot (\textit{Job} xlii. 22; \textit{Luke} xlii. 55); but the rarity of the notices leads to the inference that it seldom blew from that quarter (\textit{Ps.} xxviiii. 20; \textit{Cant.} iv. 10; \textit{Ecclus.} xiii. 14; and even when it does blow, it does not carry the \textit{gammon} into Palestine itself, although Robinson experienced the effects of this southerly wind far south of Beer-sheba (\textit{R. S.} i. 196). In \textit{Egypt}, the south wind (\textit{bathh}\textit{\textgreek{lo}n}) prevails in the spring, a portion of which in the months of April and May is termed \textit{beckhounasen} from that circumstance (\textit{Lam.} i. 22). The west and southwest winds reach Palestine loaded with moisture gathered from the Mediterranean (Robinson, i. 429), and are hence expressively termed by the Arabs father of the "rain" (\textit{vide Ramsay, p. 79}). The west wind, as a "man's hand" that rose out of the west, was recognized by Elijah as a prelude of the coming downfall (1 \textit{K.} xviii. 44), and the same token is abashed by our Lord as one of the ordinary signs of the weather (\textit{Luke} xlii. 14). Westerly winds prevail in Palestine from November to February.

In addition to the four regular winds, we have notice in the Bible of the local equals (\textit{Akhaph}; Mark iv. 37; \textit{Luke} xlii. 23) to which the Sea of Gennesaret was liable in consequence of its proximity to high ground, and which were sufficiently violent to endanger boats (\textit{Matt.} viii. 24; \textit{John} vi. 18). The gales which occasionally visit Palestine are noticed under the head of \textit{Whirlwind}. In the narrative of St. Paul's voyage we meet with the Greek term \textit{lyco} (\textit{Aph}) to describe the southwest wind; the Latin \textit{Cossus} or \textit{Coursus} (\textit{xhipo}), the northwest wind (\textit{Acts} xxi. 12); and \textit{phrakladon} (a term of uncertain origin, perhaps a corruption of \textit{phraklo}, which appears in some MSS.}

\textit{\textgreek{silyphos}} (\textit{\textgreek{silyphos}})(\textit{\textgreek{silyphos}}) in \textit{Ps.} xlii. 6 (A V "horrible") has been occasionally understood as referring to the \textit{gammon} (\textit{Oisikasen}, in loc.; \textit{Gesen. Thes.}\ p. 485); but it may equally well be rendered "south full" or "suffocating" (\textit{Heftensberg, in loc.}).
drunk as must, but more generally it was bottled off after fermentation, and, if it were designed to be kept for some time, a certain amount of lees was added to give it body (Is. xxv. 6). The wine consequently required to be "refined" or strained previously to being brought to table (Is. xxv. 6).

The produce of the wine-press was described in the Hebrew language by a variety of terms, indicative either of the quality or of the use of the liquid. These terms have of late years been subjected to a rigorous examination with a view to show that Scripture approves, or, at all events, does not speak with approval, of the use of unfermented wine. In order to establish this position it has been found necessary, in all cases where the substance is coupled with terms of commendation, to explain them as meaning either unfermented wine or fruit, and to restrict the notices of fermented wine to passages of a condemnatory character. We question whether the critics who have adopted these views have not driven their arguments beyond their fair conclusions. It may at once be conceded that the Hebrew terms translated "wine" refer occasionally to an unfermented liquor; but inasmuch as there are frequent allusions to intoxication in the Bible, it is clear that fermented liquors were also in common use. It may also be conceded that the Bible occasionally speaks in terms of strong condemnation of the effects of wine; but it is an open question whether in these cases the condemnation is not rather directed against intoxication and excess, than against the substance which is the occasion of the excess. The term of chief importance in connection with this subject is treisw, which is undoubtedly spoken of with approval, inasmuch as it is frequently classed with "dara and theemân, in the triplet "corn, wine, and oil," as the special gifts of Providence! This has been made the subject of a special discussion in a pamphlet entitled Treisw lef Yâgân by Dr. Lees, the object being to prove that it means not wine but fruit. An examination of the Hebrew terms is therefore unavoidable, but we desire to try it out simply as a matter of biblical criticism, and without reference to the topic which has called forth the discussion.

 advertised one another by sweet and eries (Is. xvi. 19; Jer. xxv. 30, xlvi. 33). Their legs and garments were laced red with the juice (Gen. xii. 11; Is. xiii. 2, 3). The express juice escaped by an aperture into the lower vat, or was at once collected in vessels. A handpress was accidentally used in Egypt (Wilkinson, i. 45), but we have no notice of such an instrument in connection with the treatment of the wine, we have but little information. Sometimes it was preserved in its unfermented state, and

---

*The word translated "oil" when "wine and oil" or "corn, wine, and oil" are spoken of in conjunction is not theemân ("שָׁם", but abish ("אָבִיש"), which, according to Gesenius, "seems to differ from Prosecution to the topic which has called forth the discussion.
The most general term for wine is *vynis,* which is undoubtedly connected with the Greek *dros,* the Latin *vinum,* and our "wine." It has hiterto
been the current opinion that the Indo-European languages borrowed the term from the Hebrews.

The reverse, however, appears to be the case (Re-
man, Long. Sem. i. 207); the word belongs to the
Indo-European languages, and may be referred
either to the root *sceir,* "to weave," whence come
*civer, viinum, vitus, viitum* (Pott, Etym. Forsch. i.
129, 230), or to the root *wam,* "to love." (Kuhn,
Zeitschr. f. vergl. Sprachforsch. i. 191, 192). The
word being a borrowed one, no conclusion can be
drawn from etymological considerations as to its
use in the Hebrew language. *Tirisr* is referred
to the root *pi€vii,* "to get possession of," and is
applied, according to Gesenius (Thes. p. 673), to
wine on account of its incrusting qualities, where
*it gives possession of the brain; but, according to
Ritger, as quoted by Lesi (Tirisr, p. 58), to the
vine as being a *possessio* (sax' €v€x)i in the
eyes of the Hebrews. Neither of these explanations
is wholly satisfactory, but the second is less
so than the first, insomuch as it would be difficult
to prove that the Hebrews attached such pre-
eminent value to the vine as to place it on a par
with bailed property, which is designated by the
cognate terms *perve€UNSAY and *suk€bUH. Now
we see that any valuable conclusion could be drawn
from this latter derivation: for, assuming its cor-
rectness, the question will still arise whether it
was on account of the natural or the manufactured
product that such store was set on the vine.

"Soe" is derived from a word signifying "to
tread," and therefore refers to the method by
which the juice was expressed from the fruit.
It would very properly refer to new wine as being
recently trodden out, but not necessarily to unfer-
mented wine. It occurs but five times in the Bible
(Cant. viii. 2; Is. xix. 26; Joel i. 5, iii. 18; Am.
ix. 13). *Sibe* is derived from a root signifi-
ating "to soak" or "drink to excess." The
vaguate verb and participle are constantly used in
the latter sense (Dent. xxi. 29; Prov. xxiii. 29, 21);
Is. lv. 22; Nah. i. 10). The connection between
sibe and the Latin *suiea,* applied to a dejection of
must (*Kitto's Cyclo. s. v. Wine*), appears doubt-
ful; the latter was regarded as a true Latin word by
Pliny (xiv. 11). *Sibe* occurs but thrice (Is. i. 22;
Hos. iv. 18; Nah. i. 10). *Cewor* (Dent. xxii.
11), in the Chaldee *cawor,* (Ezr. vi. 9, vii. 22;
and *chawor* (Dan. v. 1 4)), conveys the notion of
*feasting or libation," and may equally well apply
to the process of fermentation or to the frothing
of liquid freshly poured out, in which latter case it
might be used of an unfermented liquid.
*Meves* (Ps. xxxv. 8, *meray* (Cant. vii. 2); and *minaves* (Prov. xxiii. 20; Is. xiv. 11), are connected ety-
mosologically with *sibe* and "mix," and imply a
mixture of wine with some other substance: no
conclusion can be drawn from the word itself as to
the quality of the wine, whether fermented or
unfermented, or as to the nature of the substance
introduced, whether spices or water. We may
further notice *sheker,* a generic term applied to all
fermented liquors except wine [DINNE, NETTIA].

*Chumet,* a weak sour wine, ordinarily termed
*vynept* [VINEGAR]; *asababib* rendered "fagen
of wine" in the A. V. (2 Sam. xvi. 1; 1 Chr.
xvi. 2; Cant. ii. 5; Hos. iii. 1), but really meaning
a cake of pressed raisins; and *shopaniim,* properly
meaning the "less" or dregs of wine, but in Is.
xxv. 6 transferred to wine that had been kept
on the lees for the purpose of increasing its body.
In the New Testament we meet with the terms:
*ovos,* answering to *vynis* as the general
designation of wine; *glebas* properly sweet wine
(Acts ii. 13; Is. lii. 1); *diaper* the special form of the
Hebrew sheker or *cawor* (wine). In Rev. xiv.
10 we meet with a singular expression, "literally
meaning mixed manized, evidently referring to the
custom of mingling wine: the two terms cannot
be used together in their literal sense, and hence
the former has been explained as meaning "poured
out." (De Wette in l. c.)

From the terms themselves we pass on to an
examination of such passages as seem to elucidate
their meaning. Both *vynis* and *tirisr* are oca-
sionally connected with expressions that would
apply properly to a fruit: the former, for instance,
with verbs significant of gathering (Jer. xl. 10, 12,
and growing (Ps. iv. 14, 16); the latter with gath-
ering (Is. lii. 1; A. V. "he brought the fruit"),
(Mic. vi. 16), and wandering (Is. xxiv. 7; Joel i. 10).
So again the former is used in Num. vi.
4 to define the particular kind of tree whose
products were forbidden to the Nazarite, namely,
the "pomegranate of the vine;" and the latter in
Judg. ix. 13, to denote the product of the vine.
It should be observed, however, that in most, if not all
the passages where these and similar expressions
occur, there is something to denote that the fruit is
regarded not simply as fruit, but as the raw mate-
rial out of which wine is manufactured. Thus,
for instance, in Ps. cix. 15 and Judg. ix. 13 the
delicacy effects of the product are noticed, and that
these are more suitable to the idea of wine than of
fruit seems self-evident: in one passage indeed the
A. V. connects the expression "make cheerful"
with bread (Zech. ix. 17), but this is a mere mis-
translation, the true sense of the expression there
used being to *enourage or make grow*. So, again,
the *treading of the grape* in Mic. vi. 15 is in itself
conclusive as to the pregnant sense in which the
term tirisr is used, even if it were not subsequently
implied that the effect of the treading was in the
ordinary course of things to produce the *vynis*
which was to be drunk. In Is. kh. 9 the object of the
gathering is clearly conveyed by the notice of
shaking.

In Is. xxiv. 7 the *tirisr,* which withers, is paralleled with *vynis* in the two follow-
ing verses. And lastly, in Is. xxxv. 8 the nature of
the tirisr, which is said to be found in the cluster
of the grapes, is not obscurely indicated by the sub-
squent subje€Un, "a blessing is in it." That the
terms "wine" and "wine" should be thus inter-
changed in poetical language calls for no explana-
tion. We can no more infer from such instances
that the Hebrew terms mean grapes as *fruit*,
than we could infer the same of the Latin *vinum*
because in some two or three passages (Platt.
Trin. ii. 1, 125; Varr. de L. li. 17; Catu. R. R.

The impression produced on the mind by a general review of the above notices is, that both grog and Irish in their ordinary and popular acceptation are referred to fermented, intoxicating wine. In the condemnatory passages no exception is made in favor of any other kind of liquid passing under the same name but not invested with the same dangerous qualities. Nor again in these passages is there any decisive condemnation of the substance itself, which would enforce the conclusion that elsewhere, where an unmatured liquid must be understood. The condemnation must be understood of excessive use in any case: for even where this is not expressed, it is implied: and therefore the instances of wine being drunk without any reproof of the act, may with as great a probability imply the moderate use of an intoxicating beverage, as the use of an unfermented one.

The notices of fermentation are not very decisive. A certain amount of fermentation is implied in the distillation of the leather bottles when new wine was placed in them, and which was liable to burst old bottles. [Bottle.] It has been suggested that the object of placing the wine in bottles was to prevent fermentation: but that the preservation of wines in leather bottles fermentation might ensue from their being impregnated with the fermenting substance" (Ti-rosh, p. 61). This is not inconsistent with the statement in Matt. ix. 17, but it detracts from the spirit of the comparison which implies the presence of a strong, expansive, penetrating principle. It is, however, inconsistent with Job xxxii. 19, where the wine is described as occurring even in earthen bottles. It is very likely that new wine was preserved in the state of must by placing it in jars or bottles, and then burning it in the earth. But I should be inclined to understand the passages above quoted as referring to wine drawn off before the fermentation was complete, either for immediate use, or for the purpose of forming it into sweet wine after the manner described by the teetotal writers (vii. 19) (Vice of Ant. - Vinum) "The presence of the gas-bubble, as, or the Hebrews termed it, "the eye" that sparkled in the cup (Prov. xxiii. 31), was one of the tokens of fermentation having taken place, and the same effect was very possibly implied in the name kudar.r.

The reference to terms call for but few remarks. There can be no question that nosa means wine, and in this case it is observable that it forms part of a Divine promise (Job iii. 18; Am. ix. 13) very much as Ti-rosh occurs elsewhere, though other notices imply that it was the occasion of excess (Ixxx. 21; Joel i. 5). Two out of the three passages in which sbe occurs (Is. 1:22; Nah. i. 10) imply a liquid that would be spoiled or soured (the expression in Is. i. 22, akibah, A. V. - mixed," a supposed to convey the same idea as the Latin vinaeque applied to wine in Plin. xix. 19) by the application of water; we think the passages quoted favor the idea of strength rather than sweetness being the characteristic of sbe. The term occurs in Hos. iv. 18, in the sentence describing the verb accompanying it has no connection with the notion of acidity, but would more properly be rendered "is past." The mingling implied in the term mesek may have been designed either to buy "sweet," and hence expresser in itself the substance to be eaten.

a An apparent instance occurs in Is. iv. 1, where the "buy and eat" has been supposed to refer to the "buy wine and milk," which follows (Verse, p. 94). But the term rendered "buy" properly means to
increase, or to diminish the strength of the wine, according as spices or water formed the ingredient that was added. The notices chiefly favor the former view: for mangled liquor was prepared for high festivals (Prov. ix. 2, 5), and occasions of excess (Prov. xxiii. 30; Is. v. 22). A cup "full mixed," was emblematic of severe punishment (Ps. lvii. 7). At the same time strength was not the sole object sought in the wine; "mangled with myrrh," given to Jesus, was designed to deaden pain (Mark xv. 23), and the spices pomegranate wine prepared by the bride (Cant. vii. 2) may well have been "of a mild character. Both the Greeks and Romans were in the habit of flavoring their wines with spices, and such preparations were described by the former as wine "εἰ δὲ ἀποκαθαρισμὸς καταρακτικῶν καρακτικῶν" (Athen. i. p. 31 e), and by the latter as "aromatics" (Plin. xiv. 10, § 5). The authority of the Mishna may be cited in favor both of water and of spices, the former being noticed in Berach. 7, § 5; Pesach. 7, § 13, and the latter in Schen. 2, § 1. In the New Testament the character of the "sweet wine," noticed in Acts ii. 13, and for some like remark. It was "the purest wine in the proper sense of the term, inasmuch as about eight months must have elapsed between the vintage and the feast of Pentecost. It might have been applied, just as mustum was by the Romans, to wine that had been preserved for about a year in an unfermented state (Cato, R. R. c. 129). But the explanations of the ancient lexigraphers rather lead us to infer that its license qualities were due, not to its being recently made, but to its being produced from the very purest juice of the grape: for both in Hebrews and the Eucharistic Magnificat the term γάλακτος is explained to be the juice that flowed spontaneously from the grape before the treading commenced. The name itself, therefore, is not conclusive as to its being an unfermented liquor, while the context implies the reverse: for St. Peter would hardly have offered a serious defense to an accusation that was not seriously made; and yet if the sweet wine in question was not intoxicating, the accusation could only have been ironical. As considerable stress is laid upon the quality of the grapes, it is disengaged from strength, supposed to be implied in the Hebrew terms meek and sīle, we may observe that the usual term for the insipid and coloring addition of wine, which was characterized more especially by sweetness, was δισκύλλος, rendered in the L. V. "honey" (Gen. xxiii. 11; Exx. xvii. 17). This was prepared by boiling it down either to a third of its original bulk, in which case it was termed Σέρες by the Latins, and δισκύλλος by the Greeks, or else to half its bulk, in which case it was termed διενομένον (Plin. xiv. 11). Both the substance and the name, under the form of sīte, are in common use in Syria at the present day. We may further notice a less artificial mode of producing a sweet liquor from the grape, namely, by pouring the juice directly into the cup, as described in Gen. xi. 11. And, lastly, there appears to have been a beverage, also of a sweet character, produced by macerating grapes, and hence termed the liquor "ζωή" of grapes (Num. vi. 3). These latter preparations are allowed in the Koran (xvi 69) as substitutes for wine. There can be little doubt that the wines of Pal

\[ \text{WINE} \]

\[ \text{estine varied in quality, and were named after the localities in which they were made. We have no notices, however, to this effect. The only wines of which we have special notice, belonged to Syria: these were the wine of Helbon, a valley near Damascus, which in ancient times was praised at Tyre (Ez. xxvii. 18) and by the Persian monarchs (Neh. xx. v. 75), as it still is by the residents of Damascus (Porter, Damascus, i. 333); and the wine of Lebanon, famed for its aroma (Hos. xiv. 7). With regard to the uses of wine in private life there is little to remark. It was produced on occasions of ordinary hospitality (Gen. xiv. 18), and at festivals such as marriages (John ii. 3). The monuments of ancient Egypt furnish the fullest evidence that the people of that country, both male and female, indulged liberally in the use of wine (Wilkinson, i. 52, 53). It has been inferred from a passage in Phutarch (de Isb. 6) that no wine was drunk in Egypt before the reign of Psammetichus, and this passage has been quoted in illustration of Genesis xiv. 11. The meaning of the author seems to be that the kings subsequently to Psammetichus did not restrict themselves to the quantity of wine prescribed to them by reason of their sacred office (Dodd, i. 70). The cultivation of the vine was incompatible with the conditions of a military life, and it was probably on this account that Josiah, wishing to perpetuate that kind of life among his posterity, prohibited the use of wine to them (2 Chr. xxxv. 12). The case is exactly parallel to that of the Nabataeans, who abstained from wine on purely political grounds (Dodd. xiv. 94). Under the Mosaic Law wine formed the usual drink-offering that accompanied the daily sacrifice (Ex. xxix. 40); the presentation of the first-fruits of the vintage (Lev. xix. 11); and other offerings (Num. xvi. 15). It appears from Num. xxviii. 7 that strong drink might be substituted for it on these occasions. Title was to be paid of wine (ἱροῦκος) as of other products, and this was to be consumed "before the Lord," meaning within the precincts of the Temple, or perhaps, as may be inferred from Lev. vii. 10, at the time the Temple was situated between the two gates (xxvii. 17, 18). The priest was also to receive first-fruits of wine (ἱροῦκος), as of other articles (Dent. xviii. 4; comp. Ex. xx. 21); and a promise of plenty was attached to the faithful payment of these dues (Prov. iii. 9, 10). The priests were prohibited from the use of wine and strong drink before performing the services of the Temple (Lev. x. 9), and the place which this prohibition holds in the narrative favors the presumption that the offense of Nadab and Abihu was committed under the influence of liquor. Ezekiel repeats the prohibition as far as wine is concerned (Ez. xiv. 21). The Nazarite was prohibited from the use of wine, or strong drink, or even the juice of grapes during the continuance of his vow (Num. vi. 2-4); but the adoption of the vow was a voluntary act. The use of wine at the paschal feast was not enjoined by the Law; but had become an established custom, at all events in the post-Babylonian period. The cup was handed round four times according to the ritual prescribed in the Mishna (Pesach. 10, § 1), the third cup being designated the cup of blessing, "(1 Cor. x. 16). The word was then said (Pesach. 10, § 7). [PANNONIUM.] The contents of the cup are specifically described by our Lord as "the fruit (γύρυμα) of the vine (Matt. xxvi. 29; Mark xiv]
Pet. A. W. substituted It on early events, these wine. 
 scourmaceutical use of wine on the part of all holding office in the Church; as that they should not be ψάρμοι (Greek, σαρμοί) to the sensual and violent under the influence of wine: “not given to much wine” (1 Tim. iii. 8); “not consulved to much wine” (Tit. ii. 3). The term ρυγάδειας in 1 Tim. iii. 2 (A. V. “sober”), expresses general vigilance and circumspection (Schaeusser, Lex. s. v.; Allford, in loc.). St. Paul advises Timothy himself to be no longer a habitual water-drinker, but to take a little wine for his health’s sake (1 Tim. v. 23). No very satisfactory reason can be assigned for the place which this instruction holds in the epistle, unless it were intended to correct any possible mis-apprehension as to the preceding words, “Keep thyself pure.” The precepts above quoted, as well as others to the same effect, are made to teach the disciples generally (Rom., vii. 13; Gal. v. 21; 1 Pet. iv. 3), show the extent to which incontinency prevailed in ancient times, and the extreme danger to which the Church was subjected from this quarter. 

W. L. B.

A. * WINE-FAT. [Wine-Press.]

WINE-PRESS (ψιρας, πηγάδιον). From the scanty notices contained in the Bible we gather that the wine-presses of the Jews consisted of two receptacles or vats placed at different elevations, in the upper one of which the grapes were trodden, while the lower one received the expressed juice. The two vats are mentioned together only in Joel ii. 13: “The press (ψιράς) is full: the fats (γαλείδια) overflow” — the upper vat being full of fruit, the lower one overflowing with the must. Yekel is similarly applied in Joel ii. 24, and probably in Prov. iii. 10, where the verb rendered “burst out” in the A. V. may bear the more general sense of “overflow.” In Neh. xiii. 15, Lxx. i. 15, and Is. xiii. 2, with παράθεια in a parallel sense in the following verse. Elsewhere yekel is not strictly applied: for in Job xxiv. 11, and Jer. xlviii. 33, it refers to the upper vat, just as in Matt. xxi. 33, ὁ σπαλαίης (properly the vat under the press) is substituted for ἀγάδιον, as given in Mark xvi. 1. It would, moreover, appear natural to describe the whole arrangement by the term γαλεύς, as denoting the most important part of it; but, with the exception of proper names in which the word appears, such as Gal. Galakémon, Gath-himmon, Gath-heber, and Gittaim, the term yekel is applied to it (Judg. vii. 25; Zech. xiv. 10). The same term is also applied to the produce of the wine-press (Num. xvii. 27, 30; Deut. xv. 11; 2 K. vi. 27; Hos. ix. 2). The term παράθεια, as used in Hag. ii. 16, probably refers to the contents of a wine vat, “as to the vessel,” as Dr. G. W. B. Dyer observes (Zech. xiv. 10). The two vats were usually dug or hewn out of the solid rock (Is. v. 2, margin; Matt. xxi. 33). Ancient wine-presses, so constructed, are still to be seen in Palestine, one of which is thus described by Robinson: “Advantage had been taken of a ledge of rock: on the upper side a shallow vat had been dug out, eight feet square, and fifteen inches deep. Two feet lower down another smaller vat was excavated, four feet square by three feet deep. The grapes were trodden in the shallow upper vat, and the juice drawn off by a hole at the bottom (still remaining) into the lower vat” (Bibl. Res. iii. 137 603). The wine-presses were thus permanent, and were sufficiently well known to serve as indications (Judg. vii. 18, 19). The upper receptacle (γαλεύς) was large enough to admit of threshing being carried on in (not “by,” as in A. V.) it, as was done by Gideon for the sake of concealment (Judg. vi. 11). [FAT.]

WISDOM OF JESUS, SON OF SIRACH. [Ecclesiasticus.]

WISDOM, THE OF SOLOMON. Σωφία Σαλομών: Σωφία Σαλομοντάτες; later, Σωφία: Liber Spiritualis; Sapientia Salomonis; Σοφία Σαλωμώνιας. The title Σωφία was also applied to the Book of Proverbs, as by Melito cp. Enob. H. E. iv. 20 (Προφαιτία Σωφία καὶ Ἡσαΐας; see Vales, or Routh ad loc.), and also to Ecclesiasticus, as Epiphanius (vide loc. liv. 185, εν ταῖς Σωφίαις, Σοφίωτας τὸ φημα καὶ φημὶ τῷ Σωῳ), from which considerable confusion has arisen.

1. Text. — The Book of Wisdom is preserved in Greek and Latin texts, and in subdivisions into Syriac, Arabic, and Armenian. Of these latter, the Armenian is said to be the most important; the Syriac and Arabic Versions being paraphrastic and inaccurate (Griim, Enc. § 10). The Greek text, which, as will appear afterwards, is undoubtedly the original, offers no remarkable features. The variations in the MSS. are confined within narrow limits, and are not such as to suggest the idea of distinct early recensions; nor is there any appearance of serious corruptions anterior to existing Greek authorities. The Old Latin Version, which was left untouched by Jerome (Plan. in Liber Sol., in hoc libro qui a latrieae Sapientia Salomonis inscribatur . . . calamo temporum habita; Nuz. 1190), was strictly applied to the upper vat in Neh. xiii. 15, Lxx. 1. 15, and Is. xiii. 2, with παράθεια in a parallel sense in the following verse. Elsewhere yekel is not strictly applied: for in Job xxiv. 11, and Jer. xlviii. 33, it refers to the upper vat, just as in Matt. xxi. 33, ὁ σπαλαίης (properly the vat under the press) is substituted for ἀγάδιον, as given in Mark xvi. 1. It would, moreover, appear natural the Greek measure equivalent to the Hebrew bath.
Examples of these additions are found — i. 15, In-justitia autem moris est acquisitio; ii. 8, Vultum profanum sed non peccatrum laetus notor; ii. 17, et sciamus quos erant moriosis illius; vi. 1. Melior est sapientia quam rices, et vir prudens quam foetis. And the construction of the parallelism in the two first cases suggests the belief that there, at least, the Latin reading may be correct. But other additions point to a different conclusion: vi. 23, diligite hunc sapientiam carnes qui professo se sapientiis secum possideant, et forsitan principium intelligat; viii. 19, qvigintis pluribus illi dominas a principio; xii. 5, a defensione potus sui, et in cius abundanter filii Israel latius sunt.

The chief Greek MSS. in which the book is contained are the Codex Sinaiticus (S.), the Cod. Alexandrinus (A.), the Cod. Vatichanius (B.), and the Cod. Epheseniæ reser. (C.). The entire text is preserved in the three former; in the latter, only considerable fragments: viii. 5-xi. 10; xi. 13-xvii. 18; xviii. 24-xix. 22. Saluter therefore used four MSS. of the higher class for his edition: C. Corbeleanus duns, unum Sangermanensem, et slium S. Theodoroii ad Removos, of which he professes to give almost a complete (but certainly not a literal) collation. The variations are not generally important; but patristic quotations show that in early times very considerable differences of text existed. An important MS. of the book in the Brit. Mus. F. 1046, Sec. viii. has not yet been examined. 2. Contents. — The book has been variously divided; but it seems to fall most naturally into two great divisions: (1) i.-ix.; (2) x.-xix. The first contains the doctrine of Wisdom in its moral and intellectual aspects; the second, the doctrine of Wisdom as shown in history. Each of these parts is again capable of subdivision. The first part contains the praise of Wisdom as the source of immortality in contrast with the teaching of sensualists (i.-viii.); and next the praise of Wisdom as the guide of practical and intellectual life, the stay of princes, and the interpreter of the universe (vi.-ix.). The second part, again, follows the action of Wisdom summarily, as preserving God's servants from Adam to Moses (x. 1-x. 4), and more particularly in the punishment of the Egyptians and Canaanites (xi. 5-xii. 17-xiii. 2). This punishment is traced to its origin in idolatry, which, in its rise and progress, presents the false substitute for Revelation (xiii. xiv.). And in the last section (xv.-xix.) the history of the Exodus is used to illustrate in detail the contrasted fortunes of the people of God and idolaters. The whole argument may be presented in a tabular form in the following shape:

I. — Ch. i.-ix. The doctrine of Wisdom in its spiritual, intellectual, and moral aspects.

(a) I.-v. Wisdom the giver of happiness and immortality.

The conditions of wisdom (i. 1-11).

Uprightness of thought (1-5).

Uprightness of word (6-11).

The origin of death (i. 12-li. 24).

Sin (in fact) by man's free will (i. 12-16).

The reasoning of the sensualist (ii. 1-20).

Sin (in source) by the envy of the devil (21-24).

The godly and wicked in life (as mortal), (iii. 1-iv.).
chapters. Eichhorn 'Eisd. in d. Apoc. 1736,' rightly feeling that some historical illustrations of the action of wisdom were required by the close of ch. ix., fixed the end of the original book at ch. xi. 1. Nachtrieb (Dea Buch 118., 1790) assigned the first part of the time of Antiochus Epiphan. the second (vii. 8-9) to a philosophic Alexandrine Jew of the time of our Lord, and the third (xii.-xv.) to a contemporary, but unclescholar Jew, who wrote under the influence of the ruinist national prejudices.

The eleventh chapter was, as he supposed, added by the compiler who bound the three books together. Bretschneider 'Eisbd. 1851' fell back upon a modification of the earliest division. He included cc. i.-xii. in the original book, which he regarded as essentially philosophic, while the later addition (xiii.-xiv.) is, in his judgment, predominantly theological. It is needless to enter upon the various opinions which have been maintained, but when taken together, they furnish an instructive example of the course of subjective criticism. The true explanation of the one hypothesis which they have in common — the divided authorship of the book — is found in the substantial harmony and connection of its parts, in the presence of the same general tone and manner of writing, which is present in the essential unities of style and language which it presents, though both are necessarily modified in some degree by the subject-matter of the different sections. (For a definite examination of the arguments of the 'Separatists,' see Grimm, loc. cit. 4, and Rambach, Com. in ii. Sp. 31.)

Some, however, seem to have questioned its integrity. Eichhorn imagined that it was left imperfect by its author (Linh. p. 149); Grorius, apparently, that it was mutilated by some accident of time (Videtur hic liber esse καθέρως); and others have found, in later times, to support each opinion. Yet it is obvious that the scope of the argument is fully satisfied by the investigation of the providential history of the Jews up to the time of the occupation of Canaan, and the last verse furnishes a complete epilogue to the treatise, which Grimm considers, not immoderately, with the last words of 3 Macc.

The idea that the book has been interpolated by a Christian hand (Grotius, Grorius) is as little worthy of consideration as the idea that it is incomplete. The passages which have been brought forward in support of this opinion (ii. 12-20, 24, iii. 13, 14, 17; comp. Homil. p. 174, ed. 1850) lose all their force, if fairly interpreted.

4. Style and Language. — The literary character of the book is most remarkable and interesting. In the richness and freedom of its vocabulary it most closely resembles the language of Homer. But, it is superior to that fine declamation, both in power and variety of diction. No existing work represents perhaps more completely the style of composition which would be produced by the sophistic schools of rhetoric, and in the artificial balancing of parts, and the frequent metricals of arrangement and rhythm, it is impossible not to be reminded of the exquisite story of Proclus (Neum. loc. cit. 21), and of the subtle refinements of Protagoras in the dialogue which bears his name.

It follows as a necessary consequence that the effect of different parts of the book is very unequal. The florid redundancy and restless striving after effect, which may be not unsuited to vivid intellectual pictures, is wholly alien from the philosophic contemplation of history. Thus the forced contrasts and fantastic exaggerations in the description of the Egyptian phalanges cannot but displease; while it is equally unphilosophic for the language of the rationalist (iv. 12 ff.) and of the picture of future judgment (v. 12 ff.) the magnificent description of Wisdom (vii. 22-28, vii. 1) must rank among the noblest passages of human eloquence, and it would be perhaps impossible to point out any piece of equal length in the remains of classical antiquity more precious with noble thought, or more rich in expressive phrase. It may be placed beside the Hymn of Job and the visions of Enoch, and it will not lose its power to charm and move. Examples of strange new words may be found almost on every page. Such as αναποθεσις, πτωτολογος, ελεγχυα, αγωνια, ταγωνια, απλοδοιος, μεθανοια, εξωματικαι, καταδολος, απεστιακος, εκθειμα, απειροποιηται, etc.; or others, again, to the language of philosophy, δοξασθαι, ετερ, φρονεσθαι, etc.; and others to the LXX. chreia, δικαιωμαι, etc. No class of writings and no mode of combination appear to be unelastic in the hands of the writer. Some of the phrases which he adopts, and supposes to be others', are characteristic of the original authors, e.g. ουκ ειναι αληθειαν, or c. (i. 4), δασονευεσθαι πατρα θεου (iv. 16), ἁλιτι διανοιας παρηκτικης (iii. 4), etc., and not less so some of the short and weighty sentences in which he gathers up the truth on which he is dwelling: vi. 19, σαβεται έγγου ει νοει θεου; vii. 26, φειδη το πατεω ω τοι έστη ζνεοντα ρελακτοι το νοον το Ιουδαι τοι χριστος, δοκαται κατα λογον (vii. 31, ἀπειροποιητην την εχει την ενωσιν). The language, or the Old Latin translation is also itself full of interest. It presents, in great profusion, the characteristic provincialisms which elsewhere mark the earliest African version of the Scriptures. (Comp. Vulgate, ch. 43.) Such are the substantives ουσιονια, ἐρετιγερον, προεκτρο- νια, μηλικτα, σημεια, παρεια, συγευτευθαναι; πνευματικα; ουσια, διονυσια, ευγενεια; τωμανοριον (αλαγηρον); και τοι προεκτρονια επισκοπης; και χριστον της ζωης. Τυμβολον εν τωιτωι; τουτου μεν υπερ διαδημερτοι, συρια εις οικον οιδεται και χριστον.
the language, which have been just noticed, are so marked that no doubt could ever have been raised as to the originality of the Greek text, if it had not been that the book was once supposed to be the work of Solomon. It was assumed (so far rightly) that if the traditional title were correct, the book must have been written in Hebrew; and the belief which was thus based upon a false opinion as to the authorship, survived, at least partially, for some time after that opinion was abandoned. Yet as it never was obvious, even on a superficial examination, that the style and language of the book show conclusively that it could not have been the work of Solomon, so it appears with equal certainty that the freedom of the Greek diction was checked by no Aramaic text. This was well stated by Jerome, who says, "Fector et parvas erotas Jesu filii Simeon libri, et alios "집드트기 우리 중 사무주의 Solomonis insertur..." Scrutus apud Hebrews mssquam est, quia et ipse stylum Graecum eloquentiam reboet" (Prefet, in Liber, Solom.;) and it seems superfluous to add any further argument to those which must spring from the reading of any one chapter. It is, however, interesting on other grounds to observe that the book contains not only in the use of the Greek language, but differs from the Hebrew: ii. 12, ἐνδιηγουμένως τὸν Δαίκανον 571 διδαχὴν τοῦ ἀνθρώπου ἀστριτι (Is. iii. 10); xx. 10, στόςὸς ἡ καρδία αἵτων (Is. xiv. 20); and this not in direct quotations, where it is conceivable that a Greek translator might have felt justified in adopting the rendering of the version with which he was familiar, but where the words of the LXX. are inwrought into the text itself. But while the original language of the book may be regarded as certainly determined by internal evidence, great doubt hangs over the date and place of its composition; and it will be necessary to examine some of the doctrinal peculiarities which it presents before any attempt is made to determine these points with approximate accuracy.

6. Doctrinal Character.—The theological teaching of the book offers, in many respects, the nearest approach to the language and doctrines of Greek philosophy which is found in any Jewish writing up to the time of Philo. There is much in the views which it gives of the world, of man, and of the Divine Nature, which springs rather from the combination or conflict of Hebrew and Greek thoughts than from the independent development of Hebrew thought alone. Thus, in speaking of the divinity of man, the writer describes him as "having created the universe out of matter without form" (κτίσας τὸν κόσμον ἐν ὑπαρξει ἀφτερως, xi. 17), adopting the very phrase of the Stoics, which is also found in Philo (De Vit. Off. c. § 14), to describe the pre-existing matter out of which the world was made, and (like Philo, De Mundi. Op. § 5) evidently implying that this inde-terminable matter was itself uncreated. Whatever attempts may be made to bring this statement into harmony with the doctrine of an absolute primal creation, it is evident that it derives its form from Greece. Scarcely less distinctly heathen is the conception which is presented of the body as a mere weight and clog to the soul (ix. 15; contrast 2 Cor. v. 1-4); and we must refer to some extra-Judaeic source for the remarkable doctrine of the preexistence of souls, which finds unanswerable expression in ii. 20. The form, indeed, in which this doctrine is enunciated differs alike from that given by Plato and by Philo, but it is no less foreign to the pure Hebrew mode of thought. It is more in accordance with the language of the O.T. that the writer represents the Spirit of God as filling (i. 7) and Inspiring all things (xii. 1), but even here the idea of "a soul of the world" seems to influence his thoughts: and the same remark applies to the doctrine of the Divine Providence (πρόβασις, xv. 3, viii. 2; comp. Grimm. ad loc.), and of the four cardinal virtues (viii. 7, σωφρόσυνη, φιλόσοφος, δικαιοσύνη, ἀρετή), which, in form at least, show the effect of Stoic teaching. There is, on the other hand, no trace of the characteristic Christian doctrine of a future resurrection of the body: and the future triumph of the good is entirely unconnected with any revelation of a personal Messiah (iii. 7, 8, v. 16; comp. Grimm on i. 12, iii. 7, for a good view of the eschatology of the book).

The identification of the temple (Gen. i. 2), directly or indirectly, with the devil, as the "bringer of death into the world" (ii. 20, 21), is the most remarkable development of a Biblical doctrine which the book contains; and this pregnant passage, when combined with the earlier declaration as to the action of man's free will in the taking of evil to himself (i. 12-16), is a noble example of the living power of the Divine teaching of the O.T. in the face of other influences. It is also in this point that the Pseudepigrapha differs most widely from Philo, who recognizes no such evil power in the world, though the doctrine must have been well known at Alexandria (comp. Gin. rer. Philo, etc. ii. 238). The subsequent deliverance of Ashu from his transgression (ἐξελαττώσαν εκ παραπόταμον ἰδίων) is attributed to Wisdom; and it appears that we must understand by this, not the scheme of Divine Providence, but that wisdom, given by God to man, which is immortal (viii. 17). Generally, too, it may be observed that, as in the cabbalistic books, Proverbs and Ecclesiastes, there are few traces of the recognition of the sinfulness even of the wise man in his wisdom, which forms, in the Psalms and the Prophets, the basis of the Christian doctrine of the atonement (v. 17). With regard to the interpretation of the O.T., it is worthy of notice that a typical significance is attributed to underlie the historic details (xvi. 1, xviii. 4, 5, etc.); and in one most remarkable passage (xviii. 24) the high-
WISDOM, THE, OF SOLOMON

3549

Priestly dress is expressly described as presenting an image of the Divine glory in creation and in the patriarchal covenant—an explanation which is found, in the main, both in P (Deut. 18.14), § 12) and Josephus (Ant. vii. 7, § 7), as well as in later writers (comp., also vols. i. viii). In connection with the O. T. Scriptures, the book, as a whole, may be regarded as carrying on one step further the great problem of life contained in Ecclesiastes and Job; while it differs from both formally by the admixture of Greek elements, and doctrinally by the supreme prominence given to the idea of the active vindication of Divine justice (comp., below, § 9).

7. The Doctrine of Wisdom—It would be impossible to trace here in detail the progressive development of the doctrine of the book, as a Divine Power standing in a sense between the Creator and creation, yet without some idea of this history no correct opinion can be formed on the position which the book of the Wisdom of Solomon occupies in Jewish literature. The foundation of the doctrine is to be found in the book of Proverbs, where (viii.), Wisdom (Khokmah) is represented as present with God before (viii. 22) and during the creation of the world. So far it appears only as a principle regulating the action of the Creator, though even in this way it is represented as the outward expression of Wisdom, and God. Moreover, by the personification of Wisdom, and the relation of Wisdom to men (viii. 31), a preparation is made for the extension of the doctrine. This appears, after a long interval, in Ecclesiastes. In the great system of Wisdom given in that book (xxiv.), Wisdom is represented as the withholding of the whole universe (4-6), and taking up her special abode with the chosen people (8-12). Her personal existence and providential function are thus distinctly brought out. In the book of Wisdom the conception gains yet further completeness. In this, Wisdom is identified with the Spirit of God (ix. 17)—an identification best illustrated in xiii. 3—which brooded over the elements of the unformed world (ix. 9), and inspired the prophets (vii. 7, 27). She is the power which unites (i. 7) and directs all things (viii. 1). By her, in especial, men have fellowship with God (xii. 11), and her action is not confined to any period, but in all ages entering into the lives of men. Moreover, the written word comes to be regarded as the vehicle of her utterance (vii. 27). So also her working, in the providential history of God's people, is traced at length (xi.), and her power is declared to reach beyond the world of man into that of spirits (vii. 23).

The conception of Wisdom, however boldy personified, yet leaves a wide chasm between the two conceptions; the real power is not a spirit vivifying and uniting all things in all time, as distinguished from any special outward revelation of the Divine Person. Thus at the same time that the doctrine of Wisdom was gradually constructed, the correlative doctrine of the Divine Word was also reduced to a definite shape. The Word (Logos) is, indeed, the Divine expression, as it was understood in Palestine, furnished the exact complement to Wisdom, the Divine thought; but the ambiguity of the Greek Logos (sermo, ratio) introduced considerable confusion into the later treatment of the two ideas.Broadly, however, it may be said that the Word properly represented the mediative element in the action of God, Wisdom the mediative element of his omniscience. Thus, according to the later distinction of Philo, Wisdom corresponds to the immanent Word (Δωρις ουσιας, while the Word, strictly speaking, was defined as communicatio (Δωρις τοποθετητος). Both ideas are included in the language of the prophets, and both found a natural development in Palestine and Egypt. The one prepared men for the revelation of the Son of God, the other for the revelation of the Holy Spirit.

The book of the Pseudo-Solomon, which gives the most complete view of Divine Wisdom, contains the whole of the Proverbs, and for the most part two passages of the Song of Solomon, and yet the whole of the Wisdom of Solomon is represented with the attributes of personal action (xvi. 12, xviii. 15; ix. 1) is of different character. These, however, are sufficient to indicate that the two powers were distinguished by the writer; and it has been commonly argued that the superior prominence given in the book to the conception of Wisdom is an indication of a date anterior to Philo. No such conclusion unreasonably, it is probably established on independent grounds that the book is of Alexandrine origin. But it is no less important to observe that the doctrine of Wisdom in itself is no proof of this. There is nothing in the direct teaching on this subject which might not have arisen in Palestine, and it is necessary that we should look for all the special traits of Alexandrine thought in the book which have been noticed before (§ 6) for the primary evidence of its Alexandrine origin; and starting from this there appears to be, as far as can be judged from the imperfect materials at our command, a greater affinity in the form of the doctrine of Wisdom to the teaching of Alexandria than to that of Palestine (compare xviii. 17): Welte, v. 161 ff., has some good criticisms on many supposed traces of Alexandrine doctrine in the book, but errors in denying all.

The doctrine of the Divine Wisdom passes by a transition, often imperceptible, to that of human wisdom, which is derived from it. This embraces not only the modern view of mind and spirit, but also the various branches of physical knowledge. [Comp. PHILOSOPHY.] In this aspect the communciation of the great forms of natural science in vii. 17-20 (viii. 8), offers a most instructive subject of comparison with the corresponding passages in I K. iv. 32-34. In addition to the subjects on which Solomon wrote (Songs, Proverbs; also the Fowls, Breeds, Beasts, Fishes, Plants, Birds), History, Cosmology, Meteorology, Astronomy, Psychology, and even the elements of the philosophy of history (viii. 8), are included among the gifts of Wisdom. So far then the thoughtful Jew had already at the Christian era penetrated into the domain of speculation and inquiry, into each province, it would seem, which subsequently was then recognized, without abandoning the simple faith of his nation. The fact itself is most significant; and the whole book may be quoted as furnishing an important corrective to the later Roman descriptions of the Jews, which were drawn from the people when they had been almost uncivilized by the excitement of the last desperate struggle for national existence. (For detailed citations to the chief authorities on the history of the Jewish doctrine of Wisdom, see PHILOSOPHY; adding Bruch, Die Weisheitslehre der Hebräer, 1854.)

8. Place and Date of Writing.—Without claiming for the internal indications of the origin of the book a decisive force, it seems most reasonable to believe on these grounds that it was comp. at
WISDOM, THE
OF SOLOMON

Alexandria some time before the time of Philo (civ. 120-80 B. C.). This opinion in the main, though the conjectural date varies from 150-50 B. C., or even beyond these limits, is held by Heydenreich, Gürner, Bauermeister, Ewald, Bruch, and Grimm; and other features in the book go far to confirm it. Without entering into the question of the extent of the Hellenistic element at Jerusalem in the first century B. C., it may be safely affirmed that there is not the slightest evidence for the existence there of so wide an acquaintance with Greek modes of thought, and so complete a command of the resources of the Greek language, as is shown in the book of Wisdom. Alexandria was the only place where Judaism and Philosophy, both of the east and west, came into natural and close connection. It appears further that the mode in which Egyptian idolatry is spoken of, must be due in some degree to the influence of present and living antagonisms, and not to the contemplation of past history. This is particularly evident in the great force laid upon the details of the Egyptian animal worship (xv. 18, etc.) and the description of the condition of the Jewish settlers in Egypt (xiv. 11-16) applies better to colonists fixed at Alexandria on the conditions of life in the first Ptolemies, than to the intermediate descendants of Jews. It may, indeed, be said justly, that the local coloring of the latter part of the book is conclusive as to the place of its composition. But all the guesses which have been made as to its authorship are absolutely valueless. The earliest was that mentioned by Jerome, who assigned it to Philo (Prof. in Lib. Sal. c. Numbil summarum veterum hone esse habendi Philioum adscendant."

There can be no doubt that the later and famous Philo was intended by this designation, though Jerome in his account of him makes no reference to the belief (De cire. illustr. xii.). Many later writers, including Luther and Gerard, adopted this view; but the variations in teaching, which have been already noticed, effectually prove that it is unfounded. Others, therefore, have imagined that the name was correct, but that the elder Philo was intended by it (c. Wermeehhof, and in a modified form Huet and Belmer). But of this later Jewish Philo it is simply known that he wrote a poem on Jerusalem. Luther suggested Aristobulus. [Aristoc/olus.] Eichhorn, Zeller, Justen, and several others supposed that the author was one of the Therapeutics, but here the positive evidence against the conjecture is stronger, for the book contains no trace of the ascetic discipline which was of the essence of the Therapeutic teaching. The opinion of some later critics that the book is of Christian origin (Kirschlamm, C. H. Weisse), or even, definitely the work of Apollos (Sohne), is still more prevalent; for no one supposes that it is not the least trace of the three cardinal truths of Christianity, the Incarnation, the Atonement, the Resurrection of the body, but it even leaves no room for them by the general tenor of its teaching. 6

6 The conjecture of J. Faber, that the book was written by Zenobius, who rightly assumed the character of a second Solomon, is only worth mentioning as a specimen of misplaced ingenuity (com. Wette, Em. p. 191 B.). Augustine defends the conjecture that the author was a Jew named Benjehuda, under the Latin name of "Saulus" (in de race et origine lib. ii. 4). It is probable that the original Greek may have read, καὶ Ἐλίζαρε Σολωμόν ἀπὸς Φαλέους (for Ἐλίζαρε εἰρήνεια ναοῦ ἐποίησε) . . . . Or again that Jerome so mistranslated the passage (Journ. of Philal. 1855, p. 57 E.).

9. History. -- The history of the book is extremely obscure. There is no trace of the use of it before the Christian era, but this could not be otherwise if the view which has been given of its date be correct. It is perhaps more surprising that Philo does not (as it seems) show any knowledge of it, and it is not unlikely that if his writings are carefully examined with this object, some allusions to it may be found which have hitherto escaped observation. On the other hand, it can scarcely be doubted that St. Paul, if not other of the Apostles, was well acquainted with its language, though he makes no definite quotation from it (the supposed reference in Luke xii. 49 to Wisd. i. 12-14, is wholly unfounded). Thus we have striking parallels in Rom. ix. 21 to Wisd. xv. 7; in Rom. ix. 22 to Wisd. xii. 20; in Eph. vi. 13-17 to Wisd. v. 17-19 (the heavenly armor). The coincidences in thought or language which occur in other books of the N. T., if they stood alone, would be insufficient to establish a direct connection between them and the Book of Wisdom; and even in the case of St. Paul, it may be questioned whether his acquaintance with the book may not have been gained rather orally than by direct study. The same remark applies to a short passage in the epistle of Clement to the Corinthians, pointed out by Grimm (ibid. c. 27; Wisd. xii. 22, xiii. 12); so that the first clear references to the book occur not earlier than the close of the second century. According to Eusebius (H. E. v. 26), Irenaus made use of it (and of the Ep. to the Hebrews) in a lost work, and in a passage of his great work (Commentary on the Gospels, etc. 398) Irenaus silently adopts a characteristic phrase from it (Wisd. vi. 19. ἀβατοσύνη δὲ ἐὰν γάρ είρην εἰρήνεια ναοῦ ἐποίησεν). From the time of Clement of Alexandria the book is constantly quoted as an inspired work of Solomon, or as "Scripture," even by those Fathers who denied its assumed authorship, and it gained a place in the Canon (together with the other Apocryphal books) at the Council of Carthage, c. 397 A. D. (for detailed references see Canon, vol. i. pp. 364, 365). From this time its history is the same as that of the other Apocryphal books up to the period of the Reformation. In the controversies which arose then its intrinsic excellence commanded the admiration of those who refused it a place among the Canonical books (so Luther op. Grinn. § 28). Pelagian directly affirmed its inspiration (Grimm, L. C.); and it is quoted as Scripture in both the books of Homilies (pp. 98-99 : 174, ed. 1850). In later times the various estimates which have been formed of the book have been influenced by controversial prejudices. In England, like the rest of the Apocrypha, it has been most strangely neglected, though it furnishes several lessons for Church Festivals. It seems, indeed, impossible to study the book dispassionately, and not feel that it forms one of the last links in the chain of providential connection between the Old and New Covenants. How far it lacks short of Christian truth, or rather how com-

Christian (otherwise unknown) named Philo. In support of this he suggests an ingenious conjectural emendation of a corrupt passage of the Muratorian Canon. Where the Latin text reads et Sepultura ob ambiguum est que in epitaphii inscriptione, the original Greek may have read, καὶ Ἐλίζαρε Σολωμόν ἀπὸς Φαλέους (for Ἐλίζαρε εἰρήνεια ναοῦ ἐποίησε) . . . . Or again that Jerome so mistranslated the passage (Journ. of Philal. 1855, p. 57 E.).

WIZARD

1. Two witnesses at least are required to establish any charge (Num. xxiv. 30; Dent. xvii. 6, xix. 13; 1 K. xxi. 13; John viii. 17; 2 Cor. xiii. 1; Heb. x. 29); and a like principle is had down by St. Paul as a rule of procedure in certain cases in the Christian Church (1 Tim. v. 19).

2. In the case of the suspected wife, evidence besides the husband's was desired, though not demanded (Num. v. 13).

3. The witness who withheld the truth was sanctioned (Lev. v. 1).

4. False witness was punished with the punishment due to the offense which it sought to establish. [Oath.]

5. Slanderous reports and officious witness are disrevered (Ex. xx. 16, xxiii. 1; Lev. xix. 16, 18; Deut. xix. 16–21; Prov. xxiv. 28).

6. The witnesses were the first executioners (Deut. xiii. 9, xiv. 7; Acts vii. 58).

7. In case of an animal left in charge and torn by wild beasts, the keeper was held to bring the excuse in proof of the fact and disproved of his own criminality (Ex. xxi. 13).

8. According to Josephus, women and slaves were not admitted to bear testimony (Act. iv. 8, § 15). To these exceptions the Mishnah adds idiots, deaf, blind, and dumb persons, persons of infamous character, and others, ten in all. (Mish. Sanhed. ii. 13, 11; Obbo, Lxx. Rabbi, p. 652). The high-priest was not bound to give evidence in any case except one affecting the King (ibid.). Various restrictions on the quality of evidence and the manner of taking it are given in the Mishnah (Sanhed. iv. 5, v. 2, 3; Maccab. i. 1, 9; Shab. iii. 10, iv. 1, v. 1). In criminal cases evidence was not to be given; in servile, written evidence was allowed (Obbo, Lxx. Rabbi, p. 652).

In the N. T. the original notion of a witness is exhibited in the special form of one who attests his belief in the Gospel by personal suffering. So St. Stephen is styled by St. Paul (Acts xxii. 20), and the "faithful Antipas" (Rev. ii. 13). St. John also speaks of himself and of others as witnesses in this sense (Rev. i. 9, vi. 9, xi. 3, xx. 4). See also Heb. xi. and xii. 1, in which passage a number of persons are mentioned, belonging both to O. T. and N. T. who bore witness to the truth by personal endurance; and to this passage may be added, as bearing on the same view of the term "witness," Dan. iii. 21, vi. 16; 1 Mac. i. 60, 63; 2 Mac. vi. 18, 19. Hence it is that the general use of the ecclesiastical term "Martyr" has arisen, of which various illustration may be seen in Sueton. Titus, vol. ii. p. 310, &c. [Martyr, Aner. ed.]

H. W. P.

WIZARD. [Magic.]

* WOE WORTH (Ex. xxx. 22) is equivalent to "woe be," i.e., to the day of which the prophet speaks. WORTH, from the Anglo-Saxon, means "to be" or "become," like werde in German. 11.

WOLF (Cani; סָפוֹן; ᾽αῦως; λύπης). There can be little doubt that the wolf of Palestine is the common Canis lupus, and that this is the animal so frequently mentioned in the Bible, though it is true that we lack precise information with regard to the Canis of Palestine. Hemptinh and Ehrenberg have described a few species, as, for instance, the Canis Syriacus and the C. (Vulpes) Niloticus (see figures in art. Fox, i. 840 l.); and Col. Hamilton Smith mentions, under the name of derbina, a species of black wolf, as occurring in Arabia and Southern Syria: but nothing definite seems to be known of this animal. Wolves were doubtless far more common in Biblical times than they are now, though they are occasionally seen by modern travelers (see Kitto's Physical History of Palestine, p. 364, and Russell's Nat. Hist. of Aleppo, ii. 184). The wolf seldom ventures so near the city as the fox, but is sometimes seen at a distance by the sportsmen among the hilly grounds in the neighborhood; and the villages, as well as the herds, often suffer from them. It is called dwell in Arabic, and is common all over Syria.

The following are the Scriptural allusions to the wolf: Its ferocity is mentioned in Gen. xiii. 27; Ez. xxii. 27; Hab. i. 8; Matt. vii. 15; its nocturnal habits, in Jer. v. 6; Zeph iii. 3; Hab. i. 8; its attacking sheep and lambs, John x. 12; Matt. x. 16; Luke x. 3. Isaiah (xi. 6, xvi. 25) foretells the peaceful reign of the Messiah under the metaphor of a wolf travelling with a lamb; and persecutors are compared with wolves (Matt. x. 16; Acts xx. 29).

Wolves, like many other animals, are subject to variation in color: the common color is gray with a tinting of fawn and long black hairs; the variety most frequent in Southern Europe and the Pyrenees is black; the wolf of Asia Minor is more tawny than these of the common color.

The people of Nubia and Egypt apply the term dwell to the Canis lupus, Fr. canis (see Rüppell's Atlas zu der Reise im Nördlichen Afrika, p. 46); this, however, is a jackal, and seems to be the Lycaon Syriacus, which Hemp. and Ehrenberg noticed in Syria, and identical with the "Egyptian wolf" figured by Hama. Smith in Kitto's Cyc.

W. H.

WOMEN. The position of women in the Hebrew commonwealth contrasts favorably with that which in the present day is assigned to them generally in eastern countries. The social equality of the two sexes is most fully implied in the history of the original creation of the woman, as well as in the name assigned to her by the man, which differed from his own only in its femine termination (Gen. ii. 18–23). This narrative is here briefly repeated, as it supplies an argument for enforcing the duties of the husband towards the wife (Eph. v. 28–34). Many usages of early times interlaced with the preservation of this theoretical equality: we may instance the existence of polygamy, the patriarchal powers vested in the head of the family under the patriarchal system, and the treatment of captives. Nevertheless a high tone was maintained generally on this subject by the Mosaic Law, and, as far as we have the means of judging, by the force of public opinion.

The most salient point of contrast in the usages of ancient as compared with modern oriental society was the large amount of liberty enjoyed by women. Instead of being immured in a harem, or appearing in public with the face covered, the wives and maidens of ancient times mingled freely and openly with the other sex in the duties and amusements of ordinary life. Rebekah travelled on a camel with her face unveiled, until she came into the presence of her affianced (Gen. xxiv. 64, 65). Jacob saluted Rachel standing near the herdsmen, as occasionally seen of the shepherds (Gen. xxix. 11). Many of these maidens was engaged in active employment, the former in fetching water from the well, the latter in tending her flock. Sarah wore no veil in Egypt, and yet this formed
no ground for supposing her to be married (Gen. xvii. 14-19). An outrage on a maiden in the open field was visited with the severest punishment (Dent. xxi. 25-27), proving that it was not deemed improper for her to go about unprotected. Further than this, women played no inconsiderable part in public celebrations: Miriam headed a band of women who accompanied with song and dance the overthrow of the Egyptians (Ex. xv. 20, 21). Jephthah’s daughter gave her father a triumphant reception (Judg. xi. 31); the maidens of Shiloh danced publicly in the vineyards at the yearly fest (Judg. xi. 21); and Shelmun and David, on their return from the defeat of the Philistines, with singing and dancing (1 Sam. vi. 6, 7). The odes of Deborah (Judg. v.) and of Hannah (1 Sam. ii. 1, etc.) exhibit a degree of intellectual cultivation which is in itself a proof of the position of the sex in that period. Women also occasionally held public offices, particularly in the capacity of prophetess or inspired teacher, as instanced in Miriam (Ex. xv. 20), Huldah (2 K. xii. 14), Noadiah (Neh vi. 14), Anna (Luke i. 36), and above all Deborah, who applied her prophetical gift to the administration of public affairs, and was so entitled to be styled a “judge” (Judg. iv. 4).

The active part taken by Jezebel in the government of Israel (1 K. xxii. 29, xxxii. 1,4), the consecration of the throne of Judah by Athaliah (2 K. xi. 31), further attest the latitude allowed to women in public life.

The management of household affairs devolved mainly on the women. They brought the water from the well (Gen. xxiv. 15; 1 Sam. ix. 11), attended to the flocks (Gen. xxix. 6, etc.: Ex. ii. 16), produced the wool (Gen. xxv. 29; 2 Sam. xiii. 8), and occupied their leisure hours in spinning (Ex. xxv. 29; Prov. xxx. 19) and making clothes, either for the use of the family (1 Sam. ii. 19; Prov. xxx. 21), for sale (Pro. xxxiv. 14, 24), or for charity (Acts iv. 39).

The value of a virtuous and active householdwife forms a frequent topic in the book of Proverbs (xi. 2, 16, 4, 11, xxxii. 13, etc.). The result of such influence was of course proportionately great; and, where there was no second wife, she controlled the arrangements of the house, to the extent of inviting or receiving guests on her own motion (Judg. iv. 18; 1 Sam. xxv. 18, etc.; 2 K. i. 4, iv. 8, etc.). The effect of polygamy was to transfer female influence from the wives to the mother, as is incidentally shown in the application of the term gebelach (literally meaning powerful) to the queen mother (1 K. ii. 19, xx. 13; 2 K. x. 13, xxiv. 12; Jer. xiii. 18, xviii. 2). Polygamy also necessitated a separate establishment for the wives collectively, or for each individually. Thus in the palaces of the Persian monarch there was a “house of the women” (Esth. ii. 9) which was guarded by eunuchs (Esth. ii. 8), in some cases very strictly, and the application of the term was connected with, but separate from, the rest of the building (1 K. vii. 8); and on journeys each wife had her separate tent (Gen. xxxii. 32).

In such cases it is probable that the females took their meals apart from the males (Esth. i. 9); but we have no reason to conclude that the separate system prevailed generally among the Jews. The women were present at festivals, either as attendants on the guests (John xii. 2), or as themselves guests (Job i. 4; John ii. 3); and hence there is good ground for concluding that on ordinary occasions they joined the males at meals, though there is no positive testimony to that effect.

Further information on the subject of this article is given under the heads DECEASED, DRESS, HAIR, MARRIAGE, SLAVE, VEIL, and WIDOW.

W. L. B.

WOOD. [Forest.]

* WOOL. [Weaving.]

WOOL (יוֹלֶה, תַּלְסָרְס). Wool was an article of the highest value among the Jews, as the staple material for the manufacture of clothing (Lev. xi. 47; Dent. xxi. 11; Job xxxi. 20; Prov. xxxi. 13; Ez. xxxiv. 3; Hos. ii. 5). Both the Hebrew terms, ט البعض, and  הל, imply the act of shearing, though distinction between them being that the latter refers to the “wool” (Dent. xvii. 4; Job xxxi. 20), as proved by the use of the cognate גייזל, in Judg. vi. 37-40, in conjunction with  תַּלְסָרְס, in the sense of “a fleece of wool.” The importance of wool is incidentally shown by the notice that Melchizedek’s tribute was paid in a certain number of camels “with the wool” (2 K. iii. 4), as well as by its being specified among the first-fruits to be offered to the priests (Dent. xviii. 4). The wool of Damascus was highly prized in the market of Tyre (Ex. xxxii. 38); and is compared in the LXX. to the wool of Miletus (ἐπαν εἰς Μιλήτου), the fame of which was widely spread in the ancient world (Phil. viii. 73; Virc. Georg. ii. 583, 334). Wool is occasionally cited as an image of purity and brilliance (Is. i. 18; Dan. vii. 9; Rev. i. 14), and the flakes of snow are appropriately likened to it (Ps. cxviii. 16). The art of dyeing it was understood by the Jews (Mishna, Shab. 1, § 6).

WOOLEN (LINEN and). Among the laws against unnatural mixtures is found one to this effect: “A garment of mixtures לֶהָדְתָרְס שָׁרָתָה יִוָלֶת shall not come upon thee” (Lev. xix. 19); or, as it is expressed in Dent. xxi. 11, “Thou shalt not wear שָׁרָתָה, wool and linen together.”

Our version, by the help of the latter passage, has rendered the strange word שָׁרָתָה in the former, “linen and woollen”; while in Dent, it is translated “a garment of divers sorts.” In the Vulgate the difficulty is avoided; and סָרוֹנָה, “spurious,” or “counterfeit,” the rendering of the LXX., is wanting in precision. In the Targum of Onkelos the same word remains with a slight modification to adapt it to the Chaldee; but in the Peshito-Syrac. of Lev. it is rendered by an adjective, מֵסָרוֹנָת (Misraonat), “garment mixed,” responding in some degree to the Samaritan version, which has “spotted like a leopard.” Two things only appear to be certain about שָׁרָתָה— that it is a foreign word, and that its origin has not at present been traced. Its signification is sufficiently defined in Dent. xxii. 11. The derivation given in the Mishna (Citahin, ix. 8), which makes it a compound of three words, “mixed, spin, and twisted,” is in keeping with Rabbinical etymologies generally. Other etymologies are proposed by Bochart (Hieroz. pt. i. h. 2, c. 45), Simonis (Lex. Heb. and Pielcher (Jud. i.e. cent. 2, loc. xi.). The last-mentioned writer defended the Egyptian origin of the word, but his knowledge of Coptic, according to others, tended not much beyond the letters, and little value, therefore, is to be attached to the solution which he proposed for the difficulty. Jablonski himself favors the suggestion of Forster, that a garment of linen and woolen was called by the Egyptians šahontos, and that this word was sor-
rowed by the Hebrews, and written by them in the form skhnhm (Qumran, i. 294).

The passage given by Josephus (Ant. iv. 8, § 11) for the law which prohibited the wearing a garment woven of linen and woolen is, that such were worn by the priests alone (see Mishna, Cilin, ix. 1. Of this kind were the girdle (of which Josephus says the warp was entirely linen, Ant. iii. 7, § 2), cephal, and breastplate (Braunius, de vet. Sac. Hebr. p. 130, 111) of the high-priest, and the girdle of the common priests (Maimonides, Oek. Broannikish, xviii.). Spencer conjectured that the use of wool and linen in woven in the same garment prevailed amongst the ancient Zabithi, and was associated with their idolatrous ceremonies (De b. B. b. iii. 33 § 5); but that it was permitted to the Hebrew priests, because with them it could give rise to no suspicion of idolatry. Maimonides found in the books of the Zabithi that "the priests of the idolaters clothed themselves with robes of linen and wool mixed together." (Towseley, Reasons of the Laws of Moses, p. 297.) By "wool" the Talmudists understood the wool of sheep (Mishna, Cilin, ix. 1.). It is evident from the passage given by Josephus that the adoption of a particular color of dress was an indication of idolatrous tendencies, and there may be therefore some truth in the explanation of Maimonides.

W. A. W.

*WORD, THE (אֲלֹהֵי: rechlan), John i. 1, 14. This term is employed by St. John in a manner peculiar to himself among the sacred writers, but in such a manner as suggests that among those for whom he immediately wrote, it was already associated with a meaning or meanings somewhat analogous to that which he designed to convey by it. That this was in general the case, there is abundant evidence; but to determine precisely the various shades of meaning attached to it in different quarters by those who lived at the time of the Evangelist or not long before, and to show precisely in what relation his own employment of it stood to existing usage, are among the most difficult problems in the history of religious thought.

The idea of a distinction between the hidden and the manifested Deity, between God as He is in himself and as He makes himself known in creation and revelation, seems to have been early entertained among the Jews, and was naturally suggested by many of the representations of the Old Testament, such as the names used in the creation account. This distinction has been by most, at least, of the Targums and Chaldee paronomasia of portions of the O. T. These writings, although their claims to antiquity have been of late years considerably reduced (Schechter, Ancient Targum) doubtless represent longstanding Jewish tradition, and it is among their most remarkable characteristic features that whenever God is spoken of in the Heb. especially as interposing in the affairs of men, the expression יְהוּדָּה דְּרוּפָּה (sometimes נְזַעֲדָה, דְּרוּפָּה), "the word of Jehovah," is very commonly substituted for the proper divine name. But there are no data from which we may gather the exact form of thought which lay at the foundation of the usage, and the employment of it was wholly determined by no settled rule. Most, if not all the passages in which the expressions above cited occur may be explained by a reference to the principle suggested or contemplated. The statement sometimes made that the יְהוּדָּה דְּרוּפָּה, "word of Jehovah," is in the Targums expressly identified with the Messiah can hardly be sustained.

D S T.
The writings of Philo, the Jew of Alexandria, who flourished in the former half of the first century, present the earliest approximation to a definite doctrine of the Word. His system, if system it can be called, is a mingling of Pythagoreanism, Stoicism, and the Emanationism of the East with the doctrines of the O.T. Scriptures. Of this system the doctrine of the Logos has been styled the central point, and it is often presented here in terms which bear a striking resemblance to the representations of St. John, although quite commonly a careful examination shows that the resemblance lies in the expression rather than in the thought. That the Logos-essential of St. John is in some way connected with that of Philo, admits of no reasonable doubt. But the manifold incongruities, not to say self-contradictions, to be found in the writings of the latter, the extraordinary latitude which he manifestly allows himself in his attempts to reconcile the whole contrast presented by his whole style of thinking to that exhibited in the Fourth Gospel, forbids us to believe that the author of that Gospel can have been indebted to the Alexandrian philosopher for any fundamental element of doctrine.

Whatever may have been the connection between the Logos as found in the writings of St. John, and the idea that had already made some use of it in the O.T., above alluded to, in accordance with the use of Plato, from whom his conception of the Logos in its main features was derived, may be the expression which, but for this consideration, he would naturally have employed.

b Thus the Logos is represented as the Son of God [De Prof. ec. 29, Op. i. 521 ed Mang.,] the eldest Son, the first-begotten, τραπατιστάς νός, τραπατός (De Conf. Leg. ec. 14, 29, 411, 427; De Arte ec. 12, i. 388; De Somm. lib. i. c. 37, i. 658) the image of God, θεός (De Prof. Mind. c. 8, s. 6; De Conf. Legg. ec. 29, i. 419; De Somm. lib. i. c. 11, i. 655) and often elsewhere; his "eternal image," De Conf. Legg. ec. 29, i. 427; the instrument by which the world was made, ἀκόντιος ὑπὸ τοῦ θεοῦ, De Somm. lib. i. c. 37, i. 659, and preexistent, ως de, ὁ ἀνωτέρωτος (De Cercub. ec. 35, i. 152, where note Philo's distinction between τό ὅσον ὑπὲρ τοῦ θεοῦ, τό ὅσον ἀπὸ τοῦ θεοῦ, and τό ὅσον ὑπὸ τοῦ θεοῦ, as denoting respectively the primary or efficient cause, the material, the instrument, or intermediate agent, and the end or final cause: comp. Legg. Ἀρ. legg. lib. iii. c. 31, 140, οὐκ θεὸς ὁ λογικὸς ὑπὲρ αὐτοῦ, εἰτέρως ἀνωτέρωτος προστάγορος τοιχονομος, also De M. Legg. lib. ii. c. 1, 447; De Monarch. lib. ii. c. 5, 222; God's preeminence, ὁ πρῶτος ὁ προκείμενος ἡγεμόνας, upon the heavenly things depend (De Arte ec. 12, i. 348; De Somm. lib. i. c. 41, i. 659) the interpreter of God, ἡμετέρας οὖν ὁ λογικὸς ὑπὲρ αὐτοῦ (Legg. Ἀρ. legg. lib. i. c. 74, 1, 125; Quod. Deus sit immanent. lib. iii. 290; De Somm. lib. i. c. 41, i. 659); the light, ἡ λειτουργία ὁ λογικὸς ὑπὲρ αὐτοῦ (De Somm. lib. i. c. 13, i. 871); the fountain of wisdom, σωτάς πατρι, from which those who draw overabundant life, ὁ ἀννυφοσ, De Prof. ec. 18, i. 709; thus the lower names, ἄγων ὄρας, and mediator between God and the world, separating and yet connecting both (Quod Re- comm Dir. Heros, ec. 42, i. 501 f.; high-priest, ἀγωνιστής, free from all sin (De Prof. ec. 29, i. 521 f.; De Somm. lib. i. c. 37, i. 659) and pertaining to the whole history, he is about to give, he first of all declares, with manifest reference to Gen. i. 1, "in the beginning ἐστιν ('Εν ἀρχῇ ἦν τὸ λόγον") the Word." Here, as in the opening of his first epistle, is distinctly brought to view the great fact of the created, and therefore the eternal, existence of the Logos. Next follow a statement of the intimate relation such as the Logos sustains to God and the world, and which, though, as he says, in the whole history he is about to give, he first of all declares, with manifest reference to Gen. i. 1, "in the beginning ἦν ὁ λόγος ('Εν ἀρχῇ ἦν ὁ λόγος") the Word." Thus as if to guard against the misapprehensions being entertained that the distinction indicated as existing in the divine nature had originated in time, there is subjoined the affirmation. The same was in the beginning with God." To pursue further the account given of the Word in the sublime prologue of the Evan-
gelist, would make it necessary to trench too much upon the province of the commentator. The main purpose of this article is to point out in general the probable relation of St. John's doctrine upon this subject to the previous history of the employment of the term, and to show in what manner it may be supposed that his own representations have been affected by existing tendencies of thought. While in the view above presented of the way in which his own special usage of the term was probably determined, nothing has been said of its fitness in its more ordinary acceptations for the purpose to which he applies it, we are under no necessity of supposing that in his selection of it, he had no regard to its more common significances, whether in the language of philosophy or in that of every-day life, as contributing to make it suitable for his purpose.

It is, in particular, far from improbable that the import of ὁ λόγος as being predominantly the revelation of thought may have been distinctly in his mind, as most highly fit to be associated with Him who is The Truth revealed.5

In some cases as is in I. John 1:1, and likewise that adopted by Beza, Tittmann, and others, as in λέγεται, or ἐπηγγέλθη, the promised one, are wholly unsustained by usage. Nor is there any valid foundation for supposing, as many do, that the term was adopted by St. John on the ground of its being specially suited, in certain of its acceptations, to express the idea of the Divine Logos. It should be added, however, that not only was the Evangelist furnished through the already prevailing conceptions of the Word, with the most suitable expression of his great idea, but he was thus enabled to avoid himself of whatever there was of truth connected with past speculations upon the subject, and to show how his own doctrine effectually met the difficulties which had been felt so long, and which attempts had been so variously made to meet. It was as if he had said to those of his readers whom he more immediately had in view, What you have vainly sought to find, and what you may think that in your conception of the Word, you have found, I make known to you in the history of Jesus Christ.

Indeed, it is not in his presentation of the doctrine of the Word alone, that we find the indications of such a design. In all his writings we are met by the recurrence of peculiar phrases and representations (many of them often repeated), which stand connected in such a manner with systems of error that came to their full development only in a subsequent age, that we are enabled both to discern the genesis of these systems as already in being in his own time, and to trace their origin in preceding thought. at the same time that we are called to note the admirable skill with which the inspired writer, without resorting to the form of polemics, effectually guards the truth against assault, and turns the dangers which threaten it into a source of instruction.6

* * *  

On the use of ὁ λόγος, and πρᾶξις τῆς ἀγίως in the Apocalypse, see Bretschneider, Systeme, Dichtung d. Dogma, u. w. d. überw. Schriften d.

Some of the writers referred to above find the Menah da-Fegh in the Targum, or so called Targum, but not the earlier; but there seems to be no good ground for the distinction. The prize-essay of S. Maybaum, "Die Ansehungsphänomen u. Ansehungsprêtre bei Onkelos u. d. später Targumim mit besond. Berücksicl. der Assirischen Menah," Jevorna u. Schechou, Basel, 1870, I have not yet seen. The older literature of the subject is given in Wolf's "Bibl. Hebr." ii. 1150 ff. That the Menah is identified by the Targumists with the Messias has been maintained by some, not only without any plausible reason, but in opposition to the clearest passages: see the Jerusalem Targ. on Ex. xlii. 42; Peshito-Jonathan on Deut. xxx. 4; and Jonathan ben Uzziel on Is. xlii. 14.

On the Angel of Jehovah in the Old Testament, see the references under Angels, vol. i. p. 98. Both on this subject, and on the use of the terms Shechinah and Metatron in the later Jewish writings, the reader is particularly recommended to consult Dr. Noyes' review of Henstenberg in the "Christ. Examiner" for May and July, 1836. On the later Jewish theology generally, see the literature under the art. Messias.

WORM, the representative in the A. V. of the Hebrew words Sis, Rimnah, and Tzalchoth, Thoa, or Tahloth, occurs in numerous passages in the Bible. The first-named term, Sis (םש), "sphs: times) occurs only in Is. iii. 8, "For the (םש) shall eat them up like a garment, and the (םש) shall eat them like wool."

The word probably denotes some particular species of moth, whose larva is injurious to wool, while perhaps the former name is the more general one for any of the destructive times or "clothes moths." For further information on the subject the reader is referred to "Worm."
abedent Israelites kept till the morning of a week-day "laid worms" ( Guinness, s. v.), and stalk (Ex. xvi. 20); while of that kept over the Sabbath and gathered the night before, it is said that "it did not stink, neither was there any worm therein." The Hebrew word is connected with the root נון "to be putrid" (see Gesenius, Thes. s. v.), and points evidently to various kinds of maggots, and the larvae of insects which feed on putrid or animal matter rather than to earthworms; the words in the original are clearly used indiscriminately to denote either true annulii, or the larval condition of various insects. Thus, as may be seen above, rimōth and tor śāb are both used to express the maggots or caterpillar, whatever it might have been that consumed the dead menora in the wilderness of Sin. Job, under his heart-ailment, exclaims, "My flesh is clothed with rimōth" (viii. 5; see also xiii. 14); there is no reason to doubt that the expression is to be understood literally; a person in Job's condition would very probably suffer from oedema of some kind. In Job xxii. 26, xxiv. 24, there is an allusion to worms (insect larva) feeding on the dead bodies of sinners who have disappeared in the unknown passage (xix. 26).—And though after my skin worms destroy this body,—I have rather overstated the words of the original, "My skin shall have been consumed."* The patriarch uses both rimōth and tor śāb ( נון פ י ו ה ) in ch. xxv. 6, where he compares the estate of man to a rimōth, and the son of man to a tor śāb. This latter word, in one or other of its forms (see above), is applied in Rutt. xxviii. 29 to some kinds of herculean destructive to the house: "They shall plant vineyards . . . but shall not gather the grapes, for the tor śāb shall eat them." Various kinds of insects attack the vine, amongst which one or the most destructive is the Jacobite pyraclossis, the little caterpillar of which eats off the inner parts of the blossoms, the clusters of which it binds together by spinning a web around them. The worm which is said to have destroyed Jacob's vineyard was the larva of "borax" (borax). Michælis (Suppl. p. 2199) quotes Ramfis as asserting that there is a kind of black caterpillar, which, during sultry rainy weather, does actually strip the plant of its leaves in a single night. In I. xi. 24, the allusion is made to maggots feeding on the dead bodies of the slain in battle. The words of the prophet are applied by our Lord (Mark iv. 44, 46, 49) metaphorically to the clang of a guilty conscience in the world of departed spirits.

The death of Herod Agrippa I. was caused by worms—αἰσχαιριστοῖς, Acts xii. 23; according to Josephus (Ant. xix. 8), his death took place five days after his departure from the theatre. It is various that the Jewish historian makes no mention of worms in the case of Agrippa, though he expressly notes it in that of Herod the Great (Ant. xvii. 6, § 5). A similar death was that of Antinous Epiphanes (2 Marc. ii. 9; see also Eusebius, Hist. Eccl. viii. 16; and Lucian, Pharamondos, i. p. 904; compare Wetstein on Acts xii. 23). Whether the worms were the cause or the result of the disease is an immaterial question. The "Angel of the plagues," in allusion to the great plagues of Egypt, the "Angel of Death." Lord struck Herod with some disease, the issue of which was fatal, and the loATHsome appearance of which could not fail to have had a marked humiliating effect on his proud heart. W. H.

**WORMWOOD** (נִבָּיִם, ladanah: χελών, ódōn, and ἀνώκην: οὐσίωδης οἰκοζον). The correct translation of the Heb. word occurs frequently in the Bible, and generally in a metaphorical sense, as in Deut. xxvii. 18, where of the kind of wormwood the Israelites is said, "Lest there be hunger among you, a root that breatheth wormwood." (see also Prov. v. 4). In Jer. ix. 15, xxiii. 15; Lam. iii. 15, 19, wormwood is symbolized of bitter calamity and sorrow; mournful judges are said to "turn judgment to wormwood." (Am. v. 7). The Oriental writers applied sorrows, cruelties, and calamities of any kind by plants of a poisonous or bitter nature. (Gall. i. 861). The name of the star which at the sound of the third angel's trumpet fell upon the rivers, was called Wormwood (Αἰθέρος: rev. vii. 1). Kittos (Plut. Hist. of Palestine, p. 215) enumerates four kinds of wormwood as found in Palestine—Artemisiia vulgaris, A. judaica, A. costata, A. richardi. Wetstein speaks of some kind of wormwood under the name of Artemisia sicula, and says it is very common in Palestine; this is perhaps Artemisia Juliana. The Hebrew Leamoth is doubtless generic, and denotes several species of Artemisia (Ceclius, Herod. i. p. 480: Rosenmüller, Bibl. Hist. p. 136). W. H.

* WORSHIP (derived from ωριμάσαι, and the termination ship) originally = worthiness, became used to denote the honor or reverence of which one was regarded as worthy, and, as a verb, signified to pay such honor or reverence; the word not being originally restricted, as now, to religious worship. Thus Wycliffe translates Matt. xix. 13, "Worship the Lord, and the medir," and in the marriage service of the Church of England the bridegroom says to the bride, "With my body I thee worship." The noun "worship" is so used in the A. V. Psal. x. 14; Luke xiv. 10; and the verb occurs in Matt. xviii. 26 and often elsewhere as the rendering of πραθυπόμενον when it denotes the civil homage or commandage expressed by the oriental custom of prostration. [Adoration: ACTOR: PRAYER: PRIEST: SACRIFICE, etc.]

**WORSHIPPER.** A translation of the Greek word πραθυπόμενος, used once only, Acts xix. 35, in the margin "Temple-keeper." The πραθυπόμενος was originally an attendant in a temple, probably employed with its charge (Eurip. Ion, 115, 121, ed. Hus.: Plut. Life, vi. 7. Bekk.: Theodoret, Hist. Eccl. iii. 14, 16; Pollux, i. 14; Philo, De Prov. Sac. 6, li. 257; Hezychius explains it by δύο τῶν κορών κορών, κορών γὰρ τὸ σπείρα, Σούδας, κορών καὶ ευπορία, ἀλλ' οὖς ὁ σῶμα, ed. Gaisb. p. 2759). The divine holers paid in later Greek times to the person even in their lifetime, were imitated and exaggerated by the Romans under the empire, especially in Asia (Plut. Lys. 23: Appian, Mithr. 76: Dion Cass. xxxi. 6). The term πραθυπόμενος became thus applied to cities or communities which undertook the worship of particular emperors even in their lifetime; but there is no trace of the special title being applied to any city, "..." or, as Davidson renders it, "... Ye, after my skin when this body is destroyed." (Intro. to T & T p. 225).
before the time of Augustus. The first occurrence of the term in connection with Ephesus is on coins of the age of Nero (A. D. 54—68), a time which would sufficiently agree with its use in the account of the riot there, probably in 56 or 57. In later times the title appears with the numerical adjuncts B. τιμω/σι and even περιτιμω/σι. A coin of Nero's time bears on one side the device which, on the reverse a figure of the temple of Artemis (Mionnet, Inscri. iii. 93; Eckhel, Dict. Utter. Num. i. 529). The ancient veneration of Artemis and her temple on the part of the city of Ephesus, which procured for it the title of ναός Ἀρτεμίδος, is too well known to need illustration: but in later times it seems probable that with the term ναός the practice of Necourism became reserved almost exclusively for the veneration paid to Roman emperors, towards whom many other cities also of Asia Minor are mentioned as Necouri, e. g. Nicaedia, Perinthus, Sardis, Smyrna, Magnesia (Herod. i. 20; Strabo, xiv. 640; Aristid. Or. xii. 775, ed. Blau; Mionnet, Inscri. iii. 97. Nen. 281, 285; Eckhel, Dict. Utter. Num. ii. 551, 552; Böckh, Inscri. iv. 2617, 2618, 2224, 2534, 2567, 2990. 2992, 2993; Krause, De Cn. Necoreis; Hofmann, ib. necoreis). H. W. P.

* WOT and WOThETT occur repeatedly in the A. V. (Gen. xxvi. 26, xxvii. 11, Exod. xxxii. 1, etc.) as forms of the indicative present of the old verb to wir or to "know." [Wot: Wot:]

WRITING. [GAMES.]

WRITING. It is proposed in the present article to treat, not of writing in general, its origin, the people by whom and the manner in which it was done, but simply with reference to the Hebrew race to give such indications of the acquaintance with the art as are to be derived from their books, to discuss the origin and formation of their alphabet, and the subsequent development of the present square character, and to combine with this discussion an account, so far as can be ascertainment, of the material appliances which they made use of in writing, and the extent to which the practice prevailed among the people.

It is a remarkable fact that although, with respect to other arts, as for instance those of music and metal working, the Hebrews have assigned the honor of their discovery to the heroes of a remote antiquity, there is no trace or tradition whatever of the origin of letters, a discovery many times more remarkable and important than either of those. Throughout the book of Genesis there is not a single allusion, direct or indirect, either to the practice or to the existence of writing. The word אָמַר, câthab, "to write," does not once occur; none of its derivatives are used; and אָמַר הָא, "a book," is found only in a single passage (Gen. x. 1), and there not in a connection which involves the supposition that the art of writing was known at the time to which it refers. The signet of Judah (Gen. xxxviii. 12, 25) which had probably some device engraved upon it, and Pharaoh's ring (Gen. xli. 42) with which Joseph was invested, have been appealed to as indicating a knowledge quite consistent with the existence of writing. But as there is nothing to show that the devices upon these rings, supposing them to exist, were written characters, or in fact anything more than emblematical figures, they cannot be considered as throwing much light upon the question. That the Egyptians in the time of Joseph were acquainted with writing of a certain kind there is other evidence to prove, but there is nothing to show that up to this period the knowledge extended to the Hebrew family. At the same time there is no evidence against it. The instance brought forward by Heugel, for instance, "is simply to prove that they used inscriptions of alphabetic writings," is by no means so decisive as he would have it appear. It is Ex. xxxix. 20: "And they made the plate of the holy crown of pure gold, and wrote upon it a writing of the engravings of a signet, a Holiness to the Lord." That is, this inscription was engraved upon the plate as the device is engraved upon a signet, in imagination; and the expression has reference to the manner of engraving, and not to the figures engraved, and therefore cannot be appealed to as proving the existence of alphabetic characters upon Judah's signet or Pharaoh's ring. Writing is first distinctly mentioned in Ex. xxvii. 14, and the connection clearly implies that it was not then employed for the first time, but was so familiar as to be used for historic records. Moses is commanded to preserve the memory of Amedak's onslaught in the desert by committing it to writing. "And Jehovah said unto Moses, Write this for a memorial in the book (not a book," as in the A. V.,) and rehearse it in the ears of Joshua." It is clear that this book is here referred to, and not the book of Amalek's, the book of the wars of Jehovah, or the book of Joshua, or one of the many documents of the ancient Hebrews which have long since perished. Or it may have been the book in which Moses wrote the words of Jehovah (Ex. xxiv. 4), that is the laws contained in chapters xxviii.—xxxii. The tables of the testimonies are said to be "written by the finger of God" (Ex. xxxi. 18) on both sides, and "the writing was the writing of God, engraved upon the tables" (Ex. xxxii. 16). It is not clear whether the passage in Ex. xxxiv. 28 implies that the second tables were written by Moses or by God himself. The engraving of the gems of the high-priest's breastplate with the names of the children of Israel (Ex. xxvii. 11), and the inscription upon the mitre of Aaron (Ex. xxxix. 20) bear witness to the art of the engraver than of the writer, but both imply the existence of alphabetic characters. The next allusion is not so clear. The Israelsites were forbidden, in imitation of the idolatrous nations, to put any "brand" (lit. "writing of burning") upon themselves. The figures thus branded upon the skin might have been alphabetic characters, but they were more probably emblematical devices, symbolizing some object of worship, for the root עָמַר, câthab (to write), is applied to picture-drawing (Judg. viii. 14), to mapping out a country (Josh. xix. 8), and to plan-drawing (1 Chr. xxviii. 19). The curses against the adulteress were written by the priest "in the book," as before, and blotted out with water (Num. x. 23). This proceeding, though principally distinguished by its symbolic character, involves the use of some kind of ink, and of a material upon which the characters were written which would not be destroyed by water. The writing on door-posts and gates, alluded to in Deut. vi. 9, xi. 20, though perhaps to be taken figuratively rather than literally, implies certainly an acquaintance with the art and the use of alphabetic characters. Hitherto, however, nothing has been said of the application of writing to the purposes
of ordinary life, or of the knowledge of the art among the common people. Up to this point such knowledge is only attributed to Moses and the priests. From Deut. xxiv. 1, 3, however, it would appear that it was extended to others. A man who wished to be separated from his wife for her infidelity, could relieve himself by a summary process.

"Let him write her a bill ( inflict a, a book") of divorce, and give it in her hand, and send her out of his house." It is not absolutely necessary to infer from this that the art of writing was an accomplishment possessed by every Hebrew citizen, though there is no mention of a third party, and it is more than probable that these "bills of divorce," though apparently so informal, were the work of professional scribes. It was enjoined as one of the duties of the king (Deut. xvii. 18), that he should transcribe the book of the Law for his own private study, and we shall find hereafter in the history that distinct allusions to writing occur in the case of several kings. The remaining instances in the Pentateuch are the writing of laws upon stone covered with plaster, upon which while soft the inscription was cut (Deut. xxvii. 3, 8), the writing of the song of Moses (Deut. xxxi. 24), and of the Law in a book which was placed in the side of the ark (Deut. xxxi. 29). One of the first acts of Joshua on entering the Promised Land was to inscribe a copy of the Law on the stones of the Altar on Mount Ebal (Josh. viii. 32). The survey of the country was drawn out in a book (Josh. xix. 8). In the time of the Judges we first meet with the professional scribe (scribe, in his important capacity as marshal of the host of warriors (Judg. v. 14), with his staff (A. V. "pen") of office. Ewald (Post. Bäch. i. 129) regards spher in this passage as equivalent to , spher, "judge," and certainly the context implies the high rank which the art of writing conferred upon its possessor.

Later on in the history we read of Samuel writing in "the book" the manner of the kingdom (1 Sam. x. 25); but it is not till the reign of David that we hear for the first time of writing being used for the purposes of ordinary communication. The letter (lit. "book") which contained Uriah's death-warrant was written by David, and must have been intended for the eye of Joab alone; who was therefore able to read writing, and probably to write himself, though his message to the king, conveying the intelligence of Uriah's death, was a verbal one (2 Sam. xi. 14, 15). If we examine the instances in which writing is mentioned in connection with individuals, we shall find that in all cases the writers were men of superior position. In the Pentateuch the knowledge of the art is attributed to Moses, Joshua, and the priest alone. Samuel, who was educated by the high-priest, is mentioned as one of the earliest historians (1 Chr. xxiv. 29), as well as Nathan the prophet (2 Chr. ix. 29). Solomon the prophet, indeed, was the writer (2 Chr. xi. 15, xiii. 22), and Jehu the son of Hanani (2 Chr. xx. 34). Letters were written by Jezebel in the name of Ahab and sealed with his seal (1 K. xii. 8, 9, 11); by Jehu (2 K. x. 6); by Hezekiah (2 Chr. xxx. 1); by Rabshekh the Assyrian general (2 Chr. xxiii. 17); by the Persian satraps (Ezra. iv. 6, 7, 8); by Sanballat (Neh. vi. 5). Tobiah (Neh. vi. 19), Hanani (Ezra. viii. 5), Moaddei, and Ethan (Ezra. ix. 29). The prophet Elijah wrote to Ahab (2 Chr. xxi. 12); Isaiah wrote some of the history of his time (2 Chr. xxxvi. 22); Jeremiah committed his prophecies to writing (Jer. ii. 90), sometimes by the help of Baruch the scribe (Jer. xxxvi. 4, 32); and the false prophet, Shemaiah the Nehemiah, endeavored to undermine Jeremiah's influence by the letters which he wrote to the high-priest (Jer. xxix. 25). In Is. xxi. 11, 12, there is clearly a distinction drawn between the man who was able to read, and the man who was not, and it seems a natural inference from what has been said that the accomplishments of reading and writing were not widely spread among the people, when we find that they are universally attributed to those of high rank or education, kings, priests, prophets, and professional scribes.

In addition to these instances in which writing is directly mentioned, an indirect allusion to its early existence is supposed to be found in the name of certain officers of the Hebrews in Egypt, , spher, LXX. γραμματεύς (Ex. v. 6, A. V. "officers"). The root of this word has been sought in the Arabic spher, "to write," and its original meaning is believed to be "writers," or "scribes." The explanation adopted by Arber in his Lexicon Hebraicum et Talmudicum, though he rejected it in his Geschichte der Hebräischen Sprache und Schrift. In the name Kirjath-spher (Bethoklon, Josh. xvi. 15) the indication of a knowledge of writing among the Phoenicians is more distinct. Hitzig conjectures that the town may have derived its name from the discovery of the art, for the Hittites, a Canaanitish race, inhabited that region, and the term Hittite may possibly have its root in the Arabic spher, chatta, "to write."

The Hebrews, then, a branch of the great Semitic family, being in possession of the art of writing, according to their own historical records, at a very early period, the further questions arise, what character they made use of, and whence they obtained it. It is scarcely possible in the present day to believe that, two centuries since, learned men could have judged seriously maintained, at least as an article of faith, that the square character, as it is known to us, with the vowel points and accents, was a direct revelation from heaven, and that the commandments were written by the finger of God upon the tables of stone in that character. Such, however, was really the case. But recent investigations have shown that, so far from the square character having any claim to such a remote antiquity and such an august parentage, it is of comparatively modern date, and has been formed from a more ancient type by a gradual process of development, the steps of which will be indicated hereafter, so far as they can be safely ascertained. What then was this ancient type? Most probably the Phoenician. To the Phoenicians, the daring seamen, and adventurous colonizers of the ancient world, tradition assigned the honor of the invention of letters (Plin. v. 12). This tradition may be of no value as direct evidence, but as it probably originated with the Greeks, it shows that, to them at least, the Phoenicians were the inventors of letters, and that these were introduced into Europe by means of that intercourse with Phoenicia which is implied in the legend of Cadmus, the man of the East. The Phoenician companions of this hero.
accordings to Herodotus (v. 58), taught the Greeks many accomplishments, and among others the use of letters, which hitherto they had not possessed. So Lucan, Phars. iii. 220:—

"Phoenices prini, famae si creantis, et
Mansuram rudibus vocem signare figuris,"

Pliney (vii. 56) was of opinion that letters were of Assyrian origin, but he mentions as a belief held by others that they were discovered among the Egyptians by Mercury, or that the Syrians had the honor of the invention. The best-mentioned theory is that given by Bisdorus Simius (v. 24), who says that the Syrians invented letters, and from them the Phenicians, having learned them, transcribed them to the Greeks. On the other hand, according to Tacitus (Ann. xi. 14), Egypt was believed to be the source whence the Phenicians derived their knowledge. Be this as it may, the voice of tradition represents the Phenicians as the disseminators, if not the inventors, of the alphabet. Whether it came to them from an Arabian or Egyptian source can at best be but the subject of conjecture. It may, however, be reasonably inferred that the ancient Hebrews derived from, or shared with, the Phenicians the knowledge of writing and the use of letters. The two nations spoke languages of the same Semitic family; they were brought into close contact by geographical position: all circumstances combine to render it probable that the ancient Hebrew alphabet was the common possession both of Hebrews and Phenicians, and this probability is strengthened by the results of modern investigation into the Phenician inscriptions which have of late years been brought to light. The names of the Hebrew letters indicate that they must have been the invention of a Semitic people, and that they were moreover a pastoral people may be inferred from the same evidence. Such names as Aleph (an ox), Gimel (a camel), Lamed (an ox-goad), are most naturally explained by this hypothesis, which necessarily excludes the seafaring Phenicians from any claim to their invention. If, as has been conjectured, they took the first idea of writing from the Egyptians, they would at least have given to the signs which they invented the names of objects with which they themselves were familiar. So far from this being the case, the letters of the Hebrew alphabet contain no trace whatever of ships or seafaring matters: on the contrary, they point distinctly to an inland and pastoral people. The Semitic and Egyptian alphabets have this principle in common, that the object whose name is given to a letter was taken originally to indicate the letter which begins the name; but this fact alone is insufficient to show that the Semitic races borrowed their alphabet from Egypt, or that the principle thus held in common may not have been the possession of other natural rivals. The Semitic and Egyptian alphabets have this principle in common, that the object whose name is given to a letter was taken originally to indicate the letter which begins the name: but this fact alone is insufficient to show that the Semitic races borrowed their alphabet from Egypt, or that the principle thus held in common may not have been the possession of other natural rivals.

The phonetic use of hieroglyphics," says Mr. Kenrick, "would naturally suggest to a practical people, such as the Phenicians were, a simplification of the cumbersome system of the Egyptians, by dispensing altogether with the pictorial and symbolic use, and assigning one character to each sound, instead of the multitude of homophones which made the reading of the hieroglyphics so difficult: the residence of the Phenician shepherds, the Hylkon, in Egypt might afford an opportunity for this adaptation, or it might be brought about by commercial intercourse. We cannot, however, trace such a resemblance between the earliest Phoenician alphabet known to us, and the phonetic characters of Egypt, as to give any certainty to this conclusion" (Phoenicians, pp. 164, 165).

Perhaps all that can be inferred from the tradition that letters came to the Greeks from the Phenicians, but that they were the invention of the Egyptians possesses this, that the Egyptians possessed the alphabet before the Phenicians. Wahl, De Wette, and Kopp are inclined to a Babylonian origin, understanding the Sagg of Diodorus and the Sigr of Pliney of the Babylonians. But Gesenius has shown this to be untenable, because (1) Pliny distinctly mentions both Sigr and Aegypt; and by no means confines them; and (2) because the inscription on the seal-stone, on which Kopp based his theory, is nothing more than Phenician, and that not of the oldest form, but inclining to the somewhat later Aramaic character. This seal-stone or brick contained, besides a cuneiform inscription, some Semitic characters which were deciphered by Kopp, and were placed by him at the head of his list of Semitic alphabets (Bilder und Schriften, ii. 154). Gesenius, however, read them with a very different result. He himself argues for a Phoenician origin of the alphabet, in opposition to a Babylonian or Aramaean, on the following grounds: 1. That the names of the letters are Phoenician, and not Syrian. Several of the names are found alike in the Hebrew and Aramaic dialects; as for instance, Beth, Gimmel, Zain, Ain, Shin, Tash, but others are not found in Syriac at all, at least not in the same sense. Aleph, in Syriac signifies "a thousand," not "an ox;" Dailath is not "a door," and for this, as well as for evon, geel, men, pe, desk, and evon, different words are used. The Greek forms of the names of the letters are somewhat in favor of an Aramaic origin, but there is no proof that they came in this shape from the East, and that they were not so modified by the Greeks themselves. 2. It is not probable that the Aramaic dialect was the language of the inventors: for the letters הophon, which to them were certainly consonants, had become so weak in the Aramaic that they could scarcely any longer appear as such, and could not have been expressed by signs by an inventor who spoke a dialect of this kind. 3. If the Phenician letters are pictorial, as there seems reason to believe, there is no model, among the old Babylonian discoveries of writing, after which they could have been formed; while, on the other hand, it is extremely probable that the Phenicians, from their extended commerce, especially with Egypt, adopted an imitation of the Egyptian phonetic hieroglyphics, though they took neither the figures nor the names from this source. The names of some of the letters lead us to a nominal pastoral people, rich in herds: Aleph (an ox), Gimel (a camel). From the cosmology of the Egyptians, (a tent-door), evon (a tent-pep), cheeth (a hurde or pen). It is a little remarkable that Gesenius did not see that this very fact militates strongly against the Phoenician origin of the letters, and points, as has been observed above, rather to a pastoral than a seafaring people as their inventors. But whether or not the Phenicians were the inventors, the Semitic alphabet, there can be no doubt of their just claim to being its chief disseminators; and with this understanding we may accept the genealogy of alphabets as given by Gesenius, and exhibited in the accompanying table.

### Phoenician

Whatever minor differences may exist between the ancient and more modern Semitic alphabets, they have two chief characteristics in common: (1) that they contain only consonants and the three principal long vowels, א, י, ו (which must have been consonants originally.—W. H. W.); the other vowels being represented by signs above, below, or in the middle of letters, or being omitted altogether. (2) That they are written from right to left. The Ethiopic, being perhaps a non-Semitic alphabet, is an exception to this rule, as is the cuneiform character, in which some Semitic inscriptions are found. The same peculiarity of Egyptian writing was remarked by Herodotus. No instance of what is called hondrep-ehau writing — that is in a direction from right to left, and from left to right in alternate lines — is found in Semitic monuments.

The old Semitic alphabets may be divided into two principal classes: (1) The Phoenician, as it exists (a) in the inscriptions in Cyprus, Malta, Carpentras, and the coins of Phoenicia and her colonies. It is distinguished by an absence of vowels, and by sometimes having the words divided and sometimes not (b). In the inscriptions on Jewish coins. (c) In the Phoenician-Egyptian writing, with three vowel signs, deciphered by T. A. Smith on the nummy languages. From (c) are derived (d), the Samaritan character, and (e), the Greek. (2) The Hebrew-Chaldean: to whose belong (a), the Hebrew square character; (b), the Phoenician, which has some traces of a cursive hand; (c), the Estrangelo, or ancient Syriac; and (d), the ancient Arabic or Coptic. The oldest Arabic writing (the Himyaritic) was perhaps the same as the ancient Hebrew or Phoenician.a

It remains now to consider what of all these was the alphabet originally used by the ancient Hebrews. In considering this question it will on many accounts be more convenient to begin with the common square character, which is more familiar, and which from this familiarity is more constantly associated with the Hebrew language and writing. In the Talmud (Sanh. fol. 21, 22) this character is called נָיַנְיֶת נָיַנְיֶת, "square writing," or נָיַנְיֶת נָיַנְיֶת, "Assyrian writing," the latter appellation being given because, according to the tradition, it came up with the Israelites from Assyria. Under the term Assyria are included Chaldean and Babylonian in the wider sense; for it is clear that in ancient writers the names Assyriam and Chaldeam are applied differently to the same characters. The letters of the inscription on the tomb of Sardanapalus are called Chaldean (Athen. xii. 529) and Assyrian (Athen. xii. 407; Arrian, Exp. Alex. ii. 5, § 4). Again, the Assyrian writing on the pillars erected by Darius at the Deepenes (Her. iv. 87), is called by Strabo Persio (xv. 502). Another derivation for the epithet נָיַנְיֶת נָיַנְיֶת, askhurchit, as applied to this writing, has been suggested by Rabbi Judah the Holy, who derives it from נָיַנְיֶת נָיַנְיֶת, askhursherkh, "blessed," the term being applied to it because it was employed in writing the sacred books. Another etymology (from אָשֶׁר, to be straight), given by the Hebrew grammarians Abrahim de Bohus, describes it as the straight, perpendicular writing, so making the epithet equivalent to that which we apply to it in calling it the square character. Hupfeld, starting from the same root, explains the Talmudic designation as merely a technical term used to denote the more modern writing, and as opposed to נָיַנְיֶת נָיַנְיֶת, root, "broken," by which the ancient character is described. According to him it signifies that which is firm, strong, protected and supported as with forts and walls, referring perhaps to the horizontal strokes on which the letters rest as on a foundation. In this view he compares it with the Ethiopic character, which is called in Arabic אָבִּיִּים.

---

a * Schreiber (Phoenaicische Sprache, pp. 77, 78) divides the Phoenician remains into four palaeographical classes. The first, which he makes provisionally, as he had no monument to prove it, is the Archaic Phoenician used with little alteration up to the seventh century before Christ. To this class, we may say, belongs the Moabite monument of King Mesha, first given to the public by M. Ganneau in January, 1870. The second class is the Eastern Phoenician, extending from the seventh or sixth century B.C., until the time of Christ, and called by M. de Vogüé the "Shobak." The third class is the Carthaginian, and the fourth the New Phoenician of the time of the Roman domination of North Africa and Spain. W. H. W.

b * Probably the Talmud of Venice is right in printing this word נָיַנְיֶת נָיַנְיֶת instead of נָיַנְיֶת, from a root נָיַנְיֶת נָיַנְיֶת, "to cut, engrave." W. H. W.
"supported." It must be confessed that none of these explanations are so satisfactory as to be unhesitatingly accepted. The only fact to be derived from the word ר"מ" is that it is the source of the whole Talmudic tradition of the Babylonian origin of the square character. This tradition is embodied in the following passages from the Jerusalen and Babylonian Talmuds: "it is a tradition: R. Jose says Ezra was fit to have the Law given by his hand, but that the age of Moses prevented it; yet though it was not given by his hand, the writing and the language were: the writing was written in the Syriac tongue, and interpreted in the Syriac tongue (Ezr. iv. 7), and they could not read the writing (Dan. v. 8); from hence it is learned that it was given on the same day. R. Nathan says the Law was given in broken characters (ג"ת, root), and agrees with R. Jose; but Rab (t. e. R. Judah the Holy) says that the Law was given in the Assyrian (c. the square character), and when they sin it was turned into the broken character, and when they were worthy, in the days of Ezra, it was turned back into the Babylonian character, according to Zechar. ix. 12. It is a tradition: R. Simeon ben Eleazar says, on the account of R. Eleazar ben Pappa, who also says, on the account of Eleazar Hammoni, the Law was written in the Assyrian character." (Talm. Jerus. Megilbith, fol. 71, 72, 73.) But the story, as best known, is told in the Babylonian Talmud: "Mar Zutra, or as others Mar Uka, says, at first the Law was given to Israel in the Hebrew (י"ע), i.e. the Samaritan writing and the holy tongue: and again it was given to them, in the days of Ezra, in the Assyrian writing and the Syriac tongue. They chose for the Israelites the Assyrian writing and the holy tongue, and left to the idioth the Hebrew writing and the Syriac tongue. Who are the idioth? R. Chisda says, the Gentiles (or Samaritans). What is the Hebrew writing? R. Chisda says, the Libyan writing." (Sanhed. fol. 21. 2; 22. 1.) The Libyan writing is explained by R. Solomon to mean the large characters in which the Jews wrote their annals and mezuoth. The broken character mentioned above can only apply to the Samaritan alphabet, or one very similar to it. In this character are written, not only manuscripts of the Samaritan Pentateuch, varying in age from the 13th to the 16th century, but also other works in Samaritan and Arabic. The Samaritans themselves call it Hebrew writing, in contradistinction to the square character, which they call the writing of Ezra. It has no vowel points, but a distinctive mark called μακεδόνιον is employed, and words and sentences are divided. A form of character more ancient than the Samaritan, though closely resembling it, is found on the coins struck under Simon Maccecaus, cir. n. v. 142. Of this writing Gesenius makes the part "Phaligraphie in Ersh and Gruber's Encyclopaedic" that it was most probably employed, even in manuscripts, during the whole lifetime of the Hebrew language, and was gradually displaced by the square character about the birth of Christ. An examination of the characters on the Maccecan coins shows that they bear an extremely close resemblance to those of the Phoenician inscriptions, and in many cases are all but identical with them. The figures of three characters (ג, כ, צ) do not occur, and that of ד is doubtful. In order to explain the Talmudic story above given, and the relation between the square character and that of the coins, different theories have been constructed. Some held that the square character was sacred, and used by the priests, while the character on the coins was for the purposes of ordinary life. The younger Buxtorf (De Isd. Hebri. Gen. and Assyr. fol. 271) and Loeschner (De Gram. Assyri. Hebri. pp. 207, 298), who maintained that the characters on the coins were a kind of tachygraphic writing formed from the square character. Hartmann (Ling. Eial. p. 28, &c.) also upheld the existence of a twofold character, the sacred and profane. The fate of this hypothesis of a double alphabet had some analogies to which they could appeal for support. The Egyptians had a twofold, or even a threefold character. The eminently religious character of the ancient Persians and Medes was perhaps a sacred character for monuments, the Zend being used for ordinary life. The Arabs, Persians, and Turks, employs different characters according as they require them for letters, poems, or historical writings: but analogy is not proof, and therefore the passage in Is. viii. 1 has been appealed to as containing a direct allusion to the ordinary writing as opposed to the sacred character. But it is evident, upon examination, that the writing there referred to is that of a perfectly legible character, such as an ordinary unskilled man might read. Irenaeus (Adv. Heres. ii. 24), indeed, speaks of sacred letters, but his information is not to be relied on. In fact the sole ground for the hypothesis lies in the fact that the only specimens of the Hebrew writing of common life are not in the usual character of the manuscripts. If this assumption of the existence of a twofold alphabet be abandoned as untenable, we must either substitute for it a second hypothesis, that the square character was the exclusive possession of the kingdom of Judah, and that the Samaritan was used in the northern kingdom, or that the two alphabets were successive and not contemporaneous. Against the former hypothesis stands the fact that the coins on which the so-called Samaritan character occurs were struck at Jerusalem, and the names Hebrew and Assyrian, as applied to the two alphabets, would still be unaccounted for. There remains then the hypothesis that the square character and the writing of the coins succeeded each other in point of time, and that the one gradually took the place of the other, just as in Arabic the Nischi writing has displaced the older Cuthic character, and in Syriac the Estrangelo has given place to that at present in use. But did the square character precede the character on the coins, or was the reverse the case? According to some of the doctors of the Bnai and (Stah.
precisely written.

Judah the Holy, who adopted a different etymology for the word שְׁמֶשׁ (Assyrian), says that the Law was first given in this square character, but that afterwards, when the people sinned, it was changed into the broken writing, which again, upon their repentance in the days of Ezra, was converted into the square character. In both these cases it is evident that the tradition is entirely built upon the etymology of the word askhârîthâ, and varies according to the different conceptions formed of its meaning: consequently it is of but slight value as direct testimony. The varying character of the tradition shows moreover that it was framed after the true meaning of the name had become lost. Origen (on Ez. ix. 4) says that in the ancient alphabet the tau had the form of a cross, and (Hexap., i. 86, Montfaucon) that in some MSS. of the LXX. the word שְׁמֶשׁ was written in ancient Hebrew characters, not with those in use in his day, "for they say that Ezra used other [letters] after the Captivity." Jerome, following Origen, gives out as certain what his predecessor only mentioned as a report, and the tradition in his hands assumes a different aspect. It is certain, he says, that Ezra the scribe and doctor of the law, after the taking of Jerusalem and the restoration of the Temple under Zerubbabel, discovered other letters which we now use: whereas up to that time the characters of the Samaritans and Hebrews were the same. . . . And the tetragrammaton name of the Lord we find in the present day written in ancient letters in certain Greek rolls." (Prel. Gal. in Lebr. Rep.) The testimony of Origen with regard to the form of tau undergoes a similar modification. In the ancient Hebrew letters, which the Samaritans use to this day, the last letter, ταύ, has the form of a cross. Again, in another passage (Ep. 136 ad Marcell. ii. 794. Ep. 14, ed. Martinay) Jerome remarks that the inadmissible name שְׁמֶשׁ, being misunderstood by the Greeks when they met with it in their books, was read by them πᾶσιν, i.e. הַיְהֵה. It has been inferred from this that the ancient characters, to which both Jerome and Origen refer in the first-quoted passages, were the square characters, because in them alone, and not in the Samaritan, does any resemblance between שְׁמֶשׁ and הַיְהֵה exist. There is nothing, however, to show that Jerome contemplated the same case in the two passages. In the one he expressly mentions the "ancient characters," and evidently as an exceptional instance, for they were only found in certain letters of the Samaritans and of the alphabet of a copy of the Decalogue built into a cross. Origen merely says this is the case in the ancient or original (ἐπαγωγεύμενος) Hebrew characters, and it is evident from the writing on the Macedonian coins, and of the ancient and even the more modern Phenician, but not of the alphabet known to us as the Samaritan. It seems clear, therefore, that Jerome's language on this point cannot be regarded as strictly accurate.

There are many arguments which go to show that the Samaritan character is older than the square Hebrew. One of these is derived from the existence of the Samaritan Pentateuch, which, according to some writers, must date at least from the time of the separation of the two kingdoms, the northern kingdom retaining the ancient writing which was once common to both. But there is no evidence for the existence of the Samaritan Pentateuch before the Captivity, and the opinion which now most commonly prevails is that the Samaritans received it first in the Macedonian period, and with it the Jewish writing (Haverfield, Edin. i. 290). The question is still far from being decided, and while it remains in this condition the arguments derived from the Samaritan Pentateuch cannot be allowed to have much weight.

Hudspeth (Stud. and Krit. 1830, ii. 279, &c.) contends that the common theory, that the Samaritans received their writing from the ancient Israelithish times, but maintained it more faithfully than the Jews, is improbable, because the Samaritans were a mixed race, entirely different from the ancient Israelites, and had, like their language, a preponderating Aramaic element: consequently, if they had had a character peculiar to themselves, independently of their sacred writings, it would rather have been Aramaic. He argues that the Samaritans received their present writing with their Pentateuch from the Jews, because the Samaritan character differs in several important particulars from that on the Phenician monuments, but coincides in all characteristic deviations with the ancient Hebrew on the Macedonian coins. These deviations are: (1) the horizontal strokes in both, μεν, and ων, which have no parallel on the Phenician monuments: (2) the angular heads of beth, מ, and samekh, which last never occurs in an angular form in Phenician: (3) the entirely different forms of tebeth and וν, as well as of ו in מ and ש, which are not found in the Phenician coins. In the Samaritan letters אלף, כותל, בונל, שין, there is a closer relationship with the forms of the old Hebrew: the only marked deviation is in the form of ταύ. To these considerations Hudspeth adds the traditions of Origen and Jerome and the Talmud already given, and the fact that the Samaritans have preserved their letters unaltered, a circumstance which is intelligible on the supposition that these letters were regarded by them with superstitious reverence as a sacred character which had come to them from without, and which, in the absence of any earlier indigenous tradition of writing, necessarily became a lifeless permanent type.

The names of the letters, and the correspondence of their forms to their names in the Phenician alphabet: a kind of argument for the superior antiquity of this to the Hebrew square character: e. g. גîn (an eye), מมาจากעך, of which Rosen gives a figure (Zeitz, d. Deutsch. Mag. Grz. xii. 278) Here, contrary to Hudspeth, the ταύ is a simple cross, being precisely the old Phenician form.
which on the coins and Phoenician monuments has the form רוש (a bird), גוף (a body), כופ (a weapon), and גוף (the hollow hand) correspond to their forms better in the square character; this, however, at most, would only prove that both are derived from the same original alphabet in which the correspondence between the shape and name of each letter was more complete. Again, we trace the Phoenician alphabet much further back than the square character. The famous inscription on the sarcophagus of Elshmunazar, found at Sidon in 1855, is referred by the Due de Luynes to the sixth century B.C. The date of the inscription at Marseilles is more uncertain. Some would place it before the foundation of the Greek colony there, B.C. 600.

There is reason to believe, however, that it is much more recent. Besides these we have the inscriptions at Sigeaim and Anyczia in the ancient Greek character, which is akin to the Phoenician. On the other hand, the Hebrew-Chaldee character is not found on historic monuments before the birth of Christ. A consideration of the various readings which have arisen from the interchange of similar characters in the present text leads, as might naturally be expected, to results which are rather favorable to the square character, for in this alone are the manuscripts written which have come down to us. The following examples are given, with one exception, by Gesenius:—

(a.) In the square alphabet are confounded—

ב and ב, נֵבִיָּשׁ, Neh. xii. 14 = נֵבִיָּשׁ, Neh. xi. 3; נֵבִיָּשׁ, 1 Chr. ix. 15 = נֵבִיָּשׁ, Neh. xi. 17.

1 and י, נֵבִיָּשׁ, Gen. xlii. 37 = יֵבָנָי, 1 Chr. i. 46.

ב and ב, נֵבִיָּשׁ, 1 K. vii. 49 = נֵבִיָּשׁ, 2 Chr. iv. 11.

ב and ב, נֵבִיָּשׁ, Ps. xlvii. 12 = נֵבִיָּשׁ, 2 Sam. xlvii. 12.

1 and י, נֵבִיָּשׁ, Ps. xxxi. 3 = יֵבָנָי, Ps. lxxvi. 3.

(b.) In both alphabets are confounded—

ת and ת, נֵבִיָּשׁ, 1 Chr. i. 6 = נֵבִיָּשׁ, Gen. x. 3; נֵבִיָּשׁ, 1 Chr. i. 7 = נֵבִיָּשׁ, Gen. x. 4; נֵבִיָּשׁ, Lev. xi. 14 = נֵבִיָּשׁ, Deut. xiv. 13; נֵבִיָּשׁ, Ps. xvii. 11 = נֵבִיָּשׁ, 2 Sam. xxix. 11.

(c.) In the Phoenician alone—

ב and ב, נֵבִיָּשׁ, 2 Sam. xlvii. 29 = נֵבִיָּשׁ, 1 Chr. vi. 30.

1 and י, whence probably יֵבָנָי, Josh. xxi. 16 = יֵבָנָי, 1 Chr. vi. 44.

ב and ב, נֵבִיָּשׁ, 1 Chr. xi. 37 = יֵבָנָי, 2 Sam. xlvii. 35.

(d.) In neither—

א * No sort of dependence can be put on this argument. The oldest רוש has a triangular, and not a round head, and the gradual development of the Gezer square characters is evident enough from

2 and י, נֵבִיָּשׁ, Neh. vii. 7 = נֵבִיָּשׁ, Ezr. ii. 2.

2 and י, נֵבִיָּשׁ, Num. xxvi. 35 = נֵבִיָּשׁ, 1 Chr. vii. 20: נֵבִיָּשׁ, 1 Chr. vii. 76 (64) = נֵבִיָּשׁ, Josh. xxi. 12.

The third class of these readings seems to point to a period when the Hebrew used the Phoenician character, and a comparison of the Phoenician alphabet and the Hebrew coin-writing shows that the examples of which Gesenius makes a fourth class, might really be included under the third; for in these some forms of ל and שָנָה, as well as of ל and שָנָה, are by no means unlike. This circumstance takes away some of the importance which the above results otherwise give to the square character. Indeed, after writing his Hebrewische Sprache und Schrift, Gesenius himself appears to have modified some of the conclusions at which he arrived in that work, and instead of maintaining that the square character, or one essentially similar to it, was in use in the time of the LXX., and that the Maccabees retained the old character for their coins, as the Arabs retained the Cufic some centuries after the introduction of the Nischi, he concludes as most probable, in his article Palaeographie (in Erasm. and Guterer's Engel.), that the ancient Hebrew was first changed for the square character about the birth of Christ. A comparison of the Phoenician with the square alphabet shows that the latter could not be the immediate development of the former, and that it could not have been formed gradually from it at some period subsequent to the time of the Maccabees. The essential difference of some characters, and the similarity of others, render it probable that the two alphabets are both descended from one more ancient than either of which each has retained some peculiarities. This more ancient form, Hüppel (Hebraische Grammatik, § 7) maintains, is the original alphabet invented by the Babylonians, and extended by the Phoenicians. From this the square character was developed by three stages.

1. In its oldest form it appears on Phoenician monuments, stones, and coins. The number of the inscriptions containing this writing is 77, greater and smaller, in the time of Gesenius, but it has since been increased by the discovery of the famous sarcophagi of Elshmunazar king of Sidon, and the excavations which have still more recently been made in the neighborhood of Cartagene have brought to light many others which are now in the British Museum. Those described by Gesenius were found at Alcena (three bilingual), at Malta (four, one of which is bilingual), in Cyprus, among the ruins of Kutium (thirty-three), in Sicily, in the ruins of Cartagene (twelve), and in the regions of Cartagene and Numidia. They belong for the most part to the period between Alexander and the age of Augustus. A Punic inscription on the arch of Septimius Severus brings down the Phoenician character as late as the beginning of the third century after Christ. Besides these inscriptions on stone, there are a number of coins bearing Phoeni-palaeographical data, without considering the resemblance they may be imagined to bear to the meaning of their names. W. H. W.
writing

carian characters, of which those found in Cilicia are the most ancient, and belong to the times of the Persian domination. The character on all these is essentially the same. In its best form it is found on the Sicilian, Maltese, Cyprian, and Carthaginian inscriptions. On the Sicilian coins it is perhaps most original, degenerating on the later coins of Phoenicia, Spain, and the neighboring islands, and becoming almost a cursive character in the monuments of Numidia and the African provinces. There are no final letters, and no divisions of words. The characteristic of the Phoenician alphabet as it is thus discovered is, that it is purely consorntal; that it consists of twenty-two letters written from right to left, and is distinguished by strong perpendicular strokes, and the closed heads of the letters; that the names and order of the letters are the same as in the Hebrew alphabet, as may be inferred from the names of the Greek letters which came immediately from Phoenicia; and that originally the alphabet was pictorial, the letters representing figures. This last position has been strongly opposed by Winckle (Zeitsch, d. d. M. G. xi. 76, etc.), who maintains that the ancient Phoenician alphabet contained no figures of a pictorial character, and that the letters are simply combinations of strokes. It is impossible here to give his arguments, and the reader is referred for further information to his article. This ancient Phoenician character in its earliest form was probably, says Hopf, adopted by the Hebrews from the Carumities, and used by them during the whole period of the living language till shortly before the birth of Christ. Closely allied with it are the characters on the Macedonian coins, and the Samarian alphabet.

2. While the old writing remained so almost unchanged among the Phoenicians and Samarians, it was undergoing a gradual transformation among its original inventors, the Aramaeans, especially those of the West. This transformation was effected by opening the heads of the letters, and by bending the perpendicular stroke into a horizontal one, which in the cursive character served for a connecting intermediate character and gave the inscription a more uniform turn for a basis or foundation for the letters. The character in this form is found in the earliest stage on the stone of Carpentas, where the letters 𐤀𐤃𐤁𐤆𐤇, have open heads; and later in the inscriptions on the ruins of Palmyra, where the characters are distinguished by the open heads degenerating sometimes to a point, and by horizontal connecting strokes. Besides the stone of Carpentas, the older form of the modified Aramaic character is found on some fragments of papyri found in Egypt, and preserved in the Library at Turin, and in the Museum of the Duke of Biccas. Plates of these are given in Gesenius' Monumenta Phoeniciva (tab. 28-33). They belong to the time of the later Ptolemies, and are written in an Aramaic dialect. The inscription on the Carpentas stone was the work of heathen scribes, probably, as Dr. Levy suggests (Zeitsch, d. d. M. G. xi. 67), the Babylonian colonists of Egypt; the writing of the papyrus he attributes to Jews. The inscription on the vase at the Serapeum at Memphis is placed by the Due de Luynes and M. Mariette in the 4th century B.C. In the Bichas fragments the heads of the letters 𐤀𐤃𐤁𐤆𐤇, have fallen away altogether. In the forms of 𐤀𐤄𐤄𐤃, we see the origin of the figures of the square character. The final forms of Cypri and Nov occur for the first time. The Palmyrene writing represents a later stage, and belongs principally to the second and third centuries after Christ, the time of the greatest prosperity of Palmyra. The oldest inscription belongs to the year 396 of the Greeks (A. D. 84), and the latest to the year 569 (A. D. 257). The writing was not confined to Palmyra, for an inscription in the same character was found at Athlone. The Palmyrene inscriptions are fifteen in number: ten bilingual, in Syriac and Greek, and Syriac and Latin. Two are preserved at Rome, four at Oxford. Those at Rome differ from the rest, in having lost the heads of the letters 𐤀𐤃𐤁𐤆𐤇, while the forms of the 𐤀𐤃𐤁𐤆𐤇, are like the Phoenician. Of the cursive Assyrian writing, which appears to be allied to the Aramaean, Mr. Layard remarks, 'On monuments and remains purely Syrian, or such as cannot be traced to a foreign people, one form of character has been discovered, and it so closely resembles the cursive of Assyria, that there can be little doubt as to the identity of the origin of the two. If, therefore, the inhabitants of Syria, whether Phoenicians or others, were the inventors of letters, and those letters were such as exist upon the earliest monuments of that country, the cursive character of the Assyrians may have been as ancient as the cuneiform. However that may be, it is highly probable that cuneiform character has never been found in Assyria on remains of a very early epoch, and it would seem probable that simple perpendicular and horizontal lines preceded rounded forms, being better suited to letters carved on stone tablets or rocks. At Ninevah the cursive writing was found on part of an ababaster vase, and on fragments of letters written out of the papyrus used for copying the ruins. On the ababaster vase it accompanied an inscription in the cuneiform character, containing the name of the Khoresabad king, to whose reign it is evident, from several circumstances, the vase must be attributed. It has also been found on Babylonian bricks of the time of Nebuchadnezzar (Nin. ii. pp. 163, 166). M. Fresnel discovered at near some fifty fragments of pottery covered with this cursive character in ink. These, too, are said to be of the age of Nebuchadnezzar (Journ. Asiat. July 1853, p. 77). Dr. Levy (Zeitsch, d. d. M. G. ix. 465) maintains, in accordance with the Talmudic tradition, that the Jews acquired this cursive writing in Babylon, and brought it back with them after the Captivity together with the Chaldean language, and that it gradually displaced the older alphabet, of which fragments remain in the forms of the final letters.

3. While this modification was taking place in the Aramaic letters, a similar process of change was going on in the old character among the Jews. We already find indications of this in the Macedonian coins, where the straight strokes of some letters are broken. The Aramaic character, too, had apparently an influence upon the Hebrew, proportionally to the influence exercised by the Aramaic dialect upon the Hebrew language. The heads of the letters still left in the Palmyrene character are removed, the position and length of several oblique strokes are altered (as in 𐤀𐤀𐤀𐤀), it lost the character of a cursive hand by the separation of the several letters, and the stiff ornaments which they received at the hands of calligraphers, and thus became an angular, uniform, broken character, from which it receives its name square (𐤀𐤀𐤀𐤀)
In the letters א, ג, ד, ה, ו, ש, ת, the Egyptian-Aramaic appears the older, and the Palmyrene most resembles the square character. In others, on the contrary, as מ, נ, ק, ס, the square character is closely allied to the forms in the Biblical fragments; and in some, as י, ק, ת, י, כ, both the older alphabets agree with the square character.

So far as regards the development of the square character from the Aramaic, as it appears on the stele of Carpentras and the coins of Palmyra, Hufeld and Gesenius are substantially agreed, but they differ widely on another and very important point. Gesenius is disposed to allow some weight to the tradition as preserved in the Talmud, Origen, and Jerome, that the Hebrews at some period adopted a character different from their own. The Chaldæan square alphabet he considers as originally Aramaic, but transferred to the Hebrew language.

To this conclusion he appears to be drawn by the name Assyria applied in the Talmud to the square character, which he infers was probably the ancient character of Assyria. If this were the case, it is remarkable that no trace of it should be found on the Assyrian monuments; and, in the absence of other evidence, it is unsafe to build a theory upon a name, the interpretation of which is uncertain. The change of alphabet from the Phoenician to the Aramaic, and the development of the Syrac from the Aramaic, Gesenius regards as two distinct circumstances, which took place at different times, and were separated by a considerable interval. The formation of the square character he maintains cannot be put earlier than the second century after Christ. Hufeld, on the other hand, with more show of reason, objects altogether the theory of an abrupt change of character, because he doubts whether any instance can be shown of a simple exchange of alphabets in the case of a people who have already a tradition of writing. The ancient letters were in use in the time of the Maccabees, and from that period writing did not cease, but was rather more practiced in the transcription of the sacred books. Besides, on comparing the Palmyrene with the square character, it is clear that the former has been altered and developed, a result which would have been impossible in the case of a communication from without which overwhelmed all tradition and spontaneity. The case of the Samaritans, on the other hand, is that of a people who received an alphabet entire, which they regarded as sacred in consequence of its association with their sacred book, and which they therefore retained unaltered with superstitions fidelity. Moreover, in the old Hebrew writing on the coins we see already a tendency to several important alterations, as, for example, in the open heads of א and י, and the base lines of כ, ה, ו, ת, and many letters, as מ, are derived rather from the sin-character than from the Palmyrene, while ג and י are entirely Phoenician. Finally, Hufeld adds, it is in the highest degree improbable — nay, almost inconceivable — that the Jews, in the fervor of their then enthusiasm for their sacred books, should, consciously and without apparent reason, have adopted a foreign character, and abandoned the ancient writing of their fathers.

Assuming, therefore, as apparently true, that the square character of the Hebrews was the natural result of a gradual process of development, and that it was not adopted in its present shape from without, but became what it is by an internal organic change, we have further to consider at what time it acquired its present form. Kopp (Bibl. und Schriften, ii. 177) places it as late as the 4th century after Christ; but he appears to be guided to his conclusion chiefly by the fact that the Palmyrene character, to which it is most nearly allied, extended into the 3d century. It is evident, however, from several considerations, that in the 4th century the square character was substantially the same as it is to this day, and had for some time been so. The descriptions of the forms of the letters in the Talmud and Jerome coincide most exactly with the present; for both are acquainted with final letters, and describe as similar those letters which resemble each other in the modern alphabet, as, for instance, ב and כי, ק and מ, י and ו, י and ב, etc. The calligraphic ornaments which were employed in the writing of the synagogue rolls, as the λογία on the letters ש, מ, and י, which is the point in the broken headline of מ, מ, and many other prescriptions for the orthography of the Torah are found in the Talmud, and show that Hebrew calligraphy, under the powerful protection of minute laws observed with superstitious reverence, had long received its full development, and was become a fixed unalterable type, as it has remained ever since. The change of character, moreover, not only in the time of Jerome and the Talmud, but even as early as Origen, was an event already long passed, and so old and involved in the darkness of time as to be attributed in the common legend to Ezra, or by most of the Talmudists to God Himself. The very obscurity which surrounds the meaning of the terms ש and מ as applied to the old and new writing respectively, is another proof that in the time of the Talmudists the square character had become permanent, and that the history of the changes through which it had passed had been lost.

In the Mishna (Shebb. xii. 5) the case is mentioned of two Zains (ז) being written for Cheth (ח), which could only be true of the square character. The often-quoted passage, Matt. v. 18, which is generally brought forward as a proof that the square character must have been in existence in the time of Christ, who mentions ז, ז, or ג, as the smallest letter of the alphabet, proves at least that the old Hebrew or Phoenician character was no longer in use, but that the Palmyrene character, or one very much like it, had been introduced. From these circumstances we may infer, with Hufeld (Stud. und Krit. 1830, ii. 288), that Whiston's conjecture is approximately true; namely, that about the first or second century after Christ the square character assumed its present form; though in a question involved in so much uncertainty, it is impossible to pronounce with great positiveness.

(Num. and Bab. p. 506), which Dr. Levy (Zevah 1. D. M. G.), assigns to the 7th century B.C. (See the pls. in Sch. ed's. of De Wette's Ent. (1832), 1.)
Next to the scattered hints as to the shape of the Hebrew letters which we find in the writings of Jerome, the most direct evidence on this point is supplied by the so-called *Alphabetum Legatum*, which is found in a MS. (Codex Marchallianus, now lost, of the LXX. of Lan. ii.) It is the work of a Greek scribe, imperfectly acquainted with, or more probably entirely ignorant of Hebrew, who copied clumsily the letters which were before him. In this alphabet *Γ* is written Π, and *γ* are of nearly equal length, the latter being distinguished by two dots; *θ* is made like φ, and η like H. The letters on the two Abraxas gems in his possession were thought by Montaneum (*Prodlin. ad Hebr. Orig. i. 22, 23*) to have been Hebrew; but as they have not been fairly deciphered, nothing can be inferred from them. Other instances of the occurrence of the Hebrew alphabet written by ignorant scribes are found in a Codex of the New Testament, of which an account is given by Treschow (*Teid. desr. Cod. Vet. aliquot Gr. N. T.*), and three have been edited from Greek and Latin MSS. in the *Novarum Tintae Diplomatique* published by the Benedictines. To those, as to the *Alphabetum Legatum*, Kennicott justly attributes no value. *Disert. Gen.* p. 69 note. The same may be said of the Hebrew writing of a monk, taken from the work of Rabanus Maurus, *De inventione linguarum*. The Jews themselves recognize a double character in the writing of their synagoge rolls. The earlier of these is called the *Tota* writing (בּלָם בּלָם) as some suppose, from Tum, the grandson of Rashla, who flourished in the 12th century, and is thought to be the inventor; or, according to others, from the *perfect* form of the letters, the epithet Tum being then taken as a significant epithet of the square character, in which sense the expression *תּוּתָם, תּוּתָם, תּוּתָם* occurs in the Talmud (*Shabbath*, ed. 163 b). Phylacteries written in this character were hence called *Tota tephilin*. The letters have fine pointed corners and perpendicular *tajgin* (תָּגִי), or little strokes attached to the seven letters מָדָה. The *Tota* writing is chiefly found in German synagoge rolls, and probably also in those of the Polish Jews. The *Welch* writing (כּלָם כּלָם), to which the Jews assign a later date than to the other, usually occurs in the synagoge rolls and other manuscripts of the Spanish and eastern Jews. The figures of the letters are rounder than in the *Tota* writing, and the *tajgin*, or crown-like ornaments, terminate in a thick point. But besides these two forms of writing, which are not essentially distinct, there are minor differences observable in the manuscripts of different countries. The Spanish character is the most regular and simple, and is for the most part large and bold, forming a true square character. The German is more sloping and compressed, with pointed corners; but finer than the Spanish. Between these the French and Italian character is intermediate, and is hence called by Kennicott (*Disert. Gen.* p. 71) character *intermedium*. It is for the most part rather smaller than the other, and the forms of the letters are rounder (*Eichhorn, Einw.* ii. 37-41; Tychsen, *Texturen der var. col. Hebr. V.* T. MSS. gen. *liv.* p. 264; Bellermann, *De usum palaeog. Hebr.* p. 43).

The *Alphabet*.—The oldest evidence on the subject of the Hebrew alphabet is derived from the alphabetical psalms and poems: Ps. xxxv., xxxiv., xxxiv., ext. ext. ext., ext., ext., Prov. xxxi. 10-31; Lam. ii.-iv. From these we ascertain that the number of the letters was twenty-two, as at present. The Arabic alphabet originally consisted of the same number. *Treschow* (*Adv. Hebr. ii.* 24) says that the ancient sacred letters were ten in number. It has been argued by many that the alphabet of the Phenicians at first consisted only of sixteen letters, or according to Hig of fifteen, ת, ל, נ, ב, נ, פ, כ, ז, ד, ה, ו, י, ג, י, ב, פ, כ, ד, ה, ו, י, being omitted. The legend as told by Pliny (vi. 56) is as follows. Cadmus brought with him into Greece sixteen letters: at the time of the Trojan war Laomedon added four others, Θ, Ξ, Ω, and Simonides of Molos four more, Ζ, Υ, Ο, Π. Aristotle recognized eighteen letters of the original alphabet, ΑΒΔΕΖΙΚΛΜΝΟΠΡΣΤΥΦ, to which Θ and Χ were added by Epicharum of Comana, Tac. *Ann. xi.* 14. By Lapis of Seville (*Orig. i.* 21) it is said there were seventeen. But in the oldest story of Cadmus, as told by Herodotus (v. 58) and Diodorus (v. 24), nothing is said of the number of the letters. Recent investigations, however, have rendered it probable that at first the Semitic alphabet consisted of but sixteen letters. It is true that no extant monuments illustrate the period when the alphabet was thus curtailed, but as the theory is based upon an organic arrangement first proposed by Lepsius, it may be briefly noticed. Dr. Donaldson (*Vie Crot. gen.* p. 171, 3d ed.) says, "besides the mutes and breathings, the Hebrew alphabet, as it now stands, has four sibilants, ת, ל, נ, פ, וב. Now it is quite clear that all these four sibilants could not have existed in the oldest state of the alphabet. Indeed we have positive evidence that the Ephyrmites could not pronounce צ, but substituted for it the simpler articulation צ (Judges xii. 6). We consider it quite certain, that at the first there was only one sibilant, namely this צ, or *swash*. Finally, to reduce the Semitic alphabet to its oldest form, we must omit *cyph*, which is only a softened form of *kaph*, the liquid *resh*, and the semivowel *ph", which are of more recent introduction... The remaining 16 letters appear in the following order: ב, ל, ת, נ, פ, כ, ד, ה, ו, י, ג, י, ב, פ, כ, ד, ה, ו, י. If we examine this order more minutely, we shall see that it is not arbitrary or accidental, but strictly organic according to the Semitic articulation. We have four classes, each consisting of 4 letters: the first and second classes consist each of 3 mutes preceded by a breathing, the third of the 3 liquids and the sibilant, which perhaps closed the oldest alphabet of all, and the fourth contains the three supernumerary mutes preceded by a breathing." The original 16 letters of the Greek alphabet, corresponding to those of the

* Dr. Donaldson's conjectures are at best rather fanciful. His second class does not consist of "three mutes." Even if כ can be called such, ל is no mute and never was, so far as we know. Why four sib-

bils "could not have existed in the oldest state of the alphabet" it would be difficult to show if the len

gage was developed sufficiently, at the time the
Shemite, are thus given by Dr. Donaldson (ibid., p. 175).

In the Greek alphabet, as it is now given in the grammars, F and O are omitted; and ten other characters added to these. The Shemite Tydme (C) became ς (ς), Caph (D) became κοπα (κ), and Tav (E) became λατιν. (λ). Reck (C) was adopted and called ρ (ρ), and ξ, which was used by the Dorians for κοπα (κ), is only another form of ζ (ς). Σin (D) or Sin (S) is the original of Σ, which from some cause or other has changed places with ζ(ς). The Shemite Stoneck, just as Ю has been transferred to its position. In like manner Mem became μ, and Numer became ν. With the remaining Greek letters we have nothing to do, as they do not appear to have been Shemite in origin, and will therefore proceed to consider the Hebrew alphabet as known to us.

With regard to the arrangement of the letters, our chief sources of information are as before the alphabetical acrostics in the Psalms and Lamentations. In these poems some irregularities in the arrangement of the alphabet are observable. For instance, in Lamm. ii., liv., B stands before Z; in Ps. xxxvii. Z stands before Z, and Z is wanting: in Ps. xxxv., xxxiv. Z is omitted, and in both there is a final verse after Z beginning with Z.

Hence Z has been compared with the Greek ϖ, and the transposition of Z and Z has been explained from the interchange of these letters in Aramaic. But as there are other irregularities in the alphabetical psalms, no stress can be laid upon these points. We find, for example, in Ps. xxxv., two verses beginning with Σ, while Z is omitted; in Ps. xxxiv. two begin with Τ, and so on.

The names of the letters are given in the LXX. of the Lamentations as found in the Vatican MS. as printed by Mai, and in the Codex Friderico-Augustanus, published by Tischendorf. Both these ancient witnesses prove, if proof were wanting, that in the 4th century after Christ the Hebrew letters were known by the same names as at the present day. These names all denote sensible objects which had a resemblance to the original form of the letters, preserved partly in the square alphabet, partly in the Phoenician, and partly perhaps in the alphabet from which both were derived.

The following are the letters of the Hebrew alphabet in their present shape, with their names and the meanings of these names, so far as they can be ascertained with any degree of probability.

A, Aleph. Α, an ox (comp. Plut. Syr. Ques. i. 2, § 3). In the old Phoenician forms of this letter can still be traced some resemblance to an ox-head.

B, Bet. Γ β, a house. The figure in the square character corresponds more to its name, while the Ethiopic Υ has greater resemblance to a tent. Gr. βεα (B).

Gimel. Γ γ, a camel. The ancient form is supposed to represent the head and neck of this animal. In Phoenician it is T, and in Ethiopic  ג, which when turned round became the Greek γαλα, (γαλα). Gesenius holds that the earliest form represented the camel's hump.

Daleth. Δ δ, a door. The significance of the name is seen in the older form Δ, whence the Greek δόρα, Δ, a tent-door. [The simple triangle of the Greek δ is a yet older form found in the Moabite Inscription, and still more resembles a tent-door. — W. H. W.]

He. ᵇ, without any probable derivation; perhaps corrupted, or merely a technical term. Ewald says it is the same as the Arabic ب a hole, fissure. Hupfeld connects it with the interjection स, स्य, "lo!" The corresponding Greek letter is Ε, which is the Phoenician כ turned from left to right.

Vau. Ṽ, a hook or tent-peg: the same as the old Greek βόδ (F), the form of which resembles the Phoenician Ω. [But the old Phoenician Ω is ν and not ν, and corresponds in shape with the Greek Τ, with which it also corresponds in sound. The Greek Τ has been supposed to be a late addition to the Greek alphabet, but it is found in the oldest inscriptions, and its shape shows it to have been borrowed, with the other Phoenician characters, from the East. — W. H. W.]

Zain. Ζ ζ, probably = ל, מ, zaino, a weapon, sword (Ps. xiv. 7): omitting the final letter, it was also called ל, מ, zain (Misr. Shabb. xii. 5). It appears to be the same as the ancient Greek ζαν. [The same name, perhaps; but the oldest form of ζαν, as found in the inscriptions from Heliocarnassus and Teos, is Ζ, the same as the most ancient Zain. — W. H. W.]

Cheth. צ צ, a fence, inclosure (= Arab. צ, from ל, ס, י, to surround). Comp. the Phoen. צ th is the Greek ι (Ι).
Greek writing.

Greek alphabets \( \alpha \). Originally it had two powers, as in Arabic, and was represented in the LXX. by \( \pi \), or a simple breathing

\[ \text{Pe.} \quad \alpha = \pi \text{, a mouth.} \]

The Greek \( \pi \) is from \( \alpha \), the construct form of \( \pi \).

\[ \text{Toda.} \quad \gamma, \gamma, \text{or } \gamma, \gamma, \text{a fish-hook or prong for spearing the larger fish. Others explain it as a nose, or an owl. One of the Phoenician forms is } \gamma. \]

From \( \text{Toda} \) is derived the Greek \( \gamma \).

\( \gamma \), Kaph. \( \gamma \), perhaps the same as the Arable \( \gamma \) the back of the head. Ge- sensius originally explained it as equivalent to the Chaldean \( \gamma \), the eye of a needle, or the hole for the handle of an axe. Hitzig rendered it "ear," and others "a pole."

The old Hebrew form \( \gamma \), inverted \( \gamma \), became the Greek \( \gamma \) (\( \gamma \)); and the form \( \gamma \), which occurs on the ancient Syracusan coins [and in the Mohabite inscription — William W.], suggests the origin of the Roman \( Q \).

\[ \text{Reeh.} \quad \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma \gamma scriptions there are no such divisions, though in several of the oldest, as the Enguine Tables and the Syenas inscription, there are one or two, while others have as many as three points which serve this purpose. The same is the case with the Phoenician inscriptions. Most have no divisions of words at all, but others have a point, except where the words are closely connected. The cuneiform character has the same point, as well as the Samaritan, and in Cufic the words are separated by spaces, as in the Aramaico-Egyptian writing. The various readings in the LXX. show that, at this time the version was made in Hebrew MSS. which the translators used the words were written in a continuous series. The modern synagogue rolls and the MSS. of the Samaritan Pentateuch have no vowel-points, but the words are divided, and the Samaritan in this respect differs but little from the Hebrew.

Final Letters, etc.—In addition to the letters above described, we find in all Hebrew MSS. and printed books the forms ב, מ, ל, י, which are the shapes assumed by the letters ב, מ, ל, י when they occur at the end of words. Their invention was clearly due to an endeavor to render reading more easy by distinguishing one word from another, but they are of comparatively modern date. The various readings in the LXX. show, as has been already said, that that version was made at a time when the divisions of words were not marked, and consequently at this time there could be no final letters. Gesenius at first maintained that on the Palmyrene inscriptions there were neither final letters nor divisions of words, but he afterwards admitted, though with a little exhibition of temper, that the final נ was found there, after his error had been pointed out by Kiepert (Bibl. u. Storh. ii. 152; Ges. Moa. Phen. p. 82). In the Aramaico-Egyptian writing both final כ and final נ is occur, as may be seen in the Balsam fragments given by Gesenius. The five final letters כ מ ל י נ are mentioned in Berosus Balsam (parash. i. fol. 1, 4), and in both Talmuds; in the one (T. Bah. Sabbath. fol. 104, 1) they were said to be lost in six MSS. and in the other (T. Hecron. Haggadah, fol. 71, 4) to be an Hebrew or tradiion of Moses from Sinai; yet, by an ancient writer (Pirkh Elijah, e. 18) they are said to be known by Abrahaem (Gill, Dissertation concerning the Antiquity

succession of continuous lines. Yet in fact our mode of separating the words is the artificial one, and the other is the natural one, in reducing oral discourse to written. Spoken speech is an uninterrupted current. It is not the car at all, except as slightly aided by some information of the voice, but the mind which separates the speech into words, and thus comprehends the meaning of what is uttered. The speaker runs together different words in the same manner as he runs together different syllables of the same word. The old method therefore simply adjusted the eye to the ear, and so made the discourse appear onomatopoeia or stone very much as it sounded from the tongue of the speaker.

The words are separated by points in some of the most ancient Phoenician inscriptions, as in the record from Cahun, that from Tuces, the bilingual of Sidonius, and notably so in the oldest of all, the Moabite Inscription, which also separates sentences by a perpendicular line.

II. The words are separated by points in some of the most ancient Phoenician inscriptions, as in the record from Cahun, that from Tuces, the bilingual of Sidonius, and notably so in the oldest of all, the Moabite Inscription, which also separates sentences by a perpendicular line.

When I was made, in the case that, after careful comparison, I find but six or eight in the five books of Moses, and even these generally require a slight variation in the letters, so that not much can be deduced on the subject. These cases are Gen. vii. 11, for Gen. xx. 16, י for י; Gen. xi. 17, י for י; Num. xxiv. 22, י for י; Num. xxxii. 19, י for י; Deut. xxvi. 5, י for י; Deut. xxxii. 2, apparently י for י; and perhaps Deut. xxxii. 8, י for י or י for י. One of these cases, Deut. xxxii. 2, where י seems to have been read for י י י. These are also specimen of the cases where the scribes were left entirely read. W. H.
excluded letters in a smaller form on the margin above the line (Eichhorn, Edin. ii. 57-59). That
abbreviations were employed in the ancient Hebrew
writing is shown by the inscriptions on the Macca-
borean coins. In MSS. the frequently recurring
words are represented by writing some of their let-
ters only, as "םוהי" or מ" for מוהי, and a frequently recurring phrase by the first letters of its
words with the mark of abbreviation; as ר"ב
for ר' יב or ר" for ר' ו which is also written ל or ל'.

The greater and
smaller letters which occur in the middle of words (comp. Ps. lix. 16; Gen. ii. 4), the suspended let-
ters (Judg. xviii. 30; Ps. lix. 14), and the in-
serted letters (Num. x. 35), are transferred from the
MSS. of the Masoretes, and have all received at
the hands of the Jews an allegorical explanation.
In Judg. xviii. 30 the suspended נ in the word
"Mamaseh," without which the name is "Moses," is
said to be inserted in order to conceal the dis-
grace which the idiocy of his grandson conferred
upon the great lawgiver. Similarly the small י
in the word מ"ל ELEMENT, "to weep for her" (Gen.
xxiii. 2), is explained by Rad Hatturim as indicat-
ing that Abraham wept little, because Sarah was an
old woman.

Numbers were indicated either by letters or
figures. The latter are found on Phoenician coins,
on the sarcophagi of Eshmunazar, on the Pal-
myrene inscriptions, and probably also in the Ar-
meno-Egyptian writing. On the other hand, letters
are found used as numerals on the Maccaboan
coins, and among the Arabs, and their early adop-
tion for the same purpose among the Greeks may
have been due to the Phenicians. It is not too
much to conjecture from these analogies that figures
and letters representing numbers may have been
employed by the ancient Hebrews. It is even pos-
sible that many discrepancies in numbers may be
explained in this way. For instance, in 1 Sam. vi.
19, for 50,070 the Syrinx has 5,070; in 1 K. iv. 26
(v. 6) Solomon had 40,000 horses, while in the
parallel passage of 2 Chr. ix. 25 he has only 4,000;
according to 2 Sam. x, 18, David destroyed 700
chariots of the Syrians, while in 1 Chr. xix. 18,
the number is increased to 7,000. If figures were
used in such discrepancies are easily intelligible.
On the other hand, the seven years of famine in 2 Sam.
xxiv. 15, may be reconciled with the three of 1 Chr.
xxii. 12 and the LXX. by supposing that a scribe,
writing the square character, mistook 2 ( = 3) for
7 ( = 7).

Again, in 2 Chr. xxi. 20, Jehoram dies
at the age of 40, leaving a son, Ahaziah, who was
42 (2 Chr. xxii. 2). In the parallel passage of 2 K. viii. 26 Mazziah is only 22, so that the scribe
probably read צ' instead of צ'. On the whole,
Gesenius concludes, the predetermination would be in
favor of the letters, but he deprecates any attempt
to explain by this means the enormous numbers we
meet with in the descriptions of armies and wealth,
and the variations of the Samaritan and LXX. from
the Hebrew text in Gen. v.

Vowel-points and Diphthongal Marks. — It is im-
possible here to discuss fully the origin and antigu-
ity of the vowel-points and other marks which are
found in the writing of Hebrew MSS. The most
that can be done will be to give a summary of
results, and to refer the reader to the sources of
fuller information. Almost all the learned Jews of
the Middle Ages maintained the equal antiquity
of the vowels and consonants, or at least the intro-
duction of the former by Ezra and the men of the
Great Synagogue. The only exceptions to this uni-
formity of opinion are some few hints of Aben Ezra,
and a doubtful passage of the book Curi. The
same view was adopted by the Christian writers
Raymond Martini (cir. 1258), Perez de Valentun
(cir. 1430), and Nicholas de Lyra, and these are
followed by Luther, Calvin, and Pellicanus. The
modern date of the vowel-points was first argued by
Elia Levi, followed on the same side by Cappelbos, who was opposed by the younger Bar-
toff. Later defenders of their antiquity have been
Gill, James Robert son, and Tyxein. Others, like
Hottin gere, Princhauma, Schulten, J. D. Michaelus,
and Eichhorn, have adopted an intermediate view,
that the Hebrews had some few ancient vowel-points,
which they attached to ambiguous words. "The
dispute about the antiquity and origin of the He-
brew vowels commenced at a very early date; while
Mar-Narrotani H., Gaon in Sura (850-889),
prohibited to provide the copies of the Law with
vowels, because these signs had not been communi-
cated on Mount Sinai, but had only been introduced
by the sages to assist the reader: the Karaites
allowed no scroll of the Pentateuch to be used in
the synagogue, unless it was furnished with vowels
and accents, because they considered them as a
divine revelation, which, like the language and the
letter, was already given to Adam, or certainly to
Moses " (Dr. Kalsche, Heb. Gr. ii. 65). No vowel-
points are to be found on any of the Jewish coins,
or in the Palmyrene inscriptions, and they are want-
ing in all the relics of Phoenician writing. Some
of the Maltese inscriptions were once thought by
Gesenius to have marks of this kind (Gesch. der
Hebr. Spr. p. 184), but subsequent examination
led him to the conclusion that the Phenician mon-
uments have not a vestige of vowel-points. The
same was the case originally in the Estrangolo
and Ueke alphabets. A single example of a diacri-
tical mark occurs for the first time on one of the
54, 179). It occurs to correspond with the dia-
critical mark which we meet with in Syriac writing,
and which is no doubt first alluded to by Ephraim
Syrus (on Gen. xxxvi. 24, Opp. i. 184). The
age of this mark in Syriac is uncertain, but it is most
nearly connected with the מ"ה of the Samar-
itans, which is used to distinguish words which have
the same consonants, but a different pronun-
ciation and meaning. The first certain indication
of vowel-points in a Semitic language is in the
Arabic. Three were introduced by Ali, son of Abu-
hadib, who died A. H. 40. The Sabian writing
also has three vowel points, but its age is uncertain.
Five or six vowel-points and seven reading marks
were introduced into the Syriac writing by Thophius
and Jacob of Edessa. The present Arabic system
of pronunciation originated with the introduction
of the Khiit character by Abu Mellek, who died A. D.
939. On the whole, taking into consideration the
nature and analogies of the kindred Semitic lan-
guages, and the Jewish tradition that the vowels
were only transmitted orally by Moses, and were
afterwards reduced to signs and fixed by Ezra and
the great Synagogue, the propension of evidence
goes to show that Hebrew was written without

of the accents is twofold. 1. They serve to mark the tone syllable, and at the same time to show the relation of each word to the sentence: hence they are called דָּבָכָא, as marking the sense. 2. They indicate the modulation of the tone according to which the Old Testament was recited in the synagogues, and were hence called דָּבָכָא.

"The manner of recitation was different for the Pentateuch, the prophets, and the metrical books (Job, the Psalms, and the Psalms): old modes of cantillation of the Pentateuch and the prophets (in the HaplAthroia) have been preserved in the German and Portuguese synagogues; both differ, indeed, considerably, yet manifestly show a common characteristic, and are almost like the same composition sung in two different keys; while the chanting of the metrical books, not being employed in the public worship, has long been lost" (Kalisch, p. 84).

Several modern investigators have decided that the use of the accents for guiding the public recitations is anterior to their use as marking the tone of words and syntactical construction of sentences. The great number of the accents is in favor of this hypothesis, since one sign alone would have been sufficient to mark the tone, and the logical relation of the different parts of a sentence has been indicated by a much smaller number. Gesenius, on the other hand, is inclined to think that the accents at first served to mark the tone and the sense (Gesch. p. 221). The whole question is one of mere conjecture. The advocates for the antiquity of the accents would carry them back as far as the time of the ancient Temple service. The Gemara (Nedarim, fol. 37, 2; Megillah, i. fol. 7, 2) says that the levites recite according to the accents even in the days of Nehemiah.

Writing Materials, etc. — The oldest documents which contain the writing of a Semitic race are probably the bricks of Nineveh and Babylon on which are impressed the cuneiform Assyrian inscriptions. Inscribed bricks are mentioned by Pliny (vii. 56) as used for astronomical observations at the temple of Babylon. There is, however, no evidence that they were ever employed by the Hebrews, who certainly at a very early period practiced the more difficult but not more durable method of writing on stone (Ex. xxiv. 12, xxxii. 18, xxxii. 15, xxiv. 1, 28; Deut. x. 1, xxvii. 1; Josh. viii. 32), on which inscriptions were cut with an iron graver (Job xix. 24; Jer. xvii. 1). They were moreover acquainted with the art of engraving upon metal (Ex. xxxvii. 36) and gems (Ex. xxxviii. 9). Wood was used upon some occasions (Num. xvii. 3; comp. Hom. ii. vii. 157), and writing tablets of box-wood are mentioned in 2 Esdr. xiv. 21.

The "lead," to which allusion is made in Job xix. 24, is supposed to have been poured when melted into the cavities of the stone made by the letters of an inscription, in order to render it durable, and does not appear ever to have been used by the Hebrews as a writing material, like the χάρτος ὀλυμπιάδον at Thébes, on which were written Hesiod's Works and Days (Paus. ix. 31, § 4, comp. Plin. xii. 21). Inscriptions and documents which were intended to be permanent were written

b The case of Eackel (iv. 1) is evidently an exception.

copper was used for the same purpose. M. Brito found traces of it in letters on the pavement slabs of Khorsabad (Layard, Nos. iii. 188).
on tablets of brass (1 Macc. viii. 22, xiv. 27), but from the manner in which they are mentioned it is clear that their use was exceptional. It is most probable that the most ancient, as well as the most common material which the Hebrews used for writing was dressed skin in some form or other. We know that the dressing of skins was practiced by the Hebrews (Ex. xxv. 5; Lev. xiii. 48), and they may have acquired the knowledge of the art from the Egyptians, among whom it had attained great perfection, the leather-cutters constituting one of the principal subdivisions of the third caste. The fineness of the leather, says Sir G. Wilkinson, "employed for making the straps placed across the bodes of mummies, discovered at Thebes, and the beauty of the figures stamped upon them, satisfactorily prove the skill of the leather-cutters," and the antiquity of embossing; some of these bearing the names of kings who ruled Egypt about the period of the Exodus, or 3,300 years ago (Anc. Eg. iii. 155). Perhaps the Hebrews may have borrowed, among their other requirements, the use of papyrus from the Egyptians, but of this we have no positive evidence. Papyri are found of the most remote Pharaonic age (Wilkinson, Anc. Eg. iii. 118), so that Pliny is undoubtedly in error when he says that the papyrus was not used as a writing material before the time of Alexander the Great (xiii. 21). He probably intended to indicate that this was the date of its introduction to Europe.

Ancient Writing Materials.

In the Bible the only allusions to the use of papyrus are in 2 John 12, where χαρτής occurs, which refers especially to papyrus paper, and 3 Macc. iv. 29, where χαρπήσας is found in the same sense. In Josephus (Ant. iii. 11, § 6) the trial of obstinacy is made by writing the name of God on a skin, and the 70 men who were sent to Ptolemy by Jerusalem by the high-priest Eleazar, to translate the Law into Greek, took with them the skins on which the Law was written in golden characters (Lit. xii. 2, § 10). The oldest Persian annals were written on skins (Hod. Sic. ii. 32), and these appear to have been most frequently used by the Semitic races if not peculiar to them. Of the byssus which was used in India before the time of Alexander (Strabo xv. p. 717), and the palm-leaves mentioned by Pliny (vii. 24), there is no trace among the Hebrews, although we know that the Etruscans wrote their earliest copies of the Koran upon

a The word for "book," סָפָר, סֵפָר, is from a root, סָפָר, סֵפָר, "to scrape, shave," and indirectly points to the use of skin as a writing material.
Law was to be written with nothing else (Waener, § 334). The ink, נטף, דפי (Jer. xxxvi. 18), literally "black," like the Greek μαύρον (2 Cor. iii. 3; 2 John 12; 3 John 13), was to be of lamp-black dissolved in gall juice, though sometimes a mixture of lamp-black and vitriolic acid was used (Waener, § 335). It was carried in an inkstand (食べ the hosspeh), which was suspended at the girdle (Es. iv. 2, 3) as is done at the present day in the East. The modern scribes have an apparatus consisting of a metal or ebony tube for their reed pens, with a cup or ball of the same material, attached to the upper end, for the ink. They thrust through the girdle, and carry with them at all times (Thomson, The Land and the Book, p. 181). Such a case for holding pens, ink, and other materials for writing is called in the Midrash לא הלל לבל, kolathrin, or קלאחרין, kolathrya (codenominatio; Midr. Celen. ii. 7; Mike. x. 1) while יתכט יטט, kalitcath (Midr. Celen. xi. 3), is a case for carrying pens, penknife, style, and other implements of the writer's art. To professional scribes there are allusions in Ps. xlv. 1 [2]; Ezr. vii. 6; 2 Esdr. xiv. 24. In the language of the Talmud these are called חדשות, bikkurin, which is a modification of the Lat. libellus (Talm. Shabb. fol. 16, 1). For the literature of this subject, see especially Gesenius, Geschichtc der hebräischen Sprache und Schrift, 1815; Lehrbuch der hebr. Sprache, 1817; Monumenta Phenicia, 1837; Art. Palaigraphie in Ersch and Gruber's Allg. Lex., vol. iii. Heidelb., Ausfahriiche hebräische Gemünzungen (1841), and his articles in the Studien und Kritiken, 1830, Band 2: A. T. [G.] Hoffmann, Grammatik Syriacum, 1837: A. G. Hoffmann, Art. Hebräische Schrift in Ersch and Grüber; Fürst, Lehrbuch der urmenschlichen Sprachen, 1835: Ewald, Ausführlicher Lehrbuch der hebr. Sprache; Saalschütz, Forschungen im Gebiete der hebräisch-assyrischen Sprachen und Altertümern, 1828: besides other works, which have been referred to in the course of this article.

* This may be a suitable place to speak of the writing on the Moabite stone recently discovered on the coast of the Dead Sea. In August, 1868, the Rev. F. Klein, connected with the Church Missionary Society in Jerusalem, met with this monumental stone at Bohun, the ancient Dison (נלה) on a journey from Es-salt to Kerak, a region seldom visited by Europeans and still comparatively unknown. He copied a small part of the inscription and took measurements, which show the stone to have been about 3 feet 9 inches long, 2 feet 4 inches in breadth, and 1 foot 2 inches thick. It was in almost perfect preservation, lying with the inscription uppermost, and was a basaltic stone, exceedingly heavy. No inscription was on the bottom of the side, which was perfectly smooth, and without marks. But unfortunately, before the stone could be properly examined, owing to the unwillingness of the Arabs to give it up, it was broken into fragments by cold water having been thrown upon it after it had been heated by fire. We are indebted mainly to the efforts of Capt. Warren, and the French vice-consul at Jerusalem, M. Bonmeau, for impressions or reproductions taken of the main block and some of the recovered parts, from which we learn the character and importance of this interesting monument. The investigations are not yet complete, but are supposed to establish the following results. (1) The stone is undoubtedly the oldest Semitic monument yet found. (2) It is stated by Mr. Deutsch, of the British Museum, that the characters appear older than any of the Assyrian bilingual cylinders in the British Museum. He thinks that they are of the very last age, or as old as the ninth century, n. c. (3) The stone chronicles the achievements of one Mesha, king of the Moabites. Now it was about this time (namely, 800 B. c.), that Mesha lived, against whom Jehoram and Jehoshaphat fought (2 K. iii. 4 ff.). [Missra.] (4.) The inscription is full of well-known Biblical names, such as Beth-Danoth, Beth-Baal-Meon, Hormaim, and Dibon. (5.) Mention is frequently made of Israel, a rival power, and of Chemosh, the national God of Moab. (6.) It is invaluable to the student of alphabets. Nearly the whole of the Greek alphabet is found here, not merely similar to the Phenician shape, but as identical with it as can well be. (7.) From the few existing letters, it seems, if not impossible, at least very improbable, that the language written upon the stone is not a dialect of the Hebrew. The Moabite stone is said to be a copy of the stone of Debir, or Dison, which was the old name of Hebron. (8.) It contains, besides other letters, the Hebrew letters which do not occur in the Greek, a ð (th), and an e (w). (9.) The stone is full of interesting historical details. It shows a German translation of the epigraph, supplying in brackets the missing or illegible words, on conjectural grounds. (10.) It is a document for the sake of comparing the cuneiform inscriptions. It is remarkable that no word occurs in the Moabite fragment of which the root does not exist in the Hebrew Biblical text. It reads in this respect, as M. de Vogüé remarks, almost like a page from the Hebrew Scriptures. Prof. Schlottmann points out various important connections between this document and the Biblical history. Prof. G. Rawlinson, on "the Moabite Stone" (Contemp. Rec. Aug. 1870, pp. 97-112), dwells particularly on "the palaeographical value of the discovery." He argues, among other points, that the more primitive forms of the letters on "the stone" resemble the objects from which they are named much more strikingly than the later forms, and therefore confirm the theory of the pictorial origin of alphabetic writing. He finds evidence, also, in the closer resemblance between these more primitive figures and the earliest Greek letters, that the Greeks borrowed the art of writing from the Phenicians at a much earlier date than many have assigned to that event. Letters, according to this view, were not necessarily unknown to the Greeks in the time of Homer and Hesiod. The Pentateuch and other oldest parts of the He-
New and important inscriptions in various languages, of which the most important is that of King Mesha of Moab, found the present year in the ancient Dibon, have been discovered and selected upon by expert scholars.

The general result of these investigations has been to magnify the importance and to extend the sway of the old Canaanite or Phoenician alphabet, and to indicate more clearly to us its original characters. It is not improbable that every style of script now in use, with the exception of the Chinese and Japanese, is the lineal descendant of the letters of Cadmus.

Whether the three systems of picture-writing, the Egyptian, the Central American, and the Chinese; the two alphabetic systems of the ancient Persians and the Phoenicians, and the mixed system of Assyria had all a common origin, as Geiger maintains, in the valley of the Euphrates, it is as yet impossible to decide. In order to express thought to the eye, pictures would first be employed. These pictures would next stand for the first syllable of the words which they had represented, and finally for the first vocal elements of those syllables. Such, no doubt, was the history of the Semitic alphabet. The names of the letters seem to point to a hieroglyphic period, as they are the objects of which such pictures could be drawn. Then the fact that the Semitic alphabet has no vowels points to a period when the vocal system of the language was less developed, and when each written consonant carried its own vowel with it, as in the syllabic system of ancient Assyria. We know of two modern cases, one of the Cherokee Indian Sequoya or Gist, and the other of Duarte Bucare in Africa, in which savages, having gained some inkling of the civilized method of representing fractions of words by arbitrary signs, have themselves invented an alphabet. It is a suggestive fact that in both of these cases the system which they hit upon was syllabic. Sequoya in 1825 had devised an alphabet composed of two hundred syllables, which he afterwards reduced to eighty-five. Such was probably the original syllabic character of the Semitic alphabet, consisting of consonants followed by the primitive vowel ɑ. Had the alphabet originally been formed by making an ultimate analysis of sounds it would be difficult to explain the fact that the vowels, the most prominent elements in such an analysis, are all absent.

It is now generally admitted that the Phoenician or Semitic alphabet was derived from the Egyptian hieratic characters (Brugsch, Zeit. 1864, p. 70 ff. and in his Bildung u. Entst. d. Schrift, Berlin 1868). F. Lenormant,

Saw in prop. de l'alph. phon., Par. 1869. Lauth, Ueber d. ägypt. Ursprung aus. Bücherum. u. Ziffere in the Sitzungs. d. inner. Abh. d. Wiss., 1867, ii. 84-124. G. Ebers, Ägypten u. d. Köcher Mosc, Leipzig, 1868, pp. 147-151. Schröder, De phon. Sprach., Halle, 1869, p. 76. F. Schröder, in De Wette's Étud. in d. Bäcker des A. T., 8 d. 1889, p. 180. Takiusu's basis for the letters on the one hand the most archaic Phoenician forms as given on gems and seals and on the Mosbite Inscription, and on the other the most ancient hieratic characters as found on the papyrus Prisse, a manuscript of the twelfth dynasty, and so older than the Hyksos, we find that in at least half of the Phoenician letters there is an evident resemblance to the corresponding hieratic. In the Phoenician, as in the Hebrew, Dhal and Resh are almost identical. The same is true in the hieratic writing. In these two letters, and in Shin, the resemblance is quite striking. Probably the adaptation of the Egyptian characters to the use of the Phoenician or Canaanite language, was due to the large dress of the Hyksos, who invaded the Delta of the Nile even before the Hyksos invasion, although some have given the credit to the Hyksos conquerors, and others even to the Israelites, although their condition in Egypt was certainly not favorable to literary pursuits.

The names of the letters are pure Semitic and not Egyptian. This shows that although hieratic characters were borrowed, the Egyptian names were not taken with them. In selecting these names it is probable that the simplest and the most familiar objects were chosen which happened to have names beginning with the desired letter. In most cases it is useless to try to find in the characters any resemblance to the objects whose names they bear. Thus in the Egyptian hieroglyphic Lamed is a lion. This in the hieratic is reduced to a conventional form which was adopted almost exactly into the Phoenician alphabet, but with a change of name from "lion" to ל"ת, "an ox-goad," which does not resemble at all in shape. The most we can say is that the selection of common visible objects for names of the letters is in imitation of the Egyptian picture-writing, and in a few cases it may have been possible, as in תב, a door, and ע"ב, water, to find words beginning with the requisite letter which agreed in sense with the shape of the letters.

We can be approximately certain of the original form of the Phoenician letters. By far the most important monument for this purpose is the Mosbite column of Mesha, belonging to the first half of the ninth century before Christ. Next in importance to this are the inscriptions on some weights found in Assyria by Layard, and which are nearly as old and which contain no less than 2000 characters and gems of extreme antiquity. The later Phoenician monuments are counted by hundreds, and one of them, the great Sidonian inscription, is of considerable palaeographical value. De Vogüé concludes as the result of his study of these remains that the alphabet in its archaic form was characterized by the prevalence of sharp angles (Journal Asiatique, 1867, p. 171). The zigzag shape of Mem and Shin is a certain proof of the antiquity of the monument that contains them. A few letters, notably יג וו, retained their sharp angles to a late period. Of this original form we do not possess
a single pure example, unless it be a single scrap
beans, bearing the legend הָלִּישָׁן, "belonging to
Shallum," which may be as old as the time of Da-
v. In the Moabite inscription these sharp angles
are generally preserved, although Lamed has lost its
angle to the right, and Beth, Kaph, Mem, Nun,
and Pe, curve their first stroke somewhat to the left.
Again, which means "an eye," may have been
originally circular, as we here find it, and the same
may have been the ease with Faa and Kaph, both of
which have rounded heads on the Moabite stone.
We here first find דלת the simple Greek Δελθ, Δ, and
quite distinguishable from Resh; and سئد is
identical with the earliest Greek ς, as found in the
Coryca inscriptions of the forty-ninth Olympiad.
From this archaic Phenician, of which Lenormant
gives the characters so far as they were then known
(Revue Archéologique, 1867), were derived the
Greek letters of which we have specimens as old as
the ninth century before Christ, written so exactly
in the Phenician character, and still turned to the
left, that Prof. E. Hitzig (Zeitschr. d. d. M., t.
1858, p. 273) has tried to transliterate, as it Phenici-
ian, the inscription from Sura, cut under the
picture of a fish, "תְּלַקְנָא יָגוּפָא יָשָׂהוּ.
The first stage in the modification of the original
Phenician character was the substitution of trans-
verse bars for the original zigzags, first in מ, נ,
and afterwards in ש. At the same time the
letters show more curves, and in the Aramaic
dialects all the zigzags disappear; and the heads of
Beth, Deltb, and Reh, which were at first closed
and triangular, are opened at the top. From the
Aramaic character by gradual changes was derived
the Pahlavone and the modern square Hebrew.
This is hardly the place to give the genealogy
of any other than the square Hebrew of all the alphabets
that are descendants of the old Semitic.
For the Greek, reference may be made to the elaborate
alphabets of Greece, Asia Minor, and the Ionian
Islands given by Kirchhoff (Stud. zur Gesch. d.
zur Berlin, 1864). For the Latin Monument has done
a similar service. Weber, following Prusen,
makes it not improbable (Zeitschr. d. d. M. G. x.
389 ff.) that the Sanskrit had a similar origin, car-
rying with it all the alphabets of India, Burmah,
Java, and Thibet. His argument, however, is by no
means universally accepted as conclusive.
The Zend and Tadjik alphabets are of Semitic origin,
as Spiegel shows in his Gram. der Hauverselb-
sprache, pp. 26, 34 ff. Kloppoth has remarked
that the Mongolian, Tangusian, and Manchu alphabets
are from the Syrian; though modified, it is
true, by the peculiar columnar arrangement of the
Chinese. Add to these the Samaritan, Ethiopic, and
Syriac; the Arabic, with its characters
modified or unmutilated as accepted by Turks,
Persians, Malays, Hindostanes, Berbers, and Tou-
arees; still further remember that the Cyrillic
and Greek alphabets of Bulgaria and Russia,
and the Gothic of Ulphilas, were of Semitic origin
through the Greek, and those of the rest of the
east of the Caspian through the Persian, and we have
the Chinese left as the only living written language
whose alphabet is not lineally descended from that
of Cadmus. To the literature referred to above,
add M. A. Levy, Philologische Studien, 4 Hefte, Bresl.
1856-70; Siegel u. Gemmen, ittd. 1869; Die pal-
myren. Inschriften, in Zeitschr. d. d. M. G., 1864,
p. 65 ff.

YEAR

X.

XANTHICUS. [Momms, iii 2007]

Y.

YARN (בַּרְנָן; בַּרְנָן). The notice of yar-

n is contained in an extremely obscure passage in
1 K. x. 28 (2 Chr. ii. 16): "Solomon had horses
brought out of Egypt, and linen yarn: the king's
merchants received the linen yarn at a price." The
LXX. gives έν ἑωνω, implying an original reading
of Εν εωνω; the Vulg. has de Cor, which is
merely a Latinized form of the original. The He-
brew received Text is questionable, from the cir-
stance that the second mitrith has its final vowel
lengthened as though it were in the status
construetus. The probability is that the term does
refer to some entrepôt of Egyptian commerce,
but whether Tekaoh, as in the LXX., or Coa, as in
the Vulg., is doubtful. Gesenius (Thes. p. 1202)
gives the sense of "number" as applying equally
to the merchants and the horses: "A bond of
the king's merchants bought a drove (of horses)
at a price;" but the verbal arrangement in 2 Chr.
is opposed to this rendering. Thesius (Ezech. Bibl.
on 1 K. x. 28) combines this sense with the former,
giving to the first mitrith the sense "from Tekaoh,"
to the second the sense of "drove." Bertheau
(Ezech. Bibl., 2 Chr. i. 10) and First (Lex. s. v.)
side with the Vulgate, and suppose the place calle-
d Coa to have been on the Egyptian frontier: "The
king's merchants from Coa (i. e. stationed at Coa)
took the horses from Coa at a price." The sense
adopted in the A. V. is derived from Jewish in-
terpreters.

W. L. B.

YEAR (נַע): יָנוֹעַ; יָנוֹעַ, the highest ordi-

nary division of time. The Hebrew name is
identified with the root יָני, "he or it repeated,
did the second time," with which are cognate the
ordinal numeral יָנוֹעַ, "second," and the cardia-

cal, יָנוֹעַ, "two." The meaning is therefore
taken to be "an iteration," by Gesenius, who
compares the Latin annus, properly a circle. Ge-

senius also compares the Arabic حُرْق، which he
says signifies a "circle, year." It signifies a "year,"
but not a "circle," though sometimes
meaning "around:" its root is יָנוֹע, "it
be came altered or changed, it shifted, passed,
revolved and passed, or became complete" (on Mr. Lane's
authority). The ancient Egyptian RENP, "a
year," seems to resemble annus; for in Coptic one
of the forms of its equivalent, पृष्म, the
Bashmure पृष्म, पृष्म, is identical
with the Sahidic पृष्म, a "handle, ring,"
पृष्म, "rings." The sense of the He-
brew might either be a recurring period, or a cir-
cle of seasons, or else a period circling through the
seasons. The first sense is agreeable with any
period of time: the second, with the Egyptian
YEAR

"primitive year," which, by the use of tropical seasons as divisions of the "Vague Year," is shown to have been tropical in reality or intention; the third agrees with all "wandering years."

1. Years, properly so called.

Two years were known to, and apparently used by, the Hebrews.

1. A year of 360 days, containing twelve months of thirty days each, is indicated by certain passages in the Hebrew and Aramaic Scriptures. The Annals, and a half, of Daniel (vii. 25, xii. 7), where "time" (Ch. 17, Heb. לְבָדָּה) means "year," evidently represent the same period as the 42 months (Rev. xi. 2) and 1,260 days of the Revelation (xi. 3, xii. 6), for 360 × 3.5 = 1,260, and 30 × 42 = 1,260.

This year perfectly corresponds to the Egyptian vague year, without the five intercalary days. It appears to have been in use in Noah's time, or at least in the time of the writer of the narrative of the Flood, for in that narrative the interval from the 17th day of the 2d month to the 17th day of the 7th of the same year appears to be stated to be a period of 150 days (Gen. vii. 11, 24, viii. 3, 4, comp. 13), and, as the 1st, 2d, 7th, and 10th months of one year are mentioned (viii. 13, 14, vii. 11, vii. 4, 5), the 1st day of the 10th month of this year being separated from the 1st day of the 1st month of the next year by an interval of at least 34 days (vii. 5, 6, 10, 12, 19), we can only infer a year of 12 months. Ideler disputes the former inference, arguing that as the water first began to sink after 150 days (and then had been 15 cubits above all high mountains), it must have sunk for some days after the Ark could have rested on Ararat, so that the second date must have been more than 150 days later than the first (Handbuch, i. 69, 70, 478, 479). This argument depends upon the meaning of the expression "high mountains," and upon the height or "the mountains of Ararat," upon which the Ark rested (Gen. viii. 4), and we are certainly justified by Shemitic usage, if we do not consider the usual inference of the great height attained by the Flood to be a necessary one (Genesis of the Earth and of Man, 2d ed. pp. 57, 98).

The exact length of this period is difficult to ascertain. If we allow 30 months of 30 days each, and the use of a year of 360 days, or 12 such months, by the prophets, the latter fact overlooked by Ideler, favor the idea that such a year is here meant, unless indeed one identical with the Egyptian vague year, of 12 months of 30 days and 5 intercalary days. The settlement of this question depends upon the nature and history of these years, and our information on the latter subject is not sufficiently certain to enable us to do more than hazard a conjecture.

A year of 360 days is the rudest known. It is formed of 12 spurious lunar months, and was probably the parent of the lunar year of 354 days, and the vague year of 365. That it should have continued any time in use would be surprising were it not for the enormous length of the months. The Hebrew year, from the time of the Exodus, as we shall see, was evidently lunar, though in some manner rendered virtually solar, and we may therefore infer that the lunar year is as old as the date of the Exodus. As the Hebrew year was not an Egyptian year, and as nothing is said of its being new, save in its time of commencement, it was perhaps earlier in use among the Israelites, and either brought into Egypt by them or borrowed from Shemitic settlers.

The vague year was certainly in use in Egypt in as remote an age as the earlier part of the XIth dynasty (n. c. cir. 2000), and there can be no reasonable doubt that it was there used at the time of the building of the great Pyramid (n. c. cir. 2550). The intercalary days seem to be of Egyptian institution, for each of them was dedicated to one of the great gods, as though the innovation had been thus made permanent by the priests, and perhaps rendered popular as a series of days of feasting and rejoicing. The addition would, however, date from a very early period, that of the final settlement of the Egyptian religion.

As the lunar year and the vague year ran up parallel to so early a period as that of the Exodus, and the former seems to have been then Shemitic, the latter then, and for several centuries earlier, Egyptian, and probably of Egyptian origin, we may reasonably conjecture that the former originated from a year of 360 days in Asia, the latter from the same year in Africa, this primitive year having been used by the Noachians before their dispersion.

2. The year used by the Hebrews from the time of the Exodus may be said to have been then instituted, since a current month, Abib, on the 14th day of which the first Passover was kept, was then made the first month of the year. The essential characteristics of this year can be clearly determined, though we cannot fix those of any earlier year. It was essentially solar, for the offerings of productions of the earth, first-fruits, harvest-produce, and ingathered fruits, were fixed to certain days of the year, two of which were in the periods of great feasts, the third itself a feast reckoned from one of the former days. It seems evident that the year was made to depend upon these times, and it may be observed that such a calendar would tend to cause thankfulness for God's good gifts, and would put in the background the great humanities which the heathen worshipped in Egypt and in Canaan.

Though the year was thus essentially solar, it is certain that the months were lunar, each commencing with a new moon. There must therefore have been some method of adjustment. The first point to be decided is how the commencement of each year was fixed. On the 16th day of Abib ripe ears of corn were to be offered as first-fruits of the harvest (Lev. ii. 14, xxiii. 10, 11): this was the day on which the sicle was begun to be put to the corn (Deut. xvi. 9), and no doubt Josephus is right in stating that until the offering of first-fruits had been made no harvest-work was to be begun (Ant. iii. 10, § 5). Ideler also states that ears of barley were offered (Idelb.). That this was the case, and that the ears were the earliest ripe, is evident from the following circumstances. The reaping of barley commenced the harvest (2 Sam. xxii. 9), that of wheat following, apparently without any considerable interval (Ruth ii. 24). On the day of Pentecost thanksgiving was offered for the harvest, and it was therefore called the "Feast of Harvest." It was reckoned from the commencement of the harvest, on the 16th day of the 1st month. The 50 days must include the whole time of the harvest of both wheat and barley throughout Palestine. According to the observations of modern travellers, barley is ripe, in the warmest parts of Palestine, in the first days of April. The barley-harvest therefore begins about half a month or less after the vernal equinox. Each year, if solar, would thus begin at about the
equinox, when the earliest ears of barley must be ripe. As, however, the months were lunar, the commencement of the year must have been fixed by a new moon near this point of time. The new moon must have been that which fell about or next after the equinox, not more than a few days before, on account of the offering of first-fruits. Edler, whose observations on this matter we have thus far followed, supposes that the new moon was chosen by observation of the forwardness of the barley-crops in the warmer parts of the country (Hierp-bom. 1). But such a method would easily cause confusion on account of the different times of the harvest in different parts of Palestine; and in the period of the Judges there would often have been two separate commencements of the year in regions divided by hostile tribes, and in each of which the Israelite population led an existence almost independent of any other branch. It is more likely that the Hebrews would have determined their new year's day by the observation of heliacal or other star-risings or settings known to mark the right time of the solar year. By such a method the beginning of any year could have been fixed a year before, either to one day, or, supposing the month-commencements were fixed by actual observation, within a day or two. And we need not suppose that the Israelites were not well acquainted with such means of marking the periods of a solar year. In the ancient Song of Deborah we read how "They fought from heaven: the stars in their courses fought against Sisera. The river of Kishon swept them away, that ancient river, the river Kishon." (Judg. v. 20, 21). The stars that marked the times of rain are thus connected with the swallowing up of the invincible Canaanites perished. So too we read how the Lord demanded of Job, "Canst thou bind the sweet influences of the Pleiades, or loose the bands of Cisil?" (Job xxxviii. 31). "The best and most fertilizing of the rains," in Palestine and the neighboring lands, save Egypt, "fell when the Pleiades set at dawn (not exactly heliacally), at the end of autumn; rain scarcely ever falling at the opposite season, when Scorpio sets at dawn." That Cisil signifies the Pleiades does not admit of reasonable doubt, and Cisil, as opposite to it, would be Scorpio, being identified with Our Scorpionis by Aben Ezra. These explanations we take from the article FAMINE [vol. i. p. 810 b. and note]. Therefore it cannot be questioned that the Israelites, even during the troubled time of the Judges, were well acquainted with the method of determining the seasons of the solar year by observing the stars. Not alone was this the practice of the civilized Egyptians, but, at all times of which we know their history, of the Aravis, and also of the Greeks in the time of Herodot, while yet their material civilization and science were rudimentary. It has always been the custom of pastoral and scattered peoples, rather than of the dwellers in cities; and if the Egyptians be thought to form an exception, it must be recondite that they used it at a period not remote from that at which their civilization came from the plain of Shinar.

It follows, from the determination of the proper new year's day, whether by observation of a stellar phenomenon, or of the forwardness of the crops, that the method of intercalation can only have been that in use after the Captivity, the addition of a thirteenth month whenever the twelfth ended too long before the equinox for the offering of the first-fruits to be made at the time fixed. This method is in accordance with the permission granted to postpone the celebration of the Passover for one month in the case of any one who is legally unable, or journeying at a distance (Num. ix. 9-13); and there is a historical instance in the case of Hezekiah of such a postponement, for both reasons, of the national celebration (2 Chr. xxx. 1-3, 15). Such a practice as that of an intercalation varying in occurrence is contrary to western usage; but the like prevails in all Muslim countries in a far more inconvenient form in the case of the commencement of every month. The day is determined by actual observation of the new moon, and thus a day is frequently unexpectedly added to or deducted from a month at one place, and months commence on different days at different towns in the same country. The Hebrew intercalation, if determined by stellar phenomena, would not be liable to a like uncertainty, though such may have been the case with the actual day of the new moon.

The later Jews had two commencements of the year, whence it is commonly but inaccurately said that they had two years, the sacred year and the civil. We prefer to speak of the sacred and civil reckonings. Edler admits that these reckonings obtained at the time of the Second Temple. The sacred reckoning was that instituted at the Exodus, according to which the first month was determined by the civil reckoning the first month was the seventh. The interval between the two commencements was thus exactly half a year. It has been supposed that the institution at the time of the Exodus was a change of commencement, not the introduction of a new year, and that thenceforward the year had two beginnings, respectively the civil and the national reckonings. The former supposition is a hypothesis, the latter may almost be proved. The strongest point of evidence as to two beginnings of the year from the time of the Exodus, strangely unnoticed in this relation by Edler, is the circumstance that the sabbatical and jubilee years commenced in the 7th month, and no doubt on the 10th day of the 7th month, the Day of Atonement (Lev. xxv. 9, 10), and as this year immediately followed a sabbatical year, the latter must have begun in the same manner. Both were full years, and therefore must have commenced on the first day. The jubilee year was proclaimed on the first day of the month, the Day of Atonement standing in the same relation to its beginning, and perhaps to the civil beginning of the year, as did the Passover to the sacred beginning. This would be the most convenient, if not the necessary commencement of a year of total cessation from the labors of agriculture, as a year so commencing would comprise the whole round of such occupations in regular sequence from seed-time to harvest, and from harvest to vintage and gathering of fruits. The 7th month, apart from the mention of the Day of Atonement, clearly shows this, unless we suppose, but this is surely unwarrantable, that the injunction in the two places in which it occurs follows the regular order of the seasons of agriculture (Ex. xxiii. 10, 11; Lev. xxv. 3, 4, 11), but that this was not intended to apply in the case of the observance. Two or one years, with reference to the feast of Ingathering on the 15th day of the 7th month, must be here noticed. This feast is spoken of as "in the going out," or "end of the year" (Ex. xxiii. 10), and as
YEAR

This is the change of the year" (xxxiv. 22), the latter a vague expression, as far as we can understand it, but quite consistent with the other, whether indicating the turning point of a natural year, or the half of the year by the sacred reckoning. The Rabbins use the term לְתִכּ to designate the commencement of each of the four seasons into which they divide the year (Houdeshel, p. 550, 551). Our view is confirmed by the similarity of the 1st and 7th months as to their observances, the one containing the Feast of Unleavened Bread from the 15th to the 21st inclusive; the other, that of Tabernacles, from the 15th to the 22nd. Evidence in the same direction is found in the special sanctification of the 1st day of the 7th month, which in the blowing of trumpets resembles the proclamation of the jubilee year on the Day of Atonement. We therefore hold that from the time of the Exodus there were two beginnings of the year, with the 1st of the 1st and the 1st of the 7th month, the former being the sacred reckoning, the latter used for the operations of agriculture, the civil in Egypt, the former day, the latter the 21st day. The Egyptians used the lunar year for their religious observances, and for ordinary affairs, except those of agriculture, which they regulate by the Coptic Julian year.

We must here notice the theories of the derivation of the Hebrew year from the Egyptian vague year, as they are connected with the tropical point or points, and agricultural phenomena, by which the former was regulated. The vague year was commonly used by the Egyptians; and from it only, if from an Egyptian year, is the Hebrew likely to have been derived. Two theories have been formed connecting the two years at the Exodus.

(1.) Some hold that Abib, the first month of the Hebrew year by the sacred reckoning, was the Egyptian Epiphi, called in Coptic ΕΠΙΦΙ, and in Arabic, by the modern Egyptians, ابیم. Abib, or Febeh, the 11th month of the vague year. The similarity of sound is remarkable, but it must be remembered that the Egyptian name is derived from that of the goddess of the month, ΠΕΠ-Τ or ΑΠΑΠ-Τ (?), whereas the Hebrew name has the sense of "an ear of corn, a green ear," and is derived from the unused root מָצָא, traceable in מַצָּא, "verdure," מָצָא, Chaldee, "fruit," מָצָא, "green fodder." Moreover, the Egyptian Π is rarely, if ever, represented by the Hebrew ב, and the converse is not uncommon. Still stronger evidence is afforded by the fact that we find in Egyptian the root ΑΒ, "a mow-gay," which is evidently related to Abib and its cognates. Supposing, however, that the Hebrew calendar

The names of the Egyptian months, derived from their deities, are alone known to us in Greek and Coptic forms. These forms are shown by the names of the deities given in the sculptures of the ceiling of the Museum of El-Kahun to be correct; but in a second case they are traceable. The following are certain: 1. ΠΕΠ-Τ, OΣΩΤ, divinity ΤΕΕΗ (Toth), as well as a goddess. 2. ΠΑΡΕ, ΠΑΡΕ, ΠΑΡΕ, i.e. ΠΑΡΕ, belonging to Ptolemy. 3. ΑΒΠ, ΛΩΡ, ΗΑΘΑΡ. 4. ΠΕΠ-Τ, ΠΑΡΕ, 3.eC, formed by fixing the Egyptian Epiphi as the first month, what would be the chronological result? The latest date to which the Exodus is assigned is about b.c. 1320. In the Julian year n. c. 1320 the month Epiphi of the Egyptian vague year commenced May 16, 44 days after the day of the vernal equinox. April 2, very near which the Hebrew year must have begun. Thus at the latest date of the Exodus, there is an interval of a month and a half between the beginning of the Hebrew year and Epiphi I. This interval represents about 180 years, through which the vague year would retrograde in the Julian until the commencement of Epiphi corresponded to the vernal equinox, and no method can reduce it below 100. It is possible to effect this much by conjecturing that the month Abib began somewhat after this tropical point, though the precise details of the state of the crops at the time of the plagues, as compared with the phenomena of agriculture in Lower Egypt at the present day, make half a month an extreme extension. At the time of the plague of hail, the barley was in the ear and was smitten with the flaw, but the wheat was not sufficiently advanced to be in-trovel (Ex. xiv. 30, 31). In Lower Egypt, at the present day, this would be the case about the end of February and beginning of March. The Exodus cannot have taken place many days after the plague of hail, so that it must have occurred about a little after the time of the vernal equinox, and thus Abib cannot possibly have begun much after that tropical point. We have thus carefully examined the evidence as to the supposed derivation of Abib from Epiphi, because it has been carelessly taken for granted, and more carelessly alleged in support of the latest date of the Exodus.

(2.) We have founded an argument for the date of the Exodus upon another comparison of the Hebrew year and the vague year. We have seen that the sacred commencement of the Hebrew year was at the new moon about or next after, but not much before, the vernal equinox; the civil commencement must usually have been at the new moon nearest the autumnal equinox. At the earliest date of the Exodus compared by modern chronologists, about the middle of the 7th century n. c., the Egyptian vague year commenced at or about the latter time. The Hebrew year, reckoned from the civil commencement, and the vague year, therefore, then nearly or exactly coincided. We have already seen that the Hebrews in Egypt, if they used a foreign year, must be supposed to have used the vague year. It is worth while to inquire whether a vague year of this time would further suit the characteristics of the first Hebrew year. It would be necessary that the 14th day of Abib, on which fell the full moon of the Passover of the Exodus, should correspond to the 14th of Phamenoth, in a vague year commencing about the autumnal equinox. A

KUHUS, i.e. ΡΑΚΧΟΣ, II. Ἐρώς, ΕΠΙΦΙ, ΠΕΠ-Τ, or ΑΠΑΠ-Τ. The names of months are therefore, in their corrupt forms, either derived from the names of divinities, or the same as those names. The name of the goddess of Epiphi is written PT-TEE, or PT, "twice." As T is the feminine termination, the root appears to be PT, "twice," thus PT-TEE or ΑΠΑΠ-Τ the latter being Lepidus' reading. (See Lepidus D abundus, abst. iii. 170, 171, Chron. a. 2, 141, and Ptolemy, Horai Egyptian, pp. 7-9, 14, 19 18.)
full moon fell on the 14th of Phamenoth, or Thursday, April 21, B. C. 1652, of a vague year commencing on the day of the autumnal equinox, Oct. 19, B. C. 1653. A full moon would not fall on the same day of the vague year within a shorter interval than twenty-five years, and the triple near coincidence of new moon, vague year, and autumnal equinox, would not recur in less than 1,500 vague years (Exod. 48: 8, 9; 5th ed. Egypt, p. 408). This date of the Exodus, B. C. 1653, is only four years earlier than Hales’s, B. C. 1648. In confirmation of this early date, it must be added that in a list of confederates deputed by Thothmes III. at Megiddo in the 23d year of his reign, are certain names that we believe can only refer to Israelites tribes. The date of this king’s accession cannot be later than about B. C. 1440; and his 23d year cannot therefore be later than about B. C. 1416. Were the Israelites then settled in Palestine, no date of the Exodus but the longest would be tenable. [Chronology.]

II. Divisions of the Year. — 1. Seasons. Two seasons are mentioned in the Bible, "summer," and "winter." The former properly means the time of cutting fruits, the latter, that of gathering fruits; they are therefore originally rather summer and autumn than summer and winter. But that they signify ordinarily the two grand divisions of the year, the warm and cold seasons, is evident from their use for the whole year in the expression "summer and winter" (1 Sam. xxiv. 17; Zech. xiv. 8, perhaps Gen. viii. 22), and from the mention of "the winter house" (Jer. xxxvi. 22) and "the summer house" (Am. iii. 15, where both are mentioned together). Probably ֠נָּלָן and ֥שְׁלָמֵה, when used without reference to the year (as in Job xxiv. 4), retains its original signification. In the promise to Noah, after the Flood, the following remarkable passage occurs: "While the earth remaineth, seed time and harvest, and cold and heat, and summer and winter, and day and night shall not cease" (Gen. viii. 22). Here "seed-time,..." ֠נִּבְּרַל and "harvest," ֢חַדְּשִׁים, are evidently the agricultural seasons. It seems unreasonable to suppose that they mean winter and summer, as the beginnings of the periods of sowing and of harvest are not separated by six months, and they do not last for six months each, or nearly so long a time. The phrase "cold and heat," ֿ֧יָתִם וּ֙תִּפְּלָה, probably indicates the great alternations of temperature. The whole passage indeed speaks of the alternations of nature, whether of productions, temperature, the seasons, or light and darkness. As we have seen, the year was probably then a wandering one, and therefore the passage is not likely to refer to it, but to natural phenomena alone. [Seasons; Chronology.]

2. Months. — The Hebrew months, from the time of the Exodus, were lunar. The year appears ordinarily to have contained twelve, but, when intercalation was necessary, a thirteenth. The older year contained twelve months of thirty days each. [Month; Chronology.]

3. Weeks. — The Hebrew, from the time of the institution of the Sabbath, whether at or before the Exodus, reckoned by weeks, but, as no lunar year could have contained a number of weeks without a fractional excess, this reckoning was virtually independent of the year as with the Muslims. [Week; Sabbatical Chronology.]

4. Festivals, Holy Days, and Feasts. — The Feast of the Passover was held on the 14th day of the 1st month. The Feast of Unleavened Bread lasted 7 days; from the 15th to the 21st, inclusive, of the same month. Its first and last days were kept as sabbaths. The Feast of Weeks, or Pentecost, was celebrated on the day which ended seven weeks counted from the 16th of the 1st month, that day being excluded. It was called the "Feast of Harvest," and "Day of First-fruits." The Feast of Trumpets (lit. "of the sound of the trumpet"), was kept as a sabbath on the 1st day of the 7th month. The Day of Atonement (lit. "of Atonements") was a fast, held the 10th day of the 7th month. The "Feast of Tabernacles," or "Feast of Gathering," was celebrated from the 15th to the 22nd day, inclusive, of the 7th month. Additions made long after the giving of the Law, and not known to be of higher than priestly authority, are the Feast of Purim, commemorating the defeat of Haman; the Feast of the Dedication, recording the cleansing and rededication of the Temple by Judas Maccabeus; and four fasts.

III. Sacred Years. — 1. The Sabbatical year, "שֵׁכֶם וּ֙תִּפְּלָה" the "fallow year," or, possibly, "year of remission," or "זְכֵר לְיִשְׂרָאֵל" alone, kept every seventh year, was commanded to be observed as a year of rest from the labors of agriculture, and of remission of debts. Two Sabbatical years are recorded, commencing and current, B. C. 1643 and 1436-5. [Sabbatical Year; Chronology.]

2. The Jubilee year, "שֵׁכֶם וּ֙תִּפְּלָה" the "year of the trumpet," or "זְכֵר לְיִשְׂרָאֵל" alone, a like year, which immediately followed every seventh Sabbatical year. It has been disputed whether the Jubilee year was every 49th or 50th: the former is more probable. [Jubilee; Chronology.]

YEK = er, in the A. V. ed. 1611. Num. xi. 33, xiv. 11.

YoKe. — 1. A well-known implement of husbandry, described in the Hebrew language by the terms אֵּרֶךְ and "כְּלַטס," the latter specifically applying to the bows of wood out of which it was constructed, and the last to the application (binding) of the article to the neck of the ox. The expressions are combined in Lev. xxvi. 13 and Ezek. xxvii. 27, with the meaning, "bands of the yoke." The term "yoke" is frequently used metaphorically for subjectio (e. g. 1 K. xii. 4, 9; 11; Is. iv. 3), and of the iron yoke or yoke as an unnaturally galling bondage (Bent. xviii. 48; Jer. xxvii. 13). 2. A pair of oxen, so termed as being yoked together (1 Sam. xi. 7; 1 K. xix. 10, 21). The Hebrew term, נֵּכֶּה, is also applied to asses (Judg. xix. 10) and males (2 K. v. 17), and even to a couple of riders (Is. xxvi. 7). 3. The term נֵּכֶּה is also applied to a certain animal of the land, equivalent to that which a couple of oxen could plough in a day (Is. v. 10; A. V. "acre"), cor...
ZAAVAN (ザバーン in Hebrew: סבֶּון) is a city mentioned in the Bible. It is a town located in the area of the ancient Philistia. The name is also mentioned as ifSba', Zaanain, Zaanah, Zaana, Zaanar, and Zaanai. The name is most likely derived from the Hebrew word סבון (saven) which means “scorn” or “disgrace.”

The division of the passage shown in the LXX, and by the translators, in the Vulgate, is not universally accepted. Some scholars believe that the name Zaanan should be placed before the name Beth-ezel. Others believe that Zaanan is a variant form of the name Shechem.

The name Zaanan is also mentioned in the Targum Onkelos as being the same as Shechem. However, this is not a widely accepted view. Some scholars believe that Zaanan is a variant form of the name Shechem.

The name Zaanan is also mentioned in the Targum Pseudo-Jonathan as being a town located in the area of the ancient Philistia. However, this is not a widely accepted view. Some scholars believe that Zaanan is a variant form of the name Shechem.

The name Zaanan is also mentioned in the Targum Sippurim as being a town located in the area of the ancient Philistia. However, this is not a widely accepted view. Some scholars believe that Zaanan is a variant form of the name Shechem.

The name Zaanan is also mentioned in the Targum Pseudo-Jonathan as being a town located in the area of the ancient Philistia. However, this is not a widely accepted view. Some scholars believe that Zaanan is a variant form of the name Shechem.

Thus (24.) see Zabadiah, Zabdi, Zabdiel, Zebedee, "tied hath given him ".

1. Son of Nathan, son of Attai, son of Abihai, Sheshan's daughter (1 Chr. ii. 31-37), and hence called son of Abib (1 Chr. xi. 41). He was one of David's mighty men, but none of his deeds have been recorded. The chief interest connected with him is his genealogy, which is of considerable importance in a chronological point of view, and as throwing incidental light upon the structure of the book of Chronicles, and the historical value of the genealogies in it. Thus in 1 Chr. ii. 26-41, we have the following pedigree, the generations preceding Jerahmeel being prefixed:

(1) Judah.
(2) Pharez.
(3) Hezron.
(4) Jeriahmeel.
(5) Obed.
(6) Shammui.
(7) Abihai.
(8) Appian.
(9) Jotham.
(10) Sheshan.
(11) Zabadiah; Zabadiah's daughter (1 Chr. iii. 25) was called Jerahmeel. His younger sons (25.1-28.) were:

- David's own son, named David, from whose name Davidiah, Davidiah's daughter, etc., are derived.
- One who married an Egyptian woman.
- Zabadiah.
- Zabadiah's daughter, also called a daughter of Egypt.
- Attai.

Here then is a genealogy of twenty-four generations, commencing with the patriarch, and terminating we know not, at first sight, where; but as we happen to know, the history, where Zabadiah the son of Abihai lived, we are at least sure of this fact, that the fourteenth generation brings us to the time of David; and that this is about the correct number we are also sure, because out of seven other perfect genealogies, covering the same interval of time, four have the same number (fourteen), two have fifteen, and David's own son has thirteen. [GNE. OF JESUS CHRIST, I. 586]

But it also happens that another person in the line is an historical personage, whom we know to have lived during the usurpation of Athaliah, namely, Azariah the son (i.e. grand-son) of Obed (2 Chr. xxiii. 1). [AZARIAH, 14.] He was fourth after Zabadiah, while Jehoram, Athaliah's husband, was sixth after David — a perfectly satisfactory correspondance when we take into account that Zabadiah may probably have been considerably younger than David, and that the early marriages of the kings have a constant tendency to increase the number of generations in the royal line. Again, the last name in the line is the sixth after Azariah; but Hezekiah, the sixth king after Athaliah's husband, and we know that many of the genealogies were written out by "the men of Hezekiah," and therefore of course came down to his time [BRECHER I. 259] (see 1 Chr. iv. 41; Prov. xxv. 1). So that we may conclude, with great probability, both that this genealogy ends in the time of Hezekiah, and that all its links are perfect.

The only point of importance remains to be noticed, namely, that Zabadiah is called, after his great-grandmother, the founder of his house, son of Abib. For that Abib was the name of Sheshan's daughter is certain from 1 Chr. ii. 31; and it is also certain, from vv. 35, 36, that from her marriage with Jairus descended, in the third generation, Zabadiah. It is therefore as certain as such matters can be, that Zabadiah the son of Abib, David's mighty man, was so called from Abib his female ancestor. The case is analogous to that of Joab, and Abishai, and Asaiah, who are always called sons of Zeruiah, Zeruiah, like Abib, having married a foreigner. Or if any one thinks there is a difference between a man being called the son of his mother, and the son of his great-grandmother, a more exact parallel may be found in Gen. xxv. 4, xxxvi. 12, 15, 17, 18, where the descendants of Ketura, and of the wives of Esau, in the third and fourth generation, are called "the sons of Ketura," or "the sons of Abib," and "of Bedadnah" respectively.

2. (Zabadiah: [Vat.] Alex. Zabad.) An Ephraimit, if the text of 1 Chr. vii. 21 is correct. [SEE SOUTHEAST.]

3. (Zabadiah: [Vat. Zabadia.] Alex. Zabadia.) Son of Shimshai, an Ammonite, an assassin who, with Jehozabad, slew king Joash, according to 2 Chr. xxiv. 26; but in 2 K. xii. 21, his name is written, probably more correctly, Jozaiah [JOZACHAR]. He was one of the domestic servants of the palace, and apparently the agent of a powerful conspiracy (2 Chr. xxv. 3; 2 K. xiv. 5). Joash had become unpopular from his idiocies (2 Chr. xxiv. 18), his oppression (ibid. 22), and, above all, his calumnies (Ibid. 23-25). The explanation given in the article JOZACHAR is doubtless the true one, that the chronicler represents this violent death of the king, as well as the previous invasion of the Syrians, as a Divine judgment against him for the innocent blood of Zechariah shed by him: not that the assassins themselves were actuated by the desire to avenge the death of Zechariah. They were both put to death by Amaziah, but their children were spared in obedience to the law of Moses (Deut. xxiv. 16). The coincidence between the names Zechorah and Jozaiah is remarkable.

A. C. II.

4. (Zabadiah [Vat. Zabadiah.] A hymn of Israel, of the sons of Zattu, who put away his foreign wife at Ezra's command (Ezr. x. 27). He is called SARATHES in 1 Esdr. ix. 28.

5. [Rom.] Zabadiah: [Vat. FA., with prec. word, Athetaioi; Alex. Zabad.] One of the descendants of Hasphon, who had married a foreign wife after the Captivity (Ez. x. 25); called BANNAIA in 1 Esdr. ix. 33.

6. (Zabadiah: [Vat. FA. Zenia; Alex. om.] One of the sons of Xebel, whose name is mentioned under the same circumstances as the two preceding (Ezr. x. 43). It is represented by ZABADAIAS in 1 Esdr. ix. 35.

W. A. W.

ZABADAIAS [1 syl.] (Zabadaias: Sabauas.) Zabad 6 (1 Esdr. ix. 35; comp. Ez. x. 43).

ZABADAIANS [property Zabadaians] (Zabadaios; Sin. Zabadaios; Alex. Zabadieon; Zabadaios.) An Arab tribe who were attacked and spoiled by Jonathan, on his way back to Damascus from his fruitless pursuit of the army of Demetrius (1 Macc. xii. 31). Josephus calls them Nabatians (Ant. xiii. 5, § 10), but he is evidently in error. Nothing certain is known of them. Ewald (Gesch

a He does not appear in the list in 2 Sam. xxiv., and may therefore be presumed to have been added in the latter part of David's reign.
v. 382 finds a trace of their name in that of the place Zobah given by Robinson in his lists; but this is too far south, between the Carmel and the Zerkar. Michaelis suggests the Arab tribe Zebbel; but they do not appear in the necessaryihbor. Jonathan had put the enemy's army, as far as the river Eleutherus (Notre ch de Koby), and was on his march back to Damascus when he attacked and plundered the Zobedans. We must look for them, therefore, somewhere to the north-west of Damascus. Accordingly, on the road from Damascus to Baalbek, at a distance of about 30 hours (26 miles) from the former place, is the village Zebel talking, standing at the upper end of a plain of the same name, which is the very centre of Anti-Libanus. The name Zebel standing is a relic of the ancient tribe of the Zobedans. According to Burckhardt (Syria, p. 3), the plain is about three quarters of an hour in breadth, and three hours in length: it is called Zebel Zebed (heb). The village is of considerable size, containing nearly 3,000 inhabitants, who breed cattle, and the silkworm, and have some dyeing-houses (ibid.).

Not far from Zebel, on the western slopes of Anti-Libanus, is another village called Kefr Zebel, which again seems to point to this as the district formerly occupied by the Zobedans. W. A. W.

ZAB'TAI [2 syl.] (צ"ב) [perh. pure, house of]: Zobebi. 1. One of the descendants of Bebai, who had married a foreign wife in the days of Ezra (Ezr. x. 28). He is called Josabod in 1 Esdr. iii. 29.

2. (Zobebi: F. A. Zabou: Zobetai.) Father of Barnab, who assisted Nehemiah in rebuilding the city wall (Neh. iii. 29).

ZABBUD (צפב) [girset, bastored]: Keri, Keri. [Vat. omitis: Zacur]. One of the sons of Bgai, who returned in the second carvan with Ezra (Ezr. viii. 14). In 1 Esdr. viii. 40 his name is corrupted into Isalucerus.

ZABDEBUS [properly ZABDEUS] (צ"ב'ו"ם) [Valg. om.]: Zabdiel of the sons of Immer (1 Esdr. ii. 21; comp. Ez. x. 29).

ZABBODI (צפב) [Jehovah gavet]: Zobodi [Vat. -s蒱: Alex. Zabbi in Josh. vii. 1: Zobbe]. 1. Son of Zerah, the son of Judah, and ancestor of Achan (Josh. vii. 1, 17, 18).

2. (Zobodi: F. A. Zaboud: Zobedi.) A Benjaminite, of the sons of Shimmil (1 Chr. vii. 19).

3. (Vat. Zabbi: Zóbélis.) David's officer over the produce of the vineyards for the wine-celards (1 Chr. xxvii. 27). He is called "the Siphnaithe," that is, in all probability, native of Shephelah, but his native place has not been traced.

4. (Rom.) Vat. and Alex. on F. A. third hand, Zobodi: Zobedi. Some Asaph the minstrel (Neh. xii. 17): called elsewhere Zaccre (Neh. xii. 35) and Zechir (1 Chr. xi. 15).

a They plant this tree in the East by the wayside, and it is easily ascended because the branches start out comparatively near the ground. [SYRO-ARAB. NOTE 1]

ZABDIEL (צפב) [gift of God]: Zobdai. [Vat. -s蒱: Zacriel]. 1. Father of Jashobeam, the chief of David's guard (1 Chr. xxvii. 2).

2. (Zabdi: Alex. Zobdpai: F. A. Bagbapai.) A priest, son of the great men, or, as the margin gives it, "Haggabdielm." (Neh. xi. 14). He had the oversight of 128 of his brethren after the return from Babylon.

3. (Zabdiel: Joseph Zobdai: Zacriel.) An Arabian chieftain who put Alexander Balas to death (1 Macc. xi. 17; Joseph. Ant. xiii. 4, § 8). According to Dio Chrysostom, Alexander Balas was murdered by two of the officers who accompanied him (Mikler, Fragii Hist. ii. 16).

ZABBUD (צפב) [girset]: Zacrobod: Alex. Zabodi: [Comp. Zaboud: Zacub]. The son of Nathan (1 K. iv. 5). He is described as a priest (A. v. principal officer; "Priest, iii. 274; and as holding at the court of Solomon the confidential post of "king's friend," which had been occupied by Hushai the Archite during the reign of David (2 Sam. xv. 37, xvi. 16; 1 Chr. xxvii. 33). This position, if it were an official one, was evidently distinct from that of counsellor, occupied by Ahithophel under David, and had none of the character of private friendship about it, for Absalom consistently called David the "friend" of Hushai (1 Sam. xvii. 17). In the Vat. MS. of the LXX, the word "priest" is omitted, and in the Arabic of the London Palaeograph it is referred to Nathan. The Peshito-Syriac and several Hebrew MSS. for "Zabud" read "Zacaer." The same occurs in the case of ZABUD.

ZAB'ULON (צ"ב"לום: Zobaloon). The Greek form of the name ZEBULUS (Matt. iv. 13, 15, Rev. vii. 8).

ZACC'AIS [2 syl.] (צפ"א) [pure, innocent]: Zacchyi: [Vat. F.A. Zabha in Neh.]: Alex. Zacchel in Ezra: Zacchel. The sons of Zacca, to the number of 700, returned with Zerubbabel (Ezr. ii. 39; Neh. v. 11). The name is the same which appears in the N. T. in the familiar form of ZACCHAEUS.

ZACCH'AEUS [A. V. ZACHAEUS] (צ"ק"א: Zachaeus). The name of a tax-collector near Jericho, who being short in stature climbed up into a sycamore-tree, in order to obtain a sight of Jesus as He passed through that place. Luke only has related the incident (xix. 1-10). Zacchaeus was a Jew, as may be inferred from his name, and from the fact that the Saviour speaks of him expressly as "a son of Abrahom," (Luke A'barbom). So the latter expression should be understood, and not in a spiritual sense; for it was evidently meant to assert that he was one of the chosen race, notwithstanding the prejudice of some of his countrymen that his office under the Roman government made him an alien and outcast from the privileges of the Israelite. The term which designates this office (צ"ק"א) is unusual, but describes him no doubt, as the superintendent of customs or tribute in the district of Jericho, where he lived, as one having a commission from his Roman principal (unciae, publicanos) to collect the imposts levied b A. V. (Luke xix. 1) has: "And [Jesus] entered and passed through Jericho," as if the incident took place when the Kur thick lord had left the city. But the verb is ἀνασάσαι, was passing through, which places the occurrence in Jericho.
on the Jews by the Romans, and who in the execution of that trust employed subalterns (the ordinary τεκνῶν), who were accountable to him, as he in turn was accountable to his superior, whether he resided at Rome, as was more common, or elsewhere. The provision which made Winer, Redie. ii. 711, and Dict. of Ant. p. 806). The office must have been a lucrative one in such a region, and it is not strange that Zacchaeus is mentioned by the Evangelist as a rich man (αὐτὸς ὢν παλαιστής). Josephus states (Jot. xxv. 4, § 2) that the palm-groves of Jericho and its gardens of balsam were given as a source of revenue by Antony to Cleopatra, and, on account of their value, were afterwards redeemed by Herod the Great for his own benefit. The sycamore-tree is no longer found in that neighborhood (Robinson, Blind. Res. i. 593); but no one should be surprised at this, since "even the solitary relic of the palm-forest, seen as late as 1858" — which existed near Jericho, has now disappeared (Stanley, N. P. p. 507)." The eagerness of Zacchaeus to behold Jesus indicates a deeper interest than that of mere curiosity. He must have had some knowledge, by report at least, of the teachings of Christ, as well as of His wonderful working power, and could thus have been awakened to some just religious feeling, which would make him the more anxious to see the announcer of the good tidings, so important to men as sinners. The readiness of Christ to take up His abode with him, and His declaration that "salvation" had that day come to the house of his entertainer, prove sufficiently that "He who knows what is in man" perceived in him a religious susceptibility which fitted him to be the recipient of spiritual blessings. John the Baptist must often have preached near Jericho, and Zacchaeus may on some occasion have been a hearer. Reflection upon his conduct on the part of Zacchaeus himself appears to have revealed to him deficiencies which disturbed his conscience, and he was ready, on being instructed more fully in regard to the way of life, to engage in "a storefield" for the illegal exactions of which he would not venture to deny (εἰ τῶν τοῦ ἐκσυρφοναριτίαν) that he might have been guilty. At all events he had not lived in such a manner as to overcome the prejudices which the Jews entertained against individuals of his class, and their censure fell on him as well as on Christ when they declared that the latter had not scorned to avail Himself of the hospitality of "a man that was a sinner." The Saviour spent the night probably (βοτια, ver. 5, and καταλαβέων, ver. 7) in the house of Zacchaeus, and the next day pursued his journey to Jerusalem. He was in the caravan from Galilee, which was going up thither to keep the Passover. The entire scene is well illustrated by Oosterzee (Lange's Biblical. iii. 285).

We read in the Rabbinic writings also of a Zacchaeus who lived at Jericho at this same period, well known on his own account, and especially as the father of the celebrated Rabbi Ishmael ben Zachai (see Seraq. 5 Lechei. 4a, 5a). This person may have been related to the Zacchaeus named in the sacred narrative. The family of the Zacchaeus was an ancient one, as well as very numerous. They are mentioned in the books of Ezra (ii. 9 and Nehemiah (vii. 14) as among those who returned from the Babylonian Captivity under Zerubbabel, when their number amounted to seven hundred and sixty. It should be noticed that the name is given as ZAKAI in the Authorized Version of the Old Testament. See Bishop Hall's discourse on Zacchaeus in his Contemplations on the N. T. bk. iv. 3, and Archbishop Trench, on Zacchaeus, in his Studies in the Gospels.) H. B. H.

**ZACCHÆUS** [properly ZACCHÉUS] (Zacchæus is an officer of Judas Maccoabaeus (2 Macc. x. 19). Grofius, from a mistaken reference to 1 Macc. v. 56, wishes to read εἰκὼν τοῦ Ζακχαίου.

B. F. W.

ZACCHÆUS (ζακχαῖος) [mindful]: Ζακχαῖος: [Vat. omits: Zocharch.] A Simeonite, of the family of Meshim (1 Chr. iv. 20). His descendants, through his son Shimai, became one of the most numerous branches of the tribe.

ZACCHÆUS (ζακχαῖος) (Josh. 551)); [Vat. Zacch.] Alex. Ζακχαῖος: Zacher.] 1. A Benjamite, father of Shimma, the spy selected from his tribe (Num. xiii. 4).

2. [Vat.: Alex. Ζακχαῖος: Zacher.] A Merenite Levite, son of Jazaziah (1 Chr. xxiv. 27).

3. [Vat.: Alex. Ζακχαῖος: Zacher.] Alex. Ζακχαῖος: Zacher.; 1. A Ben-

4. [Vat. Zacch.] Alex. Ζακχαῖος: Zacher.; 1. A Merenite Levite, son of Jazaziah (1 Chr. xxiv. 27).

5. [Vat.: Alex. Ζακχαῖος: Zacher.] A Levite, or family of Levites, who signed the covenant with Nehemiah (Neh. x. 12).

6. [Vat.: Alex. Ζακχαῖος: Zacher.] A Levite, whose son or descendant Hamum was one of the treasures over the treasures appointed by Nehemiah (Neh. xii. 13).

ZACHARIAS, or properly ZACHARIÁH (ζαχαρίας), "remembered by Jehovah:" Ζαχαρίας: [Vat.: Ζαχαρίας, 2 K. xiv. 29; Alex. Ζαχαρίας, 2 K. xiv. 8; Ζαχαρίας, 2 K. xiv. 11; Zacherienses, 2 K. xiv. 1]; Zachariah, son of Jeroboam II, 14th king of Israel, and the last of the house of Jehu. There is a difficulty about the date of his reign. We are told that Amaziah ascended the throne of Judah in the second year of Josiah king of Israel, and reigned 20 years (2 K. xiv. 1, 2). He was succeeded by Uzziah or Azariah, in the 27th year of Jeroboam II, the successor of Josiah (2 K. xiv. 1), and Uzziah reigned 52 years. On the other hand, Josiah king of Israel reigned 16 years (2 K. xiii. 10), was succeeded by Jeroboam, who reigned 41 (2 K. xiv. 24), and he by Zachariah, who came to the throne in the 38th year of Uzziah king of Judah (2 K. xiv. 8). Thus we have (1) from the accession of Amaziah to the 38th of Uzziah, 29+38 = 67 years; but (2) from the second year of Josiah to the accession of Zachariad (or at least to the death of Jeroboam) we have 15+ 41 = 56 years. Further, the accession of Uzziah, placed in the 27th year of Jeroboam, according to

* Luke uses καταλαβέων elsewhere only in ix. 12 and evidently of a looking for the night. The term of itself may denote a nearer "breaking up," or half "for the night," is more probable here. II.
the above reckoning occurred in the 15th. And this latter synchronism is confirmed, and that with the 27th year of Jeroboam contradicted, by 2 K. xiv. 17, which tells us that Amaziah, king of Judah, survived Josiah king of Israel by 15 years. Most chronologers assume an interregnum of 11 years between Jeroboam's death and Zachariad's accession, during which the kingdom was suffering from the anarchy of a disputed succession, but this seems unlikely after the reign of a resolute ruler like Jeroboam, and does not solve the difference between 2 K. xiv. 17 and xvi. 1. We are reduced to suppose that the MSS. have here incorrect numbers, to substitute 15 for 27 in 2 K. xvi. 1, and to believe that Jeroboam II. reigned 52 or 53 years. Josephus (ix. 10, § 3) places Uzziah's accession in the 14th year of Jeroboam, a variation of a year in these synchronisms being unavoidable, since the Hebrew annalists in giving their dates do not reckon fractions of years. [ISRAEL, KINGDOM OF, vol. ii. 1178 seq.] But whether we assume an interregnum, or an error in the MSS., we must place Zachariad's accession B.C. 771-772. His reign lasted only six months. He was killed in a conspiracy, of which Shallum was the head, and by which the prophecy in 2 K. x. 30 was accomplished. We are told that during his brief term of power he did evil, and kept the high-place, and voted the first access to the God of his father, which his father had maintained in regal splendor at Bethel (Am. vii. 13). [SHAL-LEM.]

2. (Alex. Ζαχαρίας.) The father of Ahij, or Abijah, Hezekiah's mother (2 K. xviii. 2). In 2 Chr. xxix. 1 he is called ZECHARIAD.

ZACHARIAS [remembered by Jehovah]; Ζαχαρίας; Vulg. om.: 1. Zachariad the priest in the reign of Josiah (1 Esdr. i. 8).

2. In 1 Esdr. i. 15 Zachariad occupies the place of Heman in 2 Chr. xxxv. 15.

3. (Ζαχαρίας; Alex. Ζαχαρίας; [Abd. Ζαχαρίας; (V. Eger.) = SACHARIAH, and ZACHARIAH 20 (1 Esdr. v. 8; comp. Ezr. ii. 2); Neh. vii. 7). It is not clear from whence this rendering of the name is derived. Our translators follow the Geneva Version [and the Bishop's Bible]. This form of the name comes from the Abyline edition. — A.

4. (Ζαχαρίας; Ζαχαρίας.) The prophet Zachariad (1 Esdr. vi. 1, vii. 3).

5. ZECHARIAD of the sons of Pharosh (1 Esdr. vii. 59; comp. Ezr. vii. 33).

6. ZECHARIAD of the sons of Bedia (1 Esdr. viii. 37; [comp. Ezr. viii. 11]).

7. ZECHARIAD, one of the "principal men and learned," with whom Ezra consulted (1 Esdr. viii. 44; comp. Ezr. viii. 16).

8. ZECHARIAD of the sons of Elam (1 Esdr. ix. 27; comp. Ezr. x. 28). He is called Father of Sheph, a leader in the first campaign of the Maccabean war (1 Macc. v. 18, 50-62).

10. Father of John the Baptist (Luke i. 5, etc.). [JOHN THE BAPTIST.]

11. Son of Barachiad, who, our Lord says, was slain by the Jews between the altar and the Temple (Matt. xxiii. 35; Luke xi. 51). There has been much dispute who this Zachariad was. From the time of Origen, who relates that the father of John the Baptist was killed in the Temple, many of the Greek Fathers have maintained that this is the person to whom our Lord alludes; and there can be little or no doubt that the allusion is to Zachariad, the son of Jehoiada (2 Chr. xxiv. 21). As the book of Chronicles — in which the murder of Zachariad, the son of Jehoiada, occurs — closes the Hebrew canon, this assassination was the last of the murders of righteousness men recorded in the Bible, just as that of Abel was the first. (Comp. Renan, Vie de Jésus, p. 334.) The name of the father of Zachariad is not mentioned by St. Luke; and we may suppose that the name of Barachias crept into the text of St. Matthew from a marginal gloss, a confusion having been made between the son of Jehoiada Zachariah, the son of Barachias (Berenchias, the prophet. [Comp. ZECHARIAH, 6.]

ZACHARY (Zecharia). The prophet Zachariad (2 Esdr. i. 39).

ZACHER [Ζαχήρ, with prefix Ζαχαρί; [Vat. Ζαχαρί; Zacher]. One of the sons of Jehiel, the father or founder of Gibson, by his wife Machal (1 Chr. viii. 31). In 1 Chr. ii. 37 he is called ZECHARIAD.

ZADOK (Ζαδόκ) [just, upright]: Zabdi; [Vat. Alex. also Ζαδοκ. Zadok, and other forms: Σαδωκ; śadōk; righteous] 1. Son of Ahitub, and one of the chief priests in the 14th year of Josiah, Abijah being the other. [AZAIAH.] Zadok was of the house of Eleazar, the son of Aaron (1 Chr. xxvii. 5), and eleventh in descent from Aaron. The first mention of him is in 1 Chr. xii. 28, where we are told that he joined David at Hebron after Saul's death with 22 captains of his father's house, and, apparently, with 900 men (4000-3700, xxv. 26, 27). Until this time, it may be concluded, he had adhered to the house of Saul. But henceforth his fidelity to David was inviolable. When Abdon revolted, and David fled from Jerusalem, Zadok and all the Levites bearing the Ark accompanied him, and it was only at the king's express command that they returned to Jerusalem, and became the medium of communication between the king and Hushai the Archite (2 Sam. xv. viii.). When Abdon was dead, Zadok and Abiathar were the persons who persuaded the elders of Judah to invite David to return (2 Sam. xix. 11). When Adonijah, in David's old age, set up for king, and had persuaded Joab, and Abiathar the priest, to join his party, Zadok was unmoved, and was employed by David to anoint Solomon to be king in his room (1 K. ii. 25, 27). From this time, it may be concluded, he had adhered to the house of Saul. But henceforth his fidelity to David was inviolable. It is said in general terms in the enumeration of Solomon's officers of state that Zadok was the priest (1 K. iv. 4; 1 Chr. xxii. 22), but no single act of his is mentioned. But his chief account of the building and dedication of Solomon's Temple, his name does not occur, so that though Josephus says that "Zadok the high-priest was the first high-priest of the Temple which Solomon built" (Jos. x. 8, § 6), it is very doubtful whether he lived till the dedication of Solomon's Temple, and it seems far more likely that Azariah, his son, was high-priest at the dedication (comp. 1 K. iv. 2, and 1 Chr. vii. 10, and see AZAIAH, 2). Had Zadok been present, it is scarcely possible that he should not have been named in so detailed an account as that in 1 K. viii. [HIGH-PRIEST, p. 1071.]
ZADOK

Several interesting questions arise in connection with Zadok in regard to the high-priesthood. And first, as to the causes which led to the descentants of Hemanar occupying the high-priesthood to the prejudice of the house of Eleazar. There is, however, nothing to guide us to any certain conclusion. We only know that Phinehas the son of Eleazar was high-priest after his father, and that at a subsequent period Eli of the house of Hemanar was high-priest, and that the office was ordained in his house at the time of Zadok, who was first Abiathar's colleague, and afterwards superseded him. Zadok's descendants continued to be hereditary high-priests till the time of Antiochus Empator, and perhaps till the extinction of the office. [Hutte.

priest, ii. 1063.] But possibly some light may be thrown on this question by the next which arises, namely, what is the meaning of the double-priesthood of Zadok and Abiathar (2 Sam. xxv. 29; 1 Chr. xxiv. 6, 31). In later times we usually find two priests, the high-priest, and the second priest (2 K. xxv. 18), and there does not seem to have been any great difference in their dignity. So too Luke iii. 2. The expression "the chief priest of the house of Zadok" (2 Chr. xxxii. 19), seems also to indicate that there were two priests of nearly equal dignity. Zadok and Abiathar were of nearly equal dignity (2 Sam. xv. 35, 36, xiv. 11). Hophni and Phinehas again, and Eleazar and Hanaan are coupled together, and seem to have been holders of the office as it was in commission. The duties of the office too were in the case of Zadok and Abiathar divided. Zadok ministered before the Tel-ramah at Gibeon (1 Chr. xvi. 39). Mephibosheth had the care of the Ark at Jerusalem. Not, however, exclusively, as appears from 1 Chr. xiv. 11; 2 Sam. xxiv. 25, 29. Hence, perhaps, it may be concluded that from the first there was a tendency to consider the office of the priesthood as somewhat of the nature of a corporate office, although some of its functions were necessarily confided to the chief member of that corporation; and it so, it is very easy to perceive how superior abilities on the one hand, and infancy or incapacity on the other, might operate to raise or depress the members of this corporation respectively. Just as in the Saxon royal families, considerable latitude was allowed as to the particular member who succeeded to the throne. When hereditary monarchy was established in Judah, then the high-priesthood may have become more regular. Another circumstance which strengthens the conclusion that the origin of the double-priesthood was anterior to Zadok, is that in 1 Chr. ix. 11; Neh. xi. 11, Abihud, the father of Zadok seems to be described as "ruler of the House of God," an office usually held by the chief priest, though sometimes by the second priest. [Hutte, ii. 1069 a.] And if this is so, it implies that the house of Eleazar had maintained its footing by side with the house of Hemanar, although for a time the chief dignity had fallen to the lot of Eli. What was Zadok's exact position when he first joined David, is impossible to determine. He there appears inferior to Jehoiada, the leader of the Aaronites.

4. [Zadok, Zaduok: in Neh. x. 21, Vat. F.A. Zaduok: iii. 4, F.A. Zadok: Alex. omits.] Son of Eleusa, who repaired a portion of the wall in the time of Nehemiah (Neh. iii. 4). He is probably the same as is in the list of those that sealed the covenant in Neh. x. 21, as in both cases his name follows that of Meshaebel. But if so, we know that he was not a priest, as his name would at first sight lead one to suppose, but one of "the chief of the people," or scribe. With this agrees his patronymic Bann, which indicates that he was of the tribe of Judah; for Honan, one of David's mighty men, was a Netophathite (2 Sam. xxii. 20), i.e. of Netophal, a city of Judah. The men of Tekoa, another city of Judah, worked next to Zadok. Meshulimah of the house of Meshaebel, who preceded him in both lists (Neh. iii. 4, and x. 20, 21), was also of the tribe of Judah (Neh. xii. 24). Incornerriages of the priestly house with the tribe of Judah were more frequent than with any other tribe. Hence probably the name of Zadok (Matt. i. 14).

5. [Zaduok: F.A. Zauok.] Son of Innem, a priest who repaired a portion of the wall over against his own house (Neh. iii. 29). He belonged to the 10th course (1 Chr. xiv. 14), which was one of those which returned from Babylon (Ex. ii. 57).

6. [Zadok, Zaduok: Alex. in Exr. Zaduok; F.A. in Neh. Zaduok; Zaduok, Zadok.] In Neh. xii. 11, and 1 Chr. xix. 11, mention is made in a genealogy of Zadok, the son of Meraioth, the son of Abihud. But as such a sequence occurs nowhere else, Meraioth being always the grandson of Abihud (or great-grandfather, as in Ezr. vii. 2, 3), it can hardly be doubted that Meraioth is inserted by the error of a copyist, and that Zadok the son of Albiud is meant.

It is worth noticing that the N. T. name Justus (Acts i. 23, xviii. 7; Col. iv. 11) is the literal translation of Zadok. Zedekeiah, Jehozakad, may be compared.

The name appears occasionally in the post-biblical history. The associate of Judah the Galatite, the well-known leader of the agitation against the census of Quirinos, was a certain Phanese named Zadok (Joseph. Ant. xviii. 1, § 1), and the sect of the Sadducees is reputed to have derived both its

1 Chr. vi. 5-14, Ps. 132, 25, Ezr. vii. 1-3, Neh. xi. 11, and 1 Chr. ix. 11.

Seraiah. Seraiah. Seraiah. Seraiah.
name and origin from a person of the same name, a disciple of Antigonus of Socho. (See the citations of Lightfoot, *Hebr. and Talm. Exe. on Matt. iii. 8*.) The personality of the last mentioned Sabok has been strongly impugned in the article *SADDUCEES* (p. 2779 f.); but see, on the other hand, the remark of M. Renan (*Le de Judah* p. 216). 

A. C. H.

* 7. *Zaddik*; *Vat. F. Zaddik; Spoho: Sabok.* A scribe in the time of Nehemiah, one of the "treasurers." (Neh. xii. 13).

ZAHAM (צלמא) [Hebrew]: Zadik; *Vat.*: *Poullay*: Alex. *Zalami*: *Zamin*. Son of Rebec boho by Abihail, the daughter of Kiah (2 Chr. xi. 19). As Eliab was the eldest of David's brothers, it is more probable that Abihail was his granddaughter.

ZAIR (צלמא) [Hebrew]: Zair; *Rom.* *Zaiop*: Alex. *omitis*: *Seir*. A place named in 2 K. viii. 21 only, in the account of Joash's *Zair* against the Edomites. He went over to Zair with all his chariots; there he and his forces appear to have been surrounded, and only to have escaped by cutting their way through in the night. The parallel account in Chronicles (2 Chr. xxix. 20) agrees with this, except that the words "to Zair" are omitted, and the words "with his princes" inserted. This is followed by Josephus (Ant. ix. 5 § 1). The omitted and inserted words have a certain similarity both in sound and in their component letters, צל and ציל; and on this it has been conjectured that the latter were substituted for the former, either by the error of a copier, or intentionally, because the name Zair was not elsewhere known (see Keil, *Comment. on 2 K.* viii. 21). Others again, as Movers (Chron. p. 218) and Ewald (*Exeget. iii. 524*), suggest that Zair is identical with Zoor (צלحرم or צלحرم). Certainly in the Middle Ages the road by which an army passed from Judaea to the country formerly occupied by Edom lay through the place which was then believed to be Zoor, below Kerak, at the S. E. quarter of the Dead Sea (Fichler, *Gesta Dei*, p. 405), and so far this is in favor of the identification; but there is no other support to it in the M. S. readings either of the original or the Versions. The Zone of Gibeon is to be seen under that head) was probably near the N.E. end of the lake, and the chief interest that exists in the identification of Zair and Zoor, resides in the fact that it could be established it would show that by the time 2 K. viii. 21 was written, Zoor had been shifted from its original place, and had come to be located where it was in the days of Joseph, Jerome, and the Crusades. Possibly the previous existence there of a place called Zair, assisted the transfer? A third conjecture grounded on the readings of the Vulgate (Zair) and the Arabic version (Seir, סיר) is, that Zair is an alteration for Seir (סירה), the country itself of the Edomites (The."

**a** This is not, however, the interpretation of the Jewish commentators, who take the word ציל for ציל to refer to the neighboring parts of the country of Edom. See Rashi on 2 Chr. xxii. 9.

**b** *Under the heads Seirum and Zoor (Amer. ed.)*

ZALMUNNA 3589

ZA'LAPH (צלפ) [Hebrew]: Selep; *Vat.*: *Seleph*. Father of Haman, who assisted in rebuilding the city wall (Neh. iii. 30).

ZALMON (צלמון) [Hebrew]: *Zalmon*; *Alex.* *Zalmon*; *Comp. Sealmav*; *Scholm*. An Ahohite, one of David's guards (2 Sam. xxvi. 28). In 1 Chr. xi. 29 it is called LEM, which Kennicott (p. 187) decides to be the true reading.

ZALMON, MOUNT. (צלמון) [Hebrew]: *Zalmou*: *Vat.* *Seleph*; *Alex.* *Zalmon*; *Comp. Sealmav*; *Scholm*. A wooded eminence in the immediate neighborhood of Shechem, from which Abimelech and his people cut down the boughs with which he sacrificing and burnt the Shechemites who had taken refuge in the citadel (Judg. ix. 48). It is evident from the narrative that it was close to the city. But beyond this there does not appear to be the smallest indication either in or out of the Bible of its position. The Rabbin mention a place of the same name, but evidently far from the necessary position (Schwarz, p. 137). The name Selomnach-Schinen is attached to the S. E. portion of Mount Esol (see the map of Dr. Rosen, *Zeitsehr. der d. M. G.*, xiv. 634); but without further evidence, it is hazardous even to conjecture that there is any connection between this name and Taslom.

The reading of the LXX. is remarkable both in itself, and in the fact that the two great MSS. agree in a reading so much removed from the Hebrew; but it is impossible to suppose that Heron (at any rate the well known mountain of that name), is referred to in the narrative of Abimelech.

The possibility of a connection between this mountain and the place of the same name in Ps. lxxviii. 14 (A. V. Salmon), is discussed under the head of *ZALMON*, p. 279 f.

The name of Nahumathleca has been supposed to be a corruption of that of Taslom (Ohio, *Lxx. Rebii. de Nahumtla*).

ZALMONAH (צלמון) [Hebrew]: *Selemaw*; *Scholm*. The name of a desert-station of the Israelites, which they reached between leaving Mount Hor and camping at Penum, although they must have turned the southern point of Edomishit territory by the way (Num. xxxiii. 41). It lies on the east side of Edom; but whether or not identical with Moan, a few miles E. of Petra, as Rainer thinks, is doubtful. More probably Zalmonah may be in the Wady Ither, which runs into the Arabah close to where Edath anciently stood.

H. H.

ZALMUNNA (צלמננה) [Hebrew]: *Selemaw*; *Alex. Zalumna*; and so also Josephus: *Salmon*. One of the two "kings" of Midian whose capture and death by the hands of Gideon himself the reader will find reasons for the belief that the latter has not been "shifted from its original place.*

S. W.

"The variations of the MSS. of the LXX. (Holmes and Parsons) are very singular — <א> Zalmon, <ז> Zalmon, <א> Zalmon, <ז> Zalmon. But they do not point to any difference in the Hebrew text from that now existing."
formed the last act of his great conflict with Midian (Judg. viii. 5-21; Is. xxxiii. 11). No satisfactory explanation of the name of Zalzunnah has been given. That of Gesenius and Fürst ("shelter is denied him") can hardly be entertained.

The distinction between the "kings" (נגד) and the "princes" (נ醫院) of the Midianites on this occasion is carefully maintained throughout the narrative of Midianites and Amalekites, children of the East; and nothing would be easier or more natural than for the Hebrew scribes who chronicled the events to confuse one tribe with another in so minute a point as the title of a chief.

In the great Bedouin tribes of the present day, who occupy the place of Midian and Amalek, there is no distinctive appellation answering to the חִלְקִי and נְעֵר of the Hebrew narrative. Differences in rank and power there are, as between the great chief, the acknowledged head of the parent tribe, and the lesser chiefs who lead the sub-tribes into which it is divided, and who are to a great extent independent of him. But the one word שִׁילָח is employed for all. The great chief is the שִׁילָח הָלֶכֶה, the others are נְעֵי חִלְקְיָו הָלֶכֶה, of the sheikhs, i.e., sheikhs rank. The writer begs to express his acknowledgments to Mr. Layard and Mr. Cyril Graham for information on this point.

ZAM'BIIS (Za]m'bi) [Var. —beta]: Alex. Zam'bi: [Abl. Za]m'biac; Zambes. The same as AMARIAH (1 Esdr. ix. 34; comp. Esr. x. 42).

ZAM'BI: (Zam'bi) [Sin. Za]m'biac; Zambezi. ZIMRIL the Simeonite slain by Phinehas (1 Mac. ii. 26).

ZAM'MOTH (Zam'moth: [Var.] Alex. Za]m'oth: Zathmou) = ZATU (1 Esdr. ix. 23; comp. Esr. x. 27).

ZAMMU/MIMS (Za]m'mi) [see below]: [Com. Zama]midae [Var. —ieu]: Alex. Za]m'we-apu; Za]m'maw. The Ammonite name for the people (who, though they were not present) were called REPHAIM (Num. ii. 20 only). They are described as having originally been a powerful and numerous nation of giants,—"great, many, and tall,"—inhabiting the district of which at the time of the Hebrew conquest was inhabited by the possession of the Ammonites, by whom the Zammunmim had a long time previously been destroyed. Where this district was, it is not perhaps possible exactly to define; but it probably lay in the neighborhood of Rabbath-Ammon (Amana), the only city of the Ammonites of which the name of occupation is preserved to us, and therefore westward of that rich undulating country from which Moab had been forced by the Amorites (the modern Belek), and of the numerous towns of that country, whose ruins and names are still encountered.

From a slight similarity between the two names, and from the mention of the Emim in connection with each, it is usually assumed that the Zammunmim are identical with the ZE'ZERM (Gesenius, Thes. p. 220) and Ammonites, and of the numerous towns of that country, whose ruins and names are still encountered.

Various attempts have been made to explain the name: as by comparison with the Arabic (א) זנ"ה - long-necked; or מ"מ, strong and big (Simonis, Osvan. 133); or as "obstinate," from מ"מ (Luther); or as "noisy," from מ"מ (Gesenius, Thes. p. 419), or as onomatopoetic intended to imitate the unintelligible jabber of foreigners, Michaelis (Suppl. No. 629) playfully recalls the likeness of the name to that of the ï¿½lpen zem at Mechem, and suggests therefore that the tribe may have originally come from Southern Arabia, or that they were this latter, however, he ends his article with the following discreet words, "Nihil historicè, nihil originali populii novitius: fas sit etymologicè agere ignorantia."—G.

ZAN'OAH (Za]naw'ah) [perh. marsh, beg]: Zaouâr in both MSS.: [Abl Za]naw; Comp. Za'naw: Zet wel'. In the genealogical list of the tribe of Judah in 1 Ch. is said to have been the father of Zanoah (iv. 18); and, as far as the passage can be made out, some connection appears to exist between Zanoah and Zuzim (Gen. xiv. 19). Zanoah is the name of a town of Judah [Zanoah 2], and there is an allusion to the mention of that name probably points to some colonization of the place by Egyptians or by Israelites directly from Egypt. In Setzef's account of Sanite (or more accurately Zama'hah), which is possibly identical with Zanoah, there is a curious token of the influence which events in Egypt still exercised on the people (Kuenen, iii. 29).

The Jewish interpreters considered the whole of this passage of 1 Chr. iv. to refer to Moses, and interpret each of the names which it contains as titles of him. "He was chief of Zanoah," says the Targum, "because for his sake God put away the Zanoah of Israel."—G.

ZAN'OAH (Zan'aw) [marsh or beg]: The name of two towns in the territory of Judah.

d (b) Josephus inverts the distinction. He styles Oreb and Zeb with ḫum, and Zebal and Zalzunnah ḫam (Ant. v. 7 § 6).

c In this sense the name was applied by counterfeit sheikhs of the 17th century as a nickname for Sanites who pretended to speak with tongues.
The LXX. form seems to indicate the same division, as the latter part, φακίας, is identical with the second part of the Hebrew, while what precedes is different. There is again no prōna fìa reason for any change from the ordinary reading of the name. The cause of the difference from the Hebrew in the earlier part of the name must be discussed when we come to examine its meaning.

This name has been explained as Hebrew or Egyptian, and always as a proper name. It has not been supposed to be an official title, but this possibility has to be considered:

1. The Rabbinists interpreted Zaphnath-paanæah as Hebrew, in the sense "wounder of a secret." This explanation is as old as Josephus (Ant. ii. 6, § 1): and Theodoret also follows him (v. άποδρατός ἐκρυβετέος, l. p. 106, Schol.). Philo offers an explanation, which, though seemingly different, may be the same (εἰς ἄποδρας στόμα πρώτος: but Manger conjectures the true reading to be εἰς ἄποδρας στόμα ἀποκρυμένου, l. c.). It must be remembered that Josephus perhaps, and Theodoret and Philo certainly, follow the LXX. form of the name.

2. In hose, though mentioning the Hebrew interpretation, remarks that the name should be Egyptian, and offers an Egyptian etymology: "Joseph . . . name Pharaoh Zaphnath Phaeneca appellativ, quod Hebræo absolutorum repetit ornatus est. Esto quia nomen ab Αἰγύπτιο ποιητικό ἢ λογικό δέδομεν, αὐτόν δὲ παντός ᾠδής ὁ Φανερός, ἡ Αἴγυπτιος σεμείας ἔλεγχος" (Orig. vii. 7, 1. iii. p. 327, Arev.). Jerome adopts the same rendering.

3. Modern scholars have looked to Coptic for an explanation of this name. Jabonaki and others proposing as the Coptic of the Egyptian original ΝΝΤΩΤ ΦΕΝΕΟΕ, or νοοτιτ, etc., "the preservation" or "preserver of the age.
This is evidently the etymology intended by Ioseph and Jerome.

We dismiss the Hebrew interpretation, as unsound in itself, and demanding the improbable concession that Pharaoh gave Joseph a Hebrew name.

It is impossible to arrive at a satisfactory result without first inquiring when this name was given, and what are the characteristics of Egyptian titles and names. These points having been discussed, we can show what ancient Egyptian sounds correspond to the Hebrew and LXX. forms of this name, and a comparison with ancient Egyptian will then be possible.

After the account of Joseph's appointment to be governor, of his receiving the insignia of authority, and Pharaoh's telling him that he held the second place in the kingdom, follow these words: "And Pharaoh called Joseph's name Zaphnath-paanæah: and he gave him to wife Asenath the daughter of Poti-pherah priest of On." It is next stated, "And Joseph went out over [all] the land of Egypt." (Gen. xxi. 45). As Joseph's two sons were born "before the years of famine came" (ver. 50), it seems evident that the order is here strictly chronological, at least that the events spoken of are of

---

a This name, however (ledged by the name, which is not present in the Hebrew name

b Here the name is contracted to ΝΝΤΩΤ.

c These curious words are produced by joining Zanoh to the name following it. Cai., or locatio.
the time before the famine. It is scarcely to be supposed that Pharaoh would have named Joseph "the preserver of life," or the like, when the calamity, from the worst effects of which his administration preserved Egypt, had not come. The name, at first sight, seems to be a proper name, but, as occurring after the account of Joseph's appointment and honors, may be a title.

Ancient Egyptian titles of dignity are generally connected with the king or the gods, as SETEN-SA, king's son, applied not only to royal princes, but to the governors of KEEISH, or "ushi." Titles of place are generally simply descriptive, as MEKETU, "superintendent of buildings," etc.; public works? Some few are tropical. Ancient Egyptian names are either simple or compound. Simple names are descriptive of occupation, as MA, "the shepherd," an early king's name, or are the names of natural objects, as FE-MAY (?), "the cat," etc.; more rarely they indicate qualities of character, as S-NUFRE, "doer of good." Compound names usually express devotion to the gods, as P'T-AMEN-APT, "Belonging to Amen of Thebes;" some are composed with the name of the reigning king, as SHAFlA SHIA, "Shadia rules;" SHEN-AMEN-ANKHI, "Seserikhoteq" Others occur which are more difficult of explanation, as AMEN-EM-IA, "Amen in the front," a war cry? Double names, not merely of kings, but of private persons, are found, but are very rare, as SNUFRE ANKHEE, "Doer of good, living one." These double names are usually of the period before the XVIIIth dynasty.

Before comparing Zaphnath-paaneah and Ponsonbrough, in Egyptian names we must ascertain the probable Egyptian equivalents of the letters of these names. The Egyptian words occurring in Heb are few, and the forms of some of them evidently Semitized, or at least changed by their use by foreigners: a complete and systematic alphabet of Egyptian equivalents of Egyptian letters therefore cannot be drawn up. There are, on the other hand, numerous Semitic words, either Hebrew or of a dialect very near it, the geographical names of places and tribes of Pale-time, given, according to a system, in the Egyptian inscriptions and papyri, from which we can draw up, as M. de Rouge has done (Recuei Archéologique, N. S. iii. 351-354), a complete alphabet, certain in nearly all its details, and approximately true in the few that are not determined, of the Egyptian equivalents of the Hebrew alphabet. The two comparative alphabets do not greatly differ, but we cannot be sure that in the endeavor to ascertain what Egyptian sounds are intended by Hebrew letters, or their Greek equivalents, we are quite accurate in employing the latter. For instance, different Egyptian signs are used to represent the Hebrew נ and ג, but it is by no means certain that these signs in Egyptian represented any sound but ב, except in the vulgar dialect.

It is important to observe that the Egyptians had a hard "t," the parent of the Coptic Σ and δ, which we represent by an Italian T; that they had an "a" corresponding to the Hebrew נ, which we represent by an Italian A; and that the Hebrew י may be represented by the Egyptian P, also pronounced Ph, and by the F. The probable originals of the Egyptian name of Joseph may be thus stated:

ZAPHNATH-PAANEAH

The second part of the name in the Hebrew is the same as in the LXX, although in the latter it is not separate; we therefore examine it first. It is identical with the ancient Egyptian proper name PANKHIEE, "the living," borne by a king who was an Ethiopian ruling after Tirhakah, and probably contemporary with the earlier part of the reign of Psammethicus I. The only doubtful point in the identification is that it is not certain that the "a" in PANKHIEE is that which represents the Hebrew ע. It is a symbolic sign of the kind which serves as a prefix, and at the same time determines the signification of the word it partly expresses and sometimes singly represents, and it is only used in the single sense "life," "to live." It may, however, be conjectured from its Coptic equivalents to have begun with either a long or a guttural "a" (*AN-2, B, S, *AN-1 B, STH, STH, SHET, STH  B, STH S, STH  B, STH  S, STH  B, STH S, STH  S). The second part of the name, thus explained, affords no clue to the meaning of the first part, being a separate name, as in the case of a double name already cited SNUFRE ANKHEE. The LXX. form of the first part is at once recognized in the ancient Egyptian words P-SENT-N, "the defender" or "preserver of," the Coptic II KEMP, "the preserver of." It is to be remarked that the ancient Egyptian form of the principal word is that found in the LXX., but that the proposition N in hieroglyphics, however pronounced, is always written N, whereas in Coptic III becomes น before N1. The word SENT does not appear to be used except as a divine, and, under the Ptolemies, regal title, in the latter case for Soter. The Hebrew form seems to represent a compound name commencing with TEF, or TEF; he says," a not intransitive element in compound names (the root being found in the Coptic ΖΟ, ΖΟΤ: S ΖΟΟ, ΖΟΤ), or TEF, "insec, delight," 111 the name of the sacred incense, also known to us in the Greek form ζόφα (Plutarch, de Isid. et Osir. c. 80, p. 383; Hieroc. M. u. 1. 24, Spr.). But, if the name commence with either of these words, the rest seems inexplicable. It is remarkable that the last two consonants are the same as in Asshur, the name of Joseph's wife. It has been supposed that in both cases this element is the name of the godesses Neith, Asshur having been conjectured to be AN-NEEET; and Zaphnath, by Mr. Osburn, we believe, TEF-NEEET, "the delight of Neith." Neith, the goddess of Sais, is not likely to have been revenerated at Heliopolis, the city of Asshur. It is also improbable that Pharaoh would have given Joseph a name connected with idolatry; for Joseph's position, unlike Daniel's, when he was first called Belteshazzar, would have enabled him effectually to protest against receiving such a name. The latter part of the name might suggest the possibility of
ZAPHON (גנן) [northward]: Zaphôn; Alex. Ζαφών; Zaphôn. The name of a place mentioned in the enumeration of the allotment of the tribe of God (Josh. xiii. 27). It is one of the places in the "valley" which appear to have constituted the "remainder" (חתימה) of the kingdom of Siloh — apparently referring to the portion of the same kingdom previously allotted to Reuben (vv. 17-21). The enumeration appears to proceed from south to north, and from the mention of the Sea of Chinnereth it is natural to infer that Zaphôn was near that lake. No name resembling it has yet been encountered.

In Judg. xii. 1, the word rendered "northward" (תפוחית) may with equal accuracy be rendered "to Zaphôn." This rendering is supported by the Alex. LXX. (ζηφών) and a host of other MSS., and it has consistency on its side.

ZARA (Ｚ４Ｒ４) [Zorah]. Zarah [or Zerah], the son of Judah (Matt. i. 3).

ZAR'ACES (쟈רכס [Vat. Zaraφος] Ζαρακές). Brother of Joas and Jehoshaphat, king of Judah (1 Esdr. i. 38). His name is apparently a corruption of Zedekiah.

ZARAI (쟈ראי) [rising of light]: Zrepid. Properly Zerahim, the son of Judah by Tamar (Gen. xxxviii. 10, xxvi. 12).

ZARATAS [3 syll.] [Rom.]. (Vat. omit; Alex. ורפת: Vulg. omits.) 1. Zerahiah, one of the ancestors of Ezra (1 Esdr. viii. 2); called Alex. in 2 Esdr. i. 2.

2. (Zaraηασ: Zerahm): Zerahiah, the father of Elihu (1 Esdr. viii. 21).

3. (Zaraηασ: [Alex. omit]: Zorim): Zerahiah, the son of Michael (1 Esdr. viii. 34).

ZA'REAH (자의א) [perh. place of hornets].

° In I K. xvi. 9, the Alex. MS. has Ze'd̄ba, but in the other passages agrees with the Vat.

° The name is given as Sarpén by Rev. Eltis; Sar phon by Manndeville; and Sar phon by Mannde-

val. [Rom. Alex. FA. omit; Alex. [rather FA.3] Ζαράηα: Sarpôn]. The form in which our translators have once (Neh. xii. 29) represented the name, which they elsewhere present (less accurately) as Zarah and Zaratæ.

ZAREATHITES, THE (ザーresultCodēתאיטס) [plur.]: of Zarahd̄ (Sarṭaph). The inhabitants of Zarah in Judah. The word Zarah in this form only in 1 Chr. ii. 53. Elsewhere the same Hebrew word appears in the A. V. as the Zareaïites.

ZARED THE VALLEY OF (ザーresultCodēתאיטס) [valley of thick foliage]: [Rom.] φαραονία Ζαρέα; [Vat. φ. Zαρήα]. Alex. φ. Ζαρήα δόξα. The name is accurately Zarea; the change in the first syllable being due to its occurring at a pause. It is found in the A. V. in this form only in Num. xxi. 12; though in the Heb. it occurs also Deut. ii. 13.

ZAREPHATH (ザーresultCodēתאףθ) [i.e. Tarshah [building house, Gen.]: Ζαρέφαθ; in Obed. plural: Σαρεφαθίθ, [Sarephath], [Sarephath]). A town which derives its claim to notice from having been the residence of the prophet Elijah during the latter part of the drought (I K. xvii. 9, 19). Beyond stating that it was near to, or dependent on, Zidon (perȳa Ζidon), the Bible gives no clue to its position. It is mentioned by Olibahia (ver. 20), but merely as a Cunamite (that is Phoenician) city. Josephus (Ant. viii. 3, § 2), however, states that it was "not far from Silon and Tyre, for it lies between them." And to this Jerome adds (Omnia, in Sareta) "that it lay on the public road," that is the coast-road. Both these conditions are implied in the mention of it in the Itinerary of Pausanias by Jerome (Epit. Paebae, § 8), and both are fulfilled in the situation of the modern village of Saref-χένθι, a name which, except in its termination, is almost identical with the ancient Phoenician. Sarephath has been visited and described by Dr. Robinson (B. R. ii. 475) and Dr. Thomson (Land and Book, ch. xiii.). It appears to have changed its place, at least since the 11th century, for it is now more than a mile from the coast, high upon the slope of a hill (Rob. p. 474), whereas, at the time of the Crusades, it was on the shore. Of the old town, considerable investigation remains. One group of foundations is on a headland called Aiēl el-Kentorah; but the chief remains are south of this, and extend for a mile or more, with many fragments of columns, slabs, and other architectural features. The Roman road is said to have usually perfect there (Beaumont, Derry, etc., i. 186). The site of the chapel erected by the Crusaders on the spot then regarded as the site of the widow's house, is probably still preserved (See the citations of Robinson.) It is near the water's edge, and is now marked by a wedy and small khan dedicated to el-Khoub, the well-known personage who unites, in the popular Moslem faith, Elijah and St. George.

In the N.T. Zarephath appears under the Greek form of Sarepta.

ZARETAN (ザーresultCodēתאן) [i.e. Tarshah [villag}
LXX. e. the and G. He G. G.  

It is remarkable that the LXX. exhibit no "trace of the name.

ZARETH-SHAHAR (γαραθασαρ) i. e. Zeresh has shadeades [heights of dawes]; Ἱπαταῖα καὶ Ζαύρ [Vat. Σερα]; Alex. Ἱπαταία καὶ Ζαύρ: Seventh Assebbor. A place mentioned only in Josh. xi. 19, in the catalogue of the towns allotted to Reuben. It is named between Shemar and Beth-Peon, and is particularly specified as "in Mount Ha-Emek" (A. V. "in the Mount of the Valley"). From this, however, no clue can be gained to its position. Sosten (Reisch, ii. 360) proposes, though with hesitation (see his note), to identify it with a spot called Serat in the mouth of the Wady Zerka Main, about a mile from the edge of the Dead Sea. A place Shophar is marked on Van de Velde's map, about six miles south of ac-Cal, at the head of the valley of the Wady Seir. But nothing can be said of either of these in the present state of our knowledge.

ZAREHITES. THE (A/αρειτες) [pl.]: Ζαφοί [Vat.]. Alex. Ζαφωί [Exe. Vat. Ζαφωί in 1 Chr. xxvii. 11, Alex.] Ζαφωί in Josh. 3: verse Zerke, Zere, stirps Zarith and Zerait]. A branch of the tribe of Judah: descended from Zerah the son of Judah (Num. xxvi. 13, 20; Josh. vii. 17; 1 Chr. xxii. 13, 15). Zerah was of this family, and it was represented in David's time by two distinguished warriors, NIchichai the Hethite and Mahnah the Netophathite.

ZARTANAH (αρτανα) [couding]: Ζαρτανα. Alex. Ζαρθανα [Comp. Abl. Ζαρθανας] Sootham. A place named in 1 K. vii. 12, to define the position of Beth-shan. It is possibly identical with Zarithan, but nothing positive can be said on the point, and the name has not been discovered in post-biblical times.

ZARITHAN (αρθθαν) [couding]: Ζαρθαν. Alex. Ζαραθα. 1. A place in the ecore or circle of Jordan, mentioned in connection with Sucoth (1 K. vii. 16). 2. It is also named, in the account of the passage of the Jordan by the Israelites (Josh. iii. 16), as defining the position of the city Adam, which was beside (αρθθαν) it. The difference which the translators of the A. V. have introduced into the name in this passage (Zartanah) has no existence in the original. 3. A place with the similar name of Zartanah (which in the Hebrew differs from the two forms already named only in its termination) is mentioned in the list of Solomon's commissariat districts. It is there specified as "close to" (αρθθαν) a This is not only the case in the two principal MSS., the edition of Holmes and Parsons shows it in one only, and that a curious MS. of the 13th cent.

ZEBADIAH

of the sons of Immer who had married a foreign wife after the return from Babylon (Ezr. xx. 29). Called Zabadai in 1 Esdr. iv. 21.

7. (ג"ת תב) : Zabadai; [Vat. Zaqarvari; Alex. Zabadai; Zabadai.] Third son of Medehemiah the Korhite (1 Chr. xxvii. 2).

8. (Zabbai; [Vat. Zabbai;]) A Levite in the reign of Jehoshaphat who was sent to teach the Law in the cities of Judah (2 Chr. xix. 8).

9. [As in 8.] The son of Ishmael and prince of the house of Judah in the reign of Jehoshaphat (2 Chr. xix. 11). In conjunction with Amariah the chief priest, he was appointed to the superintendence of the Levites, priests and chief men who had to decide all causes, civil and ecclesiastical, which had arisen among them. The pious matter may have formed a kind of court of appeal, Zebidiah acting for the interests of the king, and Amariah being the supreme authority in ecclesiastical matters.

ZEBAH (תב) [exuviae]; Zabæi; Zebai.

One of the two “kings” of Midian who appear to have commanded the great invasion of Palestine, and who finally fell by the hand of Gideon himself. He is always coupled with Zalmunna, and is mentioned in Judg. viii. 5-21; Ps. lxxxiii. 11.

It is a remarkable instance of the unconscious artlessness of the narrative contained in Judg. viii. 23-24, 28, that no mention is made of any of the chiefs of the Midianites during the early part of the story, or indeed until Gideon actually comes into contact with them. We then discover (viii. 18) that while the Bedouins were ravaging the crops in the valley of Jezreel, before Gideon’s attack, three or more of his brothers had been captured by the Arabs, and put to death by the hands of Zebah and his brother Zalmunna. This matter is only incidentally mentioned, and is of a piece with the later references by prophets and psalmists to other events in the same struggle, the interest and value of which have been alluded to under Omri.

Ps. lxxxiii. 12 purports to have preserved the very words of the cry with which Zeba and Zalmunna rushed up at the head of their hordes from the Jordan into the luxuriant growth of the great plain, “Seize these goodly 5 pastures!”

While Oreb and Zeeb, two of the inferior leaders of the incursion, had been slain, with a vast number of their people, by the Ephraimites, at the central fords of the Jordan (not improbably those near Jear Danieel), the two kings had succeeded in making their escape a passage further to the north (probably the fords near Beth-hamean), and thence by the Wady Yafa, through Gilgal, to Karkor, a place which is not fixed, but which lay doubtless high up on the Haoran. Here they were reposing with 15,000 men, a mere remnant of their huge hordes, when Gideon overtook them. Had they resisted there was little doubt that they might have easily overcome the little band of “fainting” heroes who had fallen after them up the tremendous passes of the mountains; but the name of Gideon was still full of terror, and the Bedouins were entirely unprepared for his attack — they fled in dismay, and the two kings were taken.

Such was the Third Act of the great Tragedy. Two more remain. First, the return down the long defiles leading to the Jordan. We see the exultation of camels, jingling the golden chains, and the crescent-shaped collars or trappings hung round their necks. High abed rode the captive chiefs clad in their brilliant Argees and embroidered eleyyres, and with their “collars” or “jewels” in nose and ear, on neck and arm. Gideon probably strode on foot by the side of his captives. They passed Peniel, where Jacob had seen the vision of the face of God; they passed Smooth; they crossed the rapid stream of the Jordan, they ascended the highlands west of the river, and at length reached Ophrah, the native village of their captor (Josh. iv. 4, § 5). Then at last the question which must have been on Gideon’s tongue during the whole of the return found a vent. There is no appearance of its having been alluded to before; but it is asked, not, as nothing else could, the key to the whole pursuit. It was the death of his brothers, “the death of his mother’s son,” which excited the personal motive for that steady perseverance, and had led Gideon on to his god against hunger, fatness, and obstacles of all kinds. “What manner of men were they which ye slew at Tabor?” Up to this time the sheikhs may have believed that they were reserved for ransom; but these words once spoken there can have been no doubt what their fate was to be. They met it like noble children of the Desert, without fear or weakness. One request alone they make — that they may die by the sure blow of the hero himself — “and Gideon arose and slew them;” and not till he had avenged his brothers did any thought of plunder enter his heart — then, and not till then, did he lay hands on the treasures which ornamented their camps.

ZEBATIM (תבָּתִים; in Neh. בַּתִּים [pru- zek;] [Vat.] von Aeshenai; [Rom.] Alex. Aesheesia; [Vat. in. Zebah; [Vat. Alex. P.A.- eua;] Zabada. She is the wife of Jarchia, Suth. iv.]. The sons of Jarchia, chief of hat-Tseaim are mentioned in the catalogue of the families of “Solomon’s slaves,” who returned from the Captivity with Zerubbel (Ezra ii. 57; Neh. vii. 59). The name is in the original all but identical with that of Zerom, the fellow-city of Solomon; and as many of “Solomon’s slaves” appear to have been brought captive to Egypt, it is possible that the family of Pechereth were descended from one of the people who escaped from Zeboim in the day of the great catastrophe in the Valley of the Jordan. This, however, can only be accepted as conjecture, and on the other hand the two names Pechereth hat-Tseaim are considered by some to have no reference to place, but to signify the “servant or beater of oxen.” (Gen. x. 11; Exod. xvi. 11; Ps. 110: 2; Bertheau, Exeg. Handb. Ezr. ii. 57.)

ZEBEDEE (זְבֵדֵי or זֶבֶדֵי; Zebedee; gift). A fisherman of Galilee, the father of the Apostles James the Great and John.

a It is perhaps allowable to infer this from the use of the plural (not the dual) to the word brethren (ver. 19).

b Such is the meaning of “pastures of God” in the early idiom.

c Even to the double god. This name, on the other hand, is distinct from the Zeeba of Benjamin.

d See this noticed more at length under MUTENI SIMER, etc.
ZEBINA
(Zebina) (Matt. iv. 21), and the husband of Salome (Matt. xxvii. 56; Mark xiv. 40). He probably lived either at Bethsaida or in its immediate neighborhood. It has been inferred from the mention of his "hired servants" (Mark i. 20), and from the acquaintance between the Apostle John and Anna (the high-priest; John xviii. 13), that the family of Zebedia were in easy circumstances (comp. John xix. 27), although not above manual labor (Matt. iv. 21). Although the name of Zebedia frequently occurs as a patronymic, for the sake of distinguishing his two sons from others who bore the same names, he appears only once in the Gospel narrative, namely in Mark i. 19, or ii. 21, where he is seen in his boat with his two sons mending their nets. On this occasion he allows his sons to leave him at the bidding of the Saviour, without raising any objection; although it does not appear that he was himself ever of the number of Christ's disciples. His wife, indeed, appears in the catalogue of the pious women who were in constant attendance on the Saviour towards the close of his ministry, who watched Him on the cross, and ministered to Him even in the grave (Matt. xxvii. 55, 56; Mark xv. 40, xvi. i; comp. Matt. xx. 15, and Luke viii. 3). It is reasonable to infer that Zebedia was dead before this time. It is worthv of notice, and nay perhaps he regarded as a notable confirmation of the evangelical narrative, that the name of Zebedia is almost identical in signification with that of John, since it is likely that a father would desire that his own name should be, as it were, continued, although in an altered form. [John the Apostle.] W. B. J.

ZEBINA [ זֶבְיָהָ (Zebiyah) [bought or sold]]: Zeβeβa- vâ: [Vat. Zappâ; F.A. (with next word) Zau-
βeβaβaβaβâ]: Alex. omitis: Zeβîvina. One of the sons of Nebat, who had taken foreign wives after the return from Babylon (Ezr. x. 42).

ZEBOTIM [or ZEBOTIM]. This word represents in the A.V. two names which in the original are distinct.

1. (זֶבָּתִים, Zebäthîm, Zebā'tim), and, in the
Keri, זֶבָּתִים: [Rom. Zeβóthîm, Ζεβόθιμ; [Zeβóthîm: Var. Zebathîn:] Alex. Zeβóthîm, Ze-
βóthîm. [Zeβóthîm: Scholion] One of the five cities of the "plain" or circle of Jericho. It is mentioned in Gen. x. 19, xiv. 2, 8; Deut. xix. 23; and Hosea xi. 5, in each of which passages it is either coupled with Admah, or placed next it in the lists. The name of its king, Shemeber, is preserved (Gen. xiv. 2); and it perhaps appears again, as Zeβîm, in the lists of the menials of the Temple.

No attempt appears to have been made to discover the site of Zeβoim, till M. de Saunty suggested the Talhâ shutim, a number both he, and he alone, reports as attached to extensive ruins on the high ground between the Dead Sea and Korâk (Tiergje, Jan. 22: Moap, shi. 7). Before however this can be accepted, M. de Saunty must explain how a place which stood in the plain or circle of

a In Gen. x. 19 only, this appears in Vat. (May), Zeβoethîm. [The Vat. MS. does not contain this part of Genesis. — A.]
b The conjecture of M. de Saunty has no apparent basis: but the present distance of the site from the river is not a fatal objection to it. The explanation added above, the reader will find in Mr. Dove's own pen in the article Lor (ii. 1889). S. W.

the Jordan, can have been situated on the high
lands at least 50 miles from that river. [See ZEBOIM and ZOAD.]

In Gen. xiv. 2, 8, the name is given in the A.V. Zeβoim, a more accurate representative of the form in which it appears in the original both there and in Deut. xxxix. 23.

2. The Valley of Zeβoim (זֶבֶויָמִי): [VAT.] Fa. τάυ τῆς Ζαβιώμ: [Rom. Abh. Ζαβίωμ: Comp. Zeβoithîm: The passage is lost in Alex.: Vediæ S. postpones the name. The name differs from the preceding, not only in having the definite article attached to it, but also in containing the characteristic and stubborn letter Ain, which imparts a definite char-
acter to the word in pronunciation. It was a ravine or gorge, apparently east of Michmash, men-
tioned only in 1 Sam. xiii. 18. It is there de-
scribed with a curious minuteness, which is un-
fortunately no longer intelligible. The road run-
ing from Michmash to the east, is specified as "the road of the border that becometh to the ravine of Zeβoim toward the wilderness." The wilder-
ness ( misdroy) is not only the district of uncultivated mountain tops and sides which lies between the central district of Benjamin and the Jordan Val-
ley, but were apparently the ravine of Zeβoim itself and beyond. In that very district there is a wild gorge, bearing the name of Shulh el-Dabbâb, — "ravine of the hyena," the exact equivalent of Ge het-zeβoithîm. Up this gorge runs the path by which the writer was con-
ducted from Jericho to Michmas, in 1583. It does not appear that the name has been noticed by other travellers, but it is worth investigation. G.

The name Zeβoim (with the Ain) also occurs in Neb. xi. 34 (Rom. Vat. Alex. FA.) omitis; FA.2 Zeβóthîm, Comp. Zeβoithîm, perhaps designating a town near the ravine of the same name. It is mentioned in connection with Huld, Nebahat, Lod and Ono.

A.

ZEBUDA'H (זֶבְוָדָּה; Keri Zebôdâ; [given, bestower]: [Vat. 1αλα: A.] Alex. Ero-

ZEBUL (זֶבָּלוּעַ; [habitation, chamber]: Ze-
βóla: Zeβul). Chief man ("עב, A. V. "ruler") of the city of Shechem at the time of the contest between Abimelech and the native Canaanites. His name occurs Judg. ii. 8b, 30, 30b, 38, 41. He governed the town as the "officer." (יִבְּסַר רַקָּס: εἰκός) of Abimelech while the latter was absent, and he took part against the Canaanites by shut-
ing them out of the city when Abimelech was encaumped outside it. His conversation with Gaal the Canaanite leader, as they stood in the gate of Shechem watching the approach of the armed bands, gives Zebul a certain individuality amongst the many characters of that time of confusion. G.

The writer was accompanied by Mr. Consul E. T. Rogers, well known as one of the best living scholars in the earlier Arab, who wrote down the name for him at the moment. [Dr. Van Dyck writes the last word without doubling the b. — A.]
ZEBULONITE (ζεβολωνιτης), with the def. article [patr.]: ζεβολωνιτης [Vat. -rve-]; Alex. in both verses, ζεβολωνιτης: Zebulonites, i. e. member of the tribe of Zebulun. Applied only to Elon, the one judge produced by the tribe (Judg. xii. 11, 12). The article being found in the original, the sentence should read, "Elon the Zebulonite." 

G.

ZEBULUN (ζεβολυν, jealous), and "ζεβολος [hose, deceitful]; ζεβολογον: Zebulites. The tenth of the sons of Jacob, according to the order in which their births are enumerated; the sixth and last of Leah (Gen. xxv. 20, xxxiv. 25; xli. 14; 1 Chr. ii. 1). His birth is recorded in Gen. xxxiv. 19, 20, where the origin of the name is as usual ascribed to an exclamation of his mother's, "Now wilt my husband dwell with me (izebolbta), for I have borne him six sons!" and she called his name Zebulun.

Of the individual Zebulun nothing is recorded. The list of Gen. xli. ascribes to him three sons, founders of the chief families of the tribe (comp. Num. xxvi. 24) at the time of the migration to Egypt. In the Jewish traditions he is named as the first of the five who were presented by Joseph to Pharaoh — Dan, Naphtali, Gad, and Asher being the others (Targ. Pseudo-Isaiah, on Gen. xlvii. 2). During the journey from Egypt to Palestine the tribe of Zebulun formed one of the first camps, with Judah and Issachar (also sons of Leah), marching under the standard of Judah. Its members, at the census of Sinai, were 57,000, surpassed only by Simeon, Dan, and Judah. At that of Shiloh they were 69,900, not having diminished, but not having increased nearly so much as might naturally be expected. The head of the tribe at Sinai was Elias son of Helon (Num. xvii. 24); at Shiloh, Elizaphan son of Parouch (6s. xxxiv. 25). Its representative amongst the spies was Gadid, son of Sodi (xii. 10). Besides what may be implied in its appearances in these lists, the tribe is not recorded to have taken part, for evil or good, in any of the events of the wandering or the conquest. Its allotment was the third of the second distribution (Josh. xix. 30); Joshua, Joseph and Benjamin had acquired the south and the centre of the country. To Zebulun tell one of the fairest of the remaining portions. It is perhaps impossible, in the present state of our knowledge, exactly to define its limits; but the statement of Josephus (Ant. v, 1, § 22) is probably in the main correct, that it reached on the one side to the lake of Tiberias, and on the other to Carmel and the Mediterranean. On the south it was bounded by Issachar, who lay in the great plain or valley of the Kishon; on the north it had Naphtali and Asher. In this district the tribe possessed the outlet (the "going-out," Dent. xxxii. 18) of the plain of Acher for the fisheries of the lake of Tiberias; the splendid agricultural capabilities of the great plain of Bethsaida (equal in fertility, and almost equal in extent, to that of Jezreel, and with the immense advantage of not being, as that was, the high road of the Sidonians; and, last not least, it included sites so strongly fortified by nature, that in the later struggles of the nation they proved more impregnable than any others in the whole of the land. The sacred mountain of Tabor, Zebulun appears to have shared with Issachar (Dent. xxxii. 19), and it and Rimmon were allotted to the Merarite Levites (1 Chr. vii. 77). But these ancient sanctuaries of the tribe were eclipsed by those which arose within it afterwards, when the name of Zebulun was superseded by that of Galilee. Nazareth, Cana, Tharon, and probably the land Gennesaret itself, were all situated within its limits.

The fact recognized by Josephus that Zebulun extended to the Mediterranean, though not mentioned or implied, as far as we can discern, in the lists of Joshua and Judges, is alluded to in the Blessing of Jacob (Gen. xlix. 13): —

"Zebulun dwells at the shore of the seas,
Even he at the shore of ships:
And his thighs are upon Zidon" —

a passage which seems to show that at the date at which it was written, the tribe was taking a part in Phoenician commerce. The "way of the sea" (Deut. i. 19), the line from Damascus to the Mediterranean, traversed a good portion of the territory of Zebulun, and must have brought its people into contact with the merchants and the commodities of Syria, Phoenicia, and Egypt. Situated so far from the centre of government, Zebulun remains throughout the history, with one exception, in the obscurity which envelops the whole of this northern tribe. That exception, however, is a remarkable one. The conduct of the tribe during the struggle with Siæra, when they bought with desperate valor side by side with their brethren of Naphtali, was such as to draw down the especial praise of Deborah, who singles them out from all the other tribes (Judg. v. 18): —

"Zebulun is a people that threw away his life even unto death:
And Naphtali, on the high places of the field,"

The same poem contains an expression which seems to imply that, apart from the distinction gained by their conduct in this contest, Zebulun was already in a prominent position among the tribes: —

"Out of Misch'le came down governors:
And out of Zebulun those that handle the pen (or the wand) of the scribe;" 

a Of these three forms the first is employed in Genesis, Isaiah, Psalms, and Chronicles, except Gen. xlix. 13, and i Chr. xxviii. 13; also occasionally in Judges; the second is found in the rest of the Pentateuch, in Joshua, Judges, Esd. and the above place in Chronicles. The third and more extended form is found in Judg. i. 30 only. The first and second are used interchangeably; e.g. Judg. iv. 6 and v. 18 exhibit the first; Judg. iv. 10 and v. 14 the second form.

b This play is not preserved in the original of the "Blessing of Jacob," though the language of the A. V implies it. The word rendered "dwell" in Gen. xlix. 18 is ἔφεσθε, with no relation to the name Zebulun. The LXX. put a different point on the exclamation of Leah: "My husband will choose me" (ἀδερφή μου). This, however, hardly implies any difference in the original text. Josephus (Ant. i. 10. § 8) gives only a general explanation: "a pledge of goodwill towards her."

c Few of the towns in the catalogue of Josh. xix. 14-16 have been identified. The tribe is emitted in the lists of 1 Chronicles.

d Sephoris, jotapata, &c.

e In the "Testament of Zebulun." Fabricius Pseudopaul. V. T., 350-45 great stress is laid on his skill in fishing, and he is commerated as the first to navigate a skill on the sea.
ZEBULUNITES

refer to probably to the officers, who registered and marshalled the warriors of the host (comp. Josh. i. 10). One of these ephraimites may have been Eleazar, the single judge produced by the tribe, who is recorded as having held office for ten years (Judg. xii. 11, 12).

A similar reputation is attested to in the mention of the tribe among those who attended the inauguration of David's reign at Hebron. The expressions are again peculiar: "Of Zebulun such as went forth to war, rulers of battle with all tools of war, 50,000. who could set the battle in array; they were not of double heart" (1 Chr. xii. 23). The same passage, however, shows that while proficient in the arts of war they did not neglect those of peace, but that on the wooded hills and fertile plains of their district they produced bread, meal, figs, grapes, wine, oil, and sheep in abundance (ver. 40). The head of the tribe at this time was Ishmaiah ben-Obediah (1 Chr. xxvii. 19).

We are nowhere directly told that the people of Zebulun were carried off to Assyria. Tizlath-pileser swept away the whole of Naphtali (2 K. xv. 20; 2 Chr. vii. 2), and Shalmaneser in the same way took Samaria (2 K. xxiii. 25; xxvii. 6); but though the deportations of Zebulun and Issachar is not in so many words asserted, there is the statement (xvii. 18) that the whole of the northern tribes were removed: and there is also the well-known allusion of Isaiah to the affliction of Zebulun and Naphtali (xxvi. 1), which can hardly point to anything but the invasion of Tizlath-pileser. It is satisfactory to reflect that the very latest mention of the Zebulunites in the narratives of the visit of a large number of them to Jerusalem to the Passover of Hezekiah, when, by the enlightened liberality of the king, they were enabled to eat the feast, even though, through long neglect of the provisions of the law, they were not cleansed as the manner prescribed by the ceremonial law. In the visions of Ezekiel [Ezek. xvi. 26-33] and of St. John (Rev. vii. 8) this tribe finds its due mention.

G.

ZEBULUNITES. THE ZEBULUNITES. i.e., "the Zebulonite" [patr.]: Zebulun: Ze'bulun). The members of the tribe of Zebulun (Num. xxvi. 30) only. It would be more literally accurate if spelt Zebulunites.

G.

ZECHARIAH ZECHARIAH (יהוּדָד יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְהוָה יְhohova: Zechariahs). 1. The eleventh in order of the twelve minor prophets. Of his personal history we know but little. He is called in his prophecy the son of Berechiah, and the grandson of Iddo, whereas in the book of Ezra (x. 1, v. 14) he is said to have been the son of Iddo. Various attempts have been made to reconcile this discrepancy. Cyril of Alexandria (Pref. Comment. ad Zech.) supposes that Berechiah was the father of Zechariah, according to the flesh, and that Iddo was his instructor, and might be regarded as his spiritual father. Jerome too, according to some MSS., has in Zech. i. 1, "filius Berechiae, filiun Iddoe," as if he supposed that Berechiah and Iddo were different names of the same person: and the same mistake occurs in the LXX.: τὸ τέκνον Βαρακέων, πώς Ἀδεσίολος. Gesenius (Lex. s. v. '726) and Rosenmuller (On Zech. i. 1) take '726 as printed in the passages of Ezra to mean "grandson," as in Gen. xxix. 15. Laban is termed "the son," i.e., "grandson," of Nahor. Others, again, have suggested that in the text of Ezra no mention is made of Berechiah, because he was already dead, or because Iddo was the more distinguished person. And generally, it is recognized that in the family. Knobel thinks that the name of Berechiah has crept into the present text of Zechariah from Isaiah viii. 2, where mention is made of a Zechariah, "the son of Jehezekiel," which is virtually the same name (LXX. Βαρακέων as Berechiah. [His theory is that chapters ix-x. of our present book of Zechariah are spurious, and refers to the previous part of it, and that the books of Zechariah and Nahum have been combined.])

He seems to have been a man of great talents and great heart. Jehoiakim ascended to the throne just at the time when the new building had been finished under the supervision of the Samaritans. But the Zachiasts seem to have been rather unfavourable towards the

and Joseph (Jer. xxiv. 1, xxvi. 20), Azel (1 Chr. xxv 20) and Jaddeel (1 Chr. xv. 15).

* * *
Jews. Encouraged by the hopes which his au-

mission held out, the prophets exerted themselves to the utmost to secure the completion of the

Temple.

It is impossible not to see of how great moment, under such circumstances, and for the discharge of the special duty with which he was entrusted, would be the priestly origin of Zechariah.

Too often the prophet had had to stand forth in direct antagonism to the priest. In an age when the service of God had stiffened into formalism, and the priests' lips no longer kept knowledge, the prophet was the witness for the truth which lay beneath the outward ceremonial, and without which the outward ceremonial was worthless. But the thing to be dreaded now was not superstitions formalism, but cold neglect. There was no fear now lest in a gorgeous temple, amidst the splen-
dors of an imposing ritual and the smoke of sacrifices ever ascending to heaven, the heart and life of religion should be lost. The fear was all the other way, lest even the body, the outward form and service, should be suffered to decay.

The foundations of the Temple had indeed been laid, but that was all (Ezr. v. 16). Discouraged by the opposition which they had encountered at first, the Jewish colony had begun to build, and were about to finish; and even when the latter came from Darius sanctioning the work, and promis-
ing his protection, they showed no hearty dis-
position to engage in it. At such a time, no more fitting instrument could be found to rouse the people, whose heart had grown cold, than one who

was the authority of the prophet and the zeal and the traditions of a sacred family.

Accordingly, to Zechariah's influence we first return the rebuilding of the Temple in a great measure ascribed. "And the elders of the house build," it is said, "and they prospered through the proph-
esying of Haggai the prophet, and Zechariah the son of Jaddai." (Ezr. vi. 14.) It is remarkable that in this juxtaposition of the two names both are not

stiled prophets: not "Haggai and Zechariah the

propets," but "Haggai the prophet, and Zechariah the son of Jaddai." Is it an improbable con-
jecture that Zechariah is designated by his father's (or grandfather's) name, rather than by his official, in order to remind us of his priestly character? Be this as it may, we find other indications of the close union which now subsisted between the priest and the prophets. Various events connected with the taking of Jerusalem and the Captivity in Babylon had led to the institution of solemn fast-days; and we find that when a question arose as to the propriety of observing these fast-days, not that the city and the Temple were rebuilt, the question was referred to "the priests which were in the house of Jehovah, and to the prophets."—a recognition, not of the joint authority, but of the harmony subsisting between the two bodies, without parallel in Jewish history. The manner, too, in which Joshua the high-priest is spoken of in this proph-

ey shows how lively a sympathy Zechariah felt towards him.

Later traditions assume, what is in fact very probable, that Zechariah took personally an active part in providing for the liturgical service of the Temple. He and Haggai are both said to have composed psalms with this view. According to the LXX., Ps. xxcvii., cx-xcxi.: according to the Peshito, Ps. xxv., xcvii.: according to the Vulg., Ps. cx.: are psalms of Haggai and Zechariah. The triumphant "Hallelujah," with which many of them open, was supposed to be characteristic of those psalms which were first chanted in the Second Temple, and came with an emphasis of meaning from the lips of those who had been restored to their native land. The afflu-
dents, moreover, with which these psalms abound, as well as their place in the psalter, leave us no

doubt as to the time when they were composed, and lend confirmation to the tradition respecting their authorship.

If the later Jewish accounts may be trusted, Zechariah, as well as Haggai, was a member of the Great Synagogue. The patriotic notions of the prophet are worth nothing. According to these, he exercised his prophetic office in Chaldea, and brought many miracles there; returned to Jeru-

salem at an advanced age, when he discharged the duties of the priesthood, and where he died and was buried by the side of Haggai.

The genuine writings of Zechariah help us but little in our estimation of his character. Some faint traces, however, we may observe in them of his education in Babylon. Less free and inde-

pendent than he would have been, had his feet trod from childhood the soil,

"Where each old poetic mountain

Inspiration breathed around,

He leaned arrowed on the authority of the older prophets, and copied their expressions. Jeremiah especially seems to have been his favorite; and hence the Jewish saying, that this spirit of Jerem-

iah dwelt in Zechariah. But in what may be called the peculiarities of his prophecies, he ap-

proaches more nearly to Ezekiel and Daniel. Like them he delights in visions; like them he uses symbols and allegories, rather than the bold figures and metaphors which lend so much force and beauty to the writings of the earlier prophets; like them he beholds angels ministering before Jehovah, and fulfilling his behests on the earth. He is the only one of the prophets who speaks of Satan. That some of these peculiarities are owing to his Chaldean education can hardly be doubted. It is at least remarkable that both Ezekiel and Daniel, who must have been influenced by the same associations, should in some of these respects to close off the prophetic Zechariah, widely as they differ from him in others.

Even in the form of the visions a careful critic

might perhaps discover some traces of the

ariae et Chaldæi venit cum omnibus et quosque populos, ac turris in quibus amplissimi sunt manibus et quaestiones." Dorotheus, p. 141: "Zecharias de regione Chaldeorum vixit etiam in terram sanctam venit, et quae ete are se majoris sapientiae Aggii et qui

ZECHARIAH

prophet's early training. Possibly the "valley of myrtles" in the first vision may have been suggested by Chaldea rather than by Palestine. At any rate it is a curious fact that myrtles are never mentioned in the history of the Jews before the exile. They are found, besides this passage of Zechariah, in the Deuteron-Isaiah xi. 19, lv. 13, and Jer. viii. 13. The forms of trial in the third vision, where Joshua the high-priest is arraigned, seem borrowed from the practice of Persian rather than Jewish courts of law. The filthy garments in which Joshua appears are those which the accused must assume when brought to trial; the white robe put upon him is the caftan or robe of honor which to this day in the East is put upon the minister of state who has been acquitted of the charges laid against him.

The vision of the woman in the Ephah is also oriental in its character. Ewald refers to a very similar vision in Tod's Rastanu, i. ii. p. 688.

Finally, the chariots issuing from between two mountains of brass must have been suggested, there can scarcely be any doubt, by some Persian symbolism.

Other peculiarities of style must be noticed, when we come to discuss the question of the integrity of the Book. Generally speaking, Zechariah's style is pure, and remarkably free from Chaldaism. As is common with writers in the decline of a language, he seems to have striven to imitate the purity of the earlier models; but in orthography, and in the use of some words and phrases, he betrays the influence of a later age.

He writes גּוֹז, and פֶּלֶם, and employs פֶּלֶם (v. 7) in its later use as the indefinite article, and פֶּלֶם פֶּלֶם with the fem. termination (iv. 12). A full collection of these peculiarities will be found in Kster, Maltechrn in Zeh., etc.

Contents of the Prophecy. — The book of Zechariah, in its existing form, consists of three principal parts, chaps. i-viii., chap. ix-xii., chaps. xiii-xiv.

1. The first of these divisions is allowed by all critics to be the genuine work of Zechariah the son of Iddo. It consists, first, of a short introduction or preface, in which the prophet announces his commission; then of a series of visions, descriptive of all those hopes and anticipations of which the building of the Temple was the pledge and sure foundation; and finally of a discourse, delivered two years later, in reply to questions respecting the observance of certain established fasts.

2. The short introductory oracle (chap. i. 1-6) is a warning voice from the past. The prophet solemnly reminds the people, by an appeal to the experience of their fathers, that no word of God had ever fallen to the ground, and that therefore, if with sluggish indolence they refused to operate in the building of the Temple, they must expect the judgments of God. This warning manifestly rests upon the former warnings of Hagg.

3. In a dream of the night there passed before the eyes of the prophet a series of visions (chap. i. 7-iv. 15) descriptive in their different aspects of events, some of them shortly to come to pass, and others losing themselves in the mist of the future. These visions are obscure, and accordingly the prophet asks their meaning. The interpretation is given, not as to Amos by Jehovah Himself, but by an angel who knows the mind and will of Jehovah, who intercedes with Him for others, and by whom Jehovah speaks and issues his commands: at one time he is called the angel who spake with me (or by me) (i. 9); at another, the angel of Jehovah (v. 1, 12, 13, 1-6).

4. (1) In the first vision (chap. i. 7-15) the prophet sees, in a valley of myrtles, a rider upon a bon sape, accompanied by others who, having been sent forth to the four quarters of the earth, had returned with the tidings that the whole earth was at rest (with the exception of the heathen). Here the angel asks how long this state of things shall last, and is assured that the indifference of the heathen shall cease, and that the Temple shall be built in Jerusalem. This vision seems to have been partly borrowed from Job i. 7, etc.

5. (2) The second vision (chap. ii. 1-17, A. V. i. 18-xx. 15), explains how the promise of the first is to be fulfilled. The four horns are the symbols of the different heathen kingdoms in the four quarters of the world, which have hitherto combined against Jerusalem. The four carpenters or smiths symbolize their destruction. What follows, ii. 5-9 (A. V. ii. 1-5), betokens the extended area of Jerusalem, owing to the rapid increase of the new population. The old prophets, in foretelling the happiness and glory of the times which should succeed the Captivity in Babylon, had made a great part of that happiness and glory to consist in the gathering together again of the whole dispersed nation in the land given to their fathers. This vision was designed to teach that the expectation thus raised — the return of the dispersed of Israel — should be fulfilled; that Jerusalem should be too large to be compassed about by a wall, that Jehovah Himself would be to her a wall of fire — a light and defense to the holy city, and destruction to her adversaries. A song of joy, in prospect of so bright a future, closes the scene.

6. (3) The next two visions (iii. iv.) are occupied with the Temple, and with the two principal persons on whom the hopes of the returned exiles rested. The permission granted for the rebuilding of the Temple had no doubt stirred anew the malice and the animosity of the enemies of the Jews. Joshua the high-priest had been singled out, it would seem, as the especial object of attack,

a In the last passage the people are told to "fetch olive-branches and eypress-branches, and myrtles-branches and palm-branches, and to make books," for the celebration of the Feast of Tabernacles. It is interesting to compare this with the original direction, as given in the wilderness, when the only trees mentioned were "palmus and willows of the brook." Palestine was rich in the olive and eypress. Is it very improbable that the myrtle may have been an importation from Babylon? Ewet was also called Badassah (the myrtle), perhaps her Persian designation (Ezeh, ii. 57); and the myrtle is said to be a native of Persa.

b Ewald understands by בֵּית הָרַי not "a valley of" or "a bottom," as the A. V. renders, but the heavenly tent or tabernacle (the expression being chosen with reference to the Mosaic tabernacle), which is the dwelling-place of Jehovah. Instead of "myrtles" he understands by בֵּית הָרַי (with the LXX. and μεθορ αὐτοῦ τῆς ἀμαρατίας) "mountains," and supposes these to be the "two mountains" mentioned vi. 1, and which are there called "mountains of brass."
and perhaps formal accusations had already been laid against him before the Persian court. A. The prophet, in vision, sees him summoned before a higher tribunal, and solemnly acquitted, despite the charges of the Satan or Adversary. This is done with the form still usual in an eastern court. The filthy garments in which the accused is expected to stand are taken away, and the exalted or role of honor is put upon him in token that his innocence has been established. Acquitted at that bar, he need not fear, it is implied, any earthly accuser. He shall be protected, he shall carry on the building of the Temple, he shall so prepare the way for the coming of the Messiah, and upon the foundation-stone laid before him shall the seven eyes of God, the token of his ever-watchful Providence, rest.

(4.) The last vision (iv.) supposes that all opposition to the building of the Temple shall be removed. This sees the completion of the work. It has evidently a peculiarly impressive character; for the prophet, though his dream still continues, seems to himself to be awakened out of it by the angel who speaks to him. The candlestick (or more properly chandelier) with seven lights (borrowed from the candlestick of the Mosaic Tabernacle, Ex. xxi. 31 ff.) supposes that the Temple is already finished. The seven pipes which supply each lamp answer to the seven eyes of Jehovah in the preceding vision (iii. 9), and this sevenfold supply of oil denotes the presence and operation of the Divine Spirit, through whose aid Zerubbabel will overcome all obstacles, so that, as his hands had laid the foundation of the house, his hands should also finish it (iv. 9). The two olive-branches of the vision, belonging to the olive-tree standing by the candlestick, are Zerubbabel himself and Joshua.

The two next visions (v. 1–11) signify that the land, in which the sanctuary has just been erected, shall be purged of all its pollutions.

(5.) First, the curse is recorded against wickedness in the whole land (not in the whole earth, as A. V.), v. 3; that the solemnity may be given to it, it is inscribed upon a roll, and the roll is represented as flying, in order to denote the speed with which it pursues its course. This is the starting point of the vision, which in its immediate aspect, is the symbolical picture presented to the eye.

(6.) Next, the unclean thing, whether in the form of idolatry or any other abomination, shall be utterly removed. Caught and shut up as it were in a cage, like some savage beast, and pressed down with a weight as of lead upon it so that it cannot escape, it shall be carried into that land where all evil things have long made their dwelling (I. x., xxxiv. 13), the land of Babylon (Samar. v. 11), from which Israel had been redeemed.

(7.) And now the night is waning fast, and the morning is about to dawn. Chariots and horses appear, issuing from between two brazen mountains, the horses like those in the first vision; and these receive their several commands and are sent forth to execute the will of Jehovah in the four quarters of the earth. The four chariots are images of the four winds, which, according to Ps. cii. 20, as servants of God, fulfill their behests; and of the one that goes to the north it is particularly said that it shall let the Spirit of Jehovah rest there — is it a spirit of anger against the nations, Assyria, Babylonia, Persia, or is it a spirit of hope and desire of its return in the hearts of those of the exiles who still lingered in the land of their captivity? Stielen, Manuer, and others adopt the former view, which seems to be in accordance with the preceding vision; I would give the latter interpretation, and thinks it is supported by what follows.

Thus, then, the cycle of visions is completed. Since after scene is unrolled till the whole glorious picture is presented to the eye. All enemies are crushed; the land repopulated and Jerusalem gilt as with a wall of fire; the Temple rebuilt, more truly splendid than of old, because more abundantly filled with a Divine Presence; the leaders of the people assured in the most signal manner of the Divine protection; all wickedness solemnly sentenced, and the land forever purified of it; such is the magnificent panorama of hope which the prophet displays to his countrymen.

And very consolatory must such a prospect have seemed to the weak and disheartened colony in Jerusalem. For the times were dark and troublesome. According to recent interpretations of newly-discovered inscriptions, it would appear that Darius I. found it no easy task to hold his east dominions. Province after province had rebelled in the east and in the north, whether, according to the prophet (vi. 8), the winds had carried the wrath of God; and if the reading Medrija, i. e. Egypt, is correct (Lassen gives Kurdistan), Egypt must have revolted before the outbreak mentioned in Herod. vii. 1, and have again been reduced to subjection. To such revolt there may possibly be an allusion in the reference to "the land of the south" (v. 6).

It would seem that Zechariah anticipated, as a consequence of these perpetual insurrections, the weakening and overthrow of the Persian monarchy and the setting up of the kingdom of God, for which Joshua in faith and obedience was to wait.

Immediately on these visions there follows a symbolical act. Three Israelites had just returned from Babylon, bringing with them rich gifts to Jerusalem, apparently as contributions to the Temple, and had been received in the house of Josiah the son of Zechaniam. Either the prophet is commanded to go, — whether still in a dream or not, is not very clear,—and to employ the silver and the gold of their offerings for the service of Jehovah. He is to make of them two crowns, and to place these on the head of Joshua the high-priest,—a sign that in the Messiah who should build the Temple, the kingly and priestly offices should be united. This, however, is expressed somewhat enigmatically, as if king and priest should be perfectly at one, rather than that the same person should be both king and priest. These crowns moreover, were to be a memorial in honor of those by whose liberality they had been made, and should serve at the same time to excite other rich Jews still living in Babylon to the like liberality, Hence their symbolical purpose having been accomplished, they were to be laid up in the Temple.

3. From this time, for a space of nearly two years, the prophet's voice was silent, or his words have not been recorded. But in the fourth year of King Darius, in the fourth day of the ninth month, there came a deputation of Jews to the Temple, anxious to know whether the fast-days which had been instituted during the seventy
years' captivity were still to be observed. On the one hand, now that the Captivity was at an end, and Jerusalem was rising from her ashes, such set times of mourning seemed quite out of place. On the other hand, there was still much ground, for serious meanness; for some time after their return they had suffered severely from drought and famine (Hag. i. 6-11), and who could tell that they would not so suffer again? the hostility of their neighbors had not ceased: they were still regarded with no affectionate friend; and large numbers of their brethren had not yet returned from Babylon. It was a question therefore, that seemed to admit of much debate.

It is remarkable, as has been already noticed, that this question should have been addressed to priests and prophets conjointly in the Temple. This close alliance between two classes hitherto so separate, and often so antagonistic, was one of the most hopeful circumstances of the times. Still Zechariah, as chief of the prophets, has the decision of this question. Some of the priests, it is evident (vii. 7), were inclined to the more gloomy view; but not so the prophet. In language worthy of his position and his office, language which reminds us of one of the most striking passages of his great predecessor (Is. viii. 5-7), he lays down the same principle that God loves mercy rather than fasting, and truth and righteousness rather than sackcloth and a sad countenance. If they had persisted, he reminds them it was because their hearts were hard while they fasted; if they would dwell suitably, they must abstain from fraud and violence and not from food (vii. 4-14).

Again he foretells, but now in vision, the glorious times that are near at hand when Jehovah shall dwell in the midst of them, and Jerusalem be called a city of truth. He sees her streets thronged by old and young, her exiles returning, her Temple standing in all its beauty, her land rich in fruitfulness, her people a praise and a blessing in the earth (viii. 1-15). Again, he declares that "truth and peace" (viii. 16, 19) are the bulwarks of national prosperity. And once more reverting to the question which had been raised concerning the observance of the fasts, he announces, in obedience to the command of Jehovah, not only that the fasts are abolished, but that the days of mourning shall henceforth be days of joy, the fasts be counted for festivals. His prophecy concludes with a prediction that Jerusalem shall be the centre of religious worship to all nations of the earth (viii. 16-23).

11. The remainder of the book consists of two sections of about equal length, ix.-xxi. and xii.-xiv., each of which has an inscription. They have the general prophetic tone and character, and in subject they are in harmony with x.-ix., that the prophet seeks to comfort Judah in a season of depression with the hope of a brighter future.

1. In the first section he threatens Damascas and the sea-coast of Palestine with misfortune; but declares that Jerusalem shall be protected, for Jehovah himself shall encamp about her (where ix. 8 reminds us of ii. 5); her king shall come to her, her soul shall speak peace to the heathen, so that all weapons of war shall perish, and his dominion shall be to the ends of the earth. The Jews who are still in captivity shall return to their land; they shall be mightier than Javan (or Greece); and Ephraim and Judah once more united shall vanquish all enemies. The land too shall be fruitful as of old (comp. viii. 12). The Teraphim and the false prophets may indeed have spoken lies, but upon these will the Lord execute judgment, and then He will look with favor upon his people and bring back both Judah and Ephraim from their captivity. The possession of Gilead and Lebanon is again promised, as the special portion of Ephraim; and both Egypt and Assyria shall be broken and humiliated.

The prophecy now takes a sudden turn. An enemy is approaching from the north, who having forced the narrow passes of Lebanon, the great bulwark of the northern frontier, carries devastation into the country beyond. Hereupon the prophet receives a commission from God to feed his flock, which God himself will no more feed because of their divisions. The prophet undertakes the office, and makes to himself two staves (meaning the one Hesed, and the other Union), in order to tend the flock, and cuts off several evil shepherds whom his soul abhorred; but observes at the same time that the flock will not be obedient. Hence he throws up his office; he breaks asunder the one crook in token that the covenant of God with Israel was dissolved. A few, the poor of the flock, acknowledge God's hand herein; and the prophet demands of them the services of the false prophets, the silver, and casts it into the house of Jehovah. At the same time he sees that there is no hope of union between Judah and Israel whom he had trusted to feed as one flock, and therefore cuts in pieces the other crook, in token that the brotherhood between them is dissolved.

2. The second section, xii.-xiv., is entitled, 'The burden of the word of Jehovah for Israel.' But Israel is here used of the nation at large, not of Israel as distinct from Judah. Indeed, the prophecy which follows, concerns Judah and Jerusalem. In this the prophet beholds the near approach of troublous times, when Jerusalem should be hard pressed by enemies. But in that day Jehovah shall come to save: 'the house of David be as God, the angel of Jehovah' (xii. 8) and all the nations which gather themselves against Jerusalem shall be destroyed. At the same time the deliverance shall not be from outward enemies alone. God will pour out upon them a spirit of grace and supplications, so that they shall laugh their weakness with a mourning greater than that which the Assyrians and Babylonians have done to you in the valley of Megiddon. So deep and so true shall be this repentance, so lively the aversion to all evil, that neither lie nor false prophet shall again be seen in the land. If a man shall pretend to prophesy, 'his father and his mother that begat him shall thrust him through when he prophesieth,' fired by the same righteous indignation as Ehud was when he slew those who wrought folly in Israel (xii. 1-xiii. 6).

Then follows a short apostrophe to the sword of the enemy to turn against the shepherds of the people; and a further announcement of searching and purifying judgments; which, however, it must be acknowledged, is somewhat abrupt. Ahab's suggestion that the passage xiii. 7-9, is here out of place, and should be transposed to the end of chap. xii. is certainly ingenious, and does not seem improbable.

The prophecy closes with a grand and stirring picture. All nations are gathered together against Jerusalem; and seem already sure of their prey. Half of their cruel work has been accomplished when Jehovah himself appears on behalf of his
people. At his coming all nature is moved: the Mount of Olives on which his feet rest cleaves asunder; a mighty earthquake leaves the ground, and even the natural succession of day and night is broken. He goes forth to war against the adversaries of his people. He establishes his kingdom over all the earth. Jerusalem is safely inhabited, and rich with the spoils of the nations. All nations that are still left shall come up against Jerusalem, as the great centre of religious worship, there to worship—"the King, Jehovah of hosts," and the city from that day forward shall be a holy city.

Such is, briefly, an outline of the second portion of that book which is commonly known as the Prophecy of Zechariah. It is impossible, even on a cursory view of the two portions of the prophecy, not to feel how different the section xi.-xiv. is from the section i.-viii. The next point, then, for our consideration is this,—Is the book in its present form the work of one and the same prophet, Zechariah the son of Iddo, who lived after the Babylonish exile?

Integrity.—Mede was the first to call this in question: the probability that the latter chapters from the sixth to the sixteenth were by some other prophet, seems first to have been suggested to him by the citation in St. Matthew. He says (Epist. xxxi.), "It may seem the Evangelist would inform us that those latter chapters ascribed to Zechariah (namely, xth, xth, xth, etc.), are indeed the prophecies of Jerusalem; and that the Jews had not rightly attributed them." Starting from this point, he goes on to give reasons for supposing a different author.

"Certainly, if a man weighs the contents of some of them, they should in likelihood be of an elder date than the time of Zechariah; namely, before the Captivity; for the subjects of some of them were scarce in being after that time. And the chapter out of which St. Matthew quotes may seem to have somewhat much unsuitable with Zechariah's times; as, a prophecy of the destruction of the Temple, then when he was to encourage them to build it. And how doth the sixth verse of that chapter suit with his time? There is no scripture saith they are Zechariah's; but there is scripture saith they are Jeremiah's, as this of the Evangelist." He then observes that the mere fact of these being formulae is not enough. The manner in which the prophecies of Zechariah do not prove that they were his; difference of authorship being allowable in the same way as in the collection of Agur's Proverbs under one title with those of Solomon, and of Psalms by other authors with those of David. Even the absence of a fresh title is, he argues, no evidence against a change of author.

"The Jews wrote in rolls or volumes, and the title was but once. If ought were added to the roll, ob similioribus arguendo, or for some other reason, it had a new title, as that of Agur: or perhaps none, but was ædificatio."

The utter disregard of anything like chronological order in the prophecies of Jeremiah, where "sometimes all is ended with Zedekiah; then we are brought back to Jehoiakim, then to Zedekiah again,"—makes it probable, he thinks, that they were only hastily and loosely put together in those distracted times. Consequently some of them might not have been discovered till after the return from the Captivity, when they were approved by Zechariah, and so came to be incorporated with his prophecies. Mede evidently rests his opinion, partly on the authority of St. Matthew, and partly on the contents of the later chapters, which "e considers require a date earlier than the exile. He says again (Epist. xli.): "That which moveth me more than the rest is in chap. xii., which contains a prophecy of the destruction of Jerusalem, and a description of the wickedness of the inhabitants, for which God would give them to the sword, and have no more pity on them. It is expanded of the destruction by Titus; but methinks such a prophecy in no sense applicable for Zechariah's time (when the city yet, for a great port. Iby in her ruins, and the Temple had not yet recovered hers), nor agreeable to the scope of Zechariah's commission, who, together with his colleague Haggai, was sent to encourage the people lately returned from captivity to build their temple, and to instature their commonwealth. Was this a fit time to foretell the destruction of both, while they were but yet a building? and by Zachary, too, who was to encourage them? would not this better befit the desolation by Nebuchadnezzar?"

Archbishop Newcome went further. He insisted on the great dissimilarity of style as well as subject between the earlier and later chapters. And he was the first to have suggested the theory which supposes one of the triumphs of modern criticism, that the last six chapters of Zechariah are the work of two distinct prophets. His words are: "The eight first chapters appear by the introductory parts to be the prophecies of Zechariah, stand in connection with each other, are pertinent to the time when they were delivered, are uniform in style and manner, and constitute a regular whole. But the six last chapters are not expressly assigned to Zechariah: are unconnected with those which precede: the three first of them are unsuitable in many parts to the time when Zechariah lived: all of them have a more adorned and posthumous turn of composition than the eight first chapters: and they manifestly break the unity of the prophetical book."

"I conclude," he continues, "from internal marks in chaps. ix., x., xi., that these three chapters were written much earlier than the time of Jeremiah and before the captivity of the tribes. Israel is mentioned chaps. ix. 1. xi. 14. (But that this argument is inconclusive, see Mal. ii. 11.) Ephraim, chaps. ix. 10, 13, 3; and Assyria, chap x. 10, 11. . . . They seem to suit Hosea's age and purpose. The manner in which the prophecies of Zechariah and the six last chapters form a distinct prophecy, and were written after the death of Josiah; but whether before or after the Captivity, and by what prophets, is uncertain. Though I incline to think that the author lived before the destruction of Jerusalem by the Babylonians." In proof of this he refers to xii. 2, on which he observes that the prophecy that idols and false prophets should cease at the final restoration of the Jews seems to have been uttered when idolatry and groundless pretensions to the spirit of prophecy were common among the Jews, and therefore before the Babylonish Captivity.

A large number of critics have followed Mede and Archbishop Newcome in denying the later date of the last six chapters of the book. In England, Bishop Kibler, Whiston, Hall came to the final restoration of the Jews time when recently Pye Smith, and Davidson, in Germany, Flügel, Eichhorn, Bauer, Bartholdt, Augusti, Forberg, Rosenmüller, Granberg, Cremer, Ewald, Murer, Knebel, Hitzig, and Bleek, are agreed in maintaining that these later chapters are not the work of Zechariah the son of Iddo.

On the other hand, the later date of these chapters has been maintained among ourselves by Blay...
ney and Henderson, and on the continent by
Gorgzv, Beekmans, Jahn, Köster, Hengstenberg, 
Hillerich, Keil, De Wette (in later editions of his
Einleitung; in the first three he adopted a differ-
ent view), and Stahelin.
Those who impute the later date of these chap-
ters of Zechariah rest their arguments on the
change in style and subject after the viiith chapter, 
but differ much in the application of their critica.
Bezeemiller, for instance (Schol. in Propkh. Min.
vol. 4, p. 297), argues that chapters ix-xiv are so
able in style, that they must have been written by
one author. He alleges in proof his fondness for
images taken from postoral life (ix. 16, x. 2, 3, xi.
3, 4, 5, 7, 8, 9, 11, 13, xii. 17, xiii. 7, 8). From
the alliance to the earthquake (xiv. 5, comp. Am. i.
1), he thinks the author must have lived in the reign
of Uzziah.
Davidson (in Horae Introd. ii. 982) in like
manner declares for one author, but supposes him
to have been the Zechariah mentioned Is. viii. 2, 
who lived in the reign of Ahaz.
Eichhorn, on the other hand, whilst also assign-
ing (in his Einleitung, iv. 444) the whole of chapters
ix-xiv to one writer, is of opinion that they are
the work of a later prophet who flourished in the
time of Alexander.
Others again, as Bertholdt, Gesenius, Knobel, 
Maurer, Bunsen, and Ewald, think that chapters
ix-xi (to which Ewald adds xii. 7-9) are a dis-
tinct prophecy from chapters xii-xiv, and separated
from them by a considerable interval of time. These
critics conclude from internal evidence, that the
former portion was written by a prophet who lived in
the reign of Ahaz, and the latter given, x. 1, to the
reign of Josiah, and xi. to that of Ahaz; and most
of them conjecture that he was the Zechariah
the son of Jebernezi (or Berechiah), mentioned
Is. viii. 2.
Ewald, without attempting to identify the prophet
with any particular person, contents himself with
remarking that he was a subject of the Southern
kingdom (as may be inferred from expressions such
as that in ix. 7, and from the Messianic hopes
which he utters, and in which he resembles his
countryman and contemporary Isaiah); and that
like Amos and Hosea before him, though a na-
tive of Judah, he directs his prophecies against
Jehovah.
It is the same general agreement among the
best-named critics as to the date of the section
xii-xiv.
They all assign it to a period immediately pre-
vious to the Babylonish Captivity, and hence the
author must have been contemporary with the
prophet Jeremiah. Bunsen identifies him with
Urijah the son of Nehemiah of Kirjath-jeurim (Jer.
xxvi. 20-23), who prophesied "in the name of Je-
hovah" against Judah and Jerusalem.
According to this hypothesis we have the works of
three different prophets collected into one book,
and passing under one name:—
1. Chapters ix-xi, the book of Zechariah 1,
a contemporary of Isaiah, under Ahaz, about
736.
2. Chapters xii-xiv, author unknown (or per-
haps Jeremiah), a contemporary of Jeremiau; about
607 or 606.
3. Chapters i-viiii, the work of the son (or
grande.) of Iddo, Haggai's contemporary, about
920-518.
We have then two distinct theories before us.
The one merely affirms that the six last chapters
of our present book are not from the same author
as the first eight. The other carries the dismem-
berment entirely a step further, and maintains that
the six last chapters are the work of two dis-
tinct authors who lived at two distinct periods of
Jewish history. The arguments advanced by the
supporters of each theory rest on the same grounds.
They are drawn partly from the difference in style,
and partly from the difference in the nature of the
contents; the historical references, etc., in the dif-
f erent sections of the book; but the one sees this
difference only in ix-xiv, as compared with
i-viii.; the other sees it also in xii-xiv, as compa-
red with ix-xi. We must accordingly con-
sider,—
1. The difference generally in the style and
contents of chapters ix-xiv, as compared with chap-
ters i-viii.
2. The differences between xii-xiv, as compared with
ix-xi.
1. The difference in point of style between the
latter and former portions of the prophecy is ad-
imitted by all critics. Rosenmiller characterizes
that of the first eight chapters as "prosaic, feeble,
poor;" and that of the remaining six as "poetic,
weighty, concise, glowing;" but without admitting
that such writing is a criterion, and one which the verdict
of elder critics on the former portion has contra-
dicted, there can be no doubt that the general tone
and character of the one section is in decided con-
trast with that of the other. " As he passes from
the first half of the prophetic to the second," says
Eichhorn, "no reader can fail to perceive how
strikingly different are the impressions which are
made upon us by the two portions of the prophecy.
"The manner of writ-
ing in the second portion is far loftier and more
mysterious: the images employed grander and
more magnificent: the point of view and the hori-
zon are changed. Once the Temple and the ordi-
nances of religion formed the central point from
which the prophet's words radiated, and to which
they ever returned; now these have vanished. The
favorite modes of expression, liltierto so often re-
peated, are now as it were forgotten. The chrono-
logical notices which before marked the day on
which each several prophecy was uttered, now fail
us altogether. Could a writer at all have for-
togotten so entirely his habits of thought? Could
he so completely disguise his innermost feelings?
(Could we think of him without the mode of writ-
ing he employed, be so totally different in the
case of one and the same writer?" (Einl. iv. 443,
§ 605)."
1. Chapters i-viii. are marked by certain peculi-
narities of idiom and phraseology which do not
occur afterwards. Favorite expressions are:— "The
word of Jehovah came unto..." etc. (7, iv. vii.
2, 4, 8, viii. 1, 18): Thus with Jehovah (God)
of hosts " (4, 15, 16, 17, ii. 11, vii. 2, 4, 6,
7, 9, 14, 18, 20, 23): " And I lifted up mine eyes
and saw " (i. 8, ii. 1, 1, vi. 1): none of these
modes of expression are to be met with in chapters
ix-xiv. On the other hand, the phrase "In that
day" is entirely confined to the later chapters, in
which it occurs frequently. The form of the in-
scriptions is different. Introductions to the sepa-
rate oracles, such as those in ix. 1, xii. 1, do not
present themselves in the earlier portion. Zechar-
iah, in several instances, states the time at which
a particular prophecy was uttered by him (i. 1, 7
vii. 1). He mentions his own name in these pas-
sages, and also in vii. 8, and the names of con-

3604}
poraries in iii. 1, iv. 6, vi. 10, vii. 2: the writer (or writers) of the second portion of the book never does this. It has also been observed that after the first eight chapters we hear nothing of "Satan," or of "the seven eyes of Jehovah;" that there are no more visions: that chaps. xi. contains an allegory, not a symbolic action: that here are no rid- dles which need to be solved, no angulas interprets to solve them.

ii. Chapters ix.-xi. These chapters, it is alleged, have also their characteristic peculiarities:

1. In point of style, the author resembles Hosea more than any other prophet: such is the verdict both of Knobel and Ewald. He delights to picture Jehovah as the Great Captain of his people. Jehovah comes to Zion, and pitches his camp there to protect her (ix. 8, 9). He blows the trumpet, marches against his enemies, makes his people his bow, and shoots his arrows (ix. 10, 11); or He rides on Judah as his war-horse, and goes forth thereon to victory (x. 3, 5). Again, he speaks of the people as a flock, and the leaders of the people as their shepherds (ix. 10, x. 2, 3, xi. 4 ff.).

He describes himself also, in his character of prophet, as a shepherd in the last passages, and assumes to himself, in a symbolic action, which however may have been one only of the imagina-
tion, all the grace and the year of a shepherd.

In general he delights in images (ix. 3, 4, 13-17, x. 3, 5, 7, &c.), some of which are striking and forcible.

2. The notes of time are also peculiar:—

1. It was a time when the pride of Assyria was yet at its height (x., xi.), and when the Jews had already suffered from it. This first took place in the time of Manasseh (n. 772-745).

2. The Trans-jordanic territory had already been swept by the armies of the invader (x. 10), but a still further desolation threatened it (xi. 1-3). The first may have been the invasion of Phil (I Chr. v. 25), the second that of Tiglath-Pileser. The kingdoms of Judah and Ephraim are both standing (ix. 10, 13, x. 6), but many Israel-ites are nevertheless exiles in Egypt and Assyria (ix. 11, x. 6, 8, 10, &c.).

4. The struggle between Judah and Israel is supposed to be already begun (xi. 14). At the same time Dan Asusus is threatened (ix. 18). If so, the reference must be to the alliance formed between Pekah king of Israel and Ezequ in Danus-
unies, the consequence of which was the loss of Elath (740). Then there were the nations in wait.

Egypt and Assyria are both formidable powers (x. 9, 10, 11). The only other prophets to whom these two nations appear as formidable, at the same time, are Hosea (vii. 11, xii. 1, xiv. 3) and his con-
temporary Isaiah (vii. 17, &c.); and that in proph-
eyes which must have been uttered between 745 and 740. The expectation seems to have been that the Assyrians, in order to attack Egypt, would march by way of Syria, Phoenic a, and Philistia, along the coast (Zech. ix. 1-9), as they did after-

a So Knobel supposes. Ewald also refers, xi. 1-3, to the deportation of Tiglath-Pileser, and thinks that in x. 10, 12 the latter to some earlier deportation, the Assyrians having invaded this portion of the kingdom of Israel in the former half of Pekah's reign of twenty years. To this Bunsen (Voss in der Gesch. i, 450) objects that we have no record of any earlier removal of the Assyrians as conquerors. But that the deportations of Tiglath-Pileser, which occurred at the close of Pekah's reign, and which in x. 10 is supposed to have taken place already, according to Knobel, is and x. were probably delivered in Jotham's reign, and x. in that of Ahaz who summoned Tiglath-Pileser to his aid. Maurer thinks that x. and x. were written between the first (2 K. xv. 29) and second (2 K. xvii. 4-6) Assyrian invasions, chap. x., during the seven years interme-

b Chapter xii.—By the majority of those critics who assign these chapters to a third author, that author is supposed to have lived shortly before the Babylonian Captivity. The grounds for separating these three chapters from chapters ix.-xi. are as follows:—

1. This section opens with its own introductory formula, as the preceding one (ix. 1) does. This, however, only shows that the sections are distinct, not that they were written at different times.

2. The last verse of the two sections are altogether different. The author of the former (ix.-xi.) has both Israel and Judah before him; he often speaks of them together (ix. 13, x. 6, xi. 14, comp. x. 7); he directs his prophecy to the Trans-jordanic territo-

3. The political horizon of the two prophets is different. By the former, mention is made of the Syrians, Phcenicians, Philistines (i. 7-7), and Greeks (ix. 13), as well as of the Assyrians and Egyptians, the two last being described as at that time the most powerful. It therefore belongs to the earlier time when these two nations were begin-
ing to struggle for supremacy in Western Asia. By the latter, the Egyptians only are mentioned as a hostile nation: not a word is said of the Assy-

4. The anticipations of the two prophets are different. The former speaks only of Ephraim. He prophesies of the devastation of the Trans-jordanic territory, the carrying away captive of the Israel-

lies, but also the return from Assyria and Egypt which he elsewhere mentions Israel.
ZECHARIAH (x, 7, 10). But for Judah he has no cause of fear; Jehovah will protect her (iv, 8), and bring back those of her sons who in earlier times had gone into captivity (ix. 11). The second prophet, on the other hand, making no mention whatever of the northern kingdoms, is full of alarm for Judah. He sees hostile nations gathering together against her, and two thirds of her inhabitants destroyed (xii. 6); he sees the enemy laying siege to Jerusalem, taking and plundering it, and carrying half of her people captive (xii. 2, 5). Of any return of the captives nothing is here said.

5. The style of the two prophets is different. The author of this last section is fond of the prophetic formulae: 

\[\text{"And it shall come to pass"}\]

(xii. 3, 4, 8, xiv. 6, 8, 13, 16); 

\[\text{"in that day"}\]

(xii. 3, 4, 6, 8, 9, 11, xiii. 1, 2, 4, xiv. 8, 9, 13, 20, 21); 

\[\text{"saith Jehovah"}\]

(xii. 1, 4, xiii. 2, 7, 8). In the section ix—xi. the first does not occur at all, the second but once (ix. 16), the third only twice (x. 12, xi. 6). We have moreover in this section certain favorite expressions: - "all peoples," "all people of the earth," "all nations round about," "all nations that come up against Jerusalem," "the inhabitants of Jerusalem," "the house of David," "family" for nation, "the families of the earth," etc. 

6. There are apparently few notes of time in this section. One is the allusion to the death of Josiah in - "the mourning of Huldahrimmon in the valley of Megiddon;" another to the earthquake in the days of Ezekiel, "King of Judah." This addition to the name of the king shown, Knobel suggests, that he had been long dead; but the argument, it is worth anything, would make even more for those who hold a post-exile date. It is certainly remarkable occurring thus in the body of the prophecy, and not in the inscription as in Isaiah i. 1.

In reply to all these arguments, it has been urged by Keil, Stihelin, and others, that the difference of style between the two principal divisions of the prophecy is not greater than may reasonably be accounted for by the change of subject. The language in which visions are narrated would, from the nature of the case, be quieter and less animated than that in which prophetich anticipations of future glory are described. They differ as the style of the narrator differs from that of the orator. Thus, for instance, how different is the style of Hosea, chaps. i—iii., from the style of the same prophet in chap. iv.; again, that of Ezekiel vi., vii., from Ezekiel iv.

But besides this, even in what may be termed the more oratorical portions of the first eight chapters, the prophet is to a great extent occupied with warnings and exhortations of a practical kind (see i. 4—5, vii. 14—17, vii. 9—23); whereas in the subsequent chapters he is rapt into a far distant and glorious future. In the one case, therefore, the language would naturally sink down to the level of prose; in the other, it would rise to an elevation worthy of its exalted subject.

\[\text{\textsuperscript{a} Maurer's reply to this, namely, that the like phrase, "\text{\textsuperscript{b}\textsuperscript{a}\textsuperscript{c}\textsuperscript{d}\textsuperscript{e}\textsuperscript{f}\textsuperscript{g}\textsuperscript{h}\textsuperscript{i}\textsuperscript{j}\textsuperscript{k}\textsuperscript{l}\textsuperscript{m}\textsuperscript{n}\textsuperscript{o}\textsuperscript{p}\textsuperscript{q}\textsuperscript{r}\textsuperscript{s}\textsuperscript{t}\textsuperscript{u}\textsuperscript{v}\textsuperscript{w}\textsuperscript{x}\textsuperscript{y}\textsuperscript{z}", occurs in Ex. xxxix. 22, also in Deut. xxxv. 7, it must be confessed is of little force, because those who argue for one author build not only on the fact that the same forms of expression are to be found in both sections of the prophecy, but also on the fact that the second section, like the first, shows a familiarity with other writings, and especially with later prophets like Ezekiel. See below.}\]
earlier prophets, such as Joel, Amos, Micah, has been shown by Hitzig (Comment, p. 354, 24 ed.), but there are also, it is alleged, allusions to Zephaniah, Jeremiah, Ezekiel, and the later Isaiah (cc. xvi-xviii). If this can be established, it is evidence that this portion of the book, if not written by Zechariah himself, was at least written after the exile. We find, then, in Zech. ix. 2 an allusion to Ez. xxii. 3; in ix. 11 to Is. xxxii. 7; in x. 1 to Is. xvi. xxvii. 17. Zech. xi. is derived from Ez. xxxiv. (comp. esp. xi. 4 with xxiv. 4), and Zech. xii. 3 from Jer. xii. 5. Zech. xii. 1 alludes to Is. li. 13; xiii. 8, 9, to Ez. v. 12; xiv. 5 to Ez. xiv. 1-12; xiv. 10, 11 to Jer. xxxii. 38-40; xiv. 18-19 to Is. lvii. 24 and x. 12; xiii. 20, 21, to Ez. xiii. 12 and xiv. 9.

This manifest acquaintance on the part of the writer of Zech. ix-xiv. with so many of the later prophets seemed so convincing to De Wette that, after having in the first three editions of his Introduction declared for two authors, he found himself compelled to change his mind, and to admit that the later chapters must belong to the age of Zechariah, and might have been written by Zechariah himself.

Block, on the other hand, has done his best to weaken the force of this argument, first by maintaining that in most instances the alleged agreement is only apparent, and next, that where there is a real agreement (as in Zech. ix. 12, xi. 3, xiv. 1, xiv. 16) with the passages above cited, Zechariah may be the original from whom Isaiah and Jerem-thus that it is more probable that one writer should have allusions to many others, than that many others should borrow from one; and this probability approaches certainty in proportion as we multiply the number of quotations of allusions. If there are passages in Zechariah which are literally similar to other passages in Zephaniah, in Jeremiah, Ezekiel, and the Deuter-Isaiah, which is the more probable, that they all borrowed from him, or he from them? In ix. 12 especially, as Stihelin argues, the expression is decidedly one to be looked for after the exile rather than before it, and the passage rests upon Jer. xvi. 18, and has an almost verbal accordance with Is. xxi. 7.

Again, the same critics argue that the historical references in the later chapters are perfectly consistent with a post-exile date. This had been already maintained by Eichhorn, although he supposes these chapters to have been written by a later prophet than Zechariah. Stillelin puts the case as follows: Even under the Persian rule the political relations of the Jews continued very nearly the same as they were in earlier times. They were still placed between a large external power on the one side and Egypt on the other, the only difference now being that Egypt as well as Judah was subject to the Persians. But Egypt was an unwilling vassal, and as in earlier times when threatened by Assyria she had sought for alliances among her neighbors or had endeavored to turn them to account as they were then in her defenses, so now she would adopt the same policy in her attempts to cast off the Persian yoke. It would follow as a matter of course that Persia would be on the watch to check such efforts, and would wreak her vengeance on those among her own tributary or dependent provinces which should venture to form an alliance with Egypt. Such of these provinces as lay on the sea-coast must indeed suffer in any case, even if they remained true in their allegiance to the Persians. The armies which were destined for the invasion of Egypt would collect in Syria and Phoenicia, and would march by the way of the plain, and then strike into Palestine. If they ran as far as Gaza or as far as the Mediterranean, they would probably cause sufficient devastation to justify the prophecy in Zech. ix. 1, &c., delivered against Damascus, Phoenicia, and Philis-tia. Meanwhile the prophet seeks to calm the minds of his own people by assuring them of God's protection, and of the coming of the Messiah, who at the appointed time shall again unite the two kingdoms of Judah and Ephraim. It is observable moreover that the prophet, throughout his discourse, is anxious not only to tranquilize the minds of his countrymen, but to prevent their engaging in any insurrection against their Persian masters, or forming any alliance with their enemies. In this respect he follows the example of Jerem-iah, Ezekiel, and, like these two prophets, he foretells the return of Ephraim, the union of Ephraim and Judah, and the final overthrow both of Assyria (x. 11), that is, Persia, and of Egypt, the two countries which had, more than all others, vexed and devastated Israel. That a large portion of the nation was still supposed to be in exile is clear from ix. 11, 12, and hence verse 19 can only be regarded as a reminiscence of Mic. v. 19; and even if x. 9 must be explained as the post (with De Wette, Ebd. § 250, 6, note a), still it appears from Josephus (Ant. xii. 2, § 5) that the Persians carried away Jews into Egypt, and from Sydenius (p. 346, Niebuhr's ed.), that Ochus transplanted large numbers of Jews from Palestine to the east and north; the earlier custom of thus forcibly removing to a distance those conquered nations who from disaffection or a turbulent spirit were likely to give occasion for alarm, having not only continued among the Persians, but having become even more common than ever (Heeren, Ideen, i. 254, 24 ed.). This well-known policy on the part of their conquerors would be a sufficient ground for the assurance which the prophet gives in x. 9. Even the threats uttered against the false prophets and the Shepherds of the people are not inconsistent with the times after the exile. In Neh. vi. and vii. we find the nobles and rulers of the people oppressing their brethren, and false prophets active in their opposition to Nehemiah. In like manner "the idols" (יִמְלַכְתָּא) in xiii. 1-5 may be the same as the "Teraphim" of x. 2, where they are mentioned in connection with "the diviners" (יִמְלַכְתָּא), Malachi (iii. 5) speaks of "sorcerers" (יִמְלַכְתָּא), and that such superstition long held its ground among the Jews is evident from Joseph. Ant. viii. 2, § 5. Nor does xiv. 21 of necessity imply either idol-worship or heathen pollution in the Temple. Chapter xi. was spoken by the prophet later than ix. and x. In ver. 14 he declares the impossibility of any reunion between Judah and Ephraim, either because the northern territory had already been laid waste, or because the inhabitants of it had shown a disposition, to league with Phoenicia in a
can afford to throw off the Persian yoke, which would only involve them in certain destruction. This difficult passage Stahelin admits he cannot solve to his satisfaction, but contends that it may have been designed to teach the new colony that it was not a part of God's purpose to reunite the several tribes; and in this he sees an argument for the post-exilic date of the prophecy, inasmuch as the union of the ten tribes with the two was ever one of the brightest hopes of the prophets who lived before the Captivity.

Having thus shown that there is no reason why the sections ix.-xii. should not belong to a time subsequent to the return from Babylon, Stahelin proceeds to argue that the prophecy directed against the nations (ix. 1-7) is really more applicable to the Persian era than to any other. It is only the coastline which is here threatened; whereas the earlier prophets, whenever they threaten the maritime tribes, write with a view to the Edomites. Moreover the nations here mentioned are not spoken of as enemies of Judah; for being Persian subjects they would not venture to attack the Jewish colony when under the special protection of that power. Of Ashdod it is said that a foreigner (גַּנִּי, A. V. "lascand") shall dwell in it. This, too, might naturally have happened in the time of Zechariah. During the exile, Arabia had established themselves in Southern Palestine, and the prophet foresees that they would occupy Ashdod; and accordingly we learn from Neh. xiii. 24 that the dialect of Ashdod was unintelligible to the Jews, and in Neh. iv. 7 the people of Ashdod appear as a distinct tribe united with other Arabsians against Judah. The king of Gaza (mentioned Zech. ix. 5) may have been a Persian vassal, as the kings of Tyre and Sidon were, according to Herod. viii. 67. A king in Gaza would only be in conformity with the Persian custom (see Herod. iii. 15), although this was no longer the case in the time of Alexander. The mention of the sons of Javan (ix. 13: A. V. "Greece") is suitable to the Persian period (which is also the view of Eichhorn), as it was then that the Jews were first brought into any close contact with the Greeks. It was in fact the fierce struggle between Greece and Persia which gave a peculiar meaning to his words when the prophet promised his own people victory over the Greeks, and so reversed the earlier prediction of Joel iv. 6, 7 (A. V. iii. 6, 7). If, however, we are to understand by Javan Arabia, as some maintain, this again equally suits the period supposed, and the prophecy will refer to the Arabians, of whom we have already spoken.

We come now to the section xii.-xiv. The main proposition here is, that however hard Judah and Jerusalem may be pressed by enemies of Israel there is no further mention, still with God's help they shall be victorious; and the result shall be that Jehovah shall be more truly worshipped both by Jews and Gentiles. That this anticipation of the gathering of hostile armies against Jerusalem was not unnatural in the Persian times may be inferred from what has been said above. Persian hosts were often seen in Judea. We find an instance of this in Josephus (Ant. xi. 7, § 4), and Sidon was laid in ashes in consequence of an insurrection against Persia (Diod. xvi. 45). On the other hand, how could a prophet in the time immediately preceding the exile—the time to which, in account of xii. 12, most critics refer this section—have uttered predictions such as these? Since the time of Zechariah all the prophets looked upon the fate of Jerusalem as sealed, whereas here, in direct contradiction to such views, the preservation of the city is announced even in the extremest calamities. Any analogy to the general strain of thought in this section is only to be found in Is. xix.-xxiii.

Moreover, no king is here mentioned, but only the house of David," which, according to Jewish tradition (Herod. iv. 16, cap. ii.), held a high position after the exile, and accordingly is mentioned (xii. 12, 13) in its different branches (comp. Movers, Das Persia. Alterth. iii. 531), together with the tribe of Levi; the prophet, like the writer of Ps. Lxxvii., looking to it with a kind of yearning, which before the exile, whilst there was still a king, would have been inconceivable. Again, the manner in which Egypt is alluded to (xii. 19) almost of necessity leads us to the Persian times; for then Egypt, in consequence of her perpetual efforts to throw off the Persian yoke, was naturally brought into hostility with the Jews, who were under the protection of Persia. Before the exile this was only the case during the interval between the death of Josiah and the battle of Carmania.

It would seem then that there is nothing to compel us to place this section xii.-xiv. in the times before the exile: much, on the contrary, which can only be satisfactorily accounted for on the supposition that it was written during the period of the Persian dominion. Nor must it be forgotten that we have here that fuller development of the Messianic idea which at such a time might be expected, and one which in fact rests upon all the prophets who flourished before the exile.

Such are the grounds, critical and historical, on which Stahelin rests his defense of the later date of the second portion of the prophet Zechariah. We have given his arguments at length as the ablest and most complete, as well as the most recent, on his side of the controversy. Some of them, it must be admitted, are full of weight. And when critics like Eichhorn maintain that of the whole section ix.-x. 17, no explanation is possible, unless we derive it from the history of Alexander the Great; and when De Wette, after having adopted the theory of different authors, felt himself obliged to abandon it for reasons already mentioned, and to elucidate the integrity of the book, the grounds for a post-exilic date must be very strong. Indeed, it is not easy to say which way the weight of evidence preponderates.

With regard to the quotation in St. Matthew, there seems no good reason for setting aside the received reading. Jerome observes, "This passage is not found in Jeremiah. But in Zechariah, who is nearly the last of the twelve prophers, something like it occurs: and though there is no great difference in the meaning, yet both the order and the words are different. I read a short time since, in a Hebrew volume, which a Hebrew of the sect of the Nazarenes presented to me, an apocryphal book of Jeremiah, in which I found the passage word for word. But still I am rather inclined to think that the quotation is made from Zechariah, in the usual manner of the Evangelists and Apostles, who neglecting the exact words, only give the general sense of what they cite from the Old Testament." a

a Comment. in Evang. Matth. cap. xxvii. 9, 10.
Enaelius (Evangel. Demonstr. lib. x) is of opinion that the passage thus quoted stood originally in the prophecy of Zechariah; but was either erased subsequently by the malleus of the Jews [a very improbable supposition it need hardly be said] or that the name of Zechariah was substituted for that of Jeremiah through the carelessness of copyists. Augustine (de Cons. Evangel. iii. 30) testifies that the most ancient Greek copies had Jeremia, and thinks that the mistake was originally St. Matthew's, but that this was divinely ordered, and that the Evangelist would not correct the error even when pointed out to him. Thus, says Naber, that we might thus infer that all the prophets spoke by one Spirit, and that what was the work of one was the work of all (et singula esse omnium, et omnium singularum). a

Some later writers accounted for the non-appearance of the passage in Jeremiah by the confusion in the Greek MSS. of his prophecies—a confusion, however, it may be remarked, which is not confined to the Greek, but which is found no less in our present Hebrew text. Others again suggest that in the Greek autograph of Matthew, ΖΠΙΟΤ may have been written, and that copyists may have taken this for ΙΠΙΟΤ. But there is no evidence that abbreviations of this kind were in use so early. Epiphanius and some of the Greek Fathers seem to have read ιων κοροφιςγια St. John, Acts xxviii. 25, and the conversion of the Gentiles omits the name of Jeremiah, and has merely δικαστην per Prophetam. It has been conjectured that this represents the original Greek κοροφιςγια του ιων, and that some early annotator wrote Τερεμοιον on the margin, whence it crept into the text. The choice lies between this, and a slip of memory on the part of the Evangelist if we admit the instability of our present text of Zechariah, unless, indeed, we suppose, with Eichhorn, who follows Jerome, that an apocryphal book of Jeremiah is quoted. Theophylact proposes to insert a και, and would read δια Τερεμοιον και του ποροφιςγια ἵγουν Ζαχαριας. He argues that the quotation is really a fusion of two passages: that concerning the price paid occurring in Zechariah, chap. xvi.; and that concerning the finding in Jerusalem, chap. xix. But what N. T. writer would have used such a form of expression "by Jeremiah and the prophet"? Such a mode of quotation is without parallel. At the same time it must be borne in mind that the passage as given in St. Matthew does not represent exactly either the Hebrew text of Zechariah, or the version of the LXX. The other passages of the prophet quoted in the N. T. are ix. 9 (in Matt. xxii. 5; John xiii. 15); xii. 10 (in John. xix. 37; Rev. i. 7); xiii. 7 (in Matt. xxvi. 31; Mark xiv. 27); but in no instance is the prophet quoted by name. b

a This extraordinary method of solving the difficulty has been adopted by W. Wordworth in his note on the passage in St. Matthew. He says: "On the whole there is reason to believe that the prophecy which we read in Zech. (xi. 12, 13) had, in the first instance, been delivered by Jeremiah; and that by referring here not to Zech, where we read it, but to Jer, where we do not read it, the Holy Spirit teaches us not to regard the prophets as the authors of their prophecies," etc. And again: "He intends to teach, that all prophecies proceed from One Spirit, and that those by whom they are uttered are not sources, but only channels of the same Divine truth." But if so, why, if ed. Vallars. (Veron. 1734), tom. vii. Theobert, Interpretatione in xii. Proph. Min. Opp. ed. Schultze (Holk. 1769–74), vol. ii. pars 2.

Vultur. ob uno may be asked, do the writers of the Sacred Books ever give their name at all? Why trouble ourselves with the question whether St. Luke wrote the Acts, or whether St. Paul wrote the Ep. to the Hebrews or the Pastoral Epistles? What becomes of the argument, usually deemed so strong, derived from the testimony of the Four Evangelists, if, after all, the four are not one? It would not be too much to say that such a theory is as pernicious as that against which it is directed. b * On this question of the apparent citation from Zechariah instead of from Jeremiah, see Anmer. ed. H
ZECHARIAH

1. (A'qārā'.) Son of Shobal, who was one of the overseers of the workmen engaged in the restoration of the Temple (2 Chr. xxiv. 12).

2. The leader of the sons of Pharaoh who returned with Ezra (Ezra viii. 3).

3. [Vat. Βερα.] Son of Belai, who came up from Babylon with Ezra (Ezra viii. 11).

4. (Zēcharíah.) One of the priests of the people whom Ezra summoned in council at the river Ahava, before the second caravan returned from Babylon (Ezra viii. 16). He stood at Ezra's left hand when he expounded the Law to the people (Neh. viii. 4).

5. (Zēcharíah.) One of the family of Elam, who had married a foreign wife after the Captivity (Ezra x. 26).

6. Ancestor of Athaiah, or Uthai (Neh. xi. 4).

7. [Vat. Βερα.] ; FA. Βερα.] A Shilohite, descendant of Perez (Neh. xi. 5).

8. (Zachariah.) A priest, son of Pashur (Neh. xii. 12).

9. (Zēcharíah.) The representative of the priestly family of Iddo in the days of Joakin the son of Jeshua (Neh. xii. 16). Possibly the same as Zechariah the prophet of the son of Iddo.

10. [Vat. Zecharías; ver. 41.] Rom. Vet. Alex. FA, omit: Zēcharíah, Zēcharíah.] One of the priests, son of Jonathan, who blew with the trumpets at the consecration of the city wall by Ezra and Nehemiah (Neh. xii. 39, 41).

11. (Zēcharíah; comp. Neh. xi. 32.) A chief of the Reubenites at the time of the captivity by Tidman, Father of Zechariah (1 Chr. vii. 7).

12. [Vat. Ζαχαρίας.] Alex. Zecharías.] A Manassite, whose son Iddo was chief of his tribe in Gilead in the reign of David (1 Chr. xxiv. 20).

13. [Vat. Zecharías; 4th son of Hosah of the children of Merari (1 Chr. xxvii. 11).]

15. One of the sons of Jehoshaphat (2 Chr. xxiv. 2).

16. A prophet in the reign of Uzziah, who appears to have acted as the king's counsellor, but of whom nothing is known (2 Chr. xxvii. 5). The chronicler in describing him makes use of a most remarkable and unique expression, "Zechariah, who understood the seeing of God," or, as our A. V. has it, "who had understanding in the visions of God" (comp. Dan. i. 17). As no such term is ever employed elsewhere in the description of any prophet, it has been questioned whether the reading of the received text is the true one. The LXX., Targum, Syriac, Arabic, Raschi, and Kimchi, with many of Kennicott's MSS., read Ἰάβασα, "in the fear of," for Ἰάβασα, and their reading is most probably the correct one.

17. [Vat. Zecharías (gen. -.) The father of Abbai or Abi, Hezekiah's mother (2 Chr. xxix. 11); called also ZECHARIAH in the A. V.]

18. [Vat. Ακραπα.] One of the family of Asaph the ministrel, who in the reign of Hezekiah
ZEAD

ZEDEKIAH

3611

The son of Josiah by his wife Hamat, and therefore also a brother to Jehoiakim (2 K. xxiv. 18; comp. xxiii. 31). His original name had been Mattaniah, which was changed to Zechariah by Nebuchadnezzar, when he carried off his nephew Jehoiachin to Babylon, and left him on the throne of Jerusalem. Zechariah was but twenty-one years old when he was thus placed in charge of an impoverished kingdom, and a city which, though still strong in its natural and artificial impermeability, was bereft of well-nigh all its defenders. But Jerusalem might have remained the head of the Babylonian province of Judah, and the Temple of Jehovah continued standing, had Zechariah possessed wisdom and firmness enough to remain true to his allegiance to Babylon. This, however, he could not do (Jer. xxxviii. 5). His history is contained in the short sketch of the events of his reign, given in 2 K. xxiv. 17-20, and, with some trifling variations, in Jer. xxxix. 1-7, iii. 11-14, together with the still shorter summary in 2 Chr. xxxvi. 10, Irr: and also in Jer. xxi. xxiv., xxv., xxviii., xxx., xxxii., xxxii., xxxiii., xxxiv., xxxvii., xxxviii., the chapters containing the prophecies delivered by this prophet during this time, with his relation of various events more or less affecting Zechariah, and Ez. xvi. 11-21. To these it is indispensable to add the narrative of Josephus (Ant. x. 7, 1-8, § 2), which is partly constructed by comparison of the documents enumerated above, but also contains information derived from other and independent sources. From these it is evident that Zechariah was a man not so much bad at heart as weak in will. He was one of those unfortunate characters, frequent in history, like our own Charles I. and Louis XVI. of France, who find themselves at the head of affairs during a great crisis, without having the strength of character to enable them to do what they know to be right, and whose infirmity becomes moral guilt. The princes of his court, as he himself pathetically admits in his interview with Jeremiah, described in chap. xxxix., had him completely under their influence. "Against them," he complains, "it is not the king that can do anything." He was thus driven to disregard the counsels of the prophet, which, as the event proved, were perfectly sound; and he who might have kept the fragments of the kingdom of Judah and maintained for some generations longer the worship of Jehovah, brought its final ruin on his country, destruction on the Temple, death to his family, and a cruel torment and miserable captivity on himself.

It is evident from Jer. xxvii.6 and xxviii. (apparently the earliest prophecies delivered during this reign), that the early portion of Zechariah's reign was marked by an agitation throughout the whole of Syria against the Babylonian yoke. Jeru-
Zede\n
kiah seems to have taken the lead, since in the fourth year of Zedekiah's reign we find ambassadors from all the neighboring kingdoms—Tyre, Sidon, Edom, and Moab—at his court, to consult as to the steps to be taken. This happened either during the king's absence or immediately after his return from Babylon, whether he went on some errand, the nature of which is not named, but which may have been designed to draw the eyes of Nebuchadnezzar to his contemplated revolt (Jer. ii. 59). The project was attacked by Jeremiah with the strongest statement of the folly of such a course—a statement corroborated by the very material fact that a man of Jerusalem named Hananiah, who had opposed him with a declaration in the name of Jehovah, that the spoils of the Temple should be restored within two years, had died, in accordance with Jeremiah's prediction, within two months of its delivery. This, and perhaps also the impossibility of any real alliance between Judah and the surrounding nations, seems to have put a stop, for the time, to the anti-Babylonian movement. On a man of Zedekiah's temperament the sudden death of Hananiah must have produced a strong impression; and we may without improbability accept this as the time at which he proceeded to make in silver a set of the vessels of the Temple, to replace the golden plate carried off with his predecessor by Nebuchadnezzar (Bar. i. 8).

The first act of overt rebellion of which any record survives was the formation of an alliance with Egypt, of itself equivalent to a declaration of enmity with Babylon. In fact, according to the statement of Chronicles and Ezekiel (xvii. 13), with the expansion of Josephus, it was in direct contravention of the oath of allegiance in the name of Pharaoh, by which Zedekiah was bound by Nebuchadnezzar, namely, that he would keep the dominion for Nebuchadnezzar, make no innovation, and enter into no league with Egypt (Ez. xvii. 12; 2 Chr. xxxvi. 19, Jos. Ant. x. 7, § 1). As a natural consequence it brought on Jerusalem an immediate invasion of the Chaldeans. The mention of this event in the Bible, though sure, is extremely slight, and occurs only in Jer. xxxvi. 5–11, xxxiv. 21, and Ez. xvii. 16–20; but Josephus (x. 7, § 3) relates it more fully, and gives the date of its occurrence, namely the eighth year of Zedekiah. Probably also the occupation of Gaza, which still held out (Jer. xxxiv. 7). In the panic which followed the appearance of the Chaldeans, Zedekiah succeeded in inducing the princes and other inhabitants of Jerusalem to abolish the obilious custom which prevailed of enslaving their countrymen. A solemn rite (ver. 18), recalling in its form that in which the original covenant of the nation had been made with Abraham (Gen. xvi. 10, xii.), was performed in the Temple (ver. 15), and a crowd of Israelites of both sexes found themselves released from slavery.

In the mean time Pharaoh had moved to the assistance of his ally. On hearing of his approach the Chaldees at once raised the siege and advanced to meet him. The nobles seized the moment of respite to reassert their power over the king, and their defiance of Jehovah, by reseizing those whom they had so recently manumitted; and the prophet thereupon utters a doom on those miscreants which, in the fierceness of its tone and in some of its expressions, recalls those of Elijah on Ahab (ver. 20). This encounter was quickly followed by Jeremiah's capture and imprisonment, which but for the interference of the king (xxviii. 17, 21) would have rapidly put an end to his life (ver. 20). How long the Babylonians were absent from Jerusalem we are not told. It must have required at least several months to move a large army and baggage through the difficult and tortuous country which separates Jerusalem from the Phalifite Plain, and to effect the complete repulse of the Egyptian army from Syria, which Josephus affirms was effected. All we certainly know is that on the tenth day of the tenth month of Zedekiah's ninth year the Chaldeans were again before the walls (Jer. ii. 4). From this time forward the siege progressed slowly but surely to its consummation, with the accompanying of both famine and pestilence (Joseph.). Zedekiah again interfered to preserve the life of Jerusalem from the vengeance of the princes (xxviii. 7–13), and then occurred the interview between the king and the prophet of which mention has already been made, and which affords so good a clue to the condition of absolute dependence into which a long course of opposition had brought the weak-minded monarch. It would seem from this conversation that a considerable desertion had already taken place to the besiegers, proving that the prophet's view of the condition of things was shared by many of his countrymen. But the unhappy Zedekiah throws away the chance of preservation for himself and the city which the prophet set before him, in his fear that he would be mocked by those very Jews who had already taken the step. Jeremiah was urging him to take (xxviii. 10). At the same time his fear of the princes who remained in the city is not diminished, and he even countenances to impose on the prophet a subterfuge, with the view of concealing the real purport of his conversation from these tyrants of his spirit (vv. 21–27).

But while the king was hesitating the end was rapidly coming nearer. The city was indeed reduced to a state of extreme destitution, the Egyptians, as usual, having inflicted such destruction on the surrounding districts that the inhabitants of the city itself could not obtain sufficient food. The bread had for long been consumed (Jer. xxxviii. 9), and all the terrible expedients had been tried to which the wretched inhabitants of a besieged town are forced to resort in such cases. Mothers had been forced to eat the flesh of their own infants (Bar. ii. 3; Lam. iv. 10). Persons of the greatest wealth and station were to be seen searching the dung-heaps for a morsel of food. The effeminate nobles, whose fair complexions had been their pride, wandered in the open streets like blackened but living skeletons (Lam. iv. 5, 8). Still the king was seen in public, sitting in the gate where he was accustomed to receive the homage of the people, and to show them how to approach him, though indeed he had no help to give them (xxviii. 7).

Last, after sixteen dreadful months had dragged on, the catastrophe arrived. It was on the ninth day of the fourth month, about the middle of July, at midnight, as Josephus with careful minuteness informs us, that the breach in those stout and venerable walls was effected. The moon...
five days old, had gone down below the hills which form the western edge of the basin of Jerusalem, or was, at any rate, too low to illuminate the utter darkness which reigns in the narrow lanes of an eastern town, where the inhabitants retired early to rest, and where there are but few windows to emit light from within the houses. The wetted remnants of the army, starved and exhausted, had left the walls, and there was nothing to oppose the entrance of the Chaldeans. Passing in through the breach, they made their way, as their custom was, to the centre of the city, and for the first time the Temple was entered by a hostile force, and all the princes of the court of the great king took their seats in state in the middle gate of the hitherto virgin house of Jehovah. The alarm quickly spread through the sleeping city, and Zedekiah, collecting his wives and children (Joseph.) and surrounding himself with the few soldiers who had survived the accidents of the siege, made his way out of the city at the opposite end to that at which the Assyrians had entered, by a street which, like the Beia es-Suruca at Damascus, ran between two walls (probably those on the east and west sides of the so-called Tyropoeon valley), and issued at a gate above the royal gardens and the Fountain of Siloam. Hence he took the road towards the Jordan, perhaps hoping to find refuge, as David had, at some fortified place in the mountains on its eastern side, but was overtaken and recognized by some of the Jews who had formerly resided in the Chaldean city. By them the intelligence was communicated, with the eager treachery of deserters, to the generals in the city (Joseph.), and, as soon as the dawn of day permitted it, swift pursuit was made. The king's party must have had some hours' start, and ought to have had no difficulty in reaching the Jordan; but, either from their being on foot, weak and infirm, while the pursuers were mounted, or perhaps owing to the inincumbrance of the women and baggage, they were overtaken near Jericho, when just within sight of the river. A few of the people only remained round the person of the king. The rest fled in all directions, so that he was easily taken.

Zedekiah was then taken alive at Jericho, at the upper end of the valley of Lebanon, some 32 miles beyond Baalbec, and therefore about ten days' journey from Jerusalem. Thither Zedekiah and his sons were dispatched; his daughters were kept at Jerusalem, and shortly after fell into the hands of the notorious Ishmael at Mizpah. When he was brought before Nebuchadnezzar, the great king reproached him in the severest terms, first for breaking his oath of allegiance, and next for ingratitude (Joseph.). He then, with a reproof of cruelty characteristic of those evil times, ordered his sons to be killed before him, and lastly his own eyes to be thrust out. He was then loaded with brazen fetters, and at a later period taken to Babylon, where he died. We are not told whether he was allowed to communicate with his brother Jehoiachin, who at that time was also in captivity there: nor do we know the time of his death; but from the omission of his name in the statement of Jehoiachin's release by Evil-Merodach, 26 years after the fall of Jerusalem, it is natural to infer that by that time Zedekiah's sufferings had ended.

The fact of his interview with Nebuchadnezzar at Kiblah, and his being carried blind to Babylon, reconciles two predictions of Jeremiah and Ezekiel, which at the time of their delivery must have prepared conflicting, and which Josiah indeed particularly states Zedekiah alleged as his reason for not giving more heed to Jeremiah. The former of these (Jer. xxxii. 4) states that Zedekiah shall "speak with the king of Babylon mouth to mouth," and his eyes shall behold his eyes;" the latter (Ez. xii. 15) that "he shall be brought to Babylon, yet shall he not see the city thereof, but the whole of this prediction of Ezekiel, whose prophecies appear to have been delivered at Babylon (Ez. i. 1-3, xli. 1.), is truly remarkable as describing almost exactly the circumstances of Zedekiah's flight.

2. (37) Z 11 and 27 : 2 Zedekias; [Vat. in 1 K. xxii. 24. Zedekaias; Sederot.] Son of Chananah, a prophet at the court of Ahaz, head, or, if not head, virtual leader of the college. He appears but once, namely, as spokesman when the prophets are consulted by Ahaz on the result of his proposed expedition to Ramoth-Gilead (1 K. xxii. 2, 2 Chr. xvii.).

Zedekiah had prepared himself for the interview with a pair of iron horns after the symbolic custom of the prophets (comp. Jer. xiii. 19), the horns of the ram, or buffalo, which was the recognized emblem of the tribe of Ephraim (Best. xxxiii. 17. 26), to signify that at the time of Micah's arrival, he illustrated the manner in which Ahaz should drive the Syrians before him. When Micah appeared and had delivered his prophecy, Zedekiah sprang forward and struck him a blow on the face, accompaniving it by a taunting sneer. For this he is threatened by Micah in terms which are hardly intelligible to us, but which evidently allude to some personal danger to Zedekiah.

The narrative of the Bible does not imply that the blow struck by Zedekiah was prompted by more than sudden anger, or a wish to insult and humiliate the prophet of Jehovah. But Josiah takes a very different view, which he develops at some length (Jehovah, viii. 13, § 3). He relates that after Micah had spoken, Zedekiah again came forward, and denounced him as false on the ground that his prophecy contradicted the prediction of Elijah, that Ahaz's blood should be picked up by dogs in the field of Nibodah of Jezreel; and a further proof that he was an impostor, he struck him, daring him to do what Isaiah, in somewhat similar circumstances, had done to Jerusalem, namely, with his hand.

This addition is remarkable, but it is related by Josiah with great circumstantiality, and was doubtless drawn by him from that source, unhappily now lost, from which he has added so many admirable touches to the outlines of the sacred narrative.

As to the question of what Zedekiah and his fellows were, whether prophets of Jehovah, or of some false deity, it seems hardly possible to entertain any doubt. True, they use the name of Jehovah, but that was a habit of false prophets (Jer. xxviii. 2, comp. xxix. 21, 31), and there is a vast difference between the usual manner in which they mention the awful Name, and the full, and as it were, formal style in which Micah prophesies, and reiterated that Ahaz and his queen were purposely worshippers of Baal and Asherah, and that a few years only before this event they had an establishment consisting of two

[1] Once only, namely, 1 K. xxii. 11.
bodies — one of 450, the other of 400 — prophets of this false worship, it is difficult to suppose that there could have been also 400 prophets of Jehovah at his court. But the inquiry of the king of Judah seems to decide the point. After hearing the prediction of Zechariah and his fellows, he asks at once for a prophet of Jehovah: — "Is there not here besides (תנギャ) a prophet of Jehovah that we may inquire of him?" The natural inference seems to be that the others were not prophets of Jehovah but were the prophets of Jeremiah and his (A.V. "the groves") who escaped the sword of Elijah (comp. I K. xviii. 19 with 22, 40). They had spoken in His name, but there was something about them — some trait of manner, costume, or gesture — which aroused the suspicions of Jeremiah. And, and, to the practiced eye of one who lived at the centre of Jehovah-worship and was well versed in the marks of the genuine prophet, proclaimed them counterfeit. With these few words Zechariah may be left to the oblivion in which, except on this one occasion, he remains.

3. (תנギャ) The son of Masachah, a false prophet in Babylon among the captives who were taken with Jeremiah (Jer. xxiv. 21, 22). He was denounced in the letter of Jeremiah for having, with Ahaz the son of Kohah, incited up the people with false hopes, and profane and flagitious conduct. Their names were to become a by-word, and their terrible fate a warning. Of this fate we have no direct intuition, or of the manner in which they incurred it: the prophet simply pronounces that they should fall into the hands of Nebuchadnezzar and be burnt to death. In the Targum of R. Joseph on 2 Chr. xxviii. 3, the story is told that Joshua the son of Joazdak the high-priest was cast into the furnace of fire with Ahaz and Zechariah, but that, while they were consumed, he saved for his righteousness' sake. The son of Hamanah, one of the princes of Judah who were assembled in the scribes' chamber of the king's palace, when Micaiah announced that Barnach had read the words of Jeremiah in the ears of the people from the chamber of Gemariah the scribe (Jer. xxxvi. 12). W. A. W.

Zeeb (תנギャ) [see below]: Zeb.) One of the two "princes" (תנギャ) of Miblan in the great invasion of Israel — inferior to the "kings" (תנギャ) Zelah and Zabannah. He is always named with Orer (Judg. vii. 25, viii. 3; Ps. lxxiii. 14). The name signifies in Hebrew "wolf", just as Orer does "eagle," or "raven" and the two are appropriate enough to the customs of predatory warriors, who delight in conferring such names on their chiefs.

Zeek and Orer were not slain at the first rout of the Arabs below the spring of Harod, but at a later stage of the struggle, probably in crossing the Jordan at a ford further down the river, near the places which descend from Mount Ephraim. An enormous mass of their followers perished with them. (Orer.) Zeeb, the wolf, was brought to bay in a wine-press which in later times bore his name — the "wine-press of Zeeb" (תנギャ ידככ). Alex. ידככ ידככ: Topazar Zeb.

Zelah (תנギャ) and תנギャ, i.e. Zeeb (תנギャ): in Josh. (Rom.) Vat. omit [or read yכפר]: Alex. סריאא אפר: [Saraav, Zelaat] in Sam. ו ebay אפר in both: Zeb, in laterae. One of the cities in the allotment of Benjamin (Josh. xviii. 28). Its place in the list is between Bithnah and Ba-Elaph. None of these places have, however, been yet discovered. The interest of Zelah resides in the fact that it contained the family tomb of Kish the father of Saul (2 Sam. xxi. 14), in which were the bones of Saul and Jonathan, and also apparently of the two sons and five grandsons of Saul, sacrificed to Jehovah on the hill of Gibeah, at last found in their resting-place (comp. ver. 12). As containing their sepulchre, Zelah was in all probability the native place of the family of Kish, and therefore his home, and the home of Saul before his selection as king had brought him to prominence. This appears to have been generally overlooked, but it is important, because it gives a different starting-point to that usually assumed by the journey of Saul in quest of his father's asses, as well as a different goal for his return after the anointing; and although the position of Zelah is not and may never be known, still it is one step nearer the solution of the complicated difficulties of that route to know that Gibeah — Saul's royal residence after he became king — was not necessarily the point either of his departure or his return.

The absence of any connection between the names of Zelah and Zelzah (too frequently assumed) is noticed under the latter head.

Zelev (תנギャ) [plft, or: Zael (Vat. Elev)] Zelää: Alex. סריאא סריאא: Zalec: Zelc.) An Ammonite, one of David's guards (2 Sam. xxii. 37; 1 Chr. xiii. 39).

Zelophehad (תנギャ, תנギャ) [pl. first-born, gen.]: Zelaphath, [exc. Josh. xvii. 3, Alex. סריאא סריאא: 1 Ch. xvi. 15, Rom. Vat. סריאא סריאא: Selphath): Son of Hepher, son of Gilead, son of Machir, son of Manasseh (Josh. xvii. 3). He was apparently the second son of his father Hepher (1 Chr. xvi. 15), though Simoniacs and others, following the interpretation of the Rabbis, and under the impression that the etymology of his name indicates a first-born, explains the term תנギャ as meaning that his lot came up second. Zelophehad came out of Egypt with Moses; and all that we know of him is that he took no part in Korah's rebellion, but that he died in the wilderness, as did the whole of that generation (Num. xiv. 35, xxvii. 3). On his death without male heirs, his five daughters, just after the second numbering in the wilderness, came before Moses and Eleazar to claim the inheritance of their father in the tribe of Manasseh. The claim was admitted by Divine direction, and a law was promulgated, to be of general application, that if a man died without sons his inheritance should pass to his daughters (Num. xxvi. 33, xxvii. 1—11), which led to a further enactment (Num. xxxvi. i.), that such heiresses should

a The meaning is slightly altered by the change in the vowel-points. In the former case it signifies an "addition of meaning," in the latter a "deletion" (First, Heb., ii. 254). Compare the equivalents of the LXX. and Vulg. in Samuel, as given above.

b In like manner the sepulchre of the family of Jesse was at Bethlehem (2 Sam. ii. 32).
not marry out of their own tribe—a regulation which the five daughters of Zelophehad complied with. Beginning with Joseph, it will be seen that the daughters of Zelophehad are the seventh generation. So are Salmon, Bezeal, and Zoah (apparently the first settler of his family, from their patriarchal ancestors; while Caleb, Achan, and Phinehas are the sixth; Joshua seems to have been the eighth. [SHITTEHAI].] The average, therefore, seems to be between 5 and 7 generations, which, at 49 years to a generation (as suits to the length of life at that time), gives between 240 and 280 years, which agrees very well with the reckoning of 215 years for the sojournings of the Israelites in Egypt + 40 years in the wilderness = 255 (Joseph, Ant. iv. 7, § 5; Selden, De Success. cap. xxii., xxiii.). A. C. H.

**ZELOTES (ΣΗΟΡΟΣ; Zolotes). The epithet given to the Apostle Simon to distinguish him from Simon Peter (Luke vi. 15). In Matt. x. 4, he is called "Simon the Cananaite," the last word being a corruption of the Aramaic term, of which "Zelotes" is the Greek equivalent. [CANANITE; Simon 5.]

**ZELZAH (זֶלץ; i.e. Tseltsen [צַלְצֵל, Gen.; or, double shokar, Fürst]); [see also: Zelix, Zelzah, of the same name, in, e.g., in Mishna.]. A place named only once (1 Sam. x. 2.); as the boundary of Benjamin, close to (ן) Rachel's sepulchre. It was the first point in the homeward journey of Saul after his anointing by Samuel. Rachel's sepulchre is still shown a short distance to the north of Bethlehem, but no acceptable identification of Zelzah has been proposed. It is usually considered as identical with Zelzah, the home of Kish and Saul, and that again with Betel-geber. But this is not tenable; at any rate there is nothing to support it. The names Zelzah and Zelzach are not only not identical, but they have hardly anything in common, still less have רְּשָׁ פָּרֹא and רְשָׁ פָּרֹא יַעֲשֵׂה; nor is בֵּטֶל-geber close enough to the קֶבֶּל-geber to answer to the expression of Samuel. [Ramah.] G.

**ZEMARAIM (זֶמֶרַי; double forest-mount, Fürst); Ζημαρία; Alex. Ζημαρία; Συμφωνία]. One of the towns of the allotment of Benjamin (Josh. xix. 22). It is named between Beth-hacArabah and Bethel, and thereon in the possession of Joseph. Arabah in the former name denotes as usual the Jordan Valley; we should expect to find Zemaraim either in the valley or in some position on its western edge, between it and Bethel. In the former case the trace of the name may remain in Charâel, Ashubor, which is marked in Seetman's map (Rosen, vol. iv. map 2) as about 4 miles north of Jericho, and appears as as-Samawâ’ in those of Robinson and Van de Velde. (See also Rob. Lab. Res. i. 589.) In the latter case Zemaraim may be connected, or identical, with Mount ZEMARAIM, which must have been in the highland district.

In either event Zemaraim may have derived its name from the ancient tribe of the Zemarim or Zemarim, who were related to the Hittites and Amorites; who, like them, are represented in the biblical account as descendants of Canaan, but, from some cause or other unexplained, have left but very scanty traces of their existence. The list of the towns of Benjamin are remarkable for the number of tribes which they commemorate. The Avites, the amorites, the Ophnites, the Zelotes, are all mentioned in the catalogue of Josh. xiii. 22-28, and it is at least possible that the Zemarites may add another to the list. G.

**ZEMARAIM, MOUNT (זֶמֶרַי; [see above]: סִיָּם עִמְדוֹר: noum Symer). An enclitide mentioned in 2 Chr. xiii. 4 only. It was "in Mount Ephraim," that is, to say within the general district of the highlands of that great tribe. It appears to have been close to the scene of the engagement mentioned in the narrative, which again may be inferred to have been south of Bethel and Ephraim (ver. 19). It may be said in passing, that a position so far south is no contradiction to its being in Mount Ephraim. It has been already shown under RAMAH [iii. 2670 b] that the name of Mount Ephraim probably extended as far as es-Rim, 4 miles south of Be'tin, and 8 of Telzach, the possible representative of Ephraim. Whether Mount Zemaraim is identical with, or related to the place of the same name mentioned in the preceding article, cannot be ascertained. If they prove to be distinct places they will furnish a double testimony to the presence of the ancient tribe of Zemarites in this part of the country. No name answering to Zemaraim has been yet discovered in the maps or information of travelers on the highland.

It will be observed that in the LXX. and Vulgate, this name is rendered by the same word which in the former represents Samaria. But this, though repeated (with a difference) in the case of Zemarite, can hardly be more than an accidental error; since the names have little or no resemblance in Hebrew. In the present case Samaria is besides inadmissible on topographical grounds. G.

**ZEMARITE. THE (זֶמֶרְיָה [patr.]; סְמָארָא; [in 1 Chr. Rom. Vat. omit.] Scmarama). One of the Hamite tribes who in the genealogical table of Gen. v. (ver. 18), and 1 Chr. i. (ver. 16), are represented as "sons of Canaan." It is named between the Aravidite, or people of Canaan, and the Hamathite, or people of Hamath. Nothing is certainly known of this ancient tribe.

a Apparently reading בְּזִלְצָה. The Talmud has numerous explanations, the favorite one being that בְּזִלְצָה was Jerusalem — the shadow (בְּזִלְצָה) of God.

b Something of this kind is at the root of the modérne of the Vulg.

c The name Samarah occurs more than once else.

d The name Samaarah occurs more than once else. Where in the Jordan Valley. It is found close to the "Round Fountain" in the Plain of Gennesaret; also at the S. E. end of the Lake of Tiberias.
The old interpreters (Jerusalem Targum, Arabic Version, etc.) place them at Esnes, the modern Birin. This, however, is at the want of similarity between the two names (which is perhaps the strongest argument in favor of the old identification), proposes to locate them at Simara (the Sinyma of the classical geographers), which name is mentioned by Shaw as attached to a site of ruins near Arka, on the west coast of Syria, 19 or 11 miles above Tripoli.

On the new French map of the Lebanon (Carte du Liban...), it appears as Kebed-oum Shoumara, and lies between Arka and the Mediterranean, 2 kilometres from the latter, and 5 from the former. Beyond, however, the resemblance in the names, and the proximity of Reek and Arka, the probable seats of the Aractides and Arkites, and the consequent inference that the original seat of the Zemarites must have been somewhere in this direction, there is nothing to prove that Simara or Shoumara have any connection with the Tzemarites of the ancient records.

Traces of their having wandered to the south are possibly afforded by the name Zamurrain, formerly attached to two places in the topographical lists of Central Palestine—a district which appears to have been very attractive to the aboriginal wandering tribes of every quarter. (Zemarakim; see also Avim, Ophim, etc.)

The LXX. and Vulgate would connect the Zemarites with Sumaria. In this they have been followed by some commentators. But the idea is a delusion, grounded on the inability of the present alphabets to express the Hebrew letters of both names.

**ZEMIRA**

([The name of the son of Deacon the son of Benjamin (1 Chr. vii. 8).]

**ZENAX**

([The name of the town in the allotment of Judah, situated in the district of the Negev (Josh. xv. 57). It occurs in the second group of the enumeration, which contains amongst others Migdal-gead and Lachish. It is probably identical with Zanana, a place mentioned by the prophet Micah in the same connection.]

Schwarz (p. 163) proposes to identify it with "the village Zan-hera, situated 2 English miles southeast of Mareah." By this he doubtless intends the place which is listed in the Robinson's *Bibl. Res. 1st ed., vol. iii. App. 117" (Israelitische Ornamentik, and in Toldt's *Dritte Wanderung* (p. 149), as Žemád-eh. The latter is weller in his map places it about 2 miles due east of Marekh (Marako). But this identification is more than doubtful.]

**ZENAX**

([The name, a contraction from Ζωνάς, an Aramaic from ἀρτέμις from ἀρτέμιδαρας, Numâdon from Νομάδων, and, probably, Ergâmo from Εργάμων, a believer, and, as may be inferred from the context, a preacher of the gospel, who is mentioned in Tit. iii. 13 in connection with Apollos, and, together with him, is there commended by St. Paul to the care and hospitality of Titus and the T retam brethren. He is further described as a "lawyer" (τὸν νοµικόν). It is impossible to determine with certainty whether we are to infer from this designation that Zenas was a Roman jurisconsult or a Jewish doctor. Grothus accepts the former alternative, and thinks that he was a Greek who had studied Roman Law. The N.T. usage of ρουκάς leads rather to the other inference. Tradition has been somewhat hasty with the name of Zenas. The *Synopsis de Vita et Morte Prophetarum Apostolorum et Discipulorum Domini*, ascribed to Dorotheus of Tyre, makes him to have been one of the "seventy-two" disciples, and subsequently Bishop of Dossipas in Palæstine (Bibl. Patr. iii. 150). The "seventy-two" disciples of Dorotheus are however, a mere string of names picked out of salutations and other incidental notices in the N.T. The Greek Menologies on the festival of SS. Bartholomew and Titus (Aug. 25) refer to a certain Life of Titus, ascribed to Zenas which is also quoted for the supposed conversion of the younger Pliny (compare Fabricius, *Oec. Apr.* N. T. ii. 821 f.). The association of Zenas with Titus, in St. Paul's epistle to the latter, sufficiently accounts for the forgery. W. B. J.}

**ZEPHANIAH**

(Zephaniah, Zephon : Sophe, Zopher : Zoph). These forms refer to another punctuation, Z[ē]Ph[ā]N[ī]A[H], a participial form). Jerome derives the name from Ζηφανια, and supposes it to mean *speculator Domini*, "watcher of the LORD," an appropriate appellation for a prophet. The pedigree of Zephaniah, ch. i. 1, is traced to his fourth ancestor, Hezekiah: supposed by Aben Ezra to be the celebrated king of that name. This is not in itself improbable, and the fact that the pedigree terminates with that name, points to a personage of rank and importance. Late critics and commentators generally acquiesce in the hypothesis, namely, Eichhorn, Hitzig, F. Ad. Strauss (Vulciina Zeph-"i-a, Berlin, 1843), Haverbeck, Keil, and Bleek (Eichhorn in das Alte Testament).

Analysis. Chap. i. The utter desolation of Judah is predicted as a judgment for idolatry, and neglect of the Lord, the luxury of the princes, and the violence and deceit of their dependents (3-9). The prosperity, security, and insolence of the people is contrasted with the horrors of the day of wrath: the assaults upon the fenced cities and high towers, and the slaughter of the people (10-18).

Ch. ii., a call to repentance (1-5), with prediction concerning the new cities to be built in the Philistia. The restoration of the house of Judah after the devastation (4-7). Other enemies of Judah—Moab, Ammon—threatened with perpetual destruction, Ethiopia with a great slaughter, and Nineveh, the capital of Assyria, with desolation (8-18).

Ch. iii. The prophet addresses Jerusalem, which he reproves sharply for vice and disobedience, the cruelty of the princes and the treachery of the priests, and for their general disregard of warnings and visitations (1-7). He then concludes with a series of promises, the destruction of the enemies of God's people, the restoration of exiles, the extinguishing of the proud and violent, and the permanent peace and blessedness of the poor and afflicted remnant who shall trust in the name of the Lord. These exhortations to repentance and treachery of the misguided with intimations of a complete manifestation of God's righteousness and love in the restoration of his people (8-20).

The chief characteristics of this book are the unity and harmony of the composition, the grace, energy, and dignity of its style, and the rapid and effective alternations of threats and promises. It
prophetic import is chiefly shown in the accurate predictions of the desolation which has fallen upon each of the nations denounced for their crimes: Edom, which is overcome with a terrible invasion, being alone exempted from the doom of perpetual ruin. The general tone of the last portion is Messianic, but without any specific reference to the Person of our Lord.

The date of the book is given in the inscription: namely, the reign of Josiah, from 642 to 611 B.C. This date accords fairly with internal indications. Nineveh is represented as a state of peace and prosperity, while the notices of Jerusalem touch upon the same tendencies to idolatry and crime which are condemned by the contemporary Jeremiah.

It is most probable, moreover, that the prophecy was delivered before the 18th year of Josiah, when the reformation, for which it prepared the way, was carried into effect, and about the time when the Scythians overran the empires of western Asia, extending their devastations to Palestine. The notices which are supposed by some critics to indicate a somewhat later date are satisfactorily explained. The king's children, who are spoken of, in ch. i. 8, as addicted to foreign habits, could not have been sons of Josiah, who was but eight years old at his accession, but were probably his brothers or near relatives. The remnant of Baal (ch. i. 4) implies that some partial reformation had previously taken place, while the notices of open idolatry are incompatible with the state of Judah after the discovery of the Book of the Law.

F. C. C.

* Literature.—Among the special writers on Zephaniah are J. H. Graetz, Erkldrung des Prophet. Zephaniah (1728); D. G. C. von Guilm. Spieclcyer, Observat. exeg. crit. ad Zephaniah Vatican. (1818); P. Ewald, Der Prophet Zephaniah (1827); Fr. A. Strauss, Zephaniah Zepkunja, Can. Text. (1843); and L. Reineke, Der Prophet Zepkunja (1868). On particular topics, J. A. Nolten, Dia. exeg. in Prophetem Zephaniah (1719); C. F. Cramer, Schriftliche Denkmaler in Palast., with a Commentary (1777), and C. Th. Anton, Versio e. iii. Proph. Zeph. etc. (1811). The later writers on Zephaniah are Rosenmüller, Hitzig, Theilere, Maurer, Ewald, Umbreit, Keil (1866), Kleinert (1865, in Lange's Tischler), Henderson, Noyes, Cowles, and Pusey (1870), in their well-known commentaries on the minor prophets. For works relating to the overthrow of Nineveh, so distinctly foretold by Zephaniah, see the additions to Nahum and Nineveh. See also the art. Zepkunja by Delitzsch in Herzog's Real-Enzyk. xxvii. 495-501 (1864).

H.

3. (Zepkunja.) The son of Maaseiah (Jer. xxii. 1), and spond or second priest in the reign of Zedekiah. He succeeded Jehoiakim (Jer. xxix. 2), and was probably a ruler of the Temple, whose office it was among others to punish pretenders to the gift of prophecy. In this capacity he was appointed to Shecaniah the Nehemiahite, in a letter from Babylon, to punish Jeremia (Jer. xxix. 20), Twice was he sent from Zepkunja to inquire of Zedekiah the issue of the siege of the city by the Chaldeans (Jer. xxxi. 1), and to imbibe him in the terenece for the people (Jer. xxxvii. 3). On the capture of Jerusalem by Nebuchadnezzar he was taken with Seraiah the high-priest and others, and slain at Riblah (Jer. lii. 24; 2 K. xxv. 18, 21). In 2 K. xxv. 18, Jer. xxxvii. 3, his name is written in the longer form Zepkunja.

4. Father of Josiah 2 (Zecli. vi. 10), and of Huz, according to the reading of the received text of Zecli. vi. 14, as given in the A. V.

W. A. W.

ZEPHATHAH, VALLEY OF [Zepkunja, Zephaniah.] [Rom. Zepkunja, Var. Zepkunja: Alex. Zepkunja: Zephaniah.] The earlier name (according to the single notice of Aug. i. 17) of a Canaanite town, which after its capture and destruction was called by the Israelites Newmah. Two identifications have been proposed for Zepkunja: that of Dr. Robinson with the well-known pass ex-Septis (סביה), by which the ascent is made from the borders of the Arabah to the higher level of the "South country" (Judg. xvii. 18), and that of Mr. Rowlands (Williams's Holy City, p. 404) with Sebata, 2 hours beyond Khohbah, on the road to Susa, and on an hour north of Rebesh or Rebokh.

The former of these, Mr. Wilton (The Negr., etc., pp. 209, 209) has challenged, on account of the impracticability of the pass for the approach of the Israelites, that the pass is so remote, and desolate a spot for the position of a city of any importance. The question really forms part of a much larger one, this not the place to discuss — namely, the route by which the Israelites approached the Holy Land. But in the mean time it should not be overlooked that the attempt in question was a successful one, which is so far in favor of the correctness of the pass. The commencement from the nature of the site is one which might be brought with equal force against the existence of many others of the towns in this region.

On the identification of Mr. Rowlands some doubt is thrown by the want of certainty as to the name, as well as by the fact that no later traveller has succeeded in finding the name Sebait, or the spot. Dr. Stewart (Jebel and Kiim, p. 255) heard of the name, but east of Khohbah instead of south, and this was in answer to a leading question — always a dangerous experiment with Arabs.

It is earnestly to be hoped that some means may shortly be found, to attempt at least the examination and recollection of the place and the like contradictory statements and inferences.

3. (Zepkunja.) The son of Maaseiah (Jer. xxii. 1), and spond or second priest in the reign of Zedekiah. He succeeded Jehoiakim (Jer. xxix. 2), and was probably a ruler of the Temple, whose office it was among others to punish pretenders to the gift of prophecy. In this capacity he was appointed to Shecaniah the Nehemiahite, in a letter from Babylon, to punish Jeremia (Jer. xxix. 20), Twice was he sent from Zepkunja to inquire of Zedekiah the issue of the siege of the city by the Chaldeans (Jer. xxxi. 1), and to imbibe him in the terenece for the people (Jer. xxxvii. 3). On the capture of Jerusalem by Nebuchadnezzar he was taken with Seraiah the high-priest and others, and

* Probably reading Zepkunja. It will be observed that Josephus here forsoaks the LXX. for the Hebrew text.
ZEPHI

is probably marked by the foundations on the southeastern part of the remarkable Tell of Bethulia (Robinson). There is a deep valley which runs just the Tell down to Bethulia and thence into the plain of Philistia. Mr. Porter suggests that if Tell es-Sufich is too far from the supposed site of Maresah that this valley may be Zephathiah (Kitto, Cyclo. Bibl. Lit., iii. 1156).

II. ZEPHI (ζῆφι [waste-tower]; Ζαφέη; Σφη). 1 Chr. i. 36. [ZEPHI]

ZEPHI (ζῆφι [waste-tower]; Ζαφέη; Σφη). A son of Eliphaz son of Esau (Gen. xxxvi. 11). and one of the "dukes," or phylarchs, of the Edomites (ver. 15). In 1 Chr. i. 36 he is called Zephah.

E. S. P.

ZEPHON (ζῆφον [looking out]; Ζαφών; Αμων). Ziphon the son of Gad (Num. xxvi. 15), and ancestor of the family of the Zephonites.

ZEPHONITES. THE (αποζήφωνος) [patr.]: Αμωνείς [Vat.-tex.; Σφηνοι]. A branch of the tribe of Gad, descended from Zephon or Ziphon (Num. xxvi. 15).

ZER (ζήρ [finit.]: Τηρεν: Νεκ). One of the fortified towns of the allotment of Naphtali (Josh. xix. 35 only). From the names which succeed it in the list it may be inferred that it was in the neighborhood of the S.W. side of the Lake of Gennesareth. The versions of the LXX. and of the Vulg. both of this name and that which precedes it, are grounded on an obvious mistake. Neither of them has anything to do with Tyre or Zidon. Zedda may possibly be identified with Rhotina; but no name resembling Têr appears to have been yet discovered in the neighborhood of Tiberias.

G.

ZERAH (ζῆρα, rising, origin); Ζαπάς, [Zapai]. Zerat, [Zare]. A son of Jethro son of Esau (Gen. xxxvi. 13; 1 Chr. i. 37), and one of the "dukes," or phylarchs, of the Edomites (Gen. xxxvi. 17). Jobab of Zerah, one of the early kings of Edom, perhaps belonged to his family (xxxvi. 37; 1 Chr. i. 4). E. S. P.

ZERAH, less properly, ZA'AM (ζηκζη, with the pause accent), Ζα'αμ, with the pause accent, Ζηκζη ([rising]; Zapai: [in 1 Chr. iv. 6, Vat. Zapai: Zerat]). Twin son with his elder brother Pharez of Judah and Tamar (Gen. xxxvii. 30; 1 Chr. ii. 6). Matt. i. 5. His descendants were called Zarhites, Ezrahites, and Izrahites (Num. xxxvi. 29; 1 K. iv. 31; 1 Chr. xxvii. 31), and continued at least down to the time of Zerubbabel (1 Chr. iv. 7; Neh. vi. 24). Nothing is related of Zerah individually, beyond the peculiar circumstances of his birth (Gen. xxxvii. 27-29), concerning which see Heinegg, Hist. Patrioch. xviii. 28. A. C. H.

2. (Zapai: Alex. Zapoai: Zerat.) Son of Simeon (1 Chr. iv. 24), called Zothar in 1 Chr. xiv. 10.

3. (Zapai [Vat. Zapai]; Zapoai: Alex. Zapaio: Naphon; Aher [Vat. Naphon; Aher]. A Gershonite Levite, son of Ioho or Jomah (1 Chr. vi. 21, 41 [Heb. vi. 26]).

4. (Ζηκζη: Zapai, Zereth). The Ethiopian or Cushite, "Zëpi, an invader of Judah, defeated by Ass (2 Chr. xiv. 9).

1. In its form the name is identical with the Hebrew proper name above. It has been supposed to represent the Egyptian USARIKEN, possibly pronounced USABREN, a name almost certainly of Semitic origin [Shishak, ii. 1239]. The difference is great, but may be partly accounted for, it we suppose that the Egyptian deviates from the original Semitic form, and that the Hebrew represents that form, or that a further deviation than would have been made was the result of the similarity of the Hebrew proper name Zerah. So, "SAI, even if pronounced SEWA, or SEVA, is more remote from SHEBEK or SHEBETEK than Zerah from USARIKEN. It may be conjectured that these forms resemble those of Memphite, Moph, "Nqés, which evidently represent current pronunciation, probably of Semites.

2. The war between Asa and Zerah appears to have taken place soon after the 10th, and shortly before the 15th year of Assa, probably late in the 14th, as we shall see in examining the narrative. It therefore occurred in about the same year of Assa as the battle of the king of Judah, his reign, as far as the 14th year inclusive, was b. c. 933-940, or, if Massa's reign be reckoned of 35 years, 933-929. [Shishak, pp. 590-598] E.

3. The first ten years of Assa's reign were undisturbed by war. Then Assa took counsel with his subjects, and walled and fortified the cities of Judah. He also maintained an army of 500,000 men, 300,000 spearmen of Judah, and 280,000 archers of Benjamin. This great force was probably the whole number of men able to bear arms (2 Chr. xiv. 1-8). At length, probably in the 14th year of Assa, the anticipated danger came. Zerah, the Edomite, with a mighty army of a million, Cushim and Lubim, with three hundred chariots, invaded the kingdom, and advanced unopposed in the field as far as Maresah. As the invaders afterwards retreated by way of Gerar, and Maresah lay on the west of the hill-country of Judah, where it rises out of the Philistine plain, in the line of march from Egypt to Jerusalem, it cannot be doubted that they came out of Egypt. Between the border on the side of Gerar and Maresah, lay no important city but Gath. Gath and Maresah were both fortified by Rekobam before the invasion of Shishak (3. 8), and were no doubt captured and its inhabitants driven out by that king (comp. xxiv. 14), whose list of conquered towns, etc., shows that he not only took some strong towns, but that he subdued the country in detail. A delay in the capture of that, where the warlike Philistines may have opposed a stubborn resistance, would have removed the only obstacle on the way to Maresah, thus securing the retreat that was afterwards made by this hostile nation from that king's dominions, as its immediate neighborhood, was a route to Jerusalem, presenting no difficulties but those of a hilly country; for not one important town is known to have lain between the capital and this outpost of the tribe of Judah. The invading army had swarmed across the border and devoured the Philistine fields before Asa could march to meet them. The distance from Gerar to the southern border of Palestine, to Maresah, was not much greater than from Maresah to Jerusalem, and considering the nature of the tracts, would have taken about the same time to traverse and only such delay as would have been caused by
the sieges of Gath and Mareshah could have enabled Asa hastily to collect a levy and march to relieve the beleaguered town, or hold the passes.  

"In the Valley of Zephathiah at Mareshah," the two armies met. We cannot perfectly determine the site of the battle. Mareshah, according to the Osmantici, lay within two miles of Eleutheropolis, and Dr. Robinson has reasonably conjectured its position to be marked by a remarkable "telt," or artificial mound, a mile and a half south of the site of the former town. Its significance, "this which is at the head," would scarcely suit a position at the opening of a valley. But it seems that a narrow valley terminates, and a broad one commences at the supposed site. The Valley of Zephathiah, "the watch-tower," is supposed by Dr. Robinson to be the latter, a broad vale, descending from Eleutheropolis in a northwesterly direction towards Tell es Sīqūḥ, in which last name he is disposed to trace the old appellation (Gībb. Res. ii. 31). The two have no connection whatever, and Robinson's conjecture is extremely hazardous. If this identification be correct, we must suppose that Zerah retired from before Mareshah towards the plain, that he might use his chariots and horsemen to make effect, instead of engaging them in the narrow valleys leading towards Jerusalem. From the prayer of Asa we may judge that, when he came upon the invading army, he saw its hugeness, and so that, as he descended through a valley, it lay spread out beneath him. The Egyptian monuments enable us to picture the general disposition of Zerah's army. The chariots formed the first corps in a single column of double line; behind them, massed in phalanxes, were heavy armed troops; probably on the flanks stood archers and horsemen in lighter formations. Asa, marching down a valley, must have attacked in a heavy column; for none but the most highly disciplined troops can form line from column in the face of an enemy. His spearman of Judah would have composed this column; each bank of the valley would have been occupied by the Betejamite archers, like those came to David, "helpers of the war, armed with bows, and [who] could use both the right hand and the left in [ hurling] stones and [ shooting] arrows out of a bow" (1 Chr. xii. 1, 2). No doubt the Egyptian, confident in his numbers, disdained to attack the Hebrews or clear the heights, but waited the opening provided by the battle against the more likely. The prayer before the battle is full of the noble faith of the age of the Judges: "Lord, [it is] alike to Thee to help, whether the strong or the weak; help us, O Lord our God: for we rest on Thee, and in Thy name we go against the multitude. O Lord, Thou art our God; let not man prevail against Thee." From the account of Abijah's defeat of Jeroboam, we may suppose that the priests sounded their trumpets, and the men of Judah despatched with a shout (2 Chr. xiii. 14, 15). The hills and mountains were the favorite camping-places of the Hebrews, who usually rushed down upon their more numerous or better disciplined enemies in the plains and valleys. If the battle were deliberately set in array, it would have begun early in the morning, in the broad valley, or the plain of these times, when there was not a night surprise, as when Goliath challenged the Israelites (1 Sam. xvii. 20-23), and when Thoithones III. fought the Canaanites at Megido, and as we may judge from the long pursuits at this period, the sun would have been in the eyes of the army of Zerah, and its archers would have been thus useless. The chariots broken by the courage and the skill of their occupants, and not by shots of arrows, must have been forced back upon the embossed host behind. "So the Lord smote the Ethiopians before Asa, and before Judah: and the Ethiopians fled. And Asa and the people that [were] with him pursued them unto Gerar: and [or "for"] the Ethiopians were overthrown, that they could not recover themselves." This last clause seems to refer to an irremediable overthrow at the first: and, indeed, had it not been so, the pursuit would not have been carried, and, as it seems at once, beyond the frontier. So complete was the overthrow, that the Hebrews could capture and spoil the cities around Gerar, which must have been in alliance with Zerah. From these cities they took very much spoil, and they also drove the tents of cattle, and carried away sheep and camels in abundance." (2 Chr. xiv. 9-15). More seems to have been captured from the Arabs than from the army of Zerah: probably the army consisted of a nucleus of regular troops, and a great body of tributaries, who would have scattered in all directions, leaving their country open to reprisals. On his return to Jerusalem, Asa was met by Jehoshaphat, who exhorted him to be faithful to God. Accordingly Asa made a second reformation, and collected his subjects at Jerusalem in the 3rd month of the 16th year, and made a covenant, and offered of the spoil "seven hundred oxen and seven thousand sheep" (xxv. 1-15). From this it would appear that the battle was fought in the preceding winter. The success of Asa, and the manifest blessing that attended his war, caused him to hurl to him Epherimites, Manassites, and Simanites. His Esther had already captured cities in the Israelite territory (xiii. 19), and he held cities in Mount Ephraim (xx. 8), and then was at peace with Israel. Since then, always at the mercy of a powerful king of Judah, would have naturally turned to him. Never was the house of David stronger after the defection of the ten tribes; but soon the king fell into the wicked error, so constantly to be repeated, of calling the heathen to aid him against the kindred Israelites, and hired Benhadad, king of Syria-Damascenus, to lay their cities waste, when Hanani the prophet recalled to him the great victory he had achieved when he trusted in God (xvi. I—9). The after years of his reign were troubled with wars (xx. 9), but they were with Baasha (1 K. xv. 16, 32). Zerah and his people had been too signally crushed to attack him again.  

4. The identification of Zerah has occasioned some difference of opinion. He has been thought to have been a Cushite of Arabia, or a Cushite of Ethiopia above Egypt. But lately it has been supposed that he was the Hebrew name of Usurken I., second king of the Egyptian XXIf dynasty; or perhaps more probably Usurken II., his second successor. This question is a wider one than seems at first sight. We have to inquire whether the army of Zerah was that of an Egyptian king, and, if the reply be affirmative, whether it was led by either Usurken I. or II. 

The historian had reduced the angle of Arabia that divided Egypt from Palestine. Probably Nubia was unable to attack the Assyrians, and endeavored, by securing this tract, to guard the approach to Egypt. If the army of Zerah were Egyptian, this would account for its connection with the people of Gerar and the pastoral tribes of
the neighborhood. The sudden decline of the power of Egypt after the reign of Shishak would be explained by the overthrow of the Egyptian army about thirty years later.

The composition of the army of Zerah, of Cushim, and Ludim (2 Chr. xvi. 8), closely resembles that of Shishak, of Ludim, Sukkiiim, and Cushim (xvi. 31); both armies also had chariots and horsemen (xvi. 8, xii. 3). The Cushim might have been of an Asiatic Cush, but the Ludim can only have been Africans. The army, therefore, must have been of a king of Egypt, or Ethiopia above Egypt. The uncertainty is removed by our finding that the kings of the XXIIId dynasty employed mercenaries of the MASHUSHEWA, a Libyan tribe, which apparently supplied the most important part of their hired force. The army, moreover, as consisting partly, if not wholly, of a mercenary force, and with chariots and horsemen, is, save in the horsemen, exactly what the Egyptian army of the empire would have been, with the one change of the increased importance given to the mercenary forces, than we know to have marked it under the XXIIId dynasty. (STISHV, p. 3012.) That the army was of an Egyptian king therefore cannot be doubted.

As to the identification of Zerah with an Ussrak, we speak diffidently. That he is called a Cushite must be compared with the occurrence of the name NAMUGUEL, Ninroud, in the line of the Ussrak, but that line seems rather to have been eastern than of western Ethiopians (see, however, STISHV, p. 3012). The name Ussrak has been thought to be Sargon (STISHV, l. c.,) in which case it is unlikely, but not impossible, that another Hebrew or Semitic name should have been adopted to represent the Egyptian form. On the other hand, the kings of the XXIIId dynasty were of a warlike family, and their sons constantly held military commands. It is unlikely that an important army would have been intrusted to any but a king or prince. Ussrak is less remote from Zerah than seems at first sight, and, according to our computation, Zerah might have been Ussrak H., but according to Dr. Hincks's, Ussrak I.

5. The defeat of the Egyptian army by Asa is without parallel in the history of the Jews. On no other occasion did an Israelite army meet an army of one of the great powers on either side and defeat it. Shishak was unprepared. Semmacherib was not met in the field, Necho was so met and overthrew Josiah's army, Nebuchadnezzar, like Shishak, was only delayed by fortifications. The defeat of Zerah thus is a solitary instance, more of the power of the faith of the Hebrews, a single witness that the God of Israel was still the same who had led his people through the Red Sea, and would give them the same aid if they trusted in Him. We have, indeed, no distinct statement that the defeat of Zerah was a miracle, but we have proof enough that God providentially enabled the Hebrews to vanquish a force greater in number, stronger in the appliances of war, with horsemen and chariots, more accurate in discipline, no raw levies hasty equipped from the king's army, but a seasoned standing militia, strengthened and more terrible by the addition of swarms of hungry Arabs, bred to war, and whose whole life was a time of pillage. This great deliverance is one of the many proofs that God in his people weawsmsa, when whether He bids them stand still and bend his salvation, or nerves them with that courage that has wrought great things in his name in our later age; thus it bridges over a chasm between two periods outwardly unlike, and bids us see in history the immutability of the Divine actions.

R. S. P.

ZERAH(תילול) (7773) [Jehovah caused to spring forth]: Zapaia, Zapaia, Zapaia; Alex. Zapias, Zapias, Zapias; Zeriah, Zerah. A priest, son of Czic, and ancestor of Ezra the scribe (1 Chr. vi. 6, 51 [Heb. v. 52, vi. 50]; Exz. vii. 4 [where the A. V. ed. 1611 reads Zeruiah]).

2. (Zapaia; [Vat. Zapaia]; Alex. Zapaia: Zareeb.) Father of Elhoimson of the family of Pulath Maob (Exz. viii. 4); called Zarafula in 1 Esd. vii. 61.

* ZERA'IAH (3 syl.), Exz. vii. 4 (A. V. ed. 1611). (Zeremia 1.)

ZEREDA (צורדה) [white forest]: [Rom.] Zepaz, [Vat. Zepaz], [Alex. Zepaz, Zaper]: Zareed. The name of a brook or valley running into the Dead Sea near its S. E. corner, which Dr. Robinson (Top. Res. ii. 157) with some probability suggests as identical with the Wady el-Abyay. It lay between Moab and Edom, and is the limit of the property of the Israelites wandering in the wilderness (Num. xii. 14). Laberde, arguing from the distance, thinks that the source of the Wady el-Ghârâmeh in the Arabah is the site: as from Mount Hor to el-Abyay is by way of Ezion-geber 65 leagues, in which only four stages occur: a rate of progress quite beyond their power. This argument, however, is feasible, since it is clear that the marches-stations mentioned indicate not daily stages, but more permanent encampments. He also thinks the palm-trees of Wady ti. would have attracted notice, and that Wady Jethun (el-Plama) could not have been the way consistently with the precept of Dent. ii. 3.

The camping station in the catalogue of Num. xxxiii., which corresponds to the "patching in the valley of Zareed" of xi. 12, is probably biblical God, as it stands next to Ed-Marsin; compare Num. xxxiii. 44, 45 with xii. 12. The Wady el-Abyay forms the boundary between the districts of Jebel and Kerak. The stream runs in a deep ravine and contains a hot spring which the Arabs call the "Bath of Solomon, son of David." (Hely, May 29.) (Zereed.)

The interpreters translate the name in the first case "osiers," and in the second "baskets" (Targum Pseudo-jonathan), which recalls the "brook of the willows" of Isaiah (xx. 7). The name "Sippar" (willow) is attached to the valley which runs down from Kerak to the Dead Sea; but this appears to be too far north for the Zered. (WILLows, BROOK of THE.)

ZEREDA (צורדה) i.e. the Tserédh, with the def. article [ending]: יִּזְרָדָא [Vat. -pele]; Alex. יִּזְרָדָא: Sereda. The native place, according to the present Hebrew text, of Jerodam, the leader of the revolt of the northern tribes, and the first king of the "Kingdom of Israel." It occurs in I K. xi. 26 only. The LXX. (in the Vatican Codex) for Zereda substitute Sarceia, as will be seen above. This is not in itself remarkable, since it is but an instance of the exchange of and d, which is so often observed both in the LXX. and Syriac Versions, and which has not both attained to the place in the Hebrew text itself of Judg. vii. 22, where the name Zerarah is sometimes attached to a place which is perhaps else-
where called Zeredathah. But it is more remarkable that in the long addition to the history of Jeroboam which these translators insert between 1 K. xii. 24 and 25 of the Hebrew text, Sarira is frequently mentioned. In strong contrast to the merely casual mention of it in the Hebrew narrative as Jeroboam's native place, it is elevated in the narrative of the LXX. into great prominence, and becomes in fact the most important, and, it may naturally be presumed, the most impracticable fortress of Ephraim. It there appears as the town which Jeroboam fortified for Solomon in Mount Ephraim; thither he repairs on his return from Egypt; there he assembles the tribe of Ephraim, and there he builds a fortress. Of its position nothing is said except that it was "in Mount Ephraim," but from the nature of the case it must have been central. The LXX. further make it the residence of Jeroboam at the time of the death of his child, and they substitute it for Tirzah (not only on the single occasion on which the latter name occurs in the Hebrew of this narrative, but) three times over. No explanation has been given of this change of בֶּן אֶפְרַיִם into בֶּן אֶפְרַיִם. It is hardly one which would naturally occur from the usurpations either of copyists or of pronunciation. The question of the source and value of these singular additions of the LXX. has never yet been fully examined; but in the words of Dean Milman (Hist. of the Jews, iv. ed. i. 352), "there is a circumstantiality about the incidents which gives them an air of authenticity, or rather antiquity," and which it is to be hoped will prompt some scholar to a thorough investigation.

Zeredathah has been suggested as being identical with Zeredathah (2 Chr. iv. 17) and Zarthan or Zartanah. But even if the two last of these names were more similar to it than they are, there would remain the serious topographical difficulty to such an identification, that they were in the valley of the Jordan, while Zeredah was, according to the repeated statement of the LXX., on Mount Ephraim. If, however, the restricted statement of the Hebrew Bible be accepted, which names Zeredah merely as the native place of Jeroboam, and as not concerned in the events of his mature life, then there is no obstacle to its situation in that part of the tribe of Ephraim which lay in the Jordan Valley.

ZEREDATHAH (זֶרֶדַתָּה) [reading]: [Vat.] Zeredathah; [Rom. Zeredathah:] Alex. Zedatha; Zeredathah. Named (in 2 Chr. iv. 17 only) in specifying the situation of the foundations for the brass-work of Solomon's Temple. In the parallel passage in 1 K. vii. 45, Zeredathah occupies the place of Zeredathah, the rest of the sentence being literally the same; but whether the one name is merely an accidental variation of the other, or whether, as there is some ground for believing, there is a connection between Zeredah, Zeredathah,

\[a\] The is terminating the name in the A. V. is the Hebrew mode of connecting it with the particle of motion: Zeredathah, i.e. to Zeredah.

b The Ti at the commencement of this barbarous word no doubt belongs to the preceding name, Beth-shittah; and they should be divided as follows, Beth-she'tah Tamarathah. The Vatican Codex appears to be the only MS. which retains any trace of the name. The others quoted by Holmes and Parsons either submit or exclude for it, or exhibit some variation of

Zeredah, and Zarthan, we have now no means of determining. It should be observed that Zeredah has in the original the definite article prefixed to it, which is not the case with either Zeredathah or Zerera.

G.

ZERERATH (זֶרֶרְתָּה) i.e. Tzererah: Tzare'parathah; Alex. καὶ συνωρθηθη; Vulg. omits. A place named only in Judg. vii. 22, in describing the flight of the Midianite host before Gideon. The A. V. has somewhat unnecessarily added to the original obscurity of the passage, which runs as follows: "And the host fled into Beth-hassittah to Zerera, and into the brink of Abel-meholah upon Tabbath" — apparently describing the two lines of flight taken by the two portions of the horde.

It is natural to presume that Zerera is the same name as Zeredathah. They both appear to have been in the Jordan Valley, and as to the difference in the names, the termination is insignificant, and the exchange of ש and ת is of constant occurrence. Zeredathah, again, appears to be equivalent to Zerera.

It is also difficult not to suppose that Zerera is the same place with the Sarira which the LXX. present as the equivalent of Zeredah and of Tirzah. But in the way of this there is the difficulty which has been pointed out under Zereda, that the two last-named places appear to have been in the highlands of Ephraim, while Zeredathah and Zeredathah were in the Jordan Valley.

G.

ZERESH (זֶרֶשָּׁה) [Pers. gold]: Zorshah: [Alex.] Zorshatha; Joseph. Zophatha: Zeres. The wife of Haman the Agagite (Esth. v. 10, 14, vi. 13), who counselled him to prepare the gallows for Mordecai, but predicted his husband's ruin as soon as she knew that Mordecai was a Jew.

A. C. H.

ZERETH (זֶרֶת) [perh. splendor]: Zareth: [Vat. Apeth:] Alex. Zareth: Sereth. Son of Ashur the founder of Tekoa, by his wife Helah (1 Chr. iv. 7).

ZERI (זֶרֵי) [patr., Jezzer]: Zerai [Vat. pare]; Sorai. One of the sons of Jeduthun in the reign of David (1 Chr. xxiv. 9). In ver. 11 he is called Zeri.

ZEROR (זֶרְוָר) [pellicle]: Tpareth: Alex. Apeth: [Comp. Zarephath; Serour]. A Benjamite, ancestor of Ish the father of Saul (1 Sam. ix. 1).

ZERU'AH (זֶרֵעָה) [leprous]: Zaruah: [Rom.] Vat. omits: Alex. Zorah; Saru. The mother of Jeroboam the son of Nebat (1 K. xi. 21). In the additional narrative of the LXX. inserted after 1 K. xii. 24, she is called Sarira (a corruption of Zeruah), and is said to have been a harlot.

ZERUB'BABEL (זֶרֵבּוּבָבֵל) [dispersed, or

the words quoted above from the Alex. MS. The Vulgate entirely omits the name.

c Or possibly the two first of these four names should be joined, Beth-hassittah-Zerera.

d Zerera appears in Judg. vii. 22, נֶרֶת הַבֶּן פָּרָת', with the particle of motion attached, which is all but identical with זֶרֶת הַבֶּן פָּרָת', Zeredathah.
The head of the tribe of Judah at the time of the return from the Babylonish Captivity in the first year of Cyrus. His exact parentage is a little obscure, from his being always called the son of Shealtiel (Ezr. iii. 2, 8, v. 2, &c.; Hag. i. 1, 12, 14, &c.), and appearing as such in the genealogies (Matt. i. 12; Luke iii. 27), whereas in 1 Chr. iii. 19, he is represented as the son of Pedaiah, Shealtiel's brother, and consequently as Salathiel's nephew. Probably the genealogy in 1 Chr. exhibits his true parentage, and he succeeded his uncle as head of the house of Judah—a supposition which tallies with the facts that Salathiel appears as the first-born, and that no children are assigned to him.

There are two histories of Zerubbabel: the one, that contained in the canonical scriptures: the other, that in the apocryphal books and Josephus.

The history of Zerubbabel in the Scriptures is as follows: in the first year of Cyrus he was living at Babylon, and was the recognized prince (inherit) of Judah in the Captivity, what in later times was called סֶּרֶבֶתֶּל יִצְרָאֵל or סֶרֶבֶתֶּל בַּיּוֹנָד (Rhees), "the Prince of the Captivity," or "the Prince." On the issuing of Cyrus's decree he immediately availed himself of it, and placed himself at the head of those of his countrymen who were raised to build the House of the Lord, which is in Jerusalem. It is probable that he was in the king of Babylon's service, both from his having, like Daniel and the three children, received a Chaldean name [Shebazzar], and from his receiving from Cyrus the office of governor (מַלְכָּה) of Judæa. The restoration of the sacred vessels, which Nebuchadnezzar had brought from the temple, having been effected, and cups presents of silver and gold, and goats, having been bestowed upon the captives, Zerubbabel went forth at the head of the returning colony, accompanied by Jeshua the high-priest, and perhaps by the prophets Haggai and Zechariah, and a considerable number of priests, Levites, and heads of houses of Judah and Benjamin with their followers. On arriving at Jerusalem, Zerubbabel's first care was to build the altar on its old site, and to restore the daily sacrifice. [JERUSALEM.] Perhaps also they kept the Feast of Tabernacles, as it is said they did in the temple of Artaxerxes (Barn. ap. ix. 1, 9), and the Jews were allowed to celebrate it in their own country. This is the opinion of such Talmudists as suspect that vv. 4, 5, and the first half of ver. 6, are interpolated, and are merely an epitome of Neh. viii., which belongs to very different times. [ERETZ, BOOK OF: NEHEMIAH, BOOK OF.] But his great work, which he set about immediately, was the rebuilding of the Temple. Being armed with a grant from Cyrus of timber and stone for the building, and of money for the expenses of the work (Ezr. vi. 4), he had collected the materials, including cedar-trees brought from Lebanon to Joppa, according to the precedent in the time of Solomon (2 Chr. ii. 16), and got together masons and carpenters to do the work, by the opening of the second year of their return to Jerusalem. And accordingly, in the second month of the second year of their return, the foundation of the Temple was laid with all the pomp which they could command; the priests in their vestments with trumpets, and the sons of Asaph with cymbals, singing the very psalm of praise for God's unfailing mercy to Israel which was sung when Solomon dedicated his Temple (2 Chr. v. 11-14); while the people responded with a great shout of joy, "because the foundation of the house of the Lord was laid." How strange must have been the emotions of Zerubbabel at this moment! As he stood upon Mount Zion, and beheld from its summit the desolations of Jerusalem, the site of the Temple blank, David's palace a heap of ashes, his fathers' sepulchres defiled and overlaid with rubbish, and the silence of desertion and captivity hanging oppressively over the streets and waste places of what was once the joyous city; and then remembered how his great ancestor David had brought up the ark in triumph to the very spot where he was then standing, how Solomon had reigned there in all his magnificence and power, and how the petty kings and potencies of the neighboring nations had been his vassals and tributaries, how must his heart alternately have swelled with pride, and throbbed with anguish, and sunk in humiliation! In the midst of these mighty memories he was but the officer of a foreign heathen despot, the head of a feeble remnant of half emancipated slaves, the captain of a bond hardly able to hold up their heads in the presence of their hostile and jealous neighbors; and yet there he was, the son of the son of Salathiel, the great and illustrious line of the royal families of the house of David, restored to their situation; and, despite all the discommodiments attending it, we cannot doubt that Zerubbabel's faith and hope were kindled by it into fresh life.

But there were many hindrances and delays to be encountered before the work was finished. The Samaritans or Cutheans put in a claim to join with the Jews in rebuilding the Temple; and when Zerubbabel and his companions refused to admit them into partnership, they tried to hinder them from building, and hired counsellors to frustrate their purpose. They probably contrived, in the first instance, to intercept the supplies of timber and stone, and the wages of the workmen, which were paid out of the king's revenue, and then by misrepresentation to calumniate them at the court of Persia. Thus they were successful in putting a stop to the work. But at last Cyrus sent orders confirming the privileges of the reign of Cyrus, and through the eight years of Cambyses and Smerdis. Nor does Zerubbabel appear quite blameless for this long delay. The difficulties in the way of building the Temple were not such as need have stopped the work: and during this long suspension of sixteen years Zerubbabel and the rest of the people had been busy in building costly houses for themselves, and one might even suspect that the cedar-wood which had been brought for the Temple had been used to decorate private dwellings (comp. the use of בֵּית in Hag. i. 4, and 1 K. vii. 3, 7). They had, in fact, ceased to care for the desolation of the Temple (Hag. i. 1-2), but had not noticed that God was rebuilding the holiness of the temple by withholding his blessing from their labors (Hag. i. 5-11). But in the second year of Darius light dawned upon the darkness of the colony from Babylon. In that year— it was the most memorable event in Zerubbabel's life—the spirit of prophecy suddenly blazed up with a most brilliant light amongst the returned
represents; and the long silence which was to ensure till the ministry of John the Baptist was preceded by the stirring utterances of Haggai and Zechariah. Their words fell like sparks upon tinder. In a moment Zerubbabel, raised from his apathy, threw his whole strength into the work, zealously seconded by Jeshua and all the people. [Ezra xii.] Under-terred by a fresh attempt of their enemies to hinder the progress of the building, they went on with the work even while a reference was being made to Darius; and when, after the original decree of Cyrus had been found at Eschatana, a most gracious and favorable decree was issued by Darius, enjoin- ing Tattenai and Shetharboznai to assist the Jews with whatsoever they had need of at the king's ex- pense, the work advanced so rapidly that on the third day of the month Adar, in the sixth year of Darius, the Temple was finished, and was forthwith dedicated with much pomp and rejoicing. It is difficult to calculate how great was the effect of the prophecies of Haggai and Zechariah in sustaining the courage and energy of Zerubbabel in carrying his work to completion. Addressed, as many of them were, directly to Zerubbabel by name, speaking, as they did, most glorious things of the Temple which he was building, conveying to Zerubbabel himself extraordinary assurances of Divine favor, and compelling with their magnificent and consolatory predictions of the future glory of Jerusalem and Judah, and of the conversion of the Gentiles, they necessarily exercised an immense influence upon his mind (Hag. i. 13, 14; ii. 4-9, 21-23; Zech. iv. 6-10, viii. 3-8, 9, 18-23). It is not too much to say that these prophecies upon Zerubbabel were the immediate instrument by which the church and commonwealth of Judah were preserved from de- struction, and received a life which endured till the coming of Christ.

The only other works of Zerubbabel which we learn from the Scripture history are the restoration of the courses of priests and Levites, and of the provision for their maintenance, according to the institution of David (Ezr. vi. 18; Neh. xii. 47); the registering the returned captives according to their genealogies (Neh. vii. 5); and the keeping of a Passover in the seventh year of Darius, with which last event ends all that we know of the life of Zerubbabel the son of Shealtiel: a man inferior to few of the great characters of Scripture, whether we consider the perils undergoing to which he devoted himself, the importance, in the economy of the Divine government, of his work, his courage and faith, or the singular distinction of being the object of so many and such remarkable prophetic utterances.

The apocryphal history of Zerubbabel, which, as usual, Josephus follows, may be summed up in a few words. The story told in 1 Esdr. iii.-viii. is, that on the occasion of a great feast made by Darius on his accession, three young men of his body-guard had a contest who should write the wisest sentence. That one of the three (Zerubbabel) writing "Women are strongest, but above all things Truth beareth away the victory;" and afterwards defending his sentence with much eloquence, was decried by accusation to be the wisest, and claimed for his reward, at the king's hand, that the king should perform his vow which he had vowed to rebuild Jerusalem and the Temple. Upon which the king gave him letters to all his treasurers and governors on the other side the river, with grants of money and exemption from taxes, and sent him to rebuild Jerusalem and the Temple, accompanied by the families of which the list is given in Ezra ii., Neh. viii.; and then follows, in utter confusion, the history of Zerubbabel as given in Scripture. Apparently, too, the compiler did not perceive that Sheshbazzar (Sheshbazzar) was the same person as Zerubbabel. Josephus, indeed, seems to identify Sheshbazzar with Zerubbabel, and tries to reconcile the story in 1 Esdr. by saying, "Now it so fell out that about this time Zoroabel, who had been made governor of the Jews that had been in captivity, came to Darius from Jerusalem, for there had been an old friend-ship between him and the king," etc. (Ant. xi. 3). But it is obvious on the face of it that this is simply Josephus's invention to reconcile 1 Esdr. with the canonical Ezra [Esthe, First Book of]. Josephus has also another story (Ant. xi. 4, § 9) which is not found in 1 Esdr. of Zerubbabel going on an embassy to Darius to accuse the Samaritan governors and hippocræ of withholding from the Jews the grants made by Darius out of the royal treasury, for the offering of sacrifices and other Temple expenses, and of his obtaining a decree from the king commanding his officers in Samaria to supply the high-priest with all that he required. But that this is not authentic history seems pretty certain from the names of the governors, Sambathus being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), Sambathai being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), Sambathai being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), Sambathai being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), Sambathai being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), Sambathai being an imitation or corruption of Sambathai, Chronicler of Tattenai (or Phanthamni, as in i. x.), ...
Zerubbabel, the foremost man of his country, as a double genealogy, one representing him as descending from all the kings of Judah, the other as the descendant indeed of David, but through a long line of private and unknown persons. We find him, filling the position of Prince of Judah at a time when, as far as the history informs us, the royal family was utterly extinct. And though, if descended from the last king, he would have been his grandson, neither the history, nor the contemporary prophets, nor Josephus, nor the apocryphal books, give the least hint of his being a near relative of Jeconiah, while at the same time the natural interpretation of Jer. xxvi. 20 shows the daughter of Nabash as childless. The inference from all this is obvious. Zerubbabel was the legal successor and heir of Jeconiah's royal estate, the grandson of Neri, and the lineal descendant of Nathan the son of David. [Nalathiel: Genealogy of Christ. For Zerubbabel's descendants see Hananiah 8.]

In the N. T. the name appears in the Greek form of Zorobabel. A. G. H.

ZERUHIH (7367, and once 7368: Zorohai; [Alex. 1 Sam. xxvi. 6, Zoroues; [Sourri.]) A woman who, as long as the Jewish records are read, will be known as the mother of the three leading heroes of David's army — Abishai, Joab, and Asaeh — the sons of Zeruiah. She and Abigail are specified in the genealogy of David's family in 1 Chr. ii. 13-17 as "sisters of the sons of Jesse" (ver. 10; comp. Joseph. Ant. vii. 10, § 1). The expression is in itself enough to raise a suspicion that she was not a daughter of Jesse, a suspicion which is corroborated by the statement of 2 Sam. xvii. 25, that Abigail was the daughter of Nahash. Abigail being apparently the younger of the two women, it is a probable inference that they were both the daughters of Nahash, but whether this Nahash be — as Professor Stanley has ingeniously conjectured — the king of the Ammonites, and the former husband of Jesse's wife, or some other person unknown, must forever remain a mere conjecture. [David, vol. i. p. 552.] Other explanations are given under Nahash, vol. iii. p. 2053. Her relation to Jesse (in the original Ishai) is expressed in the name of her son Abishai.

Of Zeruiah's husband there is no mention in the Bible. Josephus (Ant. vii. 1, § 3) explicitly states his name to have been Souri (2 Novip), but no corroboration of the statement appears to have been discovered in the Jewish traditions, nor does Josephus himself refer to it again. The mother of such remarkable sons must herself have been a remarkable woman, and this may account for the fact, if not unique, that the family is always called after her, and that her husband's name has not been considered worthy of preservation in the sacred records.

ZE Companion (7369, [perh. ocie-tree: Zorab [Vat. Zorai], Zorah: Alex. Zorhova, Zorba: Zer- than, Zeritha.]. The son of Laadan, a Gershomite Levite (1 Chr. xxiii. 8). In 1 Chr. xvi. 22 he appears as the son of Jehiel, or Jehidi, and so the grandson of Laadan.

ZE THAN (7375: Zorhad: Alex. Htrav: Zor- than. A Benjamine of the sons of Bilhan (1 Chr. vii. 10).

ZETHAR (7379, [perh. star: Abaras, Zelthar). One of the seven enarchs of Alasmernus who attended upon the king, and were commanded to bring Vashti into his presence (Esth. 1. 16).

ZI'A (7381: Zori: [Comp. Zad: Zile]. One of the Gallites who dwelt in Bashan (1 Chr. v. 13).

ZI'BA (7382, once 7383: [Rom. 1187. Vat.] Zibba: Alex. Zibba, and in ch. vii. 1, 2, 5, 6, 7, Zibus; Joseph. Zibba, Sibba). A person who played a prominent part, though with no credit to himself, in one of the episodes of David's history (2 Sam. ix. 2-12, xii. 1-4, xiv. 17, 21). He had been a slave (1725) of the house of Saul before the overthrow of his kingdom, and (probably at the time of the great Philistine incursion which proved so fatal to his master's family) had been set free (Joseph. Ant. vii. 5, § 5). The opportunities thus afforded him he had so far improved, that when first encountered in the history he is head of an establishment of fifteen sons and twenty slaves. David's reception of Mephibosheth had the effect of throwing Ziba with his whole establishment back into the state of bondage from which he had so long been free. It reduced him from being an independent landholder to the position of a mere dependent. The knowledge of this fact gives the key to the whole of his conduct towards David and towards Mephibosheth. Beyond this the writer has nothing to add to his remarks on Ziba under the head of Mephibos-

a The adverse judgment here expressed, though it may rest on a probability, strikes us as more decisive than the record warrants. In Ziba's "con-}
An allusion is made to some unrecorded fact in the history of the Horites in the passage, “this [was that] Abiah that found the mules in the wilderness, as he led the asses of Zebon his father” (Gen. xxxix. 21). The word rendered “mules” in the A. V. is the Heb. בְּנִים, perhaps the oxen of giants, as in the reading of the Sam. בְּנִים, and so also Onkelos and Pseudo-Jonathan. Gesenius prefers “hot springs,” following the Vulg. rendering. Zebon was also one of the dukes, or phylarchs, of the Horites (ver. 21). For the identification of Beeri, the father of Judith the Horrite (Gen. xxvi. 24) see Beerit, and see also Anah. E. S. P.

ZIBTA (תִּבְתָּה) [voc.: ZeShá: [Vat. 1:5: See Shá: [Vat. 1:5:a Beiri]. A Benjamite, apparently, as the text now stands, the son of Shabariah by his wife Hodesh (1 Chr. viii. 9).

ZIBTIA (תִּבְתְיָה) [voc.: ZeShá: [Vat. 1:5: See Shá: [Vat. 1:5:a Beiri]. A Benjamite, apparently, as the text now stands, the son of Shaharaim by his wife Hodesh (1 Chr. viii. 9).

ZICHRI (זֶכֶרִי) [remembered, famous]. Zekhirí: Zekheri. 1. Son of Zabur the son of Kish (1 Chr. vii. 21). His name is incorrectly given in modern editions of the A. V. as Zithri, though it is printed Zekhiri in the ed. of 1611.

2. (Zekhirí [Vat. paki]; Alex. Zekhri) A Benjamite of the sons of Shimaiah (1 Chr. viii. 19).

3. (Zekhirí [Vat. paki]; Alex. Zekhri) A Benjamite of the sons of Shashak (1 Chr. viii. 23).

4. (Zekhirí [Vat. Zekhri]; Alex. Zekhri) A Benjamite of the sons of Jeroham (1 Chr. viii. 27).

5. (Zekhirí [Vat. Zekhri]; Alex. Zekhri) Son of Asaph, elsewhere called Zered and Zaccieth (1 Chr. ix. 15).

6. (Zekhirí [Vat. Zekhri]; Alex. Zekhri) A descendant of Eleazar the son of Moses (1 Chr. xxvi. 25).

7. The father of Eleazer, the chief of the Benjamites in the reign of David (1 Chr. xxvi. 16).

8. (Zekhirí [Vat. Zekhri]; Alex. Zekhri) Of the tribe of Judah. His son Amasiath commanded 200,000 men in Jehoshaphat's army (2 Chr. xxi. 16).

9. (Zekhriyés: [Comp. Zekhirí]) Father of Eliahshaph, one of the conspirators with Jehoiada (2 Chr. xxiii. 1).

10. (Zekhirí [Vat. Ezechri; Alex. E'Cz'hri]) An Ephrahite hero in the invading army of Pekah, the son of Remaliah (2 Chr. xxvii. 7). In the battle which was so disastrous to the kingdom of Judah, Maaseiah the king's son, Azrikam, the prefect of the palace, and Elkanah, who was next to the king, fell by the hand of Zichri,

11. (Zekhirí [Vat. FA: Zekhri]: [Vat. Zekhri]) Father or ancestor of Azgai (14. Neh. xi. 9). He was probably of Benjamin.

12. [Vat. 1:5: Alex. FA:1 omis.] A priest of the family of Abijah, in the days of Joaiah the son of Jeshua (Neh. xii. 17). W. A. W.

ZID'DIM (זִידְדִים) [with the def. article hiddéim, Distr.]: τὸν θησαυρὸν: Asseclina). One of the fortified towns of the allotment of Nophath, according to the present condition of the Hebrew text (Josh. xiii. 35). The translators of the Vat. LXX. appear to have read the word in the original, בִּידְדִים, “the Tyrians,” while those of the Peshito-Syriac, on the other hand, read it as יִדְדִים, Zidon. These readings were probably both influenced by the belief that the name next following that in question, namely, Ziz, was that of Tyre. But this is more than doubtful, and indeed Tyre and Zidon were included in the allotment of Nachaloth, but of Asher (xix. 28, 29). The Jerusalem Talmud (Megillah, i.) is probably nearer the mark in identifying hat-T diblim with Kifý Chittit, which Schwarz (p. 182) with much probability takes to be the present Hattin, at the northern foot of the well-known Kurna Hattin, or “Horos of Hattin,” a few miles west of Tiberias. This identification falls in with the fact that these next names in the list are all known to have been connected with the lake.

ZIDKUVAH (זְדֵקְיוֹנָה) [justice of Jehovah]. Zedékías: Zekkibás. A priest, or family of priests, who signed the covenant with Nehemiah (Neh. x. 1). This name is identical with that elsewhere in the A. V. rendered Zedekiah.

ZIDON or SİDON (צִידוֹן) and ZİDON. Zidown, Zidón, Vat. Zidonion, Vat. Zidonion, Vat. Zidonion, Vat. Zidon. Zidon or Sidon, or Sidon was a city of Phœnicia, in the region of the Mediterranean Sea, in latitude 34° 34' 05" N., less than twenty English miles to the north of Tyre. Its Hebrew name, Tzidon, signifies “Fishing,” or “Fishery” (see Gesenius, s. v.). Its modern name is Soube. It is situated in the narrow plain between the Lebanon and the sea, to which it once gave its own name (Joseph. Ant. v. 9; § 1, τὸ μεγάλὸν Σιδόνος πόλις) at a point where the mountains recede to a distance of two miles (Keurick's Phœnicia, p. 19). Adjacent to the city there are luxuriant gardens and orchards, in which there is a profusion of the finest fruit trees suited to the climate. “The plain is flat and low,” says Mr. Porter, author of the Handbook for Syria and Palestine, “but near the coast line rises a little hill, a spur from which shoots out a long and hundred yards into the Tyrian sea in a south-western direction. On the northern slope of the promontory thus formed stands the old city of Zidon. The hill behind the south is covered by the citadel” (Enc. Britannica, 8th edition, s. v.).

From a Biblical point of view, this city is inferior in interest to its neighbor Tyre, with which its name is so often associated. Indeed, in all the passages above referred to in which the two cities are mentioned together, Tyre is named first—a circumstance which might at once be deemed accidental, or the mere result of Tyre's being the nearest of the two cities to Palestine, were it not that some doubt on this point is raised by the order being reversed in two works which were written at a period after Zidon had enjoyed a long temporary superiority (Ex. iii. 7; 1 Chr. xii. 4). However this may be, it is certain that, of the two, Tyre is of the greater importance in reference to the writings of the most celebrated Hebrew prophets; and the splendid prophecies directed against Tyre, as a single colossal power (EZ. xxvi, xxvii, xxviii. 1-19; Is. xxxiii.), have not parallel in the
shorter and vaguer utterances against Zidon (Ex. xxxviii. 21-23). And the predominant Biblical interest of Tyre arises from the prophecies relating to its destiny.

If we could believe Justin (xviii. 3), there would be no doubt that Zidon was of greater antiquity than Tyre, as he says that the inhabitants of Zidon, when their city had been reduced by the king of Ascalon, founded Tyre the year before the capture of Troy. Justin, however, is such a weak authority for any disputed historical fact, and his account of the early history of the Jews, wherein we have some means of testing his accuracy, seems to be so much in the nature of a romance (xxxvi. 2) that, without laying stress on the unreasonableness of any one's assuming to know the precise time when Troy was taken, he cannot be accepted as an authority for the early history of the Phoe-

Modern Saida — Zidon or Sidon (Kitto).
wise, by Sidonians being used as the generic name of the Phoenicians or Canaanites (Josh. xiii. 6; Judg. xviii. 7); and by the reason assigned for there being no deliverer to Laish when its possessors were about to be put out of existence (Judg. xi. 29; Judges, c.); whereas, if Tyre had been of equal importance, it would have been more natural to mention Tyre, which possessed substantially the same religion, and was almost twenty miles nearer (Judg. xviii. 28). It is in accordance with the inference to be drawn from these circumstances that Homer gives the poems Tyre is not named, while there is mention both of Sidon and the Sidonians (Old. xiv. 425; H. xxiii. 743); and the land of the Sidonians is called “Sidonia” (Old. xiii. 285). One point, however, in the Homeric poems deserves to be specially noted concerning the Sidonians, that they are never here mentioned as traders, or praised for their nautical skill, for which they were afterwards so celebrated (Hercod. vii. 44, 96). The traders are invariably known by the general name of Phoenicians, which would, indeed, include the Sidonians: but still the special praise of Sidonians was as skilled workmen. When Achilles distributed prizes at the games in honor of Patroclus, he gave as the prize of the swifted runner, a large silver bowl for mixing wine with water, which was very naturally given to the skillful Sidonians, but which Phoenicians had brought over the sea (H. xxiii. 743, 744). And when Menelaus wished to give to Telenarchus what was most beautiful and most valuable, he presented him with a similar mixing-bowl of silver, with golden rim, a divine work, the work of Hephaestus, which had been a gift to Menelaus himself from Phoenicians, king of Sidon (Old. iv. 614-618, and Old. xvi. I. e.). And again, all the beautifully embroidered robes of Andromache, from which she selected one as an offering to Athene, were the productions of Sidonian women, which Paris, when coming to Troy with Helen, had brought from Sidon (H. i. 289-293). But in no case is anything mentioned as having been brought from Sidon in Sidonian vessels or by Sidonian sailors. Perhaps at this time the Phoenician vessels were principally fitted out at sea-ports of Phoenicia to the north of Sidon.

From the time of Solomon to the invasion of Nebuchadnezzar Zidon is not often directly mentioned in the Bible, and it appears to have been subordinate to Tyre. When the people called “Zidonians” is mentioned, it sometimes seems that the Phoenicians of the plain of Zidon are meant, as, for example, when Solomon said to Hiram that there was none among the Jews that could skill to hew timber like the Zidonians (I K. v. 6); and possibly, when Ethbaal, the father of Jezebel, is called their king (1 K. xvi. 31), who, according to Josephus (Ant. viii. 13, § 2), was king of the Tyrians. This may likewise be the meaning when Ashdoreth is called the Goddess, or Abomination, of the Zidonians (1 K. xi. 5, 33; 2 K. xiii. 13), or when women of Solomon are mentioned in reference to Solomon (1 K. xi. 1). And this seems to be equally true if the phrases, “daughter of Zidon,” and “merchants of Zidon,” and even once of “Zidon itself” (Is. xxii. 2, 4, 12) in the prophecy of Isaiah against Tyre. There is no doubt, however, that Zidon itself, the city properly so called, was threatened by Joel (iii. 4) and Jeremiah (xxvii. 3). Still, all that is known respecting it during this epoch is very scanty, amounting to scarcely more than that one of its sources of gain was trade in slaves, in which the inhabitants did not shrink from selling inhabitants of Palestine [PERSIANS, iii. 2518 b?]; that the city was governed by kings (Jer. xxvii. 3 and xxv. 22); that, previous to the invasion of Nebuchadnezzar, it had furnished mariners to Tyre (Ex. xxviii. 8); that, at one period, it was subject, in some sense or other, to Tyre; and that, when Shalmaneser king of Assyria invaded Phoenicia, Zidon seized the opportunity to conquer Tyre, which was the subject of one city to another city only twenty miles off; inhabited by men of the same race, language, and religion; but the fact is rendered conceivable by the relation of Athens to its allies after the Persian war, and by the history of the Italian republics in the Middle Ages. It is not improbable that its rivalry with Tyre may have been industrial in inducing Zidon, more than a century later, to submit to Nebuchadnezzar, apparently without offering any serious resistance.

During the Persian domination, Zidon seems to have attained its highest point of prosperity; and it is recorded that, towards the close of that period, it far excelled all other Phoenician cities in wealth and importance (Diod. xvi. 44; Mela, i. 12). It was at this time that, according to Herodotus, Nebuchadnezzar had tended not only to weaken and impoverish Tyre, but likewise to enrich Zidon at the expense of Tyre; as it was an obvious expedient for any Tyrian merchants, artisans, and sailors, who deemed resistance useless or unwise, to transfer their residence to Zidon. However this may be, in the expedition of Xerxes against Greece, the Sidonians were allowed to be in the Persian fleet, and were a prominently important element of his naval power. When, from a hill near Abilis, Xerxes witnessed a boat race in his fleet, the prize was gained by the Sidonians (Herod. vii. 44). When he reviewed his fleet, he sat beneath a golden canopy in a Sidonian galley (vii. 100); when he wished to examine the mouths of the river Peneus, he entrusted himself to a Sidonian galley, as was his wont on similar occasions (vii. 128); and when the tyrants and general officers of his great expedition sat in order of honor, the king of the Sidonians sat first (viii. 67). Again, Herodotus states that the Phoenicians supplied the best vessels of the whole fleet; and of the Phoenicians, the Sidonians (vii. 96). And lastly, as Homer gives a vivid idea of the beauty of Achilles by saying that Xiron (three-named) was the most beautiful of all the Greeks who went to Troy, after the son of Pelus, so Herodotus completes the triumph of the Sidonians, when he praises the vessels of Artemisia (probably for the daring of their crews), by saying that they were the most renowned of the whole fleet, “after the Sidonians” (vi. 9).

The prosperity of Sidon was suddenly cut short by an unsuccessful revolt against Persia, which led to one of the most disastrous catastrophes recorded in history. Unlike the siege and capture of Tyre by Alexander the Great, which is narrated by several writers, and which is of commanding interest through its relation to such a renowned conqueror, the fate of Sidon is only known through the history of Dio Diodorus (xiv. 42-45), and is mainly connected with Artaxerxes Ochus (c. 580-528), a monarch who is justly regarded with mingled aver- sion and contempt. Hence the calamitous over- throw of Sidon has not, perhaps, attracted so much
attention as it deserves. The principal circumstances were these. While the Persians were making preparations in Phenicia to put down the revolt in Egypt, some Persian satraps and generals behaved oppressively and insolently to Sidonians in the Sidonian division of the city of Tripolis. On this, the Sidonian people projected a revolt; and during their first concerted arrangements with other Phenician cities, and made a treaty with Nectanebus, they put their designs into execution. They commenced by committing outrages in a residence and park (μαγαθέας) of the Persian king; they burnt a large store of fodder which had been collected for the Persian cavalry; and they seized and put to death the Persians who had been guilty of insults towards the Sidonians. Afterwards, under their King Tennes, with the assistance from Egypt of 4,000 Greek mercenaries under Mentor, they expelled the Persian satraps from Phenicia; they strengthened the defenses of their city, they equipped a fleet of 100 triremes, and prepared for a desperate resistance. But their King Tennes proved a traitor to their cause — and in performance of a compact with Oechus, he betrayed into the king's power one hundred of the most distinguished citizens of Sidon, who were all shot to death with javelins. Five hundred other citizens, who went out to the king with ensigns of supplication, shared the same fate; and by concert between Tennes and Mentor, the Persian troops were admitted within the gates, and occupied the city walls. The Sidonians, before the arrival of Oechus, had burnt their vessels to prevent any one's leaving the town; and when they saw themselves surrounded by the Persian troops, they adopted the desperate resolution of shutting themselves up with their families, and setting fire each man to his own house (v. c. 531). Forty thousand persons are said to have perished in the flames. Tennes himself did not save his own life, as Oechus, notwithstanding his promise to the contrary, put him to death. The privilege of searching the ruins was sold for money.

After this dismal tragedy, Sidon gradually recovered from the blow; fresh immigrants from other cities must have settled in it; and probably many Sidonian sailors survived, who had been putting their trade elsewhere in merchant vessels at the time of the capture of the city. The battle of Issus was fought about eighteen years afterwards (v. c. 531), and then the inhabitants of the restored city opened their gates to Alexander of their own accord, from hatred, as is expressly stated, of Pharias and the Persians (Arrian, Indic. III. b. 15). The impolicy, as well as the cruelty of Oechus in his mode of dealing with the revolt of Sidon now become apparent; for the Sidonian fleet in joining Alexander was an essential element of his success against Tyre. After aiding to bring upon Tyre as great a calamity as had afflicted their own city, they were so far merciful that they saved the lives of many Tyrians by concealing them in their ships, and then transporting them to Sidon (Q. Curtius, iv. 4, 19).

From this time Sidon, being dependent on the fortunes of war in the contests between the successors of Alexander, ceases to play any important political part in history. It became, however, again a flourishing town, and Polyaenus (c. 20) incidentally mentions that Antiochus in his war with Ptolemy Philopator encamped over against Sidon (v. c. 218), but did not venture to attack it from the abundance of its resources, and the great number of its inhabitants, either natives or refuges. Subsequently, according to Josephus (Ant. xiv. 19, § 2), Julius Caesar wrote a letter respecting Hyrcanus, which he addressed to the "Magistrates, Council, and Denes of Sidon." This shows that up to that time the Sidonians enjoyed the forms of liberty, though Dion Cassius says (Siv. 7) that Augustus, on his arrival in the East, deprived them of it for sedition conduct. Not long after, Strabo, in his account of Phenicia, says of Tyre and Sidon, "Both names had formerly, and now; but which should be called the capital of Phenicia, is a matter of dispute between the inhabitants" (xiv. p. 556). He adds that it is situated on the mainland, on a fine naturally-formed harbor. He speaks of the inhabitants as cultivating the sciences of arithmetic and astronomy; and says that the best opportunities were afforded in Sidon for acquiring a knowledge of the grammar and of all other branches of philosophy. He adds, that in his time there were distinguished philosophers, natives of Sidon, as Boethus, with whom he studied the philosophy of Aristotle, and his brother Diobotaus. It is to be observed that both these names were Greek; and it is to be presumed that in Strabo's time, Greek was the language of the educated classes at least, both in Tyre and Sidon. This is nearly all that is known of the state of Sidon when it was visited by Christ. It is about fifty miles distant from Nazareth, and is the most northern city which is mentioned in connection with his journeys. Piny notes the manufacture of glass at Sidon (Hist. Nat. v. 17, 19); and during the Roman period we may conceive Tyre and Sidon as two thriving cities, each having an extensive trade, and each having its staple manufacture; the latter of glass, and Tyre of purple dyes from shell-fish.

There is no Biblical reason for following minutely the rest of the history of Sidon. It shared generally the fortunes of Tyre, with the exception that it was several times taken and retaken during the wars of the Crusades, and suffered accordingly more than Tyre previous to the fatal year 1291 A.D. Since that time it never seems to have fallen quite so low as Tyre. Through Fakhr ed-Din, emir of the Druses between 1594 and 1654, and the settlement at Sayda of French commercial

a In an excellent account of this revolt, Bp. Thirlwall seems to have regarded Diodorus as meaning Sidon itself by the words εἰς τὴν Σιδόνιαν, xvi. 41 (Hist. of Greece, v. 179); and Mihet, in his French translation of Diodorus (Éléments Historique de Diodore de Sicile, Paris, 1837, tom. v. 79), actually translates the words by "Sidon." The real meaning, however, seems to be as stated in the text. Indeed, otherwise there was no sufficient reason for mentioning Triopilia as particularly connected with the causes of the war.

b Piny elsewhere (Hist. Nat. xxxvi. 65 [29]) gives an account of the supposed accidental invention of glass in Phenicia. The story is that some merchants on the seashore made use of some heaps of natron to support their glass vessels; and that when the current was submitted to the action of fire in conjunction with the sea sand, a translucent vitreous stream was seen to flow along the ground. This story, however, is now discredited; as it requires intense furnace heat to produce the fusion. See article "Glass" in the Encyclopaedia Britannica, 5th edition.
houses, it had a revival of trade in the 17th and part of the 18th century, and became the principal city on the Syrian coast for commerce between the east and the west (see *Memoires du Chetelier d’Avrinc*, Paris, 1733, tom. i. p. 294-379). This was put to an end at the close of last century by violence and oppression (Ritter’s *Ermlkaule*, siedl.-rehut. Theil, erste Abtheilung, dritte Buch, pp. 405, 406), closing a period of prosperity in which the population of the city was at one time estimated at 20,000 inhabitants. The population, if it ever approached such a high point, has since materially decreased, and apparently does not now exceed 5,000; but the town still shows signs of former wealth, and the houses are better constructed and more solid than those at Tyre, being many of them built of stone. The chief exports are silk, cotton, and mulberries (Robinson’s *Itineraire Recherches*, ii. 418, 419). As a protection against the Turks, its ancient harbor was filled up with stones and earth by the orders of Fakhri ed-Din, so that only small boats can now enter it; and larger vessels anchor to the northward, where they are only protected from the south and east winds (Porter’s *Handbook for Syria and Palestine*, 1858, p. 398). The trade between Syria and Europe now mainly passes through Beirut, as its most important commercial centre: and the natural advantages of Beirut in this respect, for the purposes of modern navigation, are so decided that it is certain to maintain its present superiority over Sidon and Tyre.

In conclusion it may be observed, that while in our own times no important remains of antiquity have been discovered at or near Tyre, the case is different with Sidon. At the base of the mountains to the east of the town there are numerous sepulchres in the rock, and there are likewise sepulchral caves in the adjoining plain (see Porter, *Encyclop. Britannica*, i. c.). “In January, 1855,” says Mr. Porter, “one of the sepulchral caves was accidentally opened at a spot about a mile S. E. of the city, and in it was discovered one of the most beautiful and interesting Phoenician monuments in existence. It is a sarcophagus . . . the lid of which was hewn in the form of a mummy with the face bare. Upon the upper part of the lid is a perfect Phoenician inscription in twenty-two lines, and on the head of the sarcophagus itself is another almMOST as large.” This sarcophagus is now in the Nineveh division of the Sculptures in the Louvre. At first sight, the material of which it is composed may be easily mistaken; and it has been supposed to be black marble. On the authority, however, of M. Suchard of Paris, who has examined it very closely, it may be stated that the sarcophagus is of black syenite, which, as far as is known, was abundant in Egypt than elsewhere. It may be added that the features of the countenance on the lid are decidedly of the Egyptian type, and the head-dress is Egyptian, with the head of a bird sculptured on what might seem the place of the right and left shoulder. There can therefore be little reason to doubt that this sarcophagus was either made in Egypt, and sent thence to Sidon, or that it was made in Phoenicia in imitation of similar works of art in Egypt. The inscriptions themselves are the longest Phoenician inscriptions which have come down to our times. A translation of them was published by Professor Dietrich at Marburg in 1855, and by Professor Ewald at Göttingen in 1856.* The preludious idea of them seems to be to warn all men, under penalty of the monarch’s curse, against opening his sarcophagus or disturbing his repose for any purpose whatever, especially in order to search for treasures, of which he solemnly declares there are none in his tomb. The king’s title is “King of the Sidonians”; and, as is the case with Khethub, mentioned in the book of Kings (1 K. xvi. 31), there must remain a certain doubt whether this was a title ordinarily assumed by kings of Sidon, or whether it had a wider signification. We learn from the inscription that the king’s mother was a priestess of Ashoreth. With regard to the precise date of the king’s reign, there does not seem to be any conclusive indication. Ewald conjectures that he reigned not long before the 11th century B.C.

E. T.

---

* Zidon or Sidon has points of contact also with the N. Testament. The Saviour himself in all probability visited that city (certainly if we read Mark vii. 24, xxii. 14, 30, xxxii. 30, according to the best opinion), and at all events passed near it in his excursion across the southern spur of Lebanon and back thence into Decapolis (Matt. xv. 21 ff.; Mark vii. 24 ff.). The Apostle Paul touched at this port on his voyage to Rome, and found Christians there whom the courtesy of Julius permitted him to visit (Acts xxvii. 5). Very possibly a church had existed there from the time of the dispersion of the disciples from Jerusalem after the death of Stephen, some of whom went into Phoenicia (Acts xi. 19).

Among the antiquities of Zidon may be mentioned the immense stones which form the north-west angle of the inner harbor, each one some ten feet square . . . and columns, sarcophagi, broken statuary, and other evidences of a great city found everywhere in the garden, with the oldest trees growing in a fertile soil many feet thick above them” (Thomson, *Laud and Book*, i. 154 f.). Greek and Roman coins are not uncommon, having on them the commercial emblem of a ship. Zidon has become in our own day the seat of a flourishing mission from this country, with outposts at various points in that part of Syria.

H.

---

* Zidonians (Zidon, Ez. xxiii. 30. מִדְנִי, מַדְנִי, מַדְנִים, and once (1 K. xi. 33) מְדַנִּים; Zidonians, [Vat. Sidonians], exc. Ez. xxiii. 30, στρατηγός Ασσύριου: Sidunni, exc. Ez. xxiii. 30, τουρσόνιος). The inhabitants of Zidon. They were among the nations of Syria and Egypt in practice the Israelites in the art of war (Judg. iii. 3), and Levy (inserted in Kitto’s *Bibl. Cyclopaedia*, iii 1181), is no doubt as trustworthy as any other. H.
and colonies of them appear to have spread up above the hill country from Lebanon to Mizpeothoth-naim (Josh. xiii. 4, 6), whence in later times they hewed cedar-trees for David and Solomon (1 Chr. xxii. 4). They oppressed the Israelites on their first entrance into the country (Judg. x. 12), and appear to have lived a luxurious, reckless life (Judg. xviii. 7): they were skillful in hewing timber (1 K. v. 6), and were employed for this purpose by Solomon. They were idolaters, and worshipped Ashtoreth as their tutelary goddess (1 K. xi. 3, 35; 2 K. xxi. 10), as well as the sun-god Baal, from whom their king was named (1 K. xvi. 31). The term Zidonians among the Hebrews appears to have been extended in meaning as that of Phoenicians among the Greeks.

In Ez. xxxii. 30, the Vulgate read Ḫuṣa, the LXX. probably Ḫuṣa, for Ḫuṣu. Zidonian women ( PIXI 'xi: Sidoniat: Sidonite) were in Solomon's harem (1 K. xi. 1).

Z'IWA ( PIXI 'ξίωα) [dry, thirsty]: Ζωιθία, Ζώδ: Alex. Ζώονα, Ζυά: Sibor, Sober. 1. The children or posterity of Nebuchadnezzar returned with Zerubbabel (Ezr. ii. 43; Neh. vii. 46). 2. (Var. [Rom. Alex. F-A] oniś; [F-A] Ziwā: Zoint): Chief of the Nethinim in the Neh. xii. 21. The name is probably that of a family, and so identical with the preceding.

ZIK'LAC ( PIXI 'ζίκλακ) and twice ƪזיוֹקילקכ [vindaling, bending, Firstl]: Ζάκλακα, once Ζακλακα: in Chr. [Var.] Zακλακα, Zακλακα: Alex. Ζακλακα, but also Ζακλακα, Ζακλακα: Sīkā: Joseph. Ζακλακα: Sīkē: A place which possesses a special interest from its having been the residence and the private property of David. It is first mentioned in the catalogue of the towns of Judah in Josh. xv., where it is enumerated (ver. 31) amongst those of the extreme south, between Hormah (or Zephath) and Madmannah (possibly Beth-narbooth). It next occurs, in the same connection, amongst the places which were allotted out of the territory of Judah to Simeon (xix. 5). We next encounter it in the possession of the Philistines (1 Sam. xxvii. 11). This is the same place as that which is occupied by Ziklag in the s. 20).

ZIL'LAH ( PIXI 'זיללה) [shorn]: Ζηλάδ: Sella. One of the two wives of Lamech the Cainite, to whom he addressed his song (Gen. iv. 20, 22, 25). She was the mother of Tubal-Cain and Naamah. Dr. Kalisch (Comm. on Gen.) regards the names of Lamech's wives and of his daughter as significant of the transition into the period of art which took place in his time, and the corresponding change in the position of the woman. Naamah signifies the lovely, beautiful woman; whilst the wife of the first man was simply Eve, the Ilegiving. The women were, in the age of Lamech, no more regarded merely as the propagators of the human family: beauty and gracefulness began to command homage.

— which follows from the narrative of 1 Sam. xxx (see 9, 10, 21)—that it was north of the brook Besor. The word employed in 1 Sam. xxvii. 5, 7, 11, to denote the region in which it stood, is peculiar. It is not hes-Shelich, as it must have been had Ziklag stood in the ordinary lowland of Philis-

tia, but hes-Sā'deh, which Professor Stanley (S. of P. App. § 15) renders "the field." On the whole, though the temptation is strong to suppose (as some have suggested) that there were two places of the same name, the only conclusion seems to be that Ziklag was in the south or Negeb country, with a portion of which the Philistines had a connection which may have lasted from the time of their residence there in the days of Abraham and Isaac. It is remarkable that the word śā'deh is used in Gen. xiv. 7, for the country occupied by the Amalekites, which seems to have been situated far south of the Dead Sea, or near Kadesh. The name of Paran also occurs in the same passage. But further investigation is necessary before we can remove the residence of Nabal so far south. His Moon would in that case become, not the Motā which lies near Zif and Kārnāh, but that which was the headquarters of the Maonites, or Mo-
hūmōh. Ziklag does not appear to have been known to Eusebius and Jerome, or to any of the older travellers. Mr. Rowlands, however, in his journey from Gaza to Suez in 1842 (in William's Holy City, i. 465-468) was told of "an ancient site called Ashdoor, or Kasbounty, with some ancient walls," three hours east of Saba, which again was two hours and a half south of Kārnāh, if this he considers as identical with Ziklag. Dr. Robinson had previously (in 1838) heard of 'lishāj as lying southwest of Mill, on the way to 'Abilp (Bibl. Res. ii. 201), a position not discordant with that of Mr. Rowlands. The identification is supported by Mr. Wilton (Negeb, p. 268); but it is impossible at present, and until further investigation into the district in question has been made, to do more than name it. If Dr. Robinson's form of the name is correct — and since it is repeated in the Lists of Dr. Eli Smith (App. vol. iii. of 1st ed. p. 115 n) there is no reason to doubt this — the similarity which prompted Mr. Rowlands' conjecture almost entirely disappears. This will be evident if the two names are written in Hebrew, 'זיללה, 'זיללה.

a The only instance in the A. V. of the use of F in a proper name.

b 1 Chr. xii. 1 and 20.
ZILPAH 3631

ZIMRI

\(\text{ZILPAH} (\text{Ziph, woman})\): Zal\ph a/Zel\phi a \text{ (Syrian)}

\(\text{ZIMRI} (\text{Zimri, son of Seir,} \text{Zemari})\)

1. The son of Seir, the Aramean, slain by Phinehas with the Midianitish princess Cozi in Num. xxxvii. 14. When the Isrealites at Shittim were smitten with plagues for their impure worship of Baal-peor, and were weeping before the Tabernacle, Zimri, with a shameless disregard to his own high position and the sufferings of his tribe, brought into their presence the Midianitess in the sight of Moses and in the sight of the whole congregation. The fierce anger of Phinehas was aroused, and in the swift vengeance with which he pursued the offenders, he gave the first indication of that uncompromising spirit which characterized him in later life. The whole circumstance is much softer in the narrative of Josephus (Ant. iv. 6, §§ 10–12), and in the hands of the theologian is divorced of all its vigor and point. In the Targum of Penuel, Josephus and ben Uzziah several traditional details are added. Zimri retorts upon Moses that he himself had taken to wife a Midianitess, and twelve miraculous signs attend the vengeance of Phinehas.

In describing the scene of this tragedy an unusual word is employed, the force of which is lost in the rendering "tent" of the A. V. of Num. xxxv. 8. It was not the "bed", or ordinary tent of the encampment, but the "kubbah, kubab" (whence Span. abrigo, and our "abode," or dome-shaped tent, to which Phinehas procured his victims. Whether this was the tent which Zimri occupied as chief of his tribe, and which in consequence more elaborate and highly ornamented than the rest, or whether it was, as Gesenius suggests, one of the tents which the Midianitess used for the worship of Poor, is not to be determined, though the latter is favored by the rendering of the Vulg. tentem. The word does not occur elsewhere in Hebrew. In the Syriac it is rendered a cell, or inner apartment of the tent.

W. A. W.
Ewald's inference from Jezebel's speech to Jehu (2 K. ix. 31), that on Elah's death the queen-mother welcomed his murderer with smiles and blandishments, seems rather arbitrary and far-fetched.

[JEZEBEL H.]

3. (Zinari.) One of the five sons of Zerah the son of Judah (1 Chr. ii. 6).

4. [Alex. twice, 1 Chr. viii. 36, Zaaqar.] Son of Jehoshah and descendant of Sain (1 Chr. viii. 36, xxiv. 42).

5. (Om. in LXX.: Zemlari.) An obscure name, mentioned (Jer. xxv. 25) in probable connection with Dedan, Tema, Buz, Arabia (קַסֹּר יִדְיֶה), the mingled people "ereh" (בֵּית יִדְיֶה), all of which immediately precede it, besides other peoples; and followed by Ezion, the Medes, and others. The passage is of wide importation, but the reference, as indicated above, seems to be a tribe of the sons of the East, the Beni Kadem. Nothing further is known respecting Zinari, but it may possibly be the same as, or derived from Zimar, which see.

E. S. P.

ZIN (צִינַן [for palmo-try, Ges.]: Zir: [Vat. Ζήβαδ]: Num. xxvii. 14 a, Alex. Zëwû: Josh. xxv. 1, Alex. Zëwû: Josh. xv. 3, Rom. Alex. Zëwû, Vat. ψήφον, m. θεοφόρον: Sin.) The name given to a portion of the desert tract between the Dead Sea, Ghor, and Arabia (possibly including the two latter, or portions of them) on the E., and the general plateau of the Tih which stretches westward. The country in question consists of two or three successive terraces of mountain converging to an acute angle (like stairs where there is a turn in the flight) at the Dead Sea's southern verge, towards which also they slope. Here the drainage finds its chief vent by the Wady el-Firkeh into the Ghor, the remaining waters running by smaller channels into the Arava, and ultimately by the Wady el Jethel also to the Ghor. Judging from natural features, in the vagueness of authority, it is likely that the portion between, and drained by these wadies, is the region in question; but where it ended westward, whether at any of the above named terraces, or blending imperceptibly with that of Parun, is quite uncertain. Kadesh lay in it, or on this unknown boundary, and here also Ismaän was a wady town, with Judah; since Kadesh was a city in the border of Edom (see KADESH: Num. xiii. 21, xxv. 1, xxviii. 14, xxxiii. 36, xxxiv. 3; Josh. xv. 1). The researches of Williams and Rowlands on this subject, although not conclusive in favor of the site el-Kabîsa for the city, yet may indicate that the "wilderness of Kades," which is indistinguishable from that of Zin, follows the course of the Wady Murch westward. The whole region requires further research; but its difficulties are of a very formidable character. Josephus (Ant. iv. 4, § 6) speaks of a "hill called Sin" (צִינֵה), where Miriana, who died in Kadesh, when the people had "come to the desert of Sin," was buried. This "Sin" of Josephus may really be the name Zin below, being applied to a hill, may perhaps indicate the most singular and wholly i.solated conical acclivity named Modernah (Medina, or Modena), standing a little S. of the Wady Firkeh, near its outlet into the

slave of women. But its root seems to be צין, "to be high." (Genesis:) and in other passages, especially Prov. xvii. 19, the meaning is "a hilly fortress," Ghör. This would precisely agree with the "land of country above indicated (Num. xx. 1, Seetum Reisen, iii. Hebron to Madâna: Wilton, "Nebel," pp. 127, 134)."

ZINA (צִינָה [prob. abundance]: Zêḏâk Zînâ.) The second son of Shimeï (1 Chr. xviii. 10 comp. 11) the Gershonite. One of Kinnitoch's MSS. reads סנהו, Zīnā, like the LXX. and Vulg.

* ZION (צִיון, Zîon, from צָאַב, "a hill") a name, from צוֹב, "to be settled," by which the Palestinian topographers, and the Talmudic and modern Moslems, designated Jerusalem. It is the name of two of the seven hills of the city, the site of the Temple, and the Christian Sepulchre, and of the "lower city" of the Moslems. The name distinguished the sacred hill, and the chief site of the city, from the region, and also from the surrounding desert. It is thus used, "in the high hill of Zion," "upon the hill of Zion," "Zion is the hill of Jehovah," "Zion is exalted above all her neighbors," "Zion is the habitation of a living God." (Ps. lxxvi. 7.) The symbolic name of Jerusalem, as a city of God, as a city of the converts of the Gentiles, as a city of the Noeological, the New Jerusalem, and the New Jerusalem, as the city of the New Moses, the city of the New Testament, and the city of the New Jerusalem, is intended.

Mount Zion, the southern terminal of the eastern tongue of the high table-land, or double promontory, on which Jerusalem was built, and is the highest of its hills. E升ated, and surrounded by deep, trench-like ravines on the west, south, and east, with a deep depression, or valley, in the ridge on the north, it was a position of great natural strength. It first appears in sacred history as a stronghold of the Jebusites who had fortified it, and who held possession of it long after the Israelites had gained the rest of the territory (Josh. xv. 63). It was assaulted at length, and captured by king David (1 Chr. xi. 4-7, who built both a palace and a citadel upon it, and subsequently brought to it the ark of the Lord.

As the seat not only of royal dominion, but of sacred worship, and David; in the Temple was built, this evidence came to be designated as the "holy hill of Zion" (Ps. lvi. 6) and as the "chosen habitation" of Jehovah (Ps. lxxvi. 13), and this naturally led to its employment by the N. T. writers as a type of heaven (Heb. xi. 22; Rev. xiv. 1). It being the royal residence, it was called the "City of David," and its" holiness" and "holiness" (Ps. xxvi. 9), and its prominence in the Psalms led to the frequent use of its name as the synonym of Jerusalem (Is. xxi. 24); as, also, to the designation of the inhabitants of the city collectively, as Zion, or the daughter of Zion (Is. xlix. 14; Is. ix. 14; Zech. ii. 10). The summit of the ridge presented a broad level tract, the southern portion of which lies outside of the modern walls. This is now occupied, in part, by the cemeteries of different Christian sects, including the Protestants, and among them is the stone building, once a Christian church, which covers the traditional site of the sepulchre of king David. Muslim legend has, hitherto, prevented a thorough exploration of the locality. A part of this ground has been cultivated — literally fulfilling the remarkable prediction that Zion should be "ploughed like a field" (Is. xxvi. 18; Mic. iii. 12). Zion was a natural rocky terrace, and hence the force of the Scriptural comparisons which associate with its strong foundations the safety of being rather than "a harem." Ewald, in his sketch of Zinari, is perhaps somewhat led astray by the desire of finding a historical parallel with Sardanapalus.
livers and the stability of Christ's kingdom (Is. xxviii. 16).

Until a late period, the site of Zion was unquestioned. A glance at the ground of the city, or at a plan of it, shows that the southwest hill was the largest and most important of the hills on which it was built. The position of this hill accords so fully with almost all the traditional and historical notices which have reached us, that it has been accepted without dissent as the Zion of David. A few years since, Mr. Ferguson started the theory that Zion was identical with the southeast hill, or Moriah. The present writer in a preceding article has stated the grounds of dissent from this view (Jerusalem, ii. 1330-1332; see also Bild. Sacra, xxiv. 116-140).

Quite lately, still another theory, as novel, has been started, affirming the identity of Zion with Akra, the hill on the north; and this we will briefly examine here. (See also Bild. Sacra, xxvii. 565-568.) This originated with Captain Warren, the British engineer who has made such important and interesting subterraneous explorations in Jerusalem, and who appears to have enlivened his labors below ground with historical researches above, which are quite independent of his professional work. It is propounded by him in Quarterly Statement, No. III., of the Palestine Exploration Fund, under the title: "The Comparative Holiness of Mounts Zion and Moriah" (pp. 76-98). It is expanded and defended by Rev. John Forbes, LL.D., Edinburgh, in the Bild. Sacra (xxvii. 191-195). Both writers concede the baselessness of Mr. Ferguson's theory, which will not, probably, be put forward again; and the new theory, we apprehend, will be as transient.
its natural position, and threw around it a wall which made it well nigh impregnable.

Now, the advocates of the new theory must give some consistent explanation of the royal zeal, shown through successive reigns, in fortifying this broad and ghastly summit. They take pains to explain that Zion was not an isolated fortress, but included a considerable part of the city—the palace of the king and the dwellings of the people; and the upper city was, confessedly, larger than the lower.

The most commanding spot in the capital, by nature and art combined made the most secure, and of ample extent, withal, — the royal palaces (according to their theory) were not here; the royal treasures were not here; the royal sepulchres were not here; the citadel was not here; the Tabernacle and the ark of the covenant, before the building of the Temple, were not here; and the wise monarchs of Israel fortified this elevated quarter of their capital, until it could bid defiance to almost any assault, and then built their own residence outside of it, looking up with admiration to its strong fortifications, congratulating the inhabitants who dwelt within its fastnesses, but depriving themselves, their families, and their possessions, secular and sacred, of the benefit of their own defenses!

There succeeded a period of protracted peace, in which the monarch could have his summer residence in the country, and build a palace for his queen in the unrivalled suburbs. But from the first conquest it was necessary to have a point of as absolute security as possible; and what conceivable point would naturally be guarded with more jealous care than the principal seat of the royal family — the seat of empire? For a considerable period (we know not how long) the wall around the southwest hill was the only wall of the city. Josephus repeatedly refers to it as, by way of distinction, "the old wall." And the interval in which it served as the sole protection of the capital was not a season of peace, but a period of incessant war with the tribes and nations on every side of Israel.

And when new walls were afterwards erected, new defenses were added to this.

Capt. Warren says:— If we place three round shot close together we have a rough model of Jerusa-

meh. Solomon's. On the shot of the shot to the north being Mount Zion; that to the southwest, Moriah; and that to the southwest, the remainder of Jerusalem " (p. 81). Accepting this "model," we call the north shot Akra: the southeast, Moriah: and the southwest (which to Warren is nameless), Zion. The north hill was subsequently protected on its exposed side by a strong wall — the second wall of Josephus; and at a still later day, in the reign of king Herod Agrippa, a fourth hill, on the northwest (Bezetha), was protected on its exposed side by the third wall of Josephus. Jerusalem was never attacked from the south. The point of menace and peril, in every siege, was in the high-

lands on the north. These three walls on the north were successive brickworks against a foreign foe. When the hill represented by Warren's north shot was protected by one wall, the southwest hill was protected by two walls; when the former was protected by two, the latter was protected by three. And the security enjoyed by the upper city, on the southwest hill, above that of the lower city, con-

sisted, besides its natural defenses on the south, in the fact that it was not isolated on the north, in the construction of which successive kings had taken an enthusiastic interest. Consequently, as we have

said, this part of Jerusalem held out the longest in every siege. "No attack or approach is ever de-
scribed as made against the upper city of Zion until after the besiegers had broken through the second wall, and had thus possessed the lower city." (Rob. Bibb. Res. 1852, p. 214). When the city was invested by Titus after he had stormed and carried every part but the southwest hill, the course of the siege is thus stated by Mr. Grove: — "The upper city, higher than Moriah, inclosed by the original wall of David and Solomon, and on all sides precipices, except on the north, where it was defended by the wall and towers of Herod, was still to be taken. . . . It took eighteen days to erect the necessary works for the siege. The four legion were once more stationed on the west or northwest corner, where Herod's palace abut-

ted on the wall, and where the three magnificent and impregnable towers of Hippicus, Phasaelus, and Mariamne rose conspicuous. This was the main attack" (Jerusalem, i. 307). The wall thus strengthened by Herod for the protection of that part of the city which embraced his own palace was the old wall, which ran from Hippicus eastward to the Nysus. "The interior and most ancient of the three walls on the north was, no doubt, the same wall which ran along the northern brow of Zion," or the southwest hill. (Rob. Bibb. Res. i. 413.) For whose protection, as more important than their own, was this wall built and strengthened by David and Solomon and their immediate successors?

The reasons offered by these writers for their hypothesis are not based on recent discoveries, nor are they new. These speculations have not the remotest connection with Capt. Warren's explorations in Jerusalem. The argument rests mainly on two or three passages in Josephus and the first book of Maccabees, relating to the Akra or castle which Antiochus Epiphanes built on the hill sustain-
ing the lower city, and which are familiar to all who have studied the topography of the city. These parallel narratives involve a perplexity which Prof. Robinson fully examined, and, we think, satisfac-
torily explained, almost a quarter of a century ago (Bibb. Sover. ii. 620-624). His suggestion is, that in process of time the City of David was divided into two parts, the first restricted to the Hill of Zion, came to be used by synecdoche for the whole city, so as to be synonym-
ous with Jerusalem: and he cites evident traces of such usage from Isaiah, the Maccabees, and Josephus. This is a much simpler solution of the difficulty than the transfer of site by these writers.

The immemorial conviction, which has not merely survived centuries of observation, but been confirmed by the investigations of keen-eyed witnesses, will, we are confident, abide. The southwest hill, fortified beyond the rest, and its dwellings more carefully protected; the most im-
portant strategic point in the city, and the last rally-point in memorable sieges: the hill for which the propounders of the new theory have no name — Forbes contending himself with applying the epithet "pseudo" to the current appellation, and Warren designating it as "the remainder of Jerusalem," — this historic hill has borne, and will continue to bear the sacred and classic name of Zion.

Every Christian reader has felt — what every Christian visitor to the holy city who has stood on its southwest hill has felt more — the force and beauty of such passages as these, in the Psalms o
David: "Beautiful for situation, the joy of the whole earth, is Mount Zion, on the sides of the north, the city of the great King" (Ps. xlvii. 2); "They that trust in the Lord shall be as Mount Zion, which cannot be moved, but abideth for ever" (Ps. cxvii. 1). From strains like these the transition is abrupt and startling to such sentences as the following: "The site where Zion once was, and is not." (Warren, p. 85); "Mount Zion, once so holy, was at length razed to the ground and obliterated" (Forbes, p. 195). We take comfort in the undoubting conviction that the grand similes of the sacred writers have not been thus emptied of their significance. The Zion of the psalmist and the prophet still stands, with its rocky, precipitous sides, and the deep valleys sweep around its base, as of old. Its "palaces" have disappeared; and in its desolation, literal and moral, it is no longer "the joy" which it once was. But "beautiful for situation" it still is; and, to the eye of the traveller who approaches it from the south, it still lifts itself in strength, though not in the ancient grandeur, "on the sides of the north." (GUTTEN; JERUS; JERUSALEM; TYREOPON.

ZIOR (ז"ור) [swallow's nest]: Zipp; Alex. Ziip; Sire). A town in the mountain district of Judah (Josh. xv. 54, only). It belongs to the same group with Hebron, next to which it occurs in the list. By Eusebius and Jerome (Onom. Zipp) it is spoken of as a village between Edin (Jerusalem) and Eleutheropolis (Beth jibrin), in the tribe of Judah. A small village named סִיֵר ז' (new) lies on the road between Tekoa and Hebron, about six miles northeast of the latter (Rob. Bibl. Res. i. 488), which may probably be that alluded to in the Onomasticon; and but for its distance from Hebron, might be adopted as identical with Zior. So little, however, is known of the principle on which the groups of towns are collected in these lists, that it is impossible to speak positively on the point, either one way or the other.

ZIPH (ז"יפ) [boulder-heap, pinnacle, Ges. ed. 1893; melting-place, First]. The name borne by two towns in the territory of Judah.

1. (Maspia; Alex. 5ii'w)ZIP; Ziph.) In the south (Neph.); named between Hiinan and Telum (Josh. xv. 24). It does not appear again in the history — for the Ziph of David's adventures is an entirely distinct spot — nor has any trace of it been met with. From this, the apparent omission of the name in the Vatican LXX., and from the absence of the "and" before it, Mr. Wilton has been led to suggest that it is an interpolation (Neph., 85): but its grounds for this are hardly conclusive. Many names in this list have not yet been encountered on the ground; before several others the "and" is omitted; and though not now recognizable in the Vat. LXX., the name is found in the Alex. and in the Peshito (Ziip). In our present ignorance of the region of the Neph. it is safer to postpone any positive judgment on the point.

2. (Rom. O'g'vB; Zip; Vat. O'g'vB; Zip, ζηζιβ; Alex. Zip, ζηζιβ; Ziph.). In the highland district: named between Carmel and Juttah (Josh. xv. 55). The place is immortalized by its connection with David, some of whose greatest perils and happiest escapes took place in its neighborhood (1 Sam. xxii. 14, 15, 24, xxvi. 2). These passages show, that at that time it had near it a wilderness (wildbar, i. e. a waste pasture ground) and a wood. The latter has disappeared, but the former remains. The name of Zif is found about three miles S. of Hebron, attached to a rounded hill of some 100 feet in height, which is called Tell Zif. About the same distance still further S. is Kiramad (Carmel), and between them a short distance to the W. of the road is Jatta (Juttah). About half a mile E. of the tell are some considerable ruins, standing at the head of two small wadis, which, commencing here, run off towards the Dead Sea. These ruins are pronounced by Dr. Robinson (Bibl. Res. i. 492) to be those of the ancient Ziph, but hardly on sufficient grounds. They are too far from the tell for it to have been the citadel to them. It seems more probable that the tell itself is a remnant of the ancient place which was fortified by Roberton (2 Chron. xii. 8)." Ziph" is mentioned in the Onomasticon as 8 miles east of Hebron: "the village," adds Jerome, "in which David hid is still shown." This can hardly be the spot above referred to, unless the distance and direction have been stated at random, or the passage is corrupt both in Eusebius and Jerome. At 7 Roman miles east of Hebron a ruin is marked on Van de Velde's map, but it does not appear to have been investigated. Elsewhere (under "Zeph") and "Ziph" they place it near Carmel, and connect it with Ziph, the descendant of Caleb.

From Eusebius to Dr. Robinson no one appears to have mentioned Zif. Yet many travellers must have passed the tell, and the name is often in the months of the Arab guides (Stanley, S. of P. p. 101 b.).

There are some curious differences between the text of the LXX. and the Hebrew of these passages which may be recorded here.

HEBREW

15. . . . in the wilderness of Ziph in the wood.

19. And Ziphites came to Saul

VATICAN LXX. (MAJ.)

1. ελαθαιξ εν τη φροσμη εν τω ορει ζηζιβ δεν εν τη γη τω αρχαιωμεν.

15. εν τω ορει εν τω αρχαιωμεν εν τη κατι φρα, τη κατι [κατι = γ στιλ τι και διαθερα οι ζζιβαινα οι εκ των αρχαιωμεν προς Σ].

ALEX. LXX.

1. ζηζιβ εις ορος εις τη φροσμη εις τη γη τω αρχαιωμεν.

15. . . . εν τω ορει εν τη φροσμη εν τη κατι φρα, τη κατι [κατι = γ στιλ τι και διαθερα οι ζζιβαινα οι εκ των αρχαιωμεν προς Σ].

a * In his Index to Clark's Bible Atlas, p. 111, Mr. Grove withdraws this objection and speaks of Ziph as "now Zif, 3 miles south of Hebron."

b See a remark curiously parallel to this by Mar mont in his Voyage between Napoleon and Jerusalem.
ZIPH (ZIPH): Ziph. [Vat. omits: Alex. Zapha: Saph]. Son of Jehaleel (1 Chr. iv. 10).

ZIPTAH (ZIPTH): Zepha; [Vat. Zapha: Alex. Zapha: Zapher]. One of the sons of Jehaleel, whose family is enumerated in an obscure genealogy of the tribe of Judah (1 Chr. iv. 16).

ZIPHTHIES, THE (ZIPTHEE): Zaphai: Zeusaphaios: Ziphties. The inhabitants of Ziphtah (see the foregoing article, No. 2). In this form the name is found in the V. only in the title of Ps. liv. In the narrative it occurs in the more usual form of ZIPHTHITES, THE (ZIPTHTE): oi Zeusaphaios [Vat. Zeaphaios: Ziphteh]. 1 Sam. xxiii. 19, 20, xxiv. 1.

ZIPHTHON (ZIPTHON): Zeaphon: Sephon. Son of Gath (Gen. xvi. 16); elsewhere called Ziphthon.

ZIPHTHON (ZIPTHON: fragrant): Zeaphara: Ziphteron. A point in the north boundary of the promised land as specified by Moses (Num. xxiv. 9). It occurs between Zelah and Hazar-Enan. If Zelah is Selah, and Hazar-Enan Kuevit, as is not impossible, then Ziphteron must be looked for somewhere between the two. At present no name at all suitable has been discovered in this direction. But the whole of this toponymy is in a most unsatisfactory state as regards both comprehension of the original record and knowledge of the ground; and in the absence of more information we must be content to abstain from conjecture.

In the parallel passage of Ezekiel (xlii. 10, 17) the words "Hazar-hatticon, which is by the border of Haaran," appear to be substituted for Ziphteron. The Haaran here named may be the modern village Horatia, which lies between Selah and Kuevit, and not the district of the same name many miles further south.

ZIPPOR (ZIPPOR), and twice ZIPPER (Zappere): Zepore: Sepore. Father of Balak king of Moab. His name occurs only in the expression "son of Zipper" (Num. xxiii. 2, 4, 10, 16, xxvii. 18; Josh. xxiv. 9, Judg. xi. 23). Whether he was the "former king of Moab" alluded to in Num. xxvi. 26, we are not told, nor do we know that he himself ever reigned. The Jewish tradition already noticed [Moen, iii. 1981] is, that Moab and Midian were united into one kingdom, and ruled by a king chosen alternately from each. In this connection the similarity between the names Zipper and Zipperah, the latter of which we have to know been the name of a Midianitess, pur song, is worthy of notice, as it suggests that Balak may have been of Midianite parentage.

ZIPPO'RAH (ZIPPO'RAH: [fragrant]): Zepphora: Zipperah. Daughter of Zipporah and Jethro, the priest of Midian, wife of Moses, and mother of his two sons Gershom and Eliezer (Ex. ii. 21, iv. 25, xviii. 2, comp. 6). The only incident recorded in her life is that of the circumcision of Gershom (iv. 24-26), the account of which has been examined under the head of Moses (ill. 2019). See also Stanley's Jewish Church, p. 114.

It has been suggested that Zipperah was the Cushite (A. Y. "Ethiopian") wife who furnished Miriam and Aaron with the pretext for their attack on Moses (Num. xii. 1, &c.). The chief ground for this appears to be that in a passage in Halakuk (vii. 7) the names of Cushian and Midian are mentioned together. But in the immense interval which has elapsed between the Exodus and the period of Halakuk (at least seven centuries), the relations of Cush and Midian may well have altered too materially to admit of any argument being founded on the later passage, even if it were certain that their being mentioned in juxtaposition implied any connection between them, further than that both were dwellers in tents and enemies of Israel; and unless the events of Num. xii. should be proved to be quite out of their proper place in the narrative, it is difficult to believe that a charge could have been made against Moses on the ground of his marriage, after so long a period, and when the children of his wife must have been several years old. The most feasible suggestion appears to be that of Es Wald (gischichie, ii. 228, note), namely, that the Cushite was a second wife, or a concubine, taken by Moses during the march through the wilderness — whether after the death of Zipperah (which is not mentioned) or from other circumstances must be uncertain. This — with the utmost respect to the eminent scholar who has supported the other alternative — the writer ventures to offer as that which commends itself to him.

The similarity between the names of Zipper and Zipperah, and the possible inference from that similarity, have been mentioned under the former head. [Zipperah.]

ZITH'RI (ZITH'RI: Jehovah's protection): Zepore: [Vat. Zepore]: Alex. Zepore: Sethri. Properly "Sithri": one of the sons of Uzziel, son of Kohath (Ex. vi. 22). In Ex. vi. 21, "Zithri" should be "Zichri," as in A. V. of 1611.
Gershonite village by God, and smote them, because there was pasture there for their flocks. (1 Chr. iv. 37).

2. Ziqi'ah (Vat. Zeki'ah; Alex. Zeika) Son of Rehobam by Maachah the granddaughter of Abdon (2 Chr. xi. 20).

Zizah (Zizah) ['full breast'].

A Gershonite Levite, second son of Shimei (1 Chr. xxiii. 11); called Ziza in ver. 10.

Zo'ah (Zo'ah) [Taneis; Touis], (Ex. xxx. 14, in Tynapah), an ancient city of Lower Egypt. It is mentioned by a Shemitic and by an Egyptian name, both of the same signification. Zoan, preserved in the Coptic ΖΩΑΝ, ΖΩΑΝ, ΖΩΑ.".

Za'ane, Za'ane, Za'ane, the Arabic (a village on the site), and the classical Taneis, Tanis, whence the Coptic transcription TANEWS comes from the root ΖΑΝ, "he moved tents" (Is. xxxiii. 20), cognate with הָנֹן, "he loaded a beast of burden," and thus signifies "a place of departure," like דָּשַּׁנ, Zanamim (Josh. xix. 33), or דָּשַׁנ, Zansim (Judg. iv. 11), "removings" (Gesen), a place in northernmost Palestine, on the border of Nahalot near Kedesh. The place just mentioned is close to the natural and constant northern border of Palestine, whether under the spurs of Lebanon or of Hermon. Zoan lay near the eastern border of Lower Egypt. The sense of departure or removing, therefore, would seem not to indicate a mere resting-place of caravans, but a place of departure from a country. The Egyptian name HA-AWAR, or PA-AWAR, Avaris, Aouager, means "the abode" or "house" of "going out" or "departure." Its more precise sense fixes that of the Shemitic equivalent.

Tanis is situated in N. lat. 31°, E. long. 31° 57', on the east bank of the canal which was formerly the Tanite branch. Anciently a rich plain extended three east as far as Pelusium, about thirty miles distant, gradually narrowing towards the east, so that in a southeast direction from Tanis it was not more than half this breadth. The whole of this plain, about as far south and west as Tanis, was anciently known as "the Fields" or "Plains," HILLEGUPT, "the Marshes," ta ḫāy, "Elephemia, or "the pasture-lands," Bowsalia. Through the subsidence of the Mediterranean coast, it is now almost covered by the great Lake Mezreleb. Of old it was a rich marsh-land, watered by four of the seven branches of the Nile, the Pathunite, the Taneite, and Peliacite, and swept by the cool breezes of the Mediterranean. Tanis, while Egypt was ruled by native kings, was the chief town of this territory, and an important post towards the eastern frontier.

At a remote period, between the age when the pyramids were built and that of the empire, seemingly about in c. 2580, Egypt was invaded, over-run, and subdued, by the strangers known as the Shepherds, who, or at least their first race, appear to have been Arabs cognate with the Phoenicians. How they entered Egypt does not appear. After a time they made one of themselves king, a certain Salatis, who reigned at Memphis, exacting tribute of Upper and Lower Egypt, and garrisoning the principal places with garrisons to prevent the eastward of the eastern provinces, which he foresaw the Assyrians would desire to invade. With this view, finding in the Saite (better elsewhere Schroette) nome, on the east of the Bubastite branch, a very fit city called Avaris, he rebuilt, and very strongly walled it, garrisoning it with 240,000 men. He came hither in harvest-time (about the vernal equinox), to give corn and pay to the Assyrms, and exercise them to terrify foreigners. This is Manetho's account of the foundation of Avaris, the great stronghold of the Shepherds. Several points are raised by it. We see at a glance that Manetho did not know that Avaris was Tanis. By his time the city had fallen into obscurity, and he could not connect the HA-AWAR of his native records with the Tanis of the Greeks. His account of its early history must therefore be received with caution. Throughout, we trace the influence of the pride that made the Egyptians hate, and affect to despise the Shepherds above all their conquerors, except the Persians. The motive of Salatis is not to overawe Egypt but to keep out the Assyrians; not to terrify the natives but these foreigners, who, if other history be correct, did not then form an important state. The position of Tanis explains the case. Like other principal cities of this tract, Pelusium, Bubastis, and Heliopolis, it lay on the east bank of the river, towards Syria. It was thus outside a great line of defense, and afforded a protection to the cultivated lands to the east, and an obstacle to an invader, while to retreat it was always possible, so long as the Egyptians held the river. But Tanis, though doubtless fortified partly with the object of repelling an invader, was too far inland to be the frontier fortress. It was near enough to be the place of departure for caravans, perhaps was the last town in the Shepherd-period, but not near enough to command the entrance of Egypt. Pelusium lay upon the great road from Palestine, it has been until lately placed too far north [SIX], and the plain was here narrow, from north to south, so that no invader could safely pass the fortress; but it soon became broader, and, by turning in a southwesterly direction, an advancing enemy would leave Tanis

a Keri, as in Joshua.

b The identification of Zoa with Avaris is due to M. de Rouge.
for to the northward, and a bold general would de-
tach a force to keep its garrison in check and march
upon Helipolis and Memphis. An enormous
standing militia, settled in the Baculion, as the
Egyptian militia afterwards was in neighboring
counties of the Delta, and with its headquarters at
"Sekhef," the military capital of their province,
retained a rear in case of disaster, besides maintaining
hold of some of the most productive land in the country,
and mainly for the former two objects we believe
Avaris to have been fortified.

Manetho explicitly states Avaris to have been
older than the time of the Shepherds; but there are
reasons for questioning his accuracy in this matter.
The name is more likely to be of foreign than of
Egyptian origin, for Avaris distinctly indicates the
place of departure of a migratory people, whereas
Avaris has the simple signification "abode of de-
parture."

A remarkable passage in the book of Numbers,
not hitherto explained, "Now Hebron was built
seven years before Zoan in Egypt" (xvii, 22), seems
to deliver the key to the question.

Hebron was anciently the city of Arba, Kirjath-Arba, and was under
the rule of the Anakim. These Anakim were of the
old warlike Palestinian race that long dominated
over the southern Canaanites. Here, therefore,
the Anakim and Zoan are connected. The Shepherds
who built Avaris were apparently of the Phoenician
stock which would be referred to this race as, like
them, without a pedigree in the Semitic geo-
graphical list. Hebron was already built in Abra-
ham's time, and the Shepherd-invasion may be
dated about the same period. Whether some older
village or city were succeeded by Avaris matters
little: its history begins in the reign of Saul.

What the Egyptian records tell us of this city
may be briefly stated. Appearing probably Apophis
of the XVIth dynasty, a Shepherd-kings who reigned
shortly before the XVIIIth dynasty, built a temple
here to Set, the Egyptian Osiris, and worshipped
no other god. According to Manetho, the Shepherds,
after 511 years of rule, were expelled from all Egypt
and shut up in Avaris, whence they were allowed
to depart by capitulation, by either Amenem-De
Hamnomos (Aminhas or Theolomn IV.); the first
and seventh kings of the XVIIIth dynasty. The
monuments show that the honor of ruling Egypt
of the Shepherds belonged to Aminhas, and that this
event occurred about B.C. 1500. Rameses II. em-
sellished the great temple of Tanis, and was fol-
lowed by his son Menepthah.

It is within the period from the Shepherd-inva-
sion to the reign of Menepthah, that the soqour and
Exodus of the Israelites are placed. We believe
that the Pharaoh of Joseph as well as the oppressor
were Shepherds, the former ruling at Memphis and
Zoan, the latter probably at Zoan only; though in
the case of the Pharaoh of the Exodus, the time
would suit the annual visit Manetho states to have
been paid by Salatis. Zoan is mentioned in con-
nection with the Phleges in such a manner as to
have no doubt that it is the city spoken of in
the narrative in Exodus as that where Pharaoh dwelt.
The wonders were wrought "in the field of Zoan":
(Ps. lxxviii. 12, 49), במשע, which may
either denote the territory immediately around the
city, or its name, or even a kingdom (Genen. lixi.
28. v. 112). This would accord best with the
Shepherd period; but it cannot be doubted that
Rameses II. paid great attention to Zoan, and may
have made it a royal residence.

After the fall of the empire, the first dynasty is
the XXIst, called by Manetho that of Tanis. Its
history is obscure, and it fell before the stronger
line of Bakavities, the XXIIth dynasty, founded by
Shishak. The expansion of Sesostris from the Panthone,
under the XXIIth dynasty, must have been a blow
to Tanis; and perhaps a religious war occasioned
the rise of the XXIIth. The XXIIth dynasty is
called Tanite, and its last king is probably Sthesos,
the contemporary of Tirhakah, mentioned by Her-
rodus. At this time Tanis once more appears in
proverb history, as a place to which came ambassa-
dors, either of Hoshea, or Ahaz, or else, possibly,
Hezekiah: "For his princes were at Zoan, and his
messenger came to Hanes" (Is. xxx. 4). As
mentioned with the frontier town Telphania, Tanis
is not necessarily the capital. But the same
prophet perhaps more distinctly points to a Tanite
line where saying, in "the land of Egypt," "the
princes of Zoan are become fools; the princes of
Noph are deceived." (xx. 29). The doom of Zoan
is foretold by Ezekiel: "I will set fire in Zoan"
(33. 14), where it occurs among the cities to be
taken by Nebuchadnezzar.

The plain of Sin is very extensive, but thinly
inhabited; no village exists in the immediate vicin-
ity of the ancient Tanis; and, when looking from
the mounds of this once splendid city towards the
distant palms of inhospitable villages, we perceive
a desolation spread around it. The "field of Zoan,
is now a barren waste; a canal passes through it
without being able to fertilize the soil; a fire has
been set in "Zoan;" and one of the principal capi-
tals or royal abodes of the Pharaohs is now the
habitation of fishermen, the resort of wild beasts,
and infested with reptiles and malignant fivers.

It is remarkable for the height and extent of its
mounds, which are upwards of a mile from N. to
S., and nearly 2 of a mile from E. to W. The
area in which the sacred inclosure of the temple
stood is about 1,900 ft. by 1,250, surrounded by
mounds of fallen houses. The temple was adorned
by Rameses II. with numerous obelisks and most
of its sculptures. It is very ruinous, but its re-
mainders are very instructive. The number of its
obelisks, ten or twelve, all now fallen, is in-
equaled, and the labor of transporting them from
Syene shows the lavish magnificence of the Egyptian
kings. The oldest name found here is that of
Sesertem III. of the Xth dynasty, the latest that of
221, 222). Recently, M. Mariette has made exca-
vations on this site and discovered remains of the
Shepherd-period, showing a markedly-characteristic
style, especially in the representation of face and
figure, but of Egyptian art, and therefore after-
wards appropriated by the Egyptian kings.

R. S. P.

* The past ten years have been rich in discoveries
of historical value at Sin, the site of the ancient
Avaris, Tanis, or Zoan. M. Mariette's excavations
have brought to light a colossal statue of Amen-
emue I. founder of the Xth dynasty; a colossal
statue of Osiris I. represented as Osiris; a third
of Serekhthotep III. of the Xth dynasty; a fourth
of another Serekhthotep, not fully identified, but hav-
ing the prefix of Osirsen I.; and a fifth colossal
of an sovereign whose name is not yet known from
any list of kings.

In addition to these, a number of sphinxes of
the general destruction of the cities of the phain, Zoar was spared to afford shelter to Lot, and it was on that occasion, according to the quaint statement of the ancient narrative, that the change in its name took place (xxxv. 24, 25, 30). It is mentioned in the account of the death of Moses as one of the landmarks which bounded his view from Tiszali (Deut. xxxv. 9), and it appears to have been known in the time both of Isaiah (xxv. 5) and Jeremiah (xlvii. 24). These are all the notices of Zoar contained in the Bible.

1. It was situated in the same district with the four cities already mentioned, namely, in the Cœura, the "plain" or "circle" of the Jordan," and the narrative of Gen. xvi. evidently implies that it was very near to Sodom—sufficiently near for Lot and his family to traverse the distance in the time between the first appearance of the morning and the actual rising of the sun (vv. 15, 23, 27).

The definite position of Sodom is, and probably will always be a mystery, but there can be little doubt that the plain of the Jordan was at the north of the Dead Sea; and that the plain of Zoar therefore have been situated there instead of at the southern end of the lake, as it is generally taken for granted they were. The grounds for this conclusion have been already indicated under SoGOM (p. 3068), but it will be well to state them here more at length. They are as follows:

(a) The northern and larger portion of the lake has undoubtedly existed in, or very nearly in its present form since a date far anterior to the age of Abraham. (The conviction of the writer is that this is true of the whole lake, but every one will agree as to the northern portion, and that is all that is necessary to the present argument.) The Jordan therefore at that date discharged itself into the lake pretty nearly where it does now, and thus the "plain of the Jordan," unless connected with the river, must have lain on the north of the Dead Sea.

(b) The plain was within view of the spot from which Abram and Lot took their survey of the country (Gen. xiv. 13); and which, if there is any connection in the narrative, was "the mountain east of Bethel," between Bethel and Ai, with "Bethel on the west and Ai on the east." (xvii. 11, xiii. 3). Now the lower part of the course of the Jordan is plainly visible from the hills east of Bethula—the whole of that rich and singular valley spread out before the spectator. On the other hand, the southern half of the Dead Sea is not only too far off to be discerned, but is actually shut out from view by intervening heights.

(c) In the account of the view of Moses from Tiszali, the Cœura is more strictly defined as "the Cœura of the plain of Jericho" (A. V. "plain of the valley of Jericho"), and Zoar is mentioned in immediate connection with it. Now no person who knows the spot from actual acquaintance, or from study of the topography, can believe that the "plain of Jericho" can have been extended to the southern end of the Dead Sea. The Jerusalem Tarquin (not a very ancient authority in itself, but still valuable as a storehouse of many ancient traditions and explanations), in paraphrasing this passage, actually identifies Zoar with Jericho—"the plain of the name of Zoar is given יבש and the play on the "smallness" of the town is suppressed.

---

6 The Tarqum Pseudechathian, to vv. 22, 23, 26.
ZOAR

valley of Jericho, the city which produces the palms, that is Zeér (יוֹדָּה).a

These considerations appear to the writer to render it highly probable that the Zoar of the Pentateuch was to the north of the Dead Sea, not far from its northern end, in the general parallel of Jericho. That it was on the east side of the valley seems to be implied in the fact that the descendants of Lot, the Moabites and Ammonites, are in possession of that country as their original seat when they first appear in the sacred history. It seems to follow that the "mountain" in which Lot and his daughters dwelt when Moab and Ben-Ammi were born, was the "mountain" to which he was advised to flee by the angel, and between which and Sodom stood Zoar (xxix. 30, compare 17, 19). It is also in favor of its position north of the Dead Sea, that the earliest information as to the Moabites makes their original seat in the plains of Heshbon, N. E. of the lake, not, as afterwards, in the mountains on the S. E., to which they were driven by the Amorites (Num. xxxii. 31).

2. The passages in Isaiah and Jeremiah in which Zoar is mentioned give no clue to its situation. True they abound with the names of places, apparently in connection with it, but they are places (with only an exception or two) not identified. Still it is remarkable that one of these is Elekhan, which, it is probable, is in the parallel of the north end of the Dead Sea, and that another is the Waters of Ninimri, which may turn out to be identical with Wady Ninim, opposite Jericho. Wady Zeér, a short distance south of Ninim, is suggestive of Zoar, but we are too ill-informed of the situations and the orthography of the places east of Jordan to be able to judge of this.

3. So much for the Zoar of the Bible. When however we examine the notices of the place in the post-Biblical sources, we find a considerable difference. In these its position is indicated with more or less precision, as at the S. E. end of the Dead Sea. Thus Josephus says that it retained its name (Zeór) to his day (Ant. i. 4, § 4). The notices of Eusebius are to the same tenor: the Dead Sea extended from Jericho to Zoar (Zoàpàr: Ovsn. Ζωάππαρ καὶ αὐξανεῖ), the former being washed by the Euphrates, and the latter being enclosed by the mountains and inhabited, and contained a garrison of Roman soldiers; the palm and the lime-wood still flourished, and testified to its ancient fertility (Ant. xiv. 1. § 4). To these notices of Eusebius St. Jerome adds little or nothing. Paula in her journey beholds Sogor (which Josephus gives on several occasions as the Hebrew form of the name in opposition to Zoar or Zoara, the Syrian form) from Caplah Borecha (possibly Ben Naim, near Nebron), at the same time with Engedi, and the land where once stood the four cities; but the terms of the statement are too vague to allow of any inference as to its position (Epist. civii. § 11). In his commentary on Is. xv. 5, he says that it was "in the boundary of the Moabites, dividing them from the land of the Philistines," and thus justifies his use of the word/widget to translate יָדָּה (A. V. "his fugitives,"

a Similarity, Stephans of Byzantium places Zoar in Palestine (quoted by Reland, p. 1055).

b See Rümker, Der Hebr. Trau. in Herod. (Berolini, 1825), p. 291.

c The distance from Jericho to Engedi is under stated here. It is really about 21 English miles.
ZOAR 3641

ZOAR (Heb. Zôar) is a town on the W. bank of the Jordan, 1 m. from the Dead Sea, situated on the W. bank of the Dead Sea, between which mountain and the Dead Sea is the salt of salt. It is

true to say that the mountain is not south of the Dead Sea, but to the W. of it.

 arising from the Jordan, where it is called the 'Arnon' (Arnonis). The high

point of the range is on the S. side of the valley of Elah (Arnon), between which mountain and the Dead Sea is the salt of salt. It is

true to say that the mountain is not south of the Dead Sea, but to the W. of it.

arising from the Jordan, where it is called the 'Arnon' (Arnonis). The high

point of the range is on the S. side of the valley of Elah (Arnon), between which mountain and the Dead Sea is the salt of salt. It is

true to say that the mountain is not south of the Dead Sea, but to the W. of it.
ZOAR

ZOAR was east of the boundary, and Sodom west of it, and both were near it.

The first allusion to the spot (Gen. xiii. 10) accords entirely with the position which we advocate, and does not readily admit of any other construction. Mr. Grove refers to the watered and fruitful plain of Jordan, before the Lord destroyed the cities, "as thou comest unto Zoar." Like a later description, in which Zoar is a terminus, the reader naturally understands a reference to the southern extremity of the plain. If Zoar had been east of the Jordan, on a line with Jericho, the description would be unnatural. It might still be claimed to be an allusion to the the region of the valley divided by the Jordan, but it would exclude the more pertinent and manifest allusion to its length.

The above interpretation, which Mr. Grove sets aside as impossible, he has himself put forward as unquestioned and unenumerated, and in previous articles it stands as his own. His exposition (see Rev. vol. ii. p. 1658 a) reads thus:

"The two Hebrews looked over the comparatively empty land in the direction of Sodom, Gomorrah, and Zoar (xiii. 10). And Lot lifted up his eyes toward the left, and beheld all the precipice of the Jordan that it was well-watered everywhere: like a garden of Jehovah, like that unutterably green and fertile land of Egypt he had only lately quitted. Even from that distance through the clear air of Palestine, can be distinctly discovered the long and thick masses of vegetation which fringe the numerous streams that descend from the hills on either side, to meet the central stream in its tropical depths. And what it now is immediately opposite Bethel, such it seems then to have been even to Zoar, to the furthest extremity of the sea which now covers the valley of the fields (the Valley of Sibilla, Sibilla fields), the fields of Sodom and Gomorrah. So Lot chose all the precipice of the Jordan, and journeyed east, down the ravines which give access to the Jordan Valley: and then when he reached it, turned again southward and advanced as far as Sodom (II. 12)."

See also Brit. vol. i. p. 298.

Besides the passages in Genesis and the two in the prophecies which have been referred to, Zoar is named in but one other place in the Bible (Deut. xxix. 3), and that is decisive against Mr. Grove's theory.

Moses had ascended "the mountain of Nebo, to the top of Pisgah, that is over against Jericho," to take his view of the Promised Land. The Lord showed him its different sections, and among others "the plain of the valley of Jericho, the city of palm-trees unto Zoar." Mount Nebo has been identified, if we accept Mr. Fruin's suggestion, and journeyed east, down the ravines which give access to the Jordan Valley: and then when he reached it, turned again southward and advanced as far as Sodom (II. 12)."

The argument adduced above, that the earliest information as to the Moabites makes their original seat in the plains of Heshbon, northeast of the lake, not as afterwards in the mountains on the south-east, to which they were driven by the Amorites (Num. xxxii. 20), has been related to Mr. Grove himself in a preceding article (Moab, vol. iii. p. 1890 a): "The warlike Amorites, either forced from their original seats on the west, or perhaps driven over by the increasing prosperity of the young nation, crossed the Jordan, and overrun the richer portion of the territory on the north, driving Moab back to his original position behind the natural bulwark of the Arnon."

In the former of these passages, the "original seat" of the Moabites is represented to have been northeast of the sea. In the latter their "original position" is represented to have been southeast of the sea, and again, in the same article, "the south-eastern border of the Dead Sea is spoken of as their original seat."

In the former they are said to have been driven by the Amorites out of their original seat; and in the latter they are said to have been driven by the same into their original position.

We accept the second interpretation as that which lies on the face of the sacred narrative, and has been received by all Biblical students until now.

And in the Highlands above what we claim to have been the border of Jordan, are the remains of the strongholds, Kir of Moab and Ar of Moab. To remove the cradle of these tribes north
ward is to disturb and dislocate the associations and allusions of the sacred writers, as universally understood by their readers.

Mr. Grove suggests that "if Velosia be Sodom, its distance from the Wady el-Dre'a (at least 15 miles) is too great to agree with the requirements of Gen. xix." — assuming the necessity of the present circuits route. While we recognize in the name of this singular mountain a memorial of ancient Sodom, it is not necessary to suppose that it designates the exact site of the city, nor is it certain that Zoar lay at the mouth of Wady Kerd. While it is too far to suppose that Sodom was ever built by a people from a point southeast of the Dead Sea, and this we think demonstrable. We would suggest that a fugitive family might even reach Wady el-Dre'a from near the site of Khaihun el-Dre'a with less difficulty and in less time (especially in the direct line which may then have been practicable) than they could cross the Jordan and reach the base of the eastern mountains on the parallel of Jericho.

The allusion to this site by Josephus is explicit. He says: "It is to this day called Zoar." (Jot. i. 11, § 4). In describing the lake Asphaltites, he says: "It extended as far as Zoar in Arabia" (Jot. iv. 8, § 4) by which he probably designates its southern point; conformably with his own definition of the name ("a place of a high mountain, Jordan "); a practice, perhaps, somewhat Juhed (Jot. xiv. 1, § 4). Ritter, with his usual thoroughness, collates the early post-Biblical testimony, and says: "Zoar can only be looked for at the southern extremity of the Dead Sea." Of the two "medieval travellers" quoted above as apparent exceptions to this general current of te-tonomy and belief, only one wrote from personal observation, and that was Ford's "guide to the land of Zoar," (A.C., Rev. ii. 643-651), speaks of it without references in his latest work as an ascertained site: "Zoar, as we know it, was in the month of Wady Kerd, as it opens upon the neck of the peninsula" (Phys. Geog. p. 253). While this may have been the exact site of Zoar, we have no data which gives us absolute knowledge, and probably never shall have. His earlier conclusion was impracticable: "All these circumstances seem to be decisive as to the position of Zoar on the eastern side of the Dead Sea, at the foot of the mountains near its southern end" (Bibl. Revs. ii. 640). This is not more positive than Mr. Grove's original statement: "There is no doubt that it [Zoar] was situated on the southeastern border of the Dead Sea." (Moaw, vol. ii. p. 391, 1st Ed. ed.; comp. iii. 190, Amer. ed., for a later alteration.)

Mr. Tristram offers a still stronger theory respecting the site of Zoar. He proposes to place it in the west side of the valley, south of Jericho. He suggests this location without any trace of name or ruin, or any hint of history or tradition, as corresponding to the view granted to Zoar from the top of Pisgah. "If we place Zoar, as it naturally would be placed according to the narrative of Lot's escape, at the foot of the hill, between Wady Dhibir and Rex Fashkiah, we see that here was just the limit of Moses' view, in accordance with the record." (Land of Israel, p. 306, 2d ed.)

No one can have imagined that the southeast border of the Dead Sea and the walls of Zoar at that point were visible to the prophet from the top of Pisgah, unless, as suggested by Mr. Melville in his sermon on the "Death of Moses," his vision was but within the range of the actual prospect of the sea." (S. & P. p. 295.)

Mr. Tristram's own description is as full a confirmation of the sacred record as we could have anticipated from a visitor who should identify the locality and describe the scene. In selecting this site, without any indication, local or traditional, he sets aside, without answering it, the array of evidence convincing to Mr. Grove, as to the writers of the note who preceded him, which makes the Zoar of the Pentateuch a town of Moab on the east side of the valley. And by no possible interpretation can the plaintive cry and panic flight, recorded in "the burden of Moab," be associated with a city off on the southern limits of the wilderness of Sodom; which cries out for Moab; his fugitives shall flee unto Zoar, an height of three years old; for by the mounting up of Lahaith with weeping shall they go it up; for in the way of Horonaim, they shall raise up a cry of destruction" (Is. xx. 5). "From the cry of Heshbon even unto Elelah, and even unto Jalaah, have they uttered their voice, from Zoar even unto Horonaim, as an height of three years old; for the waters also of Nimrah shall be desolate." (Jer. xlviii. 34).

A fuller examination of Mr. Tristram's positions may be found in Bibl. Soc. (1888), xxv. 136-143.

In a private letter since written, Mr. T. intimates his relinquishment of his published theory. For further argument against the theory that the Pentapolis lay north of the sea, as applied to the other cities, see under Samson (Amer. ed.): S. W.

Z OYA of ZOBAH (Σωίσα, Σώψα [statue, public place]); Σωδά: [2 Sam. viii. 12; 2 Chr. viii. 3, Alex. Σωδά: 1 Chr. xix. 6, Rom. Ver. Σωδᾶ, Π. Σωδά: 2 Chr. viii. 3, Ps. lx. 1, 11, 12, Σωδα; 2 Sam. xviii. 36, Πολυανάκες, Alex. Σωδᾶς Τοπογραφίας: Σωδα] (once Σωδα, [once Σωδα]) is the name of a portion of Syria, which formed a separate kingdom in the time of the Jewish monarchs, Saul, David, and Solomon. It is difficult to fix its exact position and limits; but there seem to be grounds for believing it at some place in the ancient limits of Cœle-Syria, and extending thence northeast and east, towards, if not even to the Euphrates. [SYRIA.] It would thus have included the eastern flank of the mountain-chain which shuts in Cœle-Syria on that side, the high land about Aleppo, and the more northern portion of the Syrian desert.

Among the cities of Zobah were a Hamath (2 Chr. viii. 3), which must not be confounded with "Hamath the Great." (Hamath-Zobah); a place called Tishbah or Bethah (2 Sam. viii. 8; 1 Chr. viii. 8), which is perhaps Tishbe, between Pal-mera and Aleppo; and another called Berothai, which has been supposed to be Beitha.
ZOBA

ZOHELETH. THE STONE

We first hear of Zobah in the time of Saul, when we find it mentioned as a separate country, governed apparently by a number of kings who owned no common head of chief (1 Sam. xiv. 47). Saul engaged in war with these kings, and "vexed them," as he did his other neighbors. Some forty years later than this, we find Zobah under a single ruler, Hadadezer, son of Rehob, who seems to have been a powerful sovereign. He had wars with Tob, king of Hamath (2 Sam. viii. 10), while he held in close relations of amity with the kings of Damascus, Beth-rehob, Ish-tof, etc., and held various petty Syrian princes as vassals under his yoke (2 Sam. x. 19). He had even a considerable influence in Mesopotamia, beyond the Euphrates, and was able on one occasion to obtain an important auxiliary force from that quarter (1 Chr. viii. 10). Compare title to Ps. lxk. 1. David, having resolved to take full possession of the tract of territory originally promised to the posterity of Abraham (2 Sam. viii. 3; compare Gen. xxxv. 18), attacked Hadadezer in the early part of his reign, defeated his army, and took from him a thousand chariots, seven hundred (seven thousand, 1 Chr. xviii. 4) horsemen, and 20,000 footmen. Hadadezer's allies, the Syrians of Damascus, having withstood his assistance, David defeated them in a great battle, in which they lost 22,000 men. The wealth of Zobah is very apparent in the narrative of this campaign. Several of the officers of Hadadezer's army carried "shields of gold" (2 Sam. viii. 7), by which we are probably to understand iron or wooden frames overlaid with plates of the precious metal. The cities, moreover, which David took, Bethah (or Tidhath) and Ben-hoth, yielded him "exceeding much brass" (ver. 8). It is not clear whether the Syrians of Zobah submitted and became tributary on this occasion, or whether, although defeated, they were able to maintain their independence. At any rate a few years later, they were again in arms against David. This time the Syrians were not content with the defensive. The war was provoked by the Ammonites, who hired the services of the Syrians of Zobah, among others, to help them against the people of Israel, and obtained in this way auxiliaries to the amount of 30,000 men. The allies were defeated in a great battle by Joab, who engaged the Syrians in person with the flower of his troops (2 Sam. x. 9). Hadadezer, upon this, made a last effort. He sent across the Euphrates into Mesopotamia, and "drew forth the Syrians that were beyond the river" (1 Chr. xix. 16), who had hitherto taken no part in the war. With these allies and his own troops he once more renewed the struggle with the Israelites, who were now commanded by David himself, the crisis being such as seemed to demand the presence of the king. A battle was fought near Hamath—a place, the situation of which is uncertain (Helam) — where the Syrians of Zobah and their new allies were defeated with great slaughter, losing between 40,000 and 50,000 men. After this we hear of no more hostilities. The petty princes hitherto tributary to Hadadezer transferred their allegiance to the king of Israel, and it is probable that he himself became a vassal to David.

Zobah, however, though subdued, continued to cause trouble to the Jewish kings. A man of Zobah, one of the subjects of Hadadezer—Rezon, son of Elhadah — having escaped from the battle of Helam, and "gathered a band" (i.e. a body of irregular marauders), marched southward, and contrived to make himself master of Damascus, where he reigned (apparently) for some fifty years, proving himself to be the last of the line of monarchs of Zobah. Solomon also was (it would seem) engaged in a war with Zobah itself. The Hamath-Zobah, against which he "went up," (2 Chr. viii. 3), was probably a town in that country which resisted his authority, and which he accordingly attacked and subdued. This is the sense that we find of Zobah in scripture. The name, however, is found at a later date in the Inscriptions of Assyrria, where the kingdom of Zobah seems to intervene between Hamath and Damascus, falling thus into the regular line of march of the Assyrian armies. Several Assyrian monarchs relate that they took tribute from Zobah, while others speak of having traversed it on their way to or from Palestine.

ZOBEBAH (צובית) [dow morning]: Za-badh: Alex. Zabdh; Sam. Son of Coz, in an obscure genealogy of the tribe of Judah (1 Chr iv. 8).

ZO'Har (זוהר) [whiteness]: Zadap: Seor. 1. Father of Ephron the Hittite (Gen. xxii. 8, xxv. 9). 2. (Seor, Seor). One of the sons of Simeon (Gen. xlii. 11; Ex. vi. 15); called Zerah in 1 Chr. iv. 24. * 3. Incorrectly printed Zoor (A. V. ed. 1611, later obs. Lezon), 1 Chr. iv. 7. [Zoan, p. 3641 b] A.

ZOHELETH, THE STONE (יהלמה) [see below]: A'deth חנשכמ [Val.]: Alex. ה'ﺋו'למ' חנשכמ' lambda Zoheloth. This was "by En-Rogel" (1 K. i. 9); and therefore, if En-Rogel be the modern Ummed-Derry, this stone, "where Edomiah slew sheep and oxen," was in all likelihood not far from the Wall of the Virgin. [En-Rogel.] The Targumists translate it "the rolling stone." Andarch affirms that it was a large stone on which the young men tried their strength in attempting to roll it. Others make it "the serpent stone" (Genus.), as if from the root רָשָׁב, "to creep." Jerome simply says, "Zodec tractum sive prostratum." Others connect it with running water: but there is nothing strained in making it "the stone of the conduit." (יהלמה, Meskelbehth), from its proximity to the great rock-conduit or conduits that poured into Siloam. Bioch's idea is that the Hebrew word zheleth denotes "a slow motion" (Hieroz. part i. bk. 1, c. 9); "the fullers here pressing out the water which dropped from the clothes that they had washed in the well called Rogel." If this be the case, then we have some relics of this ancient custom at the massive breastwork below the present Birfel d'Alouer, where the donkeys wait for their load of skins from the well, and where the Arab washerwomen may be seen to this day beating their clothes.

a We give the following Rabbinical note on Zoheloth, from the Aramaic commentary of Tanchum of Jerusalem, translated by Haarmbracher:—

"Ver. 9. לֶחֶלֶת Verbam לֶחֶלֶת significat
The practice of picking stones, and naming them from a person or an event, is very common. Jacob did so at Bethel (Gen. xxviii. 19; xxx. 14; see Bocca’s Connex., pp. 757, 758); and he did it again when parting from Lælæm (Gen. xxx. 45). Joshua set up stones in Jordan and Gilgal, at the command of God (Josh. iv. 20-21); and again in Shechem (Josh. xxiv. 26). Near Beth-shemesh there was the well-“Elon-gebeth (for great stone”), the name of a son of Joshua (Judg. vi. 14), called also Melach-gebeth (the great weeping,” I Sam. vi. 18). There was the Elon-Bohan, south of Jericho, in the plains of Jordan (Josh. xxv. 6, xviii. 17), “the stone of Boldom the son of Reuben,” the Ehrenbreitstein of the Ciceror, or “plain” of Jordan, a memorial of the son or grandson of Jacob’s eldest born, for which the writer once looked in vain, but which Felix Fabri in the 15th century (Eyrath, ii. 82) professes to have seen. The Rabbi preserves the memory of this stone in a book called Elon-Bohan, or the touchstone (Chron. of Rabbi Joseph, trans. by Binfolobtzky, i. 192). There was the stone set up by Samuel between Mizpeh and Shen, “Ebon-Escur;” the stone on which they set the seal or stamp (I Sam. vii. 11, 12). There was the Great Stone on which Samuel slew the sacrifices, after the great battle of Saul with the Philistines (1 Sam. xiv. 32). There was the Eben- Ezel (“lapis discusus vel altius, a discensi Jonathani et Davidis,” Simonis, Opera, p. 156), where David hid himself, and which some Talmudists identify with Zoheleth. Large stones have always obtained for themselves peculiar names, from their shape, their position, their connection with a person or an event. In the Sinai Desert the writer found the Holeab el-Ridob (“stone of the rider”); Holeab el-Fal (“stone of the beam”), Holeab Mass (“stone of Moses”). The subject of stone is by no means uninteresting, and has not in any respect been exhausted. See the Notes of De Sola and Lindenthal in their edition of Genesis, pp. 175, 226; Bocca’s Connex., p. 785; Vossius de idolatre. vi. 33; Seiliger on Eschusis, p. 198; Herodotus on Abarbain, bk. vii., and Hellenorbaus on Amathia; also a long note of Onundis in his edition of Minuciana Felix, p. 15; Cabinet’s Fragments, Nos. 106, 735, 756: Kittos’ Philistia. See, besides, the works of antiquaries on stones and stone circles; and an interesting account of the curious Phenician Holeab Chan in Malta, in Tal-lack’s recent volume on that island, pp. 115, 127.)

H. B.

* It should be added that M. Clermont-Ganneau, connected with the French consulate at Jeru-

**salem, reports the supposed recovery of Zoheleth is the present Es-Zoheleth, the name of a rocky plateau nearly in the centre of the line along which stretches the village of Nisam (which see): the western face, cut perpendicularly, slightly over-

hanges the valley. He assumes this to be the stone of Zoheleth, near (al-S) En-Rogel (1 K. i. 9), though the Hebrew and the Arabic names differ, as Zoheleth and zohelet. He proposes also to identify En-Rogel with the Virgin’s Fountain, and not with Dir Eygh, the former being only 60 metres from Zoheleth, while the latter is 700 metres and the Pool of Nisam 400. He suggests further, that on this supposition we can more easily trace the line which separated the territories of Benjamin and Judah as stated in Josh. xv. 7, xviii. 16. He maintains that the jelladon divide the valley of the Kedron into three sections, the second of which, extending from the southeast angle of the Haram, to the confluence at the north of Dir Eygh, they call Wady Farman, Pharaoh’s Valley, i. e., as the name imports in that application, “Valley of the King;” and the front of the valley so designated is precisely that which the King’s Gardens (Garden, i. 570) used to occupy (Quarterly Statement of the P. E. Fund, No. vi., pp. 251-253).
ZORAH, the LAND OF

If the word Sārōh (rendered "field") may be taken in its usual sense, then the "field of Zophim" was a cultivated spot high up on the top of the range of Pisgah. But that word is the almost invariable term for a portion of the upper district of Moab, and therefore may have had some local sense which has hitherto escaped notice, and in which it is employed in reference to the spot in question. The position of the field of Zophim is not fixed, it is only said that it commanded merely a portion of the encampment of Israel. Neither do the ancient versions afford any clue. The Targum of Onkelos, the LXX., and the Peshito-Syriac take Zophim in the sense of "watchers" or "lookers-out," and translate it accordingly. But it is probably a Hebrew version of an aboriginal name, related to that which in other places of the present records appears as Mispēh or Mizpah. May it not be the same place which later in the history is mentioned (once only) as Mizpah-Moarb?

Mr. Porter, who identifies Altūrā with Pisgah mentions (Handbook, p. 390 α) that the ruins of Moarb, at the foot of that mountain, are surrounded by a fertile and cultivated plain, which he regards as the field of Zophim.

* The gently sloping and terraced brow, a mile and a half west of Moarb, and eight miles north of Altūrā, which Tristram proposes as the site of Nebo, he also suggests as the probable "field of Zophim." (Land of Israel, p. 340, 21 ed.) [Nebo. Amur. ed.]

ZORAH (זֹרָה) [perh. sinking down, low ground?]: Zapā, Zapā (Vat. Josh. xiii. 2, 25; Zaphā), Zapā, Zapā, Aṣān (Joseph. 2α); Zapā, Zapā (Vat. Josh. xiii. 2). One of the towns in the allotment of the tribe of Dan (Josh. xix. 41). It is previously mentioned (xxv. 25) in the catalogue of Judah, among the places in the district of the Shefelah (A. V. Zareah). In both lists it is in immediate proximity to Eshtemoa, and the two are elsewhere named together almost without an exception (Judg. xxii. 35, xxxi. 25, xxxvi. 2, 8, 11, and see 1 Chr. ii. 53). Zorah was the residence of Manoah and the native place of Samson. The place both of his birth and his burial is specified with a curious minuteness as "between Zorah and Eshtaol; " "in Mahaneh-Dan" (Judg. xiii. 25, xxxii. 31). In the genealogical records of 1 Chr. iii. 32, 42, the "Zorathites and Esthathites" are given as descended from (i.e. colonized by) Kishath-Jearim. Zorah is mentioned amongst the places fortified by Rehoboam (2 Chr. xi. 10), and it was re-visited by the men of Judah after the return from the Captivity (Neh. xii. 29, A. V. Zareah). In the 'Ovna-tiwto (Σαρδα and "Sara") it is mentioned as lying some 10 miles north of Eleutheropolis on the road to Nicopolis. By the Jewish traveller lag-Parchi (Zam's "Benjamin of Talm. ii. 441") it is specified as three hours S. E. of Lydb. This field or zorath direction — though in neither is the distance nearly sufficient — with the modern village of Sārōh (Σαρδα), which has been visited by Dr. Robinson (Bibl. Res. iii. 153) and Tobler (de Nat. 181—183). It lies just below the brow of a sharp-pointed, conical hill, at the shoulder of the ranges which there meet and form the north side of the Weiβ Gaden, the northernmost of the two branches which unite just below Sārōh, and form the great Weiβ Surch. Near it are to be seen the remains of Zorah, Beth-beneneh, Timnah, and other places more or less frequently mentioned with it in the narrative. Eshtol, however, has not yet been identified. The position of Sārōh at the entrance of the valley, which forms one of the inlets from the great lowland, explains its fortification by Rehoboam. The spring is a short distance below the village, "a noble fountain," which was at the end of April — walled up square with large hewn stones, and gushing over with fine water. As we passed on, continues Dr. Robinson, with a more poetical tone than is his wont, "we overtook no less than twelve women toiling upwards to the village, each with her jar of water on her head. The village, the fountain, the fields, the mountain, the females bearing water, all transported us back to ancient times, when in all probability the mother of Samson often in like manner visited the fountain and toiled homeward with her jar of water." In the A. V. the name appears also as Zareah and Zorahiel. The first of these is perhaps most nearly accurate. The Hebrew is the same in all.

ZORATHITES, THE (זֹרָתִיִּים): Tov. [Vat. betel]: Alex. τόβα; Surchi, i. e. the people of Zorah, are mentioned in 1 Chr. iv. 2 as descended from Shelah, one of the sons of Judah, who in 1 Chr. ii. 52 is stated to have founded Kishath-Jearim, from which again "the Zorathites and the Esthathites" were colonized.

ZORAH (זֹרָה): Pesh. [Vat. Zapā, Sar- ret]. Another (and slightly more accurate) form of the name usually given in the A. V. as Zorah, but more as Zareah. The Hebrew is the same in all cases. Zorah occurs only in Josh. xxv. 33, among the towns of Judah. The place appears, however, to have come later into the possession of Dan. [Zorah.]

ZORITES, THE (זֹרָתִים): Gr: ἡσαρίπα [Vat. spet]: Alex. Ἑσαρίπα [Comp. ὡς Zapā: Sar- ret], are named in the genealogies of Judah (1 Chr. ii. 44), apparently (though the passage is in great confusion) amongst the descendants of Solan and near connections of Judah. The Targum regards the word as being a contraction for "the Zorathites;" but this does not seem likely, since the Zorathites are mentioned in ver. 52 of the same genealogy in another connection.

ZOROBABEL (זֹרֹבֶּבָ֫אֵל): Zoroabal, 1 Esdr. iv. 13, v. 5—70; vi. 2—29; Eccles. xlix. 11; Matt. l. 12, 13; Luke iii. 27. [Zoroabal.]

ZUAR (זָעָר [ora]: ūzārāp: Saur): Father of Nethanah the chief of the tribe of Issachar at the time of the Exodus (Num. i. 5, ii. 9, vi. 18, 25, x. 19). ZUPH, THE LAND OF (זֵעֵפָה): meaning-coupl.: ζη'ψ [Σαρ, Vat.] Zapā: Alex. that Altūrā is Pisgah. (See Kitto's Bibl. Cyc. vol. iii. p. 139.)

II. as if reading Zoph (Tuph), which the original text (Cethib) of 1 Chr. vi. 25 still exhibits for Zapā.
ZUPH, THE LAND OF

ZUZIMS, THE

Vulg. Zeupp: Syr. Peshito, 3,5. Text: Vulg. tertae Siph). A district at which Saul and his servant arrived after passing through those of Shalisha, of Shalim, and of the Benjamites* (1 Sam. ix. 5 only). It evidently contained the city in which they encountered Samuel (ver. 6), and that again, if the conditions of the narrative are to be accepted, was certainly not far from the "tomb of Rachel," probably the spot to which that name is still attached, a short distance north of Bethlehem. The name Zuph is connected in a singular manner with Samuel. One of his ancestors was named Zuph (1 Sam. i. 1; 1 Chr. vi. 35) or Zophai (1 Chron. 25); and his native place was called Ramathaim-Zophim (1 Sam. i. 1).

But it would be unwise to conclude that the "land of Zuph" had any connection with either of these. If Ramathaim-Zophim was the present Nęki Semneh,—and there is to say the least, a strong probability that it was,—then it is difficult to imagine that Ramathaim-Zophim can have been in the land of Zuph, when the latter was near Rachel's sepulchre, at least seven miles distant from the former. Nęki Semneh, too, if anywhere, is in the very heart of the territory of Benjamin, whereas we have seen that the land of Zuph was outside of it.

The name, too, in its various forms of Zophim, Mizpeh, Mizpah, Zophath, was too common in the Holy Land, on both sides of the Jordan, to permit of much stress being laid on its occurrence here.

The only possible trace of the name of Zuph in modern Palestine, in any suitable locality, is to be found in Sboo, a well-known place about seven miles due west of Jerusalem, and five miles south-west of Nęki Semneh. This Dr. Robinson (Jebel. Res. ii. 8, 9) once proposed as the representative of Ramathaim Zophim; and although on topographical grounds he virtually renounces the idea (see the foot-note to the same pages), yet those grounds need not similarly affect its identity with Zuph, provided other considerations do not interfere. If Shalim and Shalisha were to the N. E. of Jerusalem, near Saadiah, then Saul's route to the land of Benjamin would be S. or S. W., and pursuing the same direction he would arrive at the neighborhood of Sboo. But this is at the best no more than conjecture, and unless the land of Zuph extended a good distance east of Sboo, the city in which the meeting with Samuel took place could hardly be sufficiently near to Rachel's sepulchre.

The significatio of the name of Zuph is quite doubtful. Gesenius explains it to mean "honey;" but while it understands it as "abounding with water," it will not be overlooked that when the LXX. version was made, the name probably stood in the Hebrew Bible as Ziph (Tap). Zophim is usually considered to signify watchmen or hecatoons; hence, perhaps, in which sense the author of the Targum has actually rendered 1 Sam. ix.

(see margin of A. V.). This is a totally distinct name from Ziph (Tap).

If indeed the "land of Yemina" be the territory of Benjamin.

"Sensus magis quam verbum ex verbo transmutatur" (Jerome, Quast. Hær. in Gen. iv. 36). Schumann Genesis, p. 257) suggests that for מְנִין they read מַנְיַין. The change in the initial letter is the 5, — "they came into the land in which was a prophet of Jehovah." G.

ZUPH (צִוּפ; [in 1 Sam. Alex. Zeupp, Comp. Zeapp; Rom. Vat. corrupt.] Zoph in 1 Chr.: Zuph). A Kohathite Levite, ancestor of Elkanah and Samuel (1 Sam. i. 1; 1 Chr. vi. 35 [20]). In 1 Chr. vi. 26 he is called Zophai.

ZUR (*צְוּר; Zor). 1. One of the five princes of Midian who were slain by the Israelites when Baham fell (Num. xxxi. 8). His daughter Cozbi was killed by Phinehas, together with her paramour Zuri, the Simeonite chieftain (Num. xxxv. 15). He appears to have been in some way subject to Sihon king of the Amorites (Josh. xiii. 24). 2. [In 1 Chr. viii. 30, Alex. Ierup; in ix. 36, Vat. Sin. Alex. Ierup.] Son of Jehiel the founder of Gibeon by his wife Maachah (1 Chr. viii. 39, ix. 36).

ZURIEL (צֹרִיאל [my rock is God]; Zeorja: Suriel). Son of Abihail, and chief of the Merarite Levites at the time of the Exodus (Num. iii. 36).

ZURISHADDAY (צָרִישׂדָדֵא [my rock is the Almighty]; Z upon Z; Zorshadda; Vat. in Num. i. 6, -pe]: Sinieeonite, Father of Shemuel the chief of the tribe of Simeon at the time of the Exodus (Num. i. 6, ii. 12, vili. 56, 41, x. 10). It is remarkable that this and Annashaddai, the only names in the Bible of which Shaddai forms a part, should occur in the same list. In Judith (vii. i) Zurishaddai appears as Salasaddai.

ZUZIMS, THE (צֹזִימים; גְבַהְוַי הַשָּׁדַדְו). In both MSS.: Zuzim, but Jerome in Quast. Hist. gentes fieres. The name of an ancient people who, living in the path of Cheddaumur and his allies, were attacked and overthrown by them (Gen. xv. 5 only). Of the etymology or significatio of the name nothing is known. The LXX., Tarzum of Onkelos, and Sam. Version (with an eye to some root not now recognizable) render it "strong people." The Arabic Version of Saadiaf (in Walton's Polyglot) gives อสะ-สะ, by which it is uncertain whether a proper name or appellative is intended. Others understand by it "the wanderers" (Le Clerc, from ציפ) or "serpents" (Michaelis, Suppl. No. 603): hardly more ascertainable is the situation which the Zuzim occupied. The progress of the invaders was from north to south. They first encountered the Leiphaim in Ashereth Karnaim (near the Leju in the north of the Hauran); next the Zuzim in Ham; and next the Emini in Shaveh Kiriataim. The last named place has not been identified, but was probably not far north of the Arnon. There is therefore some plausibility in the suggestion same which Ewald proposes in identifying Hana (Gen. xiv. 5) with Ammon.}}

C. Comparing the Arabic צור. By adopting this (which however Gesenius, Thea. p. 510 a, resists and alter- ing the points of צור to צור, as it is plain the LXX. and Vulg. read them, Michaelis ingeniously obtains the following reading: "They smote the giants in Ashereth Karnaim, and the people of smaller (i.e. ordinary) stature, who were with them."
of Ewald (Gesch. i. 308, note), provided it is etymologically correct, that Ham ḫm, is ḫm, Am. i. c. Ammon; and thus that the Zuzim inhabited the country of the Ammonites, and were identical with the Zamzummim, who are known to have been exterminated and succeeded in their land by the Ammonites. This suggestion has been already mentioned under Zamzummim, but at the best it can only be regarded as a conjecture, in respect to which the writer desires to say with Bell — and it would be difficult to find a fitter sentence with which to conclude a Dictionary of the Bible — "conjectura, quibus non delectamus."
APPENDIX.

NOTES ON THE ART. "WILDERNESS OF THE WANDERING."

BY THE REV. F. W. HOLLAND, FELLOW OF THE ROYAL GEOGRAPHICAL SOCIETY OF LONDON.

[The following notes were received too late for insertion in their proper place, but are too valuable to be omitted. Mr. Holland gives the results of personal observation, having four times visited the Sinai Peninsula and spent many months in wandering over it on foot. — A.]

Page 3514, line 35, "the wilderness of Etham."—It is not necessary to suppose that the wilderness of Etham existed in the desert of the Gulf. "The edge of the wilderness" probably refers to the limits of vegetation, but to the boundary of the desert east of the gulf, marked by the higher ground which divides the Bitter Lakes from the sea.

This would form, then as now, the natural road from Egypt to the Peninsula of Sinai, and latterly Moses would lead the Israelites. A deviation from the natural road seems to be implied in the command to turn and encamp before Pharaoh. The narrow road along the shore leading only to a yet more barren desert. Escape was impossible unless God had opened a way for them through the sea.

Page 3515 b, l 2 from bottom, "Wady el-Molai":—The proper name is Wady el-Molai (Sahhâ), derived from holâhâk, impression of a horse's foot.

Page 3514, note c.—The excavations of the Palestine Exploration Fund at Jerusalem have proved that the language of Josephus concerning the height of the buildings of the Temple was not extravagant.

Page 3514, note a.—The warm spring mentioned by Mr. Hamilton is situated near Ter, and has no reference to the Agia Mâso near Suez; it is that referred to in the following note. The springs of Hummaina Pharaonie have a temperature of 100°, and emit a strong sulphurous smell. I have never seen any warm spring among those at Agia Mâso, although I have several times examined them. Water is found there by digging, and the water-holes are impregnated with the smell of the spring. The Arabs suppose that the sound is caused by the nikkâ (wooden boards used for bells) of a monastery, which was swallowed up by the earth in consequence of the wickedness of the monks. See Proceedings of the Royal Geog. Soc. vol. xiii. p. 215 f.

Page 3517 b, l 11.—The Mœcur phalirous are previously provided for, store of corn being sent on to the various stations on the Wady road, and tanks prepared for water. Their case, therefore, is quite different from that of the Israelites.
APPENDIX.

Page 3517, note c. — I have measured acacia trees upwards of nine feet in circumference. The trees grow to a large size, when they are not stunted by having their shoots annually cut off to feed the goats of the Arabs.

Page 3518, l. 2. — the Wady el-Rohbah." — I have myself seen the Wady el-Rohbah "a vast green plain," so that looking up its slope it appeared completely covered by herbage. It is never entirely bare, being thickly studded with low plants, which after a few showers of rain in spring quickly become green. I have even seen blazes of grass springing up in every direction upon it. But I have also seen the el-Rohbah after a long dry season to all appearance from a little distance a barren plain.

Page 3518 b, l. 1. — Quick sands in Jubbat el-Rohbah are merely caused by the sand drifting into the hollows, which catch the rain-water. They are not real quicksands.

Pages 3517-3521. — Supply of Water and Pasture. — Large tracts of the northern portion of the plateau of the Til, which are now desert, were evidently formerly under cultivation. The Gulf of Suez, probably by means of an artificial canal connecting it with the Biter Lakes, once extended nearly fifty miles further north than it does at present, and the mountains of Palestine were well clothed with trees. Thus there formerly existed a rain-making area of considerable extent, which must have added largely to the deserts and rains of Sinai. Probably, also, the Peninsula itself was formerly much more thickly wooded.

The amount of vegetation and herbage in the Peninsula, even at the present time, has been very much underrated; and a slight increase in the present rain-fall would produce an enormous addition to the amount of pasturage. I have several times seen the whole face of the country, especially the wadies, marvelously changed in appearance by a single shower.

It is a great mistake to suppose that the convent gardens at the foot of Jebel Misr, and those in Wady Fiwm, and at Tor, mark the only three spots where any considerable amount of cultivation could exist in the Peninsula. Hundreds of old monastic gardens, with copious wells and springs, are scattered over the mountains throughout the greater part of the Peninsula, and I could mention at least twenty streams which are perennial, excepting perhaps in unusually dry seasons.

It has been said that the present physical conditions of the country are such as to render it utterly impossible that the events recorded in the book of Exodus can ever have occurred there. It is wonderful, however, how apparent difficulties melt away as one's acquaintance with the country increases. I see no difficulty myself in the provision of sufficient pastureage for the flocks and herds, if, as I have shown, there are good reasons for supposing the rain-fall was in former days larger than it is at present: and with regard to the cattle, I will point out one important fact, which appears to me to have been overlooked, namely, that they were probably used as beasts of burden, and, in addition to other things, carried their own water, sufficient for several days, shrag in water-skins by their side, just as Sir Samuel Baker found them doing at the present day in Abyssinia. — See paper On Recent Exploration in the Peninsula of Sinai, read [by Mr. Holland] at the Liverpool Church Congress, Oct. 1869. [See also art. Sinax, p. 3504, Amer. ed.]

Page 3521 a, l. 24. — "Sin el-Husnaweh." — The water varies much in bitterness. I have found it at one time so bitter that I could not even hold it in my mouth, at another more pleasant to drink than the water I had brought in water-skins from Suez. The size of the spring is very small, but the mass of calcareous deposit which surrounds it seems to prove that the water-supply from it was formerly larger than at the present time.

There appears to be a strange confusion of places here by the writer of the article. My own observations, made at several different times, and confirmed by those of the Sinai Survey Expedition in 1869, have led me to the following conclusions. "Sin el-Husnaweh is not a brook, but a spring standing on an elevated plateau at the head of Wady Androm, which does not contain any other water, although but little to the north of its mouth are the Ajan Abn Sweeredeh, two water-holes about 8 feet deep, supplied, I think, by the drainage from Wady Werdain. A few stunted palms grow near them. The water-holes might be increased by digging. The water is slightly brackish but drinkable. Wady Todra lies to the south of Wady el-Husnaweh, running into the gulf a few miles to the north of Wady Todghel. The Arabs obtain rock-salt from it. At Jebel Baker, commonly, but wrongly, known as Tanet es-Sulhr, there is a good supply of water. This mountain lies much nearer to Suez. It is known in the charts as "Burn Hill," and forms a prominent landmark.

Page 3521 b, l. 2 from bottom. — "By watercourses." — Stanley evidently does not intend to imply the presence of water; he especially mentions their being dry. Wady Usit does not connect Jurneulaw with Taybeh; it is entirely separate from both, but drained the plateau that lies between them. The hot springs near it, visited by Niehurs, are those of the Humannah Pharowin. Wady Usit drains an elevated plateau at the back of Jebel Humannah. Wady Taybeh runs from the Wady el-Markhoh plateau, where, as it approaches the sea, it is certainly one of the best watered and wooded valleys in the whole Peninsula.

Page 3522 a, 4th par. — "The advantages of this spot for an encampment have been much exaggerated. The water is brackish and unwholesome, and it is the most unhealthy spot in the Peninsula. It is true that there are large groves of palms and thickets of tamarisk, but the ground is impregnated with salt, and is not otherwise particularly fertile. At the mouth of Wady Taybeh is the plain of Ros Aba Zulmac, which probably was the spot where the Israelites encamped; it is divided from el-Markhoh by a narrow strip of desert, which almost must be considered a portion of the Wilderness of Sin."

W. Eob's real name, as called from Eob, a species of tamarisk.

It is important to notice here that Mr. Holland has altered the opinion respecting the route of the Israelites which he had presented in a paper read before the Rox. Geol. Society in 1858, already referred to in this Dictionary under the arts. Six, Wilderness of Sin, etc., of, p. 3490, note a, and Sinai, p. 3504. He now regards el-Markhoh, and not the plain of es-Selekh, as the "Wilderness of Sin," and supposes the Israelites from this point to have journeyed up the Wady Buiiana to see his paper On Recent Explorations in the Peninsula of Sinai, read at the Liverpool Church Congress, Oct. 1839.

A
APPENDIX.

Page 3522 b, l. 12. — El-Kâr. — This name is confined to the plain south of Wady Feiran. The whole of the northern plain is, I believe, known by the general name of el-Markhba.

Page 3522 b, 2d par. — Mount. — I have now (1870) some pots of manna that I brought from Sinai in 1861. It remains perfectly good, but becomes liquid like honey in hot weather. When I first obtained it, it still remained, as when collected from the trees, in the shape of hardened drops. It is sold in Egypt for medicinal purposes, or to pilgrims as a relic from the desert.

Page 3523 a, near end of 1st par. — The height of the Sinaitic inscriptions has been much exaggerated. I have not seen one that I have failed to reach without difficulty, except in a few cases, where there were evident traces of a lower ledge of rock having fallen down. See Proceedings R. G. Soc., vol. xiii. p. 213 f.

Page 3523 a. — Rephidim. — On the site of Rephidim, where the battle with the Amalekites was fought, my opinion differs from that of Captain Wilson and Mr. Palmer. They believe the battle to have been fought in the Wady Feiran, near the site of the ancient city of Paran, and that Jebel Tihumah (not the hill on which the old church stands, which the Dean of Westminster advocates, but one opposite it on the other side of the valley) was the hill on which Moses sat, with Aaron and Hur, and which is now called El-Watyei.

The road up this hill, and the churches and chapels on its summit and sides, certainly mark this hill as a very sacred spot in the eyes of the old inhabitants of Paran. I have little doubt that they believed it to be the site of Rephidim, when Serbal, as was once certainly the case, was held to be the traditional Mount Sinai. But I have no faith in insinual tradition, either ancient or modern, as far as the woods of the convent of St. Catherine are concerned.

Besides, it appears to me that Rephidim is clearly spoken of in the Bible as within a day's journey of Mount Sinai; and this spot is two days' journey from Jebel Mâes, even by the short cut of the Nahal el-Wâdî es-Sheikh.

I am strongly of opinion that the Israelites marched up the Wady es-Sheikh, and that the narrow defile of el-Wâitich, about twelve miles from Jebel Mâes, marks the site of the battle of Rephidim.

From the head of Wady Hâbârân there stretches across the western side of the Peninsula a remarkable line of precipitous granite mountains, through which are found only three passes, leading to the high and well-watered central group of mountains, which includes Jebel Mâes. The two western passes of Wady Tihus and Nachâb Hâbârân are too narrow and rugged to have afforded a road for the mass of the Israelites.

They are altogether out of the question, if the Israelites had wagons with them at this time. We know that the princes presented six wagons for the use of the Tabernacle at Mount Sinai, and we can hardly suppose them to have been built there.

The remaining pass of el-Wâitich is a narrow defile, with perpendicular rocks on either side, and

a This formed, probably, the northern limit of the Wilderness of Sinai, the high central cluster of mountains to the south bearing the desolate name of Horab.

F. W. H.

the holding of this defile by the Amalekites would render them secure.

All the requirements of the account of the battle are found at this spot. There is a large plain, destitute of water, for the encampment of the Israelites; a conspicuous hill on the north side of the defile, commanding the battle-ground, and presenting a bare cliff, such as we may suppose the rock to have been which Moses struck.

There is another plain on the south of the pass for the encampment of the Amalekites, with abundance of water within easy reach; and, curiously enough, at this very spot, at the foot of the hill on which Moses sat, if this be Rephidim, the Arabs point out a rock, which they call "the seat of the prophet Moses."—See paper read before the Liverpool Church Congress, pp. 7, 8; also paper read before R. G. S., May 11th, 1898, p. 17.

Page 3523 a, 2d par. — Horab. — A name given probably to the central granite mountains (including Jebel Mânâ, St. Catherine, Feiran, etc.), which lie to the south of the remarkable line of cliffs stretching easterly from the head of Wady Hâbârân. The country between this line and Wady es-Sheikh, including the low mountains of Jebel el-Orf, is comparatively open, and contains several plains or broad wadis of considerable size. No trace of the name Horab now remains, unless Jebel Arâbâk, the central portion of Jebel el-Orf, be a corruption of the name. The Arabs, however, say that this mountain is so called from a plant that grows there.

Page 3524 b, end of 1st par. — El-Wâitich. — The Arabs often call the mountains by the names of the adjoining wadis.

Page 3524 b, 2d par. — Summit of Serbel. — Dr. Stewart’s “circle of loose stones,” and Dr. Stanley’s “ruins of a building, granite fragments cemented with lime and mortar,” refer to the same ruins. The latter description is the true one. There are a considerable number of inscriptions on the summit, some painted under an overhanging rock covered with whitewash, which seems to connect them with this building, similar whitewash being found upon its stones. For a description of Jebel Serbel see Proceedings R. G. Soc., vol. xiii. p. 212.

Page 3525 a, 2d par. — Jebel Mâes. — For description see Proceedings R. G. Soc., vol. xiii. p. 210. The approach from the W. by Nachâb Hâbârân is not so difficult as represented. I have several times ascended the pass with lightly-laden camels.

W. Solom should be written Solf. The Râs Sufástîkh is not a mountain interposed between the slope of Jebel Mâes and the plain, but the northern portion of Jebel Mâes itself.

Page 3525 b, l. 10. — El-Wâitich. — There is properly speaking no mountain of that name. The name el-Fa райch is applied to the high and fertile mountain plateau that lies between Wady es-Robâb and the upper part of Wady es-Sheikh. The surrounding peaks each have a separate name.

Page 3526 b, note c. — It is a mistake to think that the Amalekites have become scarce—at the top of Abans Passa’s road they especially abound.

Page 3527 a, l. 38. — The "offerings of the princes" included wagons (Num. vii. 3), a proof that the route followed by the Israelites did not lead over any very difficult passes, and therefore a help in tracing out their course.

Page 3527 a, l. 4 from bottom. — "Over its summit..."
APPENDIX.

4. have

F.

Iwo, of of no ing cient of ure built 'Jhe cross leading with believe, not are are one herd. mon.

bers for by the Gulf of Akaba, they probably crossed by one or more of these, if not too step for their wagons. The direct road from Jebel Musa northward to the Tih range presents no difficulty, a rising expanse of hard desert leading gradually up to the plateau of Ternak, where there is plenty of vegetation, and good water at Arik (Abdullah). The wells leading down to the Gulf of Akaba are somewhat narrow and rocky; a stream of good water is found at the lower Wady el-Ain. There is an upper el-Ain at the bottom of Wady Zelgeyi further to the northwest. The two, I believe, are connected.

Page 352b, l. 29. - Debub appears to me too far to the south to be identified with Dinabul; it is also included by mountains on the north. The road to it lies down Wady Naib, which rises south of Jebel Catherine. There is another road across the plain of Serped which joins Wady Naib.

Page 352b, l. 36.—El-Hoduleeqi. — This copious spring is situated at the head of the wady of the same name, which forms a col-le-sue surrounded by high cliffs. Two narrow paths, so steep that a ladder or rope is necessary to descend, lead down to it. It is difficult to identify this with Hazereth, where the whole host of the Israelites encamped for seven days. If they marched straight north from Mount Sinai we might place Hazereth in the open plateau near el-Abedleeqi. Here numerous very ancient inscriptions and ruins of wadis are found. The wadis, or in the plural waadies, "mosquitos;" are the dwellings or storehouses of the ancient inhabitants of the Peninsula. Their style of architecture is the oldest that is known, resembling the " Beehive Houses" in Scotland. They were perhaps built by the Amalekites. (See Proceedings R. G. S. Soc. vol. xiii. p. 211; paper read before R. G. S., May 11, 1868; and paper read at Liverpool Church Congress, Oct. 1869.)

Page 352, note a. — The edible hares invades the Peninsula in great numbers about every three year. I have seen the ground covered with them. The Arabs in Sinai do not eat them. Partridges of two kinds are very common. Quails are met with occasionally. Vast flocks of storks annually cross northwards from Egypt. I have counted them by hundreds on several occasions.

Page 352, l. 4. — El-Ain. — When tracing up Wady el-Ain, my Arabs pointed out a route leading northwards to Palestine. They said the road was good, and the pass over the Tih range not difficult.

P. 5534 b. — Zebliny. — There are no lions, I believe, in Sinai. Hyenas are common; so also are foxes, of which there are two kinds, the larger or 'foxes of the higher mountains; wolves in Wady Feiran, and other places. The flesby is very common. I have sometimes seen as many as 40 or 50 in a day; and have occasionally found 30 or 40 in one herd. The flesh is excellent, and when stationary for a few days the traveller can generally employ an Arab to shoot him some. They are quite contented with five or six skins for each man, which are sold in the market. The young are killed in considerable numbers for the sake of their skins, which are used for sewing dates in. The foxes are commonly known by the name of belva, but other names are given to them according to their age and the length of their fur. Hares are common. Amongst other animals which are, often seen may be mentioned the jackal, coney (Hyron Syriacus), called by the Arabs celer, jerboas, mice of several kinds, lizards, and snakes, of which I have caught five or six different kinds. Amongst the birds, vultures of two kinds, kites, hawks, storks, wild ducks, teal, snipe, herons, partridges, sand-grouse, quail, pigeons, turtledoves, Drymarchon, stonechats, plovers, ravens, crows, owls, bats, red-storks, larks, swallows, sea-gulls, etc., etc. Porcupines and hedgeshogs are found, but they are rare. Small fish are found in the warm springs near Târ. One cannot, of course, compare the amount of life found in a desert with that in other countries, which supply a larger amount of food, but I have frequently seen, and have shot or caught most of the animals and birds which I have mentioned, besides others the names of which I cannot now remember.

Page 3556 a. — Vegetation. — The statement that "the palms are almost always dwarf;" is not correct. The dwarf trees are the exception, not the rule. Many of the trees at Târ and Wady Feiran are particularly fine.

Roses of Jericho are found at the mouth of Wady Gunoaid, Wady Mokaitied, and many other places.

The "Wadi", or caper plant, is found in Tepish, and is very common in the wadis south of Jebel Mair. The fruit, which is of the size and shape of a moderate sized pear, is eaten by the Arabs. It has a pungent and very pleasant taste.

The Butel-seb (Belonosum Auronis) abounds in some of the wadis near Serbal.

The Other I have found in Wady Naib, S. E. of Jebel Mair and S. W. of Wady el-Ain. A large blue kind of boest feeds upon it.

The Etna (Pistachia terebinthus) occurs on the west of Jebel Serbal on the higher slopes; it does not appear to grow on the east of the mountain.

Page 3557. — The name Serbal is not derived from Ser; the word serbal (سربائل) signifies a "shirt" or "coat of mail," and the name has reference to the manner in which a storm clothes the smooth summit of the mountain, and perhaps to the sheet of ice with which it is sometimes covered, when it shines in the sun like a coat of mail.

* We ought perhaps to mention here, as at least a curiosity, a new theory of the route of the Israelites, set forth with no little learning and ingenuity by a writer in Lawson and Wilson's Cyclopedia of Bible Geography, etc., vol. ii. pp. 90-129 (Edin. 1869), under the title Exode, Alterative View of the. We can only indicate his chief results, without discussing the arguments by which they are supported. This writer maintains that the Gulf of Akaba is the "Red Sea" of our version, and was of much larger dimensions in the days of Moses and Herodotus, extending across modern Arabia to the Persian Gulf; that Micah is improperly rendered "Egypt" in our version, being really applied to a part of Arabia; that the water in which Moses, as an infant, was laid, was not the Nile, but a sweet water channel connecting, in early times, the limes of Suez with the Mediterranean Sea; that Goshen was the high region known to the ancients as Mount Gosen; that the Horeb of Scripture was the ridge of the Tih, and Mount Sinai Jebel el-Ymna (or Ymnah).
